Whatever her belief, when all of her great work was done there were only four children left, just an average sized modern family, four-hundred country folk with a grudge in their hearts. And Aunt Suzanne had still left no record of herself.

Yet Aunt Suzanne's talents numbered vastly more than the child-bearing one. And they were just such talents as you and I make into a meat income, a revenue of inspiration and a heritage of happiness for our children!

I HAVE borne four children, so I can vaguely, impressionistically, catch a glimmering of what it must have meant to give birth to five times as many and the one more, who might have been christened Last Straw. A woman of no mean vitality was Aunt Suzanne! Such a physique would bear up well under the tests that are breaking down Mrs. Pankhurst in her fight for her fellow-women.

But, in bearing the babies, only the first great talent has been called forth from its latency. Even backwoods babies must be clothed. Aunt Suzanne must have been an unconscious forerunner of those clever girls who are now telling mothers the world over, on attractive pages, how to cut the meanest little garments from the least cloth. If necessity was the mother of invention, in those days, I dare say Aunt Suzanne invented this idea that young, fresh women of a brighter, more hopeful era are taking advantage of. Girls, you are tucking away money Aunt Suzanne should have had. But women who have twenty-one children are not heard from.

With twenty-one, twenty-two, twenty-three hunger to satisfy Aunt Suzanne was doubtless an excellent cook, and knew as much about buying food to advantage as the women who have made a reputation telling the same helpful information to-day. I fancy she could cut up a beef into its proper divisions, make soup of all superfluous grease; and of the left-overs—Ah yes, but Mrs. Roer and Marion Harland, there were no leftovers on Aunt Suzanne's pantry shelves!

The good woman came before the day of Montessori and child study. But, if abundance of material argues anything, she may have been an unknown, unappreciated pioneer in the study of child nature. Some manner of kindergarten she must have run, even a private district school to compass Uncle Lawler's prejudice.

AND if Uncle Lawler was the sort of man the relations say he was, Aunt Suzanne must have had quiet reflections on married life that would make interesting reading to us today, if she had had time to jot them down. But whatever the message of Aunt Suzanne, it does not come to us. Unless it be that the son who ran away carried her whispered secret of revenge and went to be the founder of the Race Suicide movement.

You and I are no less productive than women of the old school. That we have unanimously agreed against large families does not mean that we have wearied of producing. On the contrary, it is in the cause of better production that we limit the number to those born of strength and gladness. Then, to get more work out of the machine, we give that set of muscles a rest and take up the work of creation with a fresh set. For there is the possibility that another generation may think that my progeny are like Uncle Lawler, as queer as Dick's hat band.

YOU and I do not put all our eggs in one basket. I do not feel flowing in my veins all the talents my blessed Aunt Suzanne must have had. But I am strong and I have some of the talents—and I too, yes, you may never believe it, but I too, I am not a shirk, want to have twenty-one children! But oh! dear shade of Aunt Suzanne! not the same kind of children. I have as many of the flesh and blood kind as Aunt Suzanne saved. And the spirit of creation is not all spent. I hope to create something that shall last, something by which the next generation shall know me for more than a "busy" woman. I must yield at least one little dream child of thought who can go forth to further the perfection of the world. Most of us have as much energy as Aunt Suzanne. We must not stop expressing the spirit of reproduction when we stop bearing physical children. We have much to do and much to think about before we go on to compare notes with Aunt Suzanne.

We have put ourselves out of Aunt Suzanne's class forever. But she has left in the figure 21 an arithmetical sign of the estimate of woman's physical capacity.

During the twilight time when Aunt Suzanne pumped water and heated it on the kitchen range to bathe the twenty-one, you and I have a pause that could be called the hour of opportunity.

"THE kingdom of heaven will not come till your women stop bearing children."

The simple heaven of everyday life will not come till we mothers stop bearing more babies than we can do justice to and give birth to ideas that shall help not only our immediate families but our fellow-men.

The Autopilgrim's Progress

Part Two—The Bridal Tour

By WALLACE IRWIN

Illustrations by James Preston

II.

The Bridgroom Seeketh

THROUGH bye-ways
And shy-ways,
Down valleys, 'cross highways
The farmer-chauffeur bore the Bridgroom who, worried,
Tried to keep tab on the road as it varied.
Meanwhile the farmer, a genial old cove,
Boasted the worth of the car that he drove.
"This little buggy
May sound kind o' chuggy—
Never mind that, Mr. Man! She's a prize.
Hark! Somethin's boilin'—
Guess she needs oilin'—
Nevertheless, she's the best of 'er size."
As Billing's Garage showed its marvelous front
The farmer's machine "died away" with a grunt,
And Brown left the rustic repairing his shay,
Fumblin' inside in a dazed sort of way.

FROM honest Jeh Billings Brown purchased a tire
For five dollars more
Than the best city store
Would ask for the same. But the city man's ire
Had no room to expand; for his mind ill forbode
Concerning his bride, out alone on the road.
Brown paid down the money and carried his tire
Out to the street, where he hoped he could hire
The farmer-mechanic to carry him back;
But he groaned in his heart when he noticed, a'ack!
That the rustic had fled
With the car, and instead
The road lay deserted, a desolate track.
Mr. Jeh Billings, a soul sympathetic,
Pitied Brown's autoplight peripatetic,
Remarking, "Too bad! I could help ye, no doubt,
But my cars is all out.
I think, though, I know where yer auto is stuck.
It's down by Hoyt's Crossin'—Ye're sort of in luck.
Jest a leetle, short stroll, though that tire is some heft—
Walk to the schoolhouse, then
turn to yer left,
Turn again
At the Main
Marked Mehitabel's Stile

Take the South Fork and proceed 'bout a mile,
Then bear through the grave-yard a piece till y' strike
The road—y' can't miss it—it's Kittyville Pike."

TELL me, kind reader, hast ever yet tried,
In the midst of the night, on a strange country road,
To carry a tire and go seek a lost bride
Through infinite lanes, while each moment your load
Weighs more and more, till your bruised, weary shoulder
Feels like old Atlas's, bearing its boulder?
If you've ever experienced such a delight
You'll know how poor Percival, lost in the night,
Stumbled
And tumbled
Through thoroughfares jumbled;
Once he was proud, but now thoroughly humbled.
He questioned each passer with modest inflections
And got from each one a new set of directions:
"Kittyville Pike? It's just over the hill."
Or "Foller the railroad," or "Turn at the Mill."

Not a car was in sight,
The moon, shining bright,
Should have charmed the romantic;
But the Bridgroom, in pain,
Found his efforts so vain

The moon drove him frantic.
He was half in a swoon
When the grave-yard he found
Where he tripped on a headstone
And falling, a wreck,
That dash-bingled tire bounded
twice on his neck.
Broke loose with a sort of
demoniac skill
And rolled o'er the mounds to the
foot of the hill;
And once . . .

But why dwell on that
tortuous stroll,
More painful and slow than a dash
to the Pole,
More footless and vague than a
Cook expedition?
Poor Brown, on a grave, in reclining position,
Looked at his watch, cursed all species of cars,
And lifted his plaint to the pitiless stars.
"If I was a kiddie, hy Jove, I would blubber!"
So saying, he took up his burden of rubber,
Drew up his chest
And continued his quest.

THE moon was reclining when Percy could see
A rusty-red light 'neath a far distant tree.
"Bright star,
It's my car!
O gee!"
Dead bent as he was, he outsped the deer
As he leaped to his Love, to his Car—drawing near
Something or other looked awfully queer.
"Katurah!" he cried,
"Speak, my Bride!"

But on peeking inside,
The Truth chilled his brain like a
serpent's vile hissing:
The car was deserted—Katurah
was missing!

(TO BE CONTINUED)

How Murphy Works

What Shall We Do About It?

By

HON. EDMUND R. TERRY

Member of the New York

Assembly in 1906 and

1911 from the First

District of Kings

Illustrated by O. E. Cesare

SOMETIMES the people wonder why after a sustained and intelligent campaign to elect a better type of officials, the results are not more lasting, for presently the body politic is back again in the old slough.

The reason is very simple. We may elect reform governors, reform mayors and I have even known of a successful movement to elect a reform register, but that does not reach the source of bad government. The wily professional politician is like the astute soldier who draws the enemies' fire by thrusting above the ramparts a hat perched upon a stick. The hat may be riddled through and through, but the wily soldier escapes. People desirous of better things in government elect their executive officers in vain unless they control the legislature; for all these executive offices, including that of governor, are under the strict control of the legislatures and their every effort for good is easily thwarted by a legislature controlled by the organization. The Bosses can smile at the election of other officials so long as they control the legislature.

The ignorance of the ordinary citizen as to the power inherent in the legislature is not shared by the Party Boss. He knows that the legislature is the controlling force in our government. Every law that is passed, to be effective, must have with it the enacting clause; that clause reads: "The People of the State of New York, represented in the Senate and Assembly, do enact as follows:" That clause distinctly sets forth the relation of the legislature to the state and all in it, for the people constitute the government and the legislature is that one of the coordinate branches of the state government, which represents the real power,—that is, "The People." The best mayor that ever lived may be thwarted in every endeavor he makes by a legislature under improper control. The same is true of the Governor and of every official under the state government. The charter under which the Mayor and the Board of Estimate and

Apportionment act can be changed at any time by the legislature. In the session of 1911, it was only the refusal to wear Mr. Murphy's collar by a few determined men in the legislature that prevented radical changes in the city charter, that would practically have eliminated the Board of Estimate and Apportionment, as an effective part of the city government.

WITHIN the last few months the power of the Assembly has been signally shown in the impeachment of Governor Sulzer. No power on earth can remove the Governor, except the Court of Impeachment, and no power on earth can bring the impeachment proceedings except the Assembly, and the only power that can remove a Senator or an Assemblyman from his seat is the House to which he belongs. The Constitution specifically prescribes,—"Each House shall determine the rules of its own proceedings and be the judge of the election returns and qualifications of its own members." Of course a member of either House convicted of a felony loses all rights as a citizen and that includes the right to sit as a member of the legislature. The present Assembly has also given another instance of the enormous power inherent in that body. They have arrested a citizen of the state for contempt and imprisoned him for the balance of the legislative term. By the Constitution no power outside of the Assembly can release him. The courts are powerless against that body. These enormous powers would be all right if our legislature were composed of men who really and individually represented their constituents; but when the legislature, by the control of a majority of its members, is simply a tool of Mr. Murphy's or of any other boss, these powers are tremendously dangerous. As it is under ideal organization rule, the Assemblyman obeys his district leader, except in small matters that have no political significance whatever, or that affect some part of the state other than his own district or

county. The district leader obeys the county leader and the county leader obeys the big chief on Fourteenth street. Is there anyone that pretends that the big chief in Fourteenth street receives his orders from the people?

The average citizen does not sufficiently realize that perhaps the most important man to him personally and as a citizen is the man who is to represent him in the Assembly at Albany. Aside from all the laws of a political complexion, the laws that prescribe the conduct of business throughout the state are in the hands of the legislature. While it takes both Houses to agree on a bill, either House can kill it and the influence of an intelligent, honest and capable member in the Assembly is very great. Now suppose an average citizen wakes up some morning and finds an unjust measure is proposed, that is likely to injure if not destroy the particular business in which he happens to be engaged, or a bill that, while it may be good generally, yet requires amendment to make it a just measure. If he has an Assemblyman who is a fit man for his position his remedy is easy. He can see him and lay it before him. If his representative, however, has been elected simply because he is a good fellow, faithful in his party work, but otherwise of no particular force, the Lord help the injured citizen.

THE most efficient Assemblymen are not those who introduce the greatest number of bills, but those who by careful reading and careful consideration of the letters they receive from their constituents determine what bills are good and what had and vote and work accordingly,—particularly work. An Assemblyman is on fewer committees than a Senator and consequently has less of routine work and more time to arrive at a wise discrimination as to the bills that come before the House.

The fact that the Assemblyman receives a salary of only fifteen hundred dollars and that his name is way, way down at the bottom of the list of the

candidates on the ballot partly accounts for the almost total lack of understanding on the part of the public as to the real functions and powers of the body to which they elect their Assemblyman. Every Assemblyman in New York State represents a constituency of over sixty thousand people. Voters seem to realize this in the country districts, but not in the big cities. The functions of an Assemblyman are tremendously important and it makes an enormous difference to the people of the state whether those functions be exercised by an intelligent and fit man from each of the hundred and fifty Assembly districts or whether the majority of them are merely rubber stamps in the hands of a "Boss," who exercises their functions for them.

THE sphere of influence of an individual Assemblyman is as great as the state, and concerns every individual in it. The laws that he has a say in passing affect the individual inhabitants of the state from the time they are born until the day of their death,—yes, even before they are born and after they die, in every relation of business and social life. I am speaking of the powers that are inherent in the office. Those powers are exercised by some one; if by intelligent and conscientious representatives, it would be all right, but if exercised by a Boss, using the representatives merely as rubber stamps, the result always has been and always must be to the injury of the state and of its people. In other words, we cannot have the government we should have in this state until its citizens come to a realizing sense of what their legislature means to them, and select their representatives accordingly.

The purpose of this article is only to draw attention to the source from which improvement in our political methods must come, if it comes at all. Only the legislature can give us a real Direct Nominations Bill, which should also make the election district the real political unit. What we need is such a bill.

THE Recall and Referendum are, if necessary at all, only necessary because we have not today a real representative government. If we attain that, and the Recall and Referendum are found then to be necessary, the voters have in their hands the power so to enact. Tammany had control of the legislature to a large extent in 1911 and has full control in 1913 and we cannot expect that organization to commit political suicide, no matter how beneficial to the party such an act might be. It is useless, therefore, to vote, except in rare cases, for a candidate of that party for the Assembly with any expectation of his voting or working for any measure that would take the control away from the organization and place it with the voters. Anyone who knows the workings of the Assembly district system, which is the basis of the present organization of the Democratic Party, in whatever counties Tammany controls, can only be amazed at the assertion that the candidates put forward represent the real desires of the voters of the party in the district. These desires have been so long held in abeyance that to a large extent they are atrophied and the voters have no recourse, but simply to accept the man who is selected by their candidate. Should an attempt be made to run an independent candidate by those citizens dissatisfied with the nominees of the regular party, the way is beset with great difficulties. In the

first place, it is necessary to have a petition to which five hundred voters of the district have affixed their names and acknowledged before a notary that they have done so. The only safe way in which this can be done, is to have each petitioner have both his signature and acknowledgement, before a notary on a separate sheet. The reason for this is the lovely joker in the existing law by which any sheet on which five per cent. of the names are fraudulent or forged must be discarded, though every other name on that sheet may be genuine and legal. When my petition was presented, I fondly imagined that I had some five hundred and sixty petitioners, but on different sheets forged and fraudulent names were shown, which knocked out so many genuine ones that were on the same sheets, that the number was brought down below the five hundred limit, and I was out. Nor is it easy to get men to sign a petition. There are eighteen or twenty men who will vote for an independent candidate on election day who will not sign a petition to one who will do so. The ballot is secret and unless he sees fit to proclaim his vote no one knows how he has voted. Signing a petition, however, is coming right out in the open and any one who does so renders himself at once liable to all the little, petty persecutions and annoyances that every district leader knows very well how to inflict through his satellites in various city departments. Everyone knows how the regular candidate is chosen. He really represents nothing except the will of the leader. The designating committee consisting of fairly reputable citizens who have been selected the previous year on account of their respectability and docility are called together by the leader, and either he or one of the number known to represent him tells the others whom to vote for. The man so selected becomes the regular candidate at the primary and with all the force behind him, is usually made the party candidate.

OPPPOSITION at the primaries is almost useless because the odds against the men engaged in the movement are entirely too great. While there are fewer names demanded on the independent petitions for contest in the primary, nevertheless, every name must be that of an enrolled voter in the Party. This makes it difficult for the number to draw from is comparatively limited and as in the case of the petitions for an independent candidate at the regular election, the lists are made public and every man who signs is subject to all sorts of urging, treaty, abuse and, where it is practicable coercion. The regular forces are so organized, and most of them have such a personal interest in the outcome, that they would do almost anything to maintain the supremacy of the regular organization, not in the interests of good government, but for the complete protection of those who are nourished at the public crib. This is perfectly natural, but is not a good thing for the interests of the public at large; who after all are more interested in their government than they seem to realize.

In my own case in the fall of 1911, a contest in the primaries might possibly have been carried, but I was attending to my duties in Albany up to and beyond the date of the primaries. My chances in the primaries might have been good. On election day five hundred and sixty-five voters wrote my name on the ballot, as provided for by law, more than two hundred others wrote my name on the

ballot, but owing to intricacies of the ballot law their votes could not be counted and their entire ballots were thrown out as irregular or void. This showed strength with the voters.

With the election district as the unit, the story would probably have been different. There, each election district is a law unto itself and is not governed so much by the Assembly District Association. For instance, as the law is at present a man may represent my district in the general committee or on the designating committee who might not be able to get a dozen votes in the district. He is elected by the voters of the Assembly district at large, and so with every other election district,—neither of them have anything to say for themselves, but the choice for each is merely the echo of the wishes of the crowd—or rather the leader—that controls the Assembly district.

WE had at one time in Kings County a real election-district system. Each election district elected its own representative to the various conventions and any attempt made on the part of any central power to coerce the choice of an election district only assured the success of the opposition. An election district unit is so small that the majority of the voters of any party in it come to know each other, and know each other so well that ten or twelve men of character and standing can, without expenditure of any money or of much time, carry the election district as they please. Some election districts, of course, in an Assembly district, will be carried by the regular organization at first, but through the district at large, it will usually be found that those districts that are a law unto themselves would be in the majority, and so control and be the regular organization of that district: but it will be an organization in which there is no room for an absolute boss, as at present. If, in addition to that, we have a reasonable system of direct nominations, the representatives in the general committee throughout the Assembly district being in thorough touch with the people voting in their respective districts, will be in a position to suggest for the party nomination for Assembly. For instance, a candidate, that will be acceptable to the majority of the voters of that party in the district, and where the officials of the Assembly district are the selection of the real representatives of various election districts, their selection of candidates at the Primary for Congress and other offices will be made intelligently and in conformity with the desires of the voters.

THE government by organization, as it is at present, is neither Democratic nor Republican, nor has it even the virtues of a despotic monarchy. There are things to be said in favor of even oligarchy, that cannot be urged in favor of organization rule, as we have it under Tammany. Whoever else you vote for, vote for Assemblymen that are really competent for the great office of representatives in the State Assembly, who are honest in the belief that this should be a government really by the People. Elect such Assemblymen and the other things that every good citizen desires will follow as a matter of course, and if the success we all expect follows the present effort to elect capable, efficient, honest and independent city officials, we will not suffer the mortification later of seeing their efforts nullified by the higher power of Murphy working through the legislature.

PEN AND INKLINGS

I ONCE called Bernard Shaw, in rhyme
"The Greatest Playwright of his time."
Next day he cabled "Incorrect,
For 'his' read 'all,' " signed Shaw—Collect.

The Secret of the Skimp Skirt

WHEN King Solomon in all his boredom exclaimed, "There is no new thing under the sun," he was only expressing a sentiment as old as the sun itself.

Eve said the very same thing many years before in the annals of Paradise. "Tell me something new!" she wailed, and the Serpent—he had never seen a lady cry before—was deeply moved (the Serpent has always been misjudged) and—there being no National Board of Censors—told her everything he knew.

When he had finished, Eve looked bored-er than ever. "Is that all?" she said.

OUR own Alan Dule asks the same hopeless question on the first night of every new play. "Will there never be an end of these crook plays," he moans, pondering darkly the while how he may hatcher the title to make a Roman headline.

Father Time has nothing to say on the matter. If you ask him to show you a new thing, he shrugs his wings and says,

"You can search me." Things old and things new are all alike to Father Time.

Peradventure, in the uttermost recess of the Sphinx lies a hair of an unknown color, or a blueprint of the fourth dimension, or better still the Ms. of a new play, or a joke that has never been cracked.

WHEN a Roman bath is unearthed in Kent or a milliner's shop in Pompeii we wait breathless to hear of the discovery of a new story, or a new dress pattern, but always it is the same old skull, the same old amphora.

Even the newness of Fashion is a jest of antiquity.

In an Italian book printed in the sixteenth century is a story (says "The Lounger" in the *London Sketch*) of a fool "who went about the streets naked, carrying a piece of cloth upon his shoulders. He was asked by some one why he did not dress himself, since he had the materials. 'Because,' replied he, 'I wait to see in what manner the fashions will end. I do not like to use my cloth for a dress

which in a little time will be of no use to me, on account of some new fashionio.'"

There may be a newer version of this story in the ashes of the Alexandrian library or beneath the ruins of Babylon, but this has at least the freshness and luster of its four-hundred years. Also it throws a light, a very searchlight, on the translucent demoiselles of today (see them shyly run to cover at the mere mention of a searchlight).

NOW we know their guilty secret.

Each of them has hoarded away in a secret drawer (as money in paucity times) a roll of fine silk or voile, or panne velvet, or crepe de chine which she is sparing from the arisours till the Wheel of Fashion shall oscillate with less fury. Then she will put away the skimpy, flimsy makeshift garments of transformed window curtains and bath towels, converted robes de nuit and remnants of net or chiffon she has been vainly trying to hide behind—and then—then alas, we shall see her an more!

CORNELL'S ATTACK AGAINST CARLISLE

A wide opening was made just outside of tackle and the runner made good gains in midfield. The Cornell attack failed, however, when set in motion under the shadow of the Carlisle goal.

Current Athletics

By HERBERT REED ("Right Wing")

CARLISLE and Cornell were among the first of the Eastern eleven to show an advanced form of attack, and in defeating the Ithacans at Percy Field the Indians disclosed certain formations that were based largely on sheer power. Warner's pupils had been expected to play a wide-open game, with a plentiful sprinkling of forward passes and wide end runs, but they surprised the Cornellians by making a heavy assault on the guard positions and upon center, using the remarkable Guyon to carry the ball much of the time. The result was that the Ithaca line, playing entirely too high, was swept off its feet in the first quarter, and the secondary defense, on guard for open play, was chary about coming up to support the line.

Neither team's defense was up to the best Eastern standards, and although from the conclusion of the first quarter to the finish of the game Carlisle's attack was pretty well bottled up, the Indians gave evidence of strength at all times, save on the ends, where Warner's charges seem to be weaker than they have been in several years. In running back kicks and in handling the ball generally Captain Welch of Carlisle did not live up to last year's reputation, and with the exception of Guyon it was the line that earned the honors of the day. The Indian team is much heavier than the figures sent out from Carlisle would indicate, and the weight is close to the ground. The In-

dians charge very hard, very fast and very low, and it was this splendid charging as much as anything else that gave them the whip hand in the first quarter.

MOST of Carlisle's play was based on three formations, shown in the accompanying diagrams. The quick dash from the always dangerous kick formation is found in Fig. 1. In this play two ends were sent over to take care of the defensive Cornell end on one side, a method frequently employed by Fielding H. Yost at Michigan, and successfully

as possible, the defense thus losing only one man to two for the attack, with the possibility that the end may be able to get into the play after all. I doubt if this offensive system will work well against Dartmouth, a team equipped with unusually good ends this year. Latest advice from Hanover lead one to believe that although the material is not nearly as husky as last year, there will not be the same tendency toward high charging that made so much trouble for the Green against Princeton last year.

Carlisle's wide tackle run, shown in Fig. 2 is one of the best built plays I have seen used this year, the serious flaw in it being that it is a trifle slow and cumbersome, so that it is possible at times for the defense to break it up with only one man. There is a wall of interference, but in this play, as is the case with the one first mentioned, there is a "pairing" of the ends on attack. The formation shown in Fig. 3 deals with the much debated problem of "false attack" and is apparently effective October football. It is extremely doubtful if the formation will be so effective against Dartmouth when the teams meet in New York.

Fig. 1.—Quick defense from kick formation

met again and again by Pennsylvania. The defense against this maneuver is usually a simple mathematical problem. Cornell's defensive end simply carried the two men "paired" against him as wide

THE Indians made less effort beyond the line of scrimmage than former Carlisle teams have done, and the Indian defense is none too strong, especially against the kicking game, a type of play that Dartmouth probably will use to the limit against the Redskins.

Fig. 2.—Wide tackle run

Fig. 3.—False attack

Against Cornell Welsh repeatedly signalled for a fair catch when facing the good punting of Barrett, and there was no sign of the quick formation around the catcher that has marked Carlisle eleven in the past.

But for the initial bad play of the line, and serious mistakes in generalship, such, for instance, as throwing away a strong kicking game in favor of a running attack in defensive territory, Cornell might well have made a far better showing. It is difficult to understand why it is necessary for any team to give the ball to its opponents on fourth down, and why, if the forward pass is to be used at all, it should be brought out only as an emergency measure. Cornell's ability to draw the secondary defense away from the territory of the pass was so noticeable that it seemed a pity the play was not used extensively on first or second down. It seems difficult to make the average football follower, and in some cases the coach, realize that the threat of the forward pass is almost as valuable as its successful execution, and that this threat must go hand in hand with any well planned running game.

FROM what I can learn of Dartmouth's system this year it seems certain that the Indians will have to face some excellent forward passing engineered by good quarterbacks and unusually good ends. In Captain Hogsett and in Louden the Green seems to be as well equipped on the wings as almost any eleven in the East. Dartmouth men who are close to the team are not expecting to see a star aggregation in the field, but they pin their faith to the speed and versatility of the Hanoverians. Dartmouth is equipped with a good punter in Curtis, and a good placement and drop-kicker in Captain Hogsett. Under the existing rules the kicking game is at a premium, and when Dartmouth and the Indians meet, the Hanover kicking game will hardly suffer by comparison, I think. Earlier in the season the odds against Dartmouth in this important game might well have been heavy, but even if the Green suffers reverses before meeting Carlisle I expect to see a well-coached eleven of better than average individual strength on the big day in New York.

All scores aside, most of the big Eastern eleven seem to average better this year than a year ago, and while the advantage of prestige still lies with Harvard, the Crimson, to be successful, will have to beat better teams, I think, than was the case in 1912. At this writing there is little to choose among the leaders, save in individual positions. Then, too, while the Navy seems quite up to the standard of a year ago, there is every evidence that Lieut. Daly is building up a high-class eleven at West Point. The Army-Navy game this year should be a fitting climax to the season.

THE Cornell-Carlisle game emphasized the faults of the direct pass from center to the backs. Cornell's tackle plays were well conceived, and well executed, so far as the opening was concerned, but there were many times when the back failed to come up promptly to the opening, having been slowed up by the direct pass. There is no blinking the fact that the back who has to make a plunge into the line anywhere between the two tackles must have his mind relieved of all thought of the ball, and to this extent I believe that the direct pass is a failure. I know that some of the best coaches in the country use it constantly,

Economy of the Bell System

Consider this significant fact: While most of the necessities of life have gone up, the price of telephone service, which is one of the essential factors in our commercial and social life, has moved steadily downward.

Although a pound of these necessities still contains but sixteen ounces, the telephone user has been getting more and more service for less money.

On the average, the people of this country pay 49% more today for food, fuel and clothing than they did in 1895. Since then, the decrease in the average rates for telephone service has been more than one-half.

At the same time, the efficiency and value of the service to the subscriber has vastly increased. Today he can talk to an average of five times as many persons in each exchange as he could eighteen years ago.

This is the inevitable result of the comprehensive policy of the Bell System, which brings together the associated Bell companies and the communities they serve.

Through the very size and efficiency of their organization they accomplish improvements and effect economies which give the greatest service at the lowest rates.

AMERICAN TELEPHONE AND TELEGRAPH COMPANY AND ASSOCIATED COMPANIES

One Policy

One System

Universal Service

It is the aim of the publishers of HARPER'S WEEKLY to render its readers who are interested in sound investments the greatest assistance possible.

Of necessity, in his editorial articles, Albert W. Atwood, the Editor of the Financial Department, deals with the broad principles that underlie legitimate investment, and with types of securities rather than specific securities.

Mr. Atwood, however, will gladly answer, by correspondence, any request for information regarding specific investment securities. Authoritative and disinterested information regarding the rating of securities, the history of investment issues, the earnings of properties and the standing of financial institutions and houses will be gladly furnished any reader of HARPER'S WEEKLY who requests it.

Mr. Atwood asks, however, that inquiries deal with matters pertaining to investment rather than speculation. The Financial Department is edited for investors.

All communications should be addressed to Albert W. Atwood, Financial Editor Harper's Weekly, McClure Building, New York City.

Champagne

Unsurpassed in palate pleasing flavor, elegant bouquet and sparkling life. Pays half the price you pay for imported champagne goes for twice the price you pay for Cook's goes for quality.

AMERICAN WINE CO.
ST. LOUIS

but the testimony of the stop-watch is against it, and the line coaches who are teaching forwards to make quick openings are almost to a man against the pass. Cornell made many quick openings against Carlisle, only to find that the backs could not get up to them in a pinch.

It must be remembered that even in the ten-yard zone behind the goal line the defensive backs can come up very fast, and unless they have been pulled out of their position by the threat of the forward pass are always ripe to choke a quick opening. With the direct pass in action, save when it is used for runs from kick formation and wide end runs in general, the backs start entirely too far behind the line of scrimmage, and no matter how well protected by interference their work is hampered through having to slow up to take the ball and through having to do considerable running before they reach the line.

SOME years ago Yale showed what could be done in the way of quick openings, sending Chadwick through them twice in the Princeton game for runs of half the length of the field, and it seems strange that only a few of the coaches have worked on the theory of starting their backs very close to the line.

To get back to the Cornell-Carlisle game for a moment. There were so many serious mistakes in generalship in this contest that it will be interesting to see how much Cornell improves in headwork before the season is over, for a team handled as was the Cornelian and White the other day will hardly beat Pennsylvania on Thanksgiving Day. In the first half

Cornell three times lost the ball to Carlisle through poor judgment in the selection of plays. Poor passing from the center was another stumbling block for the Ithacans for with the direct pass the center has a serious burden to carry. Extreme care in his passing, necessary when a man has to shoot the ball to three or four different spots, helps to spoil the center's charge on attack, and this charge is of the utmost importance. One more word about the generalship, or lack of it, against the Indians. Barrett, running the eleven, and a man who before the season is over probably will rank with the best, sent too many of his plays into the strongest triangle of the Indian defense at critical stages, and having wasted the downs on which he might well have done his experimenting, was practically forced to the use of the forward pass.

The Yale prospects at this writing are far better than they were two weeks ago. More men without reputations but with plenty of promise have been out with the team, and it is a safe guess that the Elis will put a first-class eleven in the field for the big games. There will be more difficulty than usual in getting a line on the respective merits of Yale and Harvard, since Brown, the stand-by as a "trial horse", seems to be below the standard this season. In years gone by the opinion of the Brown players has been extremely valuable on the eve of the Harvard-Yale game. This year the entire season of both the Blue and the Crimson will have to be studied before the followers of the gridiron game will be able to work out a reasonable comparison of the two.

What They Think of Us

Brand Whitlock, Mayor of Toledo (Ohio)

I have been up in the woods of Michigan for several weeks, and while I was there I used to think, in the intervals of golf and dancing and writing the concluding chapters of a book, that one of the things I most wished to do was to write and tell you that I was glad you were the editor of HARPER'S WEEKLY. For I am glad, and I wish to congratulate you on the numbers that have appeared thus far. For me they have the interest of a publication that is inspired by and expressive of your personality, and aside from your own work I have found great pleasure in the cartoons. They are quite the biggest thing of that sort that has been done in America, and I am glad that in them and in the attitude you have assumed toward public questions there is evidence that we are at last to have a literature and an art in America for minds that have been developed beyond a merely childish range of interest in intellectual affairs.

Jenks Cameron, Seattle (Washington)

You err in addressing anyone as a reader of HARPER'S WEEKLY. There are no such readers; there is no such weekly. There is a thing that calls itself that, but then there was once an ass that acquired a lion's skin—by purchase perhaps. We all know about that ass. His roarings fooled nobody.

George M. Irvin, Colorado Springs (Colo.)

It seems to me indeed a sad commentary if American people of sense and taste can prefer the stuff in writing and so-called cartoons which now fill HARPER'S WEEKLY to the very brilliant comment of

Mr. Harvey and the pictures and other contents so long included in the old and real "Journal of Civilization."

Hon. Josephus Daniels, Secretary of the Navy, Washington, D. C.

I wish to congratulate you upon the artistic appearance of HARPER'S WEEKLY. In its new dress it is a "thing of beauty." Though I feel you may not be spared as long as your friends would like so as to make it "a joy forever," its weekly visits will be warmly welcomed by thousands of Americans who have come to need the weekly tonic which your writings always impart.

Boston (Mass.) Herald

If these issues are to be considered a foretaste of what is to come, as well as a demonstration of what he has already accomplished, there would seem to be every reason to assume that this venerable weekly has resumed its earlier vigor and popularity.

New York Tribune

Guess Norman will recover his balance, once he gets used to the excitement out yonder on the floor. Otherwise, won't he catch the dingsbats.

Manchester (N. H.) Leader

We congratulate Mr. Hapgood upon his success in so completely, and so acceptably, changing HARPER'S, both as to contents and physical appearance.

Eau Claire (Wis.) Leader

No one will ever recognize the old WEEKLY in the new garb. The cartoons

are striking enough to be puzzling, the articles are clean cut, up to date and quite fearless on different lines than of yore. It will be a leader in the feminist movement, which it says is "a poor name for a big thing." The paper, no doubt, will be successful and deserves success.

Worcester (Mass.) Gazette

People will soon be wondering what Hapgood will have to offer next.

T. F. Vickers, in the "Plumbing News," Pittsburgh (Pa.)

It is a pleasure to note the attractive new form of HARPER'S WEEKLY. You are to be congratulated for providing such an interesting and valuable weekly in the new form.

Birmingham (Ala.) Age-Herald

The editorial pages are scintillating. Hapgood's pen is at its best, and every article is not only readable, but it is full of snap and vigor.

Eustace Hale Ball, (President the Historical Film Company, New York City)

HARPER'S WEEKLY, in this one edition, is certainly better than any other magazine I have seen in many years.

Long may it wave!

Chicago (Ill.) Evening Post

Friday is going to be a black day for husbands. Friday is the day upon which Mr. Norman Hapgood publishes HARPER'S WEEKLY.

The immediate effect of this event seems to be to excite a large number of feminine readers of the "Journal of Civilization" to hold their husbands guilty of cherishing the "feminist" views therein set forth and to punish them therefor in the various ways known to the mind of woman from Eve down.

"It makes 'em mad as wet hens," is the report conveyed to us from a depot news agent, who says, incidentally, that he is now selling 150 copies of the WEEKLY where he used to sell ten.

The Sacramento (Cal.) Bee

It is particularly to be hoped that Norman Hapgood, who has done such yeoman work in an effort to emancipate humanity, will not give aid to his revived effort to shame womanhood under the lying banner of emancipation—to exalt the courtesan and to degrade the wife.

And it is even more to be hoped that he has misunderstood entirely the feminist movement; that as a whole it stands for purity and not for adultery; that Ellen Key nowise represents it, but is merely the mouthpiece of her own personal erotic ideas.

Council Bluffs (Ia.) Nonpareil

The magazine ought to find a large clientele of readers, in spite of its old title. There is an increasing number of people in the country who want to know the truth which the new editor has an established reputation for telling.

Frederick H. Robinson, "Medical Review of Reviews"

The metamorphosis is wonderful and it is easy to see that you are going to produce a vital publication which will take its place among the leading periodicals of America. We cannot have too many publications with red blood in them and we are sure that the reading public will be grateful to you for your work.

Finance

By ALBERT W. ATWOOD

An Unripe Melon

FINANCE and Investment are supposed to be dry, matter-of-fact subjects. But along with the investment of hard-earned savings goes a "take a chance", audacious spirit. It has been well said that many unwise investments are due to the desire of the lonely and humble to shine and be significant, to ally themselves with mystery, to become identified with a marvelously productive tropical fruit orchard in a far-away dreamy land, or with the untamable oil-gusher in the new state but lately roamed by noble red men.

The true story of Harriman's life would be far more "romantic" than the most thrilling tale of adventure that goes by the name of fiction. In 1893 the Union Pacific had but \$8,000,000 of net earnings to pay \$12,000,000 of charges. The little, unknown Wall Street broker forced his then more welcome person into the councils of this company and expanded the property physically, geographically and financially until it reached from Puget Sound to the Gulf of Mexico, with a \$30,000,000 lap over into old Mexico, and developed such an overflowing treasury that for several years past the one recurring subject which most excites Wall Street's imagination is whether and when the Union Pacific directors will declare a "melon".

Melons and Lemons

MELONS are the exact reverse of lemons. One is sweet in the mouth and the other is sour. "When a company makes a large extra distribution to its stockholders in cash or stock," says Smith's Financial Dictionary, "the act is colloquially described as cutting a melon".

It has always been the fortune, or misfortune, of Harriman and his successors, to fire the imagination. That is, no company has been surrounded with a larger body of favorable and glowing rumors than the Union Pacific. Union Pacific stock has for years galvanized a jaded stock market. The company became under Harriman's wizard like management, and still remains, fully as much of a banking and investment institution as a railroad. Now there has just ended another period of melon rumors and corresponding speculation, and a complete damper on the whole affair by Judge Lovett's cold blooded denial. But let us look at the melon itself.

Fruit from Many Trees

WHEN Harriman took a hold of the broken-down Union Pacific line between Omaha and Salt Lake City he went about strengthening it in every possible way. One of the first things he did was to buy the Southern Pacific, which the United States Supreme Court has just pried apart from Union. This purchase was not for investment purposes at all, but none the less it has netted the Union Pacific a profit of at least \$30,000,000. Then Harriman tried to get an interest in the Burlington road and when it was refused him he took sweet revenge by purchasing a great interest in the Northern Pacific, also a James J. Hill enterprise.

Later, when Harriman found he could not control the Hill properties he sold the stock purchased at a profit of \$58,000,000. With this huge sum and other monies the Union Pacific then bought:

Illinois Central stock.....	\$62,000,000
Rock Island and other companies.....	24,524,400
Baltimore & Ohio preferred.....	17,408,400
St. Paul preferred.....	18,400,000
Norfolk and Western common.....	4,019,700
New York Central.....	17,817,100
Chicago & Alton preferred.....	10,583,100

Now it is true there has been a loss in market values on these latter stocks of more than \$30,000,000, although the shares net a fair average income return. But the company has put back into its property in the last twelve or thirteen years about \$150,000,000 out of earnings. Although dividends of 19 per cent. have been paid on the stock since 1906 there has been a surplus each year after dividends as follows:

1906.....	\$12,520,840	1910.....	\$19,919,914
1907.....	14,749,004	1911.....	14,744,448
1908.....	14,186,724	1912.....	8,208,511
1909.....	17,700,000		

What to Do With the Cash

IN addition to this showing everyone knows that early this summer the Union Pacific was compelled to sell more than \$68,000,000 of Southern Pacific stock to a syndicate. This stock was sold at 92 (or 88 including 4 per cent. of accumulated dividends). It is true that Union Pacific had to borrow to buy Southern Pacific originally. It sold its own convertible bonds for the purpose, but nearly all of these have been exchanged for stock so that now there are practically no fixed charges representing the investment in Southern Pacific. For its Southern Pacific stock Union Pacific received about \$80,000,000 in cash, which added to the \$63,000,000 in cash which it had on June 30, 1912 (1913 report has not yet been issued) makes more than \$143,000,000 in cash. Moreover, for all its Southern Pacific stock Union paid an average of only about two-thirds of its par value, whereas the selling price was for about nine-tenths of par value.

One thing is clear then, without further painful analysis: Union Pacific is a very rich railroad company, with enormous assets, not unlike the old Standard Oil Company.

Early last summer when plans were perfected for the sale of \$88,000,000 Southern Pacific stock Wall Street gradually awoke to the fact that Union Pacific would be richer in cash than ever. Rumors of a ripe melon-cutting grew to fabulous proportions. It was the only relief in a summer of pessimism. On June 13, Union Pacific, a seasoned 10 per cent. stock, sold as low as 137½. Fanned by the melon rumors it had risen to 162½ by September 30, a gain of nearly 25 points. Then mysteriously the stock began to slide back. By Wednesday, October 3, it had fallen to 153½ and the next day Robert S. Lovett, chairman of the board of directors, announced there would be no extra distribution at present and even if the directors had decided upon one they would have reduced the regular 10 per cent. dividend to correspond, so he said. By Saturday, October 11, the stock had fallen to 150½, and is now at 147.

Inside Opportunities

UION PACIFIC has always been a stock which afforded great opportunities to the "insider". I do not mean to say the directors and their associates have availed themselves of what lay in their path. Once the Interstate Commerce Commission tried to find out about big inside Union Pacific deals but it was able to get so far and no farther. There were questions which directors refused to answer, and the courts upheld their silence.

Whether advantage was taken of the decided up and down movements in Union Pacific in the last few months by "insiders" I do not know. But the stock at 147, yielding 0.80 per cent., is by no means an unattractive semi-speculative investment. Perhaps it is unfair to call it "semi-speculative", so great are the assets behind it. But its market behavior is often so speculative that in a sense it is removed from conservative securities despite the wealth back of the paper certificates. In the eleven years from 1901 to 1911 inclusive Union Pacific furnished 11.57 per cent. of the total trading in stocks on the New York Exchange, slightly more than the nearest second, Reading. It is distinctly a speculative "leader".

Union Pacific is one of those stocks in which money is made and lost in large chunks. It is ideal as a quick road to fortune, or the reverse. But suppose the stock goes to 137½ again, as it surely will if there is another real flurry in the market. At that price it returns 7.25 per cent. on the investment, a real, true enough bargain.

Keeping the Cake

CAREFUL students believe Union Pacific is worth as an investment as much as 100 or 163, which is probably about as close as one can come to it. Of course if the \$80,000,000 of cash obtained from Southern Pacific were given away dividends would have to be reduced. Moreover the company has many necessary extensions to make in Oregon and Washington and not long ago announced a \$75,000,000 improvement program. If it gave away its assets the company would be giving away its capital in large part, which it has no right to do. Possibly the company would be justified in striking an actual balance on its investment profits and declaring an extra dividend to correspond to those profits.

Attorney-General McKeenolds will bring a suit to compel the Southern Pacific to give up the Central Pacific, a line which both the Southern and Union Pacific desire to own. Union Pacific needs cash to buy in case it has the opportunity. Of course no railroad is warranted in keeping \$140,000,000 in cash indefinitely. But there will be plenty of legitimate uses to which Union Pacific can put this money. One thing is certain: there does not appear to be any good reason why this company should not continue to pay 10 per cent. dividends or its equivalent for some time to come—a remarkable achievement in these days of supposed railroad poverty.

HARPER'S WEEKLY

Journal of Civilization

Edited by NORMAN HAPGOOD

Vol. LVIII
No. 463

Week ending Saturday, November 8, 1913

[10 Cents a Copy
\$2.00 a Year]

Prices, Trusts, and Credit

THE relations between monopoly of credit and monopoly in production are extremely close. We have already announced a series of nine articles by Mr. Brandeis discussing various aspects of monopoly of credit, of the so-called Money Trust, and proposed specific remedies. Since the President has announced that trust legislation will be the principal business of Congress as soon as the money bill has passed, Mr. Brandeis has decided to precede his Money Trust articles with two articles on the general trust situation. One of them outlines a program for legislation and the other discusses price maintenance, explaining how, rightly conducted, it works against monopoly and not for it. The first of these two articles appears in this issue; the other will be printed next week; and then the Money Trust articles will follow, beginning with November 22d.

How Their Minds Work

SPEAKING of Mr. Brandeis, we are reminded of the standpat view of him and of his influence. While he is appearing to progressive minds as the most penetrating and constructive thinker at present studying industrial needs, to the reactionary he looks like the power denoted by horns, tail and hoofs. Discussing the latest wreck on the New Haven railway soon after Mr. Brandeis's "Banker-Management" appeared in HARPER'S WEEKLY, a group of conservative business men were trying to explain the latest terrible wreck on the New Haven. They decided it was due to a general demoralization of the personnel, caused by investigations and criticisms. In other words, the wrecks were caused by Mr. Brandeis. Wherever any unfortunate condition is shown up, and any step ahead prepared for, that is the way the standpat mind works. It blames the doctor for the existence of the disease.

Morals of Christabel

SAVAGE attacks have been made in some of the British papers, and in some American papers, on the articles which Christabel Pankhurst has been running in *The Suffragette* on the dangers of marriage. They have been accused of immorality and indecency. Certainly they are neither immoral nor indecent. They are perfectly straightforward, and also, in substance they are entirely true, constitute a needed and valuable warning, and increase the pressure on men to improve in sympathy with women and in restraint. The criticism to which they are fairly open is that

they resemble somewhat the articles on drink which the early prohibitionist used to have printed. They are shrill and they exaggerate.

Fashionable Diseases

COMPLAINTS of the body have their social standing. There is a hierarchy of disease, and in it are many surprises. Tuberculosis, for instance, to which no obloquy really attaches, is usually concealed, at least in its earlier stages, and called by some other name. Locomotor ataxia, on the other hand, in spite of its usually discreditable origin, has been one of the diseases in the highest social standing. People almost boast of it. Probably, as the cause becomes more generally known, it will lose its glory. We change most slowly in little things. This is one of the absurdities that has survived since the days of aristocracies, in spite of our theories on the dignity of poverty and the disgracefulness of vice.

The Arkansas Idea

TWO constitutional amendments were recently submitted to the Arkansas electorate. One disfranchised the mass of illiterate voters and was aimed especially at the negroes. The other outlawed the saloon. Either would have been adopted if submitted alone, but the Anti-Prohibitionists combined with the negroes, saw that they were registered and voted, and both amendments were defeated. The legislature was elected by the white voters and was overwhelmingly for state prohibition. A new expedient was adopted. A law was enacted providing that liquor licenses should be granted by city officials only upon a petition signed by a majority of the white residents, men and women. The law has just been declared constitutional by the state Supreme Court. By national law, we prohibit the sale of liquor to Indians, and by international agreement to the South Sea Islanders, and it is a matter of common knowledge that whiskey is as demoralizing to the negroes in the South as fire-water ever was to the Indians. Arkansas lawyers contend that this form of petition is not an exercise of the suffrage, and that the matter is one relating solely to the exercise of the police power of the State for the good of society. The law aims at the protection of the negro population from its chief curse. It is unique in recognizing the interest of the women in the abolition of the saloon. If the Supreme Court upholds the Arkansas Court, not a saloon license can be granted in a single city in that state, and Arkansas will join the ranks of the Prohibition states of the South.

Aftermaths

THERE was an obvious connection between the votes in the Senate against free lumber, in the Payne-Aldrich tariff bill, and the votes for the acquittal of Lorimer, and there has also been a singular fatality for those who voted thus. Bailey refused to entrust himself again to the suffrages of the Texans. Paynter did not long contest the issue with Ollie James in Kentucky. Simmons voted for Lorimer the first time and against him the second, because of additional evidence, and in his campaign for re-election, which was successful, a good part of his time was taken up explaining his votes. John Walter Smith of Maryland and Fletcher of Florida have their explaining yet to do, and there is strong opposition to their re-election. The Lorimer issue did not come up in the House, of course, but free lumber was an issue, and Underwood gave a body blow to Hohson, in their recent war of words on the floor, by reminding him of his vote against free lumber, in violation of his party platform, because of the lumber interests of his congressional district, and Hohson will have to explain.

Hobson is an amusing character, but like others of the oratorical type, his thinking is frequently marked by somewhat more heat than light.

How to Whiten the Seas

CONGRESSIONAL discussion about our merchant marine always begins with the statement that once our sails "whitened the seas," an expression that occurs more often in the *Congressional Record*, than "leaving no stone unturned." The Panama Canal Act, passed last year, adopted the free-ship policy, yet not a single ship has thus far been added to American registry. In the present Tariff Bill the House tried the old plan of discriminatory duties for goods carried in ships of American registry, but that involved treaty relations and the Senate rejected it. John Sharp Williams gave a terse description of the cause of the disappearance of the merchant marine. After showing how the "sails of our ships whitened the seas" up to 1860, because of the abundance and excellence of the live-oak shipbuilding material and the efficiency of our shipbuilders, giving us a marked advantage over Great Britain, he said:

"Just about that time it was discovered that you could make a ship out of iron and that it would float. So the *Virginia*, which had been the *Merrimack*, was clothed with railroad iron, and then that little cockleshell of a cheese-box came down and they had their fight, and after that time the ship-building business was revolutionized. They first began to build iron ships and then they began to build steel ships, and the position between us and Great Britain was reversed. Great Britain at that time produced iron and steel at one-half in the one case and one-third in the other case, the price at which we could produce them."

Has not the time arrived when we can compete again with the nations of the world in building steel ships, considering the fact that we can compete in the manufacture of so many other products of our steel mills? It is a subject that President Wilson has very much at heart.

Kent of California

LISTEN to his picturesque description of United States currency: "Our present currency system is a crazy-quilt of mutual and reciprocal profanities—gold, silver at a false ratio, gold certificates, silver certificates calling for fifty cents on the dollar's worth of metal, Treasury certificates redeemable in coin, a few outstanding blood-stained and pensioned greenbacks, and bank notes which in their basic character remind one of the struggle of the bankrupt to live on the interest of his debts."

As to compelling national banks to come into the new banking system: "I do not object to the mandatory feature, for the bill will prove a source of profit to legitimate banking, and those not willing to accept its provisions should not claim the federal brand, but, as we cowmen say, 'should be vented and re-branded.' Banks cannot claim the federal good-will and the federal name without complying with the federal law. They can take their little dishes and play in the state yards, if they see fit."

The most completely independent men in the House; a progressive Republican who voted for Roosevelt and for the first two great measures of the Wilson Administration; who opposed intervention in Mexico, because he would not have a drop of blood shed to protect his investments there, who does his thinking under his own hat, wears no party shackles upon his wrists, and never prostitutes his tongue or pen to the support of what he does not believe in, that is Kent. Yale helped to start his ideals, Chicago gave his training in the fight for efficiency in government, and the Pacific Coast is now rejoicing in his wide and tolerant outlook upon life.

Freedom in Massachusetts

THE *Boston Journal* deserves a good boost for the fight it is making for free journalism, and, at the same time, a great, strong boost ought to be given to George W. Anderson, the new Public Service Commissioner. For three years, Mr. Brandeis has been trying in various proceedings to get an itemized account of the expenditures of the New Haven for lobbying and publicity, but this attempt, until recently, has been unsuccessful. In connection with the proposed sixty-seven-million-dollar bond issue, he suggested to the counsel for the Public Service Commission that that Commission should call for such a statement. In response to the call for information by the Commission, the railroad filed a statement which has created consternation, because it discloses not only payments to many lobbyists and some legislators but also to newspaper writers. The *Journal* has been particularly fearless in uncovering the amounts paid, not only to such sheets as the *Boston News Bureau*, but to many reporters on the newspapers of Boston and other Massachusetts towns.

The press is truly a mighty power and one newspaper which sets out to accomplish its real duty of remaining free and telling the whole truth on matters of importance can make itself the spokesman of those working for progress and count very seriously in the history of even so large a city as Boston.

Fidelity

LOVE that varies in its object may be fine in quality; but it is not the type; it is not the norm; it departs from what is instinctively demanded by the passion of love itself, when most completely developed; and it also fails to help the development of the stable family unit, which is the most satisfactory unit of civilization, because it gives to children the warmth they crave and the individual attention they need, and because it encourages the virtues of devotion, self-control, sobriety, and the social spirit.

George Sand was an example of the high soul that is yet unfitted for constancy. Her changeableness in love was part of her unceasing search for material. She said:

To great minds the entire universe is necessary: the works of God and the works of man. The fountain of pure water invites and charms you, but not for an instant do you repose there. You must exhaust Michelangelo and Raphael before you linger on the wayside; and when you have washed off the dust of the journey in the waters of the spring, you pass on, saying: "Let us see what more there is under the sun."

Even the poets and artists, however, who naturally seek what gives intellectual stimulation more than what helps the usual conduct of life, have, on the whole, praised permanence in love. Shakespeare says:

Love is not love
Which alters when it alteration finds,
Or bends with the remover to remove.
Oh, no! it is an ever-fixed mark
That looks on tempests and is never shaken.
It is the star to any wandering bark
Whose worth's unknown, although his height be taken.
Love's not Time's fool, though rosy lips and cheeks
Within his bending sickle's compass come;
Love alters not with his brief hours and weeks,
But bears it out even to the edge of doom.

Shakespeare's is the nobler ideal, as it is the nobler poetry. Women are more steadily imbued with this ideal than men, perhaps because fidelity in woman means that her burdens are shared by another. Naturally, therefore, it is in her an instinct. In man, on the contrary, faithfulness means the assumption of burdens that he might escape. It calls, therefore, for training, for imaginative realization of others. We need, for the working out of civilization, the creation of a new man—one less predatory, less cruel, more tender, more just. Women must help. These lines of Stephen Phillips' must cease to be true:

What is the love of men that women seek?
In its beginning pale with cruelty,
But having sipped of beauty, negligent,
And full of language and distaste.

Under the sole rule of man, the differences between himself and woman have been exaggerated. When she is no longer encouraged to be without one set of virtues, and he is no longer excused for being without another set, there will be a new world. It will be a world with more freedom, but it will be a world in which ethical standards are not lower or looser than they are today, but higher and more exacting; made more welcome because they are more just.

Prose and Verse

THOSE larger conventions, as long as they are fresh and true, are a true stimulus to genius, which literalism seldom is. Thomas Hardy says: "The shortest way to good prose is by the route of good verse." Nietzsche has written:

"One writes good prose only face to face with poetry. . . . Apart from Goethe, who is justly claimed by the century that produced him, I regard only Giacomo Leopardi, Prosper Mérimée, Ralph Waldo Emerson, and Walter Savage Landor, author of the 'Imaginary Conversations,' as worthy to be called masters of prose."

Nietzsche was writing of the nineteenth century. Hardy, Kipling, Stevenson, and Meredith, in our day, although better known in prose, have written verse, as did Hazlitt, Lamb, and De Quincey in their century. Lafcadio Hearn, Edith Wharton, George Santayana, are among those of our contemporaries who have written good verse, although their reputation is mostly in prose. Will the rule hold of the future? It is not an era of verse, and, the realistic movement having spent its greatest force, the time may well be near when there will be a return to the language of the larger conventions.

Facing the Music

A SECTION man shoveling dirt nine hours a day, and taking his nine or ten dollars a week home to his family, is not doing that work because he loves it. He would like to run away from it; he would love to go fishing, idle a month, do a thousand things. But he faces the music, because of the wife and children at home, to pay his debts, to earn the bread he eats, to be a self-respecting man. On the railroads, in the mines, in the big woods, wherever men toil, they risk their lives, spend their strength, face drudgery, and most of them face the music with a song.

Progress

ARISTOTLE, who defended slavery as a necessity, said that if every instrument would work by itself, if the shuttle would weave alone, the manufacturer would dispense with workmen and the master with slaves. Aristotle had a real thought, and the time which he conceived of as imaginary promises in effect to arrive. The advance in machinery means not only so great an increase in production that everybody ought to enjoy ordinary comfort and education; it means also that the rough, heavy work of the world will practically all be done by instruments. The scientific foundation has been laid. Nothing is required now except social and political intelligence to bring about a time when there will be no large class of men engaged in the kind of labor that requires no skill.

Age Then and Now

THERE were no spectacles, no ear-trumpets, no dentists, and no occupations that did not require bodily agility, none of the simple medical devices by which we check some of the internal results of sedentary life. After youth, it was no snap to live in the "good old days."

THE ETERNAL FEMININE

By WALLACE MORGAN

Mr. Rockefeller's Dilemma

By LOUIS WALLIS

MR. ROCKEFELLER'S dilemma is bound to grow more serious every year, so long as the tension between rich and poor increases at its present rate. We trust that the Standard Oil magnate is renewing his youth. He plays golf, takes auto rides, eats imported cheese, and does many other things that are sure to lengthen life. We hope that he will live to be one hundred. This will give him over a quarter of a century yet. And think where the trusts, and corporations, and rich and poor will be by that time! It is quite possible that when Mr. Rockefeller is one hundred he will be tolerably "set" in his ways; and by that time he will probably have made a permanent choice of one or the other horn of his great dilemma.

Everybody is supposed to know that Mr. Rockefeller's personal representative on the Board of Trustees of the University of Chicago has left the Board permanently, and that Mr. Rockefeller's personal connection with the University has thus been severed. Also, that he has, of late years, given to various other philanthropies amounts large enough to create several universities equal in size to the Chicago institution. A number of years ago, one of the newspapers published a cartoon showing President Harper sitting astride a college building marked "U. of C.," and looking in alarm toward another college building marked "Yale," while Mr. Rockefeller was in the act of giving a million dollars to the rival institution. The cartoon had more significance than many people realized. President Harper was widely quoted as declaring that a successful university should have an annual deficit. Dr. Harper was a very great man—one of the greatest educators in human history. His virtues will be remembered long after his follies have been forgotten. He was a man of whom any nation could be proud; and nothing can detract from the brightness of his fame. But all great men have their weaknesses; and one of Dr. Harper's weaknesses was his remark about successful universities and yearly deficits. It irritated Mr. Rockefeller; and nobody can blame him for being irritated. He is accustomed to administer enterprises on other principles. Dr. Harper would have wrecked the United States Treasury, if he could have got at it—not dishonestly, of course, but in the same naïve fashion in which a small boy innocently smashes a plate-glass window. Now, there is nothing that Mr. Rockefeller dislikes more than being "worked." It gets on his nerves. If he has the remotest suspicion that he is being made the object of some scheme—watch out! In this case, what Mr. Rockefeller said to President Harper can be summarized, abridged, and boiled down into the following sentence: "William, I simply won't stand for it!" And notice that it wasn't "can't," but "won't."

UNDOUBTEDLY, Dr. Harper was exactly the man to be the first presidential administrator of the great University of Chicago. He was like an engineer who climbs into the cab of his locomotive, pulls the throttle wide open, and says, "Clear the road, boys; and we'll travel under a full head of steam!" Such a policy makes a record, and attracts attention—which was precisely what Harper wanted. He was a first-rate advertiser; and he got things coming his way. But the full-head-of-steam policy ate up money as fast as an express locomotive eats up coal. Harper's death, coming when it did, was the best thing for his fame. He was only fifty-one; and his constitution was wrecked by the strenuous life. Everybody who came within the range of his influence felt the tension; and it's no wonder that Mr. Rockefeller called a halt. Nobody likes to be tied to an express train. Dr. Harper was succeeded in the presidency by an administrator of a different stamp, who knows how to plan a budget and live up to it with the consistency of the head of a great business enterprise.

Mr. Rockefeller says, and believes, that he dissolved

partnership with the University of Chicago because he had succeeded in putting it on a business basis, where it would run itself, on its own stated resources, without a yearly deficit. If he were pressed further, he might possibly admit that he wanted to show that no university managed on wide-open principles could look to him for support. But even the grilling of the Day of Judgment would fail to draw from him anything more than a personal explanation of some kind—because the founder of the University of Chicago thinks in personal terms and avoids abstractions, as far as possible. Nevertheless, it is not difficult to point to certain facts which carry the suggestion that the University of Chicago is a powerful impersonal influence upon the course of Rockefeller philanthropy.

EVERYBODY knows that the big institution on the Midway has the reputation of being one of the most all-round radical centers of learning in existence. Radicalism, a few centuries ago, touched the world only at one point—in its conceptions of the physical universe. People thought the sun rose in the east, set in the west, and sailed round the earth every day. Then the astronomers came along and turned this idea topsy-turvy. But radicalism today touches life at three points—in the domains of biology, of theology, and of sociology. And at all of these points, the University of Chicago is in the vanguard. Evolution is presupposed in the departments of biology. Miracles, in the older sense of the word, have been eliminated from the departments of theology, where higher criticism reigns with undisputed sway, one of the professors having recently said that the older conceptions of the authority and infallibility of the Bible are "hopelessly shattered." In sociology, the head of the department—who was a close friend of Dr. Harper, and who has been with the University from its early years—has just come out with a startling new book, which is the most radical arraignment of the present social order since the days of Karl Marx and Henry George, containing chapters on "The Superstition of Property" and "The Illusion of Capitalism."

FOR our present purposes, it makes no difference whether other schools have professors who are as radical as those of Chicago or not. That consideration counts for nothing, either with the general public or with Mr. Rockefeller. But the fact that cannot fail to count is, that Mr. Rockefeller turns out to have set up an institution which teaches things contrary to what he himself believes. For he has "ideas" on sociology and theology. According to his opinion, property and capitalism are just exactly as sacred, in their way, as his father's Bible.

Not being a college man, Mr. Rockefeller knew little about colleges and universities when he began to found the University of Chicago. (We say "began," because the founding process took time.) He pictured to himself a great institution where people could learn mathematics, and Latin, and Greek, and physiology, and history, and law, and medicine, and all sorts of conventional knowledge; and also where young men could come and study the Bible, and learn to be ministers and missionaries. He was especially particular about religion. He had heard youthful Professor Harper talk about the Bible; and he thought the aspiring pedagogue looked pretty good. In those days, Harper discoursed on the "J. E. D. and P. documents" with varying emphasis, according to his audience. But he was always strong on the Prophets and the New Testament; and he had enough to do in teaching Hebrew by mail and fighting Professor W. H. Green of Princeton, without raising uncomfortable issues about "miracles." While as for the great principle that a successful university should have a deficit every year—it's a fact that Professor Harper never mentioned it to anybody in those days. So we see that when Mr. Rockefeller began to found the University

of Chicago, he didn't know much about universities, nor much about Harper.

To a big business man, it may look like a small matter to start a school. A man who has organized a giant corporation may think it isn't much of a job to put up a few buildings and pay the salaries of a bunch of professors. While there isn't much use in prophesying after the event, nor in trying to figure out what "might" have happened if something else hadn't happened, it's a fair guess that if Mr. Rockefeller had known a little more about the inside of the great process of education—not a great deal more, but just a little—he would never have been the founder of the University of Chicago, but would have confined his philanthropies to more conventional enterprises. Because after he had committed himself, and put his hand to the plow, he became aware that he had brought into existence an institution which wouldn't stand still and be conventional. But after he had begun, he couldn't let go very well without doing something fairly handsome. In the struggle between the founder and the first president, Mr. Rockefeller won out on the question of organization: but Harper won a spiritual victory by impressing upon the institution a radical, democratic tendency which it will always retain.

THE outlines of Mr. Rockefeller's dilemma now begin to loom up more clearly. He isn't fully conscious of the dilemma. Few great philanthropists of the present day are conscious of it. But he is instinctively aware of it. All wealthy men who go into philanthropy are more and more subject to the tug and pull of two huge forces, one of which tends to perpetuate the existing order of society, while the other tends to modify the present social system in the interests of the future. If the wealthy man puts his benefactions in "safe and sane" enterprises, which are calculated not to revolutionize the *status quo*, he is applauded by his friends and criticized by his enemies. But if he puts his money where it fertilizes the unconventional, then his enemies become friendly, while his wealthy acquaintances raise their eyebrows and begin to cool off. He is between the horns of this dilemma; and he cannot help making a choice. Take the "Sage Foundation," for example. It paid the expenses of the now famous "Pittsburgh Survey," which resulted in sensational disclosures about the housing problem in the Smoky City. Workers in the big, steel metropolis have to live in wretched slums, because land is held out of use on speculation at such high figures that the laboring people cannot afford to pay rent enough to get a healthy amount of light and air. The "Survey" has opened the eyes of Pittsburgh; and now the city administration, the civic commission, and the real estate board have put through the state legislature a law permitting the taxation of land values at a rate double the rate on buildings—with the object of making hard the way of the land speculator. The wisdom of this measure doesn't concern us here in the least. What we are emphasizing is, that the "Sage Foundation" is a force that has led up to a radical proposal to modify the existing social order.

A STILL more striking illustration of our point is furnished by Joseph Fels, the Jewish millionaire who helped to finance the British Liberal Party in its fight for the Budget which imposed heavier taxes on land values, and which was indirectly the means of depriving the House of Lords of its immemorial veto power over legislation. This is Fels' conception of philanthropy—the modification of the social mechanism itself. All of which goes to prove that a man cannot go into philanthropy without doing something either to confirm or to change the *status quo*.

Mr. Rockefeller got his start at a time when America

did its thinking in terms of "individualism," and when the "self-made" man could worship his maker in some comfort. But we have lighted on other days; and instead of agreeing, as we used to, that a man "makes" his fortune, we say that wealth is "a social product," in the making of which the wealthy man is a kind of superintendent, acting under the forms of individual, private property, but not really "producing" all of the goods to which the laws of private property entitle him. All of our new talk about "graft," and "exploitation of labor," and the like, is merely a loose, popular, inexact way of trying to adjust our mental vision to a new insight into the process of wealth-production. If everybody (millionaires and laborers included) will keep cool while the subject is under discussion, there will be no danger of another French Revolution.

IN the meanwhile, we should take note that the Standard Oil magnate is founding no new philanthropies that lead away from his inherited individualistic views of the world. Since he began to draw in the reins on the University of Chicago, his aid goes into purely conventional undertakings, designed to help the world by helping individuals, but not by modifying the social system. Rockefeller money goes into the endowment of hookworm research in the South, and medical research in the North; it helps mission schools in China, and fallen women in America; it goes judiciously through the pipelines of "The General Education Board" to the help of safe and sane colleges; and last, but not least, it goes into the recently established "Rockefeller Foundation for the Improvement of Mankind," administered by a board having the Rockefeller point of view. All these things do good, of course. Nobody disputes that. Moreover, we all ought to admit that Mr. Rockefeller has only the noblest and most disinterested aims. He isn't trying to huy us up. Nevertheless, all of his philanthropies are only one horn of the rich man's dilemma! The more Mr. Rockefeller gives, the more he raises the insistent question how one man can have so much to give. The situation has been very neatly struck off by one of the most popular clergymen that have preached in the University of Chicago, Bishop Charles D. Williams, of Michigan.

"Twenty years ago," says the Bishop, "when a man made us a present of a university, we said, 'Thank you! How kind you are!' But today, when a man makes us a present of a university, we say, 'Thank you! Where did you get it?'"

THUS we return to the point where we began—the rich man's knowledge of the process by which wealth is created. Mr. Rockefeller, up to date, has acted on the view that his fortune is a personal creation; that the disposition of it is a purely private matter; and that his money should go into projects of individual relief and improvement. His official advisers tell him to hold fast to the regular forms of philanthropy; so that his hands and his heart are full in helping humanity forward along universally accepted lines of progress; and he is deftly steered away from all projects that look unconventional. We write, not to quarrel with the underlying logic of Mr. Rockefeller's benefactions, but to emphasize that no philanthropist, however good his intentions, can escape the problem here pointed out. We cherish no dark design to put an economic treatise over on the unsuspecting reader; so we close by throwing on the screen a picture of two millionaires tightly perched on the opposite horns of the rich man's dilemma. Both have their critics and enemies. We don't ask which is right, or which is wrong. Comparisons are odious. We merely call attention to these men as interesting factors in a contrast which marks the present age.

"The man of science and not the business man is showing the nation how to economize"

WE always, as individuals, have had a fairly good idea of how to economize on food. By buying a little more here and a little less there, by "raising things," ourselves, we always have managed to keep our personal food costs pretty well under control. And, diet cranks to the contrary, we have instinctively chosen a well-balanced ration.

The fact that has fretted and confused us of late has been that all our old economies have gone for little or nothing. Try as we will, one after another, all our cherished methods of retrenchment, handed down from our greatest great grandparents, we have not been able to head off the steady rise of our food expense.

Most of us continue to make our economies individual. Therein lies the root of our failure. The time has come when we must think of our food, kinds and costs both, in terms that are nation-wide. In protesting on the price of broilers, we must think not of the individual chicken we bought yesterday, but of American Dressed Poultry and its whole relation, as a food industry, to the new century. Then only shall we begin to lay our fingers on the weak spots in poultry prices.

It is quite as difficult to get away from the personal outlook on food as it is on any other vital matter. You cannot make me transfer my anger from my butcher and his extortions on my own

private purse, to the nation-wide ignorance of shipper and consumer until you have made me understand that the wider application of my wrath will ultimately ease my flattened pocket-book.

Yet this is the difficult task to which the Department of Agriculture has addressed itself. National wastes—where are they?—what do they do to you and to me?—how shall they be stopped? It is a matter of vital import to the cost of living. The Department believes, to discover where are our great national wastes and how to stop them. And in order that real help may come from the government's investigations, it is necessary that the consumer shall understand the national scope of the work, shall get the new idea of national food waste as a personal loss.

CANNING alone cannot equalize seasonal over- and under-production! As our populace grows more and more crowded, we need more and more to regional specializing in food products. Certain sections of the country, especially adapted to raising certain kinds of crops, raise to the limit of their soil capacity and send their surplus to sections of non-production or shortage. This tendency leads more and more to the lengthening of the time between production and consumption, and has developed our complicated system of storage and shipping.

The shipping of perishable food thousands of miles to market has become

Waste in Food Shipping

By

HONORÉ WILLISIE

an established fact of our living today. The Department of Agriculture wants to know if our methods of shipping some of our most important staples of food are the best to be had. The study of handling perishable food to prevent wastes is a new science. The department has had to invent its own methods, interpret its results without the aid of precedents. But it is sinking its way slowly and surely toward practical facts.

The price of eggs is almost prohibitively high. The Department says that a large part of this is due to poor methods of shipping. Over eleven million dozens of eggs shipped to New York City in a year arrived there broken and unfit for food. The losses are so great that railroads are complaining that egg-shipping is not a profitable business. And the consumer pays!

THE Bureau of Chemistry is carrying on experiments on how to ship an egg. No detail has been too small or apparently too trivial for their observation. The study has included not only how to chill the egg, but also the best type of carton to use, the best kind of wood and nails to use for cases, and the number and placing of nails for each case. To test the amount and kind of jarring that an egg receives in a freight car, the Bureau adapted a machine used to measure earthquake shocks and sent it across the country with a carload of eggs. It studied carefully the size problem as to whether an egg should be packed standing on end or lying down, and if the latter, whether lengthwise or crosswise of the car. Infinitesimal details. Too small for the great mind. And yet, the demonstration car which the Department sent to the great producing centers this summer will save the egg industry thousands of dollars in waste.

There is other waste than breakage in shipping eggs. An enormous number of eggs spoil between the producer and the consumer. The shipper sends a great number of eggs that are not fit to stand the railroad handling. Often so many eggs spoil en route that the shipper gets back nothing on his shipment. The tendency has been for the trade to develop a method of getting spoiled eggs into use as food. This is a fundamentally wrong solution, a beginning at the wrong end of the trouble, and is demoralizing to the shipper, to the consumer and

to the new economic principle for which America must stand if it is to have food enough for its crowding population.

As little waste as possible, says the Department and that waste returned to productive uses. The Department's study of freezing and drying eggs shows that these methods will be more and more used for eggs intended for cooking purposes; and such methods are economically desirable as long as the centers of egg production and consumption are so far apart, and so long as the poor handling methods bring to the concentrators of the producing centers such an enormous number of eggs that are wholesome but not available for long hauls.

WE are going to use the chicken more and more as beef grows scarcer. The time may come when we will raise chickens, even when hard pressed for room, allowing them to share our beds with us as do the Scythians! But at present the great poultry producing districts of the United States center about the Mississippi Valley, where the fowl has range and feed. The Department wants to know if there is waste in poultry shipping, and it has been studying the situation. We all know the still too popular method of shipping dressed poultry—a barrel containing alternate layers of chickens and ice, with a gummy sack tied over the top and only the eardest wish of the shipper to keep the mess averted. The soaking of the birds in the melted ice, the dirty brims and feet, and the gradual dissolving out of the whole parts of the flesh, causes, in actual decay, a great loss in eating quality and in food value. The barrel thus packed was put into a freight car and "rushed" to its destination.

The Food Research Laboratory of the Bureau of Chemistry is carrying on extensive investigations as to the least wasteful and most sanitary methods of killing, packing and dressing poultry. The Laboratory is trying to cooperate with the shipper and educate the consumer—a large undertaking. Every householder ought to know the things that the Laboratory is saying. It says that chickens should be starved, except for plenty of water, for twenty-four hours before killing. This does away with the necessity of exsanguinating which gives such great opportunity for pollution. When a chicken is killed it should be properly bled. At least thirty per cent. of all chickens coming to the New York market have been improperly bled. These chickens lose in flavor and keep ill. A careful study is being made in the Laboratory of the relative keeping qualities of well- and ill-bled fowls. This is being determined for every phase of their marketing—their condition after chilling in the packing house, at the end of the railroad haul, and when they have passed through the various channels of a great city to the consumer.

WHEN the bird is killed the portion of the brain tissue that controls the muscles holding the feathers in place must be destroyed so that dry picking is easy. After picking, chilling. When chickens are alive their temperature is 103° F. This must be reduced to 32° F. or less before the birds can be packed for the long, hard haul in the refrigerator car. But the range of temperature permitted is small. Below 39° F. the flesh is frosted.

The Laboratory says that good refrigeration is necessary from start to finish of the chicken's journey to the

consumer. We are to become as dependent on our refrigerator cars for our food supply as England is upon her ships. The modern refrigerator car must become a chill room on wheels, says the Laboratory, if it is to serve the public satisfactorily and bring financial profit to the railroads. It ought to have good insulation. The same car with its unbroken hull must not vary in temperature over five degrees, stores must be used in one part of such a journey and ice in others. A great many experimental shipments of poultry have been made by the Laboratory to learn the best available way of conducting the handling. It has devised a refrigerator car which meets the requirements found in its investigation and it has found first-class packers glad to profit by the suggestions it makes.

The specialists of the Department have found another type of waste that is very large. In several particulars, they say, the systems used by shippers in the United States are far less economical than those employed by foreign shippers, notably those in Germany. As a result, the specialists find that certain kinds of food are started on long journeys in such condition that heavy freight charges must be paid on elements that have to be taken out of the food at the end of the trip, before it can be used as food.

ONE of the heaviest waste freight items is that paid for transporting excessive moisture in corn and in potatoes to be used for stock food or in the manufacture of starch. In Germany, the culls and faulty potatoes, which in this country are thrown away, are dried so as to remove all excess water and then shipped to various points for stock-feed purposes. This practice of drying potatoes for stock-feed and uses in the arts is little known in America. As a result, here the culls are thrown away and starch is made from potatoes when excess crops make a cheap price encouraging shipment to the factories.

Potatoes in their natural state contain upwards of 70 per cent. of water which has no nutritive value. Long shipments of potatoes, therefore, in their natural state are not practicable, whereas the Germans who dry out the excessive water find it practicable to ship the dried product.

THE waste water now being shipped in corn in the United States has, according to the Department specialists, a serious bearing on the cost of corn and also is one cause for the shortage of cars at the corn-shipping seasons. The specialists find, for example, that the American people are paying freight on \$10,000 tons of water each year in shipping their corn from the producing sections to the market. This means that at a time when there is annually a great shortage of cars, there is the equivalent of nearly 15,000 freight cars loaded with water. This water is responsible for the deterioration of shelled corn before it is finally consumed.

The specialists have figured this loss in several ways. Every year, they say, a train over 110 miles long, not counting locomotives, is engaged in nothing more profitable than in hauling water from a few miles up to a thousand miles, from the corn producing states to the seaboard or the mountain districts. Exactly how much excess freight cost this represents cannot be accurately determined, but it can be seen that as the freight on water is about one cent per mile it is a waste of useless water in corn adds considerably to the cost of

product before it reaches the consumer. The excess of water shipped amounts to the equivalent in weight for about 16 million bushels of corn.

THE waste in shipping moist corn is not alone in freight charges on water, which add to the net cost of the corn after it is delivered, but the producer who ships corn over the moisture limit has the grade of his corn lowered and with this the price for his product.

Still another cost is added when many corn dealers, on receipt of the corn, have to dry out the excessive water although many store the moist corn and do not dry it out until it begins to show signs of deterioration.

Many of the big elevators in the central corn markets now have machinery for drying out excessive moisture. But very few of the smaller collecting elevators have these drying machines and the only method of drying corn used by most producers is that of storing it in cribs. Corn shipped in the summer months has a chance to dry out in the cribs but in the cold and wet autumns crib-drying is not effective and corn shipped at this time has a heavy moisture content.

This question of moisture content and the tremendous waste it brings about at every point, with the consumer paying the ultimate cost for all, has not, the specialists insist, received the attention its very great importance demands. The annual shortage of cars at the great shipping points in the corn-moving seasons alone should have made a change in methods long ago, they claim.

They want the farmers to pay more attention to the growing of earlier maturing varieties of corn. They want all corn dried to a minimum amount of moisture content. Corn would then bulk less and weigh more per volume so that more actual corn could be packed in each freight car of any given capacity. This they figure would make available each year, throughout the period when excessive moisture is shipped, nearly fifteen thousand additional freight cars for moving corn or other freight. This would lift another common cause of expense. The wet corn, when shipped, frequently spoils *en route* and leads to claims and expensive lawsuits between shipper and railroads arising from such losses. The consumer pays the claims in the ultimate price of the corn.

THE Department is investigating the moisture content of flour and meal. It is carrying on extensive experiments with the packing and shipping of fruits. As in the case of its work with poultry and with corn no detail escapes notice. It is uncovering expense items of which the consumer has never dreamed. The men who are doing a great part of the work of investigation are chemists, men who work habitually with minute details. It is an exceedingly interesting comment on modern life that it should be the man of science and not the business man who is showing the nation how to economize.

It is a new idea, that of asking a chemist to tell us why it is impossible for our pocket-books to keep up with the cost of living. It is a new idea to the chemist that his marvelous capacity for observation can be made to encompass the nation. And it is a new idea to all of us that much of our over-cost of living may come, not from under-production, but from over-waste, even in so common a thing as shipping food.

"The evidences of these crimes against the motor are excessive in France"

The Crime Against the Motor

By AMOS STOTE

LABORING up the gentle slope of the Boulevard Raspail to where it crosses the Boulevard Montparnasse came a string of horses, five deep, straining at the burden of the cart they drew. It was four o'clock in the afternoon, an hour when the streets of Paris, away from the shopping districts, are more idle than at any other time of day. It was fortunate that such was the case, for, as the caravan attempted to negotiate an S-shaped turning, a front wheel of the wagon slipped into the depression some cobble stones had left when removed for the repairing of a street car track. Perhaps the driver should be blamed for the accident, but as he was walking on the other side of the wagon the hole was not visible to him; and, even had he seen it, could hardly have been in time to change the course of the lead horse, which plodded along nearly fifty feet in advance of the driver's position.

ONLY five minutes were required to swing the horses to an angle and release the load. But during that time the four lines of street-car tracks traversing the two boulevards were blocked at the point of their intersection, omnibuses covering the same routes were stalled, and other vehicles of all descriptions gathered to make the congestion as complete and voluminous as could be reasonably expected from the united efforts of fifty excited Frenchmen. When the seventy-five feet of horse flesh, harness and wagon got on its way again the remaining tangle of traffic spent another minute or two undoing its own snarl.

The load on that wagon had left a stone-cutter's yard, outside the walls of Paris, beyond Montmartre, between ten and eleven o'clock that morning. The driver, with his six horses and wagon, had waited for nearly two hours because three other loads had to be first gotten under way, and four such outfits in a stone-yard are capable of considerable delay without any outside help. When at last the start was made the route had to be lengthened somewhat, to avoid the extremely congested districts, yet even with the best calculations five important street intersections had to be crossed, and each time the traffic held up.

At nine o'clock that night the weary driver and six tired horses had finished their day's work—consisting of the delivery of one stone six feet long and not quite so high or wide—and had returned to the stables.

To contrast such an effort with that of a motor-truck is more unfair than to compare the efficiency of an old sailing vessel with that of the modern liner. The loaded stone wagon can make little more than two miles an hour, and to carry a stone six feet long will occupy seventy-five feet of roadway. The driver always walks beside his cart, so it is as impossible for him to command a view of both sides of the street as it is to watch properly the crossings.

WITH motor-trucks in the stone-yard, instead of twenty-four horses and four wagons to be manipulated before the loading derrick of mornings, there would be four motor-trucks, occupying no more space than one of the horse-drawn vehicles, so that each could stand beside its load without delay. As to delivery comparisons, while trying to let the horse save its face, it must be confessed that one motor would have time to loaf along the way, and still do more work than two wagons and twelve horses.

The congestion of traffic these and other horse-drawn vehicles are constantly creating in all parts of Paris is practically beyond the understanding of one who has not seen it. Paris is very active these days, and it is not unusual to see several of the long-drawn-out conveyances, on the way to a new building, trailing one another through some busy street, paralyzing traffic for blocks at a time. And I have yet to see a motor-truck employed in any branch of the building trades. There seem as many varieties of vehicles used in delivering building wares as there are materials used in construction.

ELECTRICAL houses contracting to do the installation work in a new apartment building may deliver all the tools and equipment, from wire to chandeliers, in assorted sizes of pushcarts. Equally up-to-date methods are followed by painters, paper-hangers, glass companies—even the wood for interior trim may come by pushcart.

A climax in strictly hand-made deliveries is reached when the building is completed and tenants begin to move in. The victim who is about to transplant his hearth-stone goes about among the dear, old, friendly furniture after the manner of one who bids good-bye. It was my questionable pleasure to witness one act of the removal of an American family from one French flat to another. The

accumulation of seven years had to be uprooted. According to an unvarying, international custom the people who had agreed to undertake the work were a half day late in making their initial appearance. The first thirty minutes after their officially tardy arrival I spent in the flat. Curiosity then compelled me to force an exit and see what was happening in the street. The entry-hall and sidewalk were festooned with all manner of household wares.

Drawn up at the curb were three sturdy pushcarts, resting on two wheels and a wooden prop. The French are experts at balancing a load on one of these vehicles. And they need to be, for if the cart is moved in any direction the prop will drop, giving the load whatever impetus it may receive from the rapid swing of a quarter arc. I stayed in the street long enough to see a piano, hoisted by four men, actually placed on a cart which was being steadied by two others. It was a novel scene, but one inclined to leave an unfavorable impression of French methods of locomotion.

THE evidences of these crimes against the motor, found all over Europe and in England, are excessive in France. Both the English and the French continue to do homage to that old juggernaut of hygienic road traffic, the traction-engine. It continues to be heard and felt and seen; as it roars at fifty miles an hour while making a pace of five, as it shakes the pavements and rattles the windows whenever its huge bulk looms into view. In England the traction-engine introduced the nearest approach to the long haul, which the motor-truck has since developed, that has been possible since the establishment of railways. The fact that they have proven the economy in both time and money in road transportation proves nothing so emphatically as it does the efficiency of the motor-truck. The traction-engine is as far behind the motor-truck as it is ahead of the horse. Their system of locomotion is slow, expensive, requires an excess of dead weight and space, and the services of two men to operate; yet it wins over the horse in this service, even while abdicating to the modern power van.

While England and Germany are remarkable for their backwardness in merchandise delivery, they are both ahead of France. England offers us a wonderful market for the lighter type of

automobile wagons that may be sold at a moderate price, something that will duplicate in the commercial car the low priced American-made pleasure machines that have found in the Britisher so ready a buyer. The largest stores have already adopted the motor-wagon to a considerable extent, but they are so far in the minority that, instead of the cream of the business being gone, it has only been dipped into enough to bring up examples of the value of motor methods.

Germany is without doubt the most advanced of the European countries in the use of the power vehicle for business. Moreover, the conditions bringing this about are also the best evidences of the healthy future of the trade. The German is quick to see and eager to accept any proposition that promises to give practical aid to his business. He has money to spend, is not hampered by precedent as are those of so many other countries, and has already adopted many of our innovations. An equally important influence is that the German government is ready to share the expense of private corporations in the purchase of automobile delivery wagons, for the use of the latter in times of peace—and for the service of the Fatherland in times of war.

But to return to the French situation. The American who is impressed with the costliness and antiquated methods of delivery in Germany and in England, is agast at the medieval efforts of France. In this country, where the expeditious travel of the individual is provided for in so extraordinary a manner by the taxicabs, which may be hired at an initial cost of fifteen cents, the lack of proper facilities for merchandise delivery is almost inconceivable.

THE great public service corporations of Paris, alone, were there no other selling opportunities in the whole of France, offer a fruitful field well worth an American invasion. To see the millionaire organization controlling the gas interests of the French capital represented on the pavements by four or five men harnessed to a two-wheeled cart, struggling along at a couple of miles an hour! The contrast of its own modern appliances, associated with transportation methods of a hundred years ago, puts a powerful argument into the hands of the motor-truck salesman.

Similar conditions exist in the organizations of the water and electrical corporations. They apparently make a wild endeavor to carry on their commerce by man power, just as far as possible; but when the load becomes too great for the toiling efforts of a half dozen men they appeal to the horse. London is planning a clearing house for the delivery of goods so that there may be no empty vehicles on the return trip. Paris must first secure some adequate means of merchandise delivery before it can consider plans for its concentration. The over-burdened

"The loaded stone wagon can make little more than two miles an hour"

man and the heavily-laden horse require the relief that comes from having nothing but the empty vehicle to propel on the homeward journey.

As to the street railways, they seem to realize their limitations. Instead of using men for the hauling of their repair wagons, these ambulating towers employed in overhead-wire emergencies, engage the services of a horse. The Normanly draught horse is a wonder when it comes to walking off with a load, but that is all there is to it; it is as difficult to urge these massive animals to anything faster than a two-mile gait as it would be to persuade a rooster to lay eggs.

THE French government, in some branches of its service, is inclined to set a worthy example to the business men of the country. As a matter of fact it has been rather keen to adopt many of our most modern, labor-saving devices. You will find a number of American houses in France which have long accounts with the State. In the matter of motor deliveries, the postal service offers a fine example with their big, speedy auto-vans. The city of Paris, however, gives a picturesque contrast to these modern methods in the army of men it employs, in the work of the municipality, to trundle pushcarts of all descriptions. You will frequently see four or five workmen sweating up a slight grade, pulling and pushing at a double-decked cart, loaded with potted flowers in bloom, on the way to some public garden. It is hardly likely the officials attempt to keep any record of the amount of work these men accomplish under such conditions. To wheel, by hand, many dozen plants wet in heavy, damp earth, and to keep this up for several miles, requires time—but it would look like a pitifully small performance to set down on record to the score of five strong men.

HOWEVER cheap labor may be it can never be less than excessive when such transportation is used where the motor-truck is available. In a sense, where labor is cheap time is of equally small value; but the fact remains that while cheap labor may produce cheap

time—and it certainly will in at least one sense—expedition in the matter of delivery may yet hold good value from the viewpoint of offering prompt service. It is the habit of cities to look with a lenient eye on incompetence—but a business house has to keep an eye open toward economy.

France is waiting for us to come over with the motor-wagon to put a new phase on competition—the competition of service.

At the present time the pushcart practice is almost a passion with the Frenchman. You will see a line of these vehicles in front of a big bakshop, frequently eight or ten at one time. Each requires human power, of one sex or the other—and yet the tasks of them all could be placed on the strong shoulders of one small motor-wagon, and still leave time to take on the increasing territory of a growing trade.

The cousin to the pushcart, once removed, is seen in the cycle-cart. Grocery stores of dimensions and grandeur as may hardly be equalled in our capital cities; grocery stores with palm-decorated tea rooms, where the lady of fashion may be refreshed while giving her orders; stores with luxuries from all parts of the world, even green corn on the cob and watermelon; stores with perfect telephone-order service and every modern internal equipment—wealthy corporations with branches in various parts of the city—these will have their curb lined with a whole battery of cycle-carts and pushcarts. It is a strange sight to view the vehicles of commerce standing beside the luxurious pleasure car of the wealthy patron who chooses to do her own marketing.

IN the lines of heavier trade-delivery operations are just as backward. Coal, ice, wood, they all travel by pushcart or two-wheeled affair engaging the services of from one to three horses. Though many of the streets of Paris, and in fact of all French cities, are so narrow and so winding that it is necessary to drive any number of horses tandem, the motor-truck seldom puts in an appearance, notwithstanding the fact that they could do so much to relieve these endless chains of traffic.

The lack of the commercial automobile in France is so marked, the observer immediately wonders just what the insurmountable reasons must be for this neglect of opportunity. The always ready suggestion of lack of money may, in this case, be just as readily laid aside, for France is too notoriously rich to need to hesitate over anything it desires or deems practical. The business men are good buyers of all other kinds of modern conveniences, so we may not lay this to either indifference or thickheadedness.

"The French are experts at balancing a load on one of these vehicles"

Of course some one is going to say things about the French tariff placing a barrier in the way of our entrance. But no one who has looked into the matter, and really made a study of it, will pay any attention to that perfectly invisible ghost. That our passenger automobiles are doing an increasing business in France, the very country that once held this market anchored fore and aft, is enough to show that American-made machines are not without favor in the eyes of Frenchmen. It also indicates that tariff rates, rather than making their price prohibitive, even on a sharp competitive market, are permitting our manufacturers to take over the business on a strictly price-quality standard.

TO lay any further doubt on this question, for it must be confessed that the French government has great variety and division in its classification of imports, an examination of these schedule will show that rates are all in favor of the merchandise automobile. Where chassis, motor and body are shipped complete, or where the chassis is shipped separately, the greater the weight the less the duty. On automobile bodies, the tariff on cars for transporting merchandise is less than one-sixth of that for the carrying of passengers.

That their own manufacturers are not in a position to meet the golden opportunity stands without contradiction. France seems to have overlooked the commercial cut. When the whole question is sifted

to the bottom, the fault lies right here in the industrial states of America. We, who wear the commercial-car market as a decoration, gained through the excellence of our products, have a blot on the 'satchel'—it's France.

When the American manufacturer opens up the French market for this commodity he will certainly strip the country of some of the scenes that are most picturesque to the visitor. But this phase of French picturesqueness is just about as suited to the rest of the landscape as would be, with us, a vision of Wall Street brokers going gaily to their offices in sedan chairs—or a western farmer cutting his thousand-acre wheat field with a scythe.

And besides that—we need the business.

Out O' Doors

By WILLARD A. WATTLES

FAR have I wandered from the wide and sunny prairie-land;
 Far on the mountain-side, down to the sea;
 With the ringing road beneath me and a lariat in hand
 I have trailed the white Sierras into Laramie;
 From where Seattle sets her foot upon the silver ocean sand,
 California to the Lakes and down to Tennessee,
 From New Hampshire's hooded hills to the shining Rio Grande,
 But everywhere I wandered 'twas my own country.

Everywhere I wandered there was song and jest and story;
 There was love in hardy midnight's when the day was done;
 Then the stars went reeling drunken, till the east awoke in glory
 And I heaped to meet the welcome of the great red sun.
 There is time to creep to shelter when the thud of life is hoary
 And the walls begin to tremble, then good-bye to fun,
 But it's up with the sails, boy, and right about the dory,
 Out to the broad sea the rivers run.

Out to the broad sea! Who could stay the hurrying
 White-footed freshet from the April moon?
 Down the empty shingle-bar the little waves are scurrying
 And the sea-weed settles on the naked dune.
 Oh, there's thunder in the surges where the giddy keel is furrowing,
 Where whirling waters are with foam-flecks streaming;
 There is time to hunt the harbor when the winter winds are worrying
 And you stuff the message of the white typhoon.

There is time to hunt the harbor and to anchor where the ripples lie
 Soft on the bosom of the warm sea sand.
 Sung in a cove while the great clean winds go roaring by
 Sung in a cove in a quiet land.
 But it's just the joy of swinging feet, sweet air, and seeing eye,
 Sleeping at night by the white stars spanned,
 So it's out to the broad sea, high hills, and open sky,
 With the clean wind, the strong wind, hand in hand.

The Autopilgrim's Progress

Part Two—The Bridal Tour

By WALLACE IRWIN

III

The Bridegroom Continueth to Seek and
Maketh Strange Findings

CHANGING a tire
Is a task we admire
When surroundings are calm and
there's someone else doing it.
But to tackle the job
When one's soul is athrob
With grief is no painful there's no use
pursuing it.
Yet Percy the Bridegroom attempted the task
With all the fine courage a martyr could ask,
Fitting the inner tube, starting to pumping
In rhythmic time to his heart's troubled
jumping.
"Angels above,
Where is my Love?"
"Squeak-squeak!" the air-pump responded in brief.

"**G**ODS!" Percy muttered—
And just then there fluttered
A message of hope which gave instant relief;
For Katurah, it seems, had attached to the sent
This short, scribbled message which fell at Brown's feet:
"Dear—Don't be worried. I got quite a chill
And went in a car with a nice Mr. Hill
To Johnson's Hotel, which is near here, they say.
I'm awfully frightened. So hurry up."

K."

Brown set his teeth down and cursed with a will
The virulent nerve of that "nice Mr. Hill,"
And where in the Dickens was Johnson's Hotel?
He looked for the Road Guide and found, as he thought,
The volume was lost. Maddened, Percival fell
To cranking the engine, as though it had wrought
This dullestome,
Tresdullestome,
Automobuddlesome

Sort of a bad-fairy-godmother spell.
He flew to the wheel. With demonic yawn
The strenuous car, like some dragon's fierce squaw,
Shot through the grayness that heralded dawn,
Swallowing leagues at a gulp as it tore,
Spitting explosions and growling far more.

MAD, baffled Bridegroom! Why speed, can you tell.
If you don't know the road to this Johnson's Hotel?
This thought, 'twas a merry,
Came sudden to Percy
Who dwindle his speed as he lessened his ire.
"I'll waken some farmer," he thought, "and enquire."
He thrashed the song of the valves to piano—
Then he cocked up his ear,
For he plainly could hear
A feminine cry in appealing soprano,
Musical plaint of some ladylike witch.
It rose from the shrubbery hard by a ditch.
"Oh me!
It is she!"
Percy called loud and clear,

"Are you there, honey dear?"
From the shrubbery near
Came the oddly distinctive reply. "Yes, I'm
here!"
And out of the dawn glade a vision of danger—
It wasn't his bride, but a beautiful stranger!

HER hair it was yellow,
Her lips rather nice;
A girl any fellow
Would look at, say, twice.
She was clad in diaphanous motor attire;
And—fact which lit Percival's chivalrous fire—
She'd plainly been weeping.
While others were sleeping:
And, e'en as she paused, as though aid to
require,
She blurted, "Boy—how!
O take me, please do!"

"Certainly, Miss! But where to, can you tell?"
Answered the Vision
With some indecision.
"Take me to—take me to Johnson's Hotel!"
Hope rose again
In Percival's brain.
"Johnson's Hotel! Do
you know where it is?"
"No, I am lost.
Never been to the
place."

Percy threw on speed
with a desperate whizz
And started again at
a desperate pace.

SHE sat in the seat
which belonged to
his bride—
Was ever a wandering
kern more tried?
Distracted and lone,
In search of his Own,
He was acting Sir Knight
to a lovely Unknown,
And the deed of its valorous aspect was robbed,
For the faster he drove her the surlier she sulked.
The lovely Unknown lapsed to silence at last
As desolate moors in the dawn-light they passed,
And Percival noted with air rather cheap
Her golden head nod. She was falling asleep,
—and a fact quite satanic
Maddened him to panic
As one who sits close to the Furies that smoulder;
For the deeper she slept
The closer she crept
Till her head dropped at last in the notch of his shoulder.

"**O** MERCY!"
Cried Percy,
"I can't bear to wake her,
I'll take her!
But this would be nice if —"

The Solution of the Trust Problem

A Program

By LOUIS D. BRANDEIS

THE trust problem was, perhaps, the leading issue in the Presidential campaign. The recent letter of President Wilson to Congressman Clayton indicates that the solution of this problem will be made the principal task of the coming session of Congress. Much valuable preliminary work has already been done. The main facts concerning the Money Trust have been collected by the Pujo Committee; and the report proposes certain remedies. The facts concerning industrial monopolies have been developed in a series of investigations, the list of which is so long that it reminds one of Homer's "Catalogue of Ships." The Industrial Commission made its report on Trusts and Industrial Combinations in 1901. It has been followed by separate reports of the Commissioner of Corporations on the Beef Trust, the Oil Trust, the Tobacco Trust, the Steel Trust, the Harvester Trust, and the Lumber Trust. The Commissioner of Labor has reported on conditions of employees in the steel mills. Different committees of Congress have investigated the Steel Trust, the Sugar Trust, and the Shipping Trust. There was some discussion of the Shoe Machinery Trust before the Judiciary Committee. And the Patent Committee considered, to some extent, the relation of trusts to the patent law. The Senate Committee on Interstate Commerce conducted a prolonged inquiry into methods of dealing with trusts, the record of which fills 4784 pages. In the last Congress, trust bills were reported to the House by the Stanley Committee and by the Hilditch Committee; Congressman Keam also introduced an important bill. Senator Newlands and Senator Cummins introduced bills to establish an Interstate Trade Commission, and two bills dealing comprehensively with the subject of trusts were introduced by Senator La Follette. Several of these have been re-introduced in the present Congress and are now pending.

The Issue Driven

THE decision in the Standard Oil case, May, 1911, led to an active discussion of the trust question throughout the country; and this discussion, which was continued until the end of the presidential campaign, served to clarify thought. The issue was distinctly drawn between two economic policies which differ fundamentally, namely: Are the admitted evils incident to trusts to be prevented by "regulating monopoly" or by "regulating competition?" Those who advocate "regulation of monopoly" insist that private monopoly may be desirable in some branches of industry, or, in all events, inevitable; and that existing trusts should not be dismantled nor forcibly dissolved from those branches of business in which they have already acquired a monopoly, but should be made "good" by regulation. The advocates of this view do not fear commercial power, however great, if easily methods for regulation are provided. Those who advocate "regulation of competition" insist that competition can be and should be

maintained in every branch of private industry; and that competition can be and should be restored in those branches of industry in which it has been suppressed by the trusts. They believe that no methods of regulation ever have been or can be devised to remove the menace inherent in private monopoly and over-weening financial power; and that if, at any future time, monopoly should appear to be desirable in any branch of industry, the monopoly should be a public one—a monopoly owned by the people, and not by the capitalists. The difference between these two economic policies is fundamental and irreconcilable. It is the difference between industrial liberty and industrial absolutism.

Regulating Competition

DEMOCRATIC leaders and Senator La Follette alike advocate "regulation of competition." They believe that the Sherman Anti-Trust Act has in the past been little more than a declaration of our economic policy; but that the experience gained in the twenty-three years since the Act was passed has served some useful purpose. It has established the soundness of the economic policy which it embodied and it has taught us some of the defects in the Statute which prevented, in large part, its effective operation. These leaders agreed that additional and comprehensive legislation is necessary to make the Sherman law a controlling force—to preserve competition where it now exists, and to restore competition where it has been suppressed; that to this end the prohibition of combination contained in the Act must be made more definite; that methods for enforcing the prohibition by the Court must be improved; and that the judicial remedies must be supplemented by other adequate machinery to be administered by a federal board or a commission.

As Congress is to resume now its consideration of the trust problem, it may be valuable to re-state the general character of the trust legislation which has been advocated by those who favor the "regulation of competition," although there are many differences in matters of detail.

First: Remove the Uncertainties in the Sherman Law

THIS can be accomplished, in large measure, by making the prohibitions upon combinations more definite, somewhat as the La Follette-Stanley Anti-Trust bills propose, and the recent New Jersey legislation has to some extent done. The Sherman law, as interpreted by the United States Supreme Court, prohibits monopolies and combinations "unreasonably" in restraint of trade. Experience has taught us, in the main, what combinations are thus "unreasonable." They are the combinations which suppress competition. And experience has also taught us that competition is never suppressed by the greater efficiency of one concern; it is suppressed either by agreement to form a monopoly or by those excessive competition which are

designed to crush a rival. And experience has taught us likewise many of the specific methods or means by which the great trusts, utilizing their huge resources or particularly favored positions, commonly crush rivals; for instance, "cut throat" competition; discrimination against customers who would not deal exclusively with the combination; excluding competitors from access to essential raw material; espionage; doing business under false names; and as "fake independents;" securing unfair advantage through railroad rebates; or acquiring, otherwise than through efficiency, such a control over the market as to dominate the trade. The time has come to utilize that experience and to embody its dictates into rules of positive law, which will instruct the many business men who desire to obey the statute, what they should avoid—and admonish those less conscientious what they must avoid. In the course of deciding Sherman law cases, the Supreme Court has specified many illegal methods, but by making the prohibitions upon combinations thus definite, the uncertainty of the Act, about which business men must complain, will be still farther removed, and the enforcement of the law will become much simpler and more effective.

Second: Facilitate the Enforcement of the Law by the Courts

A GREAT advance in regulating competition and preventing monopoly will result from making the judicial machinery efficient; and several measures, wisely framed to further this end are also embodied in the La Follette-Stanley anti-trust bills. Efficient judicial machinery will give relief to the people by effecting a real disintegration of those trusts which have heretofore suppressed competition and will also enable individuals who have suffered from illegal acts to secure adequate compensation. Efficient judicial machinery will be even more potent as a deterrent than as a cure; for inefficient judicial processes are the greatest encouragement to law-breaking. Despite the tolerance of trusts heretofore exhibited by the government, it is hardly conceivable that private monopoly would have acquired its present sway in America, if the judicial machinery for enforcing the prohibitions of the Sherman law had been adequate; and it is certain that the lamentable failure of the proceedings against the Standard Oil could have been averted. For the failure of those proceedings was not due primarily to inability of courts to prevent or to disintegrate illegal combinations. It was due to defects in judicial machinery or methods, or to a failure of the courts to recognize or apply existing powers.

The Standard Oil and Tobacco Trust suits present, among other things, this glaring defect in judicial processes; namely, the failure to afford redress for wrongs done in the past. Each of these trusts had extorted hundreds of millions of dollars from the public and, as the process had ruthlessly crushed hundreds of independent business concerns—persons

the admitted facts the Supreme Court declared unanimously that the combinations and their acts were illegal; but the corporations were left in undisputed possession of their ill-gotten gains, and no reparation was made to anyone for the great wrongs so profitably pursued by the trusts,—obviously a failure of justice destined to bring into disrepute not only the Sherman law, but all law.

This failure is not inherent in judicial processes. It is due wholly to a surprising lack of effective legal methods and machinery. The judicial determination of the illegality of the combination and its practices should result, under any proper system of law, as a matter of course, in compensation to the injured, the restoration to the public in some form of the profits wrongfully obtained. The Sherman law contemplated in part such a result: for it provided that anyone injured by an illegal combination might recover three times the damages actually suffered. But that provision has been practically a dead letter, because under the general rules of law the divisions in proceedings instituted by the government do not inure in any respect to the individual benefit of those who have been injured. In order to get redress, the injured person or corporation would have to institute an entirely independent suit, proceeding exactly as if the government had never acted. In other words the private litigant would derive no legal aid from the decree in favor of the government.

THIS rule of general law has afforded to the trusts immunity for wrong done. Few injured individuals or concerns could afford to conduct the expensive litigation necessary to establish the illegality of the trusts. Few could, regardless of expense, obtain the evidence required for that purpose until it was disclosed in the proceeding instituted by the government. But before the government's protracted litigation closed, the Statute of Limitation would ordinarily bar any suit of individual concerns to recover compensation for the wrongs done.

The bills now pending in Congress supply these gross defects in the judicial machinery by a very simple device. They provide in substance, that whenever in a proceeding instituted by the government a final judgment is rendered declaring that the defendant has entered into a combination in unreasonable restraint of trade, that finding shall be conclusive as against the defendant in any other proceeding brought against the defendant by any one, so that the injured person would thereafter merely have to establish the amount of the loss suffered; and the danger of losing the right to compensation while awaiting the results of the government suit is averted by the further simple device of providing that the Statute of Limitations shall not run while the government suit is pending.

THESE are a few of the many improvements in judicial machinery which, if adopted, would go far toward making the Sherman law a controlling force. It is largely by similar improvements in our judicial machinery that the inefficiency of our courts will be overcome, a just administration of law be attained, and respect for the courts be restored.

Third: Create a Board or Commission to Aid in Administering the Sherman Law

THE functions of government should not be limited to the enactment of wise rules of action, and the providing of efficient judicial machinery, by which those guilty of breaking the law may be punished, and those injured, secure compensation. The government, at least where the general public is concerned, is charged with securing, also, compliance with the law. We need the inspector and the policeman, even more than we need the prosecuting attorney; and we need for the enforcement of the Sherman law and regulation of competition, an administrative board with broad powers. What the precise powers of such a board should be is a subject which will require the most careful consideration of Congress. The bill introduced by Senator Newlands, and Senator La Follette's Federal Trade Commission bill contain many suggestions of great value. It is clear that the scope of the duties of any board that may be created, should be broad; and it is probable that whatever powers are conferred upon the board at the outset, will be increased from time to time as we learn from experience what powers may be safely conferred upon the board. There is, however, little room for difference of opinion on the following:

1: The board should have ample powers of investigation, not only as mainly for the purpose of detecting and exposing lawless business, but in order to foster and build up law-abiding business. In the complicated questions involved in dealing with "Big Business" the first requisite is knowledge,—comprehensive, accurate, and up-to-date,—of the details of business operations.

The Bureau of Corporations has, to a slight extent, collected such information in the past, and a part of it has been published with much benefit to the public. The recent collection and prompt publication of such information concerning the various branches of business would prove of great value in preserving competition. The methods of destructive competition will not bear the light of day. The mere substitution of knowledge for ignorance—of publicity for secrecy—will go far toward preventing monopoly. But aside from the questions bearing specifically upon the Sherman law, the collection of this data would prove of inestimable advantage to business.

2: The Board should co-operate with the Department of Justice in securing compliance with the Sherman law. The comprehensive knowledge of the different branches of business systematically acquired by the board would greatly facilitate and expedite the work of the Department of Justice and would enable it to supply the Court with that detailed and expert knowledge required to deal intelligently with the intricate commercial problems involved in administering the Sherman law.

3: The board should be empowered to aid in securing compliance with the law, not only in the interests of the general public, but at the request and for the benefit of those particular individuals or concerns who have been injured or fear injury by infractions of the law by others.

The inequality between the great corporations with huge resources and the small competitor and others is such that equality before the law will no longer be secured merely by supplying adequate machinery for enforcing the law. To prevent oppression and injustice the government must be prepared to lend its aid.

Fourth: Trade Agreements

WHILE we have acquired much information concerning the great monopolistic trusts like the oil, tobacco, steel, sugar, and beef trusts, which have been investigated by the Bureau of Corporations or congressional committees, little data have been collected and made public concerning the many competitive concerns engaged in many different lines of business, and which have entered into some sort of agreement with one another to limit prices or output, or concerning trade rules and practices. Some of these agreements are doubtless reasonable and beneficent restraints upon trade and should be permitted; others are doubtless vicious and should be abrogated. But in the absence of comprehensive and detailed knowledge of the subjects, we are not in a position to lay down general rules or to legislate intelligently concerning them.

The trade commission should be empowered and directed to obtain such detailed and comprehensive knowledge, and to that end all those competitive concerns and parties to such agreements should be directed to file the same with the commission and also to furnish other relevant information concerning their business. Upon so doing, these concerns should be relieved from any criminal liability for having entered into such agreements in the past and should not be liable criminally for continuing such existing agreements or arrangements, unless they are continued after the department of justice or the trade commission shall have given notice that it deems the same to be in contravention of law.

THIS would not involve giving immunity for any civil liability that may exist, nor the making of any decision by the commission or the department of justice as to whether a liability, criminal or civil, existed. It merely prescribes a means of securing, in aid of justice, and of further necessary legislation, full, comprehensive and detailed information concerning existing trade agreements relating to competitive business, knowledge of which is essential to wise and just action by Congress, the Department of Justice and the proposed trade commission. Of course, any concern which failed to furnish the required information or made a false return would remain subject to criminal liability for the past, as well as for the future.

When all this information shall have been collected, published, and opportunity for its due consideration shall have been presented, we shall be able to deal intelligently with the problem of the extent to which trade agreements among competitors should be permitted. We cannot do it now. Our present duty is to put ourselves into a position to deal with it wisely hereafter.

The Children in the Corridors

By CHARLES HANSON TOWNE

I HAVE seen children playing in the corridors of great hotels—
Pathetic, lonely little creatures,
Surrounded by rich velvet curtains and disinterested nurses,
Trying to play hide-and-seek quietly in the hushed hallways,
Behind shining pillars, as country children play behind trees;
Or teasing the bell-boys, for lack of other companionship,
As the bell-boys hurry about their duties.

These are the children that seldom see their parents;
They are, sadly enough, the product of accident,
And their parents are indifferent to them.
They are tragic little beings;
I am sorry for them with as much pity
As one can retain who lives forever in a crowded metropolis.
In the afternoons I have seen their nurses take them
Out of the silent corridors of the big hotels
Into the noisy stone corridors of the streets,
And parade them solemnly up and down, up and down,
As if they were mere wooden images instead of human beings.
And always the wise little children's eyes follow other little children
Who are in a like predicament,
As if to say, if they could, "We are all one Masonic breed,
And we understand one another."

They are led to the broader corridor of the Avenue,
And toward the park, with its pitiful spaces of green,
Its gravel walks, and its inhospitable signs
That warn them from the grass. They are always surrounded by walls;
There is never any real freedom, even in the park,
And the gray, great buildings, the immaculate hotels,
Are visible in the near distance, and seem to say,
"You cannot escape us! Our windows are eyes that watch you,
And we shall call you back soon."

These children have never learned to play;
They have never learned the wonder of real companionship
With someone who loves them. I pity them more than I pity
The children of poorer people, for the children of poorer people are loved,
And these are cast out because they are in the way,
And given into the keeping of paid servants
Who slight them or secretly frighten them.
They live forever in a state of semi-neglect,
And they will grow up—God pity them!—
Selfish, inconsequential men and women;
For their characters are formed in corridors,
And corridors are narrow, dim places.

The Last Laugh

By CARLYLE ELLIS

"A W, 'twas a kind of a joke," said
Gunner Dave Shackles soothingly,
as he turned some canned
beef stew into a plate for me.

But I was beyond soothing. Something had happened—something big and significant. And I had missed it. In consequence my paper had been scooped and, as I half fell from my tired horse beside Dave's camp-fire, my refuge through all the weary campaigns, I still held in my hand the wire that fired me.

"It was serious enough to lose me my job," I answered bitterly, but eating ravenously the while.

"Job, is it?" replied Dave cheerfully. "Well, it's likely to lose all of us our jobs, from the General up, and for good at that. If you ask me, this fool killin'-match is over."

"But what did we do?" I begged weakly.

"Just ran down into the valley," said he, "and shook hands and said, 'Hello, mates, let's have a drink,' same as we used to do before we'd shot eight thousand of 'em—peaceful-abidin' white men talking our lingo and mostly pals—full of hunches."

"Surrendered!" I gasped, my whirling head confused by Dave's hyperbole.

"Surrendered nawthin'!" roared Dave indignantly. "Ain't I tellin' you, we just turned human being and forgot we were soldiers, as we ought to have done when they began this sickenin' target-practice—to feed the maw of a haggish trust that has a damn sight too much already."

"I've fit benighted and fanatical beasts of all colors in my time and it was real fighting, for they bated us worse'n soap. But this— Hell! And they call it war! Man-shootin' under scientific management—three-platoon system and hourly reports to the board of directors—shifts

change when the whistle blows (thank God!) and scale and a half for over-time. The General 'phones wireless to his opponent (ain't no more enemies in the war game): 'What was your score today, General?' Answer real polite: 'Only five hundred and fifty-six, not countin' wounded. What's yours?' 'Oh, you've beaten us by ten today.' 'Sorry, General. Better luck tomorrow.' 'Good-bye, old chap. See you at the bally club soon.'"

THUS these men had jested while they killed—and gone to their own deaths cursing horribly.

"Tell me what has happened," I begged again, abjectly, and Dave stretched himself out on his blankets, leered lazily at me, waved his arm above his head and, began theatrically—a look of his:

"The enemy's rapid-fire rifles had been pouring a rain of lead into us a day long.

With ranges corrected to the last inch, the slaughter was terrific. And hot—"

"Dave," I interrupted, "I didn't ask you to dictate a dispatch. It's too late for that. All I want is a few cold, salient facts."

"Gosh!" grumbled the gunner. "You're an ungrateful cuss. Them were salient and, what's more, they're true. It was a right disagreeable day."

"And yet, somehow, we couldn't get mad at them—just sick inside and all over—for we knew the States boys over the way hated the devilish job as much as we did. But there were black looks and mutterings all over the shop—lots more than there ought to be among regulars—more than I'd ever seen in action before, and I didn't like it. Somethin' not nice seemed to be getting ready to happen—you could fairly feel the air growin' tight and heady. It wasn't the States and it wasn't our officers we were muttering at, either. It was them lily-white old ginks pulling the wires at roll-top desks up country. We knew about them. Now, it's duty to obey officers' orders, but it is duty, says we, to kill ourselves down a trust magnate's dirty work just because he's rich, when we don't owe him nothing?"

"At four o'clock the new-fangled gun relief came on and Hy Briggs edged in beside me."

"Mike Brown's gone," he shouted in my ear. "That wipes out the old twenty-eighths. A sweet-smelling score for old Securities Consolidated! And I'm the guy that voted for their president. Bought and paid for, hy God!"

"Powerful lot of red thinkin' goin' on in them trenches that day, believe me, son!"

"I turned to drop to the rear and there stood the General—yes, sir, the Old Man himself and his frightened aides twenty yards back. He was on a knoll above the trench, very straight and still, a choice mark for sharpshooters—just like the old dare-devil! That tight mouth of his was drawn down hard and his face was pasty-gray, but it wasn't fear that made 'em so. He was looking along at the boys in the first ditch as if he was feelin' darn sorry for 'em. You could tell he was thinkin' hard, too, and not so very different from the rest of us."

"I SAW him raise his binoculars and study the firing line across the valley and it was as if he was trying to see what they over there were thinkin'. He pointed them kind of absent-mindedly down into the valley, back and forth. Then they stopped and he kind of stiffened. He looked hard a long time, wiped his eyes, wiped the glasses and tried again. No go. He turned to call an aide, saw that he was practically alone and looked around kind of foolish. It was the queerest performance I ever saw under fire and I've seen a trifle of fighting."

"I was the nearest man to him, and as I was passing back, gul-durned if he didn't spot me and signal me up—always acted as if a general was bigger than the regulations—built that way, I reckon."

"Gunner," says he, handing me the glasses, "what is that white spot in the garden just to the right of the red cabin?"

"I took one good look."

"My God, sir," says I, scared stiff, "it's a kid."

"I'd expect to feel that way about it in the city if I saw a baby in front of a trolley-car but out in that bloody battlefield what was one youngster more or less? At least, that's the way I tried to feel about it in front of the General, for I was

some ashamed. But it wouldn't work that way. Some fool twist in my head—what with the strain and the dyin' and the thinkin'—made it seem as if saving that kid was more important than all the damned wars on earth."

"But the General snapped me up quick."

"Well, what of it?" says he, with a sharp, fierce look as if I had touched him on the nose.

"It—it'll be killed, sir," I stammered like a fool.

"Not an unusual thing on a battlefield," he said dryly, but a shade slower.

"I answered him right back this time."

"Yes, sir," I says, "but this somehow seems a lot different."

"Perhaps it is," he says, looking at me sharp and keen. And then he turned away. Just then an aide and a huger rode up. The General studied that white spot for quite a spell, the tight muscles in his face lettin' go one by one. Then they all screwed up again. He nodded short to himself and ripped out an order:

"Sound *Cause Firing*. Raise a true flag and ask Captain Foster to report here to me with six cavalymen at once."

"WHEN the aide had gone I stepped up to hand the General his glasses, but he waved them off and his hand wasn't steady."

"See, gunner," said he, "if it is—a boy or a girl."

"And him thirty-two years in the service!"

"I picked out the little bobbing figure in the flower garden, and watched it through the dust clouds."

"It seems, sir," says I, "to be a girl—about four, in a white dress, and lookin' for something she's lost, sir."

"Just then a queer thing happened. We hadn't quit firing thirty seconds before the States guns quit too, and there was the whole, bloomin' beautiful valley in the deadest silence you ever heard—not a bird-call, of course, nor even a cricket. And we hadn't more than got the white flag out of its tin case before up went one on the other side. And Captain Foster had no more than got his orders (staring and smiling like mad, but wholesome) to ride out for the kiddie and anything living that belonged to it, than out from the other side rode a corporal's guard and an officer and headed straight for the little red cabin."

"Our rescue party was off at a trot and when it saw the other party coming at a gallop it lifted to a gallop too, and the pace stiffened."

"It's a rascal!" shouted a voice in the first trench, and tumbled heads and grimy bodies and legs rose up like ten thousand gophers. Bets were being laid before the runners were a hundred yards off, and I noticed men's heads along the line turning rear and front, telling the cripples down there in the trenches how it was going."

"The General (horse-flesh is his soft spot, you know) was leaning forward still as stone. He seemed to have forgotten all about being a general with a job of killing on, but then so had everyone else forgotten. Now what do you know about that? I mean, seriously. Wallace, they say, called it *reaction*, whatever that is. I say we were just over-trained. But it felt like a sort of coma! to life."

"Anyway the General was certainly happy—for him. I could hear him talkin' to himself:

"Good riding! Good riding!—Ah, nearly a cropper! Lift her, man, lift her! Steady now!—Good!"

"A breeze had cleared the air and we could see plain into the valley. Both parties were spurring now and gosh! how those boys were scooting down the slopes and raising the dust! Looked like two sure-enough whirlwinds in a tournament. That's what it was, a tournament, and the 'way-down-deep sporting instinct in every mother's son of us was on top. Twenty thousand men were yellin' their heads off around us and wavin' anything they could lay hands on. One guy to the left was swingin' a long, blood-red bandage in circles over his head and reelin' at every swing."

"NOW they were getting close to the cabin and it seemed an even break between our men and thiers. Our cheering stopped suddenly—all at the same second, as if we'd been turned off at the main switch. Then the low roar of the cheering army on the other side came across like a challenge. It wasn't a raw war challenge either, but a big, warm, good-fellow challenge and we yelled back like demons, clamborin' over the trenches regardless."

"Now our boys had hit the road and wheeled right. The others were cutting across lots on a slant and they hurried two fences as we looked. In front of the cabin there's a big clear farmyard. That was the goal. The little speck of white had retreated to the doorway, frightened by the horsemen. Into the yard they dashed from opposite sides at the same instant—and turned into one mass of men and horse in a cloud of dust. It looked bad. For five seconds nobody breathed. Then the dust blew off—and everybody was shaking heads."

"The General threw up his arm and called sharply for his horse with some wild notion, I reckon, of stopping things himself before they went so far that they couldn't be stopped. Then he changed his mind and stood his ground with the rest of us as the next act in the big ring began."

"The twenty men in the valley dismounted and walked together to the door of the cabin where that blessed mite was standing her ground like a regular, but scared white."

"I frightened," she whimpered (as Dinny told us afterward), before any of them big gawks could think of a word to say to her."

"Mustn't be frightened," says Big Bob Scott, as soft as his fughorn voice would let him. "We've come to show you our nice horses." Hell of a line of talk for a case-hardened cavalymen, what? But the kid came right out to Bob and took his hand, him blushing like a real lady. I'd give a year in clink to have seen it."

"Naughty Joe runned away," says Missy next. "He must come back."

"Who's Joe?" asks Bob.

"Joe's my doggie," says she lookin' surprised he didn't know."

"We'll find him for you," promises reckless Bob, forgetting he wasn't quite the commander-in-chief."

"Now?" she asks.

"BOB looked at Captain Foster and he looked at the States officer and everyone looked at everyone else and grinned like sin."

"I want him now!" says the Kid imperatively."

"All right," says Captain Foster, kneeling down beside her. "But first tell me where Daddy is." And they all gathered 'round while the two had a heart-to-heart."

"In a minute or two the watching armies saw the men in front of the red cabin mount and instead of starting back for the lines they began to scatter all over the valley. Big Bob and a States man went tearing off down the road together and another pair raved the other way."

"What in—" says the General, and stepped to his horse and mounted in a flash, while his staff, which had ridden in from the rear, gathered around open-mouthed.

"Most extraordinary combat," says the General, important, just as if it wasn't his doing. "A most serious matter. I consider it advisable to investigate it in person. Forward, gentlemen!"

"And not be rode beyond the lines, very dignified and slow, with the whole-bloomin' staff trailin' behind."

"Then out of the lines across the valley came another mounted party and it was ridin' slow and dignified too. Well, you can guess their trenches buzzed some."

"But I got to thinking about the time when we'd have to go back to the killing again—like you keep thinking about the shop when you're off on a picnic—and I liked it less than ever."

"The two bunches of officers met in front of the red cabin, and at first they just saluted very stiffly; but in a minute they were shaking hands too, and dismounting and talking to the Kid."

"THEN up through the silence came something that went to our heads like liquor and set us crazy. It was the deep laughing of men, free and strong and hearty. Now, why should that have got to us so hard?"

"Of course it was the Kid that did it. She shook her finger at the two generals, they say, and piped up:

"You go find my doggie."

"Just then there was a long 'Ee-e-e-e-e-e-e-e-e'—Bob's run-splitting cowboy yell—from away down the valley, and a little puff of dust began to come back up the road. The call was answered from somewhere else and a cavalry unit began racing in from the other side. Then faint across the valley came the yell again, this time all unlighted up. We answered, and in a jiffy the noise was worse than a million coyotes."

"I don't recollect exactly what did happen next but I have a confused notion of seeing more men coming from the States lines and it seemed as if everything in the landscape was headed for the red cabin. Suddenly I found myself sprinting down the rough hillside faster than if seventeen hundred devils were after me, which, you might say, there was and more, too. But I didn't know that, for the air was thick with human yell and excitement and the only thing in life seemed to be to get first to the bottom of that valley."

"You've seen a crowd gather to a street accident, closing in on the run from all sides like a lot of crazy sheep. This was like that, only a million times bigger and wilder and crazier. All the officers in command couldn't have stopped that stampede if they had tried—which they may have, for all I know. Nothing but a bullet would have stopped me."

"He had almost reached the road and was pretty well winded when Big Bob Scott—he's only six foot three—came riding by like the devil himself, and in one hand, held high over his head, was a little yelping, yellow nut."

"Make way for the queen's mes-

senger," he sang out as he went by, and at that I got to laughing like a fool—and I couldn't stop. I had to quit running, though, and lie down to have it out. Then I heard the air full of laugh instead of yells. At least it was still yell, but a different sort. And there all around me was one army running plumb into the arms of another and rolling on the ground together and busting their sides something shameless. Then they'd shake hands and start to say something and go off again like a lot of girls."

"BUT gosh, that laugh was a comfort! It just seemed to wipe the whole world clean. It made everything look entirely different, from religion to politics, and it made the war game seem the most useless, senseless sham-fuddiness ever invented. There was a message from the Almighty in that laugh if there ever was one since the world began."

"When I could get to my feet I looked around and there were acres and acres of soldiers as thick as pens and all laughing and clapping like mad. A great crowd was in front of the red cabin and I was wondering how I was going to butt in, when I raised my hand to shade my eyes and then I saw I was still carrying the General's binoculars. That settled it. Those glasses suited go back, and off I went."

"That was a gay crowd of soldier boys. In the middle, above the level of khaki caps, was the Kid, sitting on a shoulder and laughing the recovered nut to her like a doll. And highly pleased with the world she was, the mums, and laughin' and chatterin' and shakin' her tuffy rinks at everything in a uniform that could get near her. It was her that had them all holding their selves tight to keep from aching in two."

"A space had been cleared around the cabin and the two generals were standing in the doorway alone, their staffs together a little to one side. I slipped by the guard and walked up as bold as brass, holding the glasses in plain sight."

"The look on the faces of the two old fighting men made me remember what they were up against—boards of strategy, and presidents, courts-martial, trust magnates and hell generally. It made me glad to be only a private. They didn't see me at first and I couldn't help hearing something that wasn't meant for me."

"I can't be done," said the States chief. "The private soldier is a thinking human being in this day and age and he's just seen a big white light. All hell won't make him go back to the guns in this temper. We must find some other way."

"If my death," said the Old Man, very solemn and slow, "would end this wretched business and save what's left of my men I'd go gladly. That's strange talk to you, sir. But these are strange times."

"Then he saw me there, with the glasses in my hand, and turning to the other general with a dry sort of smile, he said, 'This is the man, General, who is likely to be the death of me.' And turning to me with a twinkle in his eye that I could hardly believe, says he:

"Gunner, you're the man who helped to get us into this. Now, as man to man, how are you going to get us out?"

"As man to man, General, since you ask it," says I, thinking loud, "I'm afraid

we're all in it to stay. But if we all stick together down here (I'm a union man back home, sir) and keep the peace like lan-abidin' citizens, so to speak, somebody up there will have to find another way than killin' to settle what we were sent here to settle, and the war (God save the mark, sir) will be dead and done for."

"Gunner," says the States general, laughing, "you're a philosopher after my own heart, but you're a queer sort of a soldier."

"There's a lot of old-fashioned human nature, sir, been croppin' out of uniforms in these parts lately," says I.

"Just then it comes an officer with word to the generals that things were warming up between us and the States men over which side was entitled to keep the Kid. Of course we were all wild to have the darlin'."

"WHAT has our Solomon here to suggest," says the States general, looking at me. He meant it for a joke and laughed, but the Old Man turned to me real kindly, and waited to see if I had anything to say.

"Askin' your pardon, sir," says I. "How would another tournament do?"

"Another tournament?" says they, lookin' puzzled.

"Sure," says I. "More horse races and foot races and boxing and wrestling for points and the best army wins the Kid. I'll keep the boys out of devilment for a day or two, anyhow."

"Think you, gunner," said the Old Man, nodding fast, and blamed if he didn't hold out his hand to me, and he looked mighty happy over something.

"We may, gunner, have done some service in the world today, this gentleman and you and I," he says, "and we must not count the cost. I am ready, sir (turning to the other general), if you are, to place my stake."

"That's what happened to your Uncle Dave, son, only yesterday—to me, Dave Shackles, gunner."

"Well, the tournaments are on for tomorrow morning, and the boys have been training like fury. The General's still sealed up at headquarters keeping the wire to the capital hot (God pity him!): takin' the brunt of it all, as they say, and waitin' for the worst to happen. Lordy, I wish we knew what was going on back home."

Dave gazed into the fire in silence, biting away on his pipe-stem, and I got up stiffly and stumbled away through the dark camp to headquarters. On the bulletin board of the correspondents' tent an orderly was pinning some fresh flimsy from the wireless, and my confidants were gathered around, too absorbed to see me. The first read:

"A dispatch from London to the *Tribune* says: The amazing and laughably elaborate of the Federated States campaign on the field of Little Valley has drawn an echo of mirth from all England. The press is unanimous in declaring it to be the greatest single blow for world-peace ever struck, if it can be said to have been struck at all. Henceforth, the *Times* will say editorially tomorrow, 'a war between English-speaking nations, and probably between any of the world-powers will be virtually impossible. In a day, war has been changed from a tragic and awful menace to a monstrous absurdity. It has been laughed out of court. It is dead as dueling.'"

A Ballad of Woman

By RICHARD LE GALLIENNE

THIS poem, published in HARPER'S WEEKLY under its former management, is republished now because it is real poetry and because it is an appropriate greeting to the visiting Englishwoman. Even those Americans who believe that, like many crusaders, Mrs. Pankhurst has in the last year or two let her enthusiasm run away with her judgment, may well pay tribute to her devotion, her courage and her pioneer spirit.

(Respectfully, Admiringly, and Gratefully
Dedicated to Mrs. Pankhurst)

SHE bore us in her dreaming world,
And laughed into the face of Death;
She laughed, in her strange agony,—
To give her little baby breath.

Then, by some holy mystery,
She fed us from her sacred breast,
Soothed us with little birdlike words—
To rest—to rest—to rest—to rest:

Yea, softly, fed us with her life—
Her bosom like the world in May:
Can it be true that men, thus fed,
Feed women—as I hear them say?

Long ere we grew to girl and boy,
She sewed the little things we wore,
And smiled unto herself for joy—
Mysterious Portress of the Door.

Shall she who bore the son of God,
And made the rose of Sappho's song,
She who saved France, and beat the drum
Of freedom, brook this vulgar wrong?

I wonder if such men as these
Had once a sister with blue eyes,
Kind as the soothing hand of God,
And, as the quiet heaven, wise.

I wonder if they ever saw
A soldier lying on a bed
On some lone battle-field, and watched
Some holy woman bind his head.

I wonder if they ever walked
Lost in a black and weary land,
And suddenly a flower came
And took them softly by the hand.

I wonder if they ever heard
The silver scream, in some gray morn,
High in a lit and listening tower,
Because a man-child then was born.

I wonder if they ever saw
A woman's hair, or in her eye
Read the eternal mystery—
Or ever saw a woman die.

I wonder, when all friends had gone—
The gay companions, the brave men—
If in some fragile girl they found
Their only stay and comrade then.

She who thus went through flaming hell
To make us, put into our clay
All that there is of heaven, shall she
Mother and sister, wife and lay—

Have no part in the world she made—
Serp of the rainbow, vassal flower—
Save knitting in the afternoon,
And rocking cradles, hour by hour!

THE BRAVEST
OF THE BRAVE

JAMES MONTGOMERY FLACK

MRS. PANKHURST

Looking at Mrs. Pankhurst

By JAMES MONTGOMERY FLAGG

A LITTLE gray mouse defying the lion. Tying fancy knots in his wrinkled old tail and slapping his sagging chops. What part of that frail little body showed the sublime courage she surely had? That was the question that interested me, as I knew that some line or contour, however subtle, must inevitably indicate it.

Her whole appearance was that of a slender, tiny gentlewoman, a sheltered woman with small bones. The rather middle-aged slump of her shoulders and the small neck and the sweetness of her expression were misleading, as were the weak feminine gestures.

But in examining more closely I found two physical signs of her spirit—her jaw—although I hesitate to use the term—indicating the fighter, and I rather fancied the fearless straight line of the back of her neck was another indication.

Her confession of a portion of Irish

blood in her veins accounted for a number of qualities, including the human.

Her clear, simple and eloquent speech was in marked contrast to that of the solemnly furnished rhetoric of the gentleman who introduced her. The impression was strong that here was a good woman, and a great spirit. A spirit that seemed to regard humbly her puny body. It didn't matter. There was nothing hysterical or self-conscious in her. There was no false modesty, on the other hand. She knew that she stood for a big idea—that she was a leader, and said so, but not with self-aggrandizement. I could not help feeling that she had what some call "the vision." When she said that the reason she and they in England were resorting to militancy was because every other means had been tried, you felt that she spoke bitter truth.

When she compared her coming to America for sympathy and money for the war effort with Benjamin Franklin's

journey to Paris, there was something so beautifully appealing and whimsically pathetic about it all that it brought tears to my eyes. She spoke truth when she called the men the sentimental and impractical set!

She said she was naturally law-abiding. You felt sure of it.

And if any lout had laughed I knew I should walk right over thousands of respectable ladies' laps and kick a portion of his face in! Sitting near me there were one or two serious suffragettes with watery eyes and blue noses and I thought to myself "I really don't give a whoop whether you get the vote or not"—which was silly, and so like a man to confound issues with personalities! But although Mrs. Pankhurst is far from beautiful—although she has only a certain piquant prettiness—I knew that if it were in my power to give her the vote I should be glad to, for the simple reason that she wanted it so much—and so sweetly!

The Rebellion in China

Being an extract from a private letter to the editor of Harper's Weekly from a Chinese friend

I CAN assure you that living as I do among the people it has been astonishing to see how rapidly the empty pretensions of the so-called "people's party," Kuo ming tang, have been rated at their true worth.

Two years ago, at the revolution against the Manchu government, they were welcomed from the south and followed so obsequiously, and deferred to so much as being liberal and enlightened. Now to a man, with the exception of their own paid party and a few enthusiasts, everyone who has anything to lose, whether business, land, or money, declares that the country, collectively and individually, has had enough of them, and desires now to settle down to straightening out financial and business matters and state organization; but alas, sleek, and well-a-day, we have some neighbors whose last desire is that we shall be consolidated. They keep up and fan the flame of party strife, both openly and secretly, till the President is often driven to take a very different stand from what he would wish and it is really now a fight with Japan using the discontented elements of the country as her weapon, the same old game that she played in Korea, which the southerners are forwarding for personal reasons without regard to the good of the country at large.

The unfortunate part is that while the Kuo Ming tang are not able to substantiate their own claim to regard, they are loud mouthed and cast much suspicion on those who would bring law and order to the country.

It is quite true that some of the means are not exactly what would meet with approval from the sentimentalists, but I think that if one should ask any American who had had the actual burden of administration in the Philippines, he would agree that Yuan has been patient to the verge of weakness in dealing with the re-

fractory elements. He knows his own people, and also some of the Europeans with whom he has to deal, better than they would like to acknowledge at all times. No one who has had to govern an oriental country but realizes that it is not as easy as to manage a European population. Yet I dare say your own president will declare that his office is no sinecure.

For example, just now, Nanking city is fallen into the hands of the government troops and is undergoing all the horror inseparable from war. I send you a slip published some days ago telling of what they suffered from the "republican" troops. Now it is somewhat worse under Chang hsun and his confidant Feng Kuo chang is having his own troubles with him, as well as in restraining his own troops. This man, Chang hsun, is a man of the old type of troops under the dynasties that have prevailed in China, and I cannot give a better idea than to say he might stand for the original Poo-hah of Mikado fame, only realistically, which is not always so picturesque as in a play. His followers never expect or give quarter, and while they are in a sense loyal to him would feel grievously wronged out of their immemorial rights and privileges, were they not allowed to loot and pillage a fallen city. Yet the man is loyal to Yuan and in all the fighting his troops have stood the brunt of the fight, so that out of the ten thousand that started, it is said there are but seven left. And people say they ought to be killed too!

Europeans say why send such a man to fight? In the first place, he had a private grudge to pay off, as he was driven out of Nanking with the revolution two years ago, because he did not obey Yuan's orders to stop fighting and come out when the peace between the north and the south was declared. One of his secondary wives, who fell into the

hands of the "People's Party," they made a display of in various cities and houses and after using her as they pleased sent her back. Now Chang hsun would never rest till he had been given a chance to pay off old scores and regain his face, so it would have been an impossible matter to have kept him from going if there was to be fighting in Nanking, since the rebels had taken it for their headquarters. Next it ensued Yuan the fact that he would have some one who would fight with a will, if the resistance offered by the rebels should amount to anything. To keep hold of the doings Feng Kuo chang, who is on the new order with the new troops, was sent down too. This is a fine man, straightforward and business-like and since he is just as kindly, and a good administrator, his troops have been welcomed in the districts that they have gone into. Some differences have arisen between the two acts but the president will settle them after he has disposed of the more refractory ones. You will say what a loss of life, in one sense, yes, yet in another, no. The Americans have found in their dealing with the Moslems for example, there is nothing else to do. It is not possible to tame some people any more than one can teach a panther to plough.

Sentimentalists will make an outcry at this statement, but you and I know that there is nothing like actual experience to teach people facts. Moreover, with us the most imperative need is not the preservation of a lot of handitti, but restoration of peace and order as rapidly as possible. Our population increases fast enough to replace the loss. The handitti do some good in putting down the refractory rebels, and it is something on the order of the fighting Kilkenny cats, but it leaves the world rid of the whole lot of them and that is about the only use I can see for war.

END OF A FAKE KICK PLAY

Robinson of Colgate stopped by the Army tacklers after a good gain

Current Athletics

By HERBERT REED ("Right Wing")

THERE is promise of a better Army-Navy game this year than in many a long season. The sailors have at command a formidable list of veterans, while at West Point there is a wealth of high-class material at work under unusually competent coaching. The loss of the Yale game undoubtedly has proved a good thing for the Army for this year at least, as the team has not been brought along too fast, and there is every evidence of careful building for the big date. The Colgate game, which for thrills has seldom had an equal, was in the regular stride, although toward the close of that stiff contest the Army uncovered a series of forward passes that probably were not intended for use until later in the season.

One of the outstanding features of the season to date is the prominence of certain of the smaller college teams—eleven that are giving the best in the country, hard battles through sheer good football. Colgate was no exception. Here was a team for whom the Army team's prestige had no terrors, and which was probably two weeks ahead of the soldiers in the matter of development. There were many veterans on the eleven, and the new material measured close to their standard. For sheer speed no team that I had seen up to that time could match the men from Northern New York. The offensive play was founded on a nice combination of deception and power and the handling of the ball in the crisis-crosses and delayed passes would have done credit to any eleven in the country.

This small college team proved that what is known among the coaches as "old stuff" is still valuable, and although later in the season it will be harder

to fool the defense, smart passing behind the line is still a factor in up-to-date football. Coach Bankhart's team caught the West Pointers off guard, and proceeded to make the most of the situation, so that, although ultimately defeated, the team provided just the test for the Army players that was badly needed.

One form of the play that earned a touchdown for Colgate is shown in the diagram, (Figure 1). This play was originated by Harvard three years ago, and has been adopted with good results by many other colleges East and West. The quarter takes a direct pass from the center and poses the ball above his shoulder as if to make a forward pass. Two men go down the field to complete the bluff, while the end comes around from his position and takes the ball while in full stride. Colgate used a back to take the ball, but in other respects the play was the same for all practical purposes as its Harvard predecessor, and much like the play used successfully by Dartmouth against Princeton last year. A variation of the play, built on the same principle, however, was used seven times on the same day that Colgate was using it for a touchdown at West Point.

THIS game, like many others, notably the Harvard-Italy Cross contest, proved, if proof were needed, the value of the run from kick formation. A sample run of the kind is shown in the diagram (Figure 2). There is an excellent chance to get a tackle under the interference, and indeed, some eleven swing a guard around from his position. Since the run starts from well back of the line of scrimmage there is plenty of room for line men to swing around into the play.

Little by little, many coaches are coming to believe in the value of the simple backfield shift combined with the starting signal. With this shift used behind a balanced line as Colgate used it and as the Navy used it a couple of years ago, the backs have little difficulty in finishing their places, and the play is off like a flash. Sliding the line in the defense or dropping back a tackle, effective against line shifts, do not seem to work so well in meeting the simple back shift. With the starting signal in use the forwards do not have to keep their eyes on the ball, and there is every chance to beat the leather—a process that is noticeable from the top-most row of the grandstand but that is difficult for the official on the field to detect.

The development at West Point this year seems to have been somewhat slower than usual, but the team under Lieut. Charles D. Daly is undoubtedly being coached on sound lines. The backs have been running from the square form so familiar at Cambridge, the famous Harvard wheel-shift has been used with good results, and indeed throughout the work of the team, especially in details, there is evidence of adherence to the Harvard system. Close judges of football have come to believe that the Harvard system of coaching may well be copied with profit, and Daly who always has been a thinker in football and is also thoroughly conversant with Houghton's methods, makes almost an ideal coach. There is every reason to believe that when the soldiers meet the sailors in New York on November 29, the black, gold and gray will have on the field an eleven up to the standard of the best of former Army teams. Especially impressive is the

DEFENSE

Fig.—1: Fake forward pass

DEFENSE

Fig.—2: Run from kick formation

development of the kicking game, although against Colgate it was not as effective as the army coaches had hoped it would be.

THE West Point theory seems to be the development of an entire backfield of kickers, who can punt both for distance and direction, can drop-kick and also shift at the goal from placement. When this style of game has reached the zenith of efficiency it should be extremely dangerous in any part of the field. Against Colgate the Army was plainly in the throes of a mid-season falling off from form, but in the end the game was won largely through the maximum of individual interference. When this interference becomes a habit as has been the case of Harvard it should provide more than one opportunity to score, besides being the bulwark of down-field work and running back kicks. The Army did less kicking in its first really hard game than one would have expected but the handling of the ball was not clean through the first half, and the running game was used to make up the ground lost in the punting duel.

On the attack, ball in hand, there is every promise of coming power, and no doubt the necessary deception will be added to the play later in the season, to make the soldiers' running game extremely formidable. In the meantime the Navy eleven, boasting a lot of husky veterans, has had smooth sailing to date, and it is doubtful if the midshipmen's full hand will be shown until the team tackles the rival government institution. In a general way the type of game played by the two service schools is noticeably similar. The two coaching systems have been drawing closer and closer together in the last five years.

It has been said of the Army-Navy game that it provided more thrills and less good football than any of the big games. In their over-anxiety to get at each other, the players of the two teams

have frequently forgotten much that they had been taught. This year, however, both elevens have veterans who have been under fire on Franklin Field, and who are extremely unlikely to lose their heads. Furthermore, there is a coolness in the attitude of this year's Army team that is rather unusual. The men know the rules thoroughly, and seem to have the gift of thinking on the field. The defence against Colgate was not as alert as it might have been, but I think that is a fault that will not be in evidence in the day of the big game.

In the Colgate game, the Army team found its first opportunity to tackle a very shifty and very fast type of fairly open play, and should benefit mightily by the experience.

NEW YORK will have its first opportunity in many years to witness a high-class football game within the city limits when Dartmouth and Carlisle clash on November 15. The Indians are always popular in all sections of the country, but they seem to have an unusually enthusiastic following in New York. Whatever may have happened to both these teams by the time these lines appear, both will probably play up-to-date football when they get together. Curiously enough, Dartmouth was founded as an Indian school, and the redskins are still welcomed there, although Carlisle will put in the field more Indians than have appeared at Dartmouth in many years. This year's Indian eleven boasts of five members of the Chippewa tribe, a tribe

already made famous in all forms of athletics. The right tackle and right end are both members of this tribe, as are also Welch, the quarterback and Guion, one of the half-backs. Brockman, another Chippewa, is also a half-back. Other tribes represented on the team are the Colville from Washington, the Mission from California, the Tascara from New York, the Pomo from California, the Sac and Fox from Oklahoma, and the Shoshone from Wyoming. The star of the

Gher, Dartmouth's fast quarterback, about to throw the ball for a forward pass

Capt. Hogsett, Dartmouth's star end, who has been kicking in fine form all season

of this tribe, as are also Welch, the quarterback and Guion, one of the half-backs. Brockman, another Chippewa, is also a half-back. Other tribes represented on the team are the Colville from Washington, the Mission from California, the Tascara from New York, the Pomo from California, the Sac and Fox from Oklahoma, and the Shoshone from Wyoming. The star of the

team is Guion, the big back who raised so much havoc with Cornell, and who was a terror in the tackle position last year. Guion is one of the hardest backs to stop on the field this year. He runs low and hard, keeps his feet well, and is hardly to be brought down by a single tackler. Welch, the captain and quarterback, has yet to live up to his reputation of a year ago. He was then a veteran, while Guion was just beginning to learn the game. Glenn Warner, Carlisle's athletic director, and head coach, bemoans the Indian tendency toward carelessness on defence in the backfield, and attributes to this more than any other factor the frequent scores against Carlisle even when the Indians have triumphed, but in spite of this, there has been some splendid handling of the ball on kicks, and when the redskins are not troubled by vagaries of the wind on a strange field, they are apt to give any pair of ends an extremely busy afternoon. While Warner up to this time has clung to the closer style of attack, he is known to be a master of the open game, was one of the first coaches, indeed, if memory serves, the very first, to develop the shifts, and when he sends his team against the Green, it is fairly certain that he will use every resource at his command. By the date of that game, Dartmouth will have been put to the acid test against Princeton, and whatever the outcome of that match (fought out before this issue of HARPER'S WEEKLY appears) the Harvard eleven should be close to the top of its form, although a defeat at the hands of the Indians would hardly be considered as a serious blot on the Dartmouth escutcheon. One of the interesting features of the game should be the probable sharp contrast in style of attack, the Indians still clinging to the use of the direct pass from center, while Dartmouth makes use of the quarterback in most of the Green's best plays.

Telling the Truth to Mike Smith

By PAUL E. TRIEM

ALTHOUGH it was neither noon nor a holiday, the great wheels and shafts, with their intricate interlacing of belts, were still; men in gray overalls and jumpers loitered uneasily about, some of them leaning against the massive machinery, some standing stiffly on guard against—against what? The men didn't know.

Then a man in a plain business suit of gray mounted briskly to the top of a rough little stand that had been erected near the door of the great room, and instantly the attention of the crowd was focused upon him. Something unusual was about to happen—for the wheels were stopped, and eleven hundred "hands" had been given a half hour off to listen to this man in the gray suit. Eleven hundred half hours—nearly seventy days of eight hours each! And the company, a great, steel-hearted, conscienceless corporation, had given this time! Certainly there must be a "joker" hidden in the thing, somewhere.

Then the man on the rostrum began to speak. He was one of those strong-faced, keen-eyed, unhurried individuals who can look a crowd in the face and talk to it as he would talk man to man. And he began to speak of that old, old subject which has been hidden in a garment of mystery since Adam and Eve left the garden.

HE spoke slowly, telling of the dangers to which the animal in man subjects the angel in man when he dictates the path of action. And as he spoke, his eyes wandered over the audience, and he seemed to be seeking something. Presently his glance paused, resting on a grimy face; a young face, in spite of the grime, from which the innocence of youth seemed not to have departed. And suddenly the speaker's voice thrilled, and he was speaking directly to that one man in the audience.

"I know men," the voice of the speaker declared, "and I know that many of you at this very moment are saying, 'A lad must have his fling—it never hurt anyone to sow his wild oats!' And I tell you frankly that I don't care what you do; you're welcome to go this very night and seek the path that goes down to death—but I intend that you shall know. You have heard that your souls would suffer for your sinning; but I tell you that every time you take this chance, you are risking a life of suffering, of insanity and heart disease, of corruption such as you cannot even imagine. I see that some of you are smiling; that you think I am trying to scare you with statements that are not true. Now let me read to you from this book, which was written by a physician for physicians; remember, it was not written to scare you, but was written by a specialist, for others in his profession."

By this time the smiles were gone, and

the audience was still. They listened breathlessly as the man on the platform read from the medical book before him. And he read the old, miserable story, divested as far as might be of technical language, of the man who had sinned and who was paying the price.

So it is that the "Society of Social and Moral Hygiene of Seattle" works. This lecture took place in the machine-shop of one of the largest construction firms on the coast. The physician who delivered the lecture was a member of the society. He gave his time, while the corporation gave the time of the men. The lecturer went on to tell his audience of the odds against them if they insisted on trying to beat the devil at his own game, where the dice are always loaded. And he told them of three typical sufferers from one of these diseases, which is ignorantly supposed to be of little significance.

THE first admitted that he had been infected, but that it had amounted to "little more than a cold"—had left him in a little while, none the worse in mind or body.

The second told of having been infected; he admitted that the trouble had persisted longer than he liked, but that it had left him in good health.

The third had also been infected; he had been disordered for months, but finally he had been "cured."

"Now, all those men thought they were telling the truth," the physician on the rostrum admitted. "But what they did not tell, because they did not connect it with the taint which had come and apparently had gone, was the fact that a wife had been operated on, repeatedly, and had escaped death from an abdominal trouble by a miracle; or that a child had been born later, into whose life the light of the sun would never shine—for he was blind. But I can tell you what the family physician knew: that the repeated operations, with death narrowly averted, and the little sightless eyes—these things were among the consequences of the infection that was 'no worse than a cold.'"

THE lecture was finished, and the men filed silently back to their work. And the result? What has been the actual result from this campaign of education?

Every school-house in Seattle, with two exceptions, was used; a physician and a layman speaker presided over each meeting. The physician talked to the parents. He told them that it was not enough to go to the polls and vote the "reform" ticket; they must get down to more serious work; must care for their sons and daughters while they were still in the shelter of the home, must build up healthy bodies and clean minds.

At these meetings, booklets were distributed, setting forth in detail the message of the society.

THE lectures in factories and mills and mines were undertaken later. At first some employers objected to giving the necessary time, but as the nature and purpose of the campaign became known, this resistance ceased.

Other members were taken into the organization, paying a membership fee to help cover the actual expenses, such as the printing of booklets, etc.

And now, once more, that old American question of results: Did the campaign "make good"? Well, it is only begun, in the first place; and in the second, it must be remembered that when a fly-wheel has been revolving as long as has this fly-wheel of reticence and wilful blindness which surrounds all sex questions, it can not be stopped or reversed in a moment. One of the physicians with whom I talked, frankly admitted that the lectures to parents had seemed less successful and productive than had those with the working men. On about half the faces in the school-house audiences, a certain intolerant hostility had been evident; the others were interested, some of them perhaps convinced. Of this part of the campaign it may be said that it is an investment in the community's future; it will bear fruit, but it is impossible to say how many fold.

THE lectures to the men were more unmistakably productive. In the first place, there was no prejudice against discussing these things; in the second place, the appeal was a more direct, and if it must be admitted, a more selfish one. When you tell a woman that her youngsters may be corrupted by corrupt children around the corner, no matter how tactfully you make the statement, you are pretty apt to arouse her opposition. She knows her children "aren't that kind." But when you tell Mike Smith, down at the mill, that his sins are sure to find him out, and then follow the argument up by showing him in just what percentage of cases the devil wins his stakes, and just how heavy his hand is on those who lose, Mike isn't in shape to offer any such argument. He knows that he is guilty; but he has never heard anyone state, authoritatively, the penalty. Now, when he is told that he is playing with the terrors of death and insanity and life-long suffering, first for himself and afterwards for the innocent wife and child who may sometime come to share his name, he has to stop and think.

And when you make a man think, you've got him, provided your cause is a good one. A certain number of Mike Smiths will go to the devil in spite of all the warning in the world; but a good many will not go, if they have to go with the handage of ignorance torn from their eyes. Ignorance is the devil's greatest weapon.

Finance

By ALBERT W. ATWOOD

Telephone Securities and Government Ownership

RUMORS from Washington that the Administration has been considering the advisability of government ownership of telegraph and long-distance telephone lines have been distinctly unnerving to owners of telephone and telegraph securities. Following the news despatches, stock of the American Telephone & Telegraph Company, which, in addition to owning the Western Union Telegraph, is the central organization of all the Bell telephone companies, fell 11 $\frac{3}{4}$ points in fifteen days. Usually Tel. and Tel. holds as steady as a rock in any stock market and its decline from 191 $\frac{3}{4}$ on September 29 to 119 $\frac{3}{4}$ on October 14 was of direct concern to fifty thousand owners.

The government has recently entered into competition with the express companies, and talk of government ownership of telegraph lines is no new thing. But this is the first occasion on which any serious proposal has been made for government ownership of telephone lines. Naturally many stockholders have been aroused by the suggestion. The capital stock, bonds and notes payable of the Bell system in the hands of the investing public on December 31 last, amounted to no less than \$743,900,000. The number of shareholders of the American Telephone & Telegraph Company alone stood at 30,297, of whom a majority were women; 43,353 held 100 shares or less, and 31,953 held 25 shares or less. This does not take into account the thousands of owners and bondholders, other than the Tel. & Tel., in the Western Union Telegraph Company, the Mackay Companies (which own the Postal Telegraph and Commercial Cables) or of the 20,000 independent telephone companies.

A Gigantic Task

ONE thing is clear. If the government attempts to enter the telephone field the number of citizens whose pecuniary interests will be involved is very great indeed. The following letter from one of them, in Holyoke, Mass., is typical:

"I wish to inquire into American Telephone stock and its outlook. I have about \$2,000 to invest for my father, who, in years to come, must depend somewhat upon the income derived. American Telephone has long been one of my favorites. Within the past week or two this stock has dropped considerable, due, no doubt, to government agitation against the company, and naturally I wish to inquire what, in your opinion, will be the outcome? Do you think that the company can pay 8 per cent. in years to come? Do you think the government can find the company guilty of restraint of trade? I read in the papers that the Postmaster-General has made suggestions that the government operate telegraph wires of its own in competition with the Tel. & Tel."

Our Holyoke reader can form his own opinion after reading this article. In the first place the present Postmaster-General

has not reported in favor of government ownership of telegraph and telephone lines, as far as is generally known. Frank Hitchcock, who was Postmaster-General under President Taft, did tentatively suggest government ownership of telegraphs, but no action of any sort was taken. The suggestion was not a new one in this country. It had been brought up before many times in the last forty years. David J. Lewis, a Congressman from Maryland, who was active in the discussions which preceded the adoption of a Parcel Post, has been studying the advisability of government ownership of both telegraphs and telephones, and he has probably conferred with Postmaster-General Burleson and others. No doubt in time Lewis will introduce a bill looking toward government ownership.

Unlike the Parcel Post

THERE is a certain consistency in maintaining that if the government operates all postal communications it should likewise operate all wire communications. But it must be remembered that the government already had plant and machinery for parcel post. Indeed there are numerous students who maintain that the American government never intended private express companies to spring up, and that only carelessness permitted it. Certainly there is grave doubt whether the founders of the Post-Office ever intended it to be other than a monopoly. Thus the express companies have been interlopers, as it were. For more than half a century there has been an expensive duplication of postal facilities. The government had one post-office and three or four closely related private concerns ran another post-office. Finally the absurdity of this duplication of functions became evident—the more evident because express rates had long been outrageously high, and further because there had not been any cash investment to speak of, in these companies. They had grown fat solely through their charges upon the public.

Now telephone rates have never been subject to anything like the complaint and dissatisfaction which express rates caused. Moreover the telephone companies while making large profits have not done business wholly on surplus profits like the express companies. Within a generation investors have actually put several hundred millions of their savings into telephone plants. Thus the telephone companies cannot be regarded, like express companies, as in a sense parasites upon the public post roads (railroads). And the government, to enter the telephone business, would not merely employ machinery which it already has, but would either have to buy the present plant or build a new one to compete with the existing system.

Local and Long Distance

WASHINGTON reports say the prevailing idea is to take over only the long-distance wires. This is not practical. The government would have to take over the whole system or nothing.

A tempting relish
having the true tomato taste

BLUE LABEL KETCHUP

Keeps After Opening

Vine ripened tomatoes, from selected seed, grown under our personal supervision, carefully handled in sanitary kitchens, same day as picked; cooked but lightly so that the natural flavor is retained; seasoned delicately with pure spices; placed in sterilized bottles—this is Blue Label Ketchup.

Contains only those ingredients
Recognized and Endorsed
by the U. S. Government

Our other products, Soups, Jams, Jellies, Preserves, Meats, Canned Fruits and Vegetables, you will find equally as pleasing as Blue Label Ketchup.

It is the aim of the publishers of HARPER'S WEEKLY to render its readers who are interested in sound investments the greatest assistance possible.

Of necessity, in his editorial articles, Albert W. Atwood, the Editor of the Financial Department, deals with the broad principles that underlie legitimate investment, and with types of securities rather than specific securities.

Mr. Atwood, however, will gladly answer, by correspondence, any request for information regarding specific investment securities. Authoritative and disinterested information regarding the rating of securities, the history of investment issues, the earnings of properties and the standing of financial institutions and houses will be gladly furnished any reader of HARPER'S WEEKLY who requests it.

Mr. Atwood asks, however, that inquiries deal with matters pertaining to investment rather than speculation. The Financial Department is edited for investors.

All communications should be addressed to Albert W. Atwood, Financial Editor Harper's Weekly, McClure Building, New York City.

Local and long-distance service are too closely related to separate them. A man in Boston wishes to talk with a man in New York, and then desires to 'phone his wife in Newton (a few miles away) that he will be home late for dinner. Do not suppose for a moment that different machinery is used for the two conversations. The Bostonian in both cases calls up the same "central." The long-distance wire is the least of the mechanism employed. If the government took over the long-distance wires it would have to make an arrangement with the company to utilize all of its local facilities, take over the local facilities themselves, or duplicate them.

Total assets of the American Telephone & Telegraph Company stand on the company's books at \$924,000,000. (It is reported that Congressman Lewis has said it would cost the government \$900,000,000 to take over the system.) But an unprejudiced appraisal of the company's plant recently showed that to reproduce, it would cost \$61,000,000 more, or a total of \$985,000,000. The total debts of every conceivable kind are \$506,000,000, leaving a physical reproduction value of \$479,000,000 to care for \$309,000,000 of stock, owned, as we have seen, mostly by women and small investors in general. But to be generous let us write off 20 per cent, or \$100,000,000, for depreciation, or possible error of the engineers. That still leaves \$450,000,000, or \$117 on each share of stock, without taking into consideration any intangible assets, such as good-will, patents, franchises, cost of developing the business, or going concern values. It may also be said that some of the company's investment holdings are worth more than they are carried on the books.

What the Government Can Do

YET no one should dodge the fact that the government could injure the company if it really set out to do so. Governments do not have to compete with private industries on a business basis, for they can raise money by taxation to make up the deficit. That the government should enter into competition with the telephone system is almost incredible. It would take twenty years, probably, to build up a plant and organization as efficient as the private one now in existence.

Suppose the government takes over the telephone system at a fair price for all concerned. It would probably take Congress years to decide upon such an expensive step. But suppose such action is taken, where do the 90,000 independent companies and the Postal Telegraph stand? Either they will have to be ruthlessly and cold-bloodedly driven out of business, or bought out. The problem, it may be seen, is one not easily to be settled.

Then there is the question of whether the telephone company is a trust. Mr. Wickensham, President Taft's Attorney-General, took up that subject and decided after a prolonged study that suits against the company would be inadvisable. He suggested that the Interstate Commerce Commission make an exhaustive study of the industry and regulate it thoroughly. This the Commission is now doing. The present Attorney-General has brought one suit against one portion of the telephone system. Whether other suits will be brought is not known. In many respects the business is logically a monopoly. It cannot be broken up into pieces of tobacco, oil and steel busi-

incomes might conceivably be. It is in a wholly different class from all manufacturing enterprises. It is a public service company. There are only two logical lines of procedure, strict government regulation or government ownership. The breaking up of the system into many small, privately owned and managed units is inconceivably absurd. That is the one thing which assuredly will not be brought about.

A Strong Financial Position

I AM not competent to act as a prophet. I cannot tell what the people or the government of this country will do in decades to come. But I do know that a corporation which is sound and financially strong is in a better position to dick or with other private parties or with the people at large than one which is weak.

The American Telephone & Telegraph Company is in an enviable financial position. In the first place it is not overburdened with debt. Its debts are relatively small. It has a third more stock than bonds. And of its debt, a large amount consists of bonds which are con-

vertible into stock, and are being so exchanged every day. In the last five years, interest payments on debt have increased less than \$4,000,000, while dividends have increased more than \$11,000,000. In five years assets have grown \$311,000,000, while all capital obligations have increased slightly less than \$200,000,000.

Maintaining 8 per cent. Dividends

WILL the company continue to earn 8 per cent. dividends? Of course no one can predict years ahead what any business will earn. The uncertainties of human affairs are too great for that. But the telephone business is a steady one. It fluctuates as little as any important industry. It resembles the post-office in stability of revenue. Earnings do not fall off in panics. Its revenues never stop. They come in with far more certainty than even the receipts of the largest and most firmly established steam railroads. Telephone companies extend very little credit. Their business is practically on a cash basis, and they

deal in a commodity which is being used in all parts of the country and shows every sign of being used more as time goes on.

The outstanding obligations of the Tel. & Tel. are so low in comparison with the actual plant that the company has to earn only 5 per cent. on that plant to pay its 8 per cent. dividends. There is certainly little traceable water in the stock. Of course, if telephone rates the country over were reduced materially, it might not be as easy as now to pay the 8 per cent. But there is a lot of room between the present earnings and the 8 per cent. dividend. In 1912 the combined operating companies after setting aside \$35,000,000 for depreciation, and paying interest and dividends, had surplus earnings of more than \$13,000,000. There is room here for considerable reduction in rates without making the stockholders forego dividends, and the best part of it is that for a good many years past the same wise policy has been followed.

No one can undertake to say just what the future has in store for the telephone system, but judging by its present condition it ought to be able to weather some severe storms.

What They Think of Us

Judge Ben B. Lindsey, Denver (Colo.)

I have been following HARPER'S WEEKLY with the greatest interest. I am delighted at some of the subjects you are taking up. That recent article on unmarried mothers is the finest thing I have seen in a long time.

Joseph R. Rhoads, Overbrook (Pa.)

Your reading matter is, I think, very poor and very wild.

Helen Ring Robinson, Denver (Colo.)

It is late, I know, to congratulate you on the article "What Women Are After," in HARPER'S WEEKLY of August 16—but I have just discovered it.

"Then felt I like some watcher of the skies."

[Mrs. Robinson is a member of the Senate in the suffrage state of Colorado.—*ED. HARPER'S WEEKLY.*]

H. S. Warwick, Secretary of the Ohio State University Association, Columbus (Ohio)

Now I read HARPER'S WEEKLY. It has the F.I.P.P., which being interpreted, signifies, Pep, Interest, Personality and Power.

Wassau (Wis.) Daily Record-Herald

The only thing that is really regrettable is that the WEEKLY was not permitted to die outright. The real tragedy is the spectacle of the poor, palling, affronted thing that now calls itself HARPER'S WEEKLY, wallowing, like a bastard half-breed, under the shadow of a great name.

Richmond (Va.) Virginian

Comes a critic who says that Norman's editorials are the weakest thing about the publication. Nevertheless, Hapgood is getting out an interesting publication. He is usually wrong, and his grammar may be slightly off color, his editorials are not to be compared with Colonel Harvey's, its cartoons run the editorial policy a close race for the badge of futurism, but the magazine is different from the others, is interesting in form and make-up, and everything in it is interesting. Norman is getting out an interesting, entertaining, and valuable weekly. Otherwise

people would not take the trouble to criticize it.

Detroit (Mich.) Evening News

What Hapgood has done with HARPER'S WEEKLY is a fright to the old readers who were young fifty years ago, before the invention of art, industry, organization, and ideas.

San Diego (Cal.) Union

The other day the Century Club of San Francisco, an organization of women blue stockings, burned Brieux because he wrote "Damaged Goods," "Maternity," and "The Three Daughters of Monsieur Dupont." Fortunately there was no Strindberg in the Century Club library or there would have been a conflagration to rival the disaster of 1906. Brieux merely offended the modesty of these precise *rediculous*; Strindberg would have shocked their womanhood to its uttermost foundations. Largely in consequence of the Strindberg assault, there is no more feminism in Norway, or, for that matter, in Northern Europe. The feminists of America don't know that. Even Norman Hapgood doesn't know that feminism is a hack number fail in Europe. It is like feminine fashions—out of fashion in the place of its origin when it is just coming into fashion here.

New York Evening Sun

A West Virginia school boy is puzzling the doctors because he persists in writing upside down. The little chap should not be discouraged. He may yet grow up to become an editor of HARPER'S WEEKLY.

Youngstown (Ohio) Vindicator

While the paper has lost the distinction of thought and expression which George Harvey gave it, nevertheless it is filled with "stuff" we all want to see. He is devoting himself chiefly to the Wilson administration and to the sex problem. Of this last, he writes and permits his contributors to write with a frankness which will startle the old ladies among its readers, but will swell his subscription lists, and yet there's not a prurient word in it all, and it's sound to the core. The

sketches by T. P. O'Connor, M.P., of "Orators Who Have Influenced Me," are delightfully interesting and informing and the cartoons are surely "different,"—they're coarse and most of the women subjects are vulgar, but the pictures are haunting in the impression they must create for the typical "Broadway Girl" and her pale reflection to be seen in the grill rooms of every city.

Youngstown (N. C.) Telegram

You will enjoy the new HARPER'S WEEKLY if you sit in the farthest corner of the room and have someone read it to you.

Harry Edward Freund, Editor "The Musical Age," New York City

HARPER'S WEEKLY with Norman Hapgood as editor has opened a new field of really great journalism, and that class of journalism that leads the way to true civilization.

The American people must appreciate the new HARPER'S WEEKLY as today the minds of people of all Nations are being educated to the higher phases of life and of natural living.

San Francisco (Cal.) Star

Many readers have waited to see what Hapgood (and the McClures) can do with HARPER'S WEEKLY. Well, they appear to aim at the masterwork of these modern days: "Service," for the good of all of us. No off-color stories here—things which too many publications still think profitable. It will prove otherwise; sex questions are not omnipresent and eternal in the average normal human being; toil, knowledge, friendship, the things of the spirit and the intellect and love as life's ally and helper, not as its tyrant; such is the healthy way to put it. Sincere literary artists found this out ages ago. HARPER'S WEEKLY is on the right track.

Stratford Lee Meenan, General Agent, The Connecticut Mutual Life Insurance Company of Hartford, St. Louis (Mo.)

Keep up the good work and give us more of your "shredded wheat" illustrations.

Molly promptly seized the rope in both hands and fastened the ends together in a secure knot

A Knot-Tying Orang-Utan

By GEORGE GLADDEN

The clever ape needed no particular urging to attempt the feat of untying the knot she had tied

IT has been my great good fortune, during the past eight months, to be able to observe almost daily the remarkable group of anthropoid apes included in the collection of that splendid institution, the New York Zoological Park. The group comprises five orangutans, and four chimpanzees, all perfect specimens, usually in excellent health and spirits, and constituting an exhibit far superior, I believe, to any other of the kind in this country or in Europe.

Apes and monkeys of all kinds furnish an inexhaustible supply of mere amusement for all ages of humans, and I, for one, hope that I shall never grow too old to laugh at their antics, and the practical jokes they play on one another. At the same time, I am often surprised by the apparent failure of seemingly intelligent adults to note the real understanding which much of this play involves, especially in the case of the anthropoid apes.

One day I joined a group of about twenty persons, who were gazing into the cage occupied by the orangs, "Mimi" and "Molly," both remarkably fine specimens, and both females, though "Molly" is frequently called "Mike," for facial reasons which show in the accompanying illustrations. Both are approximately the same age—about eight years—and have been in the Park since they were about a year old. But Mimi is much the heavier, her weight being 144 pounds, her height about forty-two inches, and her reach six feet, eight and one-half inches, while Molly's weight is ninety-eight pounds, and her height about the same as Mimi's, and her reach six feet, seven and one-half inches.

Molly was sitting on the ledge in the rear of the cage, holding in one foot the bar of the trapeze, which hangs normally five or six feet from, and about on a level with the ledge. In the other hand, she held a piece of heavy manila twine, which evidently she had just found in the straw. As I watched her, she passed the twine over the trapeze bar, and then deliberately tied the ends together in a hard knot.

That it was a hard knot became apparent, because immediately it was fashioned, Molly put her long hand through the loop, and swung herself off the ledge, to which she held with the free

hand, carefully testing the strength of the cord and the knot with more and more of her weight, until she was hanging free of the ledge. The knot held.

HER next performance displayed another kind of intelligence. Apparently satisfied as to the strength of the twine and the security of the knot, she dropped to the floor, seized two footfuls of straw, and climbed back to the ledge, pulling the trapeze bar along. She then twisted the straw closely about the twine, and again swung off from the ledge, hanging by one hand from the straw covered loop. Is there any room for speculation as to why the straw was used in this way?

Subsequently I saw Molly tie a knot under conditions which indicated a pretty clear idea of its utility in an emergency. On this occasion, Keeper Fred Engelholm (who has charge of the Primates' House), threw a piece of clothesline, about twenty feet long, to Molly who sat near the wall in the open cage, part of which is shown in the accompanying illustrations. In the cage at the time were the other orangs, Mimi, Sam, Babe and Lewis, and the chimpanzees, Dick and Susie. All of these apes, and especially Dick and Susie, love to get bold of a rope and drag each other around with it, and in this instance the chimpanzees promptly pounced on the rope and tried to pull it away from Mike. Now, Molly is a very powerful ape, and much more than a match for Dick and Susie combined. But she is neither as aggressive nor as active as the chimpanzees, and furthermore she doesn't care much for their rough and tumble methods of getting what they want.

SO when Dick and Susie made common cause, and hauled away on the line, like a couple of sailors on a mainsail sheet, Molly, making two or three turns of the rope around her powerful arm, calmly backed up to the wall, easily pulling along the tugging little chimpanzees. Once under the rail (shown in the illustrations) she deliberately passed the line over it, and made it fast with a double square knot. Then she sat down and, with what I fancied was a grin on her usually impassive countenance, watched the frantic but futile efforts of Dick and Susie,

as they danced about and tugged on the line. But the knot held, and Keeper Engelholm was obliged to go into the cage and untie it, which he did only with considerable effort.

Molly's knot-tying accomplishment so interested me, that I resolved to catch and record her in the very act. This I have been able to do. The photographs from which the accompanying illustrations were made, were taken in the large outside cage (used in summer by the anthropoid apes), with Molly as the performer, and Keeper Engelholm and Mimi as audience. Under these conditions, although the light is much dimmed by the roof and bars of the cage, necessitating the use of a very slow shutter speed in my camera, I managed to get the accompanying photographs of Molly in the very act of tying and untying knots.

The clever ape needed no particular urging to induce her to attempt the feat. Keeper Engelholm looped the rope double over the trapeze bar, as it is shown in the illustrations, and then simply said:

"Go ahead, now, Molly, and tie your knot."

Molly promptly ambled over underneath the trapeze, seized the rope in both hands, and with a few deliberate motions, fastened the ends together in a secure knot. One of the accompanying illustrations shows the beginning of the operation. In the other photograph, she is untying a knot which she herself had tied.

In reply to my questions as to how Molly learned to perform this feat, I have been assured by Keeper Engelholm and his assistants that she had no instruction from any of them, and that she must have studied out the act on her own initiative. This, of course, makes the performance the more remarkable. Lacking a more plausible explanation of how she got the idea of a knot at all, I am inclined to think that she must have noticed one in a cord which came into her possession accidentally or otherwise, that her natural curiosity prompted her to untie it, and that this, in turn, suggested the reverse operation. In this connection, I may add that the orangs frequently twist straw into a sort of rope, which they loop over the trapeze bar, tie, and then swing on until it breaks.

The Way They Do It

THE expression "Invisible Government" to denote the quiet but effective methods of financial influence came into immediate favor because of its accuracy. The power of the concentrated money interests is as great as it is hidden and smooth. A hint is given and all the forces act together. Take an example in the recent attack of Mr. Aldrich on Mr. Bryan and the Currency Bill. Mr. Bryan has long been a red rag to the large property interests, and Mr. Aldrich is an expert in giving the signals. When his speech was made, word was sent out at once by many of the large financial institutions to small banks everywhere to cut down credit to the utmost. They were to give it to merchants when they deemed it absolutely necessary, but they were at the same time to create a stringency in their neighborhood. A person would come into a country bank with abundant security and the bank officials would say: "Yes, your security is ample. Yes, we have plenty of money, but we are not making loans. We are afraid the Currency Bill is going to plunge the country into ruin, and very likely this bank itself may be destroyed." No wonder, with this policy pursued all over the country, Congressmen and Senators were deluged with letters.

Making a reform against the wishes of the money power is no joke; it is not a buggy ride; it requires persistence, courage and knowledge. It will be a dire misfortune for the country if the money powers win this straight fight against the President. For our part, we think the Currency Bill does not go far enough, but we think it is an extremely valuable step forward, doubly valuable because it is a test of strength between a progressive government and a hard-fighting financial opposition. Just what we think ought to be done in addition will be made clear in the series of articles on the money trust by Mr. Braudeis which begins next week.

Coördination

REACTIONARY newspapers and the class whom they represent call the President a boss because he tries to induce Congress to live up to its pledges and to the principles on which it was chosen. The same charge against him was made when he was Governor of New Jersey. The same charge is now being made against most efficient governors; for instance, against Governor Cox of Ohio, who is following the same determination to see that pledges are carried out. This kind of coördination is absolutely necessary if our scheme of government is

to work. It is the method by which the people, the legislative department, and the executive department work smoothly together. If such coördination were interfered with, our system would break down. If Mr. Taft had understood this situation fully, and had undertaken to force Congress to carry out strictly the principles of legislation to which it was committed, the Progressive Party would never have been born. The Constitution of the United States was beyond doubt one of the most brilliant and adequate documents ever produced, but the state of mind that regards it as unchangeable can only exist in a brain that does not realize that life and growth are inseparable.

Morals and Sense

HOW quickly the spirit of a country, and even of a civilized world, may change! Only a few weeks ago, when Woodrow Wilson declared his intention of following out simple altruistic rules in his Mexican policy, a jeer went up from the investing classes in this country, and from several of the nations in Europe. He stood calmly by his policy, however, and when a little later, before the Southern Commercial Congress, he declared that never again would the United States seek to obtain one additional foot of territory by conquest, and prophesied the end of the policy of material interest, there was scarcely a dissenting voice. He pointed out acutely why we do not hear of concessions to foreign capitalists in the United States. They may be invited to make investments, but we do not grant them concessions. "The work is ours though they are welcome to invest in it." With sympathy, he pointed out that in those States which are forced to grant concessions, foreign interests are likely to dominate domestic affairs, which is a condition always dangerous and likely to become intolerable. In saying that the Latin-American States had had harder bargains driven with them in the matter of loans than any other people in the world, he indicated a characteristic of his mind,—that his sympathy, general and ethical as it is, is concrete and business-like, as when he added, "Interest has been exacted of them that was not exacted of anybody else, because the risk was said to be greater, and then securities were taken that destroyed the risks. An admirable arrangement, for those who were forcing the terms!" It is exciting to have in the White House a man capable of focusing the most progressive moral principles of the time and applying them successfully to the most complicated situations,—fearless of mere conventional criticism, and confident of the triumph of right ideas.

The Rights of Seamen

FOR twenty years the International Seamen's Union of America has been asking for changes in the law which would release them from a position akin to peonage. Andrew Fureseth, the President of the Union, has passed many years in Washington, subsisting on a seaman's wages, and working to secure this seaman's bill.

Last winter a seamen's bill which was satisfactory to Mr. Fureseth passed the House; but it was much vetoed by President Taft. Mr. Fureseth feared the seamen would lose all hope of having their wrongs righted by Congress, hastened to attend a Convention of the Seamen's Union that he might urge them to renewed patience and effort for lawful redress of their wrongs. The morning of his departure he came to bid good-bye to Senator La Follette, who had championed his bill, and he took from the Senator a message to the seamen that he would renew his efforts on their behalf, in the incoming Congress. "I don't know a man I love more than Andrew Fureseth. He is the very soul of loyalty," was the Senator's remark as the seaman went downstairs.

When Congress came to sitting in Special Session, Senator La Follette, true to his word, introduced the seaman's bill. The Senate took favorable action upon it on October 23. As this bill is identical with the bill that passed the House last session, it is confidently expected that it will pass again, and so become law.

Besides the provisions for the protection of the men, the La Follette bill provides for a standard of efficiency, certainly not unreasonable, since it is equal only to the lowest standard allowed foreign countries. It requires that two "able seamen" shall be provided for each lifeboat, and that seventy-five per cent. of the crew must be able to understand the officers.

It is probable that the low standard of efficiency in the crews is responsible for the heavy loss of life in a long list of sea disasters. The passage of the La Follette bill in the Senate is justly claimed by Fureseth "as a victory for the safekeeping of lives at sea, and the making of American seamen again free men."

The Turk on Atkins

A COMMENTARY on the ups and downs of human affairs is the report by the Turkish attaché at the recent British military manoeuvres, in which he condemns in unmeasured terms Thomas Atkins' lack of efficiency in the field. Most of the books which appeared in flocks during and after the Turko-Balkan war were of British authorship. Almost all of them smote the supposedly beaten Turk. Such also was the tenor of the correspondence from military and other observers at the front, or as near as they could get to the front, printed in British journals during the war. A few of these critics admitted extenuating circumstances, but all of them exposed the glaring inefficiency of the Turk in all his military departments, artillery, infantry, commissariat, and field-hospitals. Some put the blame on Von der Goltz and his German system; others accused Abdullah and poor old martyred Nazim Pasha. Too much politics in the army, said some; too much army in the govern-

ment, said others. But one and all they found the Turk no longer terrible, except terribly inefficient.

And now the irony. Facing the efficient Bulgarian the inefficient Turk is back almost where he was before the war began, while it is by no means certain that he has permanently lost all hold on Macedonia and Albania. Finally here is the Turkish attaché, hardened by many months of actual campaigning, trim in his German-made uniform, superbly at ease on a horse, and requiring next to nothing in camp, surveying with something like scorn the flustered evolutions of regiments softened by town barracks and accustomed to parade.

Just as there was much exaggeration in the reports of Turkish inefficiency developed in the stress of war, so in the reported unreadiness for war, which peace-time manoeuvres have more than once developed in the British army, there is more than a grain of truth.

The Christian Associations

A RECENT campaign of the Young Men's Christian Association and the Young Women's Christian Association has served to show the tremendous backing behind those organizations, both in numbers interested and in wealth accessible. The two associations have undertaken to obtain in New York City, in the two weeks beginning November 10, four million dollars for new buildings. Miss Grace H. Dodge, well known for her support of educational and progressive causes here and abroad, has pledged \$250,000. Mrs. James S. Cushman, Mrs. Wm. Fellows Morgan, Mr. George W. Perkins, Mr. Henry P. Davidson and many other men and women of wealth have taken energetic interest in the cause. Some idea of the backing of this work may be obtained from the fact that Mr. Charles S. Ward has raised \$20,000,000 in the last eight years, and raised a million dollars on one effort alone in London. Women are to get the larger share of the present \$4,000,000 fund. Three million is to go to them for buildings.

One reason that the work of these associations has so strong a hold on the loyalty of so many people is that it is closely connected with the actual material welfare of the poor. This is true not only of citizens but of new arrivals. Last July, Y. M. C. A. secretaries met sixty-seven ships in eleven European ports, distributing literature, giving two thousand cards of introduction and writing four hundred and twenty-two letters for the new-comers. In August, the secretaries on Ellis Island, or on New York piers and in Quebec met one hundred and six ships, distributing fifteen hundred and eighty-one explanatory cards, wrote one hundred and sixty-seven letters and gave assistance to thirteen hundred and sixty persons. The Association follows the work to the point of ultimate destination. It is made clear to the immigrant that Association workers are interested in his material welfare, his safety and industrial progress, and that he will be helped if he needs help. His wife is trained in various domestic branches. His children are taught many things, including safe-guarding life and limb against street and factory accidents. It is no wonder that so needed a work receives such remarkable support.

Irony and Time

SOUTHEY wrote this note on Leland's "History of Ireland":

Plantation of Ulster by James. Ireland must gratefully acknowledge that here were the first foundations laid of its affluence and security.

Time is the best ironist. What would Southey say in the light of the Irish situation of today? It is not an easy situation, and England is naturally timid because of foreign complications and the fear of having as her immediate neighbor a nation which might cooperate with her enemies on the continent. Nevertheless the only solution is toward more and more self-government for Ireland, and until that self-government is secured, Ireland will be extremely unlikely gratefully to acknowledge the services of James.

A Triumph

AN easy stone's throw from the heart of the city of Portland, Maine, has been built the new City Hall to replace the old, destroyed by fire in 1908. The new building is a striking expression of the public life of this peculiarly representative New England city. The two wings and the basement are given up to municipal offices and chambers. Connecting these wings is the auditorium with its seating capacity of 3,051. It was planned and built particularly to accommodate a municipal organ, the second largest in the United States and the fourth largest in the world, a gift to the city from Mr. Cyrus H. K. Curtis of Philadelphia, a native of Portland, as a memorial to Professor Hermann Kotszschmar, who, in the words of Mr. Curtis, "did something to make us better men and women and to appreciate that indefinable something that is an expression of the soul." Here every afternoon in the large auditorium occurs a municipal organ recital, executed by a municipal organist, Mr. Will C. MacFarlane of New York. Here for a nominal sum anyone may wander in and enjoy a peaceful hour or half hour of inspiring music. Here, too, the citizens of Portland have a hall capable of accommodating all municipal gatherings, a people's union. This conservative New England city has been broad enough to recognize some of the fundamental principles of government: that society and government are one; that society is an association of individuals for mutual aid to self-development; and that the object of administration is to help society forward to its ends. By this interrelation of recreation and municipal matters a more personal interest in the various departments of city government will be excited among Portland's 36,000 people, and by diffusion in the citizens of other towns. Under the same roof with this pealing organ will be heard, discussed, and perhaps solved, problems of public welfare and even of nation-wide import. In contemplating the breadth and grandeur of this instrument we are reminded of the words of Washington Irving in his impressions in Westminster Abbey: "Suddenly the notes of the deep, laboring organ burst upon the ear, falling with doubled and redoubled intensity, and rolling as it were, huge billows of sound. How well do their volume and grandeur accord with this mighty building."

A Loss

FOR many years William Garrott Brown was a sound and earnest thinker and writer about public affairs in the United States. He was a valued editorial contributor to this WEEKLY. For a long time before he died, he suffered much, and the way he accepted life endeared him to his friends as much as the enthusiasm and thoroughness with which he always did his work. He was one of a group of men who have recently so well represented the progressive spirit of the South. President Wilson wrote, after his death: "It is really an irreparable loss to the scholarship and thought of the country."

Standardizing City Improvements

WITH commission government overcoming graft, and city-planning preventing ugliness, the American municipality is wiping out its stain of incompetence. Illinois University is of service in the movement by establishing a chair of civic design, and by appointing Charles Mulford Robinson as professor. Harvard and the University of Michigan have given courses in the subject for some years. Columbia has had an outside lecturer on the subject, and Cornell and Wisconsin have recognized it in their work, respectively, of Landscape Architecture and Engineering. But Illinois is the first American University to make it a distinct chair, and to establish a professorship, which is a step ahead.

Ben Remains

THE attacks on Ben Lindsey in Denver have subsided. His enemies thought he was sicker than he was. When they found he was able to present his own case, the probabilities of attempting a recall vanished. There never was anything in it but oppression. There never was any doubt in the mind of the awakened and free part of the population of Denver that Ben Lindsey has done more for the welfare of that city and of its inhabitants, and of generations to come, than the city can ever repay. Those who attack him are those who think they profit from a system iniquitous in its essence.

Puritans and Greeks

THE reader of the Scarlet Letter gets a vivid idea of the Puritan conscience; it had its strength, but that book principally shows its narrowness and its cruelty. What a different thing was the attitude toward life of the most gifted people in history. The Greeks in their great period had nothing of what we call a sense of sin. When they did anything wrong, they called it "a bad shot"—something that was bound to happen from time to time and was best forgotten. As Livingston puts it, it was useless to spend thought and remorse on bad shots; it was better to go forward and improve the aim for next time. Many a person of Puritan descent, tortured needlessly by remorse, could gain much by acquiring the habit of looking at any transgression as a defective aim, and making up his mind to get nearer the bull's-eye next time.

WITH ALL THE WORLD BEFORE HER

By BEN ALI HAGGEN

The Books I Read Now

By RICHARD LE GALLIENNE

IT has been my custom all my life to carry a book with me, as I carry a cane, or as other men wear a fencer in their button-holes. As I grow older, it might be well taken as a badge of my servitude—to pen and ink. Am I not a scrivener, and thus, naturally, go about carrying the tools of my trade? Simple folk, observing me thus accompanied,—as an Italian with his shovel—in train or trolley, doubtless conceive of me as a profound student, eternally with nose in book. Would that I were! The book, I fear, is carried all too thoughtlessly—actually indeed like a cane or a flower. For I am seldom caught reading it. But, doubtless, others who also carry books—and I sometimes observe them with a thrill of comradeship—will understand. It is not an insatiable thirst for wisdom or useful information that prompts us to this, I trust, pardonable eccentricity; but it is the sense the book in hand gives us of being invisibly accompanied by some engaging personality, some distinguished and delightful prescience, some "shape of beauty," some inspiring form of thought, of whom, though we may not visibly confer with them, in the form of reading, we are agreeably and magnetically conscious. Usually they are books we know well, and scarcely need to read again. To hold them by the hand is enough, as with old friends—or a word or two now and again of the old converse, lighting up whole vistas of familiar spiritual territory, familiar yet never to be staled, as we turn our eyes to the stars. Amid the many small interests and worries that perforce make up so much of our day's work, their mere names or titles are silent remembrances of the universal and the eternal. Or, to open them at random, say, as our morning train approaches the Grand Central, and we are unconsciously squaring our shoulders for the day before us, or as we speed in the subway to keep an appointment, how strange, in the heart of roar and jostle, suddenly to come on:

That's the appropriate country—there, man's thought,
Rarer, intenser,
Self-gathered for an outbreak.
Chafes in the censor!
Leave me the unlettered plain its herd and crop;
Seek we sepulture
On a tall mountain, cited to the top,
Crowded with culture?
Thither our path lies—wind we up the heights—
Wait ye the warning!
Our low life was the level's and the night's;
He's for the morning!
Step to a tune, square chests, erect the head,
Ware the beholders!
This is our master, famous, calm and dead,
Borne on our shoulders—
Sleep, crop and herd! sleep, darkling thorp and croft,
Safe from the weather!
He, whom we convey to his grave aloft,
Singing together,
He was a man born with thy face and throat,
Lyric Apollo!

And so on with the grand clinking march of it. I tell you it is great to come suddenly on such a passage in the subway—there is no such place to make such splendid breathless contrasts in—like a rift of blue, like a cup of spring water brimming with starlight.

OF course, you run a risk in carrying such old books along with you. Some one may catch you at it—say, "What's the book?" and, when you have shown it to him, exclaim, "Browning?" with raised eyebrows, and a surprised, rather pitying, look at you. You are very evidently entering the period of fossilization, to be reading Browning at this time of day? Now, if it had been Bergson, or Sudermann, or Shaw or Brieux! Sorry! but it was Browning. The other day I was caught with a volume of Gibbon, still another day with Boswell, and

yet again with Scott! Can there be any doubt that a hardening of the mental arteries is setting in, and that I shall soon be joining the superannuated old gentlemen who drink nothing but port and read nothing but Horace? Well, I can conceive of worse drinking, and worse reading; and I know no modern company to match either.

I SUPPOSE that to be caught red-handed with Scott is most incriminating of all. Dickens and Thackeray a man may still read and escape the suspicion of second childhood. But Scott! Well, I suppose that there was a period when we all felt like that. Probably it was what we might call our Meredith period—generally our formative, fermenting period, when we were busy fad-ing ourselves spiritually and mentally, impatiently shattering the scheme of things in which we had been reared, and feverishly rebuilding another, nearer to the heart's desire. Scott is not for such periods. He is for the boy, and the grown man. For the intermediate evolutionary and revolutionary adolescent, he seems wingless, flameless, lacking in sidereal fire. The romanticism which charmed the boy seems a plaything and the humanity which holds the man seems earth-born, earth-limited. He re-says the young impatient, is nothing for my soul; and flies off somewhere in search of the thrill, the ache, the rapture of life. He reads the fashionable doctors of the soul, inevitably fascinated by sundry brilliant quacks of the mind, drawn, as is natural, by flashing anarchy in utterance, which he fondly takes for newly sounded profundities. All is so new, so amazing. Because he is living life for the first time, it never occurs to him that it has been lived before; yes, and lived in almost precisely the same manner by that old fog, who, in a world of radium and aeroplanes, met to speak of "eugenics," is discovered in the criminal enjoyment of Scott. But I must not sound too superior. It is comparatively only the other day that I re-discovered Scott for myself. I had come to the end of Dumas for the third or fourth time; and, happening to face a set of Scott on my bookshelves, I had asked myself—"Is it possible to read Scott nowadays?" I determined to try, and, for the good fortune of my experiment, I lighted on the "Fortunes of Nigel." It was, indeed, a fortunate movement. What a vivid, real world I found myself in! What character, what movement, what genuine romance! Then I tried "Quentin Durward," then "Rob Roy." We are supposed to have improved on the historical novel since Scott's day. In certain minor matters of artistry, doubtless, we have. Yet, I should like to know what we have to match those three full-blooded, high-mettled, wise-hearted books I have named; and I own myself Mr. Maurice Hewlett's willing slave. But, after all, whatever class of book we are dealing with, it is the man behind the book that counts, that finally decides its relative caliber.

IT is easy to grant a certain heaviness occasionally in Scott's style, though our feeling of that comes, I am inclined to think, less of any fault in him than in our own vitiated tastes, grown too accustomed to over-pungent, highly-sauced, effect-at-any-price, styles. His English is too good, too much of "the center," for our paradoxical, Meredithized generation. He is deficient in fireworks, and the fantastic-forcible. But the fullness of the man! How one is struck at every turn by the careless wealth of his mind, the depth and breadth of his experience, the stores of his observation, the range of his reading! With the majority of writers, even writers of real stamina, one feels that one can gauge the depths of the soil. It is thus and thus deep, and then rock. Much has been done with it. But its fertility has a limit. With Scott, on the contrary, every page seems to suggest a rich loam incalculably deep and fertile. His writing suggests the inexhaustibility of life itself. In this, of all English writers, he is nearest of kin to Shakespeare, as perhaps

no other novelist approaches Shakespeare in the absolutely concrete humanity of his characters. Where, out of Shakespeare, will we find such a character as Bailey Nicol Jarrie in "Rob Roy" and those who have admired Mr. Hewlett's Captain Brazenhead, and the numerous other imitations of Captain Dalgerty, let them seek that great original in "The Legend of Montrose" and acknowledge the joyous open-handed master, to whom the careless creation of such figures was, after all, only part of the activity of a life, whose other daily business was more than enough for one hrimful existence. And, as if all his activity as lawyer, novelist and poet, was not sufficient, the pen that never tired must needs overflow, just for fun, into that "Journal" where we can look right into the great noble, simple heart of the man himself; and if we are right-minded, feel dwarfed and ashamed, puny "moderns" as we are, before that revelation of a great and generous child-hearted nature, that was a great genius as well.

YES, as I said, it is the man behind the books that makes them great and keeps them alive, and that is always the determining difference between the great talent and the work of genius. But I am not writing an essay on Scott, else I might proceed further to illustrate his many-sidedness, ask whether, in the matter of heroines, "A Meredith woman" is more than a match for Di Vernon, or if the romantic passion of our modern novels is more truly passionate for its sexual outspokenness, compared with the hard-won self-control of Scott. What I am most concerned with here is Scott's possession of that quality which one might call human homeliness, which is common to most of those great writers, to whom, when our period of *sturm und drang* is past, we find ourselves instinctively returning. As a rule, great writers set us at our ease by making us feel, or letting us imagine, that they are like beings with ourselves. Even when they take us on starry journeys, it is as companions, presumably with the same starry inclinations as themselves. Their first effort is to make themselves understood by the reader, to enlist him on their side. The present-day fashion seems to be precisely the reverse. A writer's chief aim seems to be to impress his reader with his own superior cleverness, to dazzle, to dumbfound him; to cluh him into bewildered agreement, and to humiliate him with a sense of his pitiful mediocrity. But nothing goes to so early a doom as mere cleverness. There is nothing of which we so rapidly weary. The merely clever fellow is one to whom we soon learn to say, "O Pshaw!" So many clever fellows have gone down into the darkness—the reason being that they are usually the flashy purveyors of stolen goods, the pert popularizers of the deeply meditated thoughts of serious, individual natures; often the real, misunderstood men of a generation or two before.

All can raise the flower now
For all have got the seed.

THERE is a great deal of such flowering at the present moment, and, for all the excitement in this and that direction, very little original will have been missed by a man who has not opened a book printed within the last twenty years. All the motifs so exuberantly repeated—rather than developed—whether in philosophy, sociology, poetry or fiction, were already formulated twenty and more years ago, either in masterpieces, or works of brilliant talent. But this flowering is, of course, all to the good, as illustrating the vitality of the sowing. Much that was sowed in tears is coming up in joy; a matter surely for profound rejoicing. But, for that very reason, we may still go about carrying the old seminal hooks, leaving their merely disseminating offspring to do the good work of sending the voracious younger generation back to their originals. With Emerson in my hand, I can forego Bergson, or even James. With Ibsen and Grant Allen, I can forego Shaw—who indeed said all he had to say twenty years ago, and whose later antics are merely galvanizations of his young dust. With Meredith and Pater and Wilde—well, there is no need to specify what multitudinous illegitimate progeny

of theirs it is possible to forego; while, so long as you leave me a copy of William Morris's "The Well at the World's End," you can keep all the novels of the last twenty years. Poetry is different, and there are one or two young poets, whose volumes I am to be found carrying who, however much they may derive, as all young poets must, from their greater predecessors, are still, in a fine devotion, carrying on the torches of beauty and dream.

AS for poetry in general, I wonder if my contemporaries in foggydom find that the reading of poetry grows a more serious, I would almost say, religious, matter with them as they grow older; and, that, perhaps, for that reason they read less of it. The reading of it goes deeper with them than it did in the days when they devoured it wildly—all and sundry. It is a pleasure curiously shot through with pain nowadays, when the sorrow that wells up in all beauty has become intensified by experience, and the sentiment of loss enters so keenly into the loveliness of things. The feeling that Burns expresses in

You'll break my heart, you bonnie bird
That warbles in the lift so hie,

grows more and more familiar with us face to face with emotional moments; and poetry, being the intensest expression of our intensest feelings, presents life to us with such concentrated poignancy that we almost shrink from exposing our hearts to its divine agonies. As, too, we grow less to seek it for those intellectual messages long since delivered, the poetry we read is necessarily that which is the most quintessential—and therefore, the most scorching—the poetry of pure beauty, sheer emotion, essential music, most mystic meditation. Thus we find ourselves back again—after whatsoever wanderings among minor novelties—with the few great masters rapturously divined in boyhood, but, as manhood deepens, more and more surely known as the inspired interpreters of the holy spirit of the universe, the seers and *avant-couriers* of humanity. The verbal and lyrical gymnasts, the metaphysical contortionists, the dainty confectioners, are there still on our shelves. We may amuse ourselves with them at times—but the poet we carry in our hand, maybe, has something to say like this:

To suffer woes which Hope thinks infinite;
To forgive wrongs darker than death or night;
To defy Power, which seems omnipotent;
To love, to bear; to hope till Hope creates
From its own wreck the being it contemplates;
Neither to change, nor falter, nor repent;
This, like thy glory, Titan, is to be
Good, great and joyous, beautiful and free;
This is alone Life, Joy, Empire and Victory—

or he may be one who sings:

The holy time is quiet as a sun
Breathless with adoration—

or, again, it may be one who tells:

I met a lady in the meads,
Full beautiful—a fairy's child,
Her hair was long, her foot was light
And her eyes were wild—

or yet, once more, it may be his song is:

Lovely are the curves of the white owl sweeping
Wavy in the dusk lit by one large star.

But the reading of poetry, as I said, grows more and more like a high religious service, or like going out to see the moonrise. It is to be feared that we too often shrink from its keen stirring up of those "thoughts beyond the reaches of our soul," and seek the fireside, instead, with some companionable romance, some worldly historian, some genial gossip, or some stimulating critic. As we look out on the starry night our soul, maybe, suggests Plato; but our frailty pulls down the blind, hinting at the pleasantness of Anatole France, and we end our evening with the epicurean wisdom of the Abbé Jérôme Coignard.

The End of an Era

A comparison of the recent tariff victory with the events of Cleveland's time, and McKinley's, and Taft's

THE scene is set in the chamber of the Senate of the United States.

The hour of four o'clock in the afternoon of Tuesday, September 9, is approaching, when the Senate has agreed to begin voting on House bill 3341, known as the Underwood-Simmons bill, or better still, the Under-Woodrow bill. The galleries are thronged with a sympathetic audience, many of them the wives and daughters of Democratic Congressmen, while Democratic Representatives, with the privilege of the floor, line the walls of the chamber. For this is a Republican funeral and is not well attended by the members of that party, save those officially designated to take part in the obsequies. Secretary Tamm's beaming countenance is recognized in the President's gallery. La Follette is speaking, Senator Gore, at Senator Simmons' suggestion, having terminated his speech in defense of the bill to give the Wisconsin Senator all the time he wants. He criticizes and commends the pending measure, not neglecting to pay his final respects to the Payne-Aldrich iniquity.

The tariff debate, these last few days, has begun to show the strain on the Senatorial nerves and has tended toward acrimony. La Follette has told Gallinger that there must be a few more Senatorial vacancies, of men of his type, before the Republican party can win public favor, and Senator Hollis has claimed that he and not his New Hampshire colleague represents the sentiments of that state toward tariff reform. Senator Williams has referred pointedly to the fact that the duties have been lowered on the goods which Senator Lippitt "himself manufactures," has even read Jefferson's manual to prove that "where the private interests of a member are concerned in a bill or question, he is to withdraw." *O tempora, O mores!* To be sent to the Senate, to succeed Aldrich and represent the textile interests of New England, and then to have not only his advice rejected but his very vote challenged! Senator James fires a story at Senator Bristow, to represent the Progressive attitude to the Republican Party, relating how a soldier advised his comrades: "If the enemy are too few, we'll whip 'em; if they are too many, we'll jine 'em."

LA FOLLETTE yields the floor to Senator Thornton, who sings a little swan-song to the memory of Louisiana sugar, and at four o'clock the voting on the amendments begins. A few are adopted, but only those recommended by the Finance Committee. Other amendments break in vain against the Democratic majority. The vote is uncomfortably close on the amendment to strike free sugar from the bill, and Senator Newlands does not vote. An hour and a half is consumed in this tiresome process. Let us take the opportunity of indulging in tariff reminiscences.

When Randall, Pennsylvania Protectionist, was Speaker of the Democratic House, Pack published a significant cartoon, representing Tariff Reform as a founding infant, left midway between

the doorsteps of two respectable old gentlemen, the Republican and Democratic parties, while each with violent deprecatory gestures disclaimed paternity.

Poor old General Hancock, from his retreat on Governor's Island, issued his tariff platform in saying that the tariff was "largely a local issue." And so it has too often proved. The lines were fairly drawn in the Cleveland campaign of 1884. Yet Cleveland shocked his complacent party with his vigorous tariff message of 1887, and brought about his own defeat in the campaign of 1888. Then the Republican Party went to the other extreme with the McKinley bill, boldly avowing protection as necessary for giant as well as infant industries, and Cleveland was magnificently vindicated, with the doctrine that he had made Democratic doctrine, in 1891. "The shopping women did it," was Tom Reed's comment. Most unfortunately, the country's credit had to be first established, by the repeal of the Sherman Silver Purchasing Act, on Cleveland's recommendation, and this disrupted his party and gave the opportunity for the Democratic traitors in the Senate to work their will. William L. Wilson passed a Democratic bill through the House, but it became the Wilson-Gorman bill in the Senate.

THE scene this afternoon brings forcibly to mind the vote on the passage of that other bill on July 5, 1894. Smith of New Jersey, now the last surviving member of the Big Four, announced that as the income tax had been changed to suit his ideas somewhat, he would support the bill. Hill, David Bennett, voted against the bill on the ground of the inclusion of the "populistic" income tax, and Populist Pettigrew helped to make up the Democratic majority of five votes. It has taken twenty-nine years, nearly a generation, to pass another income tax measure. Only three members of the present Senate voted then, Gallinger, Lodge, and Perkins.

The tariff question was virtually shelved during the disastrous silver campaigns of 1890 and 1900. But what did William McKinley have in mind of unfulfilled purpose when he said in his last public utterance, at a World's Exposition, "The era of exclusiveness is past?" Did he foresee the reaction from the Dingley Act? And suppose that Theodore Roosevelt had chosen to accept freer trade with all the world as one of the McKinley policies which he bound himself to carry out? Would not the history of men and of parties have been different?

The demand for lower duties became insistent again in the campaign of 1908, and Mr. Taft went all over the country declaring for a revision downward. But the Payne bill was no fulfillment of that pledge, and when the Aldrich substitute was introduced Senator Lodge coolly informed the Senate that the Republican platform had indeed declared for a revision of the tariff, but not for revision downward. Dilliver and Beveridge and Bristow and Clapp and Cummins and La Follette aroused the country to the

iniquities of the Payne-Aldrich bill and cast their votes against it.

One cannot forget that last great speech of Dilliver's. "There have been two unique hoaxes practised upon the American people this year," he said, "the discovery of the North Pole by Dr. Cook, and the revision of the tariff downward by the Senator from Rhode Island; and each has received the highest official sanction." For President Taft signed the bill, naively confessing that the combination of wool-growers and woolen manufacturers had been too much for the virtue of his party, and later he pronounced the bill "the best ever."

THE hour of half-past five finds all the amendments disposed of. The Vice-President: "The question is upon the passage of the bill as amended, and the secretary will call the roll."

Interest immediately centers upon the Republican Progressives, who have helped so largely in bringing about this political revolution. Can they find any principle to stand upon, that will justify them in voting for the only alternative, the continuance of the Payne-Aldrich tariff rates? But Borah and Bristow and Clapp and Crawford and Cummins vote "No." Gronna, absent, releases Lewis from his pair. Kenyon votes "No." The Secretary: "Mr. La Follette." And La Follette raises his head from his arm on the desk and says: "Aye." A wave of applause breaks over the galleries and sweeps over the Democratic side of the chamber. Mr. Penrose votes "no." Mr. Poindexter: "Aye." There is another round of applause. The young Senator from Washington, a Virginian by birth and rearing, becoming a Progressive Republican in the Northwest, and now the only National Progressive in the Senate, thus casts the unanimous vote of the new party for the Democratic bill.

Three factors were essential to the result obtained. First, Oscar Underwood's knowledge of tariff problems, the only man in either house who could shut himself up in a room and write a tariff bill, "from Agate to Zinc," that could stand criticism. His leadership in the House will be sorely missed when he goes to the Senate from Alabama.

Second, Woodrow Wilson's influence as the representative of the whole people and the head of his party. He had the sense of the public will when he insisted on free wool and free sugar, and the ending of the scandals connected with the sugar schedule and Schedule K, the "citadel of Protection." His timely remarks about the "insidious lobby," amply vindicated now, demolished Democratic opposition.

Third, the reorganization of the Senate for which Hoke Smith was largely responsible. The work began before the fall elections for the Senate were held. It was a delicate task to put progressives in charge without giving the older statesmen an excuse for revolt. But the Senate also has been Democratized. Otherwise, the tragedy of 1904 might have been repeated in 1913.

Cutthroat Prices

The Competition That Kills

By

LOUIS D. BRANDEIS

great strides. New methods essential to doing business on a large scale were introduced. They are time-saving and labor-saving; and have proved also conscience-saving devices.

THE greatest progress in this respect has been made in the retail trade; and the first important step was the introduction of the one-price store. That eliminated the constant haggling about prices, and the unjust discrimination among customers. But it did far more. It tended to secure fair prices; for it compelled the dealer to make, deliberately, prices by which he was prepared to stand or fall. It involved a publicity of prices which invited a comparison in detail with those of competitors; and it subjected all his prices to the criticism of all his customers. But while the one-price store marked a great advance, it did not bring the full assurance that the seller was giving value. The day's price of the article offered was fixed and every customer was treated alike; but there was still no adequate guarantee of value; both because there was ordinarily no recognized standard of quality for the particular article, and because there was no standard price even for the article of standard quality.

Under such conditions the purchaser had still to rely for protection on his own acumen, or on the character and judgment of the retailer; and the individual producer had little encouragement to establish or to maintain a reputation. The unscrupulous or unskillful dealer might be led to abandon his goods for cheaper and inferior substitutes. This ever present danger led to an ever widening use of trade-marks. Thence the producer secured the reward for well doing and the consumer the desired guarantee of quality. Later the sale of trade-marked goods at retail in original packages supplied a further assurance of quality, and also the assurance that the proper quantity was delivered. The enactment of the Federal Pure Food Law and similar state legislation strengthened these guarantees.

But the standard of value in retail trade was not fully secured until a method was devised by which a uniform retail selling price was established for trade-marked articles sold in the original package. In that way, widely extended use of a trade-marked article fostered by national advertising could create both a

MR. BRANDEIS has been the most profound and brilliant defender of competition in the recent great struggle that has taken place on that subject. It is well known that his investigations and his philosophic thought greatly influenced the La Follette anti-trust bill and the Stanley anti-trust bill, and formed the basis of the attack made by Governor Wilson upon regulated monopoly in the campaign for the presidency. He has spoken incidentally of the evils of unregulated competition also, but he has not gone into that subject with any fulness. It is particularly interesting, therefore, to present that side of the question from Mr. Brandeis' own pen.

"I CANNOT believe," said Mr. Justice Holmes, "that in the long run the public will profit by this course, permitting knives to cut reasonable prices for mere ulterior purposes of their own, and thus to impair, if not destroy, the production and the sale of articles which it is assumed to be desirable the people should be able to get."

Such was the dissent registered by this forward-looking judge when, two years ago, the Supreme Court of the United States declared invalid contracts by which a manufacturer of trade-marked goods sought to prevent retailers from cutting the price he had established. Shortly before, the Court had held that mere possession of a copyright did not give the maker of an article power to fix by notice the price at which it should be sold to the consumer. And now the Court, by a five-to-four decision, has applied the same rule to patented articles, thus dealing a third blow at the practice of retailing nationally advertised goods at a uniform price throughout the country.;

Primitive barter was a contest of wits, instead of an exchange of ascertained values. It was, indeed, an equation of two unknown quantities.

TRADING took its first great advance when money was adopted as the medium of exchange. That removed one-half of the uncertainty incident to a trade; but only one-half. The transaction of buying and selling remained still a contest of wits. The seller still gave as little in value and got as much in money as he could. And the law looked on at the contest, declaring solemnly and ominously: "Let the buyer beware." Within ample limits the seller might legally lie with impunity; and, almost without limits, he might legally deceive by silence. The law gave no redress because it deemed reliance upon sellers' talk unreasonable; and not to discover for oneself the defects in an article purchased was ordinarily proof of negligence. A good bargain meant a transaction in which one person got the better of another. Trading in the "good old days" imposed upon the seller no obligation either to tell the truth, or to give value, or to treat all customers alike. But in the last generation trade morals have made

* Dr. Miles Medical Co., vs. Park & Sons Co. 220 U. S. 300.
† Robts. Merrill Co. vs. Nourse 210 U. S. 239.
‡ Bauer vs. Thomas 209 U. S. 1.

reputation for the article, and a common knowledge of its established selling price or value. With the introduction of that device the evolution of the modern purchase became complete. The ordinary retail sale—the transaction which had once been an equation of two unknown quantities—became an equation of two known quantities. Uncertainty in trade is eliminated by "A Dollar and the Ingersoll Watch," or "Five cents and the Uneda Biscuits."

The Court's Prohibition

SUCH is the one-price system to which the United States Supreme Court denied its sanction. The courts of Great Britain had recognized this method of marketing goods as legal. The Supreme Court of Massachusetts had approved it. The Supreme Court of California has wholly approved it. The system was introduced into America many years ago, and has become widely extended. To abandon it now would disturb many lines of business and seriously impair the prosperity of many concerns.

When the United States Supreme Court denied to makers of copyrighted or patented goods the power to fix by notice the prices at which the goods should be retailed, the Court merely interpreted the patent and copyright acts and declared that they do not confer any such special privilege. But when the Court denied the validity of contracts for price-maintenance of trade-marked goods, it decided a very different matter. It did not rest its decision upon the interpretation of a statute; for there is no statute which in terms prohibits price-maintenance, or, indeed, deals directly with the subject. It did not refuse to grant a special privilege to certain manufacturers; it denied a common right to all producers. Nor does the decision of the Court proceed upon any fundamental or technical rule of law. The decision rests upon general reasoning as to public policy; and that reasoning is largely from analogy.

The Demands of Public Policy

WHEN a court decides a case upon grounds of public policy, the judges become, in effect, legislators. The question then involved is no longer one for lawyers only. It seems fitting, therefore, to inquire whether this judicial legislation is sound—whether the common trade practice of maintaining the price of trade-marked articles has been justly condemned. And when making that inquiry we may well bear in mind this admonition of Sir George Jessel, a very wise English judge:

"If there is one thing which more than any other public policy requires, it is that men of full age and competent understanding shall have the utmost liberty of contracting, and that their contracts, when entered into freely and voluntarily, shall be held sacred, and shall be enforced by courts of justice. Therefore, you have this paramount public policy to consider, that you are not lightly to interfere with this freedom of contract."

The Court's Objection

THE Supreme Court says that a contract by which a producer binds a retailer to maintain the established selling price of his trade-marked product is void; because it prevents competition between retailers of the article and restrains trade.

Such a contract does, in a way, limit

competition; but no man is bound to compete with himself. And when the same trade-marked article is sold in the same market by one dealer at a less price than by another, the producer, in effect, competes with himself. To avoid such competition, the producer of a trade-marked article often sells it to but a single dealer in a city or town; or he establishes an exclusive sales agency. No one has questioned the legal right of an independent producer to create such exclusive outlets for his product. But if exclusive selling agencies are legal, why should the individual manufacturer of a trade-marked article be prevented from establishing a marketing system under which his several agencies for distribution will sell at the same price? There is no difference, in substance, between an agent who retails the article and a dealer who retails it.

For many business concerns the policy of maintaining a standard price for a standard article is simple. The village baker readily maintained the quality and price of his product, by sale and delivery over his own counter. The great Standard Oil monopoly maintains quality and price (when it desires so to do) by selling throughout the world to the individual customer from its own tank-wagons. But for most producers the jobber and the retailer are the necessary means of distribution—as necessary as the railroad, the express, or the parcel post. The Standard Oil Company can without entering into contracts with dealers maintain the price through its dominant power. Shall the law discriminate against the lesser concerns which have not that power, and deny them the legal right to contract with dealers to accomplish a like result? For in order to insure to the small producer the ability to maintain the price of his product, the law must afford him contract protection, when he deals through the middleman.

But the Supreme Court says that a contract which prevents a dealer of trade-marked articles from cutting the established selling price, restrains trade. In a sense every contract restrains trade; for after one has entered into a contract, he is not as free in trading as he was before he bound himself. But the right to bind oneself is essential to trade development. And it is not every contract in restraint of trade, but only contracts unreasonably in restraint of trade, which are invalid. Whether a contract does unreasonably restrain trade is not to be determined by abstract reasoning. Facts only can be safely relied upon to touch us whether a trade practice is consistent with the general welfare. And abundant experience establishes that the one-price system which marks so important an advance in the ethics of trade, has also greatly increased the efficiency of merchandising not only for the producer, but for the dealer and the consumer as well.

The Producers' Plea

IF a dealer is selling unknown goods or goods under his own name, he alone should set the price; but when a dealer has to use somebody else's name or brand in order to sell goods, then the owner of that name or brand has an interest which should be respected. The transaction is essentially one between the two principals—the maker and the user. All others are middlemen or agents; for the product is not really sold until it has been bought by the consumer. Why should one middleman have the power to depreciate in the

public mind the value of the maker's brand and render it unprofitable not only for the maker but for other middlemen? Why should one middleman be allowed to indulge in a practice of price-cutting, which tends to drive the maker's goods out of the market and in the end interferes with people getting the goods at all?

Cut-Prices—the "Mis-leader"

WHEN a trade-marked article is advertised to be sold at less than the standard price, it is generally done to attract persons to the particular store by the offer of an obviously extraordinary bargain. It is a bait—called by the dealers a "leader." But the cut-price article would more appropriately be termed a "mis-leader"; because ordinarily the very purpose of the cut-price is to create a false impression.

The dealer who sells the Dollar Ingersoll watch for sixty-seven cents, necessarily loses money in that particular transaction. He has no desire to sell any article on which he must lose money. He advertises the sale partly to attract customers to his store; but mainly to create in the minds of those customers the false impression that other articles in which he deals and which are not of a standard or known value will be sold upon like favorable terms. The customer is expected to believe that if an Ingersoll watch is sold at thirty-three and one-third per cent. less than others charge for it, a ready-to-wear suit or a gold ring will be sold as cheap. The more successful the individual producer of a trade-marked article has been in creating for it a recognized value as well as a wide sale, the greater is the temptation to the unscrupulous to cut the price. Indeed a cut-price article can ordinarily be effective as a "mis-leader" only when both the merits and the established selling price are widely known.

How Cut-Prices Hurt

THE evil results of price-cutting are far-reaching. It is sometimes urged that price-cutting of a trade-marked article injures no one; that the producer is not injured, since he received his full price in the original sale to jobber or retailer; and indeed may be benefited by increased sales, since lower prices ordinarily stimulate trade; that the retailer cannot be harmed, since he has cut the price voluntarily to advance his own interests; that the consumer is surely benefited because he gets the article cheaper. But this reasoning is most superficial and misleading.

To sell a Dollar Ingersoll watch for sixty-seven cents injures both the manufacturer and the regular dealer; because it tends to make the public believe that either the manufacturer's or the dealer's profits are unduly exorbitant; or, in other words, that the watch is not worth a dollar. Such a cut necessarily impairs the reputation of the article and, by impairing reputation, lessens the demand. It may even destroy the manufacturer's market. A few conspicuous "cut-price sales" in any market will demoralize the trade of the regular dealers in that article. They cannot sell it at cut prices without losing money. They might be able to sell a few of the articles at the established price; but they would do so at the risk to their own reputations. The cut by others, if known, would create the impression on their own customers of having been overcharged. It is better policy for the regular dealer to drop the line altogether. On

the other hand, the demand for the article from the irregular dealer who cuts the price is short-lived. The cut-price article cannot long remain his "leader." His use for it is sporadic and temporary. One "leader" is soon discarded for another. Then the cut-price outlet is closed to the producer; and, meanwhile, the regular trade has been lost. Thus a single prominent price-cutter can ruin a market for both the producer and the regular retailer. And the loss to the retailer is serious.

ON the other hand, the consumer's gain from price-cutting is only sporadic and temporary. The few who buy a standard article for less than its value do benefit—unless they have, at the same time, been misled into buying some other article at more than its value. But the public generally is the loser; and the losses are often permanent. If the price-cutting is not stayed, and the manufacturer reduces the price to his regular customers in order to enable them to retain their market, he is tempted to deteriorate the article in order to preserve his own profits. If the manufacturer cannot or will not reduce his price to the dealer, and the regular retailers abandon the line, the consumer suffers at least the inconvenience of not being able to buy the article.

Price Maintenance is Not Price Fixing

THE independent producer of an article which bears his name or trade-mark—be he manufacturer or grower—seeks no special privilege when he makes contracts to prevent retailers from cutting his established selling price. The producer says in effect: "That which I create, in which I embody my experience, to which I give my reputation, is my property. By my own effort I have created a product valuable not only to myself, but to the consumer; for I have endowed this specific article with qualities which the consumer desires, and which the consumer should be able to rely confidently upon receiving when he purchases my article in the original package. To be able to buy my article with the assurance that it possesses the desired qualities, is quite as much of value to the consumer who purchases it, as it is of value to the maker who is seeking to find customers for it. It is essential that the consumer should have confidence not only in the quality of my product, but in the fairness of the price he pays. And to accomplish a proper and adequate distribution of product guaranteed both as to quality and price, I must provide by contract against the retail price being cut."

The position of the independent producer who establishes the price at which his own trade-marked article shall be sold to the consumer must not be confused with that of a combination or trust which, controlling the market, fixes the price of a staple article. The independent pro-

ducer is engaged in a business open to competition. He establishes his price at his peril—the peril that if he sets it too high, either the consumer will not buy or, if the article is, nevertheless, popular, the high profits will invite even more competition. The consumer who pays the price established by an independent producer in a competitive line of business does so voluntarily; he pays the price asked, because he deems the article worth that price as compared with the cost of other competing articles. But when a trust fixes, through its monopoly power, the price of a staple article in common use, the consumer does not pay the price voluntarily. He pays under compulsion. There being no competitor he must pay the price fixed by the trust, or be deprived of the use of the article.

Price-cutting has, naturally, played a prominent part in the history of nearly every American industrial monopoly.

Commissioner Herbert Knox Smith found after the elaborate investigation undertaken by the Federal Bureau of Corporations that:

"One of the most effective means employed by the Standard Oil Company to secure and maintain the large degree of monopoly which it possesses, is the cut in prices to the particular customers, or in the particular markets of its competitors, while maintaining them at a higher level elsewhere."

AND Chief Justice White, in delivering the opinion of the United States Supreme Court in the Tobacco Trust case, said:

"... the intention existed to use the power of the combination as a vantage ground to further monopolize the trade in tobacco by means of trade conflicts designed to injure others, either by driving competitors out of the business or compelling them to become parties to a combination—a purpose whose execution was illustrated by the plug war which ensued and its results, by the snuff war which followed and its results, and by the conflict which immediately followed the entry of the combination in England and the division of the world's business by the two foreign contracts which ensued."

Therefore recent legislative attempts to stay monopoly commonly include in some form prohibition against the making of cut-throat prices, with a view to suppressing competition. Such provisions will be found in the bills proposed by Senator La Follette, Congressman Stanley, and Senator Cummins to supplement the Sherman Anti-Trust law; and statutes dealing with the subject have been enacted in several States.

President Wilson urged most wisely that instead of sanctioning and regulating private monopoly, we should regulate competition. Undoubtedly statutes must be enacted to secure adequate and effective regulation; but shall our courts prohibit voluntary regulation of competition by those engaged in business? And is not the one-price system for trade-

marked articles a most desirable form of regulation?

Price-Cutting—the Road to Monopoly

THE competition attained by prohibiting the producer of a trade-marked article from maintaining his established price offers nothing substantial. Such competition is superficial merely. It is sporadic, temporary, delusive. It fails to protect the public where protection is needed. It is powerless to prevent the trust from fixing extortionate prices for its product. The great corporation with ample capital, a perfected organization and a large volume of business, can establish its own agencies or sell direct to the consumer, and is in no danger of having its business destroyed by price-cutting among retailers. But the prohibition of price-maintenance imposes upon the small and independent producers a serious handicap. Some avenue of escape must be sought by them; and it may be found in combination. Independent manufacturers without the capital or the volume of business requisite for engaging alone in the retail trade, will be apt to combine with existing chains of stores, or to join with other manufacturers similarly situated in establishing new chains of retail stores through which to market their products direct to the consumer. The process of exterminating the small independent retailer already hard pressed by capitalistic combinations—the mail-order houses, existing chains of stores, and the large department stores—would be greatly accelerated by such a movement. Already the displacement of the small independent business man by the huge corporation with its myriad of employees, its absentee ownership, and its financier control, presents a grave danger to our democracy. The social loss is great; and there is no economic gain. But the process of capitalizing free Americans is not an inevitable one. It is not even in accord with the natural law of business. It is largely the result of unwise, man-made, privilege-creating law, which has stimulated existing tendencies to inequality instead of discouraging them. Shall we, under the guise of protecting competition, further foster monopoly by creating immunity for the price-cutters?

Monopoly's Easiest Way

AMERICANS should be under no illusions as to the value or effect of price-cutting. It has been the most potent weapon of monopoly—a means of killing the small rival to which the great trusts have resorted most frequently. It is so simple, so effective. Far-seeing organized capital secures by this means the coöperation of the short-sighted unorganized consumer to his own undoing. Thoughtless or weak, he yields to the temptation of trifling immediate gain; and selling his birthright for a mess of pottage, becomes himself an instrument of monopoly.

The Feminist Movement

In Masculine Dress

IT seemed such a little thing to put the bow at the back instead of at the side of the hat. Some of us frowned at it, but we let it pass, little dreaming that this seemingly insignificant shifting in position of a very small bow was the

first tremor of a seismic upheaval that now threatens to shake the world of dress to its very foundations.

ALREADY the show windows (once so stern and manly) of the hatter are beginning to look less stern and less manly. The hard, implacable lines of the "topper" and the beetling brow of the "bowler" (by some called "derby,"—as inappropriately as if a pugilist should be christened Herbert) have disappeared, as wrinkles under the hand of a Beauty Doctor, and in its place the shimmer of an almost sapphire ribbon, the gleam of a very nearly emerald leather, the smirk of a bow whose dimpled fashioning tells us that the once dividing-line between the milliner and the haberdasher (the fruit and the vegetable) is no more.

FROM the green plush hats and the shirred waistcoat of last season to the accordion-pleated trousers of next season, is a small, not to say a mining step.

AS long ago as 1797 Doctor Albrecht Hufte, of Bavaria, predicted the 'modulating of the man-attire and the

woman-attire into a harmonious unity." Part of the good Professor's prophecy bids fair to come true—their paths are narrowing as they converge. Soon the accordion-pleated trouser and the bifurcated skirt must meet where there will be no room to pass.

ONE or the other must give way—the result may be unity, but harmonious unity—never. Though they wear the same uniform, the war of the sexes will go on.

THE bargain-counter rush will be more terrible than ever before. Added to its former fury will be the fury of male competition; and the fight for the front page of the *Gentlemen's Home Companion* will be even fiercer than the bargain rush.

Note the fish-tail expression

"Within forty years government has come to stand in an altogether new relation to the people"

Governmental Mothering

By CHARLES W. ELIOT

President Emeritus of Harvard University

[From the President's address to the International Congress on School Hygiene, at Buffalo]

SINCE this century opened there has taken place among thinking people a great increase of interest in preventive medicine, and in school hygiene as one branch of preventive medicine. The reason for this fresh interest is, I think, a better appreciation of the fact that modern civilization, that is, the progressive civilization of the last hundred years, has worked terribly against the health and the perpetuity of the white race. Within that time the factory system has come into common use, making multitudes tenders of machines indoors; the cities have attracted in some countries or parts of countries the majority of the population; democracy has abolished some ancient, wholesome restraints and brought in some dangerous new liberties; applied science has quickened the rate of living both at work and at play, and has brought about a high degree of nervous tension for the most intelligent and ambitious portion of the community. The consequences of this remarkable development are seen in the reduced vitality of the multitudes that inhabit closely built cities, in the diminishing size of families, in the incapacity of many women for bearing and nursing children, in the prevalence of venereal diseases, and in the disproportionate increase in the number of the insane, the defective, and the criminally inclined.

Such cities as Paris, London, Berlin, New York and Chicago bear witness to the fact that modern civilization is all the time preparing and promoting its own destruction. Urban life and easy morals bring in selfish luxury and destructive vice; and through the sheltering from hardships, the physical comfort, and the gregarious excitements and passing emotions with no sequence in action which city life supplies, the human race is enfeebled and made less resistant to the evils, new and old, which continually assault both body and soul.

The same applied sciences, however, which have made modern urban life possible, supply defenses against the evils which accompany civilization. Thus, they supply all the forces which have built up the new and wonderful structure of preventive medicine. Among defensive measures against the evils which crowded cities and the factory system have brought on mankind, School Hygiene is of first importance. The evils

which result from bad housing, overcrowding, and unwholesome excitement in cities, and from the factory system which prevails in many important industries, take their worst effect on children and young people. Remedies and preventives should therefore be applied during childhood and adolescence. Moreover, the grown-up generation has already suffered the losses and damages, and the adults are in many cases beyond remedy. It is to the rising generation that preventive and remedial measures may be most hopefully applied.

AT innumerable points aristocratic government and democratic government alike, in both Europe and America, are interfering as they never did before with the individual, the family, and the industrial methods which yield a large part of the livelihood of the people. Under all forms of modern government the collective forces and resources of the people are freely used in the interest of society as a whole, against individual rights, parental rights, and what used to be considered clear business and property rights. Society as a whole means to control and does control the placing, building, ventilating, heating, and lighting of school buildings. States and provinces, as well as cities and towns, feel responsible for the health of school children, and desire to direct and enforce suitable care of that health, whether the parents and families are interested or not, or consent or not.

New kinds of instruction are being introduced into elementary and secondary schools, much of it relating to the prevention of disease. It is interesting to note that it would have been quite impossible to give much of this desired instruction twenty years ago, because the biological chemists, the physicists, and the naturalists have only discovered within that period the facts and principles they now wish to impart to children, and to the parents and teachers of children. One of the most urgent demands for the introduction of a new subject into the programmes of schools is the demand for teaching sex hygiene. It is only within about five years that any considerable amount of public attention has been directed to this subject—for this reason among others, that until recently there were no accurate tests for the latent

presence of the diseases which in mankind accompany perverted sex relations. Moreover, the laws and the public hospitals took no cognizance of the worst of contagious diseases; and State, Church, and family were silent about the worst of human vices.

DOCTORS and teachers are studying the effects of modern urban civilization on the nervous and mental diseases of children. These experts are inclined to attack on medical grounds some long-standing practices in schools, such as frequent examinations, lessons at home, and keen competitions. They are also interested in the causes of fatigue. It is to be hoped that these researches in the interests of school children will yield results applicable to adults engaged in professional, business, or industrial life; for the phenomena of strain and fatigue are common in all the modern industries and occupations, and the efficiency of society as a whole would be greatly promoted if such disorders and sufferings would be prevented. They are commonly attributed to over-work, whether they occur in children or adults; but it may be doubted whether they are caused by too much work. Most probably they are caused by uninteresting and worrisome work done without cheerful motives and therefore without enjoyment. Children, especially, need free and keen interest in their work, and can hardly be strained in work which they enjoy. The same is true of adults in all occupations. It is hard to hurt any person, man or woman, by work, provided he or she enjoys the work and observe the simplest rules of healthy living. The factory system with minute division of labor needs short hours, or a short working day, because close attention has to be given to a small task incessantly repeated, the performance of which has often become almost automatic, and success in which yields but little pleasure. Factory labor is therefore peculiarly unsuitable for children and any school work which at all resembles factory work may safely be condemned on that ground alone.

MUCH has been written against competition in schools, but no one has yet proposed a satisfactory alternative for competition with its two great merits. First, competition with one's own peers and superiors seems thus far to be the

only way in which any one can arrive at a reasonable understanding of his own powers. Now an understanding of one's own powers and confidence in the powers understood are necessary to the continuous development of any human being during the whole period of active life. Secondly, it has been abundantly demonstrated in the industries of all civilized countries that competition is necessary to progress in any industry large or small, old or new, personal or corporate. When competition is killed, progress ceases. That is the history of monopoly the world over, and the past and the present alike prophesy in no doubtful tones the future. Thus, any industry which rests upon patents stands still for the period of the patent, unless it is forced to buy and adopt new patents. In this country, though not in Europe, such a business may stand still in spite of buying new patents, because the patents purchased may be pigeon-holed.

A GAINST fatigue during school work two prescriptions have already proved effective—variety in work, and short periods for strenuous attention. The same prescriptions will go far to prevent fatigue in the occupation of adults, and it is also to be observed that both children and adults are greatly helped by feeling a personal interest in whatever work they do, whether by the minute, the hour, or the day. An adult will be much sooner fatigued by work in which he takes no interest than by work which interests him; although an enthusiast's passion may of course carry him to unwholesome extremes. No professional man, mechanic, or operative can do his best work unless he feels a personal interest in it, or enjoy work without loyalty to his calling or trade, and to his employer, whether that employer be the nation, the state, the city, a corporation, a firm, or a person. In school work, and in the later earning of a livelihood, these principles must be put in practice as part of school hygiene and part of every sound philosophy of life.

The past fifty years have witnessed a great improvement in the conduct of schools and to home discipline. The motives of fear, submission, and unquestioning obedience are much less appealed to than they used to be; and in their place have come in the motives of natural interest, emulation and willingness to follow a winning guide. This is an immense improvement as regards the health as well as the happiness of children. It is a very trustworthy part of school hygiene.

THE success of the Playground and Recreation Association of America during the past four years has been very encouraging. The Association resists effectively one of the worst evils of city life, the cutting off of children from open-air sports and games. The country child not only takes appropriate part in the outdoor labors of the family, but is free to roam at will through fields and woods amid the pleasant sights and sounds of nature. The city child can only contribute to the indoor labors of the family, and for open-air recreation is confined for the most part to the brick sidewalk and the paved street, from which he can look up to only a narrow strip of sky. The school rarely supplies him with anything more than a small gravelled area in which he can move a little during recess. To be sure, within the school he may be given some gymnastic exercises, but they will be indoors, and will probably be some kind of drill or simultaneous ex-

ercises which change at the word of command. They will not be free sports.

The short experience of the Playground Association, and of some American cities which have maintained for a few years past well-arranged playgrounds, has demonstrated that public playgrounds need for their best work to be supervised by teachers of games and sports, and to be well policed. Playgrounds, like parks, large or small, in or near cities, may easily become public nuisances if not well policed.

TO teach and follow good hygienic methods in schools is far the best way in a democratic society to improve the hygiene of the home. It is the Boy Scouts and the Camp-Fire Girls that can clean up a village and the country highways, and keep them clean. If a high school gives to all its girls good instruction in buying, cooking, and serving food, it will affect the diet of every family represented in the school; and such teaching, persevered in year after year, will ultimately improve the food of a large community.

The medical inspection of schools is a subject of great importance which is as yet only beginning to receive the attention it deserves. The theory of the subject has been well developed, and the reasons for effective action have been often explained, but as yet school committees, the trustees of endowed schools and the owners of private schools have been slow to put into execution the wise policy, and to recommend the expenditure of the money necessary to carry out such a policy. In order to improve the public health we need to know the actual conditions as regards both bodily and mental health which prevail in homes, schools, and colleges; and the facts can only be ascertained through well organized medical inspection in all educational institutions. We need not only thorough periodical examinations of all school children, but also to know the family and personal history of the children. These examinations should not only reveal the diseases actually present, but the tendencies of each child due to either inheritance or environment; so that the child's parents may receive competent advice concerning the treatment of any diseases from which the child may be suffering, and concerning desirable changes in its environment and defenses against its undesirable inheritances. The school must take these measures of prevention, because in an immense majority of cases the parents are wholly unable to make the diagnosis of their children's diseases, or to plan the defence of each child against its probable exposure to harm or the development of latent ills.

THE success of the Rockefeller Sanitary Commission in the Southern States in dealing on a great scale with the hookworm disease, which for many years has enfeebled a large proportion of the population, encourages us to expect great improvements in the public health from any well-devised and well-executed system of medical inspection in schools and colleges. This Commission has not only shown that it is possible to cure sufferers by the hundred thousand, but also to prevent the spread of the hookworm disease through the population of both the present and the future.

What systematic medical inspection can accomplish in a woman's college in remedying one sort of bodily defect is well illustrated in the records and diagrams preserved by the Woman's Col-

lege at Baltimore, which for more than twenty years has paid special attention to the remedying of spinal curvature in young women, a defect common among American young women. The records show complete or partial correction of that defect in thousands of cases, obtained by carefully regulated use of the Swedish machines for correcting spinal curvature and by other appropriate gymnastic exercises under medical direction. There are many such defects and disarrangements in children and young adults which competent medical supervision and a sound medical discipline could do much to remedy and prevent during the school and college ages. The organs of sense in youth afford a great field for the exercise of medical judgment and skill in the way of arresting and preventing unfortunate developments.

THE same reasons which have led irresistibly to the maintenance of city hospitals, city physicians, and boards of health, justify the maintenance in any city or large town of a system of district nursing, not for the gratuitous service of the poor alone, but for the paid service of self-supporting and self-respecting families. A family whose breadwinner brings home from fifteen to thirty dollars a week cannot possibly afford to hire a trained nurse to give her whole time to a sick or injured member at home. The wages of such a nurse and her food might easily absorb the breadwinner's entire weekly earnings. At the same time such a family is not an object of charity. It can afford, and would be willing, to pay from twenty-five to fifty cents for a daily visit from the city nurse, whose competency would be certified by her position, and who would be teacher as well as nurse. Here again, the needs of children and adults are much alike.

The study and treatment of flat feet in both children and adults is another contribution which medical science and skill are making in private and hospital practice to the efficiency of the community. There is need of a public service to overcome and prevent this crippling deformity. Stated examinations of the teeth of school children should be provided at public expense, to prevent suffering, maintain good digestion, and prolong industrial efficiency and life itself. In a few towns and cities which have experimented with dental inspection in schools, an alarming amount of disease, and malformation has been disclosed. These disorders can as a rule be remedied by the parents, who, acting on the advice of the public inspectors and nurses, secure the proper treatment for their children from private practitioners or public infirmaries.

Profound changes have taken place in most of the conditions of life for the individual and for society as a whole within the past hundred years. The environment of each individual, child or adult, has changed. The ideals of the family have changed; all the industries by which the white race lives have taken on new forms, and within forty years government, and particularly democratic government, has come to stand in an altogether new relation to the people. Government is now one of the agencies for enlightening society concerning the means of defending civilization against its own tendencies to decay and dissolution, and for strengthening the social resolution to put into execution all the measures which Christian ethics and the medical arts and sciences recommend.

What is generally called "peace" in Europe, in our present state of civilization, is an irony. It is the lives of hundreds of thousands of wage-earners cease to be devoted to keeping up armies?

merely the absence of some great European war. When will real peace come? When will the nations cease to be merely resting after one war or getting ready for another?

E. CESARE

The Three Beggars

By WILLIAM BUTLER YEATS

"**T**HOUGH to my feathers in the wet
I have stood here from break of day,
I have not found a thing to eat
For only rubbish comes my way.
Am I to live on Lebeen-lone?"
Muttered the old crane of Gort.
"For all my pains on Lebeen-lone."

King Guari walked amid his court,
The palace-yard and river-side,
And there to three old beggars said:
"You have wandered far and wide,
Can ravel out what's in my head.
Do men who least desire get most,
Or get the most who most desire?"

A beggar said: "They get the most
Whom man or devil cannot tire,
And what could make their muscles taut
Unless desire had made them so."
But Guari laughed with secret thought
"If that be true as it seems true,
One of you three is a rich man,
For he shall have a thousand pounds
Who is first asleep if but he eun,
Sleep before the third noon sounds."

And thereon merry as a bird,
With his old thoughts King Guari went
From river-side and palace-yard,
And left them to their argument.

"And if I win," one beggar said,
"Though I am old I shall persuade
A pretty girl to share my bed."
Another said: "And I will trade
Among the Kings of Greece and France."
But the third cried: "I'll to the course
Among the other gentlemen.
And lay it all upon a horse."
"But now that I have thought again,
There is a solid dignity
About a farm," the second cried.

The exorbitant dreams of beggary
That illeness had borne to pride
Sang through their teeth from noon to noon
And when the second twilight brought
The frenzy of the beggar's moon
They closed their blood-shot eyes for naught.
One beggar cried: "You're shamming sleep,"
And thereupon their anger grew,
Till they were whirling in a heap.

They'd mauled and bitten the night through,
Or sat upon their heels to rail
And when old Guari came and stood
Before the three to end this tale,
They were commingling lice and blood.
"Time's up," he cried, and all the three
With blood-shot eyes upon him stared.
"Time's up," he cried, and all the three
Fell down upon the dust and snored.

"Maybe I shall be lucky yet,
Now they are silent," said the crane.
"Though to my feathers in the wet,
I've stood as I were made of stone
And seen the rubbish run about.
It's certain there are trout somewhere
And maybe I shall take a trout
If but I do not seem to care."

Our German Market

How American Business Men Can Make a Great Deal of Money Abroad

By AMOS STOTE

IN an out-of-the-way corner of a Berlin business house there works a quiet little man who is drawing a good salary for doing something in which his employers have slight interest and less understanding, and for which the concern in whose offices he sits have had a positive dislike. Yet he is already proving that in less than two years he will most certainly add materially to the profits of both companies; the one a Michigan manufacturing corporation and the other a German importing house, the former's selling agents in Austria and Germany.

As the importers have been showing a steady, if slow, increase in business done for the Michigan concern, neither of them is able to understand why this man elected himself to his present job. But the home office has faith—and when it sees the

completed efforts, some records of which I viewed in the making, it is likely to add to the faith it now possesses a large consignment of activity. Even the few random facts I was able to bring away after my interview are enough to suggest at least what an expert is able to do in a foreign sales organization.

DURING the month of December, 1912, the German agency did a little more than forty-eight thousand dollars' worth of business for the Michigan corporation. This the home office knows and delights in. Some facts it does not know, and which are likely soon to transform its joyfulness into criticism of both its own and its agent's methods are that: In all the great commercial interests of the city of Breslau, with its six hundred thousand inhabitants, only nine of their machines

have been purchased in fourteen years; in another district covering more than a dozen cities, the chief of which has a population of seventy-two thousand, only two of their machines have been purchased within the same period; and in the city of Bonn, with its eighty-three thousand inhabitants and one hundred and three lines of industry, only six machines have been sold, three to the postal service and three to savings banks.

From these few facts it is apparent that the satisfaction the Michigan company derives from the work of the agency comes from their ignorance of conditions. In the United States and Canada this corporation averaged, during the last year, more than six hundred thousand dollars' worth of business per month; in Germany and Austria, healthy commercial countries with a combined population greater

than that of the United States and Canada, they have done but one twelfth that amount of business, or as much in the whole year as the home office averages each month.

The German agency for this house handles two additional lines—another American product, and office furniture of its own manufacturing. While the three may be considered as playing into each others' hands quite happily yet in the long run they each suffer through the division in selling operations. This is especially so in the case of the Michigan product, which is by far the most costly and demands a higher grade of salesmanship. The result is the common fate of many American products handled by a foreign agent who is not under the direct supervision of a representative of the home office. If the agent makes a fair showing he is permitted to continue, and if the agent's salesmen do a reasonable business in any of the three lines they are not molested by their employer. In other words there is no one solely interested in each line and who judges results only by the returns in each district, on his product.

What the American representative of the Michigan corporation is undertaking is the detailed analysis of the entire territory of the German agency. He is the only man not satisfied with the German business, because he is the only one of the home organization who has an intelligent idea of the amount of business the agency should do. When his present work is completed the Michigan people will have an accurate classification of the entire German and Austrian nations; one that will show the strength and nature of the representation and the amount of business done—a classification that will not omit one town with one industry large enough to be a user of one of their machines.

Uncommercial Confusion of Tongues

THE truth about Germany is that the number of complex situations it presents to the foreigner looking for business is exceeded only by the good business the country offers the wise man who rightly approaches it. From the point of view of an American representative in Europe, concerns which have not progressed beyond the catalog stage are considered as making no genuine effort for international commerce. Even where goods are handled by foreign agents, if there is no direct representative of the American house in the field the company is looked upon as merely dabbling in export. The trade specialist in Germany today has gone so far beyond these stages that he is now only content when he is able to recognize and cater to even the sectional feeling that exists in so many parts of the country.

And no one but the man on the ground, who has been there with both feet for some time, is able to grasp the real commercial importance of avoiding the points of difference that exist between the various German states. The average American business man has forgotten that the present great empire was at one time made up of twenty independent powers and that over these, at this day, there are twenty ruling kings and princes and grand dukes; and he has probably never heard that the various peoples who go to make up these states are by no means all on friendly terms. One American business man found this out when he estab-

lished a continental office in Berlin and, with the help of some German employees, went after the national trade by mail. He had spent ten thousand dollars with very small results when a veteran at the work explained to him that national distribution could not be accomplished from Berlin because the people of many of the states would throw any advertising matter in the waste basket if it bore a Berlin postmark. After that he made arrangements to have his printed matter distributed from the chief city of each state. Even the relation between Germany and Austria, which is so brotherly and reciprocal in diplomatic circles, is not always so cordial when commercial affairs are attempted. It is rather generally understood that the Berlin business man is not wonderfully popular in Vienna. Nor is the Vienna man entirely removed from the envy of his fellow countrymen as the following circumstance witnesses: An Austrian, with offices in Vienna, representing an American house, wrote a letter to an important business concern located in one of the cities of Bohemia. The letter was naturally in German, the recognized language of both districts. In due course of time this reply was received, written in pure Bohemian: "We can not read your letter but think it must be written in the Japanese tongue." The American company now has a branch office in Bohemia, with only Bohemian employees.

ANOTHER thing this company has learned is not to letter "Berlin," its continental headquarters, on any wares designed for branch offices; and while it is a product of American manufacture, yet the name of the home corporation appears nowhere on the device. Beneath the famous trademark which the article carries is the title of the German organization; after which the machines are apportioned to the branch offices and given their city addresses. In this way each district is made to feel that it is supporting a local business; which is in many respects very true as, practically without exception, the work is in charge of resident agents and assistants.

Contrary to this internal feeling of rivalry, the attitude of the average German toward American wares (I here except the German competitor) is one of friendliness. He by no means shares the feeling of suspicion held by many provincial Englishmen. In one sense the German is very much like an American advertising man who was given a rush order to prepare some copy for a new fountain pen, and who was presented with two of them. He first made a list of the pen's selling points, after which he traded the pair for one of another make and settled down to hard work. The German of today is really looking for anything that will save him time and money and is apt to smother patriotism relating to home products if the commercial advantage to be gained is at all alluring. Even the direct competition may sometimes be approached with success. I was recently shown through the offices of a Berlin manufacturing company that not only makes a typewriter but has the selling rights for an American machine. The only example of their own product in sight was one set apart for exhibition purposes; while the entire force of stenographers worked away on the American machines.

Freedom of distribution may be carried too far, however, and the best way to avoid over-indulgence in this respect

is not to do business *via* England. As American concern trying to secure German patronage through a London branch is really up against a more difficult proposition than is the strictly English house making the same attempt. The Teuton genuinely admires the creative and initiative ability of the American and is actually jealous of any apparent alliance with England. His lack of love for the Briton makes him feel that if direct representation is worth while in England then Germany, to say the least, should be shown equal consideration. More than one American house had discovered the false economy in attempting to cover Germany from a London branch. The nearest successful approach to this situation is where the German selling force is composed entirely of men of that country and only the general offices for the Continent are located in London.

The Invincible Government

THERE is only one place where the German draws the line on all foreign goods when entered in competition with any article of his own make—this is in the service of the government. It is an unwritten law and one which every official, from the mightiest to the lowliest, is expected to hold as sacred. Quality, price, service—none of these are to be considered when an imported article is offered to officialdom in competition with a home product. Any infraction of this rule is sure to bring vehement protests from press and public and more especially from the defeated home producers. There is no spirit of the law, or benefits gained, to be considered in this connection; the German sticks to the letter of the teaching with all the doggedness of his military mind.

The Crown Prince very seriously injured his popularity, if not with the general public, at any rate with a great number of influential business men, when he neglected the opportunity to set an example and carry this rule into personal matters and heeded public opinion to the extent of buying an American automobile.

Not long ago a German sales corporation, owned by an American company, which has been doing business in Germany for more than twenty years, which operates forty offices and employs hundreds of natives, offered its product, in competition, to a newly organized governmental department. By some strange freak of fate the head of the department had not been instructed in the unwritten law and as the American article proved itself better adapted to his service an order was given for one hundred and fifty. Before the facts became public the machines had been delivered and paid for; but when the German manufacturers learned the truth they raised such a furore the matter has been scheduled to be brought up at the next session of the Reichstag.

The narrowness of the German mind in this connection would be laughable were it not for the losses, either threatened or actually sustained, as a result of such a confined outlook. German sewing-machine manufacturers, who realize they are entirely outclassed by American producers, have seriously tried to secure the government ban on the purchase of American machines by the families of the officers and soldiers of the army. And even this might have been given some consideration were it not for the fact that the chief American competitor had

erected an extensive plant in one of the provinces of their country.

Inconsistent Liberty

LOSS of official patronage is not, however, without its full counterbalance of unusual opportunities. The imported factory proposition is one of inestimable value to many foreigners. Exceedingly satisfactory returns are offered any good product intelligently pushed, but the factory on German soil, operated along American lines, only sufficiently modified to meet certain local conditions, will certainly be a better competitive organization than the all-German plant. Moreover the cost of German labor is less than fifty per cent that of American labor; and the skill of the German mechanic is of too world-wide renown to need elaboration. If increased facility in reaching the German market could be counted as the only gain to the imported factory it would be a profitable investment, but in the gross result that is only one important item.

In the matter of freight rates and freight service the land of the Teuton is certainly the land of Utopia—with no discrimination against the plant controlled by foreign capital. From Kaiser to clerk the whole of official Germany fairly aches to increase its industrial and export efforts. The factory not only has excellent facilities offered it for transportation to all points in Germany at reasonable rates, but goods for export are given very appreciable reductions, not only over home rails but on the high seas as well. Much of this is due to the fact that both the railways and steamship lines are, in the majority of instances, under government control. Still another very important advantage is the fine system of invoicing in vogue, by which it is possible to ship goods to both the near and far East at a lump rate and without any of the complicated features so frequently met with in export trade. This last named advantage has frequently resulted in giving the German the competitive margin in many fields. South America not the least of them, where he has taken orders away from our houses because he was able to practically put the goods on the purchasers' shelves while we struggled with, "f. o. b. our factory siding."

IT is impossible to do more than suggest here the manifold advantages accruing to the American house establishing a branch factory on German soil; but it must not be forgotten that in addition to those already itemized the taking of this step puts the concern on the right side of the unwritten law and throws open to it the ripe market of all officialdom. There would be no Reichstag rumormongers this winter over the purchase of one hundred and fifty American machines by the new insurance department if that article had borne the magic symbol *Made in Germany*. The German agent for another American product told me that if the home plant would only allow him to make the most trifling part of their device he could do a big and profitable business with the government.

The foreigner must be warned against an excess of zeal in endeavoring to indicate that his goods are of German make when such is not the case. The Berlin office of an American corporation was recently presented with a surprise in the shape of a lawsuit brought by German competitors who claimed the company endeavored to mislead the public and to

create the impression that it was handling a German product. The cause of the trouble turned out to be an obscure agent in a distant territory, who, the competitors claimed, had put a sign over the front of his shop that was painted in the national colors. No one in the Berlin office knew of the sign's existence and though the lawsuit turned out to be nothing more serious than an irritation, it is enough to be a warning. It might be mentioned here that while the cost of living is increasing in Germany the cost of lawsuits averages less than supper money given to clerks who work overtime. The lawyer's fee in connection with a five dollar suit is twenty-five cents and often, though the German law frequently makes it a matter of small concern whether you win or lose a civil suit, it is a diversion in which almost anyone can afford to indulge.

Dodging Taxes

THESE incidents should not be allowed, however, to increase the human inclination to emphasize the difficulties to the extent that opportunity is obscured. There have been such pitiful tales told of hardship through governmental restrictions yoked to all business, of unkind laws, and especially of ruinous taxes imposed, until some have come to believe it costs more to succeed than to fail in Germany. Such tales lose much of their color when it is known that the same laws which impose so heavily also provide a way by which the foreign company organizing in Germany may legally evade practically all taxes.

There is no denying that taxes in Germany are high. The German business man carries a load of them such as would make the good men of other countries ready to give odds against their own loyalty. But the German is not only doing business—and the "handsome thing" by his government—he is getting rich, as well. And if he can accomplish this, there is no earthly reason why the average American business house can not do as much, and more, for it is given an open opportunity to dodge taxes, a legitimate act recognized by the German courts as a routine business procedure.

The way to step from under these taxes is to establish a separate German corporation, which is in reality a limited liability association. A corporation of this character may be formed by two persons, and five thousand dollars capital, for the purpose of representing an American house. Stock subscriptions may be made either by the home company or the representative and not necessarily entirely in cash, as the conferring of the rights of the representative under his contract on the association makes only a partial cash payment requisite. Even if the representative be made president of the association such an action will in no wise weaken the control of the home concern.

While the initial costs of organization are comparatively high and while the income tax levied on this type of corporation is really excessive; the first cost is only an item in proportion to the benefit gained—and the second may be reduced to a postage stamp. In other words this style of corporation need show no profit; it is organized for the purpose of never showing a profit. Not only is the validity of such a company above question but the courts recognize the fact that they are formed almost exclusively to save taxes.

Ambassadors of Commerce

AFTER all, the most economical and constructive method by which a company, realizing the enormous business opportunities Germany offers, may attack the problem of so important an export undertaking is first to send out a man of training and initiative ability; not a salesman, nor any other man who has in mind the taking of random orders which are likely to prove of more bother than they are worth to all parties concerned. The man who goes to Germany as a real Ambassador of Commerce, if he has not already had the opportunity of foreign travel, should at least be one who has given the question sufficient study to know the nature of the information he should secure, the general methods to employ in securing it, and, most important of all, to know when he has actually acquired this material in such form as to give it working value. He must be prepared to grind out such facts, in detail, concerning the laws, industries, finance, transportation, labor and sales as his company will require in the upbuilding of an export business.

The great trouble has been that many concerns have tried to reach the foreign markets without having first learned how. A painfully striking experience of this kind recently came to the notice of the foreign manager of a Pennsylvania manufacturing company. He was returning to his post after a visit to the home plant, and on board the boat was a man sent out by some American concern to, as the fellow modestly explained it, "clean up a bale of orders and show the foreigners how to do business." It was his first trip abroad, he knew no word of a foreign language, nothing of the mores of other countries, not an item of foreign laws, customs, or methods of commercial approach—he did not even know enough to keep liquor out of his head while on the boat, nor to keep still about the fatness of his letter of credit. The man from Pennsylvania said that he refrained from trying to find out the concerns the novice represented for fear of losing his respect for some house he had come to admire.

HERE was a man, who showed the most wonderful facility in evading all good advice and suggestion thrown in his way by the men with whom he came in contact, sent out at great expense to circle the globe in the interests of some corporation. If these employers are not already disgusted with the prospects of foreign trade—fate has certainly stopped short their "Ambassador," for the good of all concerned.

This elimination process of going after any foreign trade is worse than no attempt at all and when it is applied to Germany, to anyone who has had the opportunity to appreciate the huying power of this people, it seems heartbreaking. It is so very costly to secure German trade in the same way you guess at the number of seeds a watermelon contains; but when you have put the country to the acid test of careful and complete investigation, if you work on even approximately right lines, the cost of operation will be less than at home. Perhaps this last statement sounds like unnecessary exaggeration, especially when said of a country supposed to have such keen competitive schemes; yet the fact remains that scores of American firms in Germany are doing business there at ten per cent less cost—some at even a greater saving—than are the home companies.

The Autopilgrim's Progress

Part Two—The Bridal Tour

By WALLACE IRWIN

Illustrations by James Preston

IV

The Bridegroom Findeth Motor Trouble of a Domestic Kind

WITH the beautiful head of a girl he knew not
Reclined on his bridegroomly shoulder—the spot
Where the locks of his bride
Should have rested in pride—

Percy drove on and more fidgety got.
He realized well that the lovely Unknown,
Worn by her vigil, so sleepy had grown
She was quite unaware, as she drooped like a willow,
Whether a man or a rock was her pillow.

Nevertheless
You may vividly guess
Percival's ever-increasing distress
When the lady in slumber lopped over so far
He had to hold on or she'd dropped from the car.

HE tried once to shake her
In hopes he could wake her—
The act merely caused her to smile in her sleep.
He sent his ear bolting
O'er thank-ee-ma'ams jolting—
She groaned in her slumbers and started to weep.
Again heaven's mercy
Implored frightened Percy,
"Say, this would be nice, if . . ."

No sooner 'twas said
Than round a sharp curve in the woodland ahead
There came a "Hoot! Hoot!"
And a dangerous brute
Of a blue-bodied runabout swung into view,
A mighty two-seater with passengers two;
A man and a woman were they.

In dismay
Percival shook out the charms
In his arms.

All in vain,
For 'twas plain
That the calm Sleeping Beauty was there to remain.

PERCY, suppressing a furious blush,
Deep-dreading the leer
From the car drawing near,
Too shamed to look up in the ominous hush,
Was jamming on speed to pass by with a rush
When a voice from the other car rose to a yell
And spoke in an accent he knew very well:
"Mercy!
My Percy!!"
And, raising his eyes, he beheld, pale with fury,
Katuryl!

At the moment, the slumberous maid from her dream
Instantly emerged with a tenuous scream,
Swift as an antelope leaping a gorge.
She sprang to the road, crying, "Georgie, my George!"
Whereat the strange man, sitting solemn and still,
(As Percival guessed, 'twas the "nice Mr. Hill")
Coddily addressed her in boral tones,
"What are you doing there, Gwendolaide Jones?"

SHE might have explained, but Katuryl broke in:
"Percival Brown, this is rather too thin!
First you leave me at night in your automobile,
Marooned on the road without shelter or meal,
While you are, no doubt,
Just gadding about,
Having no end of a jolly good time!"

(Percival thought of his seven-mile climb
Bearing that tire
Through thistle and mire,
Yet he said not a word. Such reserve is sublime.)
—"You not only desert me, but when you appear,"
Here her accent sardonic:

Was more than ironic,
—"Well, I hope you were both
very cozy, my dear.
You looked just as snug
As a bug
In a rug—
That is, I mean, you looked very
—Oh drat!
Who is that Cat?"

THEN up spake the man in
the blue-bodied car:

"See here, Madam, Miss, or
whatever you are—

The lady you mention
With jeering intention
As Cat is the woman who's pledged
as my wife.

If you'll kindly select
A tone of respect—"
Here Percival suddenly leaped into strife,
For the woes of the night
Had aroused him to fight
And he greeted the chance of a row with delight.

"AND you, sir, beware!
Be cautious! Take care!
What tones you employ to the lady up there,
For she is my bride
And the man who would chide
My Pet does the trick at the risk of his hide!"

THE champions drew closer. They almost touched noses,
Doubling their fists in belligerent poses;
One fractional move of the tenth of a hair

No doubt had spilled buckets of blood then
And there,
Had not the enchantress called Gwendolaide
Jones
Rushed forth and exclaimed in angelical
tones,
"Hold, gentlemen, hold!
Not a blow, not a swear.
Till the truth has been told
Of this midnight affair!"

(TO BE CONTINUED)

An Irishman, a Clergyman, and a Playwright

By SYDNEY BROOKS

SOME time in October Mr. Arnold Daly will be producing "General John Regan" by "George A. Birmingham." What is more "Mr. Birmingham" himself will be in New York to supervise its production. I can safely, therefore, prophesy, for Americans who are interested in the drama and in Ireland and in Irishmen, two treats. They will see an amusing and original comedy that has been one of the few hits of the London theatrical season—it was played by Mr. Hawtrey 250 times—that is all the more refreshing for its nearness to the realities of Irish life and character; and they will meet one of the most vivid and understanding and accomplished Irishmen of the day.

Mr. "George A. Birmingham" still elings to his pseudonym in his books and plays, but it has long since ceased to be a disguise. Every one who knows anything about Ireland is aware that the man behind the name is the Rev. James O. Hannay, honorary Canon of St. Patrick's, Dublin, and for the past twenty-odd years, up to a few weeks ago, the rector of Westport in County Mayo. The first book—or, at any rate, the first novel—he ever wrote, "The Seething Pot," published some eight years ago, plunged him into such hot water that his nom de plume—nobody, in any case, can be really pseudonymous in such a whispering-gallery as Ireland—quickly peeled off him.

THE scene of "The Seething Pot" was apparently laid in Canon Hannay's own parish of Westport; many of the characters in it were men and women to whom the neighborhood had no difficulty in giving a name; and Westport, which had probably never read a book before, read this one eagerly, and, reading it, became a seething pot itself.

With the peculiar animosity and wrong-headedness that seems to be reserved for popular judgments on books and their authors, Mr. Hannay was held to have libeled the Catholic faith and the Irish priesthood. Public bodies passed resolutions demanding his retirement from the chaplaincy of the Westport Infirmary; he was excluded from the local committee of the Gaelic League; he became the center of one of those inimitable rows of which, for her perfect tranquility, Ireland has too many. Nobody, of course, took the outcry seriously, least of all the average Catholic men and women in Westport, among whom the Canon has spent the best part of his life, who knew him as intimately as his own congregation, and to whom he has endeared himself by a thousand ties.

BUT it was not this that sent "The Seething Pot" through half a dozen editions, and that made its successors, "Hyacinth" and "Benedict Kavanagh," almost as widely read. I know of no better or more beguiling introduction to Irish life and to politics than is to be found in these three novels. In the first, Canon Hannay makes it clear how little Ireland can be redeemed by "politics"; in the second how futile are the benefits

she derives from hating England and fighting against her, and from being spoon-fed into a make-believe of industrial vigor; and in the third how absolutely and inextricably her salvation depends on the character and efforts of her own people. Nothing, he asserts in effect, can be done for the Irish; everything in time can, and will, be done by them.

Just because they are true and do not flinch from facts, "The Seething Pot" and "Hyacinth," like "John Bull's Other Island," are maddeningly depressing and inconclusive. They left me, I well remember, throwing up my hands at the whole Irish question—the precise effect, I learned afterward, that their author intended to produce. In them he showed us how not to help Ireland, a lesson that both Englishmen and Irishmen have still to learn. In "Benedict Kavanagh" he went beyond negatives and gave us the key for which we were waiting.

BUT the moral to be drawn from these novels is only one of their recommendations. They are all written in a pleasant, easy, pointed style; they all turn one or another aspect of the Irish "question" into living men and women, and show you the crucial interplay of vital hates and strivings behind the inanimate abstraction of this "problem" and of that; they all supplement one another in providing a full gallery of Irish characters and movements. They are all delightfully interspersed with caustic, illuminating digressions; they all make Ireland real. Together they form a trilogy that throws a truer light on the inner impulses of Irish life and the Irish temperament than a whole library of blue-books and reports.

To these should be added Canon Hannay's fourth and latest political novel, "The Red Hand of Ulster." It is a deliciously naive and ironical and good-humored study of the situation in Ulster as it is today—a situation that Canon Hannay, himself a Ulsterman, understands to the ground. The spirit of the "Black North," its vapors and rhodomontade, its incredible earnestness of self-deception, have never been more happily seized or woven into a more exciting narrative. Anybody who wants to know whether Ulster will fight, and whether she is sincere, and the forces that really influence her, and the character of her politics and of her leaders, will learn it all from this singularly urbane and sapient novel.

CANON HANNAY holds a place of his own in the public life of Ireland. He is a Protestant clergyman, born and reared in Ulster, but at the same time an ardent Home Ruler and a still more ardent Gaelic Leaguer, both of them enthusiasms that are anathema to nine hundred and ninety-nine out of every thousand of his co-religionists. A man of much charm and sensibility, alert, tolerant, cultivated, and practical, he has none of the prejudices either of this class or of his profession. When he speaks out he does it with a sincerity at least as great as his humor. He has plenty of idealism and a sustained power of enthusiasm, hot very few illusions, and none whatever about

Ireland and the Irish. He knows the country through and through; not a single stitch in the many seams of Irish life and politics and character escapes his cool, clear gaze. Yet he never despairs either of the land or its people. Beneath the caustic and unsparing writer there is the toiler and the patriot, hopeful, indefatigable, and undismayed.

"General John Regan" is not Canon Hannay's first play. Some eighteen months ago he brought out a comedy in Dublin, where it met with a lively success. But it is with "General John Regan"—which he wrote, by the by, in three evenings—that he has made his first hit with the play-going public of London, and scored a success which, I feel very sure, he will repeat in New York.

Mr. Hannay has recently written a book round the play, but the original germ of it is to be found in a short story he contributed a few years ago to *Harper's Magazine*. The "General" of the title is a purely mythical general of alleged Irish birth, who is made out to have been the hero and savior of some South American republic. Nobody in the townlet of his reputed birth had ever heard of him until some practical joker from America, to relieve the tedium of a motor tour through the west of Ireland, invented him on the spot and announced himself as the hero's biographer, piously searching for memorials and reminiscences of his early days, and calling upon the villagers to guide him to the home of the Liberator's childhood.

THE villagers are Irish, with the Irish genius for dissimulation; they promptly conceal the fact that this is the first time they have ever heard of their distinguished fellow townsman. They are Irish, too, with the Irish genius for agreeableness, for humoring people, for saying what they think will please; and they promptly supply the investigator with everything he wants. He is shown the hot where the General was born; his ancestry and connections are fully detailed. Anecdotes and recollections multiply apace; a niece of the great man is even forthcoming for the American's edification; and within a week the hero who never existed is the idol of the village where he never was born.

How meetings are held to erect a statue in the General's honor; how the project is linked on to a great scheme for getting a pier built at the government's expense; how every step in the transaction becomes a starting-point for separate deals and intrigues and complications that evolve themselves under a perfect cloudburst of what a dull Anglo-Saxon would probably call lies, but what, to any one who really knows Ireland, are nothing of the kind—all this is the stuff and substance of the play. It is excellent humor, excellently rendered. And it is a good deal more than that: it is a good-natured but at the same time a very sure and shrewd satire on some of the more obviously amiable weaknesses of the Irish character—a joke at their expense which no one has relied in London or will relish in New York more keenly than the Irish themselves.

SOTHERN AND MARLOWE IN "MACBETH"

POLITICS IN THE ELEVENTH CENTURY

By JAMES MONTGOMERY FLAGG

Mr. Sothern in *Hamlet*

1. Sothern and Marlowe Audiences

IN playing Shakespeare almost exclusively, Edward Sothern and Julia Marlowe give to a large class of Americans something for which they are eager, but which is supplied to them in pitifully small quantities by the American stage. The people of the United States cannot be properly judged on Broadway, and the unfortunate fact that New York is the principal producing center, and that the willingness of outside managers to take a play is largely determined by its fate in New York, causes our theater to be more trifling than it would be if it fairly represented the American people. The support of Shakespeare, and of Sothern and Marlowe, comes from those classes that represent our country.

It seemed to me, the other day, as if literally thousands of sixteen-year-old girls were in the audience—no doubt partly because the college and school requirements force them to become familiar with "Macbeth" or "The Merchant of Venice," but partly also because culture in general in this country is more diffused among the women, and the parents are giving these girls what they recognize as an opportunity.

Why doesn't somebody write a great novel about the small-town girl of today, eager for culture, much more restricted in her opportunities than need be? If an interesting play goes to her town for a matinee and an evening performance, she is free to go in the afternoon only if some young man, or a parent, or some other girl wants to go. If she goes alone, it is in no way dangerous

or unpleasant, but it is unusual, and therefore, when she gets home, her mother says: "What will you be doing next? Smoking, I suppose!" A singular contrast to this is that she is free, in the same kind of a town, to drop into the moving-picture theaters. One would think it might be just the other way. Probably the reason is that dropping into the moving-picture theater is a casual affair that can be done in a few moments, and therefore the conventional mind looks upon it as natural; whereas to go off alone for a whole afternoon's attendance on a play would be recognized at once as too much of a departure from the norm. The big cities and the small towns alike are full of people who are hungry for better things than they get, and the theater will one day achieve a position where it will beckon the public upward to its best possibilities instead of merely trying to strike the greatest common denominator from the standpoint of Forty-second Street and Broadway.

2. Sothern's "Benedick"

ALL the parts played by Sothern and Marlowe this season have been played by them before; but, as "Murb Ado about Nothing" has been promoted to a more important place this season, it gives the excuse for a tribute to Mr. Sothern's Benedick. It is a truly satisfying creation of one of the most lovable personalities in literature. It has Benedick's sweetness, oddity, and gay exuberance. Technically, it is altogether sound. There is not a moment, from the first entrance to the final curtain, that Mr. Sothern does not seem to be identi-

Stage Notes

By N. H.

fied entirely with the charming creature all composed of geniality and wit. Besides being a good actor, Mr. Sothern has in himself much brilliancy and much fun, and he plays Benedick as if he knew him intimately, sympathized with him, loved him, enjoyed him.

3. A Barrie Skit

ONE of the most remarkable things about the three Barrie pieces that have been produced so far in this country this season is the absurdity of some of the comments on them. Criticism of a compelling kind, enthusiastically explaining and extolling what is real in the drama, would do much to lift it. The third Barrie piece, called "The Censor and the Dramatist," is not easy to place correctly unless one knows Barrie's mind, knows the English situation, and knows the circumstances under which the play was written. Mr. Barrie is as fond of mere sport as a small child. I have seen him put a piece of stick on a croquet wicket, because he realized that the stick at a little distance would look like a bird, and then get all his guests out skillfully in the right neighborhood and begin throwing things at the wicket until he slipped into their minds the idea that the bird sitting on the wicket was extraordinarily tame. Several times, when benefits have been about to be given, he has sat down and dashed off a trifle for one performance. In one the point of the burlesque was the conventions of the stage and when the heroine comes on she calls her mother on the telephone, and delivers a long speech beginning, as I remember it, about like this:

"Hello, Mother! Is that you? It doesn't matter who you are. Anybody will do. I want to tell the plot of the play. I am your daughter Mary. Don't you remember? I married Mr. Jones. He is my husband. We don't get on together. The telephone is so useful in a one-act play, because you can tell the whole plot without breaking into a soliloquy."

The husband and wife discover that they are leading perfectly innocent lives. They cannot stand this, so they undertake to separate.

He: I suppose you will keep the house.

She: Yes, I will keep the house.

He: Well, can I have the dining-room clock?

She: No!

He: May I keep my studs?

She: Yes, you may keep your studs.

He: Well, what about the child?

She: There is no child.

He: Oh, yes—I forgot.

The program for "The Censor and the Dramatist" contains some verses evidently written by some product of New York wholly misinterpreting the nature and purpose of the play, which is an entirely playful trifle setting forth amusingly certain conventions of the problem drama, such as that a wife's bedroom must

always open off from the living-room, in order that certain familiar situations which are used in all of these plays can be more readily presented to the audience. The censor is laughed at in a spirit almost of farce, and of course the censor is unknown here, but he is a very present, very annoying, and very familiar affair in Great Britain. The later play has the intelligent lightness and unusualness of *Barrie*. It is in no way to be classed with the two one-

it is better to leave it to the police than to any individual, because as a rule the police represent the public, and the public has a right to make its own mistakes. To be sure, sometimes the policemen are amusing. Mr. Wakko, police commissioner, is reported to have ordered a significant change in "Any Night," one of the earlier examples of the swarm of vice plays that have sprung up recently to meet the demand of the public that one

the Sergeant'll get his, and the Lieutenant and the Captain and all the rest of them'll get theirs—and when there ain't nothin' more to give up—(Smiles scantly)—maybe I'll get mine."

And this:

Policeman: "Can it, kid, can it. I seen her when she flagged ya—but if you want to fall fer it, go as far as ya like; I've given ya the inside info', so don't holler

"Eyes, look your last! Arms, take your last embrace!"

act plays which he did seriously, but the fact that an American manager puts it on for a run has an encouraging meaning; namely, that a public too long deprived of a fair proportion of drama worth listening to can now be caught and attracted by the name of *Barrie*.

4. Police Censorship

SPEAKING of censorships, there must always be somebody, of course, to decide whether a play offends morals too flagrantly to be permitted, or not, and

great evil of life shall no longer be ignored. What did Mr. Wakko have taken out? That part of the play that criticized the police—to wit:

Policeman: "Say, kid. I'm sorry about the lungs."

Mary: "Oh, forget it."

Policeman: "And, Mary, after this there ain't going to be nothin' doin' in the piece-of-change line."

Mary: "That's all right, Mike—you're entitled to it, and as long as I keep goin' you'll get yours—(Half to herself)—and

if the harpoon hurts. And say, Birdie, yer a new edition to me, so let me wise ya up; if yer guin' to scatter yer line of chirp along this alley fer the season, don't forget Little Boy Blue. Got me, Baby?"

Perhaps if there were a referendum, it would be decided that the Police Commissioner did not represent public opinion in taking out of a play that part of it which tied up a terrible existing evil with a police system. However, Christabel Pankhurst's opinion about this evil was suppressed in this country, so what do you expect?

FAST GOING IN THE MUD

A remarkable instance of how well the backs kept their feet in the slippery footing in the course of the Dartmouth-Princeton game. Whitney's fast starting would have done credit to a dusty gridiron

Current Athletics

By HERBERT REED ("Right Wing")

DARTMOUTH won its game with Princeton with something to spare, and in so doing uncovered in Curtis one of the best punters of the year. The Hanover kicking game, covered by a pair of first-class ends, had been to some extent discounted, but few who had followed the work of the two elevens were prepared for the high-class running game used by the Green—a type that probably would have done considerably more execution on a dry field. Whatever the result of subsequent games in which the Hanoverians and the Tigers figure, it has been settled to the satisfaction of most followers of the game that the Dartmouth system is better than the Princeton system. And that means a great deal. It means that Dartmouth, despite comparative geographic isolation and other handicaps, has founded a system of football that will compare favorably, theoretically, with that at any other college in the

country, and will bear comparison with the systems in use at more than one university that boasts of a wider range of material.

The Dartmouth-Indian Game

THERE can be no doubt that in the course of time the Green will move over on the Harvard schedule, but in the meantime the Hanoverians probably will have to seek conquest far afield. This week the team from New Hampshire meets the Carlisle Indians, one of the shiftest elevens in the country, and has already threshed it out with Pennsylvania. It would seem that in course of time Dartmouth must drift into an alliance of some sort, instead of being, as at present, something of a wanderer. Pennsylvania, for instance, could do worse, and hardly better, especially as Dartmouth will soon attain a position in other

branches of athletics that will entitle the institution that was started for redskins and has been monopolized by whiteskins for many a long year, to a forward position in the ranking on track and field. There have been good coaches both at Dartmouth and Princeton and it is possible that the present incumbents at both institutions will not exert a lasting influence on the type of play, but I am inclined to believe that Dartmouth will profit more than Princeton from this year's campaign. But in the long run, unless there is something bordering on a revolution in Tigertown, the Dartmouth method, founded as it is on the roots of football, will achieve better results.

Quite early in the season it was predicted in these columns that Llewellyn would prove one of the best quarterbacks of the year, and his work in the Princeton game alone was enough to place him in the front rank. Easily one of the best in the lists last year from the viewpoint of personal skill, his judgment was to be questioned in the important games. Even now, on the offense, I doubt if the Dartmouth method of playing the quarters will bear scrutiny. When little Fishon was running the team—a man who weighed not more than 125 pounds—it seemed a good idea to play close up under the center, but both Ghee and Llewellyn are so much bigger than Fishon that an aggressive defense has an excellent chance of upsetting them.

Whitney, a Star

IN Whitney the Green has one of the best backs I have ever seen, not alone in carrying the ball, but in interference and in making "false attack." Had it not been for Whitney's plunge into the line when Llewellyn made his touchdown it is doubtful if the Tiger team could have been coaxed in from its normal "spread" defense. No doubt the Hanover men had been sizing up the Princeton type of end play for some time. Certainly their attack would lead to that conclusion. The Dartmouth ends, on the contrary, bored in and upset the Princeton shifts in their incipency. The fact that the field was wet will hardly serve as an excuse.

One of the best coaches in the country has said that the work back of the line is a "shell game," and Dartmouth, with a

"Hobey" Baker, Princeton's captain, and the fleetest man behind the Orange and Black line

quick shift of the bucks, was playing a "shell game" against Princeton. The point was that when Whitney did not have the ball he looked as though he had it. The Princeton shifts, on the contrary, looked and acted as though they had nothing, which assuredly they had not.

Princeton Must Change Tactics

BY the time these lines appear Princeton probably will have begun building some sort of offense not entirely dependent upon the shifts that have proved to be failures, although why the Tigers have spent so much time on that form of the "Minnesota" that is best known, without using the variations that have been in existence for some years, but not even used by Minnesota, is beyond guessing. The same defense that stops the extant form of the "Minnesota," however, will stop the yet to be uncovered Minnesota shifts, and there is no health in them save when done to perfection.

The same amount of perfection, however, will "get over" a play much simpler than the "Minnesota," which the Dartmouth-Princeton game amply proved if proof were needed. Supreme precision would have made effective a simpler play than any Princeton used.

The Value of the Old Kicking Game

ONE of the joys of the big games is the simplicity of the play or plays that win—the realization that they are founded on football principles that are as old as the hills. It has been said of Princeton that there was some new form of kicking under cover at Tigertown, that not alone was there a new kicker but also a new kink in kicking. Yet when the test came, the Hanoverians, playing the kicking game as it is best understood by most football men, triumphed, and triumphed deservedly. There is a way to meet such a kicking game as that used by Dart-

mouth, and above all, that employed by Harvard, and it may be that the other big games will uncover it, but at this writing the sound and solid method of kicking, both on attack and defense, has earned its way to an opening or two for a score just as it always has.

The "Lively" End vs. The "Waiting" End

THE Dartmouth victory over the Tigers emphasizes as no game to the time of writing the superiority of the "lively" end over the "waiting end." Criticism of Princeton's method of end play is hopeless, save for general, and non-Princetonian consumption. The theory of the "amazing end" is best expressed in the words of a famous coach. "You are running through signals," said he. "The play is working smoothly. There is not a flaw in it. When, all of a sudden, some one comes along and throws a railroad tie into it—a mere log of wood. And what are you going to do about it?" The question must go unanswered until the highest games swing around.

Penalties a Big Factor Now

PENALTIES, doubtless, will be big factors in the games that are played toward the close of the season, which revives the old suggestion that the hockey rule be applied to football—the sending of a man to the side lines for a stated period, and compelling the offending team to play with ten men for that period. Since the rules are so free in the matter of substitutions, they might well be expanded to cover disqualifications of a temporary nature. The disgrace of expulsion from the field of play sometimes follows a man in after life, and it must be remembered that his offense is measured by the judgment of one man. The immediate disgrace would be great, I think, were he sent to the side lines for a short time, and the permanent disgrace would depend upon his character as a

"Hank" Lively, Dartmouth's field general, who was the brainiest player in the Princeton game

player—the judgment, not of an official, but of his fellows. It is a serious thing to brand a man as an intentionally rough player, and the branding should not be left to an official, who admittedly is fallible.

The Yale-Princeton Battle

WHEN this issue of the WEEKLY is out the Yale-Princeton game will have been played—a game that will have a great deal to do with the future coaching policy at the institutions involved. Yale is already committed to a resident and salaried coach, while the Tigers are going through a form of coaching responsibility from which the Elis have been graduated. Older and wiser heads will have to get into closer touch with Princeton, I think, if the younger men are to make the team what the Tiger material ought to make it, and my opinion about Princeton will not be changed by the sheer fact of victory. If victory there is to be. There is a chance, of course, that Princeton will win big games now and for many years to come, but I firmly believe that the time for introspection at Old Nassau has come at last, and come with a vengeance.

Curtis, Dartmouth's punter, one of the best kickers of the year

Bullin, the Princeton tackle, who is a mainstay in the Tigers' forward line

As They Do It in France

By ALICE GEUBEL DE LA RUELLE

One answer to the policeman argument against woman suffrage

THE official journal of August 11, 1913, publishes a long list of eminent persons decorated with the cross of the Legion of Honor, and among them are three women: Madam Clémence, the great composer, Mlle. Stoude, Founder-director of the Molière College, and Madame Prévost, Inspectrice Départementale du Travail, my colleague and friend. All those who know Madame Prévost will applaud her nomination, for no woman deserves more respect and sympathy in the very delicate functions which she has fulfilled for twenty years.

The men Inspectors and the women Inspectors of Labor are, since the law of November 2, 1892, appointed by the government after a public competition, a fact worthy of remark. The extent of powers, the salaries, the conditions for pensions, etc., are the same for both sexes.

It is a rather amusing fact that, according to the law of pensions of June, 1854, any functionary employed in the category of active service has the right, after twenty-five years, to a pension equivalent to the half at least of his actual salary. In case of death, the minor children and the surviving "spouse" have a right to a third of that pension. Those words, the "surviving spouse," do not designate the sex, but in 1851 there were no women functionaries in France. It was then only the widow who was able to benefit from this measure but now for a woman functionary the surviving spouse is a widower. Will the State pension a man who has lost his functionary wife? By so doing, the State would recognize that she was supporting him! I think that this has not yet been tested, but the terms of the law are formal and states that the surviving spouse shall receive a pension. *Tempo moras!*

THERE are about one hundred and fifty Inspectors of Labor in France; and of this number, twelve in Paris and five in the provinces are women. They are in charge of the laws of Labor and Hygiene in industry. Accordingly, they have the right to enter at any moment of the day or night into any establishment or dependencies of establishments where it is believed or even suspected that an industry is carried on. This power has been considered absolute. In fact, an *officier de la police judiciaire*, even armed with the warrant of arrest, cannot enter a building to arrest even the worst malefactor after the setting or before the rising of the sun. Article 84 of the Penal Code formally interdicts him, but the legal protection of workers would have been in great part illusory if the inspector of labor had not been able to control it in the night as well as in the day. The inspector of labor who enters an establishment where he is not yet known proves his identity by the production of a service card. If entrance is refused in spite of that, he makes a written statement and sends it to the court, and the employer,

according to article 222 of the Penal Code, is condemned for contempt of a public functionary in the exercise of his duties; the penalty varies from 16 to 300 frs fine and 8 days to 6 months' imprisonment. If the inspector sees any infraction of the Labor laws, he generally gives a notice to the employer which must be immediately complied with, the notice calling for a removal or cessation of the infraction. Or he grants a delay, as long as eighteen months in some instances, if changes in the building are required for hygiene; but if the inspector finds a very evident ill-will or ill-intent, or where the case is grave, he makes a written statement (*procès verbal*) without having even to warn the offending employer. This report is sent to the *Procureur de la République* (Public Prosecutor).

IN consequence of this report, the employer is called before the court, where he has the right to defend himself; but in this defense, neither his own testimony nor the testimony of any of his employees is accepted against the written statement of the Inspector. He is under the necessity of proving a material fact; for instance, that the required window already exists, which is hardly probable. Generally, he pleads his good faith, or extenuating circumstances. But good faith cannot be taken into consideration in matters of "infraction." It is only for misdemeanors or crimes that intention is one of the necessary conditions of culpability. Extenuating circumstances, too, are very limited in questions of infractions of the laws of labor, and are determined by special legislation, in fact, the article 463 of the Penal Code is generally not applicable except in matters of hygienic laws.

In England, the Inspector of Labor must prove the infractions of law which he has discovered. I remember having assisted in London at a session of a tribunal when Dr. Thomas, Inspector of Labor, was suing an employer. He was very much surprised when he learned from me that in France I would not have had even to explain the facts personally—my *procès verbal* or written statement being considered entirely satisfactory. In Germany, the jurisdiction for labor legislation is chiefly administrative, and consequently the inspectors of labor have no judiciary power. In the case of the Brooklyn Rapid Transit Company, as much of it as I have read in the newspapers, this would be much simplified with us.

THE Inspectors of Labor also have authority to grant permission to prolong work in cases of emergency, after accidents which require immediate repairs, or in the manufacture of conserves when the goods, such as fish, fruits, flowers, must be utilized immediately or lost results. The "midinettes" (Parisian working girls) are not now allowed to work after nine o'clock in the evening, at the beau-

tiful gowns and bewitching hats ordered by elegant Parisian and American women who compose nine-tenths of the clientele of the *Rue de la Paix*, Paris.

FINALLY, the Inspectors compile statistics used by the Board of Labor, and frequently give reports of their observations and investigations as to the results of actual laws or in the case of projected laws.

As may be seen, the functions of the Inspector of Labor in France are numerous and important. They require a great expenditure of physical strength. There are no elevators in the houses where the small workshops are. It requires also strength of character to face, at times, with calm and dignity, angry and sometimes even threatening people. It is necessary also to know thoroughly the legislation of labor, for every employer avails himself of a skilled lawyer who seeks to find weak or vulnerable points in our statements. But the Inspectors of Labor, and chiefly the women, have a mission, very noble, very fine, since it is to protect against abuses, and to assure the best conditions for work and existence of women and children, full of courage if not always of health, wishing to work for their living, and doing it so valiantly, so nobly. For instance, it happens frequently that we find a child employed in a position bad for her health and development. If she is under sixteen, the law of November 2, 1892, gives us the right to forbid her employer employing that child under those conditions. We have to do this, but we would consider that our duty was not completed if we failed to procure another position for the girl, and that is what we always do; it would be doing her a poor service to take away her bread in order to keep her health. I owe it to the truth to say that often the employer himself procures other work for the young employee when we appeal to his humanity and to his real interests. In fact, it is not to his interests to have a personnel in good health, satisfied to work for him, and co-operating joyfully in the common work? Many employers in France, as well as in America, understand this. In the little time I have been here, I have already seen firms which might be models and which I have sincerely admired.

SPACE does not permit a complete description of all the duties included in the mission of an Inspector of Labor.

To sum up then, I will say that it is not so much for her a question of being a police officer to punish infractions of labor laws, but much more to prevent as much as possible such infractions, and to instruct the employer and the employee in their reciprocal rights and duties, to help them, to prove to them that their mutual interests are to help each other loyally; and that there is no real prosperity and happiness when they rely upon abuse, oppression and hatred.

Finance

By ALBERT W. ATWOOD

THE one financial subject which is of most interest to large numbers of persons, next to how to make a good living, is how to invest money safely at a high rate of interest. Currency reform, tariff and trusts fade into shadows besides this knotty little problem. It is practical. There is no theory or "hot air" about it, and most of the letters of inquiry received by this department have to do with it.

In HARPER'S WEEKLY for September 6 the subject of 6 per cent. and safety was discussed. Most investors would like to get that combination if they can. The following letter is typical:

"I find I have about \$500 to invest, and as I have never done anything of the sort systematically I would like to do this right. There may be some more later. I want two things, sure, safety and reasonable marketability; those anyhow, and something that comes in small amounts. Then of course all the interest I can get without sacrificing the above. Can I get 6 per cent. and have safety and marketability?"

It is proposed in this article to give a list of safe investments, and most of the securities to be mentioned will yield from 5.50 to 5.70 per cent. rather than 6 per cent. There are many safe securities which yield 6 per cent. but we cannot give a list of them to advantage.

MANY real estate mortgages, or bonds based upon such mortgages, yield 6 per cent. and are safe. But these securities are local in character, and rarely have any marketability, or saleability, except such as the dealer from whom they were bought chooses to make for them. There are many thousands of such mortgages. To select them wisely one must rely upon the dealer. Everything depends upon the dealer.

There are many new or small, local industries against which securities are issued to return 6 per cent. or more. Many of these are safe, but they possess only narrow markets, and again the investor must depend upon the dealer entirely or upon a knowledge of local conditions.

Several of the strongest and most reliable of the investment banking firms offer bonds, notes and preferred stock based upon relatively new or small electric light, power and traction companies to yield from 5½ to 6 per cent. Many of these securities are safe, but here again everything depends upon the dealer. These firms have built up large organizations solely for the purpose of securing safe securities to sell to investors. The investor should get into touch with one or more of these great organizations. Usually he will be supplied with securities whose safety is sure to be demonstrated by experience. The ready saleability of such securities is sometimes called into question. While there is often much information available in regard to this class of bonds, the companies issuing them are generally comparatively new, and the standing of the bonds is more often judged by the standing of the firm which sponsors them than by widely known facts concerning the industry itself.

Finally there are numerous stocks listed on the Stock Exchange which re-

turn 6 per cent. or more. But the average conservative investor of moderate means will do well to buy a few bonds before he ventures upon stocks at all.

For all these and other reasons I have selected a list of bonds which are all dealt in on the New York Stock Exchange and are based upon the property of the larger and better-known companies. They are securities regarding which information is readily available, and which stand primarily on their own merit, irrespective, for the most part, of the sponsorship of any one firm. Less well known securities may be as good, but to determine their merit more special and individual inquiry is needed.

Bonds in \$500 Amounts

THE list of bonds which shortly follows includes only those which may be had in \$500 pieces. All of these bonds are listed on the New York Stock Exchange, and most of them enjoy an active market there. They are all safe enough for any practical purpose.

Southern Pacific, first and refunding mortgage 4s, 42 years to run, yield 4.50 per cent.

Baltimore & Ohio, first mortgage 4s, 35 yrs., 4.45 per cent.

Northern Pacific, general lien and land grant mortgage 5s, 154 yrs., 4.60 per cent.

Aitchison, adjustment mortgage 4s, 85 yrs., 4.65 per cent.

Oregon Short Line (Union Pacific) consolidated first mortgage 5s, 33 yrs., 4½ per cent.

New York Telephone, first and general mortgage 4½s, 26 yrs., 4.60 per cent.

General Electric debenture 5½s, 39 yrs., 4½ per cent.

United States Steel, sinking fund 5s, 30 yrs., 5 per cent.

Southern Bell Telephone & Telegraph, first mortgage 5s, 28 yrs., 5½ per cent.

Cumberland (Bell) Telephone & Telegraph, first mortgage 5s, 24 yrs., 5.25 per cent.

Baltimore & Ohio, convertible debenture 4½s, 20 yrs., 5½ per cent.

Most of these bonds are secured by first mortgage on properties which are among the largest and most valuable in the country. The first three are distinctly of the "Gilt-edge" class. The first named is legal for savings banks in this state, the highest known technical test for a bond. Not only is there a good market for all these bonds on the New York Stock Exchange, but one of them, the United States Steel 5s, enjoys probably the broadest market of any bond in the world.

There might possibly be added to the above list the first mortgage 5s of the Central Leather Company, which may be had in amounts of \$100 as well. These bonds run for twelve years and net a return of 5½ per cent. There might possibly also be added the first and refunding 4s of the Third Avenue Railroad of New York City, which run for 47 years and return 5.20 per cent. I would not advise an investor to buy either of these bonds, however, until after making something of a study of the position and condition of the two companies and judging for himself. Both bonds enjoy an active market.

The Open Door in Life Insurance

THE POSTAL LIFE is the only Company that opens its doors to the public so that those desiring sound insurance-protection at low cost can deal directly for it, either personally or by correspondence.

Whether you call or write, you make a guaranteed saving corresponding to the agent's commission the first year, less the moderate advertising charge. The first-year commission ranges up to

40% of the Premium on Whole-Life Policies

If subsequent years you save the Receding Commission other consumers may their agents, namely 7½%, and you also receive an Office-Expense Saving of 2%, making up the

Annual Dividend of

9½%

Guaranteed in the Policy

If you were to call at the office of any other company, or write to it, you might secure insurance, of course, but not directly the policy would go to you through some agent or agency that would get the commission. You wouldn't get it.

In fact, the other company wouldn't be permitted to give it to you unless all other applicants got it; to do so would be illegal discrimination.

The Postal Life, however, dispenses entirely with agents. Its policyholders—all of them—share the benefit of the savings then afforded by direct insurance.

Such is the Postal way, the door is open to you. Call at the Company's office, if convenient, or write now and find out the exact sum it will pay you at your age—the first year and every other.

See How Easy It Is

In writing simply say: "Mail me insurance-particulars for my age as per HARPER'S WEEKLY of November 15."

In your letter be sure to give

1. Your Full Name.
2. Your Occupation.
3. The Exact Date of Your Birth.

No agent will be sent to visit you; the Postal Life employs no agents.

Tobacco Baby Bonds

TWO of the companies which formerly went to make up the American Tobacco Co., or Trust, issue bonds in \$100 denominations, which are worthy of close attention. The Liggett & Myers Tobacco Company, one of the oldest and most prosperous segments of the former Trust, issues debenture 5s which run for 38 years and return 5.10 per cent. on the investment. They are not secured by mortgage, but in 1912 the earnings were more than five times the interest charge on these bonds. The F. Lorillard Tobacco Co. also has bonds which are of much the same character. They return about 5½ per cent. There is a market for both issues. These bonds would hardly be suitable for the most conservative class of investors, but are preeminently adapted to the wants of the business man who is able to keep in touch with developments affecting his investments.

Safe \$1000 Bonds

WHEN it comes to bonds of the \$1000 class the choice is far greater. Still confining ourselves to those which have an active market on the New York Stock Exchange the following list may be of help:

Chicago, Milwaukee & St. Paul, general mortgage 4½s, 76 years to run, 4.45 per cent. A New York savings bank bond, and one of the best bargains in that class. Louisville & Nashville, unified 4s, 27 yrs., 4.45 per cent. Also a New York savings bank bond, and among the most attractive of this, the highest of all types.

Illinois Central, refunding mortgage 4s, 42 yrs., 4.50 per cent. Also a New York savings bank investment.

Southern Railway, first consolidated mortgage 5s, first mortgage on 900 miles, 31 years to run, 4.85 per cent. These bonds are followed by \$63,000,000 development mortgage and general development 4s and \$60,000,000 preferred stock, on which 5 per cent. dividends are being paid.

Interborough Rapid Transit Company, first and refunding mortgage 3s, 38 years to run, 5.10 per cent. An agreement between the company and the City of New York makes these bonds, in effect, a quasi-municipal security. In addition, they are backed by the enormous and growing earnings which, as everyone knows, are furnished by the New York subway and elevated lines. Safe and attractive.

Seaboard Air Line, refunding mortgage 4s, 40 yrs., 5.35 per cent. These bonds are followed by \$25,000,000 adjustment bonds, on which 5 per cent. interest is being paid, and \$24,000,000 of preferred stock on which dividends have just begun.

Armour & Co., first mortgage real estate 4½s, 26 yrs., 5.06 per cent. Earnings are probably about four times the charges on these bonds.

Southern Pacific, convertible 4s, 19 yrs., 5.40 per cent. These bonds are not secured by mortgage, but are in reality safer than many good mortgage bonds. In 1912-13 the company earned more than \$26,000,000 above all interest requirements, including the interest on this issue of bonds. In addition to bring safe, returning a high rate of income and having a broad and active market, these bonds always have the possibility of a considerable advance in price.

Union Pacific, convertible 4s, 14 yrs., 4.93 per cent. These bonds stand in about the same position as the Southern Pacific convertibles, except that they are perhaps even better secured, as their lower income yield seems to indicate. The Union Pacific earned more than \$36,000,000 last year, after providing for the interest on this bond issue.

New York Gas, Electric Light, Heat & Power Co., first mortgage 5s, 35 yrs., 4½ per cent. This is an underlying bond of the New York Edison Co., one of the most prosperous electric lighting and power companies in the United States. The bond is secured by enormous earnings.

Norfolk & Western, divisional first lien and general mortgage 4s, 31 yrs., 4.70 per cent. A very strong railroad system, any bond of which should prove satisfactory.

Among the bonds which may be regarded as theoretically more speculative, but which are probably amply secured in every practical way are the following:

Virginia-Carolina Chemical, first mortgage 5s, 10 yrs., 3.70 per cent. At one time the continuance of the 8 per cent. dividend on the large issue of preferred stock was questioned, but prospects seem brighter now, and under any circumstances the bonds appear safe.

Public Service Corporation of New Jersey, general mortgage 5s, 40 yrs., 3.65 per cent. These bonds are not a first mortgage, and it must be admitted that the finances of this great corporation are far from easy to understand. But its earnings are large, and the bonds safe enough for most purposes.

Watch the Rock Island

AN interesting issue of bonds at this moment are the general mortgage 4s of the Chicago, Rock Island & Pacific Railway Company. They are practically a first mortgage on 2396 miles of railroad and around 83 and 84 return 4.80 per cent. on the investment. If the condition of the company improves, which is likely, the bonds should advance in price. Even if the company does not improve these bonds are safe. In fact they would probably not be disturbed much if any even in a reorganization. This bond is probably a bargain, but owing to the low prices of the company's junior securities should not be purchased without the investor making a further study for himself. They are legal for New York savings banks. They are preceded by only \$7,000,000 first mortgage 6s, which fall due in a few years, and are followed by \$93,000,000 refunding mortgage 4s and \$20,000,000 debenture 5s, in addition to \$75,000,000 stock on which 3 per cent. dividends are being paid, and just barely earned.

No reference has been made to equipment trust bonds as they are not dealt in on the Stock Exchange, and run for short periods, ten years and less, than the securities described. Equipment securities have been described in a previous issue and there is no question as to their safety. Although not listed on the Stock Exchange they can be sold readily enough. Those of such railroads as the Atlantic Coast Line, Baltimore & Ohio, Boston & Albany, Chicago & North-western, Delaware & Hudson, Illinois Central, Louisville & Nashville, New York Central, Norfolk & Western, Pennsylvania and Southern Pacific may be had to yield 4.70 to 5 per cent. Those of the Erie, Seaboard Air Line and one or two others return as high as 5¼ per cent.

Why does your competitor succeed?

Perhaps this is one of the reasons?

If his success is a mystery to you, or a wonder, or both, an adding machine alone might account for it. If he had an adding machine in his office and you had not, he would then have an extra, quiet means of getting accurate, detailed knowledge of each business day, week, month, and year, and of comparing his results with the relative efficiency of various departments and clerks. He would know just in how long he could do it, and when he was able to do it and why. He would be doing it correctly. You would be trying and getting lost. If that is the secret of his success, then you are actually paying for his machine by not having one of your own. This is why you ought to own an adding machine, even if you are not quite ready to get one.

WALKER'S Visible Adding Machine

This free book will tell you how to buy

It explains in detail the reason that an adding machine should be in order to serve you effectively in your business. Whether you buy a Walker or not, it will give you facts you ought to have. Sending for it is free. Send for it to receive your free booklet. Please write to us, or see this coupon, wherever it may be found.

Whether you operate motor trucks or horse wagons — "WASTED TIME"

is costing you more money than you realize.

Eliminate this waste of time and your equipment will return you a handsome profit—Cost sheets and checking systems are good as far as they go, but they don't go far enough. The

SERVIS RECORDER

will give you accurate, impartial mechanical supervision over your equipment at all times. It will show you clearly the time a vehicle is in use—the time spent on the road—the time spent in loading and unloading—it will demonstrate whether the cost is out of proportion to the work performed—whether you need more or fewer vehicles—which is best adapted for your needs, motor trucks or horse vehicles.

The Servis Recorder has no gears or outside connections—it is tamper-proof and works equally well on all vehicles—it will expose instantly any unlicensed use of a vehicle. Without cost to you we would like to demonstrate on your own vehicles how the Servis Recorder will save you money.

What They Think of Us

Mary Stuart, Dean of Women, University of Montana, Missoula (Mont.)

The new HARPER'S WEEKLY is good, every bit of it; live issues treated with intelligence and sincerity, with insight and courage—and that's rare, as you yourself know. It provides a clear atmosphere in which a growing brain can breathe freely; and that's restful—for growing brains.

I am especially grateful to you for your sanity on the "feminist movement." After all the side-stepping and sentimentality, the ranting and railing and quibbling, it's good to read the clean, simple truth about woman as she is.

Lewis J. Johnson, Professor of Engineering, Harvard University, Cambridge (Mass.)

Warm congratulations upon the HARPER'S WEEKLY of the present day.

Walter Storey, Peoria Child Welfare Exhibition (Ill.)

I trust that adverse criticism will not deter you from the splendid and inspiring step you have taken toward freeing us from dead but unburied magazine pictures of the past. I write this both from the standpoint of social advance and of art.

That said, it seems to me that a good deal of the social effect of some of the pictures is lost because of lack of correlation between such pictures and the text or spirit of the particular issue. Most people still lack the imagination and knowledge necessary to connect garbage cans and East Side life with their own fireside.

California Outlook

The Hapgood incident seems to indicate that the worst is over. There still remains in England a considerable public that cares for good writing with substance in it. Surface copyings here and there suggest the existence of a similar public in America.

Springfield (Mass.) Republican

It is noteworthy that the Pacific Coast, which is long on woman suffrage, is exceedingly short on feminism. The strange doctrines which are being preached by Norman Hapgood in the "Journal of Civilization" are as disturbing to Governor Hiram Johnson's progressive state as they perhaps would have been to G. W. Curtis.

Mrs. Margaret B. Clements, Vice-President, Tennessee W. C. T. U., Dickson (Tenn.)

Please allow me to congratulate you on the improvements that you have made in HARPER'S WEEKLY. I am delighted with its new dress and with the promise that it holds forth that it will be a progressive journal, its pages devoted to whatever concerns the welfare of the race regardless of sex. It delights my soul that you recognize the fact that God made the world for women, too.

Los Angeles (Cal.) Tribune

Editor Hapgood, by the projection of his personality into HARPER'S WEEKLY, has rejuvenated that publication. It ranks with the best now.

Hapgood is a man of ideas, often right, and, in any case, logical and frank. His utterances are on a high plane and his views those of a cultured gentleman of wide vision.

Even the abominable illustrations that his paper puts forth as art, may be art, although they don't look it.

T. S. Gurney, Hart (Mich.)

It is anarchistic. It is unpatriotic, frivolous, and the pictures are daubs, and I do not take it to my house any more, for my grandchildren to read. And I do not want to renew my subscription.

George S. Chappell, New York City.

It is perhaps needless to say that the attitude toward modern life taken by HARPER'S WEEKLY since your management came into office numbers me among the thousands of enthusiastic supporters.

McKeesport (Pa.) News

The change of occasion for comment upon the new editor's uniqueness and preeminence in American journalism, Broadhurst, axe, and blood, tools favored of Greeley, Dana, Prentiss and Grady, he swings not; neither has the stuffed club a place convenient to his tapering hand. For him the thin, keen rapier, the silken swishing of which pleases his ear no less than it is affronted by a ruder, cruder weapon's crashing thrack. But, for all the daintiness of his warpath equipment, he spills as much blood as any of his militant forebears ever shed,—a fact his trail, cluttered with the corpses of Uncle Joe, Jim Watson, Old Fingers Grosvenor, Ballinger et al., attests. His style is grace itself. He is courteous, always. Sometimes he is so gentlemanly as to be ladylike, almost. Withal, he is there with the punch; and in the year 1913 there is none who can with any chance of success contest his right to title as the greatest American editor.

Fort Worth (Texas) Star-Telegram

Upon the whole the new HARPER'S WEEKLY is a jump-up good magazine for a town of New York's size, and for those who like that kind of thing it's the very kind of thing they would like—with due apologies to the great emancipator of men passed away, and cordial will toward a great intending emancipator of women now on the job.

Floyd Dell, Chicago Evening Post

Let me express my appreciation of your article on "Woman as World Builders," and also and especially, the way you dealt with an idea in which I am particularly interested, in "Two Kinds of Mothers."

It occurs to me that you will be interested in a certain opinion of HARPER'S WEEKLY that I have come across here in Chicago. This one is an unfavorable opinion, and in its absurdity amusing. And yet it is a clue to a certain attitude of people whom you want to reach, and perhaps can only reach by taking into account that attitude.

It concerns the pictures by John Sloan and Davis and the rest. These pictures, which I admire so much, which seem to me to represent the most vital art now being produced in America, strike these people as being sordid. And in association with the feminist policy of the paper it has the curious effect of making feminism distasteful to them.

M. A. O. Packard, Plymouth (Ind.)

It looks like obtaining money under false pretences to obtain our cash for a

journal edited by that greatest American Editor and democrat—Col. George Harvey, and turn us over to a Bull Moose.

A. S. Le Fano, Boston (Mass.)

I cannot say anything nicer about HARPER'S WEEKLY than that Friday of each week has been made a red-letter day, just because HARPER'S comes out that morning.

Howard M. Holmes, Cleveland (Ohio)

Formerly I glanced over HARPER'S WEEKLY occasionally at the Public Library; now I buy it at the news-stand.

It's "bully"—as Teddy would say.

L. W. Mida, Buffalo (N. Y.)

At last! there is a magazine deserving of the name—one built for the people that understand!

Montgomery (Ala.) Advertiser

Mr. Lincoln Steffens, the press agent for and the apologist for the McNamara brothers, the dynamiters, is an honored contributor to the revamped HARPER'S WEEKLY. Mr. Steffens is a type of the class of magazine writers who have made a good living attacking all the institutions which now exist, and in advocating every new idea, particularly socialism. Mr. Steffens falls naturally into his element when he becomes a preferred contributor to HARPER'S WEEKLY, the new organ of the destructionists.

Chicago (Ill.) Record Herald

One of HARPER'S WEEKLY's poets makes New York rhyme with mark and bark. Is this quite in line with Mr. Hapgood's determination to make the WEEKLY stand for the feminist movement on this continent?

Ralph Parlette, Editor "The Lyceum Magazine," Chicago (Ill.)

I want to congratulate you on your rejuvenating power on old HARPER'S WEEKLY. This is the proof: For twenty years I have lived on trains all over the U. S. in Lyceum and Chautauque lecturing. Excepting De Witt Miller who always read HARPER'S, I can't remember seeing it on the trains. Now every day as I ride the train, I see folks with HARPER'S in their hands. The drummer, the old dad, and some women.

San Francisco News-Letter

Whatever Norman Hapgood, now editor of HARPER'S WEEKLY, may be in the eyes of those who are not his warm admirers, he is at least outspoken, and ventures opinions regardless of the fact that they may prove displeasing to a great many of his readers.

H. M. Hall, M. D., Wheeling (W. Va.)

Here in Wheeling—the kind you want—not many—not especially high-browed—good red-blooded, virile men—have found you out—and notwithstanding you have no gain on the cover—voraciously read you every Friday night.

Norwood MacGillivray, New York City

If there were more periodicals with HARPER'S WEEKLY's frank speech and courage of leadership we should soon see an end to the furtive and hypocritical attitude toward beauty and health and life, and we should still remain at least as "moral" as we are now.

HARPER'S WEEKLY

Journal of Civilization

Edited by NORMAN HAPGOOD

Vol. LVIII
No. 2070

Week ending Saturday, November 22, 1913

[10 Cents a Copy
\$3.00 a Year]

Credit and Freedom

HAVING printed the two preliminary articles of Mr. Brandeis on the financial situation, we now begin the series which deals with the money trust. Under all of our trust problems lies the question of a trust in credit. When Woodrow Wilson was still Governor of New Jersey, he said:

The great monopoly in this country is the money monopoly. So long as that exists, our old variety and freedom and individual energy of development are out of the question. A great industrial nation is controlled by its system of credit. Our system of credit is concentrated. The growth of the nation, therefore, and all our activities are in the hands of a few men, who, even if their actions be honest and intended for the public interest, are necessarily concentrated upon the great undertakings in which their own money is involved and who, necessarily, by every reason of their own limitations, chill and check and destroy genuine economic freedom. This is the greatest question of all; and to this, statesmen must address themselves with an earnest determination to serve the long future and the true liberties of men.

The facts which the Pujo Investigating Committee and its able counsel, Mr. Samuel Untermyer, have laid before the country, show the means by which a few men control the business of America. That committee says: "Far more dangerous than all that has happened to us in the past in the way of elimination of competition in industry is the control of credit through the domination of these groups over our banks and industries." . . . "Whether under a different currency system the resources in our banks would be greater or less is comparatively immaterial if they continue to be controlled by a small group."

The Report proposes certain measures which promise relief. Additional remedies will be proposed. Congress will soon be called upon to act.

How shall the emancipation be wrought? On what lines shall we proceed? The facts, when fully understood, will teach us.

In the extremely important series of which the publication begins in this issue, Mr. Brandeis first tells the facts and makes them fully understood; and then he draws his conclusions, explaining the steps that ought to be taken to realize the financial freedom that was proclaimed when Woodrow Wilson was elected president on November 6, 1912.

The Schoolmaster

WOODROW WILSON continues to amaze by his handling of politicians. Not long ago, he sent for Senators Reed, Hitchcock and O'Gorman, of the Currency Committee, seeing them each in turn. Senator Reed had already

come around to the view that speedy action on the Currency Bill was needed; Senator Hitchcock was more encouraging in his remarks about early action on the bill than before; and Senator O'Gorman expressed the opinion that the bill would pass the Senate by December 1. Mann, seeing the failure of his efforts to force an adjournment of both Houses by demanding a quorum in the House, took issue with the President, but the next thing we know the President may be able to mollify even him. The secret is not in patronage, used either as bribe or threat. The President is trying the new method of appealing to the reason and relying upon the patriotism of his temporary opponents. It was the prospect of currency legislation that delayed the passage of the Tariff Bill, just as it has been the shadow of trust legislation at the regular session that has delayed the Currency Bill. The prospect of an extra session next fall, when Representatives and a third of the Senators are up for reelection will probably make the regular session one of the busiest ever known. The Schoolmaster stays with the scholars when he keeps them in.

Mexico

OUR political interests, interpreted in the light of the President's very modern philosophy, are the same as the political interests of Mexico. The strength of the President lies in the correctness of his principles and in his quality of being a last-ditch fighter. In Mexico, he has gone very slowly and very gently, but everybody, both in this country and abroad, understands the firmness that lies in reserve. His patience has enabled him to advance his domestic problem. It has increased the confidence of South America. It has given the world an uplifting example.

Those who attempt to draw a parallel between the Mexican situation and that in Cuba in the days of Weyler need to think again. In Cuba there were patriots fighting for the liberation of their country from the oppression of a foreign power, and exciting the generous impulses of the American people in their behalf, while the destruction of the Maine caused an explosion of indignation in America. The only threat to Mexico of foreign aggression comes from those who are calling for intervention by the United States. Huerta and Carranza alike oppose intervention, and it would only unite all factions in Mexico in resistance to the authority of the United States. Order would at length be restored, of course, but at the sacrifice of many American lives and of more Mexican lives than would be lost in several revolutions. So there is little danger of the commission of some overt act

with the design of compelling intervention, and there are few Americans left in Mexico for whose protection it would be necessary to use the military forces of our nation. President Wilson's programme gradually unfolds itself: the refusal to recognize Huerta's bloody title to the Presidency; the disregard of the recent farcical elections as giving him or any one any better title; the insistence upon the establishment of constitutional government; "the steady pressure of moral force" not only upon the Huerta régime but upon the European powers, overmuch concerned about the material interests of their citizens; the lifting of the embargo upon the importation of arms and ammunition by the Constitutionalists, with probably their recognition as belligerents. With the ability to make good his promises of concessions growing more doubtful, Huerta will be unable to make another foreign loan; heavier taxation will only increase the forces of revolt against his usurpation; an unpaid soldiery will become a greater menace to him than to his enemies; while the recognition of Carranza and the Constitutionalist Party, even in the slight matter of allowing them to arm themselves, will bring to their side the speculators who are always to be found investing in the leader of a possibly successful revolution. But peace will be more enduring and order will be secured more promptly by letting the Mexican factions fight it out among themselves, while Mexico's powerful neighbor stands ready to promote order and peace in any way acceptable to the Mexican people.

The House Leadership

UNDERWOOD will not return to the House in the next Congress, whether elected to the Senate or not. Claude Kitchin, of North Carolina, ranking next on the Ways and Means Committee, stands the best chance of succeeding him in the post of majority leader. He is more radical than Underwood, and a readier debater on the floor. Palmer, of Pennsylvania, is spoken of, but it is probable that he will contest for the Senatorship with Penrose, trusting that the National Progressives will either support him or effectively divide the old Republican vote with a good candidate of their own.

Other Senatorial Changes

BLAIR LEE, Progressive Democrat for Maryland, will strengthen the President's hand. Kentucky is now represented by a Republican Senator, Bradley, and the contest for the Democratic nomination is between former Governor Beckham and Representative Stanley, of the Steel Trust Investigation Committee. The Democratic nominee will almost certainly win the Senatorship. In North Carolina, Senator Overman will have a strenuous fight with E. J. Justice, a contender against railroad domination in that state, but with the chances now favoring Overman. Culberson, of Texas, is in failing health, and Henry has a mind to try for the senatorial toga, if Culberson does not run. Gallager will be bitterly fought in New Hampshire, and ought to be beaten. The first popular elections for the Senate will probably increase the present Democratic majority.

Gorgas to the Mines

IN other times to be sent to the mines was equivalent to one's death doom; the going of Gorgas to the Witwatersrand mines will instead mean assured length of days to many who will otherwise have died untimely and most pathetically. Colonel Gorgas is proceeding by consent and approval of our War Department, because the Kaffirs working the Rand gold mines are dying off in great numbers of pneumonia, epidemics of which infection are rapidly succeeding one another. And why Colonel Gorgas? Because as everybody now knows our great sanitarian has solved most beneficently this problem of pneumonia prevention, among several other age-long problems—of malaria, yellow fever, typhoid, the tropical dysenteries and the like—in our Canal Zone; that Panama now rivals Palm Beach as a health resort, and has a mortality rate which is justly the envy of most American communities and one that only two or three can get under. Well indeed may this work of Gorgas be his Godspeed. His record for August last, the month marking probably the high tide of our Canal Zone occupancy, shows not a single death from disease in the American colony numbering 12,481 and but 39 deaths from all causes among the employees of the canal commissioners. As in the Canal Zone, so in the Rand, Colonel Gorgas believes the pneumonia problem inheres in the grippé problem, because it is reported to him that in almost all cases pneumonia follows on, is sequel to, attacks of the grippé. People all over the world might profitably consider this. We can abolish grippé if we choose; the germ of it is known and the method of prevention is clear: only there is the erroneous impression that grippé is too trivial a matter to bother about. The Dutch have put up a proverb in the house where Peter the Great studied ship building: *Den Grooten man is niets te klein*—to the great man there is nothing too slight; and that is why we are confident Gorgas will clean up the pneumonia job in the Rand, and the grippé job along with it. And no doubt while he is down there, he will be asked to look also into consumption (which, with pneumonia, kills off half the human race) among the miners. Up to recent years the consumption mortality among these wretched negroes in South Africa was murderously high, because the work was dry mining, and therefore evolving gritty dust which, when inhaled, cut into the tender lung tissue and made an ideal soil for the consumption germ to thrive and multiply in. In ours and in English coal mines the consumption mortality among the workers has been lower than among the clergy even, only farmers, bankers, brokers and company officials faring better because coal mining is "wet" and not dusty. A death rate of 70 per 1,000 has been cited among white rock drill miners (averaging 35 years of age) in the South African gold fields, as against 6.3 among English coal miners. The Transvaal Chamber of Mines some years ago humanely secured water-drills and like apparatus, by which dust is laid and the fumes generated in the blasting disposed of; and this has, no doubt, materially reduced the dry miner death rate. Yet Gorgas will reduce it further.

Anti-Vivisection Genius

AS J. W. Hodge, M.D., seems to be carrying the hammer for the anti-vivisectionists at present, we are glad to give more general publicity to some of his fits of inspiration. Those who prefer the old system of allowing the household fly to light in garbage of the worst kind, and then plant his feet in the dishes at the table will sympathize with the following:

"The house-fly bugaboo is not only the latest, but is also the silliest and most asinine fad that has ever seized the minds of a gullible and ignorant populace."

Dr. Hodge is logical. He knows why the fly is harmless. It is because what is generally considered the greatest discovery of modern science; namely the germ origin of disease, is a mere dream:

"The present idiotic crusade which is being frantically waged against the harmless house-fly, is a necessary outgrowth of a stupid belief in the doctors' 'pipe-dream,' called the 'germ theory' of disease, the silliest and most pernicious pathological doctrine ever evolved from the fuddled brain-pan of a visionary medical theorist."

Dr. Hodge also declares that the idea that mosquitoes carry yellow fever is "a fool hypothesis." Having put the ideas thus before the general public, we are willing to allow them speak for themselves.

Decency

IT has long been the custom in England and America to refer to diseases growing out of low sex standards in some roundabout way. Calmly calling them by their names has been considered one of the worst of sins. In an article published in this paper, "Unmarried Mothers," the two principal diseases of this kind were actually named, and a huge wail has arisen. This wail is, however, entirely from men. As far as we know, not one woman has objected. Reflecting on the reason for this, we have reached the following conclusions. Men have been so long accustomed to looking upon this evil, not as one of the most serious topics in the world, but as a matter to be referred to in secret ribaldry, that they cannot get over the habit of thinking any reference to it must be as indecent as their own thoughts.

A, B, C

OUR dear friend the *Record* of Fort Worth, Texas, apparently needs a few elementary lessons in the details of government. It says:

"He was so busy editing HARPER'S WEEKLY and giving advice to the world in general that he never thought it necessary to become a tax-payer or a registered voter."

It happens that the editor of HARPER'S WEEKLY was the first person in his election district to register, and that he also voted early in the morning. Just what was stirring the intellect of the Fort Worth *Record*, it is impossible to surmise with certainty, but probably our friend down there had read that the editor of HARPER'S WEEKLY had not enrolled, and got enrollment generally mixed up with taxation, registration and voting. A little study of the subject will show our Texas statesman that it is impossible to enroll in New York unless you enroll in one of the political

parties; and, therefore, one who wishes to be independent in politics does not enroll, no matter how faithfully he may register and vote. We trust the disturbance in the Southwest will now end.

Real Journalism

IN the destruction of Tammany's power, which will probably result from the recent overwhelming defeat, no small part of the credit is due to the editorials in the *New York World*. From the beginning of the fight, these editorials seized upon the essential arguments, and presented them with clearness, variety, conviction, and singular power. The newspapers as a whole did extremely well, but the newspaper men themselves will in the main agree with us that a special tribute is due to the splendid vigor and the unflinching grasp with which the campaign was assisted by the *World*.

What Now?

WHEN individuals or newspapers have been prophesying defeat at most steps in a campaign, and overwhelming victory comes, it is natural for them to escape from embarrassment by attributing the result to some event near the end of the contest. Many, therefore, speak of the Sulzer-Hennessey speeches as "turning defeat into victory"; which is childish, considering the size of the victory and the parts of the city in which it was mainly won. Of Mitchel's plurality of over 120,000, far and away the most sweeping triumph in the history of New York, possibly (though not probably), 20,000 votes were won by Hennessey. None were won by Sulzer's speeches; probably some were lost; although a large number (let us guess 40,000) resulted from the bald fact that Murphy had the arrogance to impeach Sulzer for disobedience. Many changed because of the unfitness of McCall, made clear in his record of appointments, in his part in the insurance scandals, and in his childish speeches. Mitchel won many by his own wholly admirable campaign. Victory, however, was already assured as soon as the death of Mayor Gaynor meant that there was to be a simple stand-up fight between a typical Tammany ticket on the one hand, and on the other a ticket made up of experts, most of whom, including Mitchel, McAneny, Prendergast, and Pounds, had already proved themselves fully in the service of the city.

Tammany has never been through eight years of starvation before. That a Democrat is mayor, and congenial to the national administration, will make that starvation worse. That New York will continue, and even much improve the excellent government of the last four years, will still further weaken the Tiger. But who is to bolder the advantage thus gained? A voluntary committee this year interfered and was able to force fusion. It is an unsafe method. What will the Republicans, the Progressives, the Independent Democrats do four years hence? In city affairs, there should be no Republicans, Democrats, or Progressives. Let the clamor from the great city be so insistent that it will force the assembly to grant a short ballot, and a ballot without party columns, and the citizens of New York will forever rule themselves.

"His task is a complex one, even when he is merely doing the day's routine of work"

A Day in Dr. Alsberg's Office

By HONORÉ WILLISIE

DR. CARL ALSBERG is a chemist. It is doubtful if he has any commercial instincts. The man who is creative along scientific lines seldom is a good tradesman. And yet, more than any business man in the country, Dr. Alsberg influences the direction of the business growth of the food industries of America. Part of this influence is due to his position as head of the Bureau of Chemistry. More of it is due to his constructive imagination, backed by his splendid scientific training.

It would be difficult to over-estimate the service done to America by the Bureau of Chemistry since the passing of the Food and Drug Act in 1906. It has used the Act as a club to beat into the food industry the lesson that scientific ethics must be used coordinately with business ethics. The national effect has been cleansing and wholesome.

But Dr. Alsberg wants to be something more than a club-wielder. He wants the Bureau of Chemistry to be made to stand for great scientific achievement as well as for police service. And he wants the business men of America to cooperate with him in his scientific work, instead of forcing him to use his own highly specialized brains and those of his assistants in detective service on business.

"A man's ignorance ought to be taken into consideration," says Dr. Alsberg, "in enforcing the Food and Drug Act. Nearly all the food handling and packing in the country is done by guess. If a man is putting harmful matter into his food, he ought to be told how to do better and be given a chance to do so. If he then persists, he should be thoroughly punished. I don't mean that we should not enforce the Food and Drug Act. Its enforcement should never be neglected for a moment. But I do mean that if we continually punish without showing the guilty how to do better, we shall never get anywhere."

To sit in Dr. Alsberg's office for a day, watching the ordinary day's work, is to understand what the Chief means by cooperation.

One day this fall a group of eight or ten business men held a conference with Dr. Alsberg in his office. The men were makers of flavoring extracts. They came with a grip full of empty bottles, familiar to every housewife, as the ten-cent size, with some of the larger variety. They were clean cut, intelligent looking men, very much in earnest, but with an obvious desire to conciliate that was very significant of the power behind the Chief's quiet and youthful exterior. They wanted to know what leeway the Bureau of Chemistry was going to allow them in labelling the amount of extract in their bottles.

"WE thought it would be a good idea," said one of their number, "before we got into trouble with the government for misrepresenting the contents of the bottles to explain to you what we were up against."

Dr. Alsberg examined one of the small bottles. It was jammed, appearing to hold several times what it really did.

"We can't get a uniform size bottle," the man went on. "We order the eight dram size. We get anything from four and a half to eight drams, all looking exactly alike. We can't measure each bottle. How much leeway are we to be allowed in stating 'how much' on the label?"

Dr. Alsberg continued to examine the bottle. "Of course, these panel bottles are made to deceive the public, aren't they?" he asked.

The man hesitated and then smiled sheepishly. "Yes, but the women insist on that size and shape, and on the fancy carton, and you insist on pure flavoring extracts until there is really no profit at all in the small sizes at ten cents. And now, if we are to be in trouble as to size and content—"

"Can't you force the glass factories to turn out uniform content?" asked Dr. Alsberg.

The man threw up with hands. "Glass factories and force! Why, doctor, the glass-blowers' union is one of the strongest in the country. They turn out exactly the kind of bottles they want to. We complain to the factory owner and the factory owner goes to his blowers and they tell him to go to thunder. Dr. Alsberg, we extract men are just up against the fence and we have to ask you to help us over. We have made up our minds to get together and come to get you people here to tell us what to do. How are we going to stay in business and do all the things the government and the consumer demand of us?"

Dr. Alsberg smiled, started to speak and the telephone rang. Someone had made a seizure of rotten eggs in New York and wanted to talk with the Chief about it. He settled the egg difficulty, then turned back to the fruit-extract men.

"We must help you, of course. You may be very sure that we will do our utmost to deal with you fairly. There should be some kind of bottle used where deception is not so easy and uniformity easier to get. We will look into it. You must realize, of course, that the consumer must be protected."

THE business man answered soberly, "I guess all of us here have been in business long enough to realize that the best good to the consumer ultimately

works to the best good of the manufacturer. We've had to realize it, particularly of late!" He looked meaningly at Dr. Alsberg. His associates in the manufacture of extracts nodded. "We have to make good extract. We have to put it in honest containers. Now we have come to you to help us make it pay!"

The fruit-extract man had gotten the point. And the situation was not without its pathetic as well as its humorous side. Men who had grown old in business were asking the young man of science to withhold the club until they had learned how to play the game with scientific integrity.

The young Chief is calm and keen and sympathetic and entirely uninfluenced whether he is listening to the sorrows of extract men or to the abandoned grief of a wine importer, sued by the government for calling champagne by some other name. His task is a complex one, even when he is merely doing the day's routine of work.

To administer the Food and Drug Act justly requires an intimate knowledge of practical chemistry. This administering alone is one man's job. But Dr. Alsberg is to do more. He is to swing the Bureau of Chemistry into creative work. Every man in the Bureau of Chemistry is encouraged to give birth to ideas. Such ideas are written out and from time to time Dr. Alsberg goes over the list, eliminating the futile, amending, changing and encouraging the good. To sit in judgment on investigations and research suggested by chemical experts demands a creative mind, an imagination clarified by the finest type of training. And finally, the young doctor's ultimate task is to take the results of the administering of the Drug Act and of the scientific searchings of his Bureau and make them a directing force in the economic life of the new century. And the interesting and inspiring part of the matter is that it is Dr. Alsberg's own qualities that have created his job.

After the fruit-extract men had left, a lean young man wearing spectacles came into the room. He talked earnestly for some moments. Dr. Alsberg appeared to understand exactly what was said, for he smiled approval. The layman who listened eagerly knew that the man was speaking English but otherwise got no sense from the flow of words.

"He was talking in chemical phraseology about something. What was it?" asked the layman when the man had gone.

The doctor laughed. "He was telling me about experiments in candy-making. How he hoped to stop the crumbling of the sugar, the hane of the candy industry. I asked if he knew of a good biologic chemist and he was telling me of the scientific escapades of a man he thought eligible."

THE door opened and an elderly man in a frock coat greeted the doctor.

"I've come to Washington," said the elderly man, "to have you tell me how you want us to label our acid phosphate."

"But, my dear sir," protested Dr. Alsberg, "I can't write your label for you!"

"Well, you won't stand for the one we write," cried the man. "For instance, why won't you let us say it's a brain food?"

"Because nobody can prove that it is," returned the doctor.

The man looked bewildered. "But for years, physicians have been recommending it," he protested. "What shall we say on our label?"

"Just say what you can prove to be so," urged Dr. Alsberg, bowing the bewildered phosphate man out as two other men came in.

These were men from the Bureau of Animal Industry who are planning with Dr. Alsberg for a nation-wide cleaning-up of the milk industry. They planned to do more than exercise mere police control over interstate shipments. They are going to show the milk producer how to produce better milk, and that it will pay him to produce his milk under the best conditions.

"The educational and regulatory work must go on together," said Dr. Alsberg. "It's an ancient combination much used by the old-fashioned school teacher who taught by precept when he could and resorted to the switch, when he had to!"

"Dr. Alsberg's own qualities have created his job."

AFTER the group of men had thoroughly thrashed out the details of the Milk Campaign, Dr. Alsberg said, "Do you know of some highly trained physiological chemist I can get? I find it almost impossible to find them and after finding them, to get them to consider a government salary."

His two listeners shook their heads. The Department of Agriculture keeps a drag-net set for highly trained experts. There are always at least three important berths at unimportant salaries waiting for the competent men in the Department. No Bureau ever has any superfluous expert to spare to another Bureau.

One of the Bureau's police department came in next with an arm-load of seizure papers for the chief to sign. This past summer the work of the Bureau was greatly increased by the putting of domestic meat and food products fully under the provisions of the Food and Drug Act. Hitherto, the Department could not proceed against the manufacturers of meat foods under the Pure Food Law or order seizures and prosecutions for misbranding or adulterating domestic meats.

Under the Meat Inspection Law, meat inspectors have absolutely no power to seize meat or meat-food products that have become bad or been adulterated after they have left a federally inspected establishment. The only remedy possible under the Meat Act is to proceed criminally against any one selling bad meat, but even in this event, had meat cannot be seized nor its sale prohibited.

With the meat product fully under the Food and Drug Act, the Department can now seize bad meat or adulterated meat, once it has gotten into interstate

commerce. Under this new decision, the government can control meat foods in interstate commerce from the hoof to the retailer. The Department can now also apply fully to meat products its rules regarding statements as to weight or volume or number of pieces in a package, required of other foods.

A committee has been appointed by the Secretary of Agriculture to provide an effective coöperation between the Bureau of Chemistry and of Animal Industry to control to the fullest extent allowed by the law, meat foods of all kinds.

This was the most radical and far-reaching extension of the Food and Drug Act ever made. Its wholesome effect is obvious, as well as its great addition to the police work of the Bureau of Chemistry.

While the doctor was signing his papers, a man with a determined jaw came up to his desk.

"I'm going to finish the inspection of the catsup factories, Doctor. Have you any further instructions?"

The doctor shook his head, then he looked at the man of the firm jaw quizzically. "What is your private opinion of catsup factories?"

"Some of them are good, first class," answered the man. Then he lowered his voice. "And some of them are garbage cans. Just plain garbage," and with his firm jaw set, the inspector left for his tour. There was something almost eager about the light in his eye, as though he courted battle.

THE day moved on rapidly. Reports on the making of commercial rubber from sage brush, on the killing of fly larvae in manure with common borax, were interspersed with hearings from manufacturing chemists,

protesting, or asking for advice as the case might be. The hearings were interrupted by telephone calls from other Bureau Chiefs and there was a constant waiting list of visitors, and the Bureau solicitors tramped steadily in and out with apinians loading their arms while they sniffed at malodorous cases of salmon or eyed askance mislabeled bottles of brandy.

The Chief left his chair only to greet or speed a guest. At noon his lunch was brought in to him in a paper bag. They actually eat food, these Bureau of Chemistry men, though one wonders at their temerity! All the afternoon the procession continued without a moment's pause. At five o'clock the telephone again called. The young doctor's voice was polite but unenthusiastic as he answered. "Yes, this is Alaberg speaking."

He listened intently, then his face lightened. He looked at his heaped-up desk, at the waiting line in his office, then he half whispered through the telephone "Send a taxi-cab up here and I'll get my tennis racket and be there in half an hour." He hung up the receiver and turned to his secretary. "I'm going out. I'll be back at nine tomorrow morning. I'll go over all those reports tonight,"—and was gone!

He is cool and given to silences except about the work at hand. He has tremendous responsibilities and has been given the head and shoulders fit for carrying them. Yet one's clearest impressions of the new Chief are of his youth and of the possibilities his youth opens for his Bureau, optimism, enthusiasm, work capacity and idealism, and when he is fifty-six instead of thirty-six, he will have this same youth, for it is the priceless adjunct of the creative mind.

The Independence of China

By an American Traveller

IT is difficult to tell whether the recent developments in and concerning

China are in the nature of progress or of retrogression. The effect of change, however, continues to be vivid. A frock-coated President Yuan Shih-kai, entertaining the diplomatic corps in the petaloid of the Empress Dowager's once mysterious Forbidden City, while ten is served by his wife and daughters nearby in the Throne Room of the Manchus, is an epitome, a tableau, of that change. The imperialistic barriers are all down now; the dragon's skin completely sloughed off.

For the present stability of the unwieldy republic the most reassuring event is the recent—October 10,—election by the Assembly of Yuan Shih-kai—hitherto merely Provisional President and, in reality, Dictator—as first Constitutional President. In the two years of republican ferment since the fall of the Empire no other Chinese official has come to the surface who seriously threatens the "Strong Man's" ascendancy. For six years to come, therefore, we may expect a degree of that effectiveness in office which often marks one man power by whatever constitutional limits theoretically surrounded, a Panama situation which, it is to be fervently hoped, will not be tempered by assassination.

On the other hand the foreign relations of China have recently undergone a change which is not at all reassuring for the future unity and inviolability of the Republic. The recent withdrawal of the British Government from the organized group of European Powers which has for more than three years been endeavoring to administrate and, in fact, to dictate the finances and the exploitation of China, leaves the way open to a renewal

of the old scramble of the last generation. Spheres of foreign influence will grow more sharply demarcated, and the Powers who assume their several exploitations, more mutually apprehensive: Shantung for the Germans; no international liberty, *égalité, fraternité* in Yunnan; a Japanese kick to the half-open door in Manchuria, and Mongolia the happy hunting ground of Adams Zed, the Bear who walks like a Man. Once more the Hotel Wagon *Lits* at Peking will be colonized by a vulture flock of concession hunters, even although never again may they expect quite the rich picking of the later Empire, when official "squeeze" was upheld by official ignorance. Nominally, as the Quintuple Group now breaks up, there is a corresponding gain in the independence of China. It remains to be seen whether such independence may not mean a slip toward dismemberment.

AND where does the United States come in? It is an interesting travesty on the so-called Six-Power Group that, even before President Wilson withdrew diplomatic support from the American syndicate which formed part of that very loose, paper association, an unassuming little Belgian by the name of de Vos, under the very noses of the wrangling Six-Power financiers, quietly put through two of the largest railway concessions ever granted in China; loan agreements involving more than a hundred millions of dollars signed and sealed, and survey work already begun. Undoubtedly this government is well out of such an artificial, ineffective, bund and paternalistic monopoly as the Six-Power Group always was. In spite of the mis-

takes of the Knox diplomacy, the American Group played its part at least in good faith. So much can hardly be said for some of the other constituent elements. Due to the well-founded belief that both France and Russia have scuttled the quintuple ship in coöperation with the Belgian loans, and the evident fact that both Japan and Russia severally repudiate anything approaching a joint exploitation of either Manchuria or Mongolia, Great Britain has also now been finally driven back to independent relations with China.

THE sound Far-Eastern policy of the Hay and Root régimes would never have permitted the inclusion of the United States in the original Four-Power, or the eventual Six-Power, Group. It was an entangling alliance from which we had nothing commensurate to gain for the loss of our traditional and unique position toward China. From the start it was, moreover, an alliance so opposed to the self-interest of two, at least, of the constituent powers, whose concern in China is immeasurably more vital than is ours to the people of this country, that it was predestined to disloyalty and doomed to dissolution.

Commercially this country is back where it was ten years ago or further, with its former altruism, although still tenable, a little tarnished by its recent associations and strident methods. But to balance the present pessimistic consular reports from China due, on analysis, partly to revolutionary disorders, our appropriate independent relations with the new republic are, in every other respect, already ground for mutual congratulation.

PEN AND INKLINGS

By OLIVER HERFORD

FIRST AID TO THE AWFUL

THE guest who's twenty minutes late
For dinner, is a Reprobate.
The guest who comes ahead of time
Is capable of any crime.

NEVER massage your plate, unless
You're of the Table d'Haute
Noblesse,
Or Hochgeboren (of noble line),
And own a castle on the Rhine.

TO tell a Falsehood is a Sin,
Except to say you are not "in;"
And when you bid your Host good-night,
A Lie is oftentimes polite.

THE man of caution will refrain
From jumping on a moving train;
This is particularly true
When there's a lady hitched thereto.

The Sport of the Masses

BEYOND dispute, the greatest and most popular of American outdoor sports, the one that gives excitement and relaxation to the greatest number of citizens at the same time, is that of sitting on a wooden bench and straining vocal organs while watching a few highly trained (and still more highly paid) workmen exercise their muscles to their utmost capacity.

THESE sedentary sportsmen are counted by the hundred thousand. There are hundreds of thousands more who, unable to watch the toilers, content themselves with mechanical representations of them—or bulletins announcing the progress of the game.

And when all these are counted there are still millions more who only stand and wait for each edition of the newspapers where the fascination of vicarious energy is conveyed in an unknown tongue (unknown to any but its votaries).

If you don't believe that the great American sport is watching people work, look at the crowd gathered round the excavation for a new skyscraper.

SEE the faces of the watchers thrilled to an ecstasy of Inertia (the

state called Khaf by the Arabs) by the visible sweat of the toilers.

It is the same on the curb, when the roadway laid down last week is being torn up to be laid again next week, and torn up again the week after, at so many hundred thousand per.

It is the same in Heaven where (according to John Calvin) the cool joy of the saved is intensified by the sight, their sole recreation, of the hot torment of their friends the damned.

IT is the secret of the success of rapidly moving melodrama and still more rapidly moving pictures. Next to Baseball as a vicarious muscular exercise comes Football, where the work is harder and more dangerous.

SOME day it will be Golf and that will be the beginning of the end as it has been of every country where Golf has become the national sport. The Hungarian savant, Dr. Albrecht Hulle, during his exile witnessed a game of Golf in Dombries and predicted the downfall of Scotland, and it was Hulle who traced the sinking of the city of Atlantis to the same cause. Golf is not a sport. Golf is something between a vice and an obsession lacking withal the elegance of the one, the imagination of the other, and the amenability to treatment of both.

IN his previous incarnation the Golf-player was probably an inch-worm—and yet even Golf has its perfect possibilities. Go to the Hippodrome and see how the players have been transformed from inch-worms into angels.

And Football—no longer is it a melee of mud-covered madmen struggling for the possession of a solitary ball. Through the generosity of Mr. Shubert each of the tastefully dressed players has a ball of her very own. Thus the vulgar struggle for its possession is eliminated. No longer is there any danger—and the breakages may be computed in sidewinds.

J. Pierpont Morgan

Breaking the Money Trust

By LOUIS D. BRANDEIS

Part I—Our Financial Oligarchy

THE dominant element in our financial oligarchy is the investment banker. Associated banks, trust companies and life insurance companies are his tools. Controlled railroads, public service and industrial corporations are his subjects. Though properly but middlemen, these bankers bestride as masters America's business world, so that practically no large enterprise can be undertaken successfully without their participation or approval. These bankers are, of course, able men possessed of large fortunes; but the most potent factor in their control of business is not the possession of extraordinary ability or huge wealth. The key to their power is Combination—concentration intensive and comprehensive—advancing on three distinct lines:

First: There is the obvious consolidation of banks and trust companies; the less obvious affiliations,—through stockholdings, voting trusts and interlocking directorates,—of banking institutions which are not legally connected; and the joint transactions, gentlemen's agreements, and "banking ethics" which eliminate competition among the investment bankers.

Second: There is the consolidation of railroads into huge systems, the large combinations of public service corporations and the formation of industrial trusts, which, by making businesses so "big" that local, independent banking concerns cannot alone supply the necessary funds, has created dependence upon the associated New York bankers.

But combination, however intensive, along these lines only, could not have produced the Money Trust—another and more potent factor of combination was added.

Third: Investment bankers, like J. P. Morgan & Co., dealers in bonds, stocks and notes, encroached upon the functions of the three other classes of corporations with which their business brought them into contact. They became the directing power in railroads, public service and industrial companies through which our great business operations are conducted—the makers of bonds and stocks. They became the directing power in the life insurance companies, and other corporate reservoirs of the people's savings—the buyers of bonds and stocks. They became the directing power also in banks and trust companies—the depositaries of the quick capital of the country—the life blood of business, with which they and others carried on their operations. Thus four distinct functions, each essential to business, and each exercised, originally, by a distinct set of men, became united in the investment banker. It is to this union of business functions that the existence of the Money Trust is mainly due.

THE development of our financial oligarchy followed, in this respect, lines with which the history of political despotism has familiarized us:—usurpation, proceeding by gradual encroachment rather than by violent acts; subtle and often long-concealed concentration of distinct functions, which are beneficent when separately administered, and dangerous only when combined in the same persons. It was by processes such as these that Caesar Augustus became master of Rome. The makers of our own Constitution had in mind like dangers to our political liberty when they provided so carefully for the separation of governmental powers.

The Proper Sphere of the Investment Banker

THE original function of the investment banker was that of dealer in bonds, stocks and notes; buying mainly at wholesale from corporations, municipalities, states and governments which need money, and selling to those seeking investments. The banker performs, in this respect, the function of a merchant; and the function is a very useful one. Large business enterprises are conducted generally by corporations. The permanent capital of corporations is represented by bonds and stocks. The bonds and stocks of the more important corporations are owned, in large part, by small investors, who do not participate in the management of the company. Corporations require the aid of a banker-middleman, for they lack generally the reputation and clientele essential to selling their own bonds and stocks direct to the investor. Investors in corporate securities, also, require the services of a banker-middleman. The number of securities upon the market is very large. Only a part of these securities is listed on the New York Stock Exchange; but its listings alone comprise about sixteen hundred different issues aggregating about \$26,300,000,000, and each year new listings are made averaging about two hundred and thirty-three to an amount of \$1,300,000,000. For a small investor to make an intelligent selection from three many corporate securities—indeed, to pass an intelligent judgment upon a single one—is ordinarily impossible. He lacks the ability, the facilities, the training and the time essential to a proper investigation. Unless his purchase is to be little better than a gamble, he needs the

advice of an expert, who, combining special knowledge with judgment, has the facilities and incentive to make a thorough investigation. This dependence, both of corporations and investors, upon the banker has grown in recent years, since women and others who do not participate in the management, have become the owners of so large a part of the stocks and bonds of our great corporations. Over half of the stockholders of the American Sugar Refining Company and nearly half of the stockholders of the Pennsylvania Railroad and of the New York, New Haven & Hartford Railroad are women.

GOOD-WILL—the possession by a dealer of numerous and valuable regular customers—is always an important element in merchandising. But in the business of selling bonds and stocks, it is of exceptional value, for the very reason that the small investor relies so largely upon the banker's judgment. This confidential relation of the banker to customers—and the knowledge of the customers' private affairs acquired incidentally, is often a determining factor in the marketing of securities. With the advent of Big Business such good-will possessed by the other banking houses, preeminently J. P. Morgan & Co. and their Philadelphia House called Drexel & Co., by Lee, Higginson & Co. and Kidder, Peabody, & Co. of Boston, and by Kuhn, Loeb & Co. of New York, became of enhanced importance. The volume of new security issues was greatly increased by huge railroad consolidations, the development of the holding companies, and particularly by the formation of industrial trusts. The rapidly accumulating savings of our people sought investment. The field of operations for the dealer in securities was thus much enlarged. And, as the securities were new and untried, the services of the investment banker were in great demand, and his powers and profits increased accordingly.

Controlling the Security Makers

BUT this enlargement of their legitimate field of operations did not satisfy investment bankers. They were not content merely to deal in securities. They desired to manufacture them also; and became promoters, or allied themselves with promoters. Thus it was that J. P. Morgan & Company formed the Steel Trust, the Harvester Trust and the Shipping Trust. And, adding the duties of undertaker to those of midwife, the investment bankers became in times of corporate disaster, members of the security-holders' "Protective Committees"; then they participated as "Reorganization Managers" in the reincarnation of the unsuccessful corporations and ultimately became directors. It was in this way that the Morgan associates acquired their hold upon the Southern Railway, the Northern Pacific, the Reading, the Erie, the Erie Marquette, the Chicago and Great Western, and the Cincinnati, Hamilton & Dayton. O then they insured the continuance of that control by the device of the voting trust; but even where no voting trust was

created, a secure hold was acquired upon reorganization. It was in this way also that Kuhn, Loeb & Co. became potent in the Union Pacific and the Baltimore & Ohio.

But the banker's participation in the management of the corporations was not limited to cases of promotion or reorganization. An urgent or extensive need of new money was considered a sufficient reason for the banker's entering a board of directors. And often without even such excuse the investment banker has secured a place upon the Board of Directors, through his powerful influence or the control of his customers' proxies. Such seems to have been the fatal entrance of Mr. Morgan into the management of the then prosperous New York, New Haven & Hartford Railroad, in 1898. And when once a banker has entered the Board,—whatever may have been the occasion,—his grip proves tenacious and

aggregate capitalization of \$17,873,000,000. Mainly for corporations so controlled, J. P. Morgan & Co. procured the public marketing in ten years of security issues aggregating \$1,850,000,000. This huge sum does not include any issues marketed privately, nor any issues, however marketed, of intra-state corporations. Kuhn, Loeb & Co. and a few other investment bankers exercise similar control over many other corporations.

Controlling Security Buyers

SUCH control of railroads, public service and industrial corporations assures to the investment bankers an ample supply of securities at attractive prices; and merchandise well bought is half sold. But these bond and stock merchants are not disposed to take even a slight risk as to their ability to market their goods. They saw that if they could control the security-buyers, as well as the security-makers, investment banking would, indeed, be "a happy hunting ground"; and they have made it so.

The numerous small investors cannot, in the strict sense, be controlled; but their dependence upon the banker insures their being duly influenced. A large part, however, of all bonds issued and of many stocks are bought by the prominent corporate investors; and most prominent among these are the life insurance companies, the trust companies, and the banks. The purchase of a security by these institutions not only relieves the banker of the merchandise, but recommends it strongly to the small investor, who believes that these institutions are wisely managed. These controlled corporate investors are not only large customers, but may be particularly accommodating ones. Individual investors are moody. They buy only when they want to do so. They are sometimes inconveniently reluctant. Corporate investors, if controlled, may be made to buy when the bankers need a market. It was natural that the investment bankers proceeded to get control of the great life insurance companies, as well as of the trust companies and the banks.

The field thus occupied is uncommonly rich. The life insurance companies are our leading institutions for savings. Their huge surplus and reserves, augmented daily, are always clamoring for investment. No panic or money shortage stops the inflow of new money from the perennial stream of premiums on existing policies and interest on existing investments. The three great companies—the New York Life, the Mutual of New York, and the Equitable—would have over \$55,000,000 of new money to invest annually, even if they did not issue a single new policy. In 1904,—just before the Armstrong investigation,—these three companies had together \$1,247,331,738.18 of assets. They had issued in that year \$1,025,671,120 of new policies. The New York legislature placed in 1906 certain restrictions upon their growth; so that their new business since has averaged \$547,284,212, or only fifty-three per cent. of what it was in 1904. But the aggregate assets of these

Henry Higginson

his influence usually supreme, for he controls the supply of new money.

THE investment banker is naturally on the lookout for good bargains in bonds and stocks. Like other merchants, he wants to buy his merchandise cheap. But when he becomes director of a corporation he occupies a position which prevents the transaction by which he acquires its corporate securities from being properly called a bargain. Can there be real bargaining where the same man is on both sides of a trade? The investment banker, through his controlling influence on the Board of Directors, decides that the corporation shall issue and sell the securities, decides the price at which it shall sell them, and decides that it shall sell the securities to himself. The fact that there are other directors besides the banker on the Board does not, in practice, prevent this being the result. The banker, who holds the purse-strings, becomes usually the dominant spirit. Through voting-trusts, exclusive financial agencies, membership on executive or finance committees, or by mere directorships, J. P. Morgan & Co., and their associates, hold such financial power in at least thirty-two transportation systems, public utility corporations and industrial companies—companies with an

George F. Baker

companies increased in the last eight years to \$1,817,032,260.36. At the time of the Armstrong investigation the average age of these three companies was fifty-six years. The growth of assets in the last eight years was about half as large as the total growth in the preceding fifty-six years. These three companies must invest annually about \$70,000,000 of new money; and besides, many old investments expire or are changed and the proceeds must be reinvested. A large part of all life insurance surplus and reserves are invested in bonds. The aggregate bond investments of these three companies on January 1, 1913, was \$1,019,133,968.93.

IT was natural that the investment bankers should seek to control these never-failing reservoirs of capital. George W. Perkins was Vice-President of the New York Life, the largest of the companies. While remaining such he was made a partner in J. P. Morgan & Co., and in the four years preceding the Armstrong investigation, his firm sold the New York Life \$38,894,918.51 in securities. The New York is a mutual company, supposed to be controlled by its policy-holders. But "the so-called control of life insurance companies by policy-holders through mutualization is a farce" and "its only result is to keep in office self-constituted, self-perpetuating management."

The Equitable Life Assurance Society is a stock company and is controlled by \$100,000 of stock. The dividend on this stock is limited by law to seven per cent.; but in 1910 Mr. Morgan paid about \$3,000,000 for \$51,000, par value of this stock, or \$5,882.35 a share. The dividend return on the stock investment is less than one-eighth of one per cent.; but the assets controlled amount now to over \$500,000,000. And certain of these assets had an especial value for investment bankers;—namely, the large holdings of stock in banks and trust companies.

THE Armstrong investigation disclosed the extent of financial power exerted through the insurance company holdings of bank and trust company stock. The Committee recommended legislation compelling the insurance companies to dispose of the stock within five

years. A law to that effect was enacted, but the time was later extended. The companies then disposed of a part of their bank and trust company stocks; but, being controlled by the investment bankers, these gentlemen sold the bank and trust company stocks to themselves.

The banks and trust companies are depositaries, in the main, not of the people's savings, but of the business man's quick capital. Yet, since the investment banker acquired control of banks and trust companies, these institutions also have become, like the life companies, large purchasers of bonds and stocks. Many of our national banks have invested in this manner a large part of all their resources, including capital, surplus and

Jacob H. Schiff

deposits. The bond investments of some banks exceed by far the aggregate of their capital and surplus, and nearly equal their loanable deposits.

Controlling Other People's Quick Capital

THE goose that lays golden eggs has been considered a most valuable possession. But even more profitable is the privilege of taking the golden eggs laid by somebody else's goose. The investment bankers and their associates now enjoy that privilege. They control the people through the people's own money. If the bankers' power were commensurate only with their wealth, they would have relatively little influence on American business. Vast fortunes like those

of the Astors are no doubt regrettable. They are inconsistent with democracy. They are unsocial. And they seem peculiarly unjust when they represent largely unearned increment. But the wealth of the Astors does not endanger political or industrial liberty. It is insignificant in amount as compared with the aggregate wealth of America, or even of New York City. It lacks significance largely because its owners have only the income from their own wealth. The Astor wealth is static. The wealth of the Morgan associates is dynamic. The power and the growth of power of our financial oligarchs comes from wielding the savings and quick capital of others. In two of the three great life insurance companies the influence of J. P. Morgan & Co. and their associates is carried without any individual investment by them whatsoever. Even in the Equitable, where Mr. Morgan bought an actual majority of all the outstanding stock, his investment amounts to little more than one-half of one per cent. of the assets of the company. The fetters which bind the people are forged from the people's own gold.

BUT the reservoir of other people's money, from which the investment bankers now draw their greatest power, is not the life insurance companies, but the banks and the trust companies. Bank deposits represent the really quick capital of the nation. They are the life blood of businesses. Their effective force is much greater than that of an equal amount of wealth permanently invested. The 34 banks and trust companies, which the Pujo Committee declared to be directly controlled by the Morgan associates, held \$1,983,000,000 in deposits. Control of these institutions means the ability to lend a large part of these funds, directly and indirectly, to themselves; and what is often even more important, the power to prevent the funds being lent to any rival interests. These huge deposits can, in the discretion of those in control, be used to meet the temporary needs of their subject corporations. When bonds and stocks are issued to finance permanently these corporations, the bank deposits can in large part be loaned by the investment

Frank A. Vanderlip

bankers in control to themselves and their associates; so that the securities may be carried by them until sold to investors. Or these bank deposits may be loaned to allied bankers, or jobbers in securities, or to speculators, to enable them to carry the bonds or stocks. Easy money tends to make securities rise in the market. Tight money nearly always makes them fall. The control by the leading investment bankers over the banks and trust companies is so great, that they can often determine for a time the market for money by lending or refusing to lend on the Stock Exchange. In this way, among others, they have power to affect the general trend of prices in bonds and stocks. Their power over a particular security is even greater. Its sale on the market may depend upon whether the security is favored or discriminated against when offered to the banks and trust companies, as collateral for loans.

Furthermore, it is the investment banker's access to other people's money in controlled banks and trust companies which alone enables any individual banking concern to take so large part of the annual output of bonds and stocks. The banker's own capital, however large, would soon be exhausted. And even the loanable funds of the banks would often be exhausted, but for the large deposits made in those banks by the life insurance, railroad, public service, and industrial corporations which the bankers also control. On December 31, 1912, the three leading life insurance companies had deposits in banks and trust companies aggregating \$13,839,189.08. As the Fulp Committee finds:

"The men who through their control over the funds of our railroads and industrial companies are able to direct where such funds shall be kept and thus to create these great reservoirs of the people's money, are the ones who are in position to tap those reservoirs for the ventures in which they are interested and to prevent their being tapped for purposes of which they do not approve. The latter is quite as important a factor as the former. It is the controlling consideration in its effect on competition in the railroad and industrial world."

Having Your Cake and Eating It Too

BUT the power of the investment banker over other people's money is often more direct and effective than that exerted through controlled banks and trust companies. J. P. Morgan & Co. achieve the supposedly impossible feat of having their cake and eating it too. They buy the bonds and stocks of controlled railroads and industrial concerns, and pay the purchase price; and still do not part with their money. This is accomplished by the simple device of becoming the bank of deposit of the controlled corporations, instead of having the company deposit in some merely controlled bank in whose operation others have at least some share. When J. P. Morgan & Co. buy an issue of securities the purchase money, instead of being paid over to the corporation, is retained by the banker for the corporation, to be drawn upon only as the funds are

needed by the corporation. And as the securities are issued in large blocks, and the money raised is often not all spent until long thereafter, the aggregate of the balances remaining in the banker's hands are huge. Thus J. P. Morgan & Co. (including their Philadelphia house, called Drexel & Co.) held on November 1, 1912, deposits aggregating \$164,401,819.63.

Power and Pelf

THE operations of so comprehensive a system of concentration necessarily developed in the bankers overweening power. And the bankers' power grows by what it feeds on. Power begets wealth; and added wealth opens ever new opportunities for the acquisition of wealth and power. The operations of these bankers are so vast and numerous that even a very reasonable compensation for the service performed by the bankers, would, in the aggregate, produce for them incomes so large as to result in huge accumulations of capital. But the compensation taken by the bankers as commissions or profits is far from reasonable. Occupying, as they so frequently do, the inconsistent position of being at the same time seller and buyer,—the standard for so-called compensation actually applied, is not the "Rule of reason" but "All the traffic will bear." And this is true even where there is no sinister motive. The weakness of human nature prevents men from being good judges of their own deservings.

The syndicate formed by J. P. Morgan & Co. to underwrite the United States Steel Corporation took for their services securities which netted \$64,500,000 in cash. Of this huge sum J. P. Morgan & Co. received, as syndicate managers, \$14,500,000 in addition to the share which they were entitled to receive as syndicate members. This sum of \$64,500,000 was only a part of the fees paid for the service of monopolizing the steel industry. In addition to the commissions taken specifically for organizing the United States Steel Corporation, large sums were paid for organizing the several companies of which it is composed. For instance, the National Tube Company was capitalized at \$80,000,000 of stock; \$40,000,000 of which was common stock. Half of this \$40,000,000 was taken by J. P. Morgan & Co. and associates for promotion services; and the \$40,000,000 stock so taken became later exchangeable into \$45,000,000 of Steel Common. Commissioner of Corporations Herbert Knox Smith, found that: "More than \$150,000,000 of the stock of the Steel Corporation was issued directly or indirectly (through exchange) for mere promotion or underwriting services. In other words, nearly one-seventh of the total capital stock of the Steel Corporation appears to have been issued directly or indirectly to promoters' services."

THE so-called fees and commissions taken by the bankers and associates upon the organization of the trusts have been exceptionally large. But even after the trusts are successfully launched the exactions of the bankers are often ex-

orbitant. The syndicate which underwrote, in 1901, the Steel Corporation's preferred stock conversion plan, advanced only \$20,000,000 in cash and received an underwriting commission of \$6,800,000.

The extraction of huge commissions is not confined to trust and other industrial concerns. The Interborough Railway is a most prosperous corporation. It earned last year nearly 21 per cent. on its capital stock, and secured from New York City, in connection with the subway extension, a very favorable contract. But when it financed its \$170,000,000 bond issue it was agreed that J. P. Morgan & Co. should receive three per cent.; that is, \$5,100,000, for forming this syndicate. More recently, the New York, New Haven & Hartford Railroad agreed to pay J. P. Morgan & Co. a commission of \$1,680,000; that is, 2½ per cent., to form a syndicate to underwrite an issue at par of \$67,000,000 30-year 6 per cent. convertible debentures. That means: The bankers bound themselves to take at 97½ any of these six per cent. convertible bonds which stockholders might be unwilling to buy at 100. When the contract was made the New Haven's then outstanding six per cent. convertible bonds were selling at 114. And the new issue, as soon as announced, was in such demand that the public offered and has ever since been willing to buy at 106;—bonds which the Company were to pay J. P. Morgan & Co. \$1,680,000 to be willing to take at par.

Why the Banks Became Investment Bankers

THESE large profits from promotions, underwritings and security purchases led to a revolutionary change in the conduct of our leading banking institutions. It was obvious that control by the investment bankers of the deposits in banks and trust companies was an essential element in their securing these huge profits. And the bank officers naturally asked, "Why then should not the banks and trust companies share in so profitable a field? Why should not they themselves become investment bankers too, with all the new functions incident to 'Big Business'?" To do so would involve a departure from the legitimate sphere of the banking business,—which is the making of temporary loans to other business concerns. But the temptation was irresistible. The invasion of the investment banker into the banks' field of operation was followed by a counter invasion by the banks into the realm of the investment banker. And most prominent among the banks were the National City and the First National of New York. But theirs was not a hostile invasion. The contending forces met as allies, joined forces to control the business of the country, and to "divide the spoils." The alliance was cemented by voting trusts, by interlocking directorates and by joint ownership. There resulted the fullest "co-operation"; and more railroads, public service corporations, and great industrial concerns were brought into complete subjection.

The second article of this series, "How the Combiners Combine," will appear next week

"Once caught up in the powerful surging maelstrom of convulsions, my uncle lost control of his temper and of his hat-box"

My Uncle and the Green Parrot

By DONALD BARTHOLOMEW

AS my uncle appeared upon the threshold of his private office, the heads of his many accountants suddenly ducked lower over their ledgers, presenting much the appearance of a field of wheat swept down by a gust of wind.

"Mr. Block," he said in his crisp, staccato manner, "please see that this letter is delivered at the bank by three-fifteen."

The head bookkeeper studied his watch for a moment. "It is three now, sir," he said. "I am afraid that you are asking an impossibility."

"Precisely," returned my uncle tartly,—"else I should have given the commission to an office boy."

The head bookkeeper stiffened. "There appears," he said, "to have been some misunderstanding, sir. I am an expert accountant. If you want miracles performed, I suggest you employ an apostle."

"I accept your suggestion," replied my uncle briskly. "There will be one to fill your place at eight-thirty tomorrow morning. The cashier will give you your salary to date at once." And, placing the packet in his breast pocket, he turned on his heel, took down his hat, and strode out of the office. My uncle was always quick enough to act, but often not quick enough not to act.

To return to his office would be to acknowledge himself beaten,—to cap an anti-climax on his artistically perfect exit.

The kettle of fish was spoiled, and he must preserve the unities by letting it appear that the spilling was deliberate. Therefore must be cast about for some means of entertaining himself for the remainder of the afternoon.

IT was a hot, listless day, and about him, the city lay in a sort of stupor, dragged with humidity. The only evidences of activity were the mercury which moved up,—starched collars which moved down, and family entrances which moved sideways. Now at mid-afternoon the urban muse of Divertissement invariably takes a nap. There is nothing doing. The matinee is well over and the baseball extra still lurks in the linotype room. Three P. M. is too late to start anything but the two o'clock trains on the Erie.

My uncle fared on till he found himself in the water-front district of the North River—that huge maw of the Gotham giant.

Pickwickian like, he paused, wiped the

mist from his spectacles and gazed bewildered at the panorama of confused activity stretched before him. Then as his eye fell upon a warped weather-scarred structure on the next corner, there spread over his perspiring face an expression you might attribute to our explorer who has unexpectedly run across a friend in the vicinity of the South Pole. The very building on which my uncle's binocular-like spectacles were focused lay like a tattered Rip Van Winkle in the shadow of its modern neighbors.

MY uncle gave his great spectacles an extra polish and trained them on the dingy sign that swung in the wind above the dingy door. He was not mistaken. Here was the oldest hostelry in the city,—"The Mad Bull" famed through a century and a half, for its vial pies and a certain brew of golden ale.

In a trice my uncle's mind was made. And if a portly gentleman can be said to whisk at all, my uncle whisked into the doorway of the "Mad Bull" for all the world like a rabbit into his burrow.

Ordinarily, my good uncle would as soon have slept with the devil himself as have graced the bar of a public house. But you must remember that we are living in the Era of the Elastic Code. It is not the act, but the "atmosphere" that counts. Psyche may go nude on Parnassus, but never on Broadway!

It was, then, the mellow historical setting of the "Mad Bull" that dignified the situation of my strait-laced uncle, calling for a vial pie and a mug of "half with a dash" at a water-front ale house. He lifted the pot of brew and, with a sharp puff, blew therefrom a deep collar of froth. The act served as an immediate and intimate introduction to one who stood next him at the bar, for the glob of foam landed squarely on the newly polished boot of that personage.

Tell Colonel Culpepper, if you like, that he doesn't know a julep from a jack-daw. lay down five aces in a Deadgull poker game, set a torch to Rome or tweak a monarch's beard, but never, as did my uncle on that afternoon, spill October ale over the toilet of a seaman dressed for a holiday ashore.

My uncle was on the point of framing an apology, but the fuse had been lighted; this bomb in the person of a sea-faring Beau Brummel exploded ere he could speak.

"Ere now," he bellowed, banging his pot down on the mahogany bar,— "Wot abaht it! Wot abaht it! Yer poor ham, yer! wot abaht it!"

"What about it," repeated my astonished uncle,— "what about what?"

"Wot abaht wot, eh? That's good, that is! Wot abaht the other boot. Can yer 'it that? Wot do yer want ter slop yer beer on me fer, yer hig aggrawatin' stevedore!"

"I apologize, sir," said my uncle hastily. "It was clumsy. I apologize. I assure you."

"I take my beer inside, not outside," stated the seaman, stolidly.

"Very proper," returned my uncle, relieved. "Will you finish your mug and be my guest? I don't often get down this way."

THE war cloud dispelled, my uncle would now have departed, but, like a certain wedding guest, he was held by the moist eye of the thirsty mariner.

"Wot I say, guv'nor, is that this 'ere's a peculiar world,—you an' 'me bein' thrown together so fortunate, an' gettin' on so smooth. An' wot I say farther, is, I don't often take to a new rummy. Yer can't be too careful, I says. 'Ere's George Ducky, now,"—and the seaman jerked his thumb toward the bartender.

"Take Ducky, fr a terrible example, says I. Wot abaht 'im? says you. Why, says I,—married a woman fr life, forty-eight minutes arter 'er 'e seen 'er. Did 'e regret wot 'e done? Did 'e regret wot 'e done! 'E did! The bloom'n' wizen laid awake nights thinkin' o' ways ter aggrawate 'im, an' arter a while she got mad as a cat's paw with tobaccoer juice in 'is eye every time George come 'ome lit, eh, George? Well, wot then? says you. Why, she took wolest, one day, an' they sent 'er up to the Island an' put 'er in a strait jacket. An' every time old George thinks of 'er, eh, George?—'e nearly laffs 'iself ter death. Wot 'I appen to 'er when she pops off, says you. Will George claim the precious fragments? Not 'e!"

The mariner paused to refresh himself with another draught, and my uncle murmured "Good gracious!"

"'Ere I get back from the Indies an' lose a friend an' make a friend," continued the seaman, drawing his sleeve across his mouth.

"Lost a friend!" exclaimed my uncle.

"Croaked," said the other.

"Croaked?"

"Dead," explained the seaman. "An' 'ere I've brought 'im a couple o' bloomin' parrots from the Indies, but they ain't no use to 'im now with 'im dead. Wot's more, parrots ain't in my line. Yer don't want a good reliable parrot, do yer, giv' nor—cause if yer do, why welcome to 'im, says I. That there's my way,—free an' easy with a rummy I takes to."

"Well," said my uncle, "that depends. I have been looking for a good parrot for some time. If I could get one reasonably,—"

"Reasonable my eye!" broke in the sea-going man. "Didn't I say as how you was welcome to the bird! an' a good un, too! Wot I say, is, the 'ow are we goin' ter get 'im. There's the row! We got? says you. Why, says I, the husband's over in Hoboken—at my sister-in-law's. Wot then? says you. Wait till I tell yer. The old she-pirate give me a dollar this mornin' an' says ter fetch 'er some catnip. Well, 'ere I am an' 'ave I got the catnip? Nal An' wot's more, I ain't got the bloomin' dollar neither. 'Ow am I goin' back, I ask yer."

THE seaman fortified himself with another draught. "Mebbe now," he continued, "if you was to run over an' get 'im yourself,—"

In my uncle, who had something of a Pickwickian yearning for adventure, the nature of the excursion strongly appealed. He looked at his watch.

"That's not a bad idea," he exclaimed warmly. "If I can get back in two hours!"

"Arf the time! Yer can run over,—see the old dear, get the bird an' back in an hour. But 'ere now,—wot are yer goin' ter carry 'im in? I ain't got no poll-parrot cage. 'Ow abah! a 'at box, then? They'll think yer was carryin' one a 'at except for the 'oles. Yer got ter 'ave 'oles ter ventilate the bloomin' bird. Parrots revels in ventilation; and a 'at box is more of a gent's luggage than a blasted bird-cage, ain't it?"

"A hat-box ought to do very nicely," rejoined my uncle. So, settling his score with the "Mad Bull," he set forth with the sea-going man in quest of a hat-store. As they walked, the mariner reflected aloud,—a habit formed (my uncle conjectured) in the lonely night watches on board ship.

"I'll write a line to the old Tartar on the inside o' the cover," he ruminated, "tellin' 'er to hand over one o' the birds. Wot bird 'll you pick, says you. Why, says I, the blue one, o' course. Wot's the row about the gray one, says you. Gray parrots is rum birds, says I. 'Ow that, says you. Why, says I, yer wake up one mornin' an' the idiots has pecked 'emself as bare as a boiled owl. Where does the feathers go, then, says you. That's it! You don't know, I don't know. Nobody knows!"

"Extraordinary," murmured my uncle. "An' 'ere's another thing," continued the seaman. "Wot abah! feedin' 'im. Wot are yer goin' ter give 'im ter eat? I dunno, says you. I thought so, says I; Give 'im anything but oranges. 'Cause why? says you. 'Cause the seeds sticks in 'is throat an' 'e croaks!"

The last observation brought them to a hat-store. Before my uncle could speak, the seaman had opened negotiations in his own fashion. "See 'ere," he barked at the clerk, "wot we want is a 'at-box, empty. 'Ow abah! it, now?"

"Down Fidin'!" from the clerk. "Some

one's been feedin' you raw meat. What kind of a hat-box?" he asked, turning to my uncle.

"I'd like to get one about the size that would hold a tall hat," said my uncle.

"Haven't got one," answered the clerk, "would this do?" and he fetched one of the elongated variety designed to hold a dozen hats or more.

IT was getting late and my uncle was becoming impatient to be off. He took the box, and, turning to his companion, pressed a two-dollar bill in that person's hand, bidding him good-bye and expressing his warm appreciation for the chance that had brought them together.

"Guv'nor," responded the woman, gazing at the bill and giving emphasis to his remarks by jerking my uncle's hand like a pump handle. "Guv'nor, wot I say, is, I've took to yer, 'eaven bless yer. Once a rummy's friend,—allus a friend. . . . Don't forget abah! pickin' the blue one; gray ones is bad eggs!" And, squaring away, the seaman walked out of the door and disappeared.

A moment later my uncle emerged briskly with his box tucked horizontally under his arm.

Once caught up in the powerful surging madraon of computers, my uncle lost control of his temper and of his hat-box. He soon felt like a man going over Niagara hanging onto the tail of a shark. The thing rammed people in the back and butted them in the stomach,—got between his legs and knocked off his hat. He would have swapped it then and there for a full-grown ostrich,—or would have dropped it overboard; but the picture of a furious citizen heaving a four-foot hat-box off a crowded ferryboat had its drawbacks.

NO mythological fleece-hunting Jason, encountering every variety of embarrassment in the revised catalog of Yorments, had anything on my uncle when he found himself, at last, at the dilapidated street which marked his journey's end. Through the twilight, up the steps of the nearest tenement, he scuttled, but before he could put a civil question, a hook-nosed housewife sprang out like a jack-in-the-box, brandishing an iron spoon.

"Here, you!" she cried, "I told you once before I didn't want no writin' paper nor no toilet soap an' I don't wanta subscribe ter any magazines an' I don't want no enlarged crayon portraits o' the old man fer his birthday! an' if yer come bumm-in' around here again yer'll get a pail o' slops on yer head. D'yer get me?"

"I beg your pardon," conciliated my astonished uncle. "I haven't got anything to sell. I'm looking for a Mrs. Voke at number twenty-six. Can you tell me where she lives?"

"This here's number eighty an' my name's none of your business," snapped the woman, and slammed the door on my uncle and his hat-box.

"Picks 'isself as bare as a boiled owl, eh?" muttered my exasperated uncle as he trudged along in the twilight. "Damn me. I'll pick him as bare as a boiled owl if I have to walk all night to find him!"

Once more, puffing now like a sea lion, he climbed the steps of a house he judged to be number twenty-six, and gave the bell a vicious yank.

"Does a Mrs. Voke,"—began my uncle,—

"I just told yer," interrupted the woman,—

"Pardon me, madam," said my uncle vehemently, "you couldn't have just told me anything because this is the first."

"Sampin's eatin' you," broke in the other. "I told you five minutes ago there ain't nobody on this street named Voke, nor anything like it,—an' neer was; an' if there was any number twenty-six, which there ain't also, it would be across the street!" and my uncle looking where the woman pointed, beheld a vacant lot.

What he beheld immediately thereafter caused his jaw to drop in stupefied astonishment.

Trudging by, as if weary with long walking, was one carrying under his arm a hat-box punched full of holes, identical to his own.

"Hey!" called my uncle, "hold on a minute!" and as he came up, a curious understanding look passed between them.

"Pardon me," said the stranger quietly, "but it looks a little like rain, doesn't it? Could you tell me the quickest way to the New York ferry?"

"I'm going that way myself," answered my uncle. "I'll go with you." For a few moments they walked in silence, then the stranger spoke. "I was wondering," he said, half to himself, "what does become of their feathers. They eat 'em, I suppose."

"So I understand," replied my uncle.

"I hook-nosed housewife sprang out like a jack-in-the-box, brandishing an iron spoon."

THE REHEARSAL

By E. V. Rieu

Illustrated by E. V. Rieu

OF THE BALLET

T SHINN

Our Foreign Legion

By AMOS STOTE

THERE is frequently the feeling, when business houses go after world trade, that foreign salesmen do not exhibit the same loyalty in handling imported goods as they do when representing a home industry. If there is any country that finds itself the exception to this rule it is our own; and if there is any country where we are held as favorites by salesmen, that country is Germany. American houses with experiences that fail to verify this statement have been either unfortunate in their connections, or negligent in the drawing up of agreements that were understood in detail by the representative.

The lure of the dollar is something to be reckoned with when securing salesmen in Germany. Many of these men prefer to work for an American company, both for the added importance such a connection actually gives them among their fellows, and because of the greater opportunities for advancement. The idea of being able to learn American ways, the hope of being sent to the United States—these conditions tend to attract good salesmen to our houses engaged in business in Germany.

As to opportunities for the securing of capable men in the Kaiser's kingdom, they are excellent. While the men of each profession form a social class, yet the class distinction in business life, which in many countries makes it almost impossible for a man to grow out of the work to which his earliest endeavors assigned him, is by no means hampering in its definition. This liberal characteristic, that permits a man to thrust aside precedent and climb to the utmost of his ability, has, however, a peculiar Teutonic turn. The ambitious man of that country is looking for more than wealth. Most of them will forego a goodly share of financial gain for any title or degree or office suggestive of power. The average German has a genuine fondness for being "bossed" and so, naturally, holds in great respect any one who may attach some expression of authority to his name.

Lieutenants of the Reserve

BUSINESS does not hesitate to take advantage of this situation. One of our corporations, with two factories in Germany and as fine a sales organization as there is on the Continent, makes a specialty of Lieutenants of the Reserve—petty officers of a military body that holds a silent partnership in the standing army. The Berlin sales department of this corporation is never without two or three of these men; and as rapidly as they are able to secure recruits the older ones are sent to take charge of branch offices in other cities of the Empire.

The exceedingly prominent bump of admiration and deference the people of this country exhibit in the presence of the army accounts for the commercial value of the title. The fact that the bearer may have no authority whatever in the business he represents in no way depreciates his standing with the public he solicits. The American house referred to manufactures commodities that necessitate frequent dealings with municipal authorities on questions relating to permits and inspections. There are two resident directors: an American and a German-American. The former never attempts

to deal personally with any branch of the government or with builders. The latter, though a German of good family and prominent in commercial circles, could hardly get a building-inspector to answer the telephone, except that worthy had been informed that "Director" Schmidt wished to speak with him—and Schmidt might be director of anything from the state railways to a second-hand store.

When prompt action is required, a salesman, getting ten dollars a week, perhaps, is sent to the building department. All he must do is show a card with "Lieutenant of the Reserve" engraved in one corner, and then state his desires.

While army rank will secure an audience almost anywhere, it will not sell goods unless backed by the right training. To make sure of their ability and fitness the company puts all of its prospective salesmen through a complete course in this branch of the business. Whatever the German may lack in speed in acquiring training he makes up, with interest, in thoroughness. He is rather generally a hustler when out for business; but it is unfair to compare him with the man who does that work in our country. Neither conditions nor the men lend themselves to the important undertakings so usual with our salesmen.

ATTEMPTS have been made, with the highest grade men obtainable in Germany, to allot extensive territories and cover them from two to four times a year. But it has never proven effective in holding the market. Business customs in vogue, as well as the personality of both buyer and seller, are not favorable to this plan. The rule of the German merchant to buy in small quantities makes it impossible for the average house and commodity to adopt this method. Another reason for its lack of success is that the majority of salesmen require more personal supervision than they do with us; not because there is any disposition to neglect duties or shirk responsibilities, but rather that the methods of organization and control of the sales force do not favor such operations. Even where our sales systems have been introduced human limitations have prevented large individual results. The German employer takes a paternal attitude toward his employees. He tells his salesmen what to do, and they do it, or receive a scolding. It is merely another example of being "bossed."

This situation must not be taken as suggesting that the cost of selling is higher in Germany than with us. Tests have proven the reverse to be true. One of our concerns with a factory in Germany, that has been producing drug preparations over there for more than twenty years, finds that while the average order is less than half what it is at home, the cost of selling is also less than it is in the States. And this in spite of the fact that almost twice as many salesmen are required to cover an equal amount of territory. The men work entirely on commission and there are plenty of good ones to be had.

Beards of Commerce

FROM Berlin to Paris, commercially, is rather a far cry, yet not half so distant as the Frenchman wist. The last way to sell goods in France is through a

German agent. One of our manufacturers had, because of the novelty of his wares, built up a most profitable business in France. Later the market got hopelessly away from him as a result of a series of mistakes in trying to do business on the same plan as at home. His French finish came when a German was put in to manage the office and sales forces. In a little more than a year after this inauguration the business was closed out. At one time it had profitably employed between fifty and seventy-five people.

SOMETIMES Opportunity responds to an encore. Recently this company has been successful in building up a French trade in one of its new products. The work is being done entirely by Frenchmen. Only the most general supervision is undertaken by the American who represents the company both in England and on the Continent and whose offices are in London.

Not long ago one of the officials of a new but flourishing American manufacturing concern went over to Paris to start something. The business had been put together by several energetic young men, and they decided it was time to open up a European agency. They cast lots to see who should devote a year to this task. The lucky member set out at once for Paris. By the time he had learned it was not necessary to tip the concierge every morning, and could find the way to the office he had rented without taking a taxi or carrying the address in his hat-band, he decided to advertise for salesmen. He wrote an American style advertisement and put it in the Paris editions of the *London Daily Mail* and the *New York Herald*. At the time he really did not know what he expected in the way of results. The nearest to a tangible idea was something very hazy, possibly original, possibly borrowed, that a number of Americans and Englishmen were looking for jobs that would give them a chance to use their kitchen French.

A few of this type did appear, but a business acquaintance who knew conditions happily warned the newcomer in time and agreed to occupy the chair at the hour of the advertised meeting. The first time the door-bell rang—for French offices have door-bells—a small man appeared on the scene. Though seemingly very agile it required but a glance to make the American positive the caller had already torn the fiftieth page off life's calendar. He had a beard any of us would immediately recognize as long and silky. His salute was elaborate and included considerable elevation of his head gear.

The second visitor was not unlike the first, except that Nature had used a wider gauged planter in sowing his beard, so that the hairs stood out in rugged isolation.

As the friend who had offered to help pick the winners concluded it was time to commence he made a suggestion to that effect; but the future employer looked distinctly worried.

"Say," he began, in an undertone, "what was wrong with that ad? Did I say anything that means something else to these Frenchmen, or has this government shut off some old-age pension? I don't want to be adopted; I want salesmen."

"The whiskers are one reason why I

came," the friend replied. "I knew you would hardly come up for air after the first sight. At my premier experience, when one of these came in as a salesman, I thought it was some form of French joke, and a false decoration. But let me tell you that if I were hiring salesmen today, other qualifications being equal, the man with the beard would always get the decision."

Romance and Plumbers

NO matter if an American has as many lives as a cat, if he be a real, honest American with one of those healthy-though-local, mental horizons, the French scheme of piecing out stature with whiskers never approaches him without a shock. Yet there is no getting around the practical value they set on beards in business; and let the man who belittles the French for their peculiarities remember that he may in turn appear somewhat strange to his neighbor. The beard does for the Frenchman, in the matter of putting up a substantial appearance, just what five-feet-eleven, with a good chin and nose and a pleasant smile accomplishes for our men of the road.

As to being bossed, the little Frenchman is as unlike the big German as salad is unlike steak. They are energetic and good talkers; loyal to the house they represent, ambitious to advance, exceedingly saving both in personal matters and for their employers. But they will not be driven. To attempt the strict routine of operations and reports, found so essential with us, is sure to create friction, dampen ardor, and reduce the powers of initiative that under favorable conditions are so valuable an asset to the employer. In the matter of wages, the Frenchman is paid about one-third the American scale. They are like the German in that more salesmen and smaller territories bring best results.

These facts are the condensed findings of several American houses, widely different in the wares they handle, that are doing profitable business in France. One of these corporations, that is also strongly entrenched in Germany, has proven that the Frenchman is much better able to use his personality in holding trade than the German. Their goods are handled by plumbers, and one salesman who attends this fraternity in several good-sized French towns has practically eliminated competition for the last five years by means of a most unusual expression of personality.

IT seems this fellow, in a cleverly half-concealed manner, gave out the impression that he was a man of some fortune; more than the average Frenchman considers necessary for retirement. By careful direction of the conversation the shop-keeper was always given the opportunity to ask why a man of such means preferred daily employment to the luxury of leisure. Beginning in an offhand manner, the salesman would then speak of the greatness of the company with which he had accepted employment, his lofty position in being sole representative in a territory that bristled with important customers as his present host, and of the generous attitude of the company toward all employees. Then he would deftly press

down the loud pedal; tell of the enormous wealth of the house and how it continued to manufacture only because of the service it was able to render humanity in offering so perfect and beneficial a commodity at about the cost of production. He expatiated on the wonderful advantages of the device, made talking points of commonplace particulars, and mentioned in conclusion the enviable position the handling of such wares gave local merchants.

Each new store at which this romantic young man presents himself inevitably hears the story. Each visit to old customers is embellished with an account of some recent happening that brings out fresh evidence of his own commanding position, some noble undertaking of his employers, some hitherto unseen perfection of the commodity, or possibly a new use to which it is adaptable.

So much personality might be thought perilous to the house, were it not built on the wares they manufacture. Even then such a plan could hardly be carried out, or permitted, in any country save France, the home of delight in all things romantic.

The Very Stolid Briton

TO turn from the commercial romance of France to that of England is almost like being sentenced to hard labor; yet there is something substantial and satisfying in the proverbial stick-to-it-iveness with which the Britisher sells goods, and does everything else. His idea of romance in trade is to get an order in three months that usually requires a year to land. The glory of the English salesman is that nothing daunts him. Once he has decided a certain house has need of the article he sells, that house will eventually have either to buy or go out of business.

He does not hold the enthusiasm of the French and German in the matter of representing an American company; but enthusiasm is hardly proper from his viewpoint—and after all he is very loyal. Certain sixteenth century ideas of class distinction still possess him, and this has done much to keep out of selling the type of man who is doing the best work in our country. The bright young chap with the preliminary training that makes him capable of meeting almost anyone without giving offense; the young man who, with us, sees in selling the highway to the heart of the business, is seldom in the market in England.

There is an Oxford man selling American goods in England who has lost most of his college friends; is not recognized by a sister whose husband is earning less in a month than the salesman makes in a week; who until quite recently was treated by his parents as the family disgrace—and all because of his business relations. This man has spent just enough time in the States to realize that he must either go against the rulings of his class as to what constitutes a gentleman's occupation, or suffer from dry rot. And his decision required more courage than we can ever realize.

IT must not be taken from this that England offers no salesmen of ability. There are bright boys in the lower classes who consider work of this character a re-

markable elevation. There are others in almost every class who through chance or influence—often dire necessity—get into selling and grow in it because they realize the opportunities it offers. The great trouble is the shortness of the market supply of salesmen who are above the mediocre or inefficient type.

It is more nearly possible to transplant our selling methods in England than in either France or Germany. Very little modification is necessary in the first instance; and very good results have been obtained through their use. One of our corporations conducts quite an extensive course in salesmanship in its London offices. This work has not only brought results in giving the men who enter the sales department a careful and practical training; but it has actually encouraged some who wondered if selling could really be quite the right thing for them. Because educational methods were employed, the dignity of the individual engaging in it seemed better protected—and it lent a real importance to the work.

Yet when all is said and done and argued—no one is so able as the Briton to hold the trail with the tireless patience necessary to sell to a Briton. An American salesman takes pride in hanging on to a prospect until he has convinced the latter of the value and need of the goods offered. But it takes the crack English salesman of one of our branch houses to bring a man to admit these points, and then work three years longer to get the order. In the incident referred to the salesman did not even see the man in authority for more than two weeks from the time he first began his siege. Conviction did not seem long in coming and during the second successful call the agent gave facts that forced the other man to admit everything; and yet he delayed ordering. Always, after this, the salesman made his visits under the cloak of a new argument to present; and he never pressed the subject to a final conclusion. His calls were far enough apart to avoid offense but not to allow the business man to forget him; and they were as brief as could be made the registering of a new point for consideration. He never asked questions, never became demonstrative, never suggested impatience—but he stored up in that man's mind a stock of facts that created a desire to purchase.

IT required three years to get that concern's name transferred from the list of prospects to that of customers. But it was worth the time and trouble, for the first order amounted to practically twenty-one thousand dollars. When the order came it was the usual thing sanctioned by boards of directors. There was no romantic offering of a junior partnership to the persistent salesman; not even a word of praise from the man who had acted as host during these years. As to the man who got the order, though his hand shook a little when reaching out for the signed form, thankfulness was kept well below flood tide. Each seemed to take the experience and its conclusion as quite the usual thing.

It is true the salesman took his wife to dine that night at the Cecil. It is also true they were very unhappy because of the withering formality of their peers—the waiters.

McSorley's Back Room

THE cry in every human heart is to escape from the discords and disorder of life into some region of order and peace. This in art is called the instinct for beauty; and if some of us live but dreary lives it is because we try to stifle this cry of the heart. On the other hand, turning away from distraction and from everything that could silence his longing, the artist, in his own way always an ascetic, takes life into his inventing hands and makes it plastic in dreams and in works of art; and because of his inborn sensitiveness to facts does it so convincingly that we can all say of the good painter or poet or dreamer that he does not falsify nature, but that he interprets it.

Mr. Sloan is a thinker as well as a painter. He engages in a war of opinion and here let me make a distinction. There are men who are all alive with the spirit of controversy, they are the great army of the dissuasive who convince us against our will. The true artist is persuasive. He enters into controversy without the spirit of controversy and we yield to him because he plays all so seductively upon our imaginative longings. William Morris' opponents read his socialist tracts as eagerly as his friends and often more intelligently. Morris understood his opponents too well to hate them except in some passing moment of characteristic irascibility which never got into his writings, and which with him always ended in laughter. Leonardo da Vinci "flew before the storm" because the storm was hatred which contracts the heart and limits the sympathies and blinds the intellect, extinguishing the three lights of the soul. In every work of true art there is always as final result, a something, a magic, an incantation, a music, which sweetens and releases the spirit. To discover this something and where it lies is the duty of criticism; for this something is the old reconciling hint and wavering suggestion of beauty.

"McSorley's Back Room" depicts a large lonely room. By the window through which out of the grey skies comes hardly any light is the lonely figure of an old man, large in stature and in bulk. He is taking his ale in short sips and at long intervals; his thoughts are heavy and long drawn out.

Except close by the window the whole room is in shadow, a richly colored darkness in which we can just make out the figures of two other men, talking together. There are also numerous small objects, a clock, a picture of Bryan, the model of a ship in full sail in a glass case, and things, we know not what. Slowly the picture draws the attention and then holds it. One can never be tired of peering into that gloom as one is never tired of looking to the far horizon when darkness is coming on. Every painter, from the time of Leonardo da Vinci has felt the charm of chiaroscuro. Mr. Sloan is one of the few who have painted it. To paint chiaroscuro is to make a picture of infinity.

"THE Dust Storm" is a picture that could not have been painted by Hogarth. At first glance we see approaching a great cloud of wind and rain with the Flatiron building towering up till it is lost in the overhead darkness. Just beneath the

advancing cloud are the trees of Madison Square bending under the weight of the wind. They are fully foliated because it is late summer and the leaves have turned a spectral gray, reflecting the blue light of the clouds. So much we see at once. Searching for detail we discover the human drama. There is an automobile and a quantity of scattered children running and tumbling over each other in their flight, only not this time from the automobile, but from the dust and the rain and the noise of the storm; for

The Work of

"Nature I Loved and

By JOHN

somehow we know that at the moment the thunder is crashing.

The theme of this picture is the great cloud rapidly advancing and spreading a sudden darkness with a glimpse beyond into the beauty of serene and sunny skies. The children that to Hogarth would have been the whole matter are here only a detail, and in the painting little more than indicated. If Hogarth or anybody else in the eighteenth century looked at the sky it was to ascertain weather conditions.

Hogarth has also been called an artist of the ugly, yet in his pictures are many lovely ladies. Only in his day and down even to these times the English conception of beauty is something quite different from that set before us by Mr. Sloan.

Once when I was talking with Mr. Sloan of Hogarth and of his terrible skill in depicting the hideous physiognomies of the corrupt and drunken underworld of London, he offered what seemed a revealing criticism. He said that what we hate we fly from and that Hogarth's knowledge of these people proved that he loved them for that otherwise he would not have studied them. Mr. Sloan spoke out of knowledge of his own methods. Take for instance his picture "The Hair-dresser's Window." Here we have an old woman plying her art as hair-dresser a la mode to the surrounding community. She is bleaching the hair of a young girl and, as is indicated by her wearing gloves, using some powerful chemical. It is done at the open window because the hot sun is a necessary participant. Of the subject of the treatment we see only her long and abundant hair falling down her back and of the girl attendant we get only her thin hand holding the sawer. It is a window in the second story. The crowd below

The Hair-dresser's Window

John Sloan

Next to Nature Art"

BUTLER YEATS

on the street are gazing upward; among them a lively group of three very young girls laughing and whispering together and no doubt making guesses as to who the girl may be. Do we hate this woman so realistically presented to us? Is that the artist's intention? She is hideous as though Hogarth had painted her. She has yellowed hair and thick lips and a short turned up nose and a many folded chin and short fat arms. On the contrary we laugh genially even while we flinch at this figure of grossness, this artist in hair, and enjoy her intentness at her work, and we realize that she is shrewd and strong and that she knows every girl's secret.

IN "Scrubwomen in the Old Astor Library" there is no hint of gaiety or of youth. In the immediate foreground is a team of scrubwomen each with her paid and broom, one washing the floor, the other two as they pass, furtively speaking to her. In the room beyond we can just make out two readers like phantoms bowed over their books at the big table. Why does this picture interest anyone? What is the charm of this and colored arrangement in brown? Is it the old women or the two readers? Or the walls lined with books or the atmosphere made thick, as one fancies, by the dust of so many mouldering volumes? Are we looking at a picture of silence made visible? I cannot say. It is not in words ever to tell all of a picture's meaning. Painters exist that they may tell in their painter's language what cannot be said in prose or verse or in marble or in music. Each art has its own incommunicable secret. Incommunicable, that is, by any other art. A work of art that can be put into words is picture writing and by no means a work of art; even though to a

The Dust Storm

people more conversant with words than with painting it would be preferable.

Mr. Sloan's pictures will excite strong enthusiasms but also many antagonisms. For one thing he does not arrange his pictures according to the laws of good taste nor does he care at all for the purely decorative picture which, however charming it may be, is only like a pretty woman prettily dressed or a pretty room prettily furnished. In fact, he does not arrange his pictures at all. He is an impressionist, that is, an imaginative painter, and paints by the inner life. "His subject directs him," to quote the words of Charles Lamb who, long before the impressionists, defined the meaning of imaginative painting. One has to live many days with one of his pictures to find its sweetness, its poetic charm. He does not take his art lightly. Like the great medieval painters, he is serious about both life and art. And if at first his severity offends we will turn to him again and

and painting. Also he kept good company; fortune having favored him with such friends as Robert Henri and Glackens and other original men. There was also the public library in Philadelphia (for the joy of reading was upon him) where he read every Saturday all day long from early morning, bringing his lunch with him so that there should be no interruption. Every painter and every poet is first of all an observer, only unlike the scientist, what he observes must come to him in moments of heightened sensibility; and if he be born artist and lives the right life almost every hour will bring its crisis. Mr. Sloan's school of art was life itself, his own and that of others, and finally the streets of two great cities—New York and Philadelphia. In the evenings he studied technique, with one evening set apart for conversation. Blessed conversation of young men, whereby they learn to know each other in friendship and in the generous ardor and courage of mutual challenge!

Scrubwomen in the Old Astor Library

again and find in his strangeness something restful; for his severity is the self-restraint of a man who will not be deceived, who, while looking everywhere for visions of tenderness and beauty, refuses to shut his eyes to facts.

THE artist has told us something of his early struggles. And to my mind it was an ideal education for an artist of genius. While still a boy he was introduced to a man's life; at sixteen earning his own keep and helping others, while finding time to study drawing

TO the great art schools of Paris and Europe thronging crowds of young men and women make a fashionable pilgrimage, hoping to learn the great secret, and they study the planes and curves of the posed model as to whom they know nothing and care nothing, and yet so far it is good; only the circumstances are such that these students are during the most susceptible and receptive season of their lives, for long hours and for many years, shut up in art schools and taught that nothing matters except technique, so that all their talk is of technique and not at all of life. Is it wonderful that the great picture shows of London and Paris are so dull compared with what one sees in the Louvre or the National Gallery of London or that there should have descended on the world that great monotony of clever painters with scarcely an artist or artistic vision to vary the prospect? "Art for art's sake" is a saying that has its value, but technique for the sake of technique is misleading nonsense. At any rate it gives us the painter who is not the artist, the man with the clever busy fingers and the idle soul and the sleepy intellect. We do indeed require of the painter or of the poet, technique, the best that he can give us: that we may have the consecration of the poet's dream—and everything else that is in his well-filled mind.

A Theme for Social Religion

By CHARLES ERVIN REITZEL

AGE-LONG civilization has been chained and shackled by an economic and social standard which places money above men, profits above principle, and gold above God. However, we now commemorate as our Ideal, the birth of One whose sole interest was centered in humanity; whose very Being

breathed the spirit of brotherhood and service as standing above greed and power. We therefore can give no better proof of our appreciation of Jesus and his teachings than by an every-day application of his doctrines to the maladjustments existing in our present social order.

Roses

By NEITH BOYCE

I WISHED to give Helena something for Christmas. Ever since I married Helena I have been wanting to give her things, over and above the present of myself and of all my worldly goods. I have given her a great many things that she did not want. Helena wants nothing that she cannot turn to immediate practical good. When I married her she was a wonderfully pretty, gay, courted girl, full of energy, high spirits, coquetry and desire for amusement. But she proved that she was beyond all else practical by marrying me. I was some ten years older than herself, with a good professional position and in addition a private income. I was deeply in love with her and have been ever since. Years passed, we acquired three children and a house in New York, and Helena developed into a most conscientious and able manager of the family. She is a good housekeeper, with a firm hand over the servants; she supervises most carefully the children's health, morals and education, and she maintains an atmosphere of cheer and comfort in the home. She works about fifteen hours a day. She is economical in her personal expenditures. She makes both ends meet over a large monthly budget. She has the bank account and the checkbook. She pays my tailor and club dues by check, and allows me a few dollars a week for my luncheons and car-fares. I seldom want any more.

BUT with the approach of the happy holiday season, I felt a keen desire to give Helena something. Helena hates Christmas. She always has a large family dinner on that day, besides the tree for the children, presents to relatives and friends and banknotes to the servants. She rushes madly from morning to night, concealing her feelings under an appearance of festal joy. Knowing all this, I determined to give her a little pleasure, or at least a reminder, so to speak, of my affection. But I hadn't any money, and as she had just had to write the check for my Christmas fees to the servants at the club, I really didn't like to ask her for any, especially as she would, of course, have asked what I wanted it for.

However, I had credit. I didn't dare give her anything very expensive, so the day before Christmas I stopped at the florist's, round the corner from our house, and looked for something that looked like Helena. I wouldn't have orchids, those purple dowagers, nor the hypocritical lilies,

nor the smug violets, nor commonplace carnations. Among the roses too there had to be a careful choice. But I found a rose that really was like Helena—deep in color, richly curved in form, with strong stems and leaves, firm and full of sap. I ordered a dozen—doubled in price, of course, on account of the season of rejoicing—charged them, and took them round to Helena.

She greeted me with her usual cheerfulness over the tea-table. When I presented the roses, with a gallant little speech, she cried mechanically, "Oh, how sweet of you! How lovely!" But I saw her face fall, and she couldn't help adding, "But you extravagant old dear, they must have cost a fortune!"

"You shouldn't look a gift-horse in the bill," I said, rather piqued.

"No, I know it," she said repentantly. "They are lovely, and just what I—"

"Just what I wanted, thank you so much, as the man said when the brick fell on his head," I interrupted ironically.

THEN she got up and kissed me and said a few pleasant things, and put the roses in a vase, where they looked very handsome, and we had tea cozily together. . . .

But after Christmas comes New Year's, and that means hills. Helena is always in a frightful temper on the first of January, and doesn't try to conceal it. I always try to keep out of the way when she is wrestling with the bills and her checkbook, for, after all, that is her business, and if I make the money she ought to be willing to spend it.

But on this particular day she did not spare me. She almost flung the bill at me.

"To one dozen roses . . . \$15.00," "Now, George, how could you?" she cried tearfully. "Fifteen dollars for roses! Roses at Christmas! Do you know what I have to pay for coal?"

"I don't care," I said peevishly. "No, I know you don't! And here I am, slaving and contriving and at my wife's end to pay the bills, and with the cost of living almost out of sight, and I need a new evening coat and can't afford it, and it was agreed we shouldn't give one another presents, and—"

She said a lot more, along that line, for Helena, like all conscientious and energetic people, is a bit of a nagger. Finally I interrupted with these remarks: "You're

right, Helena, gifts are absurd—especially between business partners. It's ridiculous for me to give you roses and expect you to pay the bill. I apologize. It was self-indulgence on my part. It always is. A gift means *quid pro quo*. Nothing for nothing. I had a romantic feeling for your beauty and charm. I tried to find something that would express it. The roses seemed to me like you in color, fragrance and form. I gave them to you to please myself. You did not want them. You object to paying fifteen dollars for them when there are fifteen tons of coal to be paid for. You are right, Helena; coal is a necessity—"

"LAST year I gave you a little book of love sonnets, dedicated to you, and printed at my own expense. Another piece of self-indulgence. You thought the sonnets rather pretty, but wondered how I could write such things, at my age. The year before that I gave you my historical tragedy, likewise printed at my own expense. And that you didn't even read. —And long before that, I gave you my heart, Helena, and you never quite read that, either. You turned down the page, and forgot to go on— And for all of them, you've had to pay, haven't you, and the bills have been heavy. Greek gifts! Poor Helena!"

My voice broke as I uttered these words, looking at her listening profile. She was writing during the last part of my speech—a check, which she slipped into the envelope along with the fatal bill. In her check, turned toward me, I suddenly perceived a dimple—in love, you know, there is always one who kisses, and one who turns the cheek. Helena had always turned her cheek—with the dimple in it.

All she said then was, looking up at me with a smile:

"You are a sweet, old, romantic, silly thing, and how you can talk!—You can give me a gold brick if you want to, after that, and I'll pay for it and go in debt for coal, rather than hurt a single one of your precious feelings. And it isn't true—I did read the tragedy. It was too sweet for words."

This year, I have resolved to present to Helena one single pure white rose, and as I give it to her, I shall say meekly: "I paid for it out of my own money."

I rather think she will like that.

The Autopilgrim's Progress

Part Two—The Bridal Tour

By WALLACE IRWIN

Illustrations by James Preston

V

Gwendolaide Jones Trelleth an Autobiographical Autodrama

THE gentlemen-drivers forebore from the code
Duello and drew up their cars by the road;
Their looks less disdainful,
Their poses less painful,
The ladies suppressing their monologues painful,
Laden with epithets more than a trainful.
It was merely armed peace, an observer might see,
As they sat in a circle out under a tree.
Hostility still
Showed in the men.

THE "nice Mr. Hill"
Coldly sat by his Gwen,
And near as he dared to Katurah lolled Percy,
Dumbly, in pantomime, begging for mercy.
And the angel whom humans call Gwendolaide Jones
Began her account in angelical tones:
"Since automobiles were invented I've been
Gripped by 'em,
Hipped by 'em,
Mentally dipped by 'em,
Wrecked by 'em, saved by 'em, frightened and tipped by 'em;
And when I am dead—well, I hope I'll be shipped by 'em!

"A FEW years ago, when my father was wealthy,
My automomania 'gan growing unhealthy.
Pa bought me runabouts, phaetons, touring-cars,
Chubby electrics and long-run-enduring cars.
But I clamored for more—for you see I was cursed
With that modern dementia, a gasoline thirst.
One morning poor Father to bankruptcy woke,
For the market in Limited Bunco went broke.
And Pa said to Ma, "Though your pride it embarrass,
I've pawned all our jew-els with Uncle Abe Harris;
You, too, must deny yourself fashions from Paris;
I'll give up my valet, my yacht and cigars—
And, Gwendolaide, dear, you must part with
your cars."
Gone, my heart's sweet massage!
I sought the garage

And kissed all my road-running dirlings good-bye;
My runabout slender, my touring-car big
And my cute, little, chubby electrical gig. . . .
(She closed her bright eyes, as to shut out the vision,
Then took up the tale with increasing decision.)

FROM that moment my soul was embittered. I swore
Ere long I would revel in autos once more.
My plottings bore fruit,
For I smiled on the suit
Of Marmaduke Priggles, a bit of a bore,
Who numbered his cars by the dozen and score.
Another adorer more suited my will,
But alas! ("Here a sigh from the "nice Mr. Hill.")
"Oh, how with a partner for life could I
toddle
Who'd only two cars of a former year's
model?

HOWEVER, the poorer man wooed
me so well
All cold, worldly hope meant
Mere hollow conceit.
We planned an elopement
And promised to meet
Last night to be wedded at Johnson's
Hotel.
I was packing my grip,
Prepared for the trip
When a taxi (I'd called one) drew up to
the door.

THE driver, I noticed, remarkably bore
Resemblance to someone I'd met with before. . . .
("Twas Priggles!" deep-muttered the "Nice Mr. Hill.")
"It was. But I guessed not his perfectly, till
Seventeen miles down the Kittyville Pike
I saw through the window the chauffeur's right ear
Pon which was a birthmark, remarkably like
The one which marred Priggles. Made fearless by fear
I opened the door of the taxicab light
And, keeping my balance, leaped into the night
While the villainous Marmaduke Priggles, disguised,
Drove out of sight,
Oblivious quite
Of the silent escape of the treasure he prized.
Thus, left quite alone, I . . ."
A rattle like hail
On a stretch of tin roofing broke in on her tale
Midst a wheezing asthmatic
Yet very emphatic
And a clug like the gasp of a grief-stricken whale.

"Look, look!" whispered Gwen, all her features
turned waxy.
"It sounds like,
It goes like. . ."
All shouted, "A taxi!"

(TO BE CONTINUED)

John Mason in Augustus Thomas's "Indian Summer"

By JAMES MONTGOMERY FLAGG

Augustus Thomas and the Time Spirit

By N. H.

"Martha Hedman acts as few American actresses can act"

ONCE Augustus Thomas wrote plays that did not strain anybody's intellect, and amused so large a proportion of the human race that the plays, almost without exception, filled theaters and therefore produced much wealth for the author. The distinguished German dramatist, Ludwig Fulda, who landed on our shores the other day, said, as one of his first observations, that America seemed to take the drama not as an art but as an amusement. Augustus Thomas is now putting more into his plays than he once put into them, and they are not so successful. Out of his last seven plays, I believe only two have been successes, and the fate of the seventh is now in the balance. New York critics did not like it. If it were not for the possession of an oversupply of tact, I should be willing to confess that the disapproval of the New York critics does not necessarily condemn a play. Personally, I hope "Indian Summer" will be one of the many praiseworthy dramatic productions that get away from Broadway with more or less hushes, and find a juster reception in the rest of the country, popularly known as "The Road."

NOT that "Indian Summer" is without faults. It has conspicuously two faults. The effect is at times scattered, various bits of dialogue and some incidents being put in that do not converge toward a central result. That is fault number one. Fault number two is that the third act has an over-dose of melodrama, jerking us roughly from an atmosphere of pleasant thinking into scenes of tearing about and shooting pistols. This much granted, however, "Indian Summer" remains one of Mr. Thomas's most interesting plays. I saw a revival of "Arizona" not long ago, and it made me wish I was in the country or at home reading a good book. A friend of mine has a little son uncommonly interested in a number of topics. Sheer frivolity, however, is not one of them. Therefore at a party recently he was found in a corner crying, and when asked what was the matter he sobbed out, "I am wasting my time. I am wasting my time!" I dropped in to see "Indian Summer" on a particularly hazy afternoon, and I did not at all feel that I was wasting my time. It is not only superior to such plays as "Arizona," which are more or less skillful mechanical exploitations of popular and stereotyped themes, but it is superior to a play like "The Witching Hour," because Mr. Thomas exhibited little knowledge of hypnotism in the earlier play, but shows an intimate

and cordial understanding of the mind of a middle-aged artist living today, and he throws in for good measure an uncommon inkling of what an independent young woman of our time is sometimes like.

FRANK WHITNEY is the person who is going through his Indian Summer. He is a gifted artist—by profession, a sculptor, but capable of writing poetry and deeply appreciating music. In many of the novels of the last few years and in numerous plays middle-aged men and very young women are hero and heroine as they are in Galsworthy's latest, reviewed in this issue, and in more than one novel by Wells. Where this happens is ordinary plays, there is usually a sentimental and unreal treatment and ending. Mr. Thomas, however, handles the situation with sincerity, and while he has not quite the heart to give the audience a sensible instead of a sympathetic ending, he refrains from giving a mushy one, tactfully leaving the matter at the end so that the more typical spectators can go home and imagine the hero and his young friend were married, while the minority can think that he quietly, gently and gradually shook her off and sent her back to the young man to whom she had been engaged before, and whom she found uninteresting when her imagination was stirred by the new visions of life opened up to her by contact with a more experienced nature; or, indeed, back to some other young man; it doesn't make very much difference whether it was the same young man or another, the point being, as was fully understood by the hero, that a marriage between him and his young friend and admirer would have been untrue to his own knowledge of life and unfair to the girl, who had plenty of intelligence, but whose intelligence did not have sufficient life-material to work on.

Mr. Thomas comes pretty near to having created a real character in the hero, and this impression is much helped by

the admirable acting of Mr. Mason. He realizes not only the main characteristics of such a man, but many of the pleasant little half-lights and contradicting principles. He is a philosopher as well as an artist. He has that love of youth, of life, and of loving, which usually goes with creative talent, but he is also a singularly normal, wise and kindly person. I shall not try to reproduce here the dialogue between him and his friends, but it has humor, observation of life, and what the Germans call *gemütlichkeit*, a word of more color and significance than our word "amiablety." The girl, too, is real, and here again the author is fortunate in his interpreter. Martha Hedman acts as few American actresses can act. She comes over from an old-world city in which it is possible to get a training that is impossible here, and where solid technique and sure, strong, subdued effects stand out delightfully from the prevailing acting that we see, so largely made up of idiosyncracies combined with inexperience, with the result that strong effects are nearly always sought with obvious effort, and quiet is ineffective. Several scenes between these two have much loveliness. The romance is one that is not complete because it happens when one life is in its autumn, but none the less it is genuine romance, as written and as acted. It is not so surprising, perhaps, that Mr. Thomas should gauge so accurately the moods of this man of middle age as it is that he should be able to present the wonderful maturity of a young woman, the maturity given wholly by instinct and character without experience, a maturity therefore that is able to draw an attractive ideal although it is an ideal that cannot be realized. If the melodrama in this play were tempered, and the one or two slight concessions to the audience on the side of sentiment removed, I should feel that it was without much doubt the most artistic play Mr. Thomas has produced.

A SAMPLE OF HARVARD'S POWERFUL ATTACK

Huntington Hardwick, one of the Crimson's best ground-gainers, making a slashing run through the Cornell line and secondary defense for a ten-yard gain, which gave Brickley his chance to make a touchdown on the next play.

Current Athletics

By HERBERT REED ("Right Wing")

HARVARD'S smooth offense, built around both power and deception, was shown to advantage against Cornell, although the Ithacans used such faulty generalship in the Stadium that the Crimson was not forced to depart even for a moment from the settled plan of campaign. There was not even the shadow of a flaw in the Cambridge selection of plays, for, accepting the Harvard premises, one reaches the Harvard conclusion in action, as was notably the case against Cornell. Against sun and wind Harvard scored three points against the Ithacans and did it by perfect choice of plays when there was, for the only time in the game, a temptation to take a chance. The Crimson found itself in Cornell territory on fourth down with only two yards to go for a first down. Considering the way in which the Harvard attack was moving there was every chance that another thrust into the line would have yielded a first down. Yet Logan, the Crimson field general, chose not only the safest, but also the wisest course, for he called for a drop-kick. This was successful, and the entire Harvard scheme of things was at once justified. Thence to the final whistle the Crimson played standard football.

HARVARD'S running attack is one of the best features of modern offensive football, combining as it does, speed, deception and power. The diagram (Figure 1.) shows the normal formation of the backs behind a shifted, or lop-sided line. There is plenty of strength in a play that goes through the long side of the formation, and strength plus deception in a play that goes around the short side. Until the advent of Mahan the real power of the Harvard attack has been turned on between the parallel lines shown in the diagram. The arrows indicate the range of the backs, the most interesting feature, perhaps, being the wide, outward thrust of the front back. With this man going out the play switches in at an acute angle to the line of defensive forwards. Mahan has shown so much speed, however, that he has been

used for wide end runs just as Corbett was used some years ago. Doubtless the call to Corbett to come all the way from the Pacific Coast was due to the desire to have Mahan get the benefit of the teaching of a man who was built much like the newcomer, and employed much the same methods. Equipped with hardy, heavy men, Harvard has done more than any other university toward making the greatest possible use of the backs in interference. The Crimson has had the audacity to require a back to handle a tackle without assistance, as well as a solitary back to remove an end from the path of progress.

THE Crimson attack is a typical thrusting game, the backs starting close to the line and reaching their openings quickly, and with full speed ahead. Almost invariably the ball is handled by the quarterback, thus disposing of any chance of a fumble or a missed pass such as allowed Sam White of Princeton to make his winning runs against both Harvard and Yale. There is a concealment of the ball in the Harvard attack not found in most other systems, and the delay that is so great a factor in the deception worked into the play, is made in the simplest possible manner. The formation lends itself to deception, for the quarter can easily hide the ball, and the run that includes the deception and delay, is so much like the regular runs that the defense is frequently drawn out of position. The Harvard running game, therefore, is not only strong, but also subtle, and I doubt if the latter feature has ever received its due meed of praise. So successful has the attack proved in the recent past that the average spectator has been inclined to attribute its drive and finish to sheer power and the presence on the team of remarkable backs. Beyond a doubt Harvard has been better equipped in the backfield for some years than any other eleven on the gridiron, but it must be remembered that the play quite as much as the men has been responsible for the steady upward progress

of the Cambridge institution. The football public may be in doubt about it, but the Crimson's opponents know what they are facing.

There is sharp contrast between Harvard and Yale on the offense. The Elis have made greater progress in working out the theory of the kick formation, and have used it in their own territory from time to time with better results than any attained by the Crimson system. In the diagram, Figure 2, is shown a sample of the run from kick formation, a variation of which has been used by the Elis. The backs break to the right, as indicated by the arrows, and there is what might be called a secondary interference by the guard and tackle from the side opposite to the direction of the run. It is in the clever timing of this line interference that the play excels. The interferers from the line swing around unexpectedly just in time, when the play is working well, to cut down the first man in the secondary defense.

THERE can be little doubt, I think, that the run from kick formation is one of the strongest ground gainers in the game, especially in midfield territory, since it combines the greatest possible deception with the least possible waste. It is also a good formation for the forward pass, and whenever the formation is used there is a double threat well calculated to spread the defense.

The run from kick formation, like the double passes, and the other open, deceptive plays, is of greatest value on first or second down, may be used effectively on third down when there is considerable distance to gain, but should be automatically barred on fourth down. There has been instance after instance this season of teams giving away the ball on fourth down, either by forward passing or by runs from the kick formation. The actual kick, indeed, is far more dangerous on an early down than it is on the fourth, and should seldom be delayed beyond the third, in order to allow for a possible bad pass from the center or a fumble.

DARTMOUTH defeated Princeton by using the better generalship. Harvard rolled up a high score against Cornell by the same process, and while in the latter instance the Crimson had a more powerful team and probably would have won in any event, the fact remains that the perfect generalship saved the team a lot of hard work, and the storing up of

Fig. 1.—Formation of backs behind a shifted line Fig. 2.—Run from kick formation

energy is a big factor in the modern game. With the best kicker on the field Cornell let him go to waste, and with an attack that was good for ground against any defense Cornell used it where it did not count. I doubt if Cornell will use the plan of campaign shown in the Harvard Stadium against Pennsylvania, and I doubt if Harvard will depart far from its familiar generalship against Yale. Yale's problem, granting that the Eli material is anywhere nearly on an equal footing with that at Cambridge, is to upset the perfect Harvard method by forcing the Crimson into a situation that makes the field general think twice instead of once.

THERE is no football system proof against the handicap of natural conditions—notably wind and sun. It remains to be seen what Yale will do with the natural advantage in the Stadium should the Blue win the toss. On this more than any other one thing depends the chance of the Elis, and this no matter what has happened to Harvard at Princeton in the meantime. There is no gain-saying the fact that Yale has had trouble with the material from almost the beginning of the season. There has been a hospital list as long as a man's arm, and men on whom much dependence had been placed have not lived up to expectations. But it is many a long year since there has been such an array of capable coaches at New Haven, or such perfect harmony among them. In reestablishing Yale football the New Haven coaches have had to struggle against the handicap due to a long series of defeats. Yale has lost the "habit of victory," something that meant a great deal at New Haven in the past, and the undergraduate body has lost the knowledge of Yale football history and Yale football heroes in which the student of years ago was supposed to be letter perfect. To the uninitiated this might seem a small matter, but when many of the students leave the stand before the game is over, and with the team losing there must be something wrong with the much talked of Yale spirit. Throughout the early season there has not been the fighting spirit of old in the Yale team when on the defensive in its own territory. Whether this can be overcome in a single year of the return to basic Yale football remains to be seen. In common with other coaches the football tutors at Yale have

Harvard's unrevolted backfield—Mahon, Brickley and Hardwick

found that the team was not to be brought to life by coaching alone, good as that coaching might be. One by one Yale has experimented with the newest methods of play and has dropped several that could not stand the acid test of a big game—notably the direct pass to the backs for runs from tackle to tackle. It takes time to test the various manoeuvres made possible by the existing rules.

Up to this writing there has been little that was distinctly new save Sanford's revived mass play used by the Rutgers eleven. Prof. Gettell, the ingenious Trinity coach, brought down a team to meet New York University that was equipped with a great variety of open play, not forgetting what for lack of a better name may be called an indeterminate run—the back carrying the ball around the end in position to pass should the defense show signs of being drawn in, and continuing the run should the defense stand fast or dispose itself to

meet the passing game. Unfortunately for lovers of open football, however, Trinity had games scheduled with Rutgers and Wesleyan, and the coaches of these two teams were in the stand. The result was that the Hartford team uncovered very little of their open game, and what they did do was not well done. It was a case of a strong team playing below its form.

These passes worked with deadly effect against the soldiers but largely because of the loitering play of the Army ends, who failed to drive in and hurry the passer. The Notre Dame quarter had plenty of time to wait until he could find a man uncovered and shoot the ball to him. Many good coaches teach their ends to hurry the passer, and this system has borne fruit in more than one fairly important game. The essence of the success of the forward pass is delay, and when the delay is impossible the pass itself is all but impossible. This is a truth that is slow of acceptance, it seems.

CORNELL'S FATAL FORWARD PASSING

The Ithacans persisted in making the pass when in their own territory, with the result that the ball was sniped by the alert Harvard secondary defense. In this instance Brickley caught the ball and carried it back so far that he paved the way for a Crimson score even against the run and the wind.

Galsworthy's Latest

By N. H.

NO writer expresses the characteristic mood of the thinking world more accurately than Mr. Galsworthy. He is very critical and very sympathetic; very radical and very skeptical; very mature and at the same time full of gentle hope for a better world. Sometimes when an art is civilized, it seems to be the end of an impulse. Mr. Galsworthy and the writers who deserve to be classed with him today seem to be using their culture and their sophistication in the service of new things and broad human needs, and, therefore, extreme refinement in their case seems to mean no lessened vigor. If a repentant stand patter should ask me for a novel to read that would give him a just idea of what careful but thoroughly progressive minds today were thinking, and feeling, I should be inclined, if I thought he had a mind, to give him Galsworthy's "Fraternity." If he had no special mind, there would, of course, be little use in giving him anything.

"The Dark Flower,"* unlike many of Mr. Galsworthy's books, has little to do with classes. It deals with a characteristic of men and women that is either a recent growth in the world, or, what is more probable, something that has been persistently ignored. It is not altogether a pleasant subject, and in the hands of one less skilled and less refined than Mr. Galsworthy it might easily be harsh. It treats four phases in the love life of a man, and, incidentally, phases in the love life of women who figure in this man's story. It is not a book for the very young, and it will pain those adults who are not able to see that the way to manage human weaknesses is not altogether the traditional English way of keeping them out of the conversation. The person who is at all likely to lead the life depicted by Mr. Galsworthy will be steadied by this book, and made more determined to be the master of his own existence, and to keep it in proportion. Christabel Pankhurst, in one of those articles that our virtuous community has suppressed, stated that the very gist of the feminist movement had to do with sex standards, and her analysis is correct. Women, therefore, are particularly likely to be interested in this book of Galsworthy's, as they, and especially the younger ones, form the class that are most interested in the whole upheaval now going on in the world regarding the natures of man and woman and the ethics that are justified by those natures. Trying to stop the contemplation of such a subject is sweeping back the ocean with a broom, and it is wholesome to have forward movements guided by men of such fineness as John Galsworthy. Indeed, advance and intellectual poise ought to remain together. As Woodrow Wilson once said, the student is the natural radical.

*"The Dark Flower," by JOHN GALSWORTHY, Charles Scribner's Sons, New York, 1914.

IT would not be surprising if the changes brought about in English and American thinking and feeling by Galsworthy's subtle art were greater than those brought about by Wells or Chesterton or anybody who specifically endeavors to combat prevailing ideas.

In one part of his book, Mr. Galsworthy says:

"These two good souls had stumbled on a problem which has divided the world from birth. Shall cases be decided on their individual merits, or according to formal codes?"

He himself does not undertake to decide the problem at all. He shows this boy of eighteen loved by a woman much older, carried away by his admiration for her, but swinging easily away when proximity to a young girl near his own age gives opportunity for the natural call of youth to youth. That is Book One, called "Spring."

In Book Two, called "Summer," the author reaches his fullest and strongest emotion and brings out fully what is one of the richest aspects of his talent,—his exceptional fineness and critical quality in no way diminish the intensity of his passion and of his sentiment. These intensities, however, are reached without any of the ordinary tricks, without any of the conventional appeals:

"Not much of the conquering male in him, nor in her of the ordinary enchantress."

He sees men and women in their feelings as they are seen by cultivated people today; the vividness is not lessened and the sense of truth is increased. Galsworthy is capable of showing rough, almost alarming power, as he does in depicting the husband in this second book. This rough power, applied to the much higher love between his wife and the protagonist in the book, brings about tragedy, even as death might be brought about by something as meaningless as a bolt of lightning.

The third book is called "Autumn." Mark Lennan is now married to Sylvia, the girl who had taken him away from his older love in the first book, and happily married to her, but there comes a time, when he is forty-six or forty-seven years old, when something in him wantonly seeks change, and he allows himself, all the time knowing the folly of it, to get well started in a love affair with a young girl of eighteen.

He had known real love once, and it had been torn away from him, and this perhaps made the autumn budding easier.

"Only once could a man feel the love that passed all things, the love before which the world was but a spark in a draught of wind; the love that, whatever dishonor, grief, and unrest it might come through, alone had in it the heart of peace and joy and honor. Fate had

tore that love from him, nipped it off as a sharp wind nips off a perfect flower. This new feeling was but a fever, a passionate fancy, a grasping once more at Youth and Warmth."

THE struggle is made more natural by the fact that the artist who feels it has none of the ordinary moral inhibitions—no sense of absolute right and wrong:

"Thinking had made nothing clear. Here was offered what every warm-blooded man whose spring is past desires—youth and beauty, and in that youth a renewal of his own; what all men save hypocrites and Englishmen would even admit that they desired. And it was offered to one who had neither religious nor moral scruples, as they are commonly understood. In theory he could accept. In practice he did not as yet know what he could do. One thing only he had discovered during the night's reflections: That those who scouted belief in the principle of Liberty made no greater mistake than to suppose that Liberty was dangerous because it made a man a libertine. To those with any decency, the creed of Freedom was—of all—the most enchainment."

He himself is the judge. By his own verdict and decision he must abide, and his own wish to be fair to his wife, and also to the young girl, lends him after a mighty struggle to the same conclusion that he would have been led to by ordinary morality, had his been a nature to live by rules. He pulls up in time, and explains the state of his mind to his wife, and goes off with her to Italy, leaving temptation behind him.

Thus Galsworthy, in dealing with these subtle tendencies in men and women in great capitals, and in the expressive arts, does not go to extremes. The older woman in the first book, who has felt the charm of the youth of eighteen, and has followed it with a melancholy desperation, does not wreck her life, or rather does not endeavor to substitute for her wholly unsatisfactory marriage relation what must have been after a little at least as unsatisfactory for her, and pitifully unfair to the youth. Likewise, the tendency toward new adventures of the middle-aged man, who happened to be a sculptor and highly impressionable, a man who resembled a tree putting out leaves in autumn—is only a tendency, and one of which he remains the master. In general, important literary narrative tells of normal action, of events which represent the main lines of life, lived according to the prevailing standards of the race, but no rule is universal, and Mr. Galsworthy is able to take these subtle half shades that usually express only morbidity and make out of them genuine art—art that sends the reader away not only with his mind fed but with his lungs full of air and his strength increased.

Finance

By ALBERT W. ATWOOD

The Case of the American Locomotive

Too Much Interlocking

ALTHOUGH the writer of this article makes his living by composing paragraphs on the subject of finance he firmly believes there is too much finance in modern business. No one can accuse him of self-destructive altruism any more than the average physician is open to the similar impeachment when he tries to prevent disease. Here and there, too strong a tendency toward subordinating all interests to the strictly banking-financial point of view may be scotched, just as disease is minimized here and there, but probably there will be plenty of finance to write about long after the writer is dead, just as there will be plenty of illness to combat long after all the physicians now alive have succumbed to old age.

Mr. Brandeis is pounding away at the evils of banker-management and the relation of interlocking directors to public welfare. From the more limited point of view of technical investment values it is the purpose of this article to consider the case of the American Locomotive Company. What bearing has the rather ugly row at the recent stockholders' meeting of this company upon the value of its stock and of the stocks of other companies similarly conditioned?

Specific Charges

STIRRED by the mess into which New Haven Railroad affairs had fallen, stockholders of large corporations, even the small stockholders, have recently shown an awakening of interest in their property. The small stockholder in the large corporation is always being written about, but he rarely shows his hand and until recently has been essentially a figurative person. Corporation officials have been more accustomed to what might be called professional minority stockholders, those who make large fortunes out of objecting to every corporate activity. But the small shareholder who is neither a crook nor a crank has at last made his appearance, and it is a better augury for the building up of sound investment values than a McKinley prosperity boom. For all that prosperity can do is to furnish business. It does not insure sound or disinterested management, whereas a keen interest in a corporation's affairs on the part of many stockholders means honesty and efficiency.

One Isaac M. Cate, of Baltimore, a stockholder and said to be a former officer or employee, early last month issued a fifty-page broadside against the management of the American Locomotive Company, containing a wealth of specific allegation, which is serious if all the intimations therein are true. This company, it may be said in passing, is the largest manufacturer of locomotives in the country, having only one large competitor; it owns several enormous plants, and has large issues of stock widely distributed among investors, and is usually much esteemed. Finally, does it need be said that the steam and electrical locomotive business, from the very nature of the case, ought to be one of the most dependable and splendidly suited to general investment purposes. For of course railroads must have locomotives.

MR. CATE alleges that the company buys its steel springs, for too high a price, from the Railway Steel Spring Company, a large corporation. He of course gives figures, which I am not competent to pass on. But he asserts that President Marshall of the Loco and W. M. Barnum, a director of Loco, are directors and Executive Committee members of the Railway Steel Spring Co., that Pliny Fisk, another director, is a member of the banking firm of Harvey Fisk & Sons, transfer agents for the Spring Co., that Mr. Barnum was formerly a partner of Harvey Fisk & Sons, and that another director of Loco, Albert H. Wiggin, is president of the bank which acts as registrar for Steel Spring stock. Most of these statements may be confirmed by any corporation manual.

Cate also alleges that the tool supervisor of Loco is interested in a tool supply company, that one of Loco's vice-presidents and his brother are interested in a castings company, and that the big concern buys from both these smaller companies. Mr. Cate refers to the abandonment of the manufacture of Alco automobiles at a cost estimated by the company itself of \$6,300,000, and he says the company also abandoned the manufacture of steam shovels, which are now being made a-plenty by the Bucyrus Company, of which President Marshall of Loco is a director. He also says if the company had its general offices in Schenectady or Dunkirk, where the large plants are, instead of in New York, a saving of \$500,000 would be effected.

Among other statements of Mr. Cate is that the Baldwin Company, the chief competitor, although doing a smaller business and having less valuable plants, made relatively twice as large profits in 1912 as the Loco. It may be noted that not until two or three years ago did the Baldwin Works come under banker management or interlocking directorates. For nearly three quarters of a century up to 1910 or 1911 these works were conducted as a private partnership. They have not yet had the time to feel the benumbing effects of the loss of individual ownership and business rather than financial organization.

What Do They Know About Locomotives?

THE remoteness of the present form of management of our great corporations is beautifully illustrated by the American Locomotive Co. This great enterprise, one of the largest and most important in America, has eleven directors, of whom only three, President Marshall, Vice-President McNaughton and F. H. Stevens, can be regarded by any stretch of imagination as being primarily locomotive men. The other directors are Pliny Fisk, of the banking firm which handles the company's finances, George R. Sheldon, a banker, Charles M. Schwab, the steel manufacturer, three other men who are solely bankers or banker-financiers, Harry Bronner, Lewis L. Clarke and Albert H. Wiggin and John W. Griggs, a lawyer.

True As the Tick Of a Watch

The healthy heart beats about 72 times each minute. Disturb its regularity and the penalty is to shorten life and lessen one's comfort.

Many persons unconsciously "whip" their hearts into unnatural action by use of coffee, which contains a drug, caffeine. Its effects are subtle, but sure.

If you find an irregularity in your own heart-beat and value future health and comfort

Stop Coffee

And try

POSTUM

The Breakfast cup will be just as hot and satisfying, and you will have a re-builder at work in place of a destroyer.

Postum is made of choice wheat; contains genuine nourishment; and has a rich Java-like flavour; but is absolutely free from the coffee drug, caffeine.

Postum comes in two forms.

Regular Postum—must be well boiled.

Instant Postum is a soluble powder. A teaspoonful dissolves quickly in a cup of hot water and, with the addition of cream and sugar, makes a delicious beverage instantly.

"There's a Reason"

It appears that Mr. Cate began to make his objections to the company itself before he published his attack upon it, and a committee was appointed to investigate his charges. Instead of appointing a disinterested committee of outside experts or stockholders unrelated to the management, there was appointed a committee consisting of two of the directors, Wiggins and Griggs, and Thomas Thacher, a lawyer who is said to act as general counsel for both the American Locomotive Company and the Railway Steel Spring Company, and who has his office in the little family bank building of Harvey Fisk & Sons, bankers for the Locomotive Company.

Cate's circular appeared shortly before the annual meeting of the stockholders. At the meeting, one Charles Whiting Baker, editor-in-chief of the *Engineering News* and a well known authority on several important economic and financial questions, arose and after stating that he held 41 shares of stock, suggested as an investigating committee William R. Wilcox, former Chairman of the Public Service Commission of New York, Herbert Knox Smith, former Commissioner of Corporations, and William J. Wilgus, a distinguished consulting engineer. Such a committee would of course make a disinterested report, but the directors easily defeated Mr. Baker's proposal by the weight of their proxies, which indifferent and complaisant stockholders usually send to any management which asks for them.

Then arose L. Clark Seelye, now eighty years of age, and the man who created the great educational institution for women, Smith College. He represented the holdings of Smith College and wanted to ask some pertinent questions.

President Marshall promised that the investigating committee would ultimately make a report on Mr. Cate's charges, and he vouchsafed some interesting information regarding the company's financial condition, although not touching upon the main charges. He said he received a salary of \$50,000 a year, one vice-president gets \$35,000, another \$25,000, and the comptroller and secretary and treasurer \$12,000. Then when business is especially good there are bonuses which add about 25 per cent. to these salaries. Directors get \$20 for attending meetings. The venerable educator, Dr. Seelye, thought the salaries large enough without the bonuses, as they surely do seem to be. Mr. Griggs, one of the directors, intimated that some of Mr. Cate's suggestions "may be followed in a modification of some of the company's affairs." A few weeks later, the directors, among whom are several men with up-to-date tendencies, appointed Dr. Seelye and Mr. William R. Wilcox, as a special advisory committee, to confer with the regular investigating committee.

Now the reason this meeting has been described in this article is because it indicates a new spirit among stockholders. It indicates a sort of revival of financial democracy. Corporation officials cannot accuse men like Dr. Seelye and Mr. Baker of being cranks. Mr. Cate, who brought the original charges, is said to have worked for the company, and therefore may not be wholly in the position of a disinterested outsider. But the other men are strictly outside except as owners of stock. No financial oligarchy can in the long run afford to neglect the protests of aroused stockholders. Perhaps if the directors themselves were enormous stockholders the case might be different. But President Marshall

admitted that some directors held as little as 100 shares. There are 500,000 shares altogether. He owns but 1000 shares himself.

It is sad but true that many if not most of the directors of large corporations are not large stockholders. There seem to be other reasons which induce them to become stockholders. The theory, of course, is that a community of interest and interlocking directors strengthen a business. The result seems to be that a director never quite knows to which corporation to give his best service or allegiance. This is especially true where one corporation buys supplies from another or competes with another. The whole system is so well calculated to confuse and obfuscate the small investor, and is so essentially vicious that no really strong defense of it has yet been produced or even attempted.

How can the most honorable man in the world properly serve as a director of competing companies or companies one of which buys from another? Even if he tries to do right the amount of his relative stockholdings in the two companies raises delicate questions of motives, and makes the outside investor and the public at large suspicious.

The Value of Publicity

THE airing of these Locomotive grievances is a good thing. As John Moody, a well known writer on

investment subjects, says: "Just how much or how little truth there may be in them (Cate's charges) remains to be seen. It is of course true that there is a natural tendency in corporation managements which remains unchanged too long to become somewhat wasteful or corrupt, just as there is in municipal or state governments. However, these needed discussions tend principally to put a management on its mettle, and eliminate any inefficiency or corruption which may have grown up."

CERTAINLY the rumpus in American Locomotive affairs should stimulate the management to its best efforts. The locomotive business in the last three years has been active, and the company earned a surplus of \$3,835,593 in the year ending June 30 last, after paying interest on its \$6,800,000 notes and seven per cent. dividends on its \$25,000,000 preferred stock. This preferred stock has recently sold as low as 94 and around that price, with its uninterrupted seven per cent. dividend, seems reasonably cheap. No dividends have been paid on the common stock since 1908, but with such large earnings this stock ought in time to have speculative possibilities.

The locomotive business is a highly fluctuating one, but it is sure to increase, and if the stockholders of this company continue to keep after the management there is no reason why their securities should not prove desirable.

What They Think of Us

Albuquerque (N. M.) *Herald*

One must admit that under the diligent editorship of Mr. Norman Hapgood, HARPER'S WEEKLY has become a more lively publication than under its former sedate management. In fact, it is so lively that it fairly sizzles. It is advanced, it is virile, it is colorful and jingling and thrilling. It is about everything that the Hapgood newspaper policy has become famous for; it is the real thing. It is the militant advocate of militant woman, and it militates all the time. It militates along the lines that sell papers; which, after all, is what really matters.

Rochester (N. Y.) *Herald*

Mr. Hapgood says that under its new management HARPER'S WEEKLY will stand for "progressive liberalism;" that it desires "to represent the free and liberal thought of the community." This is a laudable ambition and determination.

"The question of propriety, or decency, or whatever it is called," says the editor, "is one that we are willing to meet, although in the main it is a substitute for real thinking. While we do not wish to over-emphasize certain questions, we mean to consider them carefully, no matter how much barking may result." Well, this is a sound position to take also, and we shall be pleased to observe the carrying out of the programme. But the editor of HARPER'S WEEKLY may discover that there are rocks ahead upon his path, which are big enough to block his purpose.

A writer or an editor who desires to be frank, who wishes to speak the truth as he sees it, at all times, will, sooner or later, regret the fact that he was born in Anglo-Saxondom, if he were born, as Mr. Hapgood was, in that realm. A Frenchman, a German, or an Italian

can speak his mind freely and unservedly upon practically every question that concerns humanity vitally. An Englishman and an American cannot. Frenchmen, Germans, and Italians are ready to consider any point of view, no matter how novel or radical it may be, but Englishmen and Americans insist that the writer shall respect and, if necessary, defend their prejudices. The case is rather worse in America than it is in England, but it is bad enough there. There is not intellectual freedom in either country, and neither is there an intellectual atmosphere in which a genuinely free mind can breathe.

The only thing for the American and English writer of today to do is to repeat all the stale old platitudes that have passed muster for a century or more, or learn to write in a style like the one that George Meredith employed, or the one that Henry James employs, a style that has thorns in it to keep the bulk of the population out of his intellectual demesne. There are some very good thinkers in both countries, but most of them write, not for the public, but for each other, as William James said, not long before he died. We Anglo-Saxons have become too squeamish, too prudish, too prejudicial, too much enamored with our multimorphous taboos, to desire frankness, and the natural result is that the great majority of our writers turn hypocrites and commercialists, and write nothing but drizzly, vacuous stuff that would have put any ancient Athenian to sleep in some thirty seconds or less by the clock.

Bridgeport (Conn.) *Farmer*

Norman Hapgood takes over HARPER'S WEEKLY, which, in its day, was a necessity in the households of educated persons. But the weekly ceased many years since

Club Cocktails

THERE'S many a man who has built a rare reputation as a mixologist who lets us do his mixing for him and keeps his sideboard stocked with Club Cocktails.

Made from better materials than a bar cocktail is apt to be.

Mixed to measure—not to guess work—as a bar cocktail always is.

Softened by aging before bottling—as no bar cocktail can be.

It is the aim of the publishers of HARPER'S WEEKLY to render its readers who are interested in sound investments the greatest assistance possible.

Of necessity, in its editorial articles, Albert W. Atwood, the Editor of the Financial Department, deals with the broad principles that underlie legitimate investment, and with types of securities rather than specific securities.

Mr. Atwood, however, will gladly answer, by correspondence, any request for information regarding specific investment securities. Authoritative and disinterested information regarding the rating of securities, the history of investment issues, the earnings of properties and the standing of financial institutions and houses will be gladly furnished any reader of HARPER'S WEEKLY who requests it.

Mr. Atwood asks, however, that inquiries deal with matters pertaining to investment rather than to speculation. The Financial Department is edited for investors.

All communications should be addressed to Albert W. Atwood, Financial Editor, Harper's Weekly, McClure Building, New York City.

Used Year U. of C. Div. Chicago, Ill. School Year

to represent American philosophy, hopes, and aspirations, and sank into a lingering decadence. The Haggood control ought to bring new life to the old periodical. He can restore its old ideals, make it helpful again, and bring back to the paper the host of its former friends. We expect that result. Mr. Haggood has ideals. He knows what the people want. His paper will "tell the truth and shame the devil," as they used to say.

Wm. Ford, Chicago (Ill.)

I see some of your subscribers do not think much of your cartoons. The ones that do not appreciate them know little of actual life. They are as true as life and anything that is true to life cannot but do good. Anyone can learn a lot if he will but study out what the cartoons portray. Keep them up.

Walter Bennett, Bridgeport (Conn.)

I hope to subscribe next month, if you do not grow insane through feminine attacks on the absolutely satisfying and surely truly grounded lead you are giving us on the feminist movement. Maybe, however, the male of the species will repel the light thrown on real life, more fiercely. Take it from me that the male will resist the most, for he stands to lose a possession he held, altho wrongfully.

James Wallen, Buffalo, (N. Y.)

The new HARPER'S WEEKLY will make some people mad, but those of us who try not to think with our lungs it will make glad.

The first three numbers indicate that the *Journal of Civilization* will express the ideas and ideals as well as the facts and figures which contribute to the making of a better world to live in.

If there is any other use for a world, I do not know what it is.

Fork, in the San Diego (Cal.) Union

The mantle of Mr. Edward Bok, formerly editor of the *Ladies Home Journal*, has "descended" upon the shoulders of Mr. Norman Haggood, editor of HARPER'S WEEKLY. It doesn't exactly "fit him like the paper on the wall," but it is "becoming" enough and it is undiluted, modestly opaque and cut high on the neck. The garment is of the "Tailor" variety, ankle-high in the skirt, and the lady's hat flaunts no cigarettes. There is no frivolity in the outward seeming of the new leader of the feminist movement: on the contrary, if we would seek for faults in the Haggood costume we would urge that it is too decorous; there is no color in it; the material is either indescribably "dark" or neutral gray; the collars and cuffs are stiff-starched like those of a professional president of a votes-for-women club, or an inaccessible stenographer in a wholesale drug store; the "boots" are "comfortably large" and made expressly for hiking or golfing; there are no trimmings anywhere, and altogether the "dress" is in exact accord with the expression of the wearer's countenance, which has a precise and prim aspect as if the lips were uttering the words "papa, potatoes, poultry, prunes and prison."—"all very good words for lips, especially prunes and prison." HARPER'S WEEKLY is now what it never was, even in the time when George William Curtis sat in the sanctum writing effeminate politics for old maids of the Mugwump party.

Minneapolis (Minn.) Journal

Norman Haggood says: "The time is past when we should be afraid of young men"—except in autos or behind cigarettes.

A. E. Hamilton, New York City

Permit me to express myself relative to HARPER'S WEEKLY, as I find the cartoons good, stories better, and editorials the best of any of the publications. HARPER'S WEEKLY as I find it is without any question ten years ahead today of any of the current magazines, and every page of the weekly issues is read with much pleasure and interest; in fact I am a little on edge until it reaches me as I begin to look forward to the surprises it will have in every issue.

Waco (Texas) Times-Herald

HARPER'S WEEKLY says—that the passage of the Currency Bill at the present session of the Congress is necessary to the welfare of the country. It is our understanding that Haggood is a Roosevelt follower, which makes his expressed confidence in Wilson all the more notable.

Chicago (Ill.) Record-Herald

Richmond P. Hobson has been elected a life member of the Woman's Christian Temperance Union. We thought Norman Haggood was going to be the leader of the feminist movement.

St. Paul (Minn.) Pioneer Press

HARPER'S WEEKLY gravely assures us we never can be happy unless the Currency Bill is passed at the extra session. This assurance conveys to us the certainty that Harvey may go and Haggood may come and the WEEKLY will have the same abiding confidence in President Wilson.

Johnstown (Pa.) Democrat

HARPER'S WEEKLY under Norman Haggood is not the HARPER'S WEEKLY we knew of yore under George Harvey and earlier under George William Curtis, but it is a pretty good HARPER'S WEEKLY nevertheless—chipper, tart, facile, cheery and sometimes almost ribald, yet generally approximating the finer ideals of the old days. Its tone is fresh, its characteristics pleasing and its methods robustly free, conventions counting little with it and common sense quite a good deal. HARPER'S WEEKLY should, therefore, continue to be a power in the land. It may never again be the power it was in Curtis's best days, but it will go on exerting a wholesome influence which will be worthy of its fine traditions.

Omaha (Neb.) World-Herald

Mr. Norman Haggood and his associates simply look us over, examine our teeth and tonsils, take our blood pressure, make an analysis or two, put us through a catechism and then say: "No. 64,532 male, is assigned to No. 73,903 female; No. 63,078 male, to No. 17,355 female" and so on and so on. Then the various numbers,—first, we presume, having been formally introduced—are taken before the Secretary of Matrimony and given a permit or license. At this stage there is paid over to them the first installment of their compensation for the service they are to render society, and the second installment comes along whenever the service shall have been completed. They have nothing to worry about. They have no responsibilities or duties, except those the success of which is assured in advance by scientific management.

Thos. L. Stitz, Cincinnati (Ohio)

With the force of a Roosevelt, the proverbial truth of a Washington, with the courage of a Lincoln; Norman Haggood, in his editorial column, faces the problems of the day.

Charlotte (N. C.) Observer

HARPER'S WEEKLY strikes the right note when it says: "That the Currency Bill should pass at the present session is necessary to the welfare of the country." It is further right when it advises the people to "trust the President."

Irving Davis, 645 Madison Avenue, New York City

You've published the best as well as most significant cartoon in "The Exhausted Rubber" during this campaign.

Julius Chambers in Daily Eagle, Brooklyn, (N. Y.)

Mr. Haggood's new HARPER'S WEEKLY is a neat publication, highly creditable to the management. Why does not the new editor try some black-and-white work in true Partisan style—such as a man like, say, George Luks, could do?

The day of cross-hatching has passed; artists with a broad sweep of the brush that carries India ink and another with Chinese white are in demand.

L. J. Callahan, President, The Bookcraft Company (Detroit, Mich.)

There is no doubt but that you will make HARPER'S the National Weekly, and I wish you every success.

Laura B. Poe (Editor, Woman's Page, Daily Times-Recorder, Zanesville, Ohio)

I am so pleased that the feminist movement has a real champion in you, and that art will find an expression in your columns. It makes the world a better place in which to live when "uplift" movements have the sanction and support of an organ so powerful.

J. F. Hurley, Editor The Salisbury Post, Salisbury (N. C.)

The reading public ought to thank you for the new HARPER'S WEEKLY, which, under your direction, started good, and has improved with each issue.

Detroit (Mich.) News

One of Norman Haggood's weekly excuses for existence is John Sloan. He looks up big and vital as a man who can draw life—life that pulsates, and throbs, and suffers, and hopes and yearns and lives.

Chicago (Ill.) Tribune

Many actors bubble in the columns of HARPER'S WEEKLY (behind Mr. Haggood's back, no doubt), but none with such elegance and authority as Otis Skinner.

Charleston (S. C.) Courier

Dr. David Starr Jordan seems to have stopped helping his fellow evolutionists in their crusade against superstition and instead is devoting all his energies to helping the crusade against war. He makes a vicious whack at his new enemy by summarizing in HARPER'S WEEKLY a paper by Mr. George H. Perris, of London, in which it is stated that there is in existence an almost world wide trust made up of corporations the very existence of which depends on war and which may be counted upon to do all in their power to block arbitration and disarmament plans and postpone the day of universal peace.

Justified

THE more the Mexican situation develops, the more is the policy of the Administration justified. President Wilson has the advantage of being able to understand the control of the world's politics by the world's business interests. It is no mystery to him why investors and the governments influenced by them favored Diaz, opposed Madero, and again favored Huerta. His policy has been guided by the simple principle that our influence should not be thrown toward government of Mexico in the interests of investors. The European governments, finding Huerta satisfactory to their investors, were inclined to be ugly. They could call it amateurish, if they got any satisfaction out of that, but soon they were compelled to accept our stand. At first few but the President understood. Now most Americans and many Europeans understand. It is safe to say that this country will not recognize any government in Mexico until somebody is in reasonable control there who represents, as nearly as may be, the desires and the welfare of the Mexican people. We shall publish next week and the week after, a history of how the present Mexican situation developed out of the land situation, and we think anybody reading this story will realize what Huerta represents, and why the position of the American government could not be different.

The Principal Issue

THE reason the reactionary interests wished Huerta recognized was that they could count on him for obedience and therefore for the furthering of their Mexican investments. But they had another reason for being glad to have the Washington administration embarrassed in its Mexican policy, and that was their hope that the situation would remain complicated and unsatisfactory so that the Currency Bill might have less prospect of passing. If they could heat it now, they thought the accidents of the immediate future might ward off legislation altogether, or make possible legislation that should really work for concentration of credit still more than it is concentrated now. Mr. Brandeis's series shows that a number of results outside of the present Currency Bill will be needed before we can have "the new freedom" in the business world, but let it not be forgotten for a moment that any one of these expected bills will have a better chance passing after the Owen-Glass bill is passed, and indeed would have but poor prospect for the present if that measure were defeated.

McCall as a Spectacle

THE mushiness of a community is a matter on which the community frequently prides itself. Judge McCall (until he was hopelessly shown up) was eulogized by even that part of the press of New York which opposed him and he has been treated with courtesy. Since the election he has come out and offers to cooperate with Mayor-elect Mitchel, and a feeble-willed public automatically applauds. Why should he be allowed to cooperate with the Mayor? Why should he be allowed to remain on the Public Service Commission at all, a disgrace to the state whose governor put him there? Everybody knows the facts now. Everybody knows his part in the insurance scandals; where his sympathy lay in the police investigations; what immoral appointments he made to office; how he was enriched through the favor of Tammany Hall; and yet the citizens of the great Empire State seem happy in the spectacle of him regulating corporations, as Chairman of the Commission, and sanctimoniously offering to cooperate with a reform government.

Easy to Understand

ONLY little by little do the people become interested in improved devices for governing themselves. At one moment La Follette will succeed in stirring up Wisconsin; at another, a group of men will arouse Kansas; Oregon responds to the teaching of U'Ren; California is stirred into new ideas, after long domination. Winston Churchill and a few others start the ball rolling in New Hampshire. Wherever the movement gets well started, some advantages are reaped in actual legislation. Occasionally we find a number of improvements accepted at once; more often they come one at a time.

Brand Whitlock, Mayor of Toledo, will give his personal experiences in an early issue, and let the reader see how they bear on the importance of the short ballot,—possibly it is the most important single step in legislation now being urged. President Wilson is the head of the Short Ballot Association, and the principle has had the enthusiastic support of Colonel Roosevelt, President Eliot and most other leaders of present-day thought. If New York City could win the short ballot, without party designations, within the next four years, it would make a permanent reality of the recent crushing of Tammany. It happens, however, that while Governor Hughes succeeded in awakening the state on direct primaries, nobody as yet has stirred it into a semblance of life on an even more important issue.

A Question to Socialism

ONE of the most interesting books we know about socialism is that of Professor Simkhovitch, "Marxism versus Socialism," published this year. In it he presents very effectively a group of facts making against the theory of increasing misery, on which Marx based his argument. Here is an example of the amount of consumption of various articles in England in 1840 and in 1881:

	1840	1881
Bacon and lard	100	15 00
Butter	1 00	6 30
Cheese	6 00	5 77
Cornmeal and rice	1 00	6 30
Eggs	2 00	61 00
Wine	6 00	10 50
Cocoa	6 00	6 00
Corn, wheat and wheat flour	67 47	610 00
Raw sugar	15 00	56 00
Refined sugar	60	6 50
Tin	1 00	4 00
Tea	1 00	1 00
Wool	6 00	6 00
Wine	6 00	6 00
Spirits	6 00	6 00
Shut	1 00	1 00

Similar figures are given about other countries, but these are enough to illustrate. We have not happened to see any effective socialistic answer to such figures, and should be glad to know from some member of that party what the best answer is. Socialism certainly stands on a different footing if it has to depend merely on the allegation that, although the world is improving with great speed now, socialism could make it improve even more rapidly, than it would stand on if it could demonstrate that the misery of the laboring classes really has increased.

The South and the Panama Canal

THE genius of the New South and the sentiment of the Old South were both in evidence at the meeting of the Southern Commercial Congress, at Mobile, to celebrate, ahead of San Francisco, the opening of the Panama Canal. Mobile itself is a mingling of the old and the new, modern skyscrapers looking down upon Moorish architecture inherited from the Spanish régime; hospitality is not forgotten in the hustling fur business. It is also nearest to the Canal, among the more important ports of the Gulf. The theme of all the papers and addresses was the advantage that with proper effort will accrue to the South with the completion of the great water-way; yet the noon hour of one day was given to memorial addresses, in thirteen auditoriums, in honor of Senator John T. Morgan, the great advocate of the Canal. Those who listened to his long speeches in the Senate may have sometimes thought that he was trying to make himself immortal by making himself eternal, but there was another side. Sibert, of the Engineering Corps, testified that every difficulty he had to meet had been forecast by Senator Morgan, and that he had derived more information about the geology, topography and soil formation of the canal zone from those speeches than from all other sources combined. The Congress, on its excursion to the Canal, following the meeting in Mobile, erected a monument at the Atlantic entrance to the memory of John Tyler Morgan. Alabama claims Gorgas, and also Sibert, who built the dams and locks; South Carolina, Gaillard, of Culebra Cut fame, and Jackson Smith, who organized the labor force from other lands for the construction work. The South does not forget.

What Is Feminism?

MRS. MARY AUSTIN has written a book called "Love and the Soul Maker," which seems to us to express, with wonderful charm, insight and clearness, the very essence of the feminist movement and it is a pleasure to us that we are soon to begin the publication in serial form. It seems to us to equal in imagination and ethical vision Ellen Key's monumental work, and much to surpass it in the definiteness with which are outlined those changes needed to bring the recognized ideals of the world into conformity with the requirements of the highest female natures.

Since the new management began to publish HARPER'S WEEKLY on August 16, it has covered a number of the aspects of that great and new striving toward higher and fairer standards in morals, politics, and economics which are classed generally together under the head of the Feminist Movement. In "What Women Are After" on August 16, the editor endeavored to sketch the outlines of the movement. On August 23, Mrs. Coolidge painted a feminist view of the politics of men. On August 30, was published "Modesty in Women's Clothes" by Francis R. McCabe; on September 6, "Unmarried Mothers," by Edith Livingston Smith; on September 13, "Physical Freedom for Women," by Bliss Carman; on September 20, "Two Kinds of Mothers" by the editor, and "Women as World Builders." On September 27, "The Younger Suffragists," by Winnifred Harper Cooley, and a fiction story by Corra Harris that depicted the attitude of women toward men, and another fiction story by Neith Boyce showing the first awakening of love in a young girl; on October 4, "Marriage Today and Tomorrow," by Anna Garlin Spencer, and a description of how Oscar Wilde ran a remarkable up-to-date woman's magazine, by Arthur Fish; much of our fiction also is feminist, as for example on October 11, a story by Maude Springer Nesom, showing how earnest young people, endeavoring to be progressive and radical in their attitude toward marriage and love, frequently act from ignorance of profoundly important human facts; on October 18, a discussion by the editor of one play pointing out how much misery results from the double standard of morality, and of another play showing how ideal freedom for women is impossible without economic freedom; on October 25, "The Woman of It," by Ethel Watts Mumford; on November 8, a tribute with pen and pencil to Mrs. Pankhurst by James Montgomery Flagg, "A Ballad of Woman," by Richard Le Gallienne, and "Telling the Truth to Mike Smith," about the injury men do to women, by Paul E. Triem; on November 15, an answer to certain objections to woman suffrage by Alice Genbel de la Ruelle.

Thus it will be seen that we have been steadily endeavoring to work our way toward a comprehensive treatment of the feminist movement on its many sides. A number of features already arranged for will show the intelligent men and women of the country coöperating with us in this effort, for of course it is only through them that any editor can hope successfully to deal with so large a subject.

Sitting on the Fence

MOST estimable is the *Evening Post* of Chicago, and entitled to its own opinions. It says of HARPER'S WEEKLY that it "dodges and evades on the vexed question of militancy." What does it mean by dodging and evading? Apparently it means merely that we are not scolding at militancy, for it says:

"Everywhere, sentiment drips out thickly upon the subject. Nowhere is it considered in the cold light of fact and intelligence."

"Now, militancy is good or bad, or both. In any case, it seems to us that it rests upon an editor who aims to speak for women to say so, and to say why. To patroize and to sentimentalize is to straddle, and not even to take the straddle seriously."

We are not worried at all at having sentiment drip out thickly upon the subject, for sentiment changes the world, and the sentiment which lies behind the woman movement is a sentiment of life, of justice, and of freedom. Whatever pain it brings to the Chicago publication, we shall continue to ooze sentiment on the fight that women are making for their rights, and at the same time we shall continue to say just what we mean, and no more, on militancy as a method. We have indicated that we believed it was a successful method up to about two years ago, and is now holding back progress in England. If the *Post* wants to find a publication that will say that militancy is the best thing that ever existed, it doubtless can do so by reading any one of various feminist organs. But we take it that is not what it wishes. It wishes rather to find a publication that scolds bitterly at Mrs. Pankhurst and militancy, for somewhat overdoing the cause, and letting their faith run away with their judgment. It can also find plenty of staidpat organs everywhere that will satisfy it with their shrill disapproval. It will only waste its time reading HARPER'S WEEKLY in search of either extreme, when neither happens to be our real conviction. So we hope it will read us with other ends in mind.

A Word with Vigilance

WHILE engaged in the wholly pleasant pastime of boxing with our critics, we wish to make a remark upon the publication known as *Vigilance*, a useful and needed publication,—the organ of the American Vigilance Association, which is doing noble work in breaking down the white slave traffic. With most of the papers that have misrepresented our attitude on the Mann Law, we need not bother. When we commented on the opinion of Judge Van Fleet, we had not read the details of the Diggs-Caminetti case, and we have not read them since. We were not commenting on a particular event, but on a principle announced. The judge said: "It is immaterial what the character of the two girls involved in these two charges was at the time of the acts charged." Our position was, that for the government to go into every case of illicit love, whether anybody was deceived in it or not, and whether there was any misleading temptation of the young, or any other element except the illegality itself, was to bring

about the danger of reaction and the consequent weakening of the splendid crusade against organized vice. *Vigilance* ought not to be among the publications misrepresenting our position. When, however, it publishes quotations from the *Galesburg* (Ill.) *Register* and the *Waterloo* (Iowa) *Courier*, without any indication that those papers wholly missed the point of our comment, it does not seem to us to be acting quite carefully enough for so responsible a publication.

Two Dancers

ISADORA DUNCAN leaves a memory as definite as a Grecian frieze, or of a series of moving Grecian friezes, or of any other recorded world of beautiful experiences. Rhythm, the essence of the dance, goes through all things that are beautiful, whatever the special art may be. Nature dances to all who are sensitive to her; painting, through its proportions and its color, dances; and in a solemn and stately way architecture and religion dance. The rhythm of life shows itself in the play of the child, and the lay of the lovers, and in the triumph of the imaginative statesman. There is certainly rhythm, if not music, in the action of the stars.

Each lovely specific thing is caught by this universal rhythm and, within the conditions of its own personality, expresses it.

Isadora Duncan is rhythm and Pavlova is rhythm. The dance of neither is separated from the universal dance of life.

In these past few years America is beginning to dance—and following the dance will come rhythmical art and literature and justice and peace. There can be no real evil in the soul of a dancing community. Evil thrives in dark and stiff and formless places, physical and moral, and it is driven away by happy children and dancing artists and enlightened, working men and women.

Pavlova makes her contributions to the world's harmony and joy under strict rules and regulations. Her dancing is like other ballets except that it is much better and more fully realized, more intensely rhythmical. It is true that she and the wider impulse that formed her mark a departure from the traditional ballet, but she is nevertheless beautifully subjected to a complex technical art. A touch of the acrobat is in it, and it is a remarkable fact that crowds of people can appreciate technical excellence. Many more persons understand the rules and the regulations of any art than they do the deeper law of the art.

Here is a contrast between her and Isadora Duncan. Pavlova dances expertly within the rules and Miss Duncan seems outside of or above the rules, guided only by some simple law of rhythm which becomes the highest poetry of expression.

The classic quality of Miss Duncan's dancing lies not merely in its obvious relation to moving and fusing sculpture, but in the eternal law of rhythm, the law that nature when purely and intensely felt obeys—that is, the law that all pure art obeys. This law we cannot name or define, but those who have felt it know that Isadora obeys it. When we see this wonderful creature dance, we have tears in our eyes, because we feel again, in a new way, the eternal beauty, the eternal rhythm, and we again worship and adoringly subscribe.

- A TURKEY TROT. -

Two Embassies

By SYDNEY BROOKS

THE United States possesses some rather dingy offices in the west end of London that call themselves an Embassy,—but it has no Ambassador's residence. It acts with republican severity on the theory that all work and no sleep, let alone play, makes a good Ambassador. It provides him accordingly with a desk-chair, pens and paper, and the paraphernalia of his official business, but takes no account of his human longing for a bed, or a roof over his head, or anything that might serve him as a temporary home. These are luxuries he is expected to furnish for himself and to pay for out of his salary; and the way he meets the emergency, the sort of house and location he decides upon, is a pretty sure index of the general scale of living he means to adopt.

This, again, is mainly determined by the amount of his private income—his official salary of \$17,500 a year being totally inadequate to the task of defraying house-rent and living expenses in any of the principal European capitals and at the same time of keeping up the state that the diplomacy of today more or less insists upon. The consequence is that in one capital you will find an American Ambassador living in a palace, the rent of which exceeds the exiguous honorarium paid him by his government; and in another you will find him as poorly housed as the average representative of a Balkan State. I have known American Ambassadors in London, Paris and Berlin who can hardly have spent less than from \$50,000 to \$150,000 a year out of their private purses.

ONE had almost, indeed, begun to fear that the old type of scholar-diplomat, once America's unique and most agreeable contribution to international intercourse, the type so admirably represented by men like Baneroff, Lowell, Washington Irving, and Motley, was extinct, and that the United States had ceased, or was ceasing, to send abroad men who were appointed and welcomed on the strength of their literary laurels and from whom nothing in the way of a great establishment was expected. In London, especially, Mr. Page's three immediate predecessors were men of very large private means which they spent ungrudgingly in their country's service, and there was an inevitable embarrassment in asking any man to step into their shoes who was financially incapable of maintaining their style of doing things. The embarrassment, however, was never of England's making. I mean by that that neither the British court nor London society nor the press of the country would ever be guilty of the sort of comments and hinted objections that greeted the appointment of Dr. Hill to the Berlin Embassy a few years ago. Neither the Kaiser nor Berlin came out of that episode with credit. They showed very plainly that they preferred to see the United States represented at the German capital by men of large wealth rather than by men, however cultivated and accomplished, whose circumstances did not permit them to make a great social splash. But in London we prize the American Ambassador for his personality and achievements and character, and for the degree in which he brings with him the true flavor of American life; and so far from regarding a huge income as essential to the occupant of the London Embassy we are more disposed to find something incongruous in the spectacle of a representative of the United States, a republic and popularly associated with a certain tradition of a Jeffersonian simplicity, inhabiting the finest mansion in the metropolis and keeping up a more than ducal state. There is no capital I know of where lavish entertainments and over-elaborate appointments count, socially, for so little and where men and women make their way so much on their own merits; and it is partly because Mr. Page has restored a juster sense of proportion than has always been observed by other American Ambassadors in these matters that his advent among us has been so cordially welcomed.

THERE is not the smallest doubt of his having succeeded. Yet the post upon which he has entered is one that might well try the capacities of any man. Of all diplomatic offices it is at once the pleasantest and the most peculiar and exacting. The English people insist on treating the American Ambassador rather as a national guest whom it is a delight to honor, and from whom a full measure of entertainment is expected in return, than as an official emissary. He stands apart from all his colleagues of the diplomatic corps. They are foreigners and he is not. From the day of his arrival he becomes an intimate part of London society and a still more intimate part of the world of English art and letters and public—by which, of course, I do not mean political,—life. Other Ambassadors may be as lavishly entertained, may be able to show as full an engagement list, may dispense in return an equally brilliant hospitality. But the quality of the welcome extended to them differs altogether from that which greets their American confrère. He alone gets behind the scenes, is shown the best of whatever England has to offer, and becomes at once a public character. Of him alone it is expected that he will be less of an official and more of a man. One hears, perhaps, once in a lifetime of the Russian or German or Italian Ambassador being asked to lecture before an educational or philosophical society or invited to a literary dinner. However great their command of English, they still stand outside all but a fraction of the national life. The public knows nothing about them, and does not care to know anything. A paragraph in the Court Circular is enough to announce their advent or recall, while their American colleague, on his arrival as well as his departure, receives a full-blown editorial from the entire London press. The one is merely an incident of officialdom—the other is a national event.

THIS is a state of affairs that raises some peculiar perplexities and embarrassments. English hospitality, successfully, as a rule, escapes the charge of exuberance. But I am not sure that there is not something short of inexorable in the attentions we shower upon the American Ambassador, and that we are not at times positively brutal in our kindness. We never really give the poor man a moment's rest. Throughout his stay among us we presume inordinately on his acquaintance with English. There must, indeed, be times when we force him to wish he spoke Basque and Basque only, and did not the faith and morals hold that Milton held. So might he live among us and possess his soul in quietude—a diplomatist and not a public institution. But as it is, no sooner has he reached London than the bombardment begins. I must admit at once that it is most vigorously replied to. England and the American Ambassador set to, forthwith, to see which can entertain the other the best. It is true that not all the depredations upon his leisure are committed by Englishmen; his own countrymen and countrywomen have something to answer for. They take possession of his house on every July-the-Fourth, and squeeze his hand to a pulp without breaking down his smile; and they demand his presence and his speech at the yearly banquets on Independence Day, Thanksgiving Day and Washington's Birthday. They are among the penalties of his position and I do not underrate them; but they can hardly stand a moment's comparison with all that is inflicted upon him by English insistence.

LONDON, and indeed all England, calmly takes it for granted that the representative of the United States, whoever he may be, will be a first-class after-dinner speaker, familiar with the whole of American history and the whole of English literature, omniscient and omnipresent, and able and willing at any moment to read a paper, deliver an address, open a library,

distribute prizes at a school, unveil a monument, lay a foundation-stone, and figure as the guest of the evening at dinners of remorseless frequency and racking variety. We turn him into a sort of lecturer to the nation. We launch him on a full tide of oratory from Land's End to John O'Groat's, thrusting upon him, as he sweeps along, the presidency of innumerable societies. We scout the idea that protocols and despatches and all the banalities of international negotiations can have any claim upon him. Knowing him to be an American, and therefore interested in education, we play upon his weakness and shamelessly take toll of his democratic sympathies.

THINGS indeed have come to such a pass that an American Ambassador who was content to be merely an Ambassador, who loathed public occasions and shunned a platform, and who screened himself behind the ramparts of officialdom, would be reckoned not only a freak of nature but a disappointment and a failure. It is partly, however, America's own fault. She should not send us such charming, cultivated, good-natured men, every one of them triply armed with the capacity to discharge our exactions in full. Adams, Phelps, Lowell, Bayard, Hay, Choate and Whitelaw Reid—what other Embassy in the world can show so brilliant a line of occupants? Every one of them was distinguished as a lawyer, citizen, or litterateur before he became eminent as a diplomatist. Every one of them had interests and affiliations that stretched far beyond the humdrum official routine. Every one of them warmed both hands at the cheerful fire of English existence with a palpable relish. Every one of them was a great social success, and a success not less pronounced in his purely business and bargaining hours. Every one of them touched life at a hundred more points than the average professional diplomatist. Indeed, a tongue-tied, unsocial, narrow-gauged, inflexibly official Ambassador from the United States has become unthinkable to us; he is not less incredible to you in America. America insists on sending us her best, and we return the compliment by laying out the gift to the most ample advantage.

NOTHING like this extreme of versatility is required from the British Ambassador at Washington. Yet he, too, occupies a post of singular difficulty. Times have changed since Sir Stratford Canning described the Washington Embassy as very pleasant socially, but not requiring any great talents politically. During the past decade and a half, the office of British representative at Washington has been in many ways one of the most exacting in the service. I know, indeed, of no post which makes so insistent a demand on the level-headedness and adaptability of its occupants. I say occupants in the plural, because in Washington less than in any other capital was the British Ambassador's wife be dissociated from her husband's failure or success. The prestige of the British Embassy will often depend more on her social flexibility and manner than on her husband's merits as a diplomatist. Very few Englishwomen, so far as my observation goes, are really happy or popular in the United States, or know how to take Americans, or can help being jarred, and, what is more, showing that they are jarred, by the thousand and one little differences between English and American social standards and usages and ways of doing things. The wife of the British Ambassador has to accommodate herself to a social environment that is all the more difficult to gauge because of its similarity in general outline and its dissimilarity in detail to what she is used to at home or in the capitals of Europe. It asks a very high degree of tact and self-control, sometimes, to accept persons and things as they come, without comment or surprise, and to recognize that what might be counted easy-going-ness or curiosity in London may in Washington be merely a novel token of friendliness and interest. A British Ambassador's wife in the American capital has always to bear in mind that in matters of social usage the English and Americans, while aiming at the same mark and meaning essentially the same thing, often behave and express themselves in opposite senses. Not every British Ambassador at

Washington has had a wife who possessed these qualities of perception; and more than one hostess at the Embassy on Connecticut Avenue has passed her life, like Lady Barberina in Mr. Henry James' incomparable tale, in a state of hopeless alienation from, and misunderstanding of, her new surroundings. When this is the case the result is retroactively disastrous, because Washington resembles nothing so much as a whispering-gallery, its society is small, exceedingly intimate, and enjoys a highly specialized code of etiquette that is all its own—and a mistake, and especially a mistake on the part of the British Ambassador's wife, becomes public property at once. It certainly was not among the least of the causes of Mr. Bryce's success as Ambassador that a mastery of all these social nuances and minutiae was with Mrs. Bryce a matter of instinct, fortified by a thorough knowledge of American life and of the American people.

BUT if the conditions thus impose on the wife of the British Ambassador an unusual degree of diplomatic wariness, the Ambassador himself has to be doubly on his guard. For one thing, he finds the duties of his office carried on in a glare of publicity that in Europe is not only unknown but unimaginable. For another, there is always a party in the United States anxious to score a point against Great Britain, and there are always votes to be won—though not many, happily, in these days—by an anti-British campaign. The Ambassador, therefore, has to practice in the sphere of politics the same tactfulness and discrimination demanded from his wife in the sphere of society. He must ever be ready to make allowances; he must constantly remember that America is the exception; he must know what to discount. This is a kind of knowledge—like the not less essential knowledge of all the intricacies of the American system of government—that can hardly ever be gained by instinct or patched up by a few months' study. It is the sort of knowledge that only a man with a prolonged and intimate acquaintance with the United States is likely to possess, and that the ordinary type of British diplomatist, pitchforked into Washington from one of the capitals of Europe, is not only most certain to lack but to be unable to acquire. But what, above all, is necessary is that the British Ambassador should have the instinct for taking Americans in the right way. If he has that he has done the one thing needful. If, on the other hand, he confirms the average American's worst suspicions of British angularity and reserve, if he seems stiff and self-contained and unable to let himself go, if he has not a natural sympathy with the American people and with the spirit of their social life, his abilities are as good as wasted.

MR. BRYCE, of course, possessed all these advantages and qualifications, and many others, in an extraordinary degree. He won for the British Embassy in Washington a position analogous to that of the American Embassy in London. There is and can be only one Bryce, but I venture to predict that in their own way Sir Cecil and Lady Spring-Rice will achieve a success not less pronounced. Lady Spring-Rice, the daughter of Sir Frank Lascelles, who for many anxious years represented Great Britain at Berlin and proved himself an exceptionally capable diplomat, is making her first acquaintance with the United States; but she has the qualities of insight and flexibility that a British Ambassador's wife at Washington ought to possess. Sir Cecil, on the other hand, has the supreme advantage of being already known to Americans and liked wherever he is known. He served in Washington some years ago as an attaché, formed many friendships that he must already have found it delightful to reawaken, and left behind him a reputation and a popularity that never ceased to be cherished even in that city of endless leave-takings and forgettings. A man of alert and winning personality, with a ripe and understanding mind and the easiest, and most sympathetic manner, blessed with a native store of humor that has been vivified by contact with men and things in many diverse lands, and absolutely devoid of any sort of pretentiousness, he knows by instinct how to mingle with Americans in the broad, human way that most appeals to them.

How the Combiners Combine

By LOUIS D. BRANDEIS

Being Part II of Breaking the Money Trust

In the first article, "Our Financial Oligarchy," Mr. Brandeis described the concentration of power in the hands of a few financiers by consolidation of banks and trust companies, by the combination of railroads into systems, and by the concentration of functions in the investment banker.

AMONG the allies, two New York banks,—the National City and the First National—stand preëminent. They constitute, with the Morgan firm, the inner group of the Money Trust. Each of the two banks, like J. P. Morgan & Co., has huge resources. Each of the two banks, like the firm of J. P. Morgan & Co., has been dominated by a genius in combination. In the National City it is James Stillman; in the First National, George F. Baker. Each of these gentlemen was formerly President, and is now Chairman of the Board of Directors. The resources of the National City Bank (including its Siamese-twin security company) are about \$300,000,000; those of the First National Bank (including its Siamese-twin security company) are about \$200,000,000. The resources of the Morgan firm have not been disclosed. But it appears that they have available for their operations, also, huge deposits from their subjects; deposits reported as \$169,500,000.

The private fortunes of the chief actors in the combination have not been ascertained. But sporadic evidence indicates how great are the possibilities of accumulation when one has the use of "other people's money." Mr. Morgan's wealth became proverbial. Of Mr. Stillman's many investments, only one was specifically referred to, as he was in Europe during the investigation, and did not testify. But that one is significant. His 47,498 shares in the National City Bank are worth about \$18,200,000. Mr. Jacob H. Schiff aptly described this as "a very nice investment."

Of Mr. Baker's investments we know more, as he testified on many subjects. His 20,000 shares in the First National Bank are worth at least \$20,000,000. His stocks in six other New York banks and trust companies are together worth about \$3,000,000. The scale of his investment in railroads may be inferred from his former holdings in the Central

Railroad of New Jersey. He was its largest stockholder—so large that with a few friends he held a majority of the \$27,436,800 par value of outstanding stock, which the Reading bought at \$160 a share. He is a director in 28 other railroad companies; and presumably a stockholder in, at least, as many. The full extent of his fortune was not inquired into, for that was not an issue in the investigation. But it is not surprising that Mr. Baker saw little need of new laws. When asked:

"You think everything is all right as it is in this world, do you not?"

He answered:

"Pretty nearly."

Ramifications of Power

BUT wealth expressed in figures gives a wholly inadequate picture of the allies' power. Their wealth is dynamic. It is wielded by geniuses in combination. It finds its proper expression in means of control. To comprehend the power of the allies we must try to visualize the ramifications through which the forces operate.

Mr. Baker is a director in 22 corporations having, with their many subsidiaries, aggregate resources or capitalization of \$7,274,000,000. But the direct and visible power of the First National Bank, which Mr. Baker dominates, extends further. The Pujo report shows that its directors (including Mr. Baker's son) are directors in at least 27 other corporations with resources of \$4,270,000,000. That is, the First National is represented in 49 corporations, with aggregate resources or capitalization of \$11,544,000,000.

IT may help to an appreciation of the allies' power to name a few of the more prominent corporations in which, for instance, Mr. Baker's influence is exerted—visibly and directly—as voting trustee, executive committee man or simple director.

1. Banks, Trust, and Life Insurance Companies: First National Bank of New York; National Bank of Commerce; Farmers' Loan and Trust Company; Mutual Life Insurance Company.

2. Railroad Companies: New York Central Lines; New Haven, Reading, Erie, Lackawanna, Lehigh Valley, Southern, Northern Pacific, Chicago, Burlington & Quincy.

3. Public Service Corporations: American Telegraph & Telephone Company, Adams Express Company.

4. Industrial Corporations: United States Steel Corporation, Pullman Company.

Mr. Stillman is a director in only 7 corporations, with aggregate assets of \$2,476,000,000; but the directors in the National City Bank, which he dominates, are directors in at least 41 other corporations, with their subsidiaries, have an aggregate capitalization or resources of \$16,564,000,000. The members of the firm of J. P. Morgan & Co., the acknowledged leader of the allied forces, hold 72 directorships in 47 of the largest corporations of the country.

The Pujo Committee finds that the members of J. P. Morgan & Co. and the directors of their controlled trust companies and of the First National and the National City Bank together hold:

"One hundred and eighteen directorships in 34 banks and trust companies having total resources of \$2,679,000,000 and total deposits of \$1,983,000,000.

"Thirty directorships in 10 insurance companies having total assets of \$2,293,000,000.

"One hundred and five directorships in 32 transportation systems having a total capitalization of \$11,784,000,000 and a total mileage (excluding express companies and steamship lines) of 150,200.

"Sixty-three directorships in 24

producing and trading corporations having a total capitalization of \$3,339,000,000.

"Twenty-five directorships in 12 public-utility corporations having a total capitalization of \$2,150,000,000.

"In all, 341 directorships in 114 corporations having aggregate resources or capitalization of \$22,245,000,000."

Twenty-two Billion Dollars

TWENTY-TWO billion dollars is a large sum—so large that we have difficulty in grasping its significance. The mind realizes size only through comparisons. With what can we compare twenty-two billions of dollars? Twenty-two billions of dollars is more than three times the assessed value of all the property, real and personal, in all New England. It is nearly three times the assessed value of all the real estate in the City of New York. It is more than twice the assessed value of all the property in the thirteen Southern states. It is more than the assessed value of all the property in the twenty-two states, north and south, lying west of the Mississippi River.

But the huge sum of twenty-two billion dollars is not large enough to include all the corporations to which the "influence" of the three allies, directly and visibly, extends, for

First: There are 56 other corporations (not included in the Pujó schedule) each with capital or resources of over \$3,000,000, and aggregating nearly \$1,350,000,000, in which the Morgan allies are represented according to the Directory of Directors.

Second: The Pujó schedule does not include any corporation with resources of less than \$5,000,000. But these financial giants have shown their humility by becoming directors in many such. For instance, members of J. P. Morgan & Co., and directors in the National City Bank and the First National Bank are also directors in 158 such corporations. Available publications disclose the capitalization of only 38 of these, but those 38 aggregate \$78,669,375.

Third: The Pujó schedule includes only the corporations in which the Morgan associates actually appear by name as directors. It does not include those in which they are represented by dummies, or otherwise. For instance, the Morgan influence certainly extends to the Kansas City Terminal Railway Company, for which they have marketed since 1910 (in connection with others,) four issues aggregating \$41,761,000. But no member of J. P. Morgan & Co., of the National City Bank, or of the First National Bank appears on the Kansas City Terminal directorate.

Fourth: The Pujó schedule does not include all the subsidiaries of the corporations scheduled. For instance, the capitalization of the New Haven System is given as \$385,000,000. That sum represents the bond and stock capital of the New Haven Railroad. But the New Haven System comprises many controlled corporations whose capitalization is only to a slight extent included directly or indirectly in the New Haven Railroad balance sheet. The New Haven, like most large corporations, is a holding company also; and a holding company may control subsidiaries while owning but a small part of the latter's outstanding securities. Only the small part so held, will be represented in the holding company's balance sheet. Thus, while the New Haven Railroad's capitalization is

only \$385,000,000—and that sum only appears in the Pujó schedule—the capitalization of the New Haven System, as shown by a chart submitted to the Committee, is over twice as great; namely, \$849,000,000.

It is clear, therefore, that the \$22,000,000,000, referred to by the Pujó Committee, understates the extent of concentration effected by the inner group of the Money Trust.

Cementing the Triple Alliance

CA'RE was taken by these builders of imperial power that their structure should be enduring. It has been buttressed on every side by joint ownerships and mutual stockholdings, as well as close personal relationships; for directorships are ephemeral and may end with a new election. Mr. Morgan and his partners acquired one-sixth of the stock of the First National Bank, and made a \$6,000,000 investment in the stock of the National City Bank. Then J. P. Morgan & Co., the National City, and the First National (or their dominant officers—Mr. Stillman and Mr. Baker) acquired together, by stock purchases and voting trusts, control of the National Bank of Commerce, with its \$100,000,000 of resources; of the Chase National, with \$125,000,000; of the Guaranty Trust Company, with \$232,000,000; of the Bankers' Trust Company, with \$205,000,000; and of a number of smaller, but important, financial institutions. They became joint voting trustees in great railroad systems; and finally (as if the allies were united into a single concern) loyal and efficient service in the banks—like that rendered by Mr. Davison and Mr. Lamont in the First National—was rewarded by promotion to membership in the firm of J. P. Morgan & Co.

The Provincial Allies

THIS equipped and banded together, J. P. Morgan & Co., the National City, and the First National easily dominated America's financial center—New York; for certain other important bankers, to be hereafter mentioned, were held in restraint by "gentlemen's" agreements. The three allies dominated Philadelphia too; for the firm of Drexel & Co. is J. P. Morgan & Co. under another name. But there are two other important money centers in America—Boston and Chicago.

In Boston there are two large international banking houses—Lee, Higginson & Co., and Kidder, Peabody & Co.—both long established and rich; and each possessing an extensive, wealthy clientele of eager investors in bonds and stocks. Since 1907 each of these firms has purchased or underwritten (principally in conjunction with other bankers) about 100 different security issues of the greater interstate corporations—the issues of each banker amounting in the aggregate to over \$1,000,000,000. Concentration of banking capital has proceeded even further in Boston than in New York. By successive consolidations the number of national banks has been reduced from 58 in 1898 to 19 in 1913. There are in Boston now also 23 trust companies.

The National Shawmut Bank, the First National Bank of Boston and the Old Colony Trust Co., which these two Boston banking houses and their associates control, alone have aggregate resources of \$288,386,294, constituting about one-half of the banking resources

of the city. These great banking institutions, which are themselves the result of many consolidations, and the 21 other banks and trust companies, in which their directors are also directors, hold together 90 per cent. of the total banking resources of Boston. And linked to them by interlocking directorates are 9 other banks and trust companies whose aggregate resources are about 2½ per cent. of Boston's total. Thus of 44 banking institutions, 33, with aggregate resources of \$509,516,239, holding about 92½ per cent. of the aggregate banking resources of Boston, are interlocked. But even the remaining 9 banks and trust companies, which together hold but 7½ per cent. of Boston banking resources, are not all independent of one another. Three are linked together; so that there appear to be only six banks in all Boston that are free from interlocking directorate relations. They together represent but 5 per cent. of Boston's banking resources. And it may well be doubted whether all of even those 6 are entirely free from affiliation with the other groups.

Boston's banking concentration is not limited to the legal confines of the city. Around Boston proper are over thirty suburbs, which with it form what is popularly known as "Greater Boston." These suburban municipalities, and also other important cities like Worcester and Springfield, are, in many respects, within Boston's "sphere of influence." Boston's inner banking group has interlocked, not only 33 of the 44 banks of Boston proper, as above shown, but has linked with them, by interlocking directorships, at least 42 other banks and trust companies in 35 other municipalities.

Once Lee, Higginson & Co. and Kidder, Peabody & Co. were active competitors. They are so still in some small, or purely local matters; but both are devoted co-operators with the Morgan associates in larger and interstate transactions; and the alliance with these great Boston banking houses has been cemented by mutual stockholdings and co-directorships. Financial concentration seems to have found its highest expression in Boston.

Similar relations exist between the triple alliance and Chicago's great financial institutions—its First National Bank, the Illinois Trust and Savings Bank, and the Continental & Commercial National Bank—which together control resources of \$561,000,000. And similar relations would doubtless be found to exist with the leading bankers of the other important financial centers of America, as to which the Pujó Committee was prevented by lack of time from making investigation.

The Auxiliaries

SUCH are the primary, such the secondary powers which comprise the Money Trust; but these are supplemented by forces of magnitude.

"Radiating from these principal groups," says the Pujó Committee, "and closely affiliated with them are smaller but important banking houses, such as Kissel, Kinnicut & Co., White, Weld & Co., and Harvey Fisk & Sons, who receive large and lucrative patronage from the dominating groups, and are used by the latter as jobbers or distributors of securities, the issuing of which they control, but which for reasons of their own they prefer not to have issued or distributed under their own names. Lee, Higginson & Co., besides being partners with the inner

group, are also frequently utilized in this service because of their facilities as distributors of securities."

For instance, J. P. Morgan & Co. as fiscal agents of the New Haven Railroad have the right to market its securities and that of its subsidiaries. Among the numerous New Haven subsidiaries, is the New York, Westchester and Boston—the road which cost \$1,500,000 a mile to build, and which earned a deficit last year of nearly \$1,500,000, besides failing to earn any return upon the New Haven's own stock and bond investment of \$8,441,951. When the New Haven concluded to market \$17,500,000 of these bonds, J. P. Morgan & Co. "for reasons of their own," "preferred not to have these bonds issued or distributed under their own name." The Morgan firm took the bonds at 92½ net; and the bonds were marketed by Kissel, Kinnicut & Co. and others at 96½.

The Satellites

THE alliance is still further supplemented, as the Pujo Committee shows:

"Beyond these inner groups and subgroups are banks and bankers throughout the country who cooperate with them in underwriting or guaranteeing the sale of securities offered to the public, and who also act as distributors of such securities. It was impossible to learn the identity of these corporations, owing to the unwillingness of the members of the inner group to disclose the names of their underwriters, but sufficient appears to justify the statement that there are at least hundreds of them and that they extend into many of the cities throughout this and foreign countries.

"The patronage thus proceeding from the inner group and its subgroups is of great value to these banks and bankers, who are thus tied by self-interest to the great issuing houses and may be regarded as a part of this vast financial organization. Such patronage yields no inconsiderable part of the income of these banks and bankers and without much risk on account of the facilities of the principal groups for placing issues of securities through their domination of great banks and trust companies and their other domestic affiliations and their foreign connections. The underwriting commissions on issues made by this inner group are usually easily earned and do not ordinarily involve the underwriters in the purchase of the underwritten securities. Their interest in the transaction is generally adjusted unless they choose to purchase part of the securities, by the payment to them of a commission. There are, however, occasions on which this is not the case. The underwriters are then required to take the securities. Bankers and brokers are so anxious to be permitted to participate in these transactions under the lead of the inner group that as a rule they join when invited to do so, regardless of their approval of the particular business, lest by refusing they should thereafter cease to be invited."

IN other words, an invitation from these royal bankers is interpreted as a command. As a result, these great bankers frequently get huge commissions without themselves distributing any of the bonds, or ever having taken any actual risk.

"In the case of the pending New York subway financing of \$170,000,000 of bonds by Messrs. Morgan & Co. and their associates, Mr. Davison [as the Pujo Committee reports] estimated that there were from 100 to 125 such underwriters who were apparently glad to agree that Messrs. Morgan & Co., the First National Bank, and the National City Bank should receive 3 per cent., equal to \$5,100,000—for forming this syndicate, thus relieving themselves from all liability, whilst the underwriters assumed the risk of what the bonds would realize and of being required to take their share of the unsold portion."

The Protection of Pseudo-Ethics

THE organization of the Money Trust is intensive, the combination comprehensive; but one other element was recognized as necessary to render it stable, and to make its dynamic force irresistible. Despotism, be it financial or political, is vulnerable unless it is believed to rest upon a moral sanction. The longing for freedom is ineradicable. It will express itself in protest against servitude and in action;—unless the striving for freedom be made to seem immoral. Long ago monarchs invented, as a preservative of absolutism, the fiction of "The divine right of kings." Bankers, imitating royalty, invented recently that precious rule of so-called "Ethics," by which it is declared unprofessional to come to the financial relief of any corporation which is already the prey of another "reputable" banker.

"The possibility of competition between these banking houses in the purchase of securities," says the Pujo Committee, "is further removed by the understanding between them and others, that one will not seek, by offering better terms, to take away from another, a customer which it has theretofore served, and by corollary of this, namely, that where given bankers have once satisfactorily united in bringing out an issue of a corporation, they shall also join in bringing out any subsequent issue of the same corporations. This is described as a principle of banking ethics."

The "Ethical" basis of the rule must be that the interests of the combined bankers are superior to the interests of the rest of the community. Their attitude reminds one of the "Spheres of Influence" with ample "hinterlands" by which rapacious nations are adjusting differences. Important banking concerns, too ambitious to be willing to take a subordinate position in the alliance, and too powerful to be suppressed, are accorded a financial "sphere of influence" upon the understanding that the rule of banking ethics will be faithfully observed. Most prominent among such lesser potentates are Kuhn, Loeb & Co., of New York,—an international banking house of great wealth, with large clientele and connections. They are accorded an important "sphere of influence" in American railroading, including, among other systems the Baltimore & Ohio, the Union P. & O. and the Southern Pacific. They & the Morgan group have with few exceptions preempted the banking business of the important railroads of the country. But even Kuhn, Loeb & Co. are not wholly independent. They are "qualified allies of the inner group"; and through their close relations with the National City Bank and the National Bank

of Commerce and other financial institutions" have "many interests in common with the Morgan associates, conducting large joint-account operations with them."

The Evils Resultant

First: These banker-barons levy, through their excessive exactness, a heavy toll upon the whole community; upon owners of money for leave to invest it; upon railroads, public service and industrial companies, for leave to use this money of other people; and, through these corporations, upon consumers.

"The charge of capital," says the Pujo Committee, "which of course enters universally into the price of commodities and of service, is thus in effect determined by agreement amongst those supplying it and not under the check of competition. If there be any virtue in the principle of competition, certainly any plan or arrangement which prevents its operation in the performance of so fundamental a commercial function as the supplying of capital is peculiarly injurious."

Second: More serious, however, is the effect of the Money Trust in directly suppressing competition. That suppression enables the monopolist to extort extensive profits; but monopoly increases the burden of the consumer even more in other ways. Monopoly arrests development; and through arresting development, prevents that lessening of the cost of production and of distribution which would otherwise take place.

Can real competition exist among the anthracite coal railroads when the Morgan associates are potent in all of them? And with like conditions prevailing, what competition is to be expected between the Northern Pacific and the Great Northern, the Southern, the Louisville and Nashville, and the Atlantic Coast Line; or between the Westinghouse Manufacturing Company and the General Electric Company. As the Pujo Committee finds:

"Such affiliations tend as a cover and conduit for secret arrangements and understandings in restriction of competition through the agency of the banking house thus situated."

And under existing conditions of combination, relief through other banking houses is precluded.

"It can hardly be expected that the banks, trust companies, and other institutions that are thus seeking participation from this inner group would be likely to engage in business of a character that would be displeasing to the latter or would interfere with their plans or prestige. And so the protection that can be afforded by the members of the inner group constitutes the safest refuge of our great industrial combinations against future competition. The powerful grip of these gentlemen is upon the throttle that controls the wheels of credit and upon their signal, those wheels will turn or stop."

Third: But far more serious even than the suppression of competition is the suppression of industrial liberty, indeed of manhood itself, which this overweening financial power entails. The intimidation which it effects extends far beyond "the banks, trust companies, and other institutions seeking participation from this inner group in their lucrative underwritings"; far beyond those interested in the great corporations directly dependent upon the inner group. Its blighting and benumbing effect extends as well to the

small and seemingly independent business man,—to the vast army of professional men and others directly dependent upon "Big Business," and upon many another; for

1. Nearly every enterprising business man needs bank credit. The granting of credit involves the exercise of judgment of the bank officials; and however honestly the bank officials may wish to exercise their discretion, experience shows that their judgment is warped by the existence of the all-pervading power of the Money Trust. He who openly opposes the great interests will often be found to lack that

The first step in remedying existing conditions will be discussed in the next issue under "Interlocking Directorates"

quality of "safe and sane"ness which is the basis of financial credit.

2. Nearly every enterprising business man and a large part of our professional men have something to sell to, or must buy something from, the great corporations to which the control or influence of the money lords extends directly, or from or to affiliated interests. Sometimes it is merchandise; sometimes it is service; sometimes they have nothing either to buy or to sell, but desire political or social advancement. Sometimes they want merely peace. Experience shows that "it

is not healthy to huck against a locomotive," and "Business is business."

HERE and there you will find a hero,—red-blooded, and courageous,—loving manhood more than wealth, place or security,—who dared to fight for independence and won. Here and there you may find the martyr, who resisted in silence and suffered with resignation. But America, which seeks "the greatest good of the greatest number," cannot be content with conditions that fit only the hero, the martyr or the slave.

The Culture Club of Deadham

By MARY SWAIN WAGNER

THE Woman's Club of Deadham, after a heated discussion (104° F.) decided to permit a traveling suffragette to speak at their next regular meeting. O yes, the meetings were regular all right, there was no doubt about that; hadn't they convened at three o'clock, sharp, every Tuesday afternoon for twenty-five years, to inhale culture?

THESE culturists were insatiable in their desire to absorb culture; they were positively intemperate in their craving; they could swallow Italian art with one gulp, washing it down merely with a concoction of Roman history in a diluted form. They simmered down the poets of the Elizabethan period and hushed the French Revolution. The more they were saturated with culture the greater became their obsession. They had already reduced to pulp ten acts of encyclopaedias bound in calf, which had been purchased from time to time by the uncomplaining citizens of Deadham in their desire to fill this aching culture void.

The state legislature had for some inexplicable reason passed a bill pertaining to woman suffrage; just what this meant they scarcely knew, but they thought it had something to do with women going to the polls to vote. The members of the legislature were queer, it is true, but still they were the lawmakers of the state and it would not do to ignore them entirely. Moreover, the state federation of women's clubs, while it could not conscientiously endorse this bold reform suggested by the suffrage bill and passed by the adons of the state, did recommend to the various clubs that the subject be investigated—a most startling and progressive act for such an organization.

Thus it happened that an invitation was sent to Miss S. Tonethrower to come and expound her views to them the following Tuesday. Susan appeared at the appointed hour, and as no one seemed responsible for her entertainment she retired to an inconspicuous seat in the corner. Mrs. #490 opened the meeting by calling the roll; not a soul was missing, not even those who bitterly opposed this rash step away from the safe and beaten tracks of conservatism. As her name was called, each member responded by reciting a verse or paragraph culled from the woman's page of the local newspaper or from the *Ladies' Home Journal*. Judging from these brief and scholarly recitations the women of Deadham were certainly able to conceal their sense of humor and their apparent seriousness alarmed the little suffragette; she won-

dered how they would receive her simple earnest speech and she longed for the stirring eloquence of Susan B. Anthony.

THEN the minutes (which seemed like hours) were read by Mrs. #396, after which the fatal moment arrived when Mrs. Never-Die introduced Miss S. Tonethrower to the august assembly. At the word every woman settled back in her chair, dug up a bag from some place and began to crochet. This was a new stunt for Susan and it rattled her considerably—rattled her more than the throwing of stones or the crashing of windows. It was the first time she had ever spoken before a culture club and it was most disconcerting to discover that their time was so valuable; she heartily wished that she were at home where she would not be made to feel that she was interfering with the world's work.

AS they gradually settled down to their afternoon's work Susan could see their lips move as they counted the stitches. She tried to explain to them that woman suffrage is a world-wide movement that is not confined to Deadham alone, nor to the United States, nor England, and still they kept on crocheting. She told them that in some states women were not considered as parents of their own children, that in case of wedlock there was only one parent, the father; that when an illegitimate child is born there is still only one parent but in this case it is the mother, and still they sat crocheting. Susan told them that the age of consent or protection for girls was disgracefully low, being only twelve years, and that if they did not feel concerned about their own children they should remember that all women were not equally capable of guarding their girls from harm, and the women crocheted on. In a fit of desperation Susan said—"Don't you know that this is your campaign?" One old lady woke up with a start and dropped a stitch. "Don't you know," she continued, "that the whole world is looking at you?" Hereupon the young woman with earrings surreptitiously powdered her nose.

Susan's heart sank, but she made a desperate effort to pull herself together. If she could only hurl a few stones or smash a few windows or something to break through this knit fabric of indifference! Even the ex-patrial wisdom and advice of Bea, ex Fairfax and Lillian Russell could not would have failed her in this crisis and she knew it. She had spoken hundreds of times before in the presence of vast

audiences in London, New York and Chicago. She had been received with enthusiasm by suffrage societies, labor unions and churches; she had always felt that she held their attention, that she was addressing intelligent people, men and women with their minds open for conviction. But now, how different! What could she do!

Mrs. #390, being a kind hearted lady, noticed Susan's discomfiture and rising to her feet said in a most impressive manner: "Madam President, I move that a vote of thanks be given Miss Tonethrower for her most eloquent and entertaining address and that we then continue with the important work of the day, our study of Spain." The motion was promptly seconded and unanimously passed by all the "I's."

Thereupon Mrs. #460 announced that a paper would be read by Mrs. #35. It was very evident that all the work was done by those whose names could be represented by two figures, their willingness to do the drudgery being their open sesame to this most exclusive club.

THESE women of Deadham became so interested in that defunct institution with a Hapsburg jaw called a king, that they sat with their mouths wide open and actually forgot to crochet. They had pictures of Alphonso's cute little dead and dumb child "so afflicted by a kind and loving providence for some wise purpose." Susan groaned inwardly at all she heard and longed to tell them what she knew of eugenics and to explain to them that it was not providence but a law of nature that the sins of the fathers are visited upon the children unto the third and fourth generations.

Our glorious victories in the Spanish War were discussed with glee and they were unashamed that this great country should have condescended to whip poor little Spain. Neither did they care that the battle of San Juan Hill might have been averted if a lighted cigarette had not been dropped into the hold of the *Maine* by the tobacco trust or some other capitalists having interests in Cuba.

Susan being an ardent advocate of the universal peace movement could endure no more. She slipped quietly to the door and escaped unnoticed. She bared her head to the cooling breezes of the late afternoon; a breath of fresh air revived her indomitable spirit; her thoughtful face was beautified by the reflected glory of the hour as she breathed the prayer "how long, O Lord, how long?"

Bakst and the Russian Ballet

By

HARRY BIRNBAUM

"Alasle" from "Scheherazade"

THE furore that greeted the work of Léon Bakst in Paris in 1909 and in London in 1912, leaves no doubt as to the position that he has won as an artist. It is strange that his art could not thrive in his native land, seeing that the Russian ballet was his direct inspiration, and that the Russian people were eager to welcome an art which aimed to express emotions they had so long been forced to suppress. However, it is not to be regretted that Bakst broke away from the conservative spirit which hovered about the imperial ballet in Russia, and that he became one of the leading forces of an independent company, directed by M. Serge de Diaghilew. This company enlisted the services of such eminent artists as M. Fokine, the organizer of the ballet, M. Tcherepnin, the conductor, and Nijinsky, Pavlova, Karsavina, M. Bolm and Ida Rubenstein among its leading mimes and dancers. This group of artists determined to experiment freely with new ideals, and the attention of the world was quickly directed to their productions, after their first appearances in Paris. It was soon felt that one of its most distinguished features was the daring and brilliant work of Léon Bakst, one of a group of painters who were called upon to design the costumes and stage decorations.

M. Arsène Alexandre gives us a few facts in the life of Bakst. He was born in St. Petersburg in 1888 and was a student in the Academy of Fine Arts there, but grew tired of the work and left. He went to Paris, where we hear of him in 1895 as the pupil of Edelfelt, a Finnish artist; but it was not until 1906 that he began to win a prominent place for himself in the world of art. In that year he was commissioned by Diaghilew to do a piece of decorative work for an important Russian Arts exhibition, and from that time on he took

the artistic world by storm. His decorations for the ballet, notably his *Scheherazade*, revealed a poet and a master of color, who seemed to possess the power to conjure up from his imagination the characters of the "Arabian Nights" and to weave garments of magic about them.

HIS work, of course, is only one element in a three-fold harmony created by Russian music, dancing, and Bakst's own art. The history of its ballet feature dates as far back as Peter the Great, who paved the way for its real beginning under Diderot in 1802. The latter advocated a severe and systematic training of children for the ballet under the supervision of the State. Half a century later, after a history involving romantic love-episodes and grim tragedy, the ballet had gained a very strong hold in Russia, because of its national, patriotic character, due to the reforms of Petipa, a Frenchman. It was, however, not until the appearance of Isadora Duncan that the Russian ballet made its recent and most important development. She was the first to return to the ancient religious dance, to the primal synthesis of pantomime and music. In comparison with the present Russian ballet, Isadora Duncan is considerably antiquated, but the credit for being the first to revolt against the artifices of the modern dance, which showed no traces of emotional movement, is hers. Following closely upon her reforms, came the development of the choros and the folk-dance, which mirrored Russian life with its crude passions and showed the triumph of the body over the spirit. Nothing could so well express the sense of the body as the expressive silence and the plastic art of the Russian. It was this physical or sensual element in the dance that sounded a sympathetic note in the soul of Bakst

and caused him to become one of the foremost liberators of the art of the stage.

There is another and more important cause which helped the development of the Duncan dance into the folk-dance, namely the choral spirit which pervades all Russian music and dancing. In Russia, the note of the folk-song has not yet died and the flower of popular myth has not faded. Almost all Russian music is based upon folk and choral motifs, and from the time of Glinka's reforms there is a logical development down to the appearance of Fokine, the distinguished *maitre de ballet*. The dance under the latter's direction became such a dignified form of art that the most prominent Russian composers, Moussorgsky, Rimsky-Korsakov, Glazounov, Tchaikovsky, Borodin, Balakirev, and Tcherepnin, contributed their works for its further development. Russian music, as exemplified by these great composers, has made its powerful influence felt in America, and the Russian ballet, with Pavlova and Mordkin, outgrowing the feature of mere amusement, and entering the arena of the lyric music drama is already a force to be reckoned with here. Russian life, with its savage and romantic spirit, is its dominating feature and the wonderful imagination of Bakst, stirred by these elements, has created new visions of beauty, of which one, at least, the "Oriental," Pavlova will introduce to us.

THE feature of the art of Bakst that distinguishes him from other Russian decorators for the theater is that his work throbs with life and that there seems to be no period or national style which he cannot assimilate with ease. The "Arabian Nights," with their wild orgies, the Orient, and Greece, and the charming characters of ancient myth, with their

A YOUTH
From "Scheherazade"
By LÉON BAKST

graceful, rhythmic movements, form a poetical of his material. Perhaps the best key to his work is afforded by his own statement, "Every subject, every model, every part of the human body, that is designed without passion, without the joy of life, is a work utterly barren and false. Color should afford a joy for the eye." The effect of looking at his work, the voluptuous Bacchantes, the sinuous slaves, the majestic high-priests, the stupid Eumachs, the youths in gorgeous robes, the graceful nymphs, is that of a carnival in which the human emotions are masked as passionate colors. The bewitching dances of the bayaderes in "Scheherazade," and the perhaps too eloquent movements of the slaves in "Cleopatre" conquered Paris and all the other capitals in quick succession. It is with small wonder that his designs for these ballets and the individuals which compose them have been acquired enthusiastically by admirers throughout Europe. The Bakst Exhibition held this fall at 306 Madison Avenue, New York, afforded lovers of art an excellent opportunity of seeing many of his best designs. Not only are they superbly drawn, but the amazing colors in which the whirling figures are enveloped have the effect of heavy perfumes. Grotesque dancers in green, maroon and gold suggest the sparkling beauty of spotted pythons. The *Jeune Boetien* playing the pipes, a figure of perfect grace, and the study of a Greek maiden in delicate blue, white and silver, would arouse the admiration of a Hellenist. *St. Sebastian* and *Pisanelle* weave a mediæval spell. The intensely virile *Negres Argots*, the weird malachite-skinned *Dieux Bleu*, interpreted by Nijinsky, the dancing shepherds and the

"Papillons"

shameless *Sultana Jaane* who calls Maucet's "Olympia" to mind,—each of these strikes upon our senses exactly the note which Bakst intended.

The scenic effects of Bakst are even more startling than his designs for single figures. He leads us through the caves and mysterious grottoes of Arabia, through the sacred groves of Greece. His landscapes seem to be in a constant process of change. The colors seem to melt away before the eye. His drawings reveal the stimulating reformer, and when we realize that "Boris Godounoff," an opera not artistically perfect, but with a gripping elemental appeal, was received in New York with wild outbursts of enthusiasm, what triumph must await the art of Bakst, at once technically perfect and vital!

EVEN if the less critical and analytical fail to see the artistic unity of *mise en scène*, music and pantomime, they cannot fail to revel in these intoxicating combinations of color. If they do not inaugurate a genuine reform in stage decoration, these works will at least arouse the enthusiasm of those who sympathize with Walter Pater's comment on the Renaissance, "While all melts under our feet, we may well grasp at any passion, or any contribution to Knowledge that seems by a lifted horizon to set the spirit free for a moment, or any stirring of the senses, strange dyes, strange odors, and curious odors—."

Taboo!

By BERTON BRALEY

YOU may put on a show that is full of suggestion

And subtle appeal to the sense,

And no one will murmur or mutter a question

But simply remark, "It's immense!"

You may crowd it with girls in the filmiest dresses

Or almost no garments at all,

And have them perform all the latest excesses

Of "bunnyhug," "grizzly" and "crawl."

You may hold up the truth as a subject for laughter,

Make vice look attractive and gay,

Give praise to the rouser, the crook and the grafter

And no one will whisper you nay;

But put on a play that is truthful and vital

In showing the wages of sin,

A speedy arrest is your certain requital

With plenty of newspaper din!

You may cover debauchery thinly with glamor

And no one will utter a word,

But strip off the veil, and the raucous-voiced clamor

Of "Indignant Virtue" is heard!

So put on your shows that are daintily shady,

Where vice wears her pleasantest mien,

But shun, shun the Truth—she's a very nude lady

And therefore should never be seen!

The San Diego Exposition

By

CLYDE H. OSBORN

IN many respects the San Diego Exposition, as it is popularly known, is a radical departure from precedent. It shares with the Panama-Pacific International Exposition the distinction of being the first to be held in commemoration of a contemporaneous event—the completion of the most wonderful engineering feat of the ages, accomplished by men who are still alive.

It is probably true that preceding expositions have been great economic wastes in large measure, for they have been mainly reminiscent. The San Diego Exposition is unique in that it will not only bear messages from the past and the present, but in greater degree it will strive to build for the future. It is an exposition with a mission, and a really big one.

THE greatest problem confronting the United States today is epitomized in the phrase, "high cost of living." Analysis shows the main causes to be the enormous growth of our cities and the consequent depopulation of our rural communities. The mission of this exposition, as conceived by its sponsors, is to be instrumental in turning the tide. This it aims to do, not in an academic way, but by tangible, convincing demonstrations of the joys, the rewards and the possibilities of rural life today. Elaborate outdoor exhibits will comprehensively illustrate the most successful systems of reclamation and irrigation, pumping and distributing. Modern methods of tillage, farming and fruit-raising in every branch, and the marketing of products as well, will be shown in every detail.

THE wonderfully efficient farm machinery which so lightens the burden of the agriculturalist of today will be exhibited in actual use. Model farms upon the exposition grounds will go through their daily routine, raising, storing and marketing crops, for the education of visitors. The "Little Landers" will have a farm upon the grounds by which they expect to prove that a single acre property and intensively cultivated will yield a living for the average family.

The principal industrial exhibits will be of exceptional educational value along the same lines, for

The "Home Economy" building—main entrance, showing the Spanish-Colonial style of architecture

the San Diego Exposition is to be one of processes rather than of products. For example: the International Harvester Company of America has five acres upon which are being planted alfalfa, grain and an orchard. In the last will be demonstrated their orchard tillage instruments and tractors; upon the rest of their ground their hay and grain machinery will be in actual use. On other parts of the grounds mammoth tractors will demonstrate their plows, seeders, harrows and various other tillage implements in operation. So far as possible, all exhibitors will be required to make active demonstrations, and some of these will be upon a very large scale.

THE Exposition does not stop at the effort to inspire in its visitors a desire to return to the land. It goes further. It will show comprehensively, by huge graphic maps and convincing data, the possibilities awaiting the homeseeker in every part of the United States, the character and approximate value of land in every county and township, and the product to which each is best adapted. As well as being a big undertaking this would seem to be a magnanimous one, inasmuch as San Diego has millions of fertile, untilled acres at her door; but it is typical of the spirit of the San Diego enterprise. The scope of this vast text-book of opportunity is national. The Easterner will be shown where in his own state potential, uncultivated land beckons to him. He will, incidentally only, be shown the possibilities of the great West. Here the man who is interested in producing the great staples of life, the stock-grower, the farmer, the fruit-raiser, the market-gardener, will find a complete digest of the opportunities awaiting him in this country.

IN short, the prime aim and ultimate object of the San Diego Exposition is to foster the "back to the soil" movement; first, by actively demonstrating the rewards in health and wealth and contentment that await him who goes back to nature; second, by telling him where he can go with the capital at his command and secure the particular home or type of farm that appeals to him.

Although the San Diego Exposition will be held during the same year as the World's Fair in San Francisco it is in no sense a competitor—rather it is a complement. Greatest stress will be laid upon two exhibits which will be peculiarly its own: one depicting the history of the primitive peoples of the earth; the other, a horticultural exhibit. The directors, with the assistance of the Smithsonian

Institution, expect to make the former the largest and most complete anthropological and ethnological exhibit ever assembled. That is a rather large undertaking, but one hesitates about discounting their statements very much when confronted with some things which they have already accomplished. As bearing upon the aboriginal tribes of the Great Southwest, it is interesting to note that the Santa Fe Railroad will occupy ten acres with Indian villages,—and a Fred Harvey eating house under the management of Harvey, *filis*. Every Indian tribe in the southwestern states, each in its own village, will be generously represented. It is even rumored that, for the first time away from their respective reservations, one may see various religious and ceremonial dances and rites performed by the simon-pure American.

beautiful. Already the principal buildings are in course of construction,—some of them finished and eight others rapidly nearing completion. Picturesque Cabrillo Cañon bisects Balboa Park and it will be spanned by an immense viaduct, the "Puente Cabrillo," whose last arch is now being built. All construction work is under the supervision of Mr. Frank P. Allen, Director of Works. Mr. Allen built the Seattle Exposition and it is claimed for him that he is the first exposition-builder who was ever ready to open his fair on time. From present indications he will live up to that record.

Balboa Park covers 1400 acres and is about ten minutes' ride from the business center of San Diego. The site of the Exposition comprises some 600 acres in the center of the Park and on the crest of a

hill whence one has a wonderful view of the city, the bay, Coronado, Point Loma, the Pacific, the Coronado Islands, and can even peer into Mexico.

THE idea of an international exposition commemorating the formal opening of the Panama Canal was first evolved in San Diego. At a meeting of the local Chamber of Commerce in September, 1909, Mr. G. Aubrey Davidson made the suggestion. It met with acclaim and the exposition corporation was immediately organized. Subsequently San Francisco and New Orleans entered the field. A deadlock resulted in Congress, and San Diego threw her votes to San Francisco upon the agreement that the latter should co-operate in securing federal recognition for the San Diego Exposition, which was now under way, as an exposition exploiting primarily the Great South-

Another view of the "Home Economy" building—the arcade

The horticultural exhibit ranks next in importance. It purposes to embrace the plant life of the entire world, from the torrid zone to the frigid. That, too, is a fairly sizable task; but already tremendous strides have been made. Over 200,000 trees and shrubs have been planted on the grounds, and in the nurseries are said to be some 2,000,000 specimens of every known species of plant life. This count was not verified for the purposes of this article, but from a rather bewildering inspection one is impelled to believe the statement. Moreover, this is the first exposition that has been favored with climatic conditions which render such an undertaking feasible.

The architecture will be uniformly of the Spanish-Colonial type. Every building will be a duplicate of one of the famous buildings of Central or South America. Surrounded by almost tropical verdure, the result should be harmoniously

west. Men whose names are words to conjure with in Southern California are backing the project,—David C. Collier (the president), John D. Spreckels, G. Aubrey Davidson, Ulysses S. Grant, Jr., Frank Belcher and a score of others.

The general management of the enterprise is in the hands of Mr. Harry O. Davis. Subscriptions have been met promptly and the bond issue voted by the city found an immediate market, consequently the management has at all times had ample funds. Congress has accorded official recognition. State legislatures and county commissioners have made generous appropriations, as have many of our sister republics on the South. The irresistible conclusion is that, instead of a local state fair, San Diego will hold a real exposition in 1915, original and of splendid economic value.

Mendel Beilis

The Ritual Murder Trial

By

ROBERT SEELAV

THE Beilis case is the latest of one hundred and twenty odd cases of the sort that have been brought on since the year 1144 A.D., and it may be noted that the very first took place at Norwich, in England. But the Germanic countries have developed the largest number of these trials against Hebrews for alleged ritual murder, while at the present time this antiquated charge is the tool of government persecution in the Slavonic part of Europe.

As a result of these charges, often hatred by revengeful proselytes and still more often by princes who craved for Jewish money, hundreds of men and women mounted the gallows, or were burned at the pyre. A thrilling chapter of Jewish history is the march of the seventeen Jewesses condemned to death in one city who walked bravely on, singing "Haleon." Thousands more lost their homes and had their wealth confiscated. In the case of Tisza-Eszlar (1882), the son of the official Jewish slaughterer, bribed with trifles and coins, swore to an apparently straightforward story of how his own father cut the throat of a Christian girl, and how the assistants caught up the blood in a vessel and used the fluid in Passover celebrations, and masses of Jews suffered from blood-riots that followed, until the alleged victim was found in the river Theiss, her throat upset and her body in good condition.

NO less than four Papal bulls were issued from Rome in efforts to convince the ignorant masses that the Jews were not guilty of the charge made, and the monarchs of Germany, Bohemia, Poland and other nations have at various times condemned the persecution. One of the most important books in defense of the Jew was written by one Frank, a priest of the Catholic Church. There is not a cus-

tom or habit, a rite or law that warrants the slightest credit to the shallow belief of the consumption of blood for religious purposes.

FROM the time of Moses, when one of the Commandments read "Thou shalt not kill," down to the last rule of the peaceful and almost dispirited Rabbis of Russia, every written word or spoken sermon has spelled "Peace, Non-resistance, Mercy, and Charity." The positive laws are particularly vigorous in the prohibition of the use of blood for any purpose whatsoever.

Ye shall eat no manner of blood, whether it be of fowl or of beast, in any of your dwellings. Whosoever soul it be, that eateth any manner of blood, even that soul shall be cut off from his people.

—Leviticus, Chapter VII, 26.

Not alone in this general law is there strict prohibition, but there are numerous regulations which forbid even a possible taste of blood. In the Talmud it is laid down that if a person shall find that the bread he eats has been stained by blood from his mouth, he must stop and remove the part of the bread so tainted, although he may eat the rest of it, and he must as well rinse his mouth of any of the blood that may remain upon his teeth or tongue, for no blood must be swallowed. The rule is also laid down that when a person eats an egg, and finds a drop of blood or a nucleus in it, that egg must be discarded and cannot be eaten. Rule 29 of the "Yoreh De Ah" (a compilation of Jewish laws) provides that before meat of an animal may be eaten, it must be soaked in clean water for no less than one-half hour and after that must be thoroughly covered with salt and allowed to stay under its effect for at least one hour, so that any possible blood that may remain in the meat shall be thor-

oughly dried and washed out, and it was further directed that whereas no way is known to draw the blood out of the liver of the animal, the additional provision is made that that meat be first raked over the fire thoroughly before it may be eaten. Rabbi Tronim adds that the official slaughterer was forbidden to use for killing of animals a knife which, it was found, had been used by the executioner, so that even the remotest effect of human blood may be eliminated completely.

A method for the slaughter of animals is universally employed by the Jews designed to have the animal lose the largest portion of its blood, while water and salt draw out the rest; and a careful law prescribes further that one may not eat of the flesh of an animal that has been strangled or struck down, since in one case the blood remains in the carcass, while in the other the blood clogs and cannot be drawn out. There are laws, regulations and Rabbinical commentaries by the scores of pages in which the prohibition against the use or taste of blood is absolute and unqualified, and punishment is accorded to those who may transgress the law.

We are often confronted with the question as to the origin and source of these fatal charges. The Christians were the first to be accused of this exact charge of killing human beings for the use of blood. The first of such charges were made by the heathens in the second and third century after Christ, when the adherents of Jesus met in the catacombs of Rome and were accused of meeting in such hidden recesses to offer human sacrifices. The Church Fathers often appealed for clemency on behalf of these early Christians in the same manner that Jewish Rabbis plead, and have so often pleaded, in vain. The charge against the Christians continued almost to the Middle Ages, and only recently was repeated in China during the anti-Christian rebellion.

Jewish historians narrate the occurrence of a wholesale slaughter of Christians at the hands of Mussulmans, whereby no less than 200,000 perished, after accusing the unfortunate Nazarenes of ritual murder, the exact charge afterward employed by the Christians in the persecution of the Jews.

The Converted Senate

By McGREGOR

HOW changed the Senate is, comes to one with something of a shock with the statement that of the ninety Senators who met at the beginning of Roosevelt's second term, only eight years ago, only nineteen remain. Hawley and Hoar and Hanna and Quay and Quarles, who were members of the Senate preceding that, seem to belong to a forgotten era. It is a grim story, this of senatorial mortality. Many of these elder statesmen have gone the way of all the earth. But many more have been the victims of an aroused public opinion which demanded that the Senate which opposed or emasculated the measures for which Roosevelt stood should conform to the popular will. The magazines, weekly and monthly, "them three magazine fella," as Senator Scott called them, turned their cruel searchlights upon senatorial reputations, disclosing devious connections with "the interests," and the people did the rest.

The Republican majority of 1905 contained a notable group of men, such as Platt of Connecticut, Hale and Frye of Maine, Proctor of Vermont, Aldrich of Rhode Island, Crane and Lodge of Massachusetts, Elkins and Scott of West Virginia, Dryden of New Jersey, Platt and Depew of New York, Foraker of Ohio, Fulton of Oregon, Heyburn of Idaho, Cullom of Illinois, Beveridge of Indiana, Allison and Dooliver of Iowa, Spooner and La Follette of Wisconsin. Of these, only Lodge and La Follette remain, and "Cabot" was then the chosen defender of "Theodore" on the floor of the Senate.

"Many of these vacant seats will be vacated permanently," said the grim Senator from Wisconsin, when the Senators left their seats in a body while La Follette was speaking.

GALLINGER was a member of that Senate, but could hardly be classed with the first group, while Perkins, Dillingham, du Pont, Nelson, Clark and Warren of Wyoming, and Penrose, who was considered merely the "Me Too" of Quay, reached their later prominence by regularity, experience, and the operation of the old priority rule. Yet these, with Lodge, Root, and Burton of Ohio, form the Regular Republican leadership of the Senate today.

Clapp was also a member of the Senate of 1905, though not having earned his reputation then by insurrection against the Aldrich régime. Undoubtedly, the aggressive leadership of the Republican side of the Chamber has passed to the Progressive group, consisting of La Follette and Clapp and their later allies, Borah, Briarow, Cummins, Crawford, Kenyon, Gross, Norris, Sterling, Works, with Poindexter, National Progressive, and Sherman of Illinois, a near-Progressive.

On the Democratic side of the Chamber the changes through death have been many, but there has also been a gradual evolution toward progressiveness within the party and a political revolution in the country, which, working together, have converted a Republican majority of two-thirds, four years ago, when Taft was inaugurated, into a Democratic majority of six, the Democrats numbering fifty-one, and the Opposition, forty-five, including Repu-

licans, Progressive Republicans and one National Progressive. The Democratic minority of eight years ago was largely composed of old-fashioned Southern statesmen, many of them Confederate veterans. Again omitting unimportant men who have passed out, there were Morgan and Pettus of Alabama, Berry of Arkansas, Teller of Colorado, Mallory of Florida, Clay of Georgia, Blackburn and McCreary of Kentucky, McEnery and Foster of Louisiana, Gorman and Rayner of Maryland, McLaurin and Money of Mississippi, Bate and Carmack of Tennessee, Bailey of Texas, Daniel of Virginia, while Bacon, Martin, Clarke, Culberson, Stone, Tillman, Newlands, Simmons and Overman remain. Of these, only Clarke, Culberson and Newlands could be called Progressives. But they were presently reinforced by the arrival of Owen and Gore from Oklahoma, then Bankhead and Johnston, Reactionaries both, succeeded Morgan and Pettus. Next came Chamberlain of Oregon and Fletcher of Florida, progressive except in their votes on the Aldrich bill. Shively of Indiana, Smith of South Carolina, and Swanson of Virginia, came with Progressive leanings, Thornton of Louisiana and Chilton of West Virginia, Reactionaries.

IN the Senate of 1911, the Progressive Democrats received such notable allies as Bryan of Florida, Lea of Tennessee, Hitchcock of Nebraska, Johnson of Maine, Kern of Indiana, Martine of New Jersey, at least an acceptable alternative to James Smith, Myers of Montana, O'Gorman of New York, Pomeroy of Ohio, Reed of Missouri and John Sharp Williams of Mississippi, former minority leader of the House, and as such the supporter of all the Roosevelt policies that received legislative enactment, the Democratic scholar in politics, with a good deal of politics in the scholar. But when the lines were drawn, Bailey succeeded in getting Martin elected minority leader instead of Shively. Later in the year came Hoke Smith of Georgia, who had smashed the railroad machine into little bits in his campaign for Governor before his election to the Senate. In 1914 Ashurst and Smith entered the Senate from the Progressive new state of Arizona. With Republican division, the Taft Administration being comparable only to the plan of the city of New York, "no mistake having been left unmade," and with Woodrow Wilson nominated at Baltimore, the problems arose, first, of electing a Democratic Senate, and then of re-organizing it on Progressive lines.

HOKE SMITH, during the Presidential contest, was mainly concerned with the election of Democratic Legislatures which would elect Democratic Senators. Naturally, he kept in close touch with the candidates for the Senate, and practically all who were elected were Progressives, Hollis of New Hampshire, Hughes of New Jersey, James of Kentucky, Lane of Oregon, Lewis of Illinois, Pitman of Nevada, Robinson of Arkansas, Saulsbury of Delaware, Shafroth and Thomas of Colorado, Shields of Tennessee, Thompson of Kansas, Sheppard of Texas, succeeding Bailey, Vardaman of Missis-

siippi, and Ransdell of Louisiana. Only this month the Progressive Democrat, Blair Lee was chosen in the first direct senatorial election ever held in Maryland.

The Tariff was uppermost in view. It was known that Thornton and Ransdell had pledged their constituents that they would vote against a tariff bill reducing the duties on sugar. That left the narrow majority of two on the Democratic side. Yet the Progressives declared that they would not "make generals out of traitors." For some of those who ranked first according to the priority rule, had been known as "Aldrich Democrats," on account of their numerous votes with him on the Payne-Aldrich bill, many had voted against free lumber, in defiance of the Democratic Platform, and of these several had betrayed the connection between Lorimer and Lumber by voting for Lorimer's acquittal. Yet to have driven these men to revolt by depositing them from the Committee Chairmanships which they could claim as the ranking members, would have been to endanger if not defeat all tariff legislation.

SO the reorganization proceeded on this wise: The Caucus made Hoke Smith Chairman of a nominating committee, making report to the Caucus. Clarke was elected President pro tem, instead of Bacon, but Bacon was given his Chairmanship of the Committee on Foreign Relations. Martin was deposed from his position as Chairman of the Caucus, carrying with it the responsibility of Majority Leader, and Kern was given that position, which he is admirably qualified to fill. Simmons was ranking member on the important Committee on Finance, dealing with Tariff and Currency problems. So this committee was divided, Owen being made Chairman of the Committee on Banking and Currency and Simmons of the Finance Committee, thus confined to tariff matters. Martin was made Chairman of the Appropriations Committee, Tillman, of Naval Affairs, Smith of Maryland, of the Committee on the District of Columbia. Culberson was entitled to the Chairmanship of the Judiciary; Newlands, of Interstate Commerce; Bankhead, of Postoffices and Post Roads; Overman, of Rules; Stone, of Indian Affairs, and those were given them. But the important committees were literally packed with Progressive members. The Chairmen were further controlled by the rule that a meeting shall be called to consider any bill at the request of a majority of the Democratic membership of that committee. This prevents smothering good measures in pigeon-holes. Finally, the Chairmen were put on their good behavior by the notice that, in the next Senate, the committees appointed by the caucus will elect their own Chairmen. Thus the rule of ability and character will prevail over the rule of priority through length of service.

And a Steering Committee, with Kern as Chairman, and Progressive Democrats in control, are given the duty of watching and furthering legislation in the public interest.

So the Senate of the United States has become Progressive. Progressives control the Democratic majority, and with the Republican Progressives they are a majority of all. It is a converted Senate.

"The Trojan Women"

The Littlest Theater

Chicago's Experiment in the Production of Poetic Drama

By FLOYD DELL

man pays for a seat he should get one within seeing and hearing distance of the stage. But there are at least two other reasons for small theaters. One of them is the fact that the demand for the psychological and poetic drama is not as yet very large. The other—and this was the origin of the excessive littleness of the Chicago Little Theater—is lack of money. When you are "hell-bent" for producing poetic drama, and you have raised all the money you can raise, you simply go ahead and do the best you can with the little you have got.

THAT was what Maurice Browne did, anyway. Maurice Browne is the director and creator of the Chicago Little Theater. He is an Englishman, a poet, and an ex-publisher of poetry. Now and then one picks up beautifully printed and inexpensive volumes of poems by some of the younger English and American poets, bearing the imprint of the Samurai Press. Mr. Browne was the Samurai Press. From having been an entrepreneur of modern poetry, he turned to become a theatrical manager in Chicago—a place known abroad, as in New York, for its live interest in drama.

Mr. Browne is an enthusiast, which as commonly understood means an impractical person. Perhaps he is so overflowing with impracticality as to inhale everyone with whom he comes in contact with the same delightful quality; or perhaps he is really a shrewd business man. At all events, when it became apparent that there was no money to pay salaries, he persuaded a good-sized company of amateur actors—in this case people most of whom had training and some of whom had practical experience of the stage—to work for nothing. Among them were persons with taste in costume and stage decoration. He put them to work on Gilbert Murray's verse translation of Euripides' "Trojan Women."

NOW it has been the unhappy lot of most people who are seriously interested in the theater to witness (one "witnesses" a crime, and the word is peculiarly appropriate here) a performance in English of some Greek tragedy. The effect cannot usually be described as being that spiritual enthusiasm to which Aeschylus (as every schoolboy knows) referred. The soul is generally not shaken with sympathy and awe. If we learn anything from such productions, it is that Greek tragedy is not performance-proof. Something more than dressing up in white nightgowns and reciting the lines is required.

Mr. Browne, it seems, had ideas of his own about the production of poetic drama. He realized that the ordinary methods of the theater are inadequate to "putting over" a poetic play. The theater of today, it may be said, engages to take a citizen, slightly flushed with dinner, to roar and cajole him, tickle and fascinate him—and then, when it has him fully under its spell, to raise his soul

for a moment to the height of a crisis. But for a moment only! The tension is relaxed, the *dénouement* arrives swiftly. The ordinary play provides the ordinary theater no harder task than this. But the poetic play, which neither amuses nor cajoles, which requires of the audience from beginning to end a sustained intensity of attention, cannot be managed so easily. The poetic play postulates a certain mood in the audience, the mood necessary to its fullest appreciation. But the poetic play does not itself suffice to create that mood: the mood must be created for it by—the theater. What Wagner's music is to the presentation of the love of Tristan and Isolde, what the deeply religious significance of the Dionysian myth was to the Athenian playgoers who looked on the madness of Agave—a force tearing aside the protective epidermis of the soul and leaving its nerves bare to the intimate contacts of emotion—this art of the theater must be to the poetic drama.

THE art of the theater, as this producer saw it, then, was the creation of what is called atmosphere. And Mr. Browne was perfectly sure he could create atmosphere as well as any man. What was necessary was a use of the elements of theatrical art—action, scene and voice—to effect a miracle. So he set to work with a score of red, amber and blue electric lights, a few yards of colored cloth, a post-impressionistic canvas wall and a dozen amateurs, to create in the mind of his audience that emotional state which should predispose them to appreciate most keenly and fully the tragedy of the women of captured Troy.

It was, perhaps, absurd that he should succeed. But if anyone thinks that there has ever been given in this generation a better rendering of a Greek play, then he will have to quarrel with persons more acquainted with the subject than I. There is Richard G. Moulton of the University of Chicago, for instance. Professor Moulton wrote: "It seems to me the most successful attempt I have seen, either in England or in this country, to preserve the real spirit of the ancient classical drama in reproduction on a modern stage. Instead of attempting the minute archeological niceties of the ancient Greek theater, a thing which is possible only with an open-air stage, the performance used all the modern effects of artifice, light and shade, with singularly beautiful effect. Yet the performance retained the essential spirit of Greek drama, which is the harmony of all the arts, beauty of color, flowing draperies, statuesque figures, and gliding movements, rhythmic intonations—all were united in lyric harmony. . . . The effect on my mind—and I find the same impression in all with whom I have conversed—was a continuous spell of pathetic charm from first to last. It was a performance worthy of Euripides as the world's greatest master of pathos."

The production, to speak with due restraint, was not without faults; but its

ITS size is the least significant thing about it—but an interesting thing, nevertheless. Tucked away around a corridor on the fourth floor of the Fine Arts building, in a space no larger than a good-sized studio, it eludes the observation of the casual Chicago theater-goer, though its reputation has traveled abroad. The stage measures 5x10 feet, and there are seats for ninety-three people.

This apparently undemocratic restriction of the size of the audience, and the circumstance that in an adjoining room tea is served in the intermission, caused the suspicion, when the theater opened last year, that the Chicago Little Theater was a "society" affair, an amusement for a few well-to-do people of exotic cultural pretensions. This suspicion was natural enough, so inevitable, indeed, that it is rather worth while to explain just why it was—as it has proved—unjust.

In the first place, the precise size of the theater is an accident. It was intended to be small. And the idea of the little theater, the *théâtre intime*, hardly needs, in this year of grace, any defense. It is a natural result of the demand for the production of a more psychological, less objectively exciting sort of play than America has been accustomed to, and the demand, moreover, for a more immediate relation between the players and their audience. There is also the purely commercial idealism which insists that when a

"THE TROJAN WOMEN"

ELAINE HYMAN AS ANDROMACHE

Elaine Hagan in "On Baile's Strand"

whole effect was to pierce the minds of the audience with a tragic beauty. It was a successful production of a poetic play.

Perhaps even more successful was the production of W. B. Yeats' "On Baile's Strand," which occupied half of the bill for the first month, along with "Women-kind," by Wilfrid Wilson Gibson. The task here was easier. But another Yeats play, "The Shadowy Waters," furnished the most difficult task of all, and one to

which the ardor of Mr. Browne hardly proved adequate. The attempt to rescue this play, which was never written for the stage, from the category of "closed drama" cannot be considered a success. It was a forlorn hope, anyhow.

Strindberg, whether one is particularly interested in him or not, is a good test for such a producer. Though written in prose, his plays belong, as do many prose plays by virtue of the methods necessary

to their successful production, in the class of poetic drama. They demand a heightening of the spell by subtle management of voice and costume and scene. Two Strindberg plays were produced at the Chicago Little Theater in its first season—"Creditors" and "The Stronger." The latter, at least, was an unquestionable artistic success. It may be added that Strindberg in some of his prefaces has indicated the proper methods for the production of his plays, along exactly the lines of the Chicago Little Theater attempt—a simplicity which permits of an emotional and suggestive use of the elements of stagecraft.

THE other plays given last year were less certain tests of these methods. They included "Anatol" (in an unpurged and unvulgarized version), and several light comedies. This year the "Medea" of Euripides, in Gilbert Murray's wonderful verse translation, will be given, and "The Trojan Women" repeated. Lucille Abercrombie's blank verse tragedy, "Deborah," is otherwise the most ambitious project on the season's program, unless one gives that place to a pagant out of the Egyptian "Book of the Dead."

Mr. Browne also threatens to produce "Mr. Faust," by a young American poet, Arthur Davison Ficke: a play most interesting to read, but utterly impossible to imagine on the stage. But it is Mr. Browne's habit to perform the impossible, and he may yet startle his friends by finding some inconceivable combination of sound and form and color which shall drive the magnificent philosophy of that most undramatic drama into the hearts of an audience.

The accomplishment of the Chicago Little Theater so far is summed up thus by Mr. Browne: "We have tried to prove that those people are wrong who say that the time for poetic drama is past. We think it is beginning. And we believe that this country, so far from being a place where poetic drama cannot find an audience, is the real cradle of its renaissance. We have found that by using the right methods, poetic drama can be made as interesting as any other kind of drama. That is our accomplishment. Moreover, we have brought before our audiences some of the best work of the men who are re-creating the drama of the modern world. Best of all, we are making Euripides a contemporary."

Poetic drama, it seems, has a future in America.

Forbes-Robertson in "Hamlet"

By A. H. GLEASON

HE comes with manners of fair courtesy, a poise of bearing, a demeanor, eager and gentle. And over it all in calm, level light the intelligence which outsours matter and plays upon it from an inaccessible height.

The speaking voice is the loveliest of instruments for carrying sound to the heart of man. And when again shall we hear a voice like his, all compact of music, flexible in cadence,—and that natural organ freighted with the thought of silent years. His voice lifted the verse, bearing it with throbbing wings from troubled regions to the final

silence. The greatest work of the greatest man in the span of human consciousness was here rendered so that never the gentle accents, laden with pain, stoop under their precious burden.

To enter his theater is to rediscover that great gentleman, Hamlet, gracious, eager to be loved, hemmed in by baser natures, desiring to flourish, and nipped by a tainted air. Where for him was there escape in this world? So he is swiftly drawn to his ending, and in that brief earthly interlude before his spirit regained its felicity, he breathed out the sweetest words of human tongue.

Said Georgie B., "I should have taken
A leaf from out the book of Bacon.
And in your play a cipher hid."
Said Bayard V., "That's all you did."

The Boss of the Drama

his waning attention. And of all the tribute-payers The Newspaper Moralist is the wisest, for he moralizes at special advertising rates, payable in advance.

Nevertheless, there is hope. The Tired Business Men are deserting the sinking Drama and flocking by thousands to the Movies. Here as in a dim, wordless Furgatory, he may become purified and from hearing no speech at all, his taste for decayed dialogue be starved out of him.

PERADVENTURE, for the sheer joy of hearing the human voice again, the Tired Business Man may be led to laugh at the genuine humor of such a speech as that in "Prunella," where Scaramel, hearing Pierrot bewail the lack of a ladder to mount to Prunella's window, says to him, "How careless of you to go out at night without a ladder."

It will be hard at first but the Tired Business Man may in time learn to assimilate even more subtle comcits than

Ekkevoled Golf as played at the Hypodrome

JUST because after much noise we have rid ourselves of a municipal Boss, let us not be weary of well-doing. There is a worse Boss than Chief Murphy—the Boss of American Drama—the Tired Business Man.

With the fear of the T. B. M. on his soul the playwright pays tribute with a wretched play, the manager with a magnificent production and the critic with a glowing advance notice.

If the play is very awful indeed, too awful even for the Tired Business Man, then is heard a huge noise of UPLIFT as the Newspaper Moralist preaches yellowy of its MESSAGE in a sermon bristling with capitalized words, each a verbal dig in the T. B. M.'s stomach, to stimulate

Golf as played by the T. B. M. on the links

this. For the present, however, his obese mirth can only be aroused by such stuff as the comic grief of the widow in the "Temperamental Journey," who exposes her side-splitting sorrow in a wreath inscribed with that ancient motto, "Rest in peace—till I come." This is greeted every night by a roof-rending roar from Tired Business Men, and the Tired Thinking Man groaning, "Oh, what's the use!" steals out into the comparative quiet of Broadway.

CARTER SCORES FOR PENNSYLVANIA

The Quakers' big blond tackle making his run for a touchdown against the strong Dartmouth eleven that outfought the Red and Blue in a spectacular and high-scoring contest on Franklin Field

Current Athletics

By HERBERT REED ("Right Wing")

ARMV and Navy meet this week in the culminating battle of the football season, and it will be interesting to see how the game will work on the basis of a season's experience. When the two service schools meet in New York they will have had the best of coaching by college men who are familiar with all the coaching systems East and West. In the early days of service football the Army had something of a walk-over, for the simple reason that at that institution there was an early grip on the best of college coaching. The Navy first took up with Princeton coaching, and afterward drifted toward the Yale method and it may be fairly said that nowadays there is no fundamental difference between the two methods of coaching.

FOR some years the material at West Point was superior to that at Annapolis, but in recent years the midshipmen have not had to worry greatly about material. The styles of game played at the two

institutions have drawn nearer and nearer together, for both coaching systems have drawn heavily upon Yale, Harvard, and Princeton. There have been times when the two service schools have played a brand of football that bore all the earmarks of a consensus of the best collegiate opinion. This year, for instance, the soldiers are handled by Charlie Duly, who is a Harvard football man if ever anyone was, and his assistants are well versed in the Harvard system. The Navy, "fed" with the best of material, has been accustomed for years to Princeton coaching, only in the last few years to take up with the Yale idea, at least in line play.

IT has been said, and unjustly, I think, that the Army and Navy play poor football when they get together—due to over-eagerness. As a matter of cold fact they have played some of the best football seen in the East. No doubt the members of the team are crazy to get at each other. So much is admitted. But that they do not play high-class football is a statement that cannot be supported.

The Navy was among the first to show the back shift, and the Army has always had better than an average system of attack, especially in the early games against Yale, Harvard or Princeton, as the case might be, and this year against such strong visitors as Colgate, Notre Dame, and others.

Harvard's defeat of Princeton was accomplished by a better knowledge of football—better theory and better execution. The Crimson has worked steadily for some time upon what I consider the standard form of generalship, and has built up individual efficiency upon that basis. The Dartmouth triumph over Pennsylvania was to have been expected, for the Green has developed a style of play that makes the most of the present rules. Fortunately it is built on the sound principles of line play that have marked most of the Eastern and a few of the Western elevens.

PROBABLY one of the best things that could have happened to football was the recent dinner given by "Pa" Corbin to his Yale eleven of 1888. Next to the Yale '91 dinner this gathering was one of the most notable in football.

There are many incidents connected with the experience and workings of the Yale football team of 1888 which may be interesting after the lapse

of a quarter of a century. The head coaches of the Yale team were really Mr. and Mrs. Walter Camp. They had been married in the summer of 1888 and were boarding with relatives in New Haven. Mr. Camp had just begun his connection with a New Haven corporation. It was necessary, therefore, for him to attend strictly to his duties at the factory. Mrs. Camp was at Yale Field every day at the football practice and made careful note of the plays, the players and anything that should be observed in connection with the style of play and the individual weakness or strength. She gave her observations in detail to her husband at supper every night and when Capt. Corbin arrived at the house Mr. Camp was familiar with that day's practice and was ready for suggestions as to plays and players. This method was pursued during the entire season and was practically the only systematic coaching the team received. Of course there were several old players like Tompkins '84, Terry '85 and Knapp '86 who came to the field frequently.

AT this time it was customary for the center to snap the ball back to the quarter with his foot. "By standing the ball on end and exercising a certain pressure

CAPT. HOGE, OF THE ARMY

The veteran soldier and will lead his team against the sailors in the big game on the Polo Grounds. He has been one of the best wing men of the season in downfield work

CAPT. GILCHRIST, OF THE NAVY

Chosen by many experts as one of the foremost ends of last season, the Navy leader is expected to crown a conspicuous gridiron career with a fine exhibition of wing play at the Polo Grounds

on the same," says Corbin, "it was possible to have it bound into the quarterback's hands." It was necessary, therefore, for the center to attend to this detail as well as to block his opponent and make holes through the line for the backs. While the rules of the game at that time provided an umpire as well as a referee, the fact that there was no neutral zone and players were in close contact with each other on the line of scrimmage gave opportunity for more roughness than is customary at the present time. Nor were the officials so strict about their rulings. It was often a case of give and take. In the first Pennsylvania game played by the Yale team in the fall of 1888, there had been considerable rough work and the umpire's attention had been called to it with the request that there be disqualifications of certain players. This was without avail, however. Finally Gill, the left tackle on the Yale team, was struck a blow which knocked out two of his front teeth. "These teeth were put back into their previous places by a dentist that night," and while Gill was unable to play for several weeks, he played in the final Princeton game with the teeth restored to their original positions.

IT had been customary to give word signals for the different plays, the same being certain words which were used in various sentences relating to football and the progress of the game. Capt. Corbin, as center, was so tall that a system of sign signals was devised which he used in the Princeton game. The pulling of the visor of his cap was a kick signal. Everything that he did with his left hand in touching different parts of his uniform on the left side from collar to shoe-lace meant a signal for a play at different points on the left side of the line. Similar signals with his right hand meant similar plays on the right side of the line. The system worked perfectly and there was no case of missed signals.

THE next year the use of numbers for signals began. The work of the Yale team during the season was retarded by

PRINCETON'S LAST RALLY

Tigers cut loose their running game in the last quarter against the Crimson, only to have it diagnosed and stopped within what seemed to be striking distance of the goal

injuries. The papers were so filled with these accounts that the general opinion was that the team would be in poor physical condition to meet Princeton. As luck would have it, however, the invalids reached a convalescing stage in time to enter the Wesleyan game on the Saturday before the one to be played with Princeton in fairly good condition.

CAPT. CORBIN and Head Coach Camp attended the Princeton-Harvard game at Princeton on that day. Upon their return to New York they received a telegram from Mrs. Camp to the effect that the score made by Yale against Wesleyan was 103 to 0. One of the graduate coaches was much impressed with the opportunity to turn a few pennies, and he requested that the information be kept quiet until he could see a few Princeton men. The result was that he negotiated the small end of several stakes at long odds against Yale. When the news of the Wesleyan score was made public the next morning, the opinion of the public had changed somewhat as to the merit of the team. It nevertheless went into the Princeton game as not being the favorite, and in the opinion of disinterested persons it was expected that Princeton would win handsomely.

GEORGE WOODRUFF of the '88 team later coached the University of Pennsylvania football team. Judge Woodruff was later appointed Assistant Attorney-General of the United States, and had entire charge of the legal work of the Interior Department when Garfield

was Secretary of the Interior. He was later appointed by President Taft as Judge of the Federal Court in Hawaii. He was compelled to resign and leave that country because of the illness of his wife. He is now treasurer and general counsel of a large coal producing company.

It is probably true that no football eleven out of college twenty-five years has as many men who are actually interested in the game as the '88 team. Prof. Stagg of Chicago University is the active coach of their football team, and has developed many teams which have won the Western championship. Dr. Bull is at present one of the best coaches for punting and drop-kicking in the country, and has been with the Yale team practically all season.

HEFFELFINGER continues his active interest in the game and can any time give a very impressive object lesson in the line. Last Thanksgiving in Minneapolis he played one half of the game. Corbin has followed the game at New Haven closely each year, and is at present a member of the Yale Football Advisory Committee.

It is rather remarkable that the '88 score of 103 to 0 does not seem to have been duplicated by any bona-fide college playing strictly college teams, and it also is a coincidence that while this record stands today, the rowing record of New London made by the Yale crew in 1888, also stands, both records, made in the same calendar year, having weathered a period of a quarter of a century.

BRICKLEY MAKES HARVARD'S ONLY SCORE

Crimson's drop-kick artist sending the ball over the cross bar for the three points that brought defeat to Old Nassau. The opening was well earned through the blocking of Law's kick after the Tiger punter had received a poor pass from E. Trenkman

VI.

The Auto Scooteth, but the Taxi Getteth Around

"IT looks like a taxi!" they all of them cried,
And surer than shootin',
Careenin' and scootin',
Rattled a little, red, Chorus Girls' Pride,
Bumping the ruts just as merry and gay,
As once it had rounded the curves of Broadway;
And with every shock
Round flew its clock
Mounting up dollars—with no use to pay!

DISGUISED as a driver—though badly concealed,—

Marmaduke Priggles was plainly revealed;
His large false moustache twisted somewhat awry,
Hatred and fear in his villainous eye.
First he saw nought of the party who lurked;
Then quick, catching sight
Of his perilous plight,
The gear of his car to reverse speed he jerked,
And, ere Mr. Hill
Or Percival Brown
Could muster the will
To pursue the man down,
The crazy machine, with an air of disdain,
He turned down a twisted and kill-devil lane.

"CATCH him!" raved Hill; and with virtuous oath,
Seizing their motors and cranking them both,
The men made their lady-loves sit down beside 'em,
And were off like the winds and the demons who ride 'em.
Airships and bullets, they tell us, can fly,
Whitehead torpedoes are geared rather high;
But if anything solid was ever propelled
By gas, air or dynamite quicker than
now.

I lay down my cards and my bet is withheld
And Speed is a hollow delusion, I'll vow.

HILL in his blue-bodied car led the race,
But Percival's projectile crowded for place.
Forgetting their nerves,
They skidded round curves,

Hurdl'ing deep chuck-holes. With horrible swerves,
Through valleys,
Up alleys,
Down tow-paths
And cow-paths
That demonized taxicabs bobbed like a cork
In the man-killing manner they learn in New York;
And following closer than sleuth-hounds on wheels,
Thundered and rumbled those automobiles.
Dogging the wriggles
Of villainous Priggles,
Crowding so closely they almost could snatch him,
Four minds attuned to the battle-cry, "Catch him!"

NOW the merit of taxis, if merit it be,
Is to scuttle through holes
That would trouble men's souls
And loop sudden loops that would puzzle a fien.
And so, in the race in which we are concerned,
The cars which pursued
Were for speeding well-thewed,
But they always lost time on the curves when they turned;
And we'll give sinful Priggles the praise he deserves—
He picked out a road that was nearly all curves.

AT last, on a byway near Buck's Township Pike,
Priggles cut straight through a hen-yard and
passed
Twist a barn and a house
And, as slick as a mouse,
Doubled the well-sweep and managed to strike
The high-road beyond. He'd escaped 'em at last!

"BACK!" shouted Percy and "Back!" shouted Hill.

"Sure a needle
can pass
through a
camel, but
will

A full-bodied racing-car
enter that hole
And ever get through?"

"Yes, a march he
has stole."

Said Percy. "But quick!
Down yon lane let us
strike

And cut off the villain at
Buck's Township Pike."

Dead ahead
Off they sped,
But they'd scarce got away

Than a voice shouted, "Hey!"
They halted. Approaching them, coming
crossed,

Deputy-Constable Pilkington Botts,
The local Speedkiller, upheld his right hand
And spoke in the thunder of fearful command,

"Stir not an inch—ye
Ain't goin' free.
I legally pinch ye.
Come, foller me!"

(TO BE CONTINUED)

Finance

By ALBERT W. ATWOOD

Why Pennsylvania Stock Has Fallen

IN course of time it becomes discouraging to write solely about stocks and bonds which go down. Surely it must be still more discouraging to own them. By way of variety a forthcoming article will deal with the Standard Oil stocks, about the only group which has shown a consistent tendency to seek higher levels. But for the present we will confine ourselves to things that are low and depressed. Consider for a moment this inquiry from a woman in Wilmington, Delaware, and a possible answer:

"Pennsylvania Railroad stock is now down almost to 34. Isn't this one of the best stocks at the present time? Do you think it will go much lower? I am a worker, and have thought it a good plan to buy a share of stock every time possible, when the prices were down. I had thought of Pennsylvania Railroad as the next purchase."

The Pennsylvania, like other railroads incorporated in the state of Pennsylvania, puts its stock out in shares of \$50 each instead of \$100, the common practice. That is, a one-share certificate of Pennsylvania stock has a par, or face, value of \$50, and on the Philadelphia Stock Exchange it is quoted so many dollars a share, on the day of this writing at 33 9/16. But in New York the price is expressed by percentages of 100, and, so on the same day New York sells it at 107 1/4. Wilmington in a geographical sense naturally follows Philadelphiaomenclature, but all the same the New York way of quoting stocks is more generally employed, and we will use it.

On a Panic Basis

AT its lowest price in 1907 Pennsylvania did not fall below 103 1/2. It is now selling at 107, that is, at panic levels. Why should this scale of prices exist, and is the stock safe? These are the two vital questions to answer. It would also be interesting to know whether a still lower quotation may be expected. But to answer that question requires a complete foreknowledge of all economic and financial tendencies and events, which only cheap fakirs pretend to have.

There are many reasons why Pennsylvania has fallen. Of course if its decline be compared with that of nearly all other stocks there is less to explain, indeed comparatively little. But like the New Haven, although for utterly different reasons, attention seems to have been riveted upon this particular investment, perhaps because there is so very much of it. Thus let us try to explain the decline in reference to this company alone, and forget temporarily that nearly all other securities have passed through the same vale of tears.

WHAT has most excited criticism of Pennsylvania has been the great policy of expansion which this company entered upon in 1903 when Cassatt started

All-Weather Treads

The Latest Goodyear Invention In Eight Ways Excelling All Other Anti-Skids

This tread is double-thick.
It is extra tough—toughened by a secret process.

The grips are deep and enduring.
They last for thousands of miles.

The edges are sharp, and they stay sharp. They slant 45 degrees to face the skidding direction. On wet roads, soft or solid, they afford a bull-dog grip.

The blocks are broad and flat, offering plain-tread smoothness. The blocks are regular, causing no vibration as do irregular projections.

The blocks widen out so they meet at the base. They don't center the strains at small points in the fabric as do separate projections.

This means a long-lived tire.

In winter, every wheel of every car should have All-Weather treads. You will find no anti-skid which even compares with them. Yet eight anti-skids cost more.

All These Things Go With It

This All-Weather tread is our latest invention. It has taken five years to perfect it.

It is being adopted as fast as men find it out. Months ago it came to outsell our smooth tread with users. And on Goodyear tires, the largest-selling tires in the world.

It solves all the anti-skid problems. It gives the smoothness of plain treads. It gives plain tread economy. And yet, when you need it, it offers the wet road an almost irresistible grip.

And note that it comes on No-Rim-Cut tires, so all of these things go with it.

They Save

Rim-Cutting.

Blow-Outs.

Loose Treads.

No-Rim-Cut tires make rim-cutting impossible. And we control the only feasible method ever found to do this.

With old-type tires rim-cutting means almost one tire in three. This is proved by actual statistics.

No-Rim-Cut tires are final-cured on air bags shaped like inner tubes. They are cured under actual road conditions, at an extra cost to us of \$4,500 daily. This is done to save the countless blow-outs due to wrinkled fabric. No other maker does that, because it costs so much.

No-Rim-Cut tires combat tread separation by a patent, efficient method. We paid \$50,000 for it. In no other tire is anything like it used to combat this ruin.

No No-Rim-Cut tires meet your three greatest tire troubles in ways which we control. They are saving motor car owners millions of dollars.

They are saving so much that these tires outsell any other tire in the world.

You are bound to adopt them. Every rim-cut, every needless blow-out, every loose tread suggests them.

Go now and see them—now when winter tires are wanted, when these All-Weather treads are essential.

It is the aim of the publishers of HARPER'S WEEKLY to render its readers who are interested in sound investments the greatest assistance possible.

Of necessity, in his editorial articles, Albert W. Atwood, the Editor of the Financial Department, deals with the broad principles that underlie legitimate investment, and with types of securities rather than specific securities.

Mr. Atwood, however, will gladly answer, by correspondence, any request for information regarding specific investment securities. Authoritative and disinterested information regarding the rating of securities, the history of investment issues, the earnings of properties and the standing of financial institutions and houses will be gladly furnished any reader of HARPER'S WEEKLY who requests it.

Mr. Atwood asks, however, that inquiries deal with matters pertaining to investment rather than to speculation. The Financial Department is edited for investors.

All communications should be addressed to Albert W. Atwood, Financial Editor, Harper's Weekly, McClure Building, New York City.

upon the realization of a vision which many before him had glimpsed, namely, to carry to something like completion the monster highroad between Pittsburgh and New York. Probably more than half a billion dollars has gone into this line in these ten years, including \$100,000,000 to build the New York terminal alone.

IN 1903 the company had \$251,000,000 of stock. Today it has close to \$500,000,000. Such a tremendous increase in share capital has caused much wagging of heads and many doleful comments. Then too all along the line the Pennsylvania has gone to the utmost expense to afford its passengers comfortable service. The \$100,000,000 station is but one item, and the expenditure for passenger service has been none too remunerative. The net profit from this branch of the business has steadily fallen. And it is said that one out of every seven passengers carried in this country rides upon a Pennsylvania train. So vast too is this enterprise that when engineers, firemen and finally trainmen insist upon higher wages, and get them, the largest burden falls on the Pennsylvania.

More immediately affecting the stock was an increase of 10 per cent. in its amount last April, and the recent announcement of the contemplated creation of a \$1,000,000,000 mortgage to cover future requirements in the way of new capital. Although all of last April's new \$41,000,000 stock issue was taken by old stockholders without resort to an expensive underwriting syndicate, yet in the then condition of stock markets the meal proved a hard one to digest. Also the proposed billion-dollar bond issue is to eventuate only through many, many years, but the immediate sentimental effect is to make shareholders feel less secure.

Unreal Over-Capitalization

TO make a complete analysis of Pennsylvania's affairs would be unnecessary and confusing. The system is so vast that its operations are staggering to the ordinary investor. It all looks so big and so perplexing. But the essence of a large corporation is just as easy to get at, and often easier, than the vitals of a smaller one. The simple truth is that Pennsy's gross earnings, net earnings and surplus have all kept up with an increased capital. Moreover, while stock issues have increased, bonded indebtedness has fallen. It is today fifty millions less than it was five years ago, despite the costly New York terminal.

If the New York station were not considered the increase in capital would be strikingly less than the growth in traffic. But despite this vast and unremunerative monument the earnings on Pennsylvania stock have averaged from 8 to 10 or 11 per cent. for many years past, and in the last few years, including 1912 and even 1913, there has been but a slight decline in this average. In other words the 6 per cent. dividend does not seem to meet with any threat.

A FACT which is often lost sight of is that the Pennsylvania Railroad owns all or most of the stock in many other lines which are an integral part of

its system, such as the Pennsylvania Company. The undistributed surpluses of these companies do not appear at all on the books of the Pennsylvania Railroad, which merely receives dividends on the stocks which it owns in them. These surpluses vary from \$7,000,000 to \$15,000,000 a year. Nor does the Pennsylvania Railroad carry these stocks at inflated prices. Far from it. These securities are carried at \$351,000,000, and there are persons who say they are worth two hundred millions more than that. It would be unwise of course to absorb all of such surpluses and mark up the price at which stocks are held, but to investors it is comforting to know the values are there.

Abreast With the Times

IT has been well said that, taking a broad view, the value of Pennsylvania stock lies in the extraordinary efficiency of the management. This efficiency is shown by an ability to keep expenses down when business falls off. Certainly no other large business enterprise in America has such a long record of successful management. And even to the novice in railroad analytics it has long been known that for every dollar in dividends there has been expended a dollar in improvements. The literalness with which this principle is applied may be modified in cases, but in general it holds good.

Another quality of Pennsylvania management fully as important, I believe, as its ability, is its fearlessness, its nose to the ground instinct. This humble but necessary equipment is what the New Haven has so sadly lacked, and from want of which a nobly rich property has fallen into a decline. The hundred-million-dollar tunnel and passenger station on Seventh Avenue may seem expensive. For all that, the Pennsylvania would be better off from the mere point of view of dollars and cents if it could stop carrying passengers on all its lines today. But from the broad point of view its unceasing efforts to handle its passengers in comfort bring in big dividends in public satisfaction, or at least, in preventing dissatisfaction.

TODAY the Pennsylvania enjoys public confidence. It seeks to tilt against no trust laws. Once its ownership of nearly every coal carrying railroad was thought essential because the company derives half its traffic from coal. But both the Chesapeake & Ohio and Baltimore & Ohio have been sold. And although half its traffic comes from coal the company has announced that it will sell such coal lands as it chances to own. It also expects to part with its holdings in the Cambria Steel Company. Public opinion no longer approves of a railroad owning all manner of miscellaneous companies, and the Pennsy does not propose to argue with public opinion. But while the railroad will part with these extraneous concerns it will not lose the traffic they originate. It does not need to own coal companies to carry coal. Its lines cover the Appalachian district like a net-work, the coal production of this district has mounted by leaps and bounds in the last generation, and the amount of unmined soft coal is estimated at five hundred billion tons.

How the Stock Is Held

OF course every one knows how Pennsylvania has paid dividends without a break for half a century. Since 1856 it has paid less than 5 per cent. only once. Of course this does not prove that profits will continue in the same way in years to come. But it does show why Pennsylvania shareholders are so loyal and why there are so many of them. Last figures show 86,412 stockholders, widely scattered throughout the world, and about half of them women. Of course in such a vast corporation the directors cannot own much of the stock, and yet Henry C. Frick, one of the richest and most powerful men in the country, is probably the largest stockholder as well as a director. Mr. Frick recently broke his usual policy of silence to deny that he had sold stock, insisting instead that he had increased his ownership. In 1906 he had 86,000 shares. The Adams Express Company, which has always been a shrewd investor, is one of the largest owners, and so is the Mutual Life Insurance Company, which has surely enjoyed good financial advice. John D. Rockefeller and the Astors rank high on the list.

PENNSYLVANIA is easily the favorite investment of all manner of insurance companies and educational institutions, the trustees of both of which usually have pretty fair ideas on investment subjects. One big fire insurance company has 15,000 shares. Columbia University has 10,000 shares, or three times as much as of any other stock, and Harvard has 7,551 shares, also three times as much as of any other.

IN 1912, when many forces were at work to depress Pennsylvania, only 638,017 of its shares changed hands compared with nearly 11,000,000 of Union Pacific, which has a smaller stock issue, and 25,000,000 shares of Reading, which has only one-seventh as much stock outstanding. In the week ending November 8, 1913, although Pennsylvania fell to low prices, only 13,390 shares were sold on the New York Exchange as compared with 143,000 Reading. Even in 1893, when general conditions were far worse than they have ever been since and compared with which the present outlook is of the rosiest, Pennsylvania only fell to 93, which on the then 5 per cent. dividend, was a basis of 5.36 as compared with 5.36 now. That is the stock now sells cheaper than in 1893 when most railroads were in receivership.

INVESTORS own Pennsylvania and have fared well by it. In the years 1900-1912 inclusive the owner of this stock has received more than 100 per cent. in dividends and new stock. Offerings of cash new shares at prices below the prevailing market level to old owners have been frequent. Time and again prices have been driven down for one reason or another, but time and again they have recovered.

Pennsylvania may never sell in the forties and fifties again (140 and 150) and it is not a stock with great speculative chances because earnings can never be fabulously large in relation to the capital employed owing to the character of traffic. But as a steady dividend payer, with earnings always conservatively above the amount paid out, the future looks bright enough. As for the company's bonds, it may be safely asserted that none are more secure.

"This Six Months' Guarantee Made Me Buy My First Holeyproofs"

I buy them now for superior quality—
for soft comfort and for style!"

We made six pairs of hose that were six months long before a guarantee was thought of. These have suggested the guarantee. And more than two million people know that not a single wanted hosiery advertisement is carried in Holeyproof for wear. Yet six pairs are guaranteed six months, and we replace every pair that fails. But 50 per cent. don't fail. We pay an average of 74¢ per lb. for our yarn—the best the world affords. Long.

Good yarn which means strength without bulk—and three-ply, which means soft elasticity. Common yarn can be bought for 50¢. Buy a box and see what the difference means.

The genuine Holeyproof are sold in your town. Write for dealers' names. We ship direct where no dealer is near, charges prepaid on orders of five dollars. Write for free book, which tells all about Holeyproof.

Holeyproof Hosiery
FOR MEN, WOMEN AND CHILDREN
HOLEYPROOF HOSIERY COMPANY, Milwaukee, Wisconsin
Holeyproof Hosiery Company of Canada, Ltd., London, Canada
Holeyproof Hosiery Company, 10 Church Alley, Liverpool, England

\$1.00 per box and up for six pairs of men's \$2.00 per box and up for six pairs of women's and children's. \$1.00 per box for four pairs of women's. Above boxes guaranteed six months.
\$2.00 per box for three pairs of men's and Holeyproof socks. \$2.00 per box for three pairs of women's and Holeyproof stockings. Boxes of six guaranteed six months.

Holeyproof Silk-Gloves
FOR WOMEN
For long wear, fit and style, these are the best gloves preferred. Made in all lengths, sizes and colors.
Write for the illustrated book that tells all about them and write for the name of the dealer near you who handles them.

Will This Happen To Your Family?

IT HAPPENED to another man's family. As long as the father lived his wife and children enjoyed a comfortable home, but he forgot the uncertainty of life, and dying left nothing. The mother had to take in sewing for a living. No man who loves his family has any right to live another day without an insurance policy like the Low Cost Monthly Income Policy of The TRAVELERS INSURANCE COMPANY of Hartford, Conn.

It guarantees the wife and children a safe and certain income paid regularly every month for life.

This income cannot be lost or diminished by the inexperience of the wife or the misconduct of others, neither can it be diverted from the purpose for which it was taken out.

The policy does not cease if the insured becomes unable to pay the premiums on account of permanent and total disability, but matures immediately and is paid in the form of installments as provided in the contract to the insured himself, and on his death to the beneficiary.

MORAL: Insure in THE TRAVELERS

Harper W. O. True

Eternal Youth

By REINA MELCHER MARQUIS

WHEN I first met him I scarce credited him with forty years, so fresh was his cheek, so clear his eye, so vigorous and alert every movement of his sturdy little figure. There was, indeed, an air of actual boyishness about him, heightened, of course, by his being rather small and slender, and at a glance one would more readily have supposed him twenty rather than forty; but a closer gaze revealed him as a man of some years and experience. Nevertheless, when he spoke of his married son, I started so perceptibly that he offered me the explanation:

"My boy ran off from college to the altar," he told me, with a shake of his head that was belied by the sympathetic twinkle in his eyes. "His mother died when he was a tiny chap, and I spoiled him afterward, trying to make up to him for his loss. He had whatever he wanted—and when he wanted a wife, he got her too! So now," he finished blithely, "I am a grandfather."

IT was at the country club that we had become acquainted and had grown thus friendly, and after a morning of tennis and a luncheon together on the pleasant club-house veranda, he further confided to me that he was in town as the guest of Felicia Allen. Bob Allen had introduced us—and then made off to the business that he could never long forget. The mention of Felicia's name did not, therefore, surprise me, though something in my companion's tone drew my eyes to his face. There I encountered the unmistakable elation of the newly-accepted lover. He was engaged to Felicia—I knew it, and he knew that I knew it, though out a word had been said.

For a moment I had recalled his confession of grandfatherhood. I had recalled it with a picture of Felicia in my mind—nineteen-year-old Felicia of the dewy, wild-rose sweetness, the wild-rose innocence of life. For a moment, then, I had thought the marriage unsuitable, for all the bridegroom's youthful aspect. But as I listened to him, I began to feel that he was nearer Felicia's nineteen than to my staid thirty. I began to see, as I have said, that he was eternal youth. I began to feel safe for Felicia—and for him. How he would hold his own! How he would triumph over mere years!

I DID not see him again until the night of his wedding, which occurred early in the autumn. And then he justified my confidence in him—justified it gloriously. His was the sort of golden blondness that lends itself so wonderfully to the illusion of youth, and that blondness, illumined by the unquenchable youth and joy of his spirit, was really a beautiful and vivid thing; he looked a splendid and shining little figure, set quite apart from the common frailties of our flesh. Oh, he would hold his own, I thought! He was in very truth one whom age could not wither.

Felicia, herself the type that is created for a bridal veil, lifted to him eyes that clung and adored. It was evident that for her there had never been any question of the years between them; from the first she had recognized the eternal youth within him.

His married son and the son's girlish wife were there, and I heard them address him affectionately as "Jack." He seemed, indeed, to be of their own generation, and as he and Felicia stood beside them, a laughing, rosy group, I would have declared them all of the same generation myself, had I not known of "Jack's" fatherhood—and grandfatherhood!

Straight from their merry wedding "Jack" and Felicia went to Paris, and three years passed before their return. Then, at the country club again, I found him one afternoon—the Eternal Youth.

"We're just back," he told me. "We liked Paris so much that we couldn't leave it. Felicia was enchanted with the life over there. As for me—well, I always knew that Paris was my city! It's the city of youth—the youth that lasts!"

IT was the first time that I had heard him refer, even indirectly, to his youthful quality, and it struck me somehow as a challenging, an almost uneasy note. Was this bright youth of his a little tarnished after all? Were its wings a little heavy that he needed thus to lighten it, to remind it of its own permanence? I stared at him with sudden scrutiny, and he struck me as well-preserved! Well-preserved!—he who, only three years before, had seemed to defy the necessity of preservation. I lowered my eyes swiftly, ashamed that I had seen. And yet, I argued, it was not defeat—this need of his to use carefully, to expend sparingly, the flame that still burned within him. It could last, thus guarded.

"We've a little daughter," he told me a moment later. "You must wait for her—you must wait for Felicia. My father-in-law will bring them out this afternoon for tea."

So I lingered, and presently they came; Felicia the center of the joyous group; her father, proud and benign, wearing the silver crown of grandfatherhood; her baby, crowding gleefully upon the arm of a smart French bonnie. But it was upon Felicia herself that my gaze stayed, a Felicia transformed by the matron's, the mother's, self-assurance, smooth-skinned, shining-eyed, suave, radiant.

"Well?" breathed her husband.

"She's amazing!" I answered. "Felicia was always lovely, but now—even for her—she's amazing!"

AND amazing she was—amazing in her sheer, unexpected magnificence. She had left us a slender nymph etched in silver. She had returned a deep-bosomed madonna, painted in splendid strokes of gold—his gold! For he had done it—I realized that at once. Felicia's paler personality could never have achieved such richness of itself. Was it any wonder that he himself was a bit tarnished, considering how generously he had given himself?

"Yes," he assented to my exclamation, "she's amazing." And then, as if he had heard my thought, "She's my miracle!"

It was as if he had said: "She's my miracle—now"—being a miracle himself no longer. And then he remarked, "It's for me to keep up with her, you know."

"You'll do it," I assured him. And now I thought, with a certain sense of relief, of how well-preserved he was! He could do it—after that fashion.

"Yes, I'll do it," he murmured. But

the tone was not triumphant; rather had it the listlessness of a too great effort.

The child was in Mr. Allen's arms now, and she constantly addressed him, in her two-year-old language as "Daddy-gran."

"Isn't he the ideal grandfather?" demanded Felicia delightedly.

"Well, I ought to be!" declared Mr. Allen, raising his silvered head as if at the touch of an honor. "I ought to be. It's a great privilege—this thing of being a grandfather!"

And the Eternal Youth echoed softly: "Yes—a great privilege."

Was that a wistful note in his voice? He was a grandfather himself—I remembered that—and yet he spoke as if of a boon denied him.

PRESENTLY Felicia left her husband alone with me in our quiet veranda corner, while she trailed her rosy draperies hither and thither, her father following with the child upon his arm.

"Daddy-gran! Daddy-gran!" Every now and then the shrill, high little voice floated back to us, and when we turned our heads towards the call, we would see the baby figure nestling still against Mr. Allen's shoulder.

"He is the ideal grandfather!" said my companion slowly. "That's what a man ought to be—that's what a man ought to have—at fifty-seven."

"Oh, at fifty-seven—yes," I conceded safely, so sure was I that Felicia's husband was well under fifty.

"I am fifty-seven," he told me then.

"You?" I cried incredulously, "you?"

"Yes—I."

"Then," said I, "you're more amazing than Felicia. She's surpassed herself, but you—you're surpassed nature!"

"Yes," he admitted—and now I heard clearly, unmistakably, the wistful note that, muffled, had yet reached me before—"yes, I've surpassed nature. That's the trouble—that's how I lose."

"Lose? But, my dear man, haven't you gained the priceless? Haven't you gained eternal youth?"

WE gazed at each other, my question hanging in the air between us, and never had he seemed more youthful. Lithe and vigorously slender still, his figure showed like a boy's against the background of his large chair; in the late, soft light of the afternoon, his smooth, blond head looked as bright as ever, his cheek as fresh, his eyes as blue. For an instant I thought it had been only my own fancy that had seen him a little dim, a little blurred.

Then, like a belated answer to my question—an answer that needed translating, but none the less an answer for that—came the shrill childish cry, "Daddy-gran! Daddy-gran!" At sound of it, my friend leaned forward: "My grandchild calls me 'Jack!'" he said. And then,

"Don't you understand? Don't you realize—now—what I've lost? I've lost the right to grow old!"

"But does it matter?" I pleaded, trying to comfort him.

"Matter?" he asked. "Matter? Why, nothing else matters—at last—to any of us. That's what we spend our lives to earn!"

The Character of Mellen

AN event showing how up-to-date is the Money Trust Series, is the onslaught of former President Mellen on the management of the new Haven Railroad while he was at the head of it. The gist of Mr. Mellen's declaration is that while he was nominally at the head of the road, the financial policy was dictated by the financiers of New York and Boston who controlled the road. Mr. Mellen is sore at present, what he says should be taken with reserve, and when he declares that it was the Boston financiers who wanted to suppress him, we do not think he speaks accurately. Nevertheless his outbreak confirms much that we have been printing. When he left the road his mouth was closed because of heavy cash payments and the promise of thirty thousand dollars a year for five years. The public outcry against this magnanimity with the stockholders' money caused a declination of the gift by Mr. Mellen, and it is possible he was glad to give up the money for the sake of free expression. He wanted to be a despot, and it made him angry that he could not act independently of the men who raised him. "If I live fifteen years," he said to an acquaintance, "I shall have the world by the tail." He had the mania of bigness, and he was fond of praise. As he grew in importance, he chafed more at being called a messenger boy for Mr. Morgan. It will be remembered that when Alexander the Great came to a town, he would get together all the prominent men and have them killed. Thus he destroyed competition. His empire fell, nevertheless, even as Napoleon's began to crumble when he attempted more than lay within human power. Mr. Morgan probably organized The International Mercantile Marine more from the habit of undertaking everything than in coolness of judgment. Indeed, it is reported of Mr. Morgan that he declared: "We are getting things now where a few men can sit down and settle all the affairs of the country." And Senator Cummins answered: "I do not think that plan would work, unless the Almighty was chairman of the board."

Speed

SOME people might call Mr. Brandeis radical, and yet it is difficult even for Mr. Brandeis to keep up with the facts, so rapidly do they develop. In last week's issue he stated the number of banks and directorates locked together in Boston. Since that issue went to press, the figures have changed. Two more Boston banks have consolidated.

A New Idea

THE whole series on Breaking the Money Trust is as full of originality as it is of importance. One conception is especially worth emphasis. Gradually the world comes to accept certain kinds of private businesses as so immediately connected with public welfare and public necessity that they are called public-service corporations. Among these, heretofore, banks have not been included. Lately, however, the business of receiving deposits and making loans has come to be recognized as so general in nature that it is in many ways already regulated by law. Therefore, as Mr. Brandeis points out, and as Senator Owen has also pointed out, this principle being accepted, it follows logically that banks are subject to the rule which forbids public-service corporations from making unjust discriminations and giving undue preferences.

How Things Work Together

THE greatest importance of the series is that it solves with masterly grasp the economic problem now facing us—the problem which, as President Wilson says, lies at the very root of the new freedom. Second in importance is the fact that Congress is about to legislate not only on currency but on many sides of the trust problem, and this series is the best foundation for such legislation. There are also many incidental connections of the series with current events. For instance, in the instalment carried this week is a discussion about efficiency and graft in relation to railroad rates. Everybody remembers the famous argument of Mr. Brandeis about how railroads could save \$1,000,000 a day by modern methods, which probably was the argument that persuaded the Interstate Commerce Commission to refuse the former application for an advance. Mr. Brandeis is again counsel for the Interstate Commerce Commission in the present advance freight-rate case, and therefore is carrying out before this legal body one aspect of the work he has put into the general unfolding of his philosophy given in the Money Trust series.

Prosperity in the South

"THE best year since the war," is a common expression in the Atlantic and Gulf States. The tobacco farmers of Virginia and North Carolina are getting top prices for leaf tobacco, thanks to the real competition, in spite of common ownership, between the buyers, the companies of the dissolved Tobacco Trust. The drought in Texas and Oklahoma cut short the

Texas cotton crop a million bales and lifted the price of cotton. In Georgia, two and a half million bales were produced this year, which means, at 500 pounds to the bale, at the price of fourteen cents a pound, \$70.00 a bale, with \$10 added for the cotton seed, from which is made the poor man's butter and the rich man's salad oil,—\$200,000,000 dollars for Georgia's cotton crop; \$1,120,000,000 for the fourteen million bales the South produces this year. The hanks in the cotton belt show greater assets and deposits than ever before. The cotton factories are running full time, in spite of wails of calamity their owners uttered while the Tariff Bill was pending. With the tariff question settled, the Currency Bill soon to pass, freeing the smaller hanks from domination by the larger, the way will be cleared for carrying out the administration program of trust legislation at the regular session of Congress.

The Beiliss Jury

WHEN Mendel Beiliss was acquitted, after a two years' utterly occasionless incarceration, of "ritual murder" at Kiev, the verdict of "not guilty" was rendered by a jury of six peasants, three minor government officials, two tradesmen and one professional man—ordinary men, rather below the average, as a whole, in education and intellect. It was by common sense, a most precious gift widespread among men, that they saw through the several weeks of obfuscations by theologians and experts. Another gift this jury had was explained in an observation reported of a member of the Duma: "A Russian peasant's conscience will not allow him to find a man guilty when he sees no proof." An ingenuous writer, who surely has forgotten that he ever read LeBon's book on "The Crowd: A Study of the Popular Mind," observed that the acquittal of Beiliss "is a cheerful sign. It demonstrates that the fair temper shown during the trial by the more educated classes has permeated the lower." Are we, then, to assume that high officials and journalists, official or otherwise, are not of the educated classes? Knowledge and wisdom are far from synonymous terms.

In the famous hank fraud case Robin fooled all the insanity experts, those called by the prosecution as well as those called by the defense, but the jury found him out.

The Hetch Hetchy Controversy

HOW do you explain the fact that a fierce agitation all over the country is kept up against a measure which has had the support of Gifford Pinchot, James R. Garfield, James D. Phelan, William Kent and a number of other conspicuous fighters for conservation in this country? Gifford Pinchot says:

"I am fully persuaded that there is no other comparable source of water supply available at anything like a reasonable cost to the cities around San Francisco Bay.

"Second: That the supply of surface water furnished by the Spring Valley Water Company is adequate neither in quality nor in quantity.

"Third: That the injury to Hetch Hetchy by substituting a lake for the present swampy floor of the valley, all due allowances being made for

whatever reduction in the height of the walls there may be, is altogether unimportant compared with the benefits to be derived from its use as a reservoir.

"Fourth: That the sanitary regulations included in the bill absolutely dispose of the plea, untenable at all times, that what San Francisco is asking for is control of half of the Yosemite Park instead of merely the Hetch Hetchy Reservoir.

"Fifth: That much of the opposition has its root in the unwillingness of water-power and transportation interests in and around San Francisco to see the city get possession of the large power it will develop if the grant goes through."

The forces in opposition are two. The water-power companies who know exactly what they are doing, and the sentimental lovers of scenery who do not know at all what they are doing. A very few of them, like John Muir, may know the facts and be out of perspective on the relative importance of things, but most of them are persons unaccustomed to studying exact conditions, who merely go up in the air when somebody tells them that some scenery is going to be hurt somewhere. If there is any injury to scenery at all in this case, it will be slight and the economic gain will be so great as to explain why conservationists of the type we have mentioned are so enthusiastic for the bill now before Congress.

Nerve

ROGER SULLIVAN is an avowed candidate for the Senate. He even has a chance of election, although it is to be hoped, for the honor of the State of Illinois, that this chance is not as strong as many well-informed observers think. There is in the United States no more complete example of the old-fashioned American boss, the go-between who rules the small politicians by catering to the predatory corporations. One question at least ought to be asked of Mr. Sullivan before the election: Has he sold his gas stock!

Ohio Schools

PROBABLY at least six thousand meetings were held in schoolhouses in Ohio on the night of Friday, November 14. That means more even than the fact that six thousand delegates were elected to the Educational Congress which met in Columbus on December 5 and 6. It means that at least six thousand schools talked about their own local needs, and how the community could meet local school problems. It is, we believe, the first time in the history of the United States that a governor has called a legislature in special session chiefly for the purpose of improving the system of education. Physical and intellectual conditions alike were considered. Out of three thousand teachers in one-room township schools less than one thousand had graduated from four-year high schools. Less than one-fourth of them had had any professional training. The physical conditions in many of the schools are dangerous to health. As Governor Cox said, the trend from the country to the cities is in no small degree due to the decline of the rural school system. In attacking the problem with such energy, Ohio promises to improve where improvement will have a far-reaching influence.

Single Tax Progress

NO economic gospel of the day is progressing faster than the doctrine rather unfortunately named the Single Tax; unfortunately because a great many persons are sympathetic with the movement to throw heavier taxation on unimproved real estate, and remove taxes from improved property who are not willing to go the distance of saying that there should be no other form of taxation, and this unwillingness applies even to some who want to carry taxation of land values so far as to nationalize the land. Pueblo, Colorado, last month accepted the Single Tax, thus following the example of various places in New Zealand, Australia, and Canada. Pueblo is not a big city, but it is the biggest in the United States to try this taxation plan. Naturally, therefore, the results will be watched with peculiar interest.

Alcoholism

SINCE Aeneas at least, has Italy been a wine-drinking country. Ferrero declares the vine was a most potent instrument of subjugating the Barbarian. Rome taught Gaul, Spain, Helvetia, the Danube regions many things—law, war, road construction, city building, the Latin and Hellenic arts and civilizations; but unfortunately for those races she taught them also how to ferment the juice of the grape. September last the Fourteenth International Congress on Alcoholism met in Milan to deliberate upon it—in Italy, perhaps the largest wine-producing country, in proportion to its area, in the world. That country is supposed to have had, up to recent years, the smallest alcoholism death rate. Signor Falcioni, in welcoming the delegates, urged not the suppression of wine drinking (which is a source of enormous wealth to the Italian wine-growers) but a fight against its abuse. The enormous emigration from the Italian rural districts of recent years has favored the spread of drunkenness, because those going to countries where alcoholism prevails return victims of the habit.

In Munich also, world-famed for its amber, foam-topped fluid, anti-alcohol physicians are concerning themselves especially with children (some of whom begin beer-drinking with infancy), youths, and those who, when intoxicated, are a direct menace to the communal welfare. There is, however, no desire to reprehend liquor dealers or to antagonize non-abstaining parents. No excuse is to be given for such a letter as was once written by an irate Teuton to his child's teacher at school: "You teach mine child dot beer ruins der coats of der stomach: you please mind your own business."

A New Club

THE City Club of Boston has been a conspicuous success in advancing democratic government through democratic social relations, and now the women of that city have organized their own city club. Edward A. Filene, speaking to them at their first dinner, described the hardships of industry, the social shortcomings, and named various remedies, putting highest of all fellowship,

coming to know one another, with the resulting increase of understanding and good-will:

"By simply breaking bread together—and learning to understand each other—learning to sympathize with all kinds of women, you shall set in operation forces that will never rest."

That is the secret. Many things help forward, but nothing helps so much as real knowledge of our fellow beings.

Periodicals and Styles

THE Women's Magazines have had a serious effect upon the garment-making industry. Circulating in great numbers throughout the country, they keep the women of Podunk and of Lame Duck promptly informed of all the changes, as they are hurried across from Paris to New York. Formerly the garment industry could be regular, because after supplying a certain style to the big centers it could keep on manufacturing it for the smaller places. This meant steady employment. Now that four principal changes in style every year, and about twenty-six minor changes, on every one of many garments, making a total of several thousands, have to be supplied for the whole country in hot haste, the old evenness of manufacture and distribution and employment seems impossible to maintain. The New York firms do all they can to get ideas from Paris far enough ahead to give them comfortable time for meeting the American demand, but the secrets are so well kept, or the decisions so late, that there is a great rush always for our big cities, followed by an equal rush for the small places. If Mr. Bok succeeds in his endeavor to divorce American from Paris styles he will accomplish an interesting and desirable victory, but the change will do nothing to meet the particular difficulty. That difficulty cannot be lessened until the average woman through the country ceases to compete with the New York female plutocrat.

Poe's Reason

POE wrote that perhaps a certain Barrow was right, and the death of genius in American literature was "owing to the continual teasing of the mosquitoes." There are fewer mosquitoes to-day—and no Poe.

Query

THE story is told of a man in England who was highly praised for heroically rescuing another man from drowning. He disclaimed all courage, however, and said it was a very simple matter: "I merely swam alongside of him and turned him over on his back, just to make sure it wasn't Lloyd George, and then pulled him in to shore." Suppose you were telling this story in America and wished to substitute for Lloyd George a native of this country. If you were a stand-patter, who would be your choice? Would it be the President of the United States, for example, or Senator LaFollette, or Secretary Bryan, or Col. Roosevelt? And if you were a Progressive what would be yours? Or, if you want to choose some patriot without classifying yourself, that answer also will be welcome.

WHEN Hafiz saw the portrait free,
By Monty Flagg, of him and me,
He made remarks one can't repeat
In any reputable sheet.

Mlle. Fauteuil and J. M. Barrie

IT is harder for a table or chair to behave naturally on the stage than for a camel to be free and easy in a needle's eye, or for that matter for Mr. Rockefeller to get into Heaven.

What can be more pathetic than the spectacle of a helpless young chair or table or settee starting on a stage career shining with gilt varnish and high ambition to reflect in art's mirror the drawing-room manners of the furniture of real life.

Mlle. FAUTEUIL (that is her stage name, in private life she is just plain Settee) is fresh, charming and of the best manufacture. She appears nightly in a Broadway theater, yet she has attracted no attention. She has received no press notices.

Certainly this is from no lack of charm on her part. Her legs are delightful. In the contemplation of their gilded curves, one scarcely notices that she has no arms or that her back is slightly curved, and her upholstery, a brocade of the season before last.

IN a hushed papier-mâché voice the property man told me the story of Mlle. Fauteuil's persecution—how, at the first rehearsal with scenery, she occupied a perfectly proper position between the center table and the bay window, when the Leading Lady insisted on her being moved as she obstructed that superior person's path when, after writing the letter, she crosses to the window to see if her husband is in the garden.

Mlle. Fauteuil was then transferred to a station between the table and the fire-place. This was all right, until the scene between the Husband and Wife, when the Husband walks back and forth (quickly up stage and slowly down stage), between the table and the fire-place.

This time it was not a case of politely requesting the intervention of the stage-manager.

POOR mangled Fauteuil! When she was picked up from the orchestra pit it was found that two of her rungs were fractured and her left caster was broken clean off at the ankle.

After half a day in the hospital without either anesthetics, flowers or press notices, she reappeared on the left side of the stage, between the center table and the safe. Here she was conspicuous and happy until it was found that the Erring Son in his voyage from the window to the safe, was compelled to take a difficult step to one side to avoid the fauteuil.

Banded from right to left, up stage and down stage, at last Mlle. Fauteuil landed in her present obscure position, to the right of the stairway pillar, where, though miserably obscure, she interferes with nobody's stage business.

IN the interior set as now played there is only one chair with a speaking part—this is, the Jacobean chair on which the leading man leans when talking to the ingénue. In the first act, it faces left so that he may show his favorite profile. In the second act, the chair is reversed in order that the audience may enjoy his more popular and extensively photographed right profile.

The moral of this story is that the furniture on the stage must never appear more intelligent than the actors.

In this play the intelligence is equally divided, and the production bids fair to run all season.

ABOUT three weeks ago (if any one in these rapid times can remember so far back) a comedy entitled "The

Younger Generation" ended its brief run at the Lyceum. Its failure was chiefly due to the realistic acting of the furniture in the parlor set. In consequence of this, the actors were compelled to behave exactly as real people behave in a real parlor. The result was an artistic effect of naturalness that killed one of the best comedies that has been seen in New York since "Hindle Wakes."

EVEN the meritorious glitter of the subsequent curtain-dropper, "Half an Hour" by Barrie, could not save "The Younger Generation."

Talk about a *mauvais quart d'heure*! Here was a double dose, with a vengeance. Mr. Alan Dale, with exuberant enthusiasm, called the play wonderful. What a wonderful word "wonderful" is! What would one do without it when meeting a sudden demand for payment of compliments on anything, from a bad book to a bawling baby?

In justice to Mr. Barrie it should be stated that in the English production "the brutality of the husband" did not express itself so violently in his wearing apparel—wearing apparel is I believe what the tailor calls them.

WHY do our "stage gentlemen" always strive to appear as if they had just left the hands of the tailor? Is it any less vulgar to suggest a tailor's shop in the newness of one's clothes than to suggest the barber shop in the dressing of one's hair?

There is something unspeakably gruesome in the thought of the wife returning in half an hour to the arms of such an atrociously dressed husband.

Mr. Barrie is a master of whimsical comedy. In the amusingly pathetic he has few equals. In tragic drama he is hopelessly out of his depth.

Revolutions and Concessions

By McGREGOR

Part I

Waiting for Developments

FOR a long time, we of the United States maintained a contemptuous attitude toward the Latin-American nations to the South of us. A South American republic seemed a contradiction in terms. We complacently regarded ourselves, graciously including Canada, with our Anglo-Saxon heritage, as the only people of the Western world capable of self-government, and our free institutions as beyond the attainment of peoples with their roots in Spain or Portugal. So we cracked our jokes at their revolutions, served daily for breakfast. Latterly, with some wholesome truths we have been learning about ourselves, the mis-government of our cities, the control of state and even national politics by corrupt bosses, we have come to recognize that revolutions are things of the past in the great, progressive, South American States, Brazil, the Argentine, Chili, Peru, and that wars between them had ceased. The Central American States are still a by-word, but we have begun to learn the real truth about the causes of the revolutions that used to be so frequent. The South American States have secured stability of government because for them, in large measure, the era of concessions is past and the era of investments has set in. In the days of their weakness and poverty and undeveloped resources they were forced to borrow money and the borrower was subject to the lender. President Wilson aptly described the process in his speech in Mobile.

THE process was simple enough. When a loan was made, a concession was demanded. The concession had to be ratified by legal processes. So the concessionaire supported the party that was able to ratify the concession. Sometimes rival concessionaires supported rival parties and blood was shed for the rich financial rewards that the victorious party could bestow. Sometimes native capital combined with foreign, and this was especially the case in Mexico under the rule of Diaz. The revolution was often brought about by the revolt of the people against these exploiters of their country. It has

been a singular perversion of international morals that the great nations of the world have used their power to protect their citizens engaged in such enterprises, and only the Monroe Doctrine has saved the South American nations from being European colonies, under the plea that order had to be restored for the protection of European investors. It will be remembered also how near the Asphalt Trust came to involving us with Venezuela, even the notorious Castro, in this matter, apparently acting the part of patriot. But Europe has been the chief sinner with regard to South America, while we have been mainly at fault in our dealings with Mexico and Central America.

THE truth about Mexico has been hard to establish, mainly because the springs of news have been poisoned and the commercial interests that control so large a part of the American press have published what was most favorable, in both news and views, to the interests involved. In a letter addressed to a committee of the United States Senate, investigating conditions in Mexico, we find this striking sentiment from the pen of one of the Revolutionists, Braulio Hernandez: "Truth is elusive; it is a white dove that only permits those who love her to approach her nest: the paths that lead to it are humanity and sincerity."

Porfirio Diaz was long held up to public view as a wise and virtuous President, re-elected continuously because of the love and affection borne him by his people. When the facts concerning his iron rule of tyranny began to come out, his alienation of the national lands and of the petty holdings of the peons alike, to his favorites, the graft and scandals of his administration, the debauching of a sober and clean-living people with pulque and mescal to enrich his liquor monopoly, his treatment of the Yaqui Indians, and the enforced slavery of the peons—these facts were bitterly denied. Madero had the sympathy of the Americans along the border and of disinterested folk generally throughout the country. But

as soon as he had been elected to the Presidency and the counter-revolution of Orozco was arranged, the commercialized press became clamorous for intervention because of the sacrifice of American lives and property. Then Madero was deposed and assassinated. Instantly the same sources of news began to praise Huerta as the one strong man who could pacify Mexico, and his recognition by our government was imperatively demanded, although the counter-revolution by Carranza began immediately, and has attained far greater proportions than that of Orozco. Intervention had lost its attractions over-night.

At bottom, the Mexican question is a land question. The land is held today largely by the Spanish descendants, in regular line, of the old Conquistadores. The situation with regard to the land is not unlike that which brought on the French Revolution, the poverty of the peasantry leading to starvation in Paris and the other cities. In France, when the Revolution began, there were 130,000 landlords. After the Revolution, 4,000,000 land owners. This result has already been accomplished beyond recall in the Mexican State of Morelos, in the Southwest, where Zapata has been operating. There were 28 landlords in a population of 200,000. But the 200,000, in spite of the efforts of Diaz and Madero and Huerta, the last ordering a massacre of the people at the behest and through the money raised by the 28 landlords, have already divided up the lands and are cultivating them.

ACCORDING to an estimate by M. Bonilla, in the bulletin of the *Sociedad Geografica y Estadistica*, published in Mexico City in July last, the landed property of Mexico is divided as follows:

Class of land.	Total area.	Value per hectare.	Total value.
11,000 haciendas	90,000	\$270	\$24,300,000
18 land companies	90,000	30	2,700,000
Small land companies	1,000,000	30	30,000,000
Cities and ejidos	1,000,000	212	212,000,000
Small farms	400,000	30	12,000,000
National lands	900,000	not valued	
Total	4,000,000		\$55,000,000

So 11,000 landlords of great estates own 44 per cent. of the land, while the land companies own 10 per cent. more, which they have bought from the landlords. In Lower California three land companies, Mexican, own 78 per cent. of the land. And there is no land tax, in Mexico, but only a tax on production. The landlords refuse to sell their lands to the peasants but hold them for sale in large tracts. In the testimony before the sub-committee of the Senate Committee on Foreign Relations of the preceding Congress, there were brought out such facts as these: Mr. George Look owned a "small ranch" of 75,000 acres. Mr. Charles Newman, one of 100,000, which he valued at \$2.50 an acre. Charles K. Warren had 450,000 acres. Morris and Company own 1,250,000 acres. While Luiz Terraza is reputed to own from 15,000,000 to 16,000,000 acres, and Enrique Creel, formerly Minister to the United States, under Diaz, 5,000,000 acres. The Corralitos Company owns 5,000,000 acres. One of the witnesses was the man that surveyed the land for the Creels and the Terrazas, a German civil engineer, living in Mexico since 1882, and he summed up the case thus: "During this time Porfirio Diaz and his Minister, Pacheco, commenced to divide and sell the national lands among the big landowners and some surveying companies, giving them large tracts of land for the work of surveying and selling the other lands to the big landowners and land speculators, who often included some lands possessed by other people into theirs. Very few persons of the middle class had the luck to buy some good piece of land, the very poor people had no chance at all to get a piece of land to live on. Therefore in Mexico you will not find, like in the United States, numerous small farmers and small landowners, but only big "haciendados," with one army of slaves, who gain so low wages as scarcely to provide them with a living.

The foundation of the recent and present revolutions in Mexico was laid in the Survey Laws enacted from 1885 to 1894. It was decreed that the titles to all lands

should be recorded. Under the ancient "Law of the Egidio," every village possessed a sort of common consisting of three square leagues, which furnished the villagers gardens and pasturage for their cattle. The new laws confined this land to one square league, and the landlords, already holding from the time of the Spanish Conquest great estates, were not content with buying up or receiving as a gift the national lands then surveyed and divided, but would advertise, the small holders of land being kept in ignorance, their purpose to purchase these unrecorded lands, and would then dispossess the rightful owners. Then to secure laborers, they bought, generally for a song, the ejidos, with the exception of the one square league remaining, and put the people out of their homes and fields, so that the alternative was to work for the landlords or starve.

THERE would have been a revolution any time within the last ten years but for two factors. Diaz welcomed foreign investors, granting with lavish hand rich concessions, and thus maintaining the ability to make large loans sufficient to keep up the army and to overcome opposition whether at the so-called elections or by force of arms. Then the idea was industriously spread that Mexico's big neighbor to the North would inevitably intervene to protect the large American possessions, in the way of mines, railroads, cattle ranches, rubber plantations, and industrial enterprises. Since there is no land tax, it is computed that Americans own 42 per cent. of the taxable property of Mexico. Their mining companies, in Chihuahua and Sonora alone, the two large and populous states bordering on Arizona, New Mexico and Texas, are legion for number. The American Smelting and Refining Company owns great mining interests, the Cananea Consolidated Copper Company has an investment of \$12,000,000, the Santoy, of \$6,000,000. It was in accord with international precedents that the United States would intervene if the property of its citizens was threatened by a revolution. And the Mexican people, more than anything else in the world, dread the conquest of their country by the United States.

But Diaz had no illusions. He was far-sighted enough to dread the agrarian revolution, and saw it impending. The millions of small land-owners who had been driven from their homes in the ejidos and from their little farms, because they knew not how to record anew the titles to their lands, were growing desperate. Zapata started his guerrilla warfare in the South, and Orozco began a similar movement in the North. And when Francisco I. Madero, of the famous family that is reputed to own a hundred million dollars in property, with the favor of their large army of employees, liberally treated, entered Mexico from his exile in the United States, and captured Juarez, opposite El Paso, on the border, Diaz did not wait for the issue to be fought out. He sent for de la Barra, his representative in Washington, made him Minister of Foreign Affairs, and thus successor to the Presidency, and Diaz resigned and sailed away to France. The uprising of the people was general.

THE Senate Committee, instructed to find out whether any persons or corporations domiciled in the United States have heretofore been or are now engaged in fomenting or financing rebellion in Mexico, "conducted" exhaustive hearings on the border and in Washington and were able only to find hearsay evidence that Standard Oil had financed the Madero Revolution and this was from a confusion of Standard Oil with the Waters-Pierce Oil Company, which, though partly owned by Standard Oil, had been freed from its management. This company had been engaged in exposing the graft connected with the oil concessions obtained by Lord Cowdry, known as the Pearson interests. Foreign investors, American and European, were opposed to Madero, as he afterwards found to his cost, and were in favor of the continuance of the Diaz régime.

The part played in the overthrow of Madero and the upholding of Huerta by the concessionaires is another story and will be told in next week's issue.

"It was finally decided that I should remain and see if we suited each other"

Secretarying for a Woman Author

How one woman has worked out the most difficult of all the feminist's problems

Illustrated by May Wilson Preston

WANTED: A young woman to take dictation from writer in the mornings and to transcribe notes in the afternoons. One accustomed to manuscript work. Please answer, giving experience . . .

This advertisement at once attracted me. At the time it appeared, I was twenty-four years of age and for five years I had been working in a lawyer's office. For many reasons I was beginning to wish for a change. So I replied to the blind advertisement and, to my gratification, within two days I received an answer.

When I read the signature to the letter I was astonished to recognize it as the name of a well-known woman writer whose stories and books I had read with much interest. Also I was surprised to learn that she lived in my city.

Going to Mrs. L.—'s home, as in her letter she requested, was by way of an adventure. What would Mrs. L.— be like? What would it mean to me, if I secured the position, to be in daily contact with a woman who must dwell in an ideal world?

When I arrived at the street and number indicated in Mrs. L.—'s letter I found a plain apartment building. I rang the bell of the third floor, and when an Irishman voice answered me and asked me to walk up, my knees actually shook.

You see I had never before met, face to face, any celebrity.

The person who opened the door was not the trim maid I had rather expected, but a middle-aged woman, scrupulously tidy, wearing an enveloping gingham apron. She smiled at me and cordially invited me to enter. I found myself in a hall that led directly into a large, modern sitting-room, opening into a smaller room, Mrs. L.—'s studio.

"Just sit down and make yourself comfortable," said the woman I afterward knew as Jane. Then she left me.

IN a short time Mrs. L.— appeared. She was young, and had a half-shy air that was immediately attractive to me. She wore a little pink lawn dress. Her hair was a soft brown, drawn back from her face and fastened in a knot at the nape of her neck. Her eyes were brown, childlike in their direct gaze, but with the power to estimate another at once. I felt that with one sweeping glance she knew me through and through, that there was little I might expect to hide from her. She drew up a chair and sat down.

"I wanted to see you at once," she began, "so I didn't stop to remove my apron. I've just finished bathing the baby."

Since I was too tongue-tied to reply, she went on:

"You said in your letter that you could

take shorthand rapidly and that you believed you would like my kind of work."

I nodded.

"I WANT some one who could rather eliminate her personality during the time I dictate," she went on. "That is, I don't wish to be interrupted if you should fail to get a word—and please assure me that you can turn your shorthand book without rustling the leaves."

I smiled back at her. "I can be very quiet and unobtrusive," I said.

"You may remain here in the afternoons to transcribe your notes or do the transcribing at your own home," she said.

"I have no typewriter of my own at present," I told her.

"Well, you would have to stay here, then," she answered.

We discussed the matter of my references, and terms and it was finally decided that I should remain and see if we suited each other.

So I started in as Mrs. L.—'s secretary. On my second morning Mrs. L.— came into the studio to give me some directions. "Open any business letters on my desk. Those from editors speaking about work put in one pile. Those obviously replying to questions of mine about work put in another pile. And place any returned manuscripts in the drawer marked 'Cooler.'"

THEN she went away. "Returned manuscript!" and "Cooler." She evidently believed something to be wrong with a returned manuscript and so put it aside for consideration! When I had the letters arranged, she returned again, this time bearing a baby in her arms, half on the way to sleepy land. The mother's face as she looked down at her child was Madonna-like.

"This little girl," she said to me, "has been bathed and fed and should by all scientific rules be put in her crib, half and allowed to go to sleep alone. But she so charms me that I feel I must keep her with me. If it will not distract your attention I will try to dictate with her in my arms." And she began.

IT was a romantic story she started, looking every once in a while at notes I gave her; thrillingly interesting I found it, though I had to bend every nerve to keep up with her. The baby fell asleep, and instinctively the speaker lowered her voice. But her words flowed steadily on. I don't believe she hesitated while I filled half a shorthand book. She gazed most of the time out of the window, but her physical eyes saw nothing. She was absolutely living and moving with her characters.

At last she brought her eyes back to me. "Now that's as it should be," she ended, "to write quickly and easily."

Then she went away, her child held close in her arms, and I did not see her again till about two o'clock, when she appeared in the doorway dressed for the street. She said: "I'm going out as usual with the two children." That was the first time I knew she had two children. "And when you've finished transcribing your notes you may go home."

I couldn't help it. I went to the window in a few moments and looked out. Down in the street I saw Mrs. L.— starting away, wheeling the baby in her perambulator, the young son gamboling joyously at her side. She seemed just like any one of a number of other women taking their children out for an airing, but I decided that she was very different from any I had ever known in that she had mastered the art of having both children and a career!

AFTER three days' trial it was decided that I should remain with Mrs. L.— and I was very happy, since I enjoyed the work and its variety, very different as it was from the cut-and-dried declarations, petitions and affidavits I had been grinding out for five years. Also I enjoyed being with Mrs. L.—. She was very magnetic and she had a keen sense of humor which lightened many a situation holding elements of danger. But a flashing observation from Mrs. L.—, a brilliant smile and the day was saved for all about her.

She had her work, of course, well organized. She was not naturally systematic, she told me, but had trained herself to orderly observances in every department of her life, and she let nothing interfere with her household routine. In the mornings she bathed her children, put the baby to bed, saw the little boy off to kindergarten in the care of a young woman, then made out her list for the day, sometimes with Jane's help, but often personally going out to her ice-box and her pantry. She gave Jane each day an outline of duties, a rather flexible outline, of necessity, but never too many tasks for Jane to perform comfortably. She employed, besides Jane, a man to do the

heavy cleaning weekly, and a laundress. All those who worked for her did their best; sometimes I thought it was because Mrs. L.— treated them so humanly—not perfunctorily nor indifferently—she was really interested in them and their lives, and they felt her interest.

BUT how she could bring her mind from eggs and butter to the task of mapping out an imaginary situation with imaginary characters and making them live and breathe was a feat I couldn't understand—naturally, I suppose. After her work in the home she would come to her studio, pick up a scenario, and perhaps begin to dictate without pause for an hour.

Of course one great element in Mrs. L.—'s ability to do so many things well, was her superb health. She never neglected taking long walks in the afternoon, either with her children or leaving them in the care of Jane, and she transgressed no law of living, eating the simplest food regularly, drinking plenty of water, sleeping out of doors; therefore she could get through an immense amount of work with little resultant fatigue.

One morning she was late in starting to dictate. She sat in her big chair near the window and leaned back. "I haven't a thought in my head," she confessed. "I intended this morning to dictate the first part of an ordered story, but I don't know just how to begin, nor how to progress, nor when to stop, if I do get started." She smiled over at me quizzically. Out of an impulse I said:

"Why, I thought you had to be inspired before you could write anything!"

Then she did laugh. "My dear," she said, "I wouldn't average two stories a year if I waited always for the drive of inspiration. I suppose most persons think of a writer as being always in a fine frenzy. Well, it's an altogether wrong picture. Writing is hard work! And to have any success you must possess a spirit of perseverance, of stick-to-it-iveness, and a training that gives you the strength to bob up serenely after each discouragement—and there are many of them."

"Well, then," I asked, "why do you write, Mrs. L.—?"

"Because I can't help it," she answered promptly. "Because I love to write! Now I'm ready!"

I ALMOST jumped at her quick change.

She started. And she was in the middle of her opening paragraph, concentrating, as I could feel, with every bit of her mind, when a noise like an earthquake tearing everything before it assailed our ears; and in another moment a small figure had pushed its way into the room, flung itself upon its mother and was pouring out a story of which I, for one, could make no sense.

Closely following came Jane, flushed and excited. "I couldn't do anything with him," she cried. "I tried my best to keep him back."

Mrs. L.— said, quietly: "Very well, Jane," and Jane disappeared to hush the wailing baby awakened by her brother's impetuous onslaught.

The mother simply held her boy, an intense child, until he had run down a little. Then she said very quietly: "Now, tell me why kindergarten was dismissed, Jack." Her tone soothed him at once and he went on with his story.

When it was finished: "That's very interesting," said his mother. "And have you any plans for the rest of the morning?"

"I'd like to ride my velocipede up and down in front of the house," he said.

"Very well," his mother answered.

After a time there was quiet again and Mrs. L.— went on dictating, going to the window every little while to look down at her little son.

"She is wonderfully equipped," I thought, "physically, mentally and spiritually."

BUT later I felt that the greatest attribute of all she possessed, was the power of seeing things in relation to one another; and next greatest, the clear vision to get out of every situation something worth while, and not to sink beneath its weight and throw up her hands, as I've seen other women do, at the maddening interruptions in a woman's day!

I found Mrs. L.— one morning in the kitchen where Jane conducted me. Over a steaming kettle my employer was bending. She was making jelly. Her cheeks were flushed and her eyes bright.

"I didn't realize that Danson plums were nearly out of the market," she said. "And so I'm making conserve today."

I didn't know what service she would require of me, and so I just stood in the doorway watching her. The baby was taking her nap. Jack's kindergarten still being closed, he was actively present and engaged in removing all the small kitchen utensils out of the kitchen table drawer. Jane was miserably cognizant of his employment, but she dared not request him to stop his din, since his mother allowed him any pleasure within the realm of legitimacy. He was very, very happily fitting different parts together, and though his noise was ear-splitting, his mother only smiled over at him.

"A Montessori outfit in that kitchen drawer," she told me. "Will you bring your book out here?"

I OBTAINED my book somewhat fearfully. Could I hear above the racket? I sat down on the edge of a kitchen chair. Mrs. L.— went on stirring and watching her jelly. Jane brought forth glasses from the pantry, Jack was intently interested in assembling the different parts of the food-chopper.

"Yesterday," said Mrs. L.— after a time, "I met one of the most charming philosophers I've talked with for a long time, a janitor's wife with twin babies."

So saying, she lifted her eyes from the stove, and I knew by their expression that she had struck fire with some new thought. With the blue enameled spoon still in her hand, she began to talk, rapidly evolving an uplifting article based on that one meeting with the janitor's wife.

After a moment Jane stopped her clamor with the jelly-glasses; Jack left his food-chopper and went close to his mother, and with his big eyes gazing up earnestly at her, seemed, child as he was, to be lifted on the wings of her inspiration. And I went on taking notes.

I don't think I shall ever forget that little scene in Mrs. L.—'s kitchen. It typified to me a woman who lived out every possibility in her nature; one who had so deliberately and intelligently organized her life that she could express all her powers.

But though, as I have said, she so systematically arranged her days that she could live broadly, she had, of course, irritations to contend with. But she didn't permit them to grow into limitations and so block her progress. Instead she sought the cause of the irritations and when possible removed that, so

that she was the least nervous woman I've ever known. I couldn't imagine her bemoaning the fact that Jane might ruin or lose some of the fine linens the dining-room boasted; instead, when she found they were a care not commensurate with the enjoyment they gave, she replaced them with easily-laundered Chinese cloths and napkins. And she went further, for into those exasperations that will come at times, she read an interpretation which quite robbed them of their power to check. Indeed she made those

"Very well, Jane. Buy half a dozen of the fruit. And Jane, be sure and pick out good ones."

At which suggestion Jane would fairly scintillate.

AFTER one of these interruptions Mrs. L— did not continue her revising. Instead she said to me: "Did you ever look behind Jane when she stands gloating over the fact that she is saving a few cents for me?"

"Look behind her?"

Mrs. L—. She did make you think big. From the talk that day I carried with me the thought of trying to be more kindly, more really interested in others. Not as before I had been, because traditionally it was right to be so, but because there was a real, scientific fact underlying that way of vision.

IT was with real regret that I left Mrs. L—'s employ. Her husband moved his business headquarters from one city to another, and his family went with him.

"So saying she lifted her eyes from the stove, and I knew by their expression that she had struck fire with some new thought"

same exasperations foundations for large thought and so increased capability.

FOR instance, there was Jane, good, loyal Jane, who yet couldn't refrain from occasionally interrupting Mrs. L— in the studio. Her ruling passion for economy was her undoing on those occasions. She would appear in the studio door, apologetically, looking just like a naughty child. She would begin:

"Mrs. L—, excuse me for comin' in on you now, but there's a man at the back door with the finest fruit ever I see."

"I don't care for any now, Jane," from Mrs. L—.

"I know you don't care for any, but his grapefruit is three cents cheaper than you're paying the grocer!" Jane's tones would be actually pitiful in their prayerful appeal.

"Yes. I always see her background, a poor little home with money a terribly scarce commodity. Jane growing up in that atmosphere of pinching, worrying, wondering! Oh, seeing others with their backgrounds makes one more tolerant always!"

"Yes, I get that truth," I said after a time, "but really, Mrs. L—, don't you find Jane's interruptions annoying at times?"

"No, not when I consider her as a human being with a human's frailties and instincts. I realize that those instincts are at times too strong for her control. I see her with socially-opened eyes, that's it. Not just as an individual rather annoying because I can't bend her to my every desire. And when you do see others racially, you get some fine understandings."

Now that was the joy of being with

Mrs. L— asked me to accompany her, but for personal reasons I could not leave my home city.

From my association with her I took very many fine ideals; also I parted with some cherished traditions. A mother, I had thought, must give every moment to her children, have no outside interest. Yet I saw that Mrs. L—'s children benefited by their mother's full and varied life, since living to her highest as she did, she lived peacefully and humanly, so that her motherhood was progressive, finely understanding, never fretful. Active in her profession as she was during the two years I was with her, I never heard her put her children aside with the cry that she was busy. She fully recognized their spiritual need of her, and she fully recognized that their very need of her strengthened her, gave her a clearer vision.

Chrystal Herne, who played the title rôle in the New York Stage Society's performance of Schnitzler's "Countess Mimi."

Stage Notes

By N. H.

No. 1. "Ourselves"

WHENEVER Rachel Crothers touches a subject, the result is at least a solid contribution. If "Ourselves" had been produced last season or even in September, it would have attracted much more attention. There is a climax to the interest of the public in certain species of drama, and the climax of interest in plays dealing with sex-morality was reached some time ago. This does not mean the end of the interest

by any means, but it does mean the end of the exciting vogue. What is desirable is persistence, understanding and ability, and not fashion in treating so permanent and important a theme. When it was discovered that the public really wished to see (indeed insisted on seeing) reflected upon the stage one of the new and magnificent moral enterprises of our time, the business men in charge of the theaters, and the play-writing contingent naturally rushed in to meet this demand. Anything supposed to be scandalous re-

ceives exceptional publicity; therefore there was an agitation even out of proportion to the interest; the law was appealed to; excisions were made from some of the plays most conspicuously under fire; and a general idea went around that the climax had passed. Some of the plays which helped to give excess to the reflection of this new movement were melodramatic and shallow; some were sound and adequate. As "Ourselves" was written by Rachel Crothers, what it says is true.

NOT that the truth is without slight over-emphasis, at least as far as my experience of men and their weaknesses is a test. The husband portrayed in this play not only exhibits those faults which social tradition has encouraged in men, and which may or may not be rooted in their natures as developed by evolution, but he exhibits masculine nature with a harshness and cruelty unfamiliar to me. Possibly it is true that the great majority of men who fail to live up to their duty regarding women are as inhuman about it as the person so ruthlessly shown up by Miss Crothers, but more probably there is in every such case of weakness a mixture of ordinary human sympathy. The main point of the play, however, is that this will never be as good a world for women as it ought to be until men treat sex much less as an opportunity for casual pleasure and more as a matter of the first human importance and the highest obligation, and this point is made with terrible impressiveness. It is the same moral, by the way, that stands out from "The Guilty Man"; and when that play was being discussed in a church presided over by a very progressive minister, one of the hymns sung was by John Greenleaf Whittier, containing these words:

O Pure Redeemer! Not in vain
Your trust in human kind;
The good which blossom'd not in gain,
Your painful toil shall find.

The truth ye urge we hear about
By every wind and tide;
The voice of nature and of God
Speaks out upon your side.

The weapons which your hands have found
Are those which flourish both with weight,
Light, Truth and Love; your battleground
The free, broad field of Thought.

What would Whittier have thought of a so-called moral agitation that leaves the Winter Garden untouched and turns its heavy guns against "The Guilty Man," and writings like Christabel Pankhurst's?

No. 2. "General John Regan"

ONE class of drama that is clearly in the ascendant in public interest, is the drama of types and nationalities. "General John Regan" is a very favorable example of this kind of drama. The play and its author were discussed in our issue of November 15. I mention it now merely to point out that the public taste during the present season as far as we can tell is going to run decidedly toward that type of drama. It is a decidedly pleasant entertainment with a fresh Irish comic idea presented with buoyancy throughout. It is amusement, and amusement of a superior type, and its success is a cause for nothing but satisfaction.

No. 3. The Stage Society

THERE are many plays that the general public cannot be expected to take to its heart, which deserve to be produced and produced very well, and there is a place for special associations producing plays for special audiences. The Stage Society of New York has been giving such especially good plays with such admirable all-around acting that it has amply proved what can be done toward educating audiences, managers and actors. It is the etiquette of these societies that plays and actors are not to be criticised in detail. Actors appreciate how the present long run system tends to monotony in their work and makes all-around experience impossible. They enthusiastically cooperate with any organization which shows ability in enlarging their opportunities.

The two plays produced at the last performances were "By-products" by Joseph Medill Patterson, a stirring one act drama, showing poverty and its moral results, with a knowledge and relentlessness characteristic of Mr. Patterson, and "Countess Mitai" by Schmitzler, an absolute contrast to Mr. Patterson's play, because, instead of

the militant moral enthusiasm of a civilization just about making itself, it represents the finish, and satire, and un-committal interest of an old civilization in which there is much observation, much taste and little formative purpose. The "Countess Mitai" could not possibly succeed in an ordinary theater, because it is entirely unsuited to the American people as at present developed, but it is a marvelous piece of easy ingenuity and ripe wit, and one would go a long distance before finding a play that would give keener pleasure to that class in the community which has been to sophisticated colleges, or has read all kinds of literature all its life or traveled a great deal, or lived in great cities and discussed everything in heaven and earth. If the Princess Theater lives up to its best opportunities, it will tend toward catering especially to this class, and less and less to people interested in shocks, and I can imagine the "Countess Mitai" being a great success at that theater in New York and possibly at a few similar houses in other big cities. The drama is more alive in the United States now than it has ever been. It will progress through many agencies; through the moving pictures, which stir up the interest of the millions, many of whom will afterward wish to go on and study plays in the regular drama; it will progress through the great movement that is bringing about the production of plays by children all over the country; it has progressed a great deal since the Shuberts broke away from the syndicate, encouraging competition and the consequent invitation to young playwrights. (I hope very much the new arrangements for harmony that are on foot will not mean the end of competition in play-buying.) It will progress also through the work of various drama leagues and drama societies. Any of these that does as well as the Stage Society of New York will, however few people it actually reaches, exert an influence felt throughout the American theater.

The Endless Chain

INTERLOCKING DIRECTORATES

By LOUIS D. BRANDEIS

In the previous articles of this series Mr. Brandeis has described the concentration of financial power in the hands of a few bankers, "our financial oligarchy," by means of the consolidation of banks and trust companies, the combination of railroad systems, and the undue multiplication of the functions of the investment banker. He has given in detail methods by which the bankers form their combinations and the way in which this control of credit affects the individual American.

THE practice of interlocking directorates is the root of many evils. It offends laws human and divine. Applied to rival corporations, it tends to the suppression of competition and to violation of the Sherman law. Applied to corporations which deal with each other, it tends to disloyalty and to violation of the fundamental law that no man can serve two masters. In either event it tends to inefficiency; for it removes incentive and destroys soundness of judgment.* It is undemocratic, for it rejects the platform: "A fair field and no favors,"

—substituting the pull of privilege for the push of manhood. It is the most potent instrument of the Money Trust.† Break the control so exercised by the investment bankers over railroads, public-service and industrial corporations, over banks, life insurance and trust companies, and a long step will have been taken toward attainment of the New Freedom.

The term "interlocking directorates" is here used in a broad sense as including all intertwined conflicting interests, whatever the form, and by whatever device effected. The objection extends alike to contracts of a corporation whether with one of its direc-

tors individually, or with a firm of which he is a member; or with another corporation in which he is interested as an officer or director or stockholder. The objection extends likewise to men holding the inconsistent position of director in two potentially competing corporations, even if those corporations do not actually deal with each other.

The Endless Chain

A SINGLE example will illustrate the vicious circle of control—the endless chain—through which our financial oligarchy now operates:

J. P. Morgan (or a partner), a director of the New York, New Haven & Hartford

*This aspect of the subject was discussed by Mr. Brandeis in the issue of Aug. 16, 1913, under the title of "Banking-Monopoly—Why it has failed: A Lesson from the New Haven."

†This subject was discussed in Parts I and II of this series entitled, "Our Financial Oligarchy" and "How the Combination Combines."

Railroad, causes that company to sell to J. P. Morgan & Co. an issue of bonds. J. P. Morgan & Co. borrow the money with which to pay for the bonds from the Guaranty Trust Company, of which Mr. Morgan (or a partner) is a director. J. P. Morgan & Co. sell the bonds to the Penn Mutual Life Insurance Company, of which Mr. Morgan (or a partner) is a director. The New Haven spends the proceeds of the bonds in purchasing steel rails from the United States Steel Corporation, of which Mr. Morgan (or a partner) is a director. The United States Steel Corporation spends the proceeds of the rails in purchasing electrical supplies from the General Electric Company, of which Mr. Morgan (or a partner) is a director. The General Electric sells supplies to the Western Union Telegraph Company, a subsidiary of the American Telephone and Telegraph Company, and in both Mr. Morgan (or a partner) is a director. The Telegraph Company has a special wire contract with the Reading, of which Mr. Morgan (or a partner) is a director. The Reading buys its passenger cars from the Pullman Company, of which Mr. Morgan (or a partner) is a director. The Pullman Company buys (for local use) locomotives from the Baldwin Locomotive Company, of which Mr. Morgan (or a partner) is a director. The Reading, the General Electric, the Steel Corporation and the New Haven, like the Pullman, buy locomotives from the Baldwin Company. The Steel Corporation, the Telephone Company, the New Haven, the Reading, the Pullman and the Baldwin Companies, like the Western Union, buy electrical supplies from the General Electric. The Baldwin, the Pullman, the Reading, the Telephone, the Telegraph and the General Electric companies, like the New Haven, buy steel products from the Steel Corporation. Each and every one of the companies last named markets its securities through J. P. Morgan & Co.; each deposits its funds with J. P. Morgan & Co.; and with these funds of each, the firm enters upon further operations.

This specific illustration is in part suppositions; but it represents truthfully the operation of interlocking directorates. Only it must be multiplied many times and with many permutations to represent fully the extent to which the interests of a few men are intertwined. Instead of taking the New Haven as the railroad starting point in our example, the New York Central, the Santa Fé, the Southern, the Lehigh Valley, the Chicago and Great Western, the Erie or the Pere Marquette might have been selected; instead of the Guaranty Trust Company as the banking

reservoir, any one of a dozen other important banks or trust companies; instead of the Penn Mutual as purchaser of the bonds, other insurance companies; instead of the General Electric, its alleged competitor, the Westinghouse Electric and Manufacturing Company. The chain is indeed endless; for each controlled corporation is entwined with many others.

As the nexus of "Big Business" the Steel Corporation stands, of course, pre-eminent. The Stanley Committee showed

largest in the world. They are directors in forty machinery and similar steel-using companies; in many gas, oil and water companies, extensive users of iron products; and in the great wire-using telephone and telegraph companies. The aggregate assets of these different corporations—through which these few men exert their influence over the business of the United States—exceeds sixteen billion dollars.

Obviously, interlocking directorates, and all that term implies, must be effectually prohibited before the freedom of American business can be regained. The prohibition will not be an innovation. It will merely give full legal sanction to the fundamental law of morals and of human nature: that "No man can serve two masters." The surprising fact is that a principle of equity so firmly rooted should have been departed from at all in dealing with corporations. For no rule of law has, in other connections, been more rigorously applied, than that which prohibits a trustee from occupying inconsistent positions, from dealing with himself, or from using his fiduciary position for personal profit. And a director of a corporation is as obviously a trustee, as persons holding similar positions in an unincorporated association, or in a private trust estate, who are called specifically by that name. The Courts have recognized this fully.

Nullifying the Law

But this wholesome rule of business, so clearly laid down, was practically nullified by courts in creating two unfortunate limitations, as concessions doubtless to the supposed needs of commerce.

First: Courts held valid contracts between a corporation and a director, or between two corporations with a common director, where it was shown that in making the contract, the corporation was represented by independent directors and that the vote of the interested director was unnecessary to carry the motion and his presence was not needed to constitute a quorum.

Second: Courts held that even where a common director participated actively in the making of a contract between two corporations, the contract was not absolutely void, but voidable only at the election of the corporation.

The first exception ignored the rule of law that a beneficiary is entitled to disinterested advice from all his trustees, and not merely from some; and that a trustee may violate his trust by inaction as well as by action. It ignored, also, the laws of human nature, in assuming that the influence of a director is confined to the act of voting. Every one knows that the most effective work is done before any

The Bankers Trust Building, where J. P. Morgan & Co. have their new offices

that the few men who control the Steel Corporation, itself an owner of important railroads, are directors also in twenty-nine other railroad systems, with 160,000 miles of line (more than half the railroad mileage of the United States) and in important steamship companies. Through all these alliances and the huge traffic it controls, the Steel Corporation's influence pervades railroad and steamship companies—not as carriers only—but as the largest customers for steel. And its influence with users of steel extends much further. These same few men are also directors in twelve steel-using street railway systems, including some of the

vote is taken,—subtly, and without provable participation. Every one should know that the denial of minority representation on boards of directors has resulted in the domination of most corporations by one or two men; and in practically banishing all criticism of the dominant power. And even where the board is not so dominated, there is too often that "harmonious cooperation" among directors which secures for each, in his own line, a due share of the corporation's favors.

The second limitation—by which contracts, in the making of which the interested director participates actively, are held merely voidable instead of absolutely void—ignores the teachings of experience. To hold such contracts merely voidable has resulted practically in declaring them valid. It is the directors who control corporate action; and there is little reason to expect that any contract, however unfair, entered into by a board with a fellow director, would be subsequently avoided. Appeals from Philip drunk to Philip sober are not of frequent occurrence, nor very fruitful. But here we lack even an appealing party. Directors and the dominant stockholders would, of course, not appeal; and the minority stockholders have rarely the knowledge of facts which is essential to an effective appeal, whether it be made to the directors, to the whole body of stockholders, or to the courts. Besides, the financial burden and the risks incident to any attempt of individual stockholders to interfere with an existing management is ordinarily prohibitive.

The Essentials of Protection

Protection to minority stockholders demands that corporations be prohibited absolutely from making contracts in which a director has a private interest, and that all such contracts be declared not voidable merely, but absolutely void.

In the case of railroads and public-service corporations (in contradistinction to private industrial companies), such prohibition is demanded, also, in the interests of the general public. For interlocking interests breed inefficiency and disloyalty; and the public pays in higher rates or in poor service, a large part of the penalty for graft and inefficiency. Indeed, whether rates are adequate or excessive, cannot be determined until it is known whether the gross earnings of the corporation are properly expended. For when a company's important contracts are made through directors who are interested on both sides, the common presumption that money spent has been properly spent, does not prevail. And this is particularly true in railroading, where the company so often fields effective competition in its own field.

But the compelling reason for prohibiting interlocking directorates is neither the protection of stockholders, nor the protection of the public from the incidents of inefficiency and graft. Conclusive evidence (if obtainable) that the practice of interlocking directorates benefited all stockholders and was the most efficient form of organization, would not remove the objections. For even more important than efficiency are industrial and political liberty; and these are imperiled by the Money Trust. *Interlocking directorates must be prohibited, because it is impossible to break the Money Trust without*

putting an end to the practice in the larger corporations.

Banks as Public-Service Corporations

The practice of interlocking directorates is peculiarly objectionable when applied to banks, because of the nature and functions of those institutions. Bank deposits are an important part of our currency system. They are almost as essential a factor in commerce as our railways. Receiving deposits and making loans therefrom should be treated by the law not as a private business, but as one of the public services. And recognizing it to be such, the law already regulates it in many ways. The function of a bank is to receive and to loan money. It has no more right than a common carrier to use its powers specifically to build up or to destroy other businesses. The granting or withholding of a loan should be determined, so far as concerns the borrower, solely by the interest rate and the risk involved; and not by favoritism or other considerations foreign to the banking function. Men may safely be allowed to grant or to deny loans of their own money to whomsoever they see fit, whatsoever their motive may be. But bank resources are, in the main, not owned by the stockholders nor by the directors. Nearly three-fourths of the aggregate resources of the thirty-four banking institutions in which the Morgan associates hold a predominant influence are represented by deposits. The dependence of commerce and industry upon bank deposits as the common reservoir of quick capital is so complete, that deposit banking should be recognized as one of the businesses "affected with a public interest." And the general rule which forbids public service corporations from making unjust discriminations or giving undue preference should be applied to the operations of such banks.

Senator Owen, Chairman of the Committee on Banking and Currency, said recently:

"My own judgment is that a bank is a public-utility institution and can not be treated as a private affair, for the simple reason that the public is invited, under the safeguards of the government, to deposit its money with the bank, and the public has a right to have its interests safeguarded through organized authorities. The logic of this is beyond escape. All banks in the United States, public and private, should be treated as public-utility institutions, where they receive public deposits."

The directors and officers of banking institutions must, of course, be entrusted with wide discretion in the granting or denying of loans. But that discretion should be exercised, not only honestly as it affects stockholders, but also impartially as it affects the public. Mere honesty to the stockholders demands that the interests to be considered by the directors be the interests of all the stockholders; not the profit of the part of them who happen to be its directors. But the general welfare demands of the director, as trustee for the public, performance of a stricter duty. The fact that the granting of loans involves a delicate exercise of discretion, makes it difficult to determine whether the rule of equality of treatment, which every public-service corporation owes, has been performed. But that dif-

ficulty merely emphasizes the importance of making absolute the rule that banks of deposit shall not make any loan nor engage in any transaction in which a director has a private interest. And we should bear this in mind: If privately-owned banks fail in the public duty to afford borrowers equality of opportunity, there will arise a demand for government-owned banks, which will become irresistible.

The statement of Mr. Justice Holmes of the Supreme Court of the United States, in the Oklahoma Bank case is significant:

"We cannot say that the public interests to which we have adverted, and others, are not sufficient to warrant the State in taking the whole business of banking under its control. On the contrary we are of opinion that it may go on from regulation to prohibition except upon such conditions as it may prescribe."

Official Precedents

Nor would the requirement that banks shall make no loan in which a director has a private interest impose undue hardships or restrictions upon bank directors. It might make a bank director dispose of some of his investments and refrain from making others; but it often happens that the holding of one office precludes a man from holding another, or compels him to dispose of certain financial interests.

A judge is disqualified from sitting in any case in which he has even the smallest financial interest; and most judges, in order to be free to act in any matters arising in their court, proceed, upon taking office, to dispose of all investments which could conceivably bias their judgment in any matter that might come before them. An Interstate Commerce Commissioner is prohibited from owning any bonds or stocks in any corporation subject to the jurisdiction of the Commission. It is a serious criminal offense for any executive officer of the federal government to transact government business with any corporation in the pecuniary profits of which he is directly or indirectly interested.

And the directors of our great banking institutions, as the ultimate judges of bank credit, exercise today a function no less important to the country's welfare, than that of the judges of our courts, the interstate commerce commissioners, and departmental heads.

Scope of the Prohibition

In the proposals for legislation on this subject, five important questions are presented:

1. Shall the principle of prohibiting interlocking directorates in potentially competing corporation be applied to state banking institutions, as well as to national banks?
2. Shall it be applied to all kinds of corporations or only to banking institutions?
3. Shall the principle of prohibiting corporations from entering into transactions in which the management has a private interest be applied to both directors and officers or be confined in its application to officers only?
4. Shall the principle be applied so as to prohibit transactions with another corporation in which one of its directors is interested merely as a stockholder?

These questions will be discussed in the next issue under "Serve One Master Only."

JURY OF INTERLOCKING DIRECTORS

By O. G. Rehn

RS—"ALAS, THE POOR PUBLIC!"

CESARE

Tom Smith waiting for the returns

With Murphy at Waterloo

By PETER M. MICHELSON

Illustrated by Herb Roth

IT is unwritten law at Tammany Hall that "the chief" must be there on election night. He shall come in victory when the voters have swept into the tiger maw all the choice pickings of city offices, city contract and city loot. Then there is plenty for all and the pack greets him with the cry of good hunting. He shall come in defeat when the obscured sun and gray clouds are signs of a long, hard winter and the pack must subsist as best it can on the few bones it can scrape from beneath the frozen surface of the snow.

He shall ride through streets crowded with people out to make a Roman holiday. He will hear the horns toot and the bands play. They are playing the funeral dirge for his political hopes buried until the next election. Being something of a philosopher, he knows that the horns toot just as loudly, the bands play as joyous airs, to celebrate his victory as they now do in exultation over his defeat. He knows, too, that another six months may bring a change in that unknown quantity, the American people. So he lives and waits and hopes. That is the reason why political "chiefs" don't more often retire to insane asylums or to castles in Scotland.

"THE CHIEF" shall have none of the human emotions. That is the law of the pack. When victory perches on the flag pole of the Wigwam, "the chief" shall receive the news as a matter of course. Defeat throws her mantle of gloom over the disheartened and wavering cohorts; he alone shall not give expression to natural disappointment but shall mask his feeling behind the inscrutable smile and the equally inscrutable cigar. Smiling he shall receive the sympathy of friends. Smiling, he shall answer them, "Better luck next time." In mystery there is strength.

Once let him break "the law." Once let him stay away from the Wigwam on election night, his day of power is over.

In this natural desire to be alone in his hour of disappointment, the pack will read the true meaning of defeat. It will spring upon the wounded leader, tear him to pieces, and he who leads the onslaught, whose jaws are strongest, will be the leader of tomorrow.

So we of the faithful waited that night at Tammany Hall. There were two hundred of us in the room that had been used as the speakers' bureau during the campaign. There would have been more if Paddy Crea, jealous of his prerogative as if he had been Tom Smith and privileged to whisper in Murphy's ear, had not held the door against intruders.

TOM SMITH, pink and politic, held the field telephone. He received the returns from the district captains. He, too, was officer of the day, with power to act in all emergencies in the absence of "the chief." Back of him stood young Mr. Martin, commander of light horse, of the speakers who were sent out to capture the big guns of the enemy. Now he read the ticker-tape and learned the fate of light horse that goes up against big guns. To his left at the long table were the tabulators, men who received the skeleton returns as Smith read them, compared them with the total registration and estimated the vote. For the rest, who made up the faithful, they were a labor leader, whose bald pate was fringed with silver locks like Horace Greeley but who, unlike Greeley, served Tammany and received his reward in office; a magistrate; a justice of the Supreme Court; a contractor; a saloon-keeper; district captain; and men who wore the black cloth of the church. In fact, one had only to look at that room to get a composite picture of the Tammany organization. Except for "the chief," not an element was missing.

Our eyes smarted from tobacco smoke as we waited for the missing chief. The golden letters, mounted on a marble tablet at the back of the room, which

told of battles that the Tammany regiment had fought in the Civil War, were yellow in the smoke. George Washington, who had been imperiously attached to the wall, might have suffered an attack of jaundice, while Patrick Henry, who looked uncomfortably like William Sulzer, stared down with eyes that were gray and ghostlike. Still "the chief" did not come.

HE had not come when Tom Smith cheerfully announced the result from the first election precinct. It was from a gang district on the lower West Side and showed the gang loyally standing by the colors. The next was from the district in which the Waldorf is located, "a silk stocking district," proudly proclaimed Mr. Smith as he announced the result, a heavy vote for McCall. Then the Tammany leaders began to report and the McCall lead climbed steadily upward. Yet "the chief" did not come.

A few of us went out to get a breath of air. We climbed the broad stairway that led to the ballroom. It was worn to splinters by the tramp of many feet. At its turn was another tablet, emblazoned with more letters of gold. It proclaimed: Society of Tammany or Columbian Order

Founded A. D. 1783

Civil Liberty is the Glory of Man.

This suggested that once Tammany Hall had really been the temple of the plain people. That was in the day of the Society of Cincinnati when privilege, with its purpose openly avowed, set out to capture the citadel. Privilege has since learned to work more skillfully. It now knows that the way to rule the people is through the people, themselves—witness Tammany Hall.

We went on to the ballroom. A sign outside advised all gentlemen to remove their "hats and caps." But on election night, the ban is off. We looked inside. Hats and caps, set at every conceivable angle to denote every degree of mob authority, were scattered through the crowd inside. Feather dusters and tin horns

were much in evidence. The crowd faced an immense stage protected by two heroic figures in armor in front while a papier mâché angel looked over the fortunes of Tammany from above. In a wall panel, the Tammany tiger roamed, far from his native haunts, through the mountain gorges of the high Sierras; in a second panel, deer drank the cooling waters of an apple-green lake, after which they must have run off somewhere to die from poisoning; and in still a third panel, a Persian gentleman was carried in a sedan chair beneath date palms and California redwoods. This was where the people received the election returns after they had been scrutinized in the council chamber below.

WE returned to the council chamber.

Now all was suppressed excitement. Men buzzed everywhere. Sweat trickled down their faces as if they had come out of a Hammam bath. They leaned over the table, intensely eager to catch the story of the ticker, unrelenting and unprejudiced champion of the truth. It was a story of rout, utter rout. Queens was reported. Queens had directed an onslaught on the Tammany horde. What then of Brooklyn? Brooklyn was worse than Queens. Then Manhattan—what of Manhattan? Manhattan with its red-lights; Manhattan with its millionaires, who voted with Tammany gangsters; Manhattan, mother of Tammany; could Manhattan stem the tide? Manhattan, too, was beginning to waver. A newsboy cried "Mickel Elected." Other newsboys cried "Mickel Elected." Then someone closed the window. Where was "the chief?"

"The chief" obeyed the law that night. Even as the cries of the newsboys began outside, some one called for "Three cheers for Charles F. Murphy, leader of Tammany Hall." We of the faithful, two hundred strong, got up from our chairs and the cheers were given. In walked the man who had ruled over 8,000,000 people by proxy, who had politically decapitated the Governor of the Empire State. He was a man of average height, gross and heavy as his pictures. He wore a black derby hat and a black overcoat. His hair was

Murphy listening to one of his lieutenants

gray. As he walked to an inconspicuous seat on the side of the room flanked by a wealthy real estate man and a judge of the municipal court, he smiled and smoked his cigar.

"TICK, tick, tick" came the story of the rout. McCall, the candidate for Mayor, had to be abandoned. The hope was that the people would make a typically American blunder, bowl over the Tammany candidate for Mayor, but set up a Tammany Board of Aldermen, elect a Tammany county ticket; in short tie the hands of the Mayor they had just elected so that Tammany could loot the city as of old.

"Tick, tick, tick." It seemed that the people had done just this thing. Metz, the Tammany hope for comptroller, was leading Prendergast of Fusion by

more than 10,000. Prendergast could not hope to overcome this lead.

"Thank God for that," exclaimed a fat attaché of the municipal court who sat in a front seat watching the returns. The real estate man, who had come with Murphy, took down the figures. "The chief" smiled and smoked.

"Tick, tick, tick." Prendergast was gaining. Metz's lead was not as great as had been first reported. This was due to the fact that the earlier reports had come from the Tammany districts. Prendergast would win. The emotional court attaché wiped his brow. "The chief" smiled and smoked.

"TICK, tick, tick." Tammany was now rallying around Goulden, who commanded the left wing opposed to McAneny, Fusion's choice for President of the Board of Aldermen. "The chief" smiled and smoked. "Tick, tick, tick," the fateful ticker told of Goulden's retreat. "We'll save the county ticket, anyway," exclaimed the apoplectic court attaché while "the chief" smiled and smoked.

A prosperous-looking business man now spoke to "the chief." He was a demonstrative gentleman and what he said was not alone for Murphy's ear.

"If you can stand all these guns and still look young," announced the business man with the air of a prophet, "you're a young fellow."

"I never worry," Murphy said.

Now the Supreme Court judge was speaking. "If these newspapers stand together, they can make lots of trouble, Mr. Murphy."

"They don't stand together," Murphy said.

The business man and the judge left the room. Others slipped quietly through the half open door but we of the faithful, one hundred and seventy-five strong, remained behind.

"Tick, tick, tick." The aldermen were lost to Fusion. A district captain whispered in "the chief's" ear and then walked away. Now was heard the

When Murphy arrived

shuffling of many feet as others slipped out. We of the faithful waited, *One-Hundred-and-Fifty Strong*.

It was getting late. The newspapermen wanted a statement.

"We'll give a statement before we go," Murphy said.

"Tick, tick, tick." The county ticket was lost. "Tick, tick, tick." The state assembly had been lost to Tammany. The door creaked often now as men stole silently from the room. We of the faithful waited *One Hundred Strong*.

The newspapermen wanted that statement.

"It isn't over yet," Murphy said. "Tick, tick, tick." William Sulzer, like Banquo's ghost, had risen. The

loyal East Siders had picked up his politically decapitated head and set it once more upon his shoulders. "Tick, tick, tick." It was Waterloo.

And Murphy still smiled and smoked, still obeyed "the law."

Now Tom Smith disappeared to reappear in the room again in a few minutes, a sheet of paper in his hand. It contained Murphy's message to the people of New York. It had been written by Smith and read:

"The result speaks for itself. Mr. Mitchell has been elected by a majority of the voters. His opponents join in the wish that he may have a successful administration."

Thus the boss, who had ruled by proxy,

himself became a proxy through which another man spoke to the public.

Still smiling and smoking, still obeying "the law," Charles F. Murphy, leader of Tammany Hall, got up from his chair. We of the faithful, *Fifty Strong*, stood as he walked to the door.

"Good night," he said to the door-keeper as he passed out.

"Good night, chief," answered Paddy. "And let me tell you," he said, turning to Tommy Riley, "he'll be chief as long as he wants to be."

"What?" asked Tommy, suddenly starting. Tommy had been lost in speculation. He wondered if the new chief would give him the much desired post now held by the faithful Paddy.

"Boss" Murphy in various moods

After Two Years

By OLGA NETHERSOLE

AN English interviewer came to me not long ago, and this was his question: "Can you, in your wildest fancy, imagine a female Lord Kitchener?" That was supposed to be a stunner.

"What is it that makes Lord Kitchener what he is?" I asked in reply.

"His brain," replied the interviewer.

And science will tell you that there is no such thing as a man's brain and a woman's brain. It is just brain! The world knows that brain exists among men and the world honors the man. The world is coming to know that brain also exists in the heads of women. What we want to do is to give such women the opportunity to share equally with men. That's all we want, just the opportunity.

I am sometimes asked what in my opinion has given the present impetus to the feminist movement and my reply has been misquoted. I believe it is explained by the decrease in the birth rate. This has been distorted into the report that I said the birth rate should decrease, that women should be thinking of other things than the raising of children, that society has a right to demand of them something more, that they have no right

to confine their energies to their own homes.

On the contrary, I have always attempted to say that in my opinion the woman who becomes a mother has fulfilled the highest mission of woman and that no woman has fulfilled her mission until she has become a mother. To be the greatest actress in the world, the greatest singer or the most renowned woman in any of the arts does not equal it—there is always something lacking if the woman has not given a child or children to the world. She owes that to nature and to herself. It is the only "eternal life" we must expect, the only eternal life we can expect.

BUT the fact remains that the birth rate is decreasing amazingly. Our grandmothers raised large families and considered it their duty to devote their lives to the home. There are fewer children today, consequently the family requires less time and attention and the mother has more time for thought. Some women are forced to reject the normal responsibilities of maternity, others are denied the crowning joy of motherhood by reason of ill-health and

disease, often innocently contracted through marriage and through no fault of their own, and their inherent energy, their endurance, has driven them to take up alternative responsibilities. And it is well that they should take up these responsibilities, for the problems of our day are of a kind that require women's thought especially.

How fast the movement grows! I have been away from America only two years, and it already seems intellectually like a different place. Over when I was quoted in the public press as saying that the time would come when young women would require a certificate of health from their prospective husbands, along with the license to wed, until that day arrived when no certificate of health would be necessary, because people would be ashamed to have it necessary. I was accused editorially in the newspapers of indecency, vulgarity. Now I find that women are frankly and truthfully discussing those things that concern them vitally. Light on dark corners will bring improvement. Women are thinking; they are being allowed to use their brains, and the world will be the happier for it.

The Autopilgrim's Progress

Part Two—The Bridal Tour

This Chapter Harketh Back to the Adventures of
Lemuel Bogg

NOW Lemuel Bogg, as we left him (recall
About Chapter X of Adventures foregoing).
Sat as peaceful at lunch as two sheep in a stall
With his former foe, Skagg—and their friendship was growing;
While Lemuel's wife
Beamed on the scene,
And buried the knife
In the Boston Baked Bean.

AS Arceas of Troy might have sat with Ulysses
After the tumult and shouting were done,
Boasting of golf-scores and conquests with misses,
And trading cigars 'neath the mild Attic sun,
So Lem'l and Si
Sat eye to eye,
Sat nose to nose
In perfect repose.
"Trouble 'twixt us ain't no more to be feared—
Life, after this, 'll run awful low-geared.
With slow-risin' passion and slow-goin' thought—oh
We'll each jog along in his slow-goin' auto,"
Lem said to Si
Who made the reply,
"Guess we'll be friends till the day that we die."

'T WAS a fine afternoon, and as Lem'l proposed
A tour of Fern Valley might nicely be ridden,
They cranked their two cars in the shed where they dined
And took to the road, just to emulate Glidden.
The fumes of hard cider made joy in Lem's brain.
And when Silas drew up to the road to explain,
"It's plain to see, Brother,
That one of us two
Must go 'head of 'other,"
Said Lem'l, "then you
Be pilot a spell, for you're bright as a dollar:
And Mother and me is quite
Willin' to follow."

A VERY good pilot was Silas J.
Skagg.
When led by his instinet and
no one to nag.
And as Lem'l contentedly trailed
in the rear
He muttered, "My dear,
Ain't it queer?
We've lived very near
To the Skaggs a wany year,
Yet ne'er had the twinklin'
Least of an inklin',
What a superior
Sort of interior

(TO BE CONTINUED)

Mental equipment Si carried inside.
Which all goes to show
That we never will know
The jooks that lay close to our door—till we've tried."

THEY spun along thus till about four o'clock
When a dust-laden breeze very peevishly rose
And poor Mrs. Bogg felt a species of shock
As Lem, getting some of it lodged in his nose,
Said "Choo!"
Then, "Phew!"
Here's a nice bow-de-doo!
That caz o' Skagg's seems to kick up more dust
Than a bull in a flour-mill—I'll reely be cust—
Ka-chee!"
Said he,
Till Ma tried to balm
This new irritation by saying, "Be calm!"

HE drove along sullenly under
the trees,
In silence well punctured by
many a sneeze,
Till at last he rasped out, "I
don't see why I must
Spend my vacation a-catin'
Skagg's dust.
And why in the Dickens
Is Skagg's old road-kickin'
Better'n mine?
Is he King o' the Road, or
His gasoline odor
Extra durn fine?"
"Hush!"
Mother muttered.
"Shush!"
Lem'l spluttered,
And wearing the face of a Trouble-Creator.
He jammed his left toe on the ac-celerator.

THE car felt the spur. But as Fortune was kind,
Si, unaware of the trouble behind,
Drew up his car at a fork in the road
And, innocent quite of the war that forbode,
Waited with phlegm
The arrival of Lem.
The latter, undoubtedly red in the face,
Drew up beside. "If it's settin' a pace
Ye've got on yer mind—well, I'm willin' to race!"
Lem spoke these vigorous
Words with a vigorous
Sort of def.
"Why all this danderin'?"
I'm just meanderin'."
Answered friend Si.
Lem spoke politely, disguis'n' a taunt,

"If dreamy meanderin' 's all that
y' want,
Why don't you trail in the rear
some and hike it,
Eatin' my dust awhile—see how
y' like it?"
"Glad to!" said Si.
"Thankee!" said Lem.
Swifter than pie
Fresh from the stem.

BUT soon as the autos their
places reversed,
Poor Mrs. Bogg her forebodings
rehearsed.
"When Lem looks like that
He's worse'n Old Set. . . ."

The incoming fishing schooner is usually an object of great interest to dealers, war especially when there is a shortage

The Fishing Fleet at Boston

By
JAMES THOMSON

MORE fish are yearly handled at T Wharf in Boston than at any similar market in the entire country.

A stirring place is it when the slips are full of vessels and trading is at its liveliest. The first of the week is likely to be busiest. Of a Saturday few vessels are tied up. Monday will disclose ships perhaps three deep. On the wharf is a jostling mass of men, horses, hand-carts, ice-teams, express-wagons, fish being landed, some being shipped.

A long pier, extending from Atlantic Avenue out to the harbor line, is the famous wharf. Running nearly the whole length of the pier, and punctuated by a bell-tower in the middle, is a three-storied building of wood, wherein are located the dealers' offices and the shipping-rooms of the various interests connected with the industry, though as a matter of fact the trade long ago out-

ran wharf boundaries and may be found strung along Atlantic Avenue and adjacent side streets. The dealers have been laboring at a disadvantage.

THE wharf attracts the hummer, the beat, and the homeless. For here are rich pickings. There are men who exist on the bounty of the fisherman who, with perhaps a hundred dollars in his pocket, seeks some convenient barroom and in generous mood invites all present to partake. Thus is money thrown away which is earned in stress and storm, in the face of wintry winds when the doryman is encased in an armor of glistening ice. But among "The men who go down to the sea in ships" from T Wharf are many who save; men with the ambition to be them-

selves owners some day of the typical T Wharf schooner.

STEAM trawlers unship quickly by modern methods, but not so the schooner. With basket and handtackle the fish are raised from the hold and dumped into a box which rests on an ordinary platform scale, from whence they are pitchforked into waiting hand-carts, and by man-power trundled away to the establishment of the buyer. Here they are further assorted, prepared for shipment, packed in chopped ice, and sent to their destination in perhaps some distant state. There is much handling between the fisherman and the ultimate consumer. With wharf space at a premium, delays incident to blockades of wagons, congestion in general in the handling, so many interests to get a nip out of it, small wonder fish (which should

be an inexpensive commodity) looms up in price before it reaches the dining-table.

Take an average day at the wharf, a certain Monday in this instance. With fish enough to supply the demand, but prices well sustained, there arrived eight mackerel vessels, four sword-fishermen, and thirteen trawlers, having 62,000 pounds of mackerel, 273 sword-fish, 219,100 pounds of cod, 252,500 pounds of haddock, 80,500 pounds of hake, 44,000 pounds of pollock, 18,000 pounds of eel, 4,000 pounds of scrod and in addition, the product of the labors of the Italian motorboat fraternity which is not recorded.

THERE is an uneasy feeling amongst the schooner fishermen in the presence of the steam trawler. The first of the Boston craft the *Spray* was for a

These Italian fishermen are a very picturesque lot. They go out into the channel with motor boats, and fish as a rule with hook and line

time an object of ridicule and sarcastic comment amongst schooner fishermen. It really seemed at first as if the steam trawler in its application to our waters would be a failure more or less absolute. That it is now a success, "a paying proposition," is evident by the rapid addition to the number in active service. There are now eight and a prospect of more. Hence it looks as if this style of fishing boat would soon be in the ascendant—the noisy power boat, and the ruthless steam trawler, in place of the "romantic" white-winged fleet of schooners.

WHEN the schooner arrives at the fishing grounds, the crew are assigned, two men to a dory, with 1500 baited hooks to a man. There are usually some ten or twelve dories to a vessel. A dory leaves the ship and the trawl is paid out until it rests on the bottom of the ocean, when the extremities are anchored; the anchor is marked by a buoy. At the expiration of a certain number of hours the trawl is drawn in and return is then made to the schooner.

Sometimes, however, all does not go well. Fog may suddenly enshroud the dory and the men be lost, unless picked up by some passing vessel. Every little while a schooner heaves in sight, with her flag at half-mast—one or more men have been lost. Then for the day will every vessel at the wharf, and all the establishments doing business there, respond with colors at half-mast.

THE steam trawler is operated very differently from the schooner. Instead of the line with its innumerable baited hooks, there is thrown from the stern what is known as an "otter" trawl—a sack-shaped net heavily weighted so that it cannot fail to sink and be dragged along the sea bottom, taking in everything that comes in its way, not omitting lost anchors, and even boulders. The ship leisurely sails along for an hour and a half, towing the drag-net, at the expiration of which period, the net is hauled in, the catch spread on deck, the marketable fish separated from the unmarket-

able, cleaned, and packed in ice, while the rejected are shovelled back into the ocean. The destruction of the small fish among those rejected, by the way, forms an immense waste, which in time is certain to cause a scarcity.

IN the amount of catch the trawler has the advantage. An average fare of a moderate-sized schooner is some twenty thousand pounds, and for a double-dory schooner some sixty to seventy thousand pounds, while a steam trawler may bring in as high as a hundred

thousand pounds. The steamer can fish night and day, in all sorts of weather, in every month of the year, while the schooner cannot. A steamer can reach port quickly, the schooner takes a comparatively long time. Once in port a steamer can unload in a forenoon and be ready to sail again before night. A schooner, even after having been cleared of cargo by the hand method, may not be ready to start for the fishing grounds for days. The cleaning must be done, trawlers must be looked to, bait prepared and placed on the hooks.

T Wharf, as it has been known to the present generation, is soon to be a thing of the past. The entire fishing industry in 1914 will remove to quarters now in process of construction on the South Boston shore. In the new concrete structure there will be a loss in picturesque but a great gain in efficiency.

Yet from the picturesque point of view there is compensation in the vessels, coming into port on a winter's day covered with glistening ice, and in the fishermen, sturdy fellows in oilskins—men from the Western Islands, from Italy, from Portugal, from Brittany, from Scandinavia, from Nova Scotia. And among them are men with noble faces and with features of classic mold.

The old and the new. The typical fishing schooner of Massachusetts Bay, and the steam trawler built after the fashion of the English vessels of the North Sea

A jostling mass of men, horses, handcarts, ice teams, express wagons, fish being landed, fish being shipped; movement and kaleidoscopic changes on every side

Newspapers, Morals, and Women

By E. L. CLIFFORD

DOES it pay a publisher, for money, to sell Florida lands by the gullion to his subscribers? Does it pay, for a profit, to advise your neighbor to dope his sick child to death? Does it pay to take the money of wage-earners for stock-jobbing bubbles? Does it pay to arouse false hopes in the hearts of the poor, the discouraged, the sick?

There is quite an army of "Chocolate Soldier" publishers in America—a sort of stuffed-shirt brigade—with a great front hut a weak backbone—shooting bomboms instead of real cartridges. Ready to reform anybody and anything except themselves and their publications. Lovely editorials, rotten advertising. They are cheating themselves at solitaire. They would clean up a city on a page with filthy, criminal announcements. They invite the world—men, women, and children—to have a drink, at the end of a sermon on temperance. They jolly the preacher and wink at the devil. They mix in pile-cures with art features; tips on the races with preachments on gambling. They develop your lust and lust your development all on the same page. Chemise fiction follows a patriotic exposure of congressional misdeeds in magazines that endeavor to harpoon the whole household from Pa to the hired girl.

Fifthly, dangerous, fraudulent medical and near-medical advertising should be driven out of every publication in America. It is a positive injury to clean, legitimate advertising. It taints the decent, and makes it less productive. A newspaper may have a million-dollar building, a million-dollar equipment, a million-dollar man behind it—but you readers are the newspaper publisher's stock in trade. Your good-will is worth more than all his equipment, all his building—ten times over. You read and respond to the advertisements—the source of his revenue. If he won't make his newspaper clean, if he won't cut out the frauds—you do it for him.

YOU will find that the great majority of publishers will cooperate with you when they know what you want—when they know you mean business—when there's a light of fight in your eye.

The reason so many newspapers are not better than they are is that publishers are left to grope in the dark. They think you don't care because you don't assert yourself, because you don't hold out a guiding hand; because you don't help to make your newspaper what you want it to be.

Don't sit on a fence. We must take a decided stand on questions of public morality and public decency, to exert our greatest influence. We all know that the forces which tend to demoralize society, to make virtue a laughing-stock and vice a delight, are very strong, very active, very ubiquitous. But no man, whether he be a publisher or a preacher, or an advertising man, ever accomplishes much, standing alone. The successful man must have cooperation—red-blooded cooperation—that spurs him on to greater deeds. He must rally to his support the people who believe in the principles for which he contends.

Watch your newspapers! Boost them when they are right. Condemn them when they are wrong. Get better newspapers.

The world is demanding better things—and it is getting them. Better newspapers, better cities, better transportation, better merchants, better homes, better politics, though politics is in no danger of dying of improvements. Isn't it something wonderful to behold, the Tiger protecting the Lamb, Murphy shocked at Sulzer in the haunts of the money-changers?

But men like Wilson, La Follette, Bryan, Cummins and others as worthy to be named, have brought in a new standard of public service. They have renounced patronage, private influence and the secret caucus, and have taken their cause before the people. The machine has been damaged. The caucus is dying. We have the public primary and the public debate. Non-partisan legislatures are on the way. Compare the régimes of Grant and Wilson. Compare the mint-boards, too. When General Grant was inaugurated, his relatives swarmed to Washington to select their offices. Governor Wilson invited thirty-eight relatives to go to Washington to the inaugural. His first announcement after he was sworn in was that not a blood relation of his would get an office. I believe that Mr. W. B. Wilson, whose name suggested relationship, had to shun up his family tree to colonial times and prove a complete alibi before he got into the cabinet. So politics does improve. Publicity will improve it more.

THESE are days of luxury. Compared with homes of our youth, we live in palaces. We live much longer in a shorter space of time. We skip across the country with an automobile in an hour or two. It used to take our fathers all day to make the trip by team. Every second baby you meet is cutting its teeth on a Ford tire. We travel in trains de luxe—Pullman sleepers that furnish every luxury but sleep and a seclusion from drafts. Few of the houses of thirty years ago had steam heat. Gas-light was a luxury and electric light unknown, and the searchlight of publicity is continually showing us new ways to comforts and short cuts to pleasure; finer things to wear and better ways to wear them, perhaps. Women's dress, what shall we say of it? There certainly has been a shrinkage in the voluminous skirts of yesterday. The stylish young woman of today walking down Fifth Avenue is a paradox. She exhibits at once bad taste and good form. But there is something to be said for woman's dress—little as it is. It no longer trails the street. It takes little cloth, and it is sanitary. It doesn't gather up and carry home all the dust, germs and cigar stubs of the city.

Today social customs have changed, not always for the better. We have fewer church societies and more bridge parties in society. Your famous four hundred is increasing because every time death takes one of its members a sensational divorce adds two.

The style in marriages has changed. In Chicago they tell me the women there take shorter wedding trips, but more of them.

The dance has changed. In the old times we had the beautiful waltz and the graceful minuet. The "bunny-hug," the

"Gaby glide" and the "slippery slide" are here today.

But despite the blunders, our social trend has been upward and it has been because of a revolution in the position of woman. She has achieved a place in the world of affairs. She has entered public life to contribute her share toward the solution of social questions. She has gotten into business, the professions, into politics. She has ideas of her own. She can run for mayors, build a hospital, manage an agency, preach a sermon, plead a case or remove your appendix. And some day she is going to have a vote.

SHE really rules the advertising world—for she reads the advertisements and buys the goods. She is taking an active part in the making of the new newspaper—the "Newspaper of Tomorrow"—and it must be made clean. She is going to have the say about the influences that surround her home and children. She picks the clean publication in preference to the unclean.

She has driven the slovenly, irresponsible merchant out of business. She reads the ads and does the buying and does it economically. Gone is the old-fashioned dealer who sanded his sugar and gave you the worst of it on scales without character. Gone, too, is the old time grocery where coal-oil, sugar and crackers had the same taste. A child can go to your store and buy as safely as a professional shopper. The old *canard* theory is passed. Now it's: "Let the seller beware."

A little girl once wrote an essay on "Men" that closed with this gem: "Men and women sprang from the monkey, but the women sprang further than the men."

WOMAN doesn't want a newspaper that isn't square, that isn't clean. She doesn't want a newspaper that is loaded with kidney cures and liver pills, lust developers and beauty makers, fat reducers and fat producers, and the rest of the long list of health horrors.

So the newspaper of tomorrow is going to be a *HOME* newspaper. It is going to be a newspaper that the whole family can read without being shocked, nauseated, scared to death or flim-flammed. The "Newspaper of Tomorrow" is going to be a real light that will point the way to greater progress and greater happiness. It is going to have no desire to be a party to the crimes that are being committed in a hundred different ways by acting as a go-between.

The weak, the poor, the sick, the ignorant, the fickle and the rallow are the unfortunates drawn into this whirlpool of cures and fakes. Not the rich, the intelligent. There's the pity of it.

Advertising frauds and advertising fakes are a menace to good advertising. They are a menace to humanity. And, you readers and you legitimate advertisers have been patient and long suffering. Has the newspaper any responsibility? If it puts a crook in touch with a victim, isn't it equally guilty with the crook?

The clean newspaper goes to the clean home where it is as welcome as a life-and-blood member of the family. And the clean home yields the acceptor that makes or breaks a newspaper or any other kind of business.

PLAYING TO EMPTY SEATS

By JOHN SLOAN

YALE'S SMART INTERFERENCE

The right side of the Tiger line has been neatly shut off, save that one man, after being spilled, has been able to get one arm around the runner's leg. The Tiger forwards were first coaxed, then blocked, by the Elis

Current Athletics

By HERBERT REED ("Right Wing")

PRINCETON'S hopes of a triumphal football finish were dashed when the Yale eleven, which had been through a checkered early season, held the Tigers to a tie and really outplayed the Nassau men from start to finish. Seldom have I seen such a sharp contrast in coaching types, albeit Princeton for the first time in years used what has come to be called the orthodox gameship—kicking in home territory and using the rushing game in opponent's territory. Unfortunately for the Tigers they had no rushing game save that built upon the frayed Minnesota shift, which was hardly the type of play to throw against so strong and active a line as the Elis produced.

The change in Princeton's gameship was due to the influence of "Snake" Ames, who had spent seven weeks with the eleven teaching the men what to them was a new type of strategy. Equipped with a splendid kicker in the person of Law, an eighteen-year-old who showed as much pluck and cool-headedness this season as I have ever seen on a gridiron, the Tigers went into the Harvard game instructed to use the plan of campaign laid down by Ames—and promptly forgot the new teaching, resorting to the rushing game in midfield. There was the excuse of severe temptation due to the fact that Harvard's early method of meeting the shift was not a good one, and the Tigers believed the Crimson would not diagnose it in time to stop it short of the goal line. Vain hope. Had Princeton adhered to Ames' gameship from the start the Orange and Black might have had a better chance for victory. As it was, the big chance was thrown away.

LITTLE by little the type of gameship laid down for this game has come into use at the leading universities in the East, and it remained for the Yale game to prove that Princeton really could remember the teaching and put it into execution. But when the gameship was at its best the team found itself pitted against its master, using the same style of strategy, with the result that Princeton's season must go

down into football history as one of wasted opportunity.

Now one reason that Ames believed in the type of gameship he taught was that to a large extent it had been used by the Princeton team that defeated Yale at Berkeley Oval in 1889. To prove it, I quote from the story of the second half of that game in Parke H. Davis' book, "Football, the American Intercollegiate Game": "Yale starts the second half with a V and gains twelve yards. McClung gains fifteen yards. McClung tries a drop-kick but the ball falls short. Princeton fumbles and it is Yale's ball on the ten-yard line. Three times their backs batter the line, but Biggs and Jancway stop the attack. Princeton gets the ball on downs. Ames punts to the forty-five yard line and Warren catches the ball. Ames runs to the right end, but, just as he reaches the line, whirls around and makes a long pass to the left to Cowan, who runs thirty yards before being downed. Princeton fumbles and loses twenty yards, but Channing recovers the ball. On the line-up Ames tries for a field goal. The posts are missed but the ball rolls across the line on the ground. The Yale backs fumble it, and Warren, coming up like a race-horse, dives along the slippery mud and gets the ball for a touchdown. The ball is brought out, and the angle for goal is wide and difficult, but Ames makes it.

"Only fifteen minutes are left to play. Yale launches the V with great fierceness and follows it up with fast and desperate playing. Princeton stops the advance and immediately fumbles, Hartwell getting the ball. McClung tries for field goal at twenty yards, but the ball strikes the post. Gill is thorough and seizes the ball, carrying it across, but it is brought back for offense play. A moment later McBride tries another drop but Cash blocks the kick. Princeton gets the ball and Ames starts off a phenomenal punt, which he follows up with others, keeping the ball continually down in Yale's goal. Ames tries a long drop-kick, which falls short, but is fumbled by Yale. Cowan falls on the ball, but, rising to his feet, staggers across the line with the Yale team clinging

to him, for a touchdown. The goal fails. Yale opens with a rush and follows it up with a kick. Ames runs the ball back thirty yards, but with only McBride between him and the line, goes down, and McBride holds him at the five yard line. Before the ball can be sent off on the next play time is called."

What better exposition of the kicking game as it ought to be played today? Small wonder that Ames sought to teach it, and, indeed, did teach it, at Princeton. This type of play, unfortunately for Princeton, without the run-backs and the picked-up fumbles, or indeed, any other form of attack to support it, was used against Yale, and it was used largely by Yale, but although the Elis could not work the leather across the goal-line they showed a well-devised attack that, compared with Princeton's, was several classes higher.

THE Minnesota shift was first used in the East by Yale as a "rescue" play, and as such sufficed. Then the Blue continued its use as an entire system of offense, and failed to make it worth while. In the meantime it was taken up by Princeton with the same idea. Against teams that did not know how to meet it, it rolled up big scores and provided every opportunity for getting a fast man free. But the ball was not hidden, and nothing but the catching of the defensive line in motion made the play work. Against Yale a year ago the shift found weak spots in the Blue line, and in consequence much ground was gained. But in the second season the Army stopped the Yale shift in its tracks even with such good men as Scully and Paul leading it, and a few who were wise adopted the West Point method of meeting the manoeuvre.

From the very beginning of the present season it was pointed out that the first team that had a strong line and a correct defense would make the Princeton shift absolutely useless. There was a temporary flaw in the Harvard defense against it, but none in the Yale method, with the inevitable result, a result foreseen long ago. There are none so blind

TIGERS' KICKING STAR AT HIS BEST

Law, the wounded but game and wonderful Nassau punter, getting off a long drive from behind his own goal line. It was to Law's superb kicking that the Tigers owed their ability to keep the Elis away from the goal line

as those who prefer that condition. The Tigers had nothing else to offer once the shift was wrecked, and as a result there was nothing to support Princeton's clever kicking game. It is not that Princeton has not the backs to make distances by other and better methods. Law, Streit, Glick and Baker, were good backs, ball in hand, but they were out run from the proper formations. The Princeton system of attempted deception was too cumbersome, and as a matter of fact most of the Tigers' good gains in the Harvard game were made largely because of the work of strong, hard-charging forwards, rather than because of the use of the shift.

Princeton needs to delve only a little way into its football past to revive a system of attack that will make excellent use of such men as Law, Streit and Glick and many other promising men who turn out every year. Some of the old-fashioned tackle running, the backs starting from the simple three-man-in-a-row formation parallel to the line, might serve to resuscitate the Princeton attack, or if shift there must be the Tigers might well keep abreast of the times and borrow the simple back shift from Col-

gate, as did Yale, with excellent results. Or the Tigers might have taken a leaf from Dartmouth's book.

When it comes to defense, the Orange and Black also has a lot to learn. Equipped with powerful tackles like Balling and Phillips, Nassau might have made a better if not a braver showing against the Elis, and notably against Dartmouth, had these men been better grounded in technique, or had there been better support on the part of the ends. Princeton's tackles were continually coaxed, and when so coaxed had not reasonable support on either side. They were left to do their work practically single-handed against heavy odds.

I HAVE spoken to weariness about the defensive play of the Princeton ends. Granting that coaches prefer not to have their ends go charging in, it is hardly necessary to go to the opposite extreme, as does Princeton. Time and again I have seen a perfectly capable and useful man left "all standing"—a mere spectator—with the play shooting past inside his position and not even one man to bother with putting him out of action. There is so much that is good in Princeton foot-

ball that it seems a pity greater stress has not been laid upon it.

Princeton is due for an awakening—for a taking of football stock. The Tiger horizon will have to be broadened if the eleven is to win its share of important games in the future—the share that is coming to the Orange and Black because of its great gridiron history, its numerous really wonderful players, and certain of its great teams of the past, such as that of 1895 and that of 1896—teams that blazed the way in football and let who would copy. I should like to see more Princeton veterans watching the work of other schools of football, and watching that work with open minds. The Tigers are not very far from the right track, and for native power, speed and brains this year's material was in the front rank.

Not everything should be sacrificed to speed and deception, however, and it is to be hoped that in the near future Princeton will make better use of the assets at hand and not depend so much on the brilliancy of one individual who is raised to a pedestal because of flashing work in early season games.

A CLOSE CALL FOR PRINCETON

"Hobey" Baker, the Princeton captain, tackled and thrown so close to his own goal line that a little extra whirl back would have meant a safety against the Orange and Black

Passion and Struggle

Jean-Christophe's Pilgrimage towards Beauty and Freedom

By W. B. BLAKE

ONE secret of Rolland's power in his three-volume novel "Jean-Christophe" is that he makes us share his idealism. Love of truth is, perhaps, the author's distinguishing characteristic. His hero is himself a soldier of the ideal—though he would have accepted Wilde's apothecary: "There is always a certain amount of danger in any attempt to cultivate impossible virtues." Christophe is very human; but if he breaks a commandment or two, it is not with Gallic lightness. He makes his sacrifices—sacrifices to freedom and to conscience, to character and to art. He learns in travail the futility of self. Christophe is less a man, however, than an age. He personifies a generation that has borne "the burden of the world"—readjustment and reconstruction—a burden as heavy as that of the Saint who bore upon his shoulders "not only the whole world, but Him that created and made all the world." As a boy in Germany Christophe is sore in spirit because hampered by personal limitations and social tyrannies, by narrowness and blindness and ignorance.

But the boy's philosophical uncle—a middle-aged pedlar who has added the spirit of tolerance to the sense of wonder—gives him good counsel. It is good counsel for any young man, hurrying to change Rome in a day:

"Do not abuse life. Live in today. Be reverent towards each day. Love it, respect it, do not sully it. . . . See. It is winter now. Everything is asleep. The good earth will wake again. You have only to be good and patient like the earth. Be reverent. Wait. If you are good, all will go well. If you are not, if you are weak, if you do not succeed, well, you must be happy in that. . . . Why be angry because of what you cannot do? We all have to do what we can. *Als ich kann*," . . .

"You are a vain fellow. You want to be a hero. That is why you do silly things. A hero! I don't quite know what that is: but, you see, I imagine that a hero is a man who does what he can."

This heroism is an obsession with M. Rolland. On another page he writes: "There is but one heroism in the world: to see the world as it is—and to love it."

In spite of the gently ironical philosophy of Uncle Gottfried, this novel of "Jean-Christophe" is anything but an essay in quietism. Rather is it a plea for vital energy, sincerity, incessant struggle, courageous striving: a tragedy of the generation that is passing dedicated to "the Free Spirits of all Nations, who suffer, fight, and will prevail." The "freethinker who has read Tolstoi"

fervently believes that all is good which exalts life, that there is only one enemy: "the sensual egoism which tarnishes and dries up the sources." Rolland has none of the modern morbid terror of saying something already said. "Nothing would have induced him," he writes with approbation of his hero, "to try to be original. It seemed to him that a man must not be very commonplace to burden himself with such an idea. He tried to be like himself." This is a message for grounding and genius alike; not, "Know thyself," but, "Be thyself." This "Jean-Christophe" is, indeed, at the opposite pole from Anatole France's "Epicurean Garden"—where grow beautiful pale flowers that exhale a sickly hot-house smell, and take root in rotting corpses. Braving the mocking Anatolean snail, "The great enemy is doubt!" shouts Rolland. Life—live it and prize it and use it—is the music of his horn. Such a book could have been written only at a crisis of moral and artistic anæmia. It is then that youthful spirits, health, and intensity are best appreciated. Your Elizabethan age spends rather than celebrates the life-force. But go slow in labelling Rolland's France putrescent. For just how many centuries now has France been dying? Yet we still go to Paris—and don't go as on a graveyard pilgrimage. Pilgrim Christophe goes to this Paris out of Germany in quest of truth and freedom in life and in art.

THE nativity of his hero gives internationally-minded Rolland a chance to contrast the two civilizations. His book makes Germany more understandable to France, France more understandable to Germany, both countries more understandable to the Yankee. "Jean-Christophe" may well be worth more to the peace of Europe than Carnegie's millions.

Christophe is the son of a pennant mother, by a drunken musician—issue of a long line of musicians. Hence his wonderful vitality and grossness, grafted upon the artist-stock of him. The leisurely opening of the life history is beautiful in its reminiscences of child dreams become to most of us so thin and faint. He who understands childhood and dreams, has the secret of poetry. "Life is what we dream it."

In spite of his ridiculous awkwardness, Christophe has, from the first, his romances. Then follow his lusts and his loves. To the New England mind, nourished on East wind and baked beans, this part of his experience may seem exaggerated. I doubt it. The world of Rolland is cruel to women—who are "too free and not free enough!"

Freer, they would seek bonds; they would find therein a charm and a security. Less free, they would resign

themselves to those bonds which they would know no way of breaking; and they would suffer less. But it is the worst situation of all, this having bonds that do not bind you, and duties from which you may free yourself."

Elsewhere Christophe praises women's "tremendous effort to escape from the degrading and unwholesome semi-domesticity, to which our stupid male egoism condemned them" as "one of the most splendid facts of our time." Though their faith be illusory, "it will make women completer and more human, as they were in the great ages." For Rolland is no cynic. He is true to his own law that the artist's business is to create sunshine when the sun fails. "Life," he writes, "is a series of deaths and resurrections. Let us die to be reborn."

IN France, this transcendental novel fills ten volumes—like "Les Misérables." It would have gained by condensation,—yet into the life of the imaginary German Rolland has poured more of understanding, of love, of truth, than is given to most writers for the whole of their work—three volumes or thirty. The titles of the volumes hint of the contents: Dawn, Morning, Youth, Revolt. The Market Place, Antoinette, The House, Love and Friendship, The Burning Bush, The New Dawn, "The Market Place" is Paris—where Christophe, arriving as a fugitive, half-starved as a copyist and music-teacher, "Antoinette" is a novel within a novel,—and not indispensible.

Then come thoughts on society, socialism, syndicalism. Without premeditation, Christophe again becomes a fugitive from authority. He has, moreover, lost his dearest friend. In "The Burning Bush" the scene shifts to Switzerland, which becomes the stage of a new "Scarlet Letter." Here occur the most poignant and beautiful pages in the whole work: passages of intensity and simplicity. It is in the first and the last quarters of the book that the writer is at his best.

Romain Rolland is dealing here with modern life and art in their true essence. Nothing could be more stupid than the action of the New York publishers in branding the work a "musical novel"—simply because the protagonist happens to be a composer, and the author a lover of music. The best criticism of the novel is one which an artist made to me, quite unconscious that he was uttering criticism. I saw him with a new American novel in his hand. "Is it worth reading?" I asked. "No!" he thundered. "I think I might have enjoyed it a few months ago—but everything I try now seems unreal, bloodless, insincere. Why did you ever lend me your 'Jean-Christophe'?"

"Jean-Christophe," Three volumes. By Romain Rolland. Translated by Gilbert Cannan. New York: Henry Holt and Company.

It is ever the desire to find something new to give expression to the spirit of Christmas. With the growing trend toward sane and practical giving the range of choice that is offered in electrical devices for home comfort and home convenience appeals strongly to one who would select for a gift that which is attractive both for its novelty and practicability.

Where is the wife or mother who would not enthuse over a real electric vacuum cleaner or an electric washing machine? Think of the lasting pleasure that would be present in a home equipped with Interphones which save useless stair-climbing.

Other things which give pleasure and satisfaction much out of proportion to their cost, and for which the cost for electric current to operate is so low that it need scarcely be considered, are electric irons, coffee percolators, chafing dishes, bread toasters and warming pads. All of these and other electric goods are to be had in highest quality among the

The Telephone Doors of the Nation

WHEN you lift the Bell Telephone receiver from the hook, the doors of the nation open for you.

Wherever you may be, a multitude is within reach of your voice. As easily as you talk across the room, you can send your thoughts and words, through the open doors of Bell Service, into near-by and far-off states and communities.

At any hour of the day or night you can talk instantly, directly with whom you choose, one mile, or a hundred, or two thousand miles away.

This is possible because 7,500,000 telephones, in every part of our country, are connected and work together in the Bell System to promote the interests of the people within the community and beyond its limits.

It is the duty of the Bell System to make its service universal, giving to everyone the same privilege of talking anywhere at any time.

Because as the facilities for direct communication are extended, the people of our country are drawn closer together, and national welfare and contentment are promoted.

Stocks That Go Up

BY way of variety let us glance this week at a group of stocks which have risen in price in the last few years—the Standard Oil shares. By moving up instead of down they have turned the cold shoulder on pretty nearly all other instruments of investment, not only in the United States but in other countries. This contrary spirit, together with another recent spurt with its paper profit of scores of millions of dollars, makes timely the following inquiry from a woman on Long Island:

"Kindly tell me whether capital invested in Standard Oil is perfectly safe?"

This is brief and to the point. No words are wasted by this inquirer. Her question at once raises many more questions. It involves technical and academic as well as practical lines of discussion. What is safety? Are stocks as a class safe? Are they ever suitable for a woman? And so on. But while these issues will not be introduced, it might at once be said in reply to the apparently simple request for information that no direct or positive answer is possible. There are certain sets of facts and the best the writer can do is to set these forth.

The Age of Oil

A RECENT magazine article described our present stage in mechanical development as an age of oil. In a large sense this is true. Steamships are becoming oil ships. The British Navy has gone far toward supplanting coal with oil. Southern Pacific locomotives are equipped with oil. Automobiles increase in number and they use a form of oil. So do the roads that the automobiles stir up for the choking of pedestrians. The gasoline-driven engine is used more and more in every direction. Pleasure gasoline huggies constitute but a first stage in a new era of traffic. The motor truck looms large in every sense and there appears no limit to its possible consumption of the oily substance which makes possible the researches of a Flexner and the existence of the University of Chicago.

In 1912 this country produced more than half of the world's oil. Russia was a poor second, and if peace should ever be restored in Mexico that country might take Russia's place. With a Panama Canal there seems no danger of the world's oil supremacy getting very far away from this country.

Thus we are dealing with a basic industry, with a staple for which man will have employment as far ahead as one can see. Securities based upon the more permanent and less fluctuating sections of this industry should be safe and profitable *a priori*. In sober fact they are safe, and as profitable as Aladdin's lamp.

Dr. Jekyll and Mr. Hyde

THE oldest, most experienced and powerful oil companies are those tarred with the name Standard. Freshmen in college economies are taught that high profits bring capital into industry. Thus there are hundreds and thousands of new oil companies all striving for the fat pickings. History teaches that many will fail.

Thousands already have failed. All of which may be a good thing from the economic standpoint, but the individual investor has no desire to sacrifice himself on the shrine of economic good, or evil, for that matter. So as investors let us watch the bold entrepreneur with a reputation to make, risk his own capital, if he has any, or beg hard for other persons. But do not give him yours. When we, as investors, put our capital into oil, let us by all means place it with the master minds of that industry, with the men who have proven themselves capable. Don't let us gamble our money with the swarm of new promoters.

I hardly need refer to the fact that Standard Oil in its public aspect was long regarded as a menace. Somehow the public had doubts as to the purely altruistic nature of its methods of competition. Much has been written in defense of the oil trust. Once Elbert Hubbard's facile pen turned out an article widely reprinted by a great brokerage firm for advertising purposes, in which the oil monopoly's first great enemy, Ida Tarbell, was described as a disappointed woman whose view of Standard Oil was taken from the ditch where her father's wheelbarrow was overturned by a Standard Oil tank-wagon. And I notice that another great Standard Oil brokerage firm, through one of its bright and intelligent partners, is weak-minded enough to chuckle at this same poor joke. Note well that neither firm refers in a joking way to the fact that the supreme judicial tribunal of these United States was the body that really swatted the oil monopoly. There is no joke to that, and besides, brokers like other persons, rarely refer to arguments to which they can not find an answer.

The point to this apparently pointless digression is really an important one. The man who buys Standard Oil stocks and tries to defend the past policy of that great monopoly is taking the wrong course. And I believe the broker who deals in these stocks, likewise takes the wrong course in trying to defend these companies for their past sins. The stocks are valuable enough in themselves without trying to idealize the cold-blooded monopolists who are now so busy in giving away money to Cornell, Chicago, Amherst and other educational institutions.

Hush, Hush

THE prospective buyer of Standard Oil must also face the fact that the managers of these thirty-three companies (the Supreme Court broke the trust into thirty-three parts) still insist on a policy of silence. In this sense Standard Oil stocks always were and still are a gamble. When the trust was "dissolved" on May 15, 1911, two and one half years ago, the company stated that one year must elapse before statements of earnings could be given out. Two and a half years have passed and of the seven really large companies only two, the Vacuum Oil and the Standard Oil of California, have issued statements of earnings.

Dozens of Wall Street brokers figure and analyze until they are dizzy in regard to the earnings of these thirty-three companies. Brokers even travel over the oil fields, peep wonderingly at muddy gubbers, and otherwise pick up much technical oil jargon. These brokers turn out reams of fascinating literature. All of which is very interesting and industrious but does not alter the fact that most of the Standard Oil companies refuse to give out any state-

ment of income to brokers, stockholders or anybody else.

But the Riches Are There

IT also is probably true that control of Standard Oil is just about as centralized as ever before. The few great owners such as Rockefeller, Harkness, Pratt, Payne and Flagler are still the great owners. The competition which has been established is a peculiar and wonderful sort, not yet studied by economists. But there is a new order of management, the public conscience or vengeance toward John D. and his associates has probably been satisfied, old brutal methods of competition abolished for the most part, and the monopoly is no longer tangible or corporate. Thus the future holds no threat of battle royal between monopoly and public.

So much for Mr. Hyde. Now for Dr. Jekyll. From a purely business point of view the old Standard Oil Company was, and most of the separated companies are, about the best and most conservatively managed concerns which the world has ever seen. There has been no stock jobbing, no stock watering, no excessive dividends, no rake offs for insiders. Apparently the one idea of the managers of these companies is to make profits for the stockholders. Judging from recent exposures this seems to be the one idea which railroad and other corporation directors at large do not have. The ideal of most large corporation directors seems to be to get into some fat supply or construction company for graft for himself and let the small stockholder of the big parent company go hang. The sole ideal, so successfully realized, of the Standard Oil director is to make as huge profits as possible for the stockholders of his company, and this means small as well as large stockholders.

There is only one way to invest in Standard Oil, and that is to buy the stock and keep it. The speculative market in these stocks is about as safe as a mad bull.

To Have and to Hold

THERE are two fairly safe prescriptions for getting rich. One is to buy Standard Oil and keep it. The other is to buy the same stock and sell it when it has risen a few hundred points. Any other method is fatal. Of course the separated companies have paid out many a king's ransom since their "dissolution." Prior to that event dividends of only \$40,000,000 a year were paid. In 1912, the year following, cash dividends amounted to \$51,813,335. In the first half of 1913 they amounted to \$71,224,544, not to mention stock dividends of \$111,100,000 since "dissolution," and rights to subscribe to new stock of a value of \$35,400,000.

Now the natural question to raise is whether all the assets have not already been distributed and whether earning power has been crippled. I do not think so. The Standard Oil Company of Indiana for instance may never again declare an extra dividend of 2000 per cent. but it is paying between 80 and 90 per cent. on its increased stock issue, and probably earning double that amount.

Where the Hazard Is

EVEN John D. Rockefeller himself has said that the oil business is "hazardous," but he probably referred to the producing end. An oil well may give out

ALFRED NOYES' COLLECTED POEMS

Professor Wadsworth of Yale said last June: "Mr. Noyes has won the approval of the critic and, what is more, the ear and the heart of all who read his tongue." This edition contains all Mr. Noyes has done up to the date of publication, including "The Flower of Old Japan," "Forty Singing Seamen," "The Forest of Wild Thyme," "Drake," "The Enchanted Island," "Sherwood," "Tales of the Mermaid Tavern," New Poems, etc.

Two beautiful volumes of about 450 pages each, gilt top, portrait frontispiece. The set, \$3.50 net; postpaid \$3.75.

FOOTBALL

FOR PUBLIC AND PLAYER

By HERBERT REED

This book by the great expert of HARPER'S WEEKLY is of permanent worth because it digs down to the fundamentals of the game and analyzes the new game in all its features. Every lover of football will find it fascinating. Some chapter headings:

Coaching systems; Simple Attack and Defense; Advanced Football; Generalship; For the Spectator; Games on the Gridiron, etc. Fully illustrated from photographs and diagrams.

Cloth, 16mo; \$1.50 net; postpaid \$1.60.

FLETCHERISM

WHAT IT IS

By HORACE FLETCHER

This volume is a compact statement of the gospel of Fletcher: how he recovered his health at the age of 60, how scientific experiments established the validity of his methods, and how they can be applied with no heroic sacrifice of the enjoyments of life or untoward adherence to faddy or movement routine. While other Fletcher books treat the subjects at greater length, and are devoted to the different aspects of Mr. Fletcher's beliefs and investigations, this is a summary of the main points, and (touches the latest information on a most important matter).

Cloth, 12mo; \$1.50 net; postpaid \$1.60.

The HEART of the DESERT

By HONORÉ WILLISIE

Honoré Willisie's first novel is something which no reader of HARPER'S WEEKLY should miss—the exciting tale of a wilderness which makes vivid the word chosen of the Arizona desert. Mrs. Willisie loves the desert and knows how to picture it.

\$1.25 net; postpaid \$1.35.

Impartial Economical Mechanical Supervision

The Servis Recorder gives you supervision at all times over your delivery and shipping equipment.

The Servis Recorder supervision is mechanical—therefore accurate, impartial and economical.

The Servis Recorder tells you when the vehicle began and stopped work—

The number of hours it was in actual service.

How much delay there was in loading—

How many stops were made—
How much time was taken for lunch—

How much overtime, if any, was made by the driver.

Lets you know any unauthorized use of the vehicle.

Permits you with certainty to lay off vehicles in dull season—

Raises the standard of efficiency of your employees—

The Servis Recorder is self-contained. It is not connected with the running gear or motor in any way.

The Servis Recorder works equally well on horse wagons, motor trucks or sleds.

It is the one dependable device that never fails.

What the Servis Recorder has done—what it will do for you—will be gladly told upon request. That it will save money for you is certain. To inquire how will not obligate you.

We invite correspondence.

The Service Recorder Co.

2312 East 105th Street

CLEVELAND, OHIO

Branches in Twelve Cities

The Servis Recorder has been adopted by more than 75 Railroads for use on switching and transfer locomotives.

just as a mine may give out. In the same way the pipe line companies are speculative because the Interstate Commerce Commission is straining every effort to get them enough inside the common carrier prison to regulate their rates. But the great refining and marketing companies, such as the Standard Oil of New Jersey, Standard Oil of New York, Standard Oil of Indiana, Vacuum Oil, Galena-Signal Oil, and possibly the Standard Oil of California and the Atlantic Refining Company are well worth the permanent investor's attention.

Take the Standard Oil of New Jersey. It pays 2 per cent. regular dividends and sells at \$80, a net yield of only 3 per cent. But an extra dividend of 40 per cent. was declared last year, and the company's assets are so vast and various that no one can say at what time another extra may not come. The New York Company is selling at 100. Last year it paid an enormous stock dividend and has not yet this year paid a cash dividend on its present \$75,000,000 stock issue. But rumor has it that the company may declare 12 per cent. in cash before the year is over. Unquestionably both its assets and profits are fabulously large, the latter probably about 80 per cent. even on the increased capital.

The Strength of Good Business

THROUGH a long period the Standard Oil organization has built up a system of management which combines an infinite capacity for taking pains in trade and technical matters, aggressiveness in entering new fields and extreme honesty and conservatism in financial policy. The combination is simply irresistible. Remember that none of these companies have any bonds whatever, and practically no debts of any kind. Only one company has preferred stock, and a very small issue at that. Thus, the investor always gets a first lien on the company's earnings. There is no jugglery, no high finance. Many corporations have bonds which are not bonds, financial subterfuges without number.

The Standard Oil companies have only one object, to earn profits for one single class of persons—the stockholders. Many corporations have thirty or forty different classes of security holders, the interrelations of whose claims is enough to drive a manager either dishonest or crazy. Coupled with this Standard Oil simplicity of corporate structure, which makes for internal honesty, is an extreme conservatism, relatively speaking, in distribution of profits. There is always enough cash on hand for any possible contingency. No Standard Oil Company is caught with its clothes off when money is stringent. They are never at the mercy of banks. They do their own banking.

Finally it may be observed that at a time when bonds and other fixed income bearing obligations are suffering because a fixed amount of money does not purchase as much as it formerly did, there is a distinct advantage in owning stocks upon which there is no limit to dividends, except common sense, and especially stocks that are the only securities issued by companies engaged in a growing business.

But I can not recommend Standard Oil stocks to nervous dyspeptics unless they promise not to read the daily quotations. These are stocks for persons who have both the means and the temperament to wait.

It is the aim of the publishers of HARPER'S WEEKLY to render its readers who are interested in sound investments the greatest assistance possible.

Of necessity, in its editorial articles, Albert W. Atwood, the Editor of the Financial Department, deals with the broad principles that underlie legitimate investment, and with types of securities rather than specific securities.

Mr. Atwood, however, will gladly answer, by correspondence, any request for information regarding specific investment securities. Authoritative and disinterested information regarding the rating of securities, the history of investment issues, the earnings of properties and the standing of financial institutions and houses will be gladly furnished any reader of HARPER'S WEEKLY who requests it.

Mr. Atwood asks, however, that inquiries deal with matters pertaining to investment rather than to speculation. The Financial Department is edited for investors.

All communications should be addressed to Albert W. Atwood, Financial Editor, Harper's Weekly, McClure Building, New York City.

A DUENNA

By BEN ALI HAGGIN

LITTLE opportunity is given to the general public to enjoy the work of the group of brilliant portrait painters which has arisen in America. It is, therefore, our plan to present in *HARPER'S WEEKLY*, from time to time, reproductions of a number of the good examples of recent American portraiture. This portrait by Ben Ali Haggin is of a descendant of one of the oldest Cuban families and is interesting for the effective simplicity and individuality of the workmanship.

Good Men Needed

AFFAIRS of much moment, not only to railroads but to shippers, to consumers, to everybody, are in the hands of the Interstate Commerce Commission. With three vacancies to be filled on that body, President Wilson confronts the need of men equipped with special ability as well as with the highest sense of public service. The loss of Mr. Marble is severe. When Franklin K. Lane, who had dominated the Commission, was made Secretary of the Interior, it was at his earnest request that Mr. Marble was chosen to fill the vacancy. A terrific load of work fell upon him, as it had fallen upon Mr. Lane, and that work may have hastened his death. Another of the vacancies arises through the expiration of the term of Commissioner Clements. Mr. Clements has done such good work that we think he ought to be reappointed. He is advanced in years, to be sure, but men grow old at different periods, and Mr. Clements is full of vigor as well as full of experience and ability. In his two terms and a part of another he has been absolutely right-minded. At all times, he has been an admirable representative of the public's interest. At sixty-seven, he has not only the energy of youth, but its enthusiasm.

All Together

LET us not forget, in the various controversies about railroads and money trusts, or in any other controversies of the day, that rightly seen, the interests of all classes are the same. When there is a railroad wreck, the public is likely to assume that its interests are in conflict with the interests of the men who control the railroad. This can be true only in a limited and narrow sense. In the long run, the welfare of the public and the welfare of the road must be the same, and this is recognized by the wiser business men, as well as by the wiser critics of business. Indeed, the most encouraging aspect of our study of economic and business conditions today is that every month finds many more men engaged in active business who are studying the public needs and public welfare, and a larger proportion of the critical public who, instead of indulging in mere class hostilities, realize that sound business and sound government must be in harmony, and are seeking not for vague agitation but for genuine constructive solution. Business problems are the dominating problems today, and what will do most to make this a genuinely great country will be a spirit of coöperation, every class in the community studying not only its own needs, but sympathetically the needs of all the other classes.

They Come Fast

WHILE Mr. Brandeis' series on how to break up the money trust is progressing, events move so rapidly that it is quite impossible to keep up with the object lessons. The exposure of evils caused by interlocking directorates was already on the presses when further light was shed on this condition by the investigation of the Interstate Commerce Commission into the receivership of the St. Louis and San Francisco Railroad, commonly known as "The Frisco" road. That railroad failed, a victim to high finance. The Frisco directors and bankers had formed syndicates to buy or build connecting railroads which they sold to the Frisco Company at exorbitant prices, which they were able to do because the same men acted for the purchasers and were themselves the sellers. These transactions yielded to the syndicate profits of from seventy-five to one hundred per cent. on the investment. Just stop a minute and think of that. The banker members of the syndicate not only had their share of the syndicate profits but in addition received bankers' commissions on the sale of the Frisco securities issued to raise the money for paying the syndicates. When the road failed, bankers who had taken part in the looting controlled the legal proceedings against the road. Receivers appointed were members of the syndicates. The financiers who looted the property seem to be still in control of it. Perhaps, therefore, inadequate freight rates are not the main reason why investors hesitate to buy railroad securities. Perhaps also this complete exposure of the money trust comes none too soon.

Honesty

THE *Times Union* of Jacksonville, Florida, is not very well known to us, but its methods are those which we find usually associated with the most reactionary papers. The following is a quotation from it:

"HARPER'S WEEKLY advises: 'Always put the date so you can add it up with the rest of the bill.' Mind you, this is in the day of a pure food commission and other progressive institutions."

Now, of course, HARPER'S WEEKLY advised nothing of the sort as the *Times Union* well knew. Instead of that, it printed a humorous cartoon, laughingly criticising the grocer who gave that advice to his assistant. While we have no knowledge of this publication, we are so accustomed to standpoint methods of misrepresentation that we should be willing to wager, in the dark, a modest sum that the *Times Union* is the reactionary agent of its neighborhood.

Total Eclipse

OF old, the expression "a Sun story" used to stand among newspaper men, all over the country, for a piece of writing which crackled with electricity, and was at the same time absolutely clear—good English of the straight-from-the-shoulder sort. But now—Listen to this alleged sentence and guess what Charles A. Dana is doing in his grave:

All this time, skipping lightly over what once was Greeley and now is Herald Square, and Longacre, now Times Square, and climbing out of the subway at what is now known as Columbus Circle, but which undoubtedly will be changed, after Honorable Hearst builds on his corner lot there, to American and Journal place, one came upon the quietest election night crowd, always excepting the bell ringers and horn blowers who ring and blow no matter how elections go, that the city has seen.

It is an attempt at the Sun's old spirit, and what an attempt! What chance has gayety against the sort of English that "prep" school boys are asked to re-write on examination papers?

Where are the *Suns* of yesteryear?

Wilson and the Bosses

THROUGHOUT the Presidential campaign last year it was constantly asserted that the election of Mr. Wilson meant the triumph of the bosses, those mentioned being always, Murphy, Tom Taggart and Roger Sullivan. It would be difficult to find any one now who believes that Wilson's election resulted in the triumph of Murphy, especially since the chief Federal office in the gift of the Administration in New York City was first bestowed upon John Purroy Mitchel, and upon his election as the Anti-Tammany Mayor was given to Dudley Field Malone, who left his desk in the Treasury Department to strike Tammany and Murphy. As for Tom Taggart, the returns from the elections in Indiana cities indicate his overthrow, despite the election of his candidate in Indianapolis, through the failure of the opposition to unite. Has anybody heard of Roger Sullivan at the White House? And what happened to Smith in New Jersey? Nothing will do more to destroy boss rule in the various cities of this country than the success of the Administration now struggling in Washington to solve the biggest American problems.

The Cost of War

CHAMP CLARK, among American opponents of big military expenses, argues that every year money enough is wasted on the armies and navies of the world to feed, clothe, and educate all its children. This is indorsing the *Winston Churchill* project of a naval holiday for all the powers. A French ministry, fearful of German aggression, has just called for a loan of \$260,000,000 to cover military expenses. This is four dollars from every man, woman and child in the French Republic; or about a dollar a head more than the cost of the Philippines to date, to each inhabitant of the United States. We know what Sherman said about war. What would he have said about preparations for war?

Bloodletting in Mexico

THOMAS CARLYLE, in his *Life of Cromwell*, defending him from the charge of regicide, insists that his judges should put themselves in Cromwell's place, where it was, "My head or your head." In the French Revolution, the same philosophy is expounded under the tragic title: "The loser pays." Doubtless the Revolutionists in Mexico are not entirely conforming to the rules of civilized warfare. Doubtless also, as is evident when the consular reports come in, the effort has been made to picture the Constitutionals as blood-thirsty bandits, incapable of self-government, while the massacres ordered by Huerta are glossed over. Madero and his kinsmen and adherents lost and paid. Those who took part in his overthrow and assassination have been captured in the defense of besieged cities, Torreón, Chihuahua, Victoria, and they have been shot as traitors to the government. When the Constitutionals have been captured, they have paid with their lives. There are parallels between the French Revolution and the one in Mexico, and Carlyle is able to give insight into both.

"It was the frightfullest thing ever borne of time! One of the frightfullest. This Convention did publish lists of what the Reign of Terror had perpetrated. Lists of persons Guillotined. They contain the names of, How many persons thinks the Reader? Two Thousand, all but a few. There were above Four Thousand, *cric! Montgallard.* It is a horrible sum of human lives, M. l'abbé! Some ten times as many shot rightly on a field of battle, and one might have had his Glorious Victory, with *Te Deum.* It is not far from the two-hundredth part of what perished in the entire Seven Years' War. History, looking back over this France through long times, confesses mournfully that there is no period to be met with, in which the general Twenty-Five Millions of France suffered less than in this period which they name Reign of Terror. But it was not the dumb millions which suffered here; it was the Speaking Thousands and Hundreds and Voûts; who shrieked and published and made the world ring with their wail."

It is a sad thing, in short, this death in warfare, but it is not the worst. The oppression of a people, such as Mexico has long known, is worse.

Too Old

HENRY GASSAWAY DAVIS, who has just celebrated his ninetieth birthday, is in good health and hopes others are enjoying the same. He has lived long enough to acquire a good part of the State of West Virginia. He was a voter before the Mexican War and was a comparatively young Senator in the Seventies. One of the arguments against the election of the Democratic ticket in 1904 was that Vice-Presidential Candidate Davis would be too old to live out his term if elected. He has seen three Vice-Presidents elected since.

Mr. Edward Winston Pettus of Alabama once called on Senator Pugh and asked for the appointment to a federal judgeship. Senator Pugh, so the story goes, replied that Mr. Pettus was too old to be a Judge, whereupon Mr. Pettus made the courteous retort that he was not too old to be United States Senator in the place of Senator Pugh. The people of Alabama agreed with Mr. Pettus and he served one full term in the Senate and part of another, before his death.

Not So New

THE "movies" (perhaps we should omit the quotation marks, the word is working into the language so fast) are considered a strictly twentieth-century development. Here is an amusement advertisement which appeared in the public prints in England exactly 101 years ago.

At the Duke of Marlborough's Head in Fleetstreet, is now to be seen a new Invented Machine, composed of five curious Pictures, with moving Figures, representing the History of the Heathen Gods, which move as artificially as if Living: the like not seen before in Europe. The whole contains near an hundred Figures, beside Ships, Beasts, Fish, Fowl and other embellishments, some near a Foot in height; all which have their respective and peculiar Motions, their very Heads, Legs, and Arms, Hands and Fingers, Artificially moving to what they perform, and setting one Foot before another like Living Creatures, in such a manner that nothing but Nature can excel it. It will continue to be seen every Day from 10 in the Morning 'till 10 at Night.

This will probably hold you for a while, although it must be admitted that the moving pictures of 1812 were different in mechanism and extent from those which play so large a part in the life of 1913.

"Medical Freedom" Tactics

ORGANIZED to fight the growing affiliation between the State and the "regular" medical profession, the National League for Medical Freedom does many things which indicate its definition of "freedom."

Just now the League is aiming its fire at the lectures on sex hygiene that have been established in the Chicago public schools by the sensitive and enlightened woman superintendent. School attendance on these lectures is not compulsory, nor is the abused "taxpayer" on their account a penny out of pocket. The League is in the position of a group which attempts not simply to defend its own "rights" but to deprive the others of something which they want. Recently the League sent stenographers to report the lecture given at the Bryant School by Dr. A. C. Cotton, who was president last year of the Chicago Medical Society, and the lecture given at the Hyde Park High School by Dr. C. J. Hopkirk, another reputable physician. The League took extracts from these lectures, printed them in a circular, and then submitted the circular to Postmaster Campbell for an opinion as to whether these extracts made the leaflet too "obscene" to circulate in the mails. The postmaster is the same official who last year barred the report of the Chicago Vice Commission from the mails. He ruled, after consultation with his superiors, that the circulars were unavailable. The secretary of the League then called up the city editors and got into the newspapers a sensational account of the character of the lectures given in the public schools. It was a cheap triumph. No organization which really cares for "freedom" will summon the so-called "Comstock act" to its aid. That statute places it in the hands of unknown and irresponsible federal officials the power to censor all our literature dealing with the subject of sex.

The appeal to such a body is a pretty example of what "freedom" means to the League. "To it, freedom" means merely hostility to knowledge.

What Some Women Are Doing

IN a certain community, in a mountainous region of the South, there is almost no money, no railroads, no commerce. The people can scarcely scrape together enough to pay taxes. Nevertheless the women are doing a great deal to make progress possible, and they are doing it along the lines of traditional domestic industries. In one house, for instance, that we know of, the women can all the vegetables and fruits they use during the winter season, and sell about two thousand cans a year besides, all of it in quarts, for ten cents a quart, and including everything from peaches and cherries to beans and tomatoes. These women knit their own stockings, and spin the thread. They wear calicoes and coarse shoes and real bonnets to church, but they have done much toward revolutionizing diet and thus toward establishing the health of their community. Children who formerly lived the year round on bread and meat and sorghum and had scurvy are now well and vigorous. Lessons in canning are being given to the girls in the crossroads schoolhouses, and every country fair has its exhibit of school-girls' canning display. All of which is extremely constructive work along lines of effort that we sometimes think of as almost obsolete.

Defoe on the Feminist Movement

THE freedom of women has always had its champions, and, naturally enough, it has not been in every case the cavaliers who have understood them. In 1697 it was Daniel Defoe, that practical adventurer and brilliant journalist. He was no courtier, but he believed it was barbarous that women should be deprived of the advantages of education, and he suggested, just one hundred years before our American Mary Lyon was born, that an academy be established "differing but little from the public schools," wherein such ladies as desired should have "all the advantages of learning suitable to their genius." He would deny to them "no sort of learning," but he would advocate especially history, "that they might understand the world and be able to know and judge of things"; music and dancing, "because they are their darlings"; the graces of speech, that their conversation might be desirable. The ladies in the academy were to suffer neither "guards nor spies." Defoe was canny enough to know the opposition, and in his refutation he suggests the hue and cry against such a project. The hue and cry today has advanced from education to suffrage. "It looks," urges Defoe, "as if we denied women the advantages of education for fear they should vie with the men in their improvements." He suspects that "the world are mistaken in their practice about women"; for he cannot think that "God Almighty ever made them so delicate, so glorious creatures . . . so agreeable and delightful to mankind . . . all to be only stewards of our houses, cooks and slaves." And he looks ahead confidently. "This chapter is but an essay at the thing," he says. "I refer the practice to those happy days, if ever they shall be, when men shall be wise enough to mend it." The day seems near.

Something

New

Under the Sun

By

ALICE HUBBARD

Illustrated by Oliver Herford

THERE is something new under the sun. There is something new in the Twentieth Century.

Men and women are finding that it is safe to be honest with each other; that it is not safe to be dishonest with themselves.

Fairy tales are being discarded for scientific facts. Mature English is replacing hazy talk. Women are getting the recognition usually accorded to adults. Women are getting an understanding of the exact rating given them by men and are facing the facts disclosed.

The finances of the world have not been understood by women, for men have not considered wives, mothers, or sweethearts eligible to knowledge of accounts.

Mathematics, formerly supposed to be masculine, is now known to be of common gender. Women are doing their own bookkeeping and are studying economics. And they find that it is most imprudent to give all their time, energy, and capacity for earning, in exchange for an uninsured assurance of food, shelter, and clothing.

They have proved that it is easy for a woman, endowed with the usual amount of brain, physical and moral strength, to earn a living. An exceptionally intelligent woman can earn her living and take care of a mother and sisters, and have a surplus besides. Women have found, too, that exceptionally intelligent women are no more rare than are exceptionally intelligent men.

Woman's possessions, which were formerly in a dream world, or whose imaginary wealth was in a life to come, now have form and substance.

The old prayer, "Oh, Lord, make our women virtuous and our men brave!" has been transposed, and we are legislating that men become virtuous, and our women are becoming brave because they are exploring the world. It is only the unknown and the untried that is feared.

THE first woman who mounted a bicycle and rode out of her father's dooryard into the public highway blazed a way for woman's physical independence.

The first woman who successfully operated a type-

writer and proved that her work was worth a price in the commercial world, was a pioneer.

Bishop Vincent gave to women a new earth when he founded the Chautauqua Literary and Scientific Circles throughout the land.

He made an opportunity for every woman in Christendom to use her brain as an organ.

The first Woman's Club opened up a new civilization. It gave to women moral fiber, purpose, courage, determination, power.

When Mary Smith stood on a platform and spoke to the women in that club, it was impressed upon her that she was an entity, a personality. She found that to speak in public was not so heroic nor so wonderful as many things she had done in the routine work of her obscure life. And she found, too, that the semi-public recognition was quite refreshing.

Then followed the conviction that since she was an individual in this club, away from male protection, she had individual rights and responsibilities elsewhere, perhaps everywhere. This aroused her to the recognition of the fact that she was somebody or nobody in and of herself. Then she threw down the shield that had been held before her by man, and thrust back into its scabbard the sword that had been said to be used in her defense.

Woman has begun to think for herself, to fight her own battles, to live for herself, to carry responsibility, to teach her children to do the same.

When Elizabeth Cady Stanton called the first Woman's Rights Meeting in America, those who responded to the call did not know that they were striking off bonds more difficult to remove than those which bound black slave to white owner. It was very plain, the whole world knew that the white man owned the black man. But men and women had not eyes that could see that there was a servitude sanctioned by Church and State, tradition and sentiment, far more insidious and detrimental to man's progress than was openly acknowledged slavery. Men and women had not the courage to acknowledge the fact of such servitude even had they been able to see it.

THE home and family as it was supposed to have existed for ages, was supposed, also, to have had upon it the sanction of a Divinity unchanged and unchangeable.

The men in the territory of Wyoming did not know theirs was a modern chivalry incomparable with any other, when they made demand upon the federal government that the women of their territory, having done work equal with theirs in the development of that country should be entered as absolute equals in every political right with them. And no bribe or political advantage could tempt them to enter the Union on any other terms. When Wyoming entered the Union as a state, hers was a true democracy.

These forces, though not recognized except as subjects for caricatures in the beginning, have been cumulative.

Now they have become a power. All these forces working together have made the thrill, the stir of new life, the palpable awakening of conscience and of the intelligence of the world into what is known as the "Feminist Movement."

The change in the world has been so gradual that we are surprised to find it a new world in which woman exists as an entity.

Woman finds, to her surprise, that she is really an equal part of every part of the world.

Her interests are in everything that is. But so new is this that we are impressed more with what woman demands than with what man demands.

WITHIN a year the Feminist Movement has become of interest to everyone.

To espouse the cause of the woman suffrage phase of the Feminist Movement is now popular. Magazines and newspapers that once set their whole force of artists to ridiculing the women who asked for primitive, political rights, now have their caricaturists holding up to ridicule the men who oppose it. There is even a growing sympathy toward the English militants.

It has been a harder struggle for man to accept feminism than for woman to have established it.

Men, since they took possession of the world, have been the active, creative element, and women the submissive and passive. Now, the only discomforts which women feel are growing pains which carry with them the thrill of joy—ample compensation for discomfort.

Men have felt that what women gained would be their loss, that they and their world were losing something.

The woman movement has seemed to men iconoclastic—their idols have been broken. Men's old ideals of what a woman should be are shattered.

We will part with anything more readily than with our ideals. "Leave me my dreams! I am accustomed to the old dreams! Let me dream again!" So have the dreaming masses cried throughout the ages of the world whenever new truth has been expressed, and the dreams have been disturbed.

Socrates was killed because he disturbed the dreams of the Athenians; so was Jesus; so was Stephen. This was why Hypatia suffered death—Savonarola, Bruno, Servetus, Mary Dyer, and in our own time Ferrari, Galileo, Spinoza, Copernicus, Anne Hutchinson, Mary Wollstonecraft, Thomas Paine, Charles Darwin, Ingersoll, all disturbed the dreams of the people.

MEN have demanded that women be perfect, without their having any responsibility toward perfection themselves.

Man's dreams have been of women who were forever faithful—no matter whether they had cause for faith or not; of women who were virtuous out of wedlock, whether the dreamer knew the significance of virtue or not; of women who were gentle and modest, no matter how boisterous their own lives; of women beautiful, contented, charming, sweet-tempered, helpful, hopeful, gracious, kind, and above all loving and forgiving under every circumstance that the masters might create.

Woman has been an ideal for man, a dream-woman, a creation of his own brain, and therefore intrinsically a

possession of his own; something to create, recreate and make to suit his mood.

His understanding of the laws of Nature have had no effect upon his dreams. Natural causes must not touch his dream of the child-woman.

ALL romance has been woven out of such stuff as such dreams are made on; and the little life has been rounded by a stupor not overcome by facts. Men have preferred their dreams to truth—just as women have. "My little wife! The dearest little mother! I will ask my wife! My religion is in my wife's name! This brave little woman!" are expressions of men who love their dream-wives.

Should women begin to think for themselves; should they have ideas of their own; should they prove their thinking; what then?

Men have feared fearfully about this.

Many men have hid their heads in the sand, and have said, "It is not so. Women do not want entity. Women want protection; they want to be loved, cherished and cared for."

A Southern Senator, when asked his opinion of woman suffrage, said, "The ladies please me just as they are." And he turned with a benevolent smile to his work of more legislation, and thought he had settled the woman question.

What will become of the romance of the world if women become physically strong, if they think, make decisions, achieve political equality, social equality and commercial equality? Will not romance die? If there is no romance, then the great source of feeling is cut off. Thought is born of feeling. The imagination is dependent upon it. If romance dies, men will neither think nor work. Then the race will perish from the face of the earth—chaos will come again. "I do not fear it, my dear Lord!"

Nature does not die in the Feminist Movement.

THE love which is founded on intelligent friendship is finer and more enduring than a love born of propinquity and accident.

The old books of romance have plots so devoid of reason that they are like the plays of little children. If a man saved a woman from drowning he must marry her if possible. A woman's nursing an eligible gentleman through a hospital experience, a railroad wreck, a steamship journey, a summer's outing, a pretty face, quick repartee, fine physique, have been ample cause for establishing homes, and have been sanctioned as a fit foundation for the most serious business of the world.

The old romance would scarcely endure scientific analysis. The songs, poems and romances never pictured more than the wooing of shy maidens by ardent lovers.

The stories of the lives of mothers and fathers were not considered subjects for romance.

But wooings are short. Life is long and so are well-founded friendships.

The pagentry of the early romances belongs to the barbarisms of the times in which it flourished.

Love founded on the intelligent understanding of mutual interests belongs to the Twentieth Century.

Only a few men have given serious consideration to the place of woman in the world, or to woman's work and life. Her work and her place as they were in a primitive civilization have been accepted. In all this changing world, woman's part is the only one that was unchanged and must not change.

John Stuart Mill and Wendell Phillips are two men of public prominence who have given serious consideration to woman's rights, and they of course received their reward for espousing this unpopular cause.

ALTHOUGH the ladies may not have pleased individual men just as they are, the woman's place in their lives has pleased them; and always the romance and the dreams have been soothing.

Men have come back to their dreams at night after a day of hard work; in sickness; after sinning; when temptation ceased to have a lure; when there was no

place else to go. And the dreams have become dearer seen through the mists of repentance.

If man's dreams were taken away, he must live close to truth and face it day and night. Without them he would be left as defenseless as does excommunication and anathematization leave him.

To so live would do away with all vicarious atonement and death-bed repentance.

Bereft of this dream child-woman, and companioned by a woman with human qualities dominating the female, man must then be a man living to-day, awake to scientific understanding of the consequence of his every act.

Men have been by no means the only dreamers. Women have outdreamed them, and their cloud fabric has been more translucent even than men's.

Men have come back to their dreams. Women have stayed by theirs day and night until they have well nigh lost a vital understanding of life.

Since the industries of the home were taken into factories, women have been superdreamers. They have been romantic in their tastes and artificial in their lives. They have dreamed of lovers spurring over the plains, masterly and masterful, who would come and take possession of them whether they willed it or not, and carry them away to some fairy castle where they should be worshipped, idealized, served.

Why women have thought themselves worthy of worship, why luxuries unlimited should be their natural right, no one can explain.

But the dreams have not come true, because they were dreams.

THE economic waste in the world through the idleness and incompetence of women is inestimable. Only for the fact that the necessity for action in order to live caused women to stir and awake from their dreams, the race would have died.

Uncomfortable for men as women's discontent and unrest is, it has saved the race. It has been the greatest blessing to men whether so recognized or not. For the great awakening of women has not been just for women. As a result, men are awakening as well.

Women's activities are never for themselves alone. A double power is always with woman; she works for herself and for her children. Her natural instinct is to serve. And as it is a fact that woman and man are one, man must be affected when woman is.

Woman does not enter this new world as a child, but as a youth, with all the enthusiasm and joy of youth, with the alertness and insight of a discoverer. She has a few prejudices to overcome. She is primitive in her instincts.

SHE has caution. She must protect her young. Her desire is to guard her children against that which leads to wrong living. She understands that government is for the people and its first purpose is to serve them, whether she has formulated this or not. Woman works with the idea that education is to develop the best in the child and to be an equipment for him for work.

Man and woman together are responsible for the Feminist Movement. Man and woman together will receive the benefits from it. Neither can prosper alone; neither can be ruined alone. Together men and women go down to death, or together they live.

Together they are learning that to be awake and to know truth brings more of beauty, more of love, more of romance into life than untruth and dreams can bring.

THERE is something new under the sun. There is something new in the Twentieth Century. History has no record such as is now being made.

Throughout the progress of civilization, men and women have not been honest with each other. Women have said that men were their superiors, their masters; that it was their happiness to endure servitude for them; that their desire was to be absorbed by them. And this has been true for a brief time in almost every woman's life—then she has reluctantly repeated it for hire.

Men have gallantly served to women the sop of poppy and honey that women were superior in their virtue, beauty, loveliness, and in all that is genuinely worth while.

There were things not fit for ladies' ears, wailings and complaints which men must not hear,—men must work and women must weep.

But not until now have women and men both known that there is nothing of human interest that is not of equal importance to women and to men; that men and women should, must and do participate in all things together; that whatever man's life is, he brings it into his home; it sits at his table; it goes with him into the intimate relations of his life; that to the woman whom he is protecting most from the world he is giving more of the world in which he participates than to anyone else.

And woman must know that none of her refinements, none of her follies, none of her uselessness is or can be kept from the man with whom she shares her life. They live together and their children are the common product of their so living.

And now for the first time in the history of civilization we are approaching a time when men and women can look into each other's eyes, and with absolute honesty say to each other, we are equal.

This is the new thing under the sun.

THE GREATER KINDNESS?

There has been much agitation recently against the conduct of Sing Sing, and indeed all over the country against penitentiary methods in general, it being thought by many that society ought to have brains enough to punish criminals in some manner that might make more for reform and less for discouragement and degradation. Mr. Cesare's cartoon indicates his belief that imprisonment, in its bad form, is hardly, if at all preferable to the electric chair. We have, at any rate, progressed far enough to realize the nature of the problem and to be seeking a reasonable solution that shall bring the criminal out of jail a better and more useful man than he entered.

Serve One Master Only!

By LOUIS D. BRANDEIS

IN the previous articles of this series Mr. Brandeis has described the concentration of financial power in the hands of a few bankers, "our financial oligarchy," by means of the consolidation of banks and trust companies, the combination of railroad systems, and the undue multiplication of the functions of the investment banker. In this issue he discusses some of the proposals for curing these evils by legislation.

THE Pujo Committee and its able counsel, Mr. Samuel Lintermyer, have presented the facts concerning the Money Trust so clearly that the conclusions appear inevitable. Their diagnosis discloses intense financial concentration and the means by which it is effected. Combination,—the intertwining of interests,—is shown to be the all-prevailing vice of the present system. With a view to freeing industry, the Committee recommends the enactment of twenty-one specific remedial provisions. Each of these measures is wisely framed to meet some abuse disclosed by the evidence; and if all of them are adopted the Pujo legislation would undoubtedly alleviate present suffering and aid in arresting the disease. But many of the remedies proposed are "local" ones, and a cure is not possible, without treatment which is fundamental. Indeed, a major operation is necessary. This the Committee has hesitated to advise; although the fundamental treatment required is simple: "Serve one Master only."

THE evils incident to "interlocking directorates" are, of course, fully recognized; but the prohibitions proposed in that respect are restricted to a very narrow sphere.

First: The Committee recognizes that potentially competing corporations should not have a common director;—but it restricts this prohibition to directors of national banks.

Second: The Committee recognizes that a corporation should not make a contract in which one of the management has a private interest; but it restricts this prohibition (1) to national banks, and (2) to the officers.

PROHIBITIONS of intertwining relations so restricted, however supplemented by other provisions, will not end financial concentration. The Money Trust snake will, at most, be scotched, not killed. The prohibition of a common director in potentially competing corporations, should apply to state banks and trust companies, as well as to national banks; and it should apply to railroad and industrial corporations as fully as to banking institutions. The prohibition of corporate contracts in which one of the management has a private interest should apply to directors, as well as to officers, and to state banks and trust companies and to other classes of corporations, as well as to national banks. And, as will be hereafter shown, such broad legislation is within the power of Congress.

Let us examine this further:

The Prohibition of Common Directors in Potentially Competing Corporations

1. **National Banks.** The objection to common directors, as applied to banking institutions, is clearly shown by the Pujo Committee; and its recommendation is in accordance with the legislation or practice of other countries. The Bank of England, the Bank of France, the National Bank of Belgium, and the leading banks of Scotland all exclude from their boards persons who are directors in other banks. By law, in Russia no person is allowed to be on the board of management of more than one bank; and in Massachusetts a similar law has been applied to savings banks.

2. **State Banks and Trust Companies.** The reason for prohibiting common directors in banking institutions applies equally to national banks and to state banks in-

company doing business in the same place. The proposed concession opens the door to grave dangers. In the first place the provision would permit the interlocking of any national bank not with one trust company only, but with as many trust companies as the bank has directors.

BUT even if the bill were amended so as to limit the possible interlocking of a bank to a single trust company, the wisdom of the concession would still be doubtful. It is true, as the Pujo Committee states, that "the business that may be transacted by" a trust company is of "a different character" from that properly transacted by a national bank. But the business actually conducted by a trust company is, at least in the East, quite similar; and the two classes of banking institutions have these vital elements in common: Each is a bank of deposit, and each makes loans from those deposits. A private banker may also transact some business of a character different from that properly conducted by a bank; but by the terms of the Committee's bill a private banker engaged in the business of receiving deposits would be prevented from being a director of a national bank; and the reasons underlying that prohibition apply equally to trust companies and to private bankers.

3. **Other Corporations.** The interlocking of banking institutions is only one of the factors which have developed the Money Trust. The interlocking of other corporations has been an equally important element. And the prohibition of interlocking directorates should be extended to potentially competing corporations whatever the class,—life insurance companies, railroads and industrial companies, as well as banking institutions. The Pujo Committee has shown that Mr. George F. Baker is a common director in the six railroads which haul 80 per cent. of all anthracite marketed and own 88 per cent. of all anthracite deposits. The Morgan associates are the *arsis* between such supposedly competing railroads as the Northern Pacific and the Great Northern; the Southern, the Louisville & Nashville and the Atlantic Coast Line, and between supposedly competing industrials like the Westinghouse Electric and Manufacturing Company and the General Electric. The *arsis* between all the large potentially competing corporations must be severed, if the Money Trust is to be broken.

The most potent single source of J. P. Morgan & Co.'s power is the \$162,500,000 deposits including those of 78 interstate railroad, public-service and industrial corporations.

cluding those trust companies which are essentially banks. In New York City there are 37 trust companies of which only 15 are members of the clearing house; but those 15 had on November 9, 1914, aggregate resources of \$827,875,653. Indeed the Bankers' Trust Company with resources of \$205,000,000 and the Guaranty Trust Company, with resources of \$232,000,000, are among the most useful tools of the Money Trust. No bank in the country has larger deposits than the latter; and only one bank larger deposits than the former. If common directorships were permitted in state banks or such trust companies, the charters of leading national banks would doubtless soon be surrendered; and the institutions would elude federal control by reincorporating under state laws.

The Pujo Committee has failed to apply the prohibition of common directorships in potentially competing banking institutions rigorously even to national banks. It permits the same man to be a director in one national bank and one trust com-

Prohibiting Corporate Contracts in Which the Management Has a Private Interest

THE principle of prohibiting corporate contracts in which the management has a private interest is applied, in the Pujo Committee's recommendations, only to national banks, and in them only to officers.

The Money Trust would not be disturbed by a prohibition limited to officers. Under a law of that character, financial control would continue to be exercised by the few without substantial impairment; but the power would be exerted through a somewhat different channel. Bank officers are appointees of the directors; and ordinarily their obedient servants. Individuals who, as bank officers, are now important factors in the financial concentration, would doubtless resign as officers and become merely directors. The loss of official salaries involved could be easily compensated. No member of the firm of J. P. Morgan & Co. is an officer in any one of the thirteen banking institutions with aggregate resources of \$1,383,000,000, through which as directors they carry on their vast operations. A prohibition limited to officers would not affect the Morgan operations with these banking institutions. If there were minority representation on bank boards (which the Pujo Committee wisely advocates), such a provision might afford some protection to stockholders through the vigilance of the minority directors preventing the dominant directors using their power to the injury of the minority stockholders. But even then, the provision would not safeguard the public; and the primary purpose of Money Trust legislation is not to prevent directors from injuring stockholders; but to prevent their injuring the public through the intertwined control of the banks. No prohibition limited to officers will materially change this condition.

Apply the Private Interest Prohibition to All Kinds of Corporations

The creation of the Money Trust is due quite as much to the encroachment of the investment banker upon railroads, public service, industrial, and life-insurance companies, as to his control of banks and trust companies.

The Stanley Committee, after investigation of the Steel Trust, concluded that representatives of certain industries which are largely dependent upon railroads should be absolutely prohibited from serving as railroad directors, officers or employees

The Money Trust Snake

Before the Money Trust can be broken, all these relations must be severed. And they cannot be severed unless corporations of each of these several classes are prevented from dealings with their own directors and with corporations in which those directors are interested. For instance: The most potent single source of J. P. Morgan & Co.'s power is the \$102,300,000 deposits, including those of 78 interstate railroad, public-service and industrial corporations, which the Morgans are free to use as they see fit. The proposed prohibition, even if applied to all banking institutions, would not affect directly this great source of Morgan power. If, however, the prohibition is made to include railroad, public-service, and industrial corporations, as well as banking institutions, members of J. P. Morgan & Co., will quickly retire from substantially all boards of directors.

Apply the Private Interest Prohibition to Stockholding Interests

The prohibition against one corporation entering into transactions with another corporation in which one of its directors is also interested, should apply even if his interest in the second corporation is merely that of stockholder. A conflict of interest in a director may be just as serious where he is a stockholder

only in the second corporation, as if he were also a director.

Special Disqualifications

THE Stanley Committee, after investigation of the Steel Trust, concluded that the evils of interlocking directorates were so serious that representatives of certain industries which are largely dependent upon railroads should be absolutely prohibited from serving as railroad directors, officers or employees. It, therefore, proposed to disqualify as railroad director, officer or employee any person engaged in the business of manufacturing or selling railroad cars or locomotives, railroad rail or structural steel, or in mining and selling coal. The Stanley bill, if enacted, would certainly do away with many present abuses and would, to that extent, lessen the power of the Money Trust.

Directors, officers, and employees of banking institutions should, by a similar provision, be disqualified from acting as directors, officers or employees of life-insurance companies. The Armstrong investigation showed that life-insurance companies were in 1905 the most potent factor in financial concentration. Their power was exercised largely through the banks and trust companies which they controlled by stock ownership and their huge deposits. The Armstrong legislation directed life-insurance companies to sell their stocks. The Mutual Life and the Equitable did so in part. But the Morgan associates bought the stocks. And now, instead of the life-insurance companies controlling the banks and trust companies, the latter and the bankers control the life-insurance companies.

How the Prohibition May Be Limited

THE Money Trust cannot be destroyed unless all classes of corporations are included in the prohibition of interlocking directors and of transactions by corporations in which the management has a private interest. But it does not follow that the prohibition must apply to every corporation of each class. Certain exceptions are entirely consistent with merely protecting the public against the Money Trust; although protection of minority stockholders and business ethics demands that the rule prohibiting a corporation from making contracts in which a director has a private financial interest should be universal in its application. The number of corporations in the United States Dec. 3, 1912, was 395,336. Of these

only 1610 have a capital of more than \$5,000,000. Few corporations (other than banks) with a capital of less than \$5,000,000 could appreciably affect general credit conditions either through their own operations or their affiliations. Corporations (other than banks) with capital resources of less than \$5,000,000 might, therefore, be excluded from the scope of the Statute. The prohibition could also be limited so as not to apply to any industrial concern, regardless of the amount of capital and resources, doing only an intrastate business; as practically all large industrial corporations are engaged in interstate commerce. This would exclude some retail concerns and local jobbers and manufacturers not otherwise excluded from the operation of the Act. Likewise banks and trust companies located in cities of less than 100,000 inhabitants might, if thought advisable, be excluded, if their capital is less than \$500,000, and their resources less than, say, \$1,500,000. In larger cities even the smaller banking institutions should be subject to the law. Such exceptions should overcome any objection which might be raised that in some smaller cities, the prohibition of interlocking directorates would exclude from the bank directorates all the able business men of the community; because they would fear to become directors lest they lose all opportunity of bank accommodations.

An exception should also be made so as to permit interlocking directorates between a corporation and its proper subsidiaries. And the prohibition of transactions in which the management has a private interest should, of course, not apply to contracts, express or implied, for such services as are performed indiscriminately for the whole community by railroads and public service corporations, or for services, common to all customers, like the ordinary service of a bank for its depositors.

The Power of Congress

THE question may be asked: Has Congress the power to impose these limitations upon the conduct of any business other than national banks? And if the power of Congress is so limited, will not the dominant financiers, upon the enactment of such a law, convert their national banks into state banks or trust companies, and thus escape from congressional control?

The answer to both questions is clear. Congress has ample power to impose such prohibitions upon practically all corporations,—including state banks, trust companies and life insurance companies; and evasion may be made impossible. While Congress has not been granted power to regulate directly state banks, and trust or life insurance companies, or railroad, public service and industrial corporations, except in respect to interstate commerce, it may do so indirectly by virtue either of its control of the mail privilege or through the taxing power.

Practically no business in the United States can be conducted without use of the mails; and Congress may in its reasonable discretion deny the use of the mail to any business, which is conducted under conditions deemed by Congress to be injurious to the public welfare. Thus, Congress has no power directly to suppress lotteries; but it has indirectly suppressed them by denying, under heavy penalty, the use of the mail to lottery enterprises. Congress has no power to suppress directly business frauds; but it is constantly doing so indirectly by issuing fraud-orders denying the mail privilege. Congress has no direct power to require a newspaper to publish a list of its proprietors and the amount of its circulation, or to require it to mark paid-matter distinctly as advertising; But it has thus regulated the press, by denying the second-class mail privilege, to all

publications which fail to comply with the requirements prescribed.

THE taxing power has been resorted to by Congress for like purposes: Congress has no power to regulate the manufacture of matches, or the use of oleomargarine; but it has suppressed the manufacture of the "white phosphorous" match, and has greatly lessened the use of oleomargarine by imposing heavy taxes upon them. Congress has no power to prohibit, or to regulate directly the issue of bank notes by state banks, but it indirectly prohibited their issue by imposing a tax of ten per cent. upon any bank-note issued by a state bank.

The power of Congress over interstate commerce has been similarly utilized. Congress cannot ordinarily provide compensation for accidents to employees or undertake directly to suppress prostitution; but it has, as an incident of regulating interstate commerce, enacted the Railroad Employers' Liability law and the White Slave law; and it has full power over the instrumentalities of commerce, like the telegraph and the telephone.

As such exercise of congressional power has been common for, at least, half a century, Congress should not hesitate now to employ it where its exercise is urgently needed. For a comprehensive prohibition of interlocking directorates is an essential condition of our attaining the New Freedom. Such a law would involve a great change in the relation of the lending banks and bankers to other businesses. But it is the very purpose of Money Trust legislation to effect a great change; and unless it does so, the power of our financial oligarchy cannot be broken.

But though the enactment of such a law is essential to the emancipation of business, it will not alone restore industrial liberty. It must be supplemented by other remedial measures.

Some of these measures will be considered in the next issue under "What Publicity Can Do."

The Business of Begging

By HARRISON RHODES

Illustrated by John Sloan

THE profession of public poverty as pursued by some of its most distinguished artists. Earnest, hard-working beggars; beggars with charm; famous experts among them. How different it seems under a Southern Sun

THE study of the art of begging is—like "art-study" generally—best pursued abroad. There are occasional beggars in the streets at home;—there is, for example, a man in West Forty-fourth Street in New York who, to the certain knowledge of the writer and probably of many of his readers, has for twelve years had a wife at the point of death from starvation upon a bench just around the corner in Bryant Park. To have preserved a helpmate in so satisfactory a condition for so long a period would, even abroad, constitute a record—as Americans, we may be proud of him. But he has few worthy fellow-workers. Begging is, broadly speaking, a phenomenon for us incident to foreign travel, especially to travel in the south of Europe and in the Orient. And since these places are no longer really remote (the least of us Americans may at any time be wandering there) it becomes of interest, perhaps even of importance to know what one is to think of beggars and beggars, to arrive at some philosophy concerning them.

AT first blush,—that is, on the first trip abroad,—the whole matter seems very simple. The untraveled, at the sight of beggars, have emotions which are quite definite; all mendicants seem a disgrace—to themselves and to the community which permits their existence. It is only later that more experienced, perhaps more wearied, travelers begin to doubt and to wonder, that best odd men and withered cronies come to seem less individuals than symbols, and the shivering, whining wretches about some great cathedral door cause us to put questions which every one nowadays is beginning to put to himself, as to the beauty and value of an organized society which permits human creatures so to degrade themselves for a copper coin. It is, however, perhaps as well to start a trip abroad—and an article—with a natural and healthy contempt for mendicancy. In any case, beggars ask neither your sanction nor mine nor any traveler's for the pursuit of their chosen occupation. The profession of public poverty is, across the seas, one recognized by the community, ancient, and, one might almost say, honorable.

FOR example, in Cordova, in Spain, though mendicancy is (theoretically at least) forbidden by municipal ordinance, worthy persons may be, and are in considerable numbers, licensed by the authorities to beg! They may be known by the heavy and imposing brass plaques setting forth this fact which hang from their venerable necks, and by the calmness and assurance with which they make their demands—they are grandees of the profession, they skulk down no side streets, with one eye on the policeman, like their New York brethren, they whimper forth no terror-stricken plea as night falls. It is a little as if they considered that any well-conducted Spanish town had need of beggars, and that those who satisfied

this want were earning an honest wage.

They might even maintain that in some cases there are considerable preliminary expenses attached to begging. Take, for example, the towns in which gipsy beggars are expected, are indeed a necessary part of the romantic local color. The little girls who beg must have especially bright colored kerchiefs tied round their shoulders, gay ribbons and fresh flowers placed coquettishly in their hair. As for Gipsy Kings and Queens who so unquestionably "add" to any southern landscape, their equipment might easily run to fair sums of solid money. Yet all this picturesqueness is put at the service of the public for an occasional penny or the price of a picture post-card of their Majesties. Dishevelment and tatters are also an almost essential part of certain foreign scenes—one is tempted sometimes to wonder whether it does not cost not merely trouble but money to be always in the raggedest rags. Does the reader begin at all to catch the feeling of the highly complicated, highly civilized organization which begging is in these effete countries of the East? There are quantities of recondite and interesting economic questions awaiting the patient investigator—the advantages, for example, of beggars working cooperatively and sharing profits, and as well the problem of beggars (especially blind ones) hiring out their services for a fixed wage to an employer, who then systematizes and regulates upon a larger scale, say, the begging around a certain church or in a certain quarter of the town. Some day there are certain to be trades unions of beggars and even a Beggars' Trust.

THERE are in all towns, in the countries where begging flourishes, what might be termed recognized or established beggars. Even without the Cordovan licenses they are judged by the community in which they live worthy of patronage. By tacit, unofficial agreement they have the right to certain fat places, to sunny corners where one is comfortable, by church doors where the takings are sure to be large. Whether such positions descend by inheritance, or are subject to sale, or are open when vacant to merit and age it is excessively difficult for the foreign investigator to determine. (A side light merely is shed by the rise in rent in a certain miserable row of houses in a hungry little town since a palatial new hotel was built on the hill above it—from the moment, in fact, when it was discovered how well the children screaming for pennies in the backyards did from the foreign guests on the terrace above!) Certain begging positions must bring in a very decent revenue. There is for example the man without legs at the entrance to the Vatican Museums in Rome; his privilege would certainly sell for some thousands. Yet even the most violent could scarcely begrudge him anything. A man without legs is in no case very handsomely equipped for the struggle for

life. And this one is, you know by just looking at him, quite the best fellow in the world. And with quite the most engaging manners—he performs the amusing feat of remembering, among the hundreds or thousands a day who visit the galleries, all those who have given him a penny as they arrived, greeting them with a smile as they depart, and calling their carriages or cabs for them. He is undoubtedly a vested interest, a monopoly; some day possibly, with a reform Pope in the Vatican, he may be prohibited. Meanwhile one tourist at least hopes he is rich, though the chances are that he makes about fifty cents a day.

RICH beggars are the subject of delightful legends in all countries, but it is perhaps as well in speaking of them to draw only upon personal experience. The writer had at one time the problematic honor of the acquaintance of "Bibi-la-Purée," who was Paris's most famous beggar. He begged at church doors and had a pretty trick of turning his eyelids inside out which made him one of the best false blind men in the profession. He had as well a peculiarly poignant whine, and with these two accomplishments he could set his friends roaring with laughter of an evening in the café. It was his whim to be the friend of men of letters. And sometimes with his day's takings he became their patron. Shabby novelists have willingly consumed a cup of coffee at his expense, and more than once did one of the greatest of French poets accept the trifling loan from Bibi which paid the rent or bought that night's supper. It was the habit in those days, when ART was spelt with capital letters, to say that in so diverting the money of the pious dull bourgeois toward the aristocracy of intellect he had done well. Peace to his ashes!

WITH such ideal careers, such examples before their eyes, it is small wonder if earnest, hard-working beggars, who take their profession seriously, come to have a pride in it. People pursued by hordes of beggars as by flocks of birds of prey have been known, in exasperation, to term them mercenary. But mercenary people, one is led by the dictionary to suppose, will do anything for money. Beggars certainly will not, they will only beg for it. One may instance here the famous story of a gentleman struggling with a valise at a Spanish station where there were no porters. Accosted by an able-bodied beggar who asserted he was starving, the stranger started to hand him the bag, glad enough, in his simple American way, to give the fellow a chance "to earn an honest penny." But the Spaniard drew himself up proudly and wrapped himself in the tattered dignity of his cloak.

"The gentleman makes a mistake," he said coldly, "I am not a porter, I am a beggar," and turned away. Was he not an idealist, making sacrifices for his principles?

"In darkness, with outstretched hand, waiting, waiting forever."

TO become a good beggar one should undoubtedly begin young: old people who turn to the profession only when the pinch of poverty actually drives them never attain quite the finished technique nor the tenacity of purpose of those trained from childhood. So generally is this recognized that in most begging countries almost all children learn to beg, even though later they may cease the practice. A very young child's time is not valuable, the parents presumably argue; he has, as it were, nothing to lose, and anything which he may make is clear profit. Here will perhaps be appropriate the pretty story of the good little girl in the third-class carriage in the railway train traveling with her mother to visit relatives in a distant city. She had, quite unaided by mamma, the nice idea of jumping off the train at stations where the length of the stop permitted it, and begging of the first-class passengers. She took good care to be back before the train started again and thus before the journey's end she had been able to beg of the whole train's company and had made a nice little sum with which, let us hope, she bought a pretty present for her Aunt Emma. Can it be wondered that a radiant mother beamed from the car window upon her darling's childish effort? In the child, it cannot be too strongly asserted, is often seen the future professional beggar.

Tenacity of purpose in the face of rebuffs,—a thing surely to be counted a

virtue—often develops very early. And ingenuity in putting one's plea may show in the youngest. A gentleman out for a stroll last spring came back to his hotel door accompanied by forty determined children who had followed him distances varying from one to two miles in spite of his reiterated statements, in something at least resembling their own language, that he meant to give them nothing. And as for ingenuity the writer thinks he himself has seen budding genius. A boy of eight, arguing earnestly that he should be given a small copper coin first plead hunger. When this failed, he gave imagination full swing. He asserted variously that the money would help him buy a new cap, then new shoes, and finally that it was urgently needed, that with it—one cent was all he asked—he could go to the *dentista Americano* and have a tooth filled! And if one cent could do it that tooth is now filled. The dentist's address might be useful.

IN maturer years eternal pertinacity, eternal vigilance and ingenuity are still the price of success. A memory comes back of a small railway station in the Latin South where two trains managed to crash into each other. They did so fairly gently, being both in the habit of running slowly. Still, although there were few serious accidents, there was a good deal of hand luggage flying out of the racks and smashing passengers upon their heads; there were some people

badly bruised, several arms broken, and a good many ladies screaming nicely. But exactly at this moment, before the confusion and excitement had had an instant to subside in, beggars appeared at the carriage windows and whined for alms. Accident or no accident, they pursued their calling bravely. They would have begged upon a battlefield.

As an instance of high-class technical achievement might perhaps be mentioned a blind beggar who was able, merely by his senses of touch and hearing, instantly to detect counterfeit money and return it to the giver with a sharp reproof. He had, it must be conceded, the advantage of being blind, without that his achievement would have attracted no attention.

Of course deformity, either congenital or acquired, is a help in the profession. A hunchback or a dwarf is almost inevitably destined to a comparatively easy career as a beggar, or a vendor of postcards or lottery tickets—an allied profession. There is a kind of sad grin humor in the fact that in the swarming families of the poor a little hunchback must actually be welcomed as having his own special chance in the world, as perhaps have also the maimed, the halt, and the blind. But it is just this kind of humor about beggars which makes one in the end wonder just what miserable sad truth lies behind their existence in the world.

THERE may be rich beggars, and unworthy beggars, but beggars on the whole mean poverty and need and suffering. And almsgiving means that the world in which they exist recognizes their demand—for nothing really continues permanently without some kind of sanction from the community. They thrive best in hungry countries, and often where tyranny and injustice have through the centuries taken their toll of the drops of humanity. There is something in throwing yourself wholly upon the mercy of your neighbors which unquestionably stirs an emotion in Southern and Eastern people which we of the more practical North and West do not feel. In the Orient the first step to sainthood is to give up work, seat yourself with a wooden bowl in the market-place, and ask for charity. Perhaps in all these lands it is thought that alms benefit the giver as much as the receiver, and that it is best that the rich man should sometimes see face to face the poor man whom he helps. Indeed much might be said of the deadening of the sensibilities that may in this America of ours come from merely signing checks and letting others administer your kindnesses. The personal obligation is perhaps the strongest we can feel. Among duties unfulfilled the beggars to whom perhaps one ought to have given five like accusing ghosts to haunt one's memories.

THERE was a little boy of something like eight who once came after the stranger through deserted midnight streets, hobbling noddily on his crutches to the very hotel door, faster than a man could walk. Like a tiny bloodhound on a trail, so one said then, arguing moreover that he probably came from a comfortable home from which lazy parents drove him forth to beg. And yet, even if that were so,—sour-bow later doubts will come. It must have been a very sleepy, terrified, unhappy, small cripple who dragged himself painfully home at such an hour with an empty pocket. Why did

one, at the cost of a small child's tears, try to incarnate in oneself eternal justice?

There is, too, the dreary wrath of a middle-aged woman, who was perhaps a lady, furtively creeping to one's side in a deserted street of a grim gray old city of Castille, with a half-whispered whimpering plea for a copper. Then she seemed only the last of hundred pestiferous and unworthy mendicants. Now, somehow one remembers her decent clothes, and oddly enough, the powder on her worn face—in Spain merely a brave and pathetic indication of her gentility. One wonders whether there was there some fight to conceal the shameful poverty that had come upon her house and name, whether it was only in side streets, in whispers and of strangers who would begone the next morning that she dared ask charity.

Sometimes, when you have passed gaily on leaving a blind beggar muttering by the curb, there suddenly comes a vision of what it would mean to sit in darkness with an outstretched hand, waiting, waiting forever with nervous eagerness for that penny to fall from the unknown; what it would mean when at night someone came to fetch you home and no penny had fallen. So, one way and another, you begin to think a little of the beggar's side.

MIXED with all the sham, the trickery, the greediness, is the real suffering and the real need. To simple souls—and to some less simple—poverty means that the world is, so far, gone wrong; and begging seems as good as another way to set it right. The hope of receiving alms will at any rate die out only when there are no longer rich and poor.

But beggars often seem to ask, not alms, but their rights; they are really thinking side by side with all the reformers of the newest movements. Beggars may be no needier than many other classes, they are merely simpler and more

outspoken in their protest against social inequalities. The children of the oases of the Algerian Sahara who crowd around you screaming "Monsieur Riche"—Mr. Rich—are putting their case in that one phrase—you have, they haven't; something should be done toward equalization. But greater definiteness may be encountered, a more self-conscious formulation of the beggar's socialism.

AN agreeable middle-aged woman, returning from market one day, discovered the tourist in the sun admiring a view and decided to beg of him. She was not regularly of the profession but something in the lovely spring morning had inspired her. The tourist, always inclined, as it happened, to philosophy and discussion, objected that she did not seem particularly poor, and ventured, in defence of his views, to lift the corner of her shawl, thus disclosing a basket decently filled, and including at least one incriminating luxury, a can of lobster. He, simple-minded, thought he had routed the lady, but she met him at once upon the higher planes of economic discussion and in a most amazing manner. From the now famous basket she produced her bank-book!—the beggar had been to the bank as well. In calm triumph she called the tourist's attention to her balance and asserted that it was less than his. His at home was, Heaven knows, not large, but she was right, hers was smaller; and he,—it is hoped it will be thought handsomely—added the twenty cents which would bring the sum up to the even hundred pécetas, twenty dollars. The lady thought the act gentlemanly, but still her due; and departed, feeling the world fuller of justice than before. And indeed, can one be sure that she was not right?

This is perhaps enough of philosophy—and of sadness. But one cheerful memory may surely find place—that of a good-natured fellow with no legs or arms,

who remains in one's mind as the ideal of a beggar, worthy and pleasant-mannered yet with no hypocritical subservience. Every morning he was fetched in a little cart to the hotel door by a boy—who got a penny for it, and there he remained till night. He smoked cigarettes gaily when anyone would put one in his mouth and light it, seeing no reason why, in a country where everyone smokes, even a beggar should deprive himself of this necessity. When pretty women of the people passed along the street he complimented them—"throw them flowers," as the native expression is, and if business were dull he whistled and sometimes sang a love complaint. But he attended to his business and asked something of everyone who came by or went in or out, everyone, that is, who looked able to afford a little charity. Whatever his takings were they were enough to keep him, and to pay the boy who hauled him home in his little cart at night. He was cheerful always. He believed that the world owed the legless and armless a living, and he was serenely content that the world would pay its debt.

WE of course should have put him in a "home" and so out of our sight. But there, under the Southern sun, it was pleasant to see him, to hear him compliment the pretty girls, and to give him one's penny. But under the southern sun one's moral fiber often weakens. So long as beggars are not forbidden—as of course they should be—the temptation is strong to give something to quivering old men and shivering old women, and to place an occasional copper in a blind boy's open palm, to do all this and to rejoice in one's shame. At home we can turn our attention to a greater thing, scientific and unemotional prevention of poverty. Meanwhile on holidays and abroad one may be allowed sentimentality. Good begging, like all other good things of this world, deserves some slight reward.

"The chances are that he makes about fifty cents a day."

Revolutions and Concessions

By MCGREGOR

PORFIRIO DIAZ sailed for Europe on May 20, 1911, and Francisco I. Madero entered Mexico City on June 10, following. Francisco de la Barrá, as Minister of Foreign Affairs, had succeeded Diaz, according to the arrangement with Madero, and was Provisional President until November 6, when Madero became President by virtue of election by the people. But de la Barrá belonged to the Científico Party, so named in derision because of the theory it promulgated that the financial group alone was competent to govern Mexico scientifically. One incident of this period throws light upon the situation and incidentally upon the character of Huerta. He had been ordered by de la Barrá to attack Zapata who had been one of Madero's allies in the South. When

Madero heard of this, he denounced this warfare against Zapata and offered to see him in person and persuade him to lay down his arms. So Madero jumped into an automobile and proceeded toward Zapata's camp. When Huerta learned of this, he resolved to attack Zapata's camp about the time Madero should arrive, with the hope of killing Madero in the battle, but the attack came a little too soon.

The two main planks of Madero's platform, contained in the famous San Luis Potosí Manifesto, were Effective Suffrage and No Re-election, and the Restoration and Division of the Lands. Hampered by his Cabinet and the Senate, he was unable to carry out his promises as speedily as he had hoped. Zapata continued his insurrection in the South which it proved impossible to suppress,

and Orozco, one of Madero's disappointed generals, began a counter-revolution in the North, backed up by the Científico Party in Chihuahua City. His revolution was financed by the issue of a million and a half dollars in bonds of the State of Chihuahua and these were bought by the bankers and landlords and merchants, among the contributors being Luis Terraza of the fifteen million acres of land. Madero sent Huerta to put down this revolution, which he did, but it was during its continuance and fighting on the border, especially at Juarez, opposite El Paso, that the cry was raised for intervention, which was taken up so unanimously by the commercial press in this country. This merely indicated the prevailing hostility of the American and foreign concessionaires to the Madero Administration.

The Taft Administration, to its credit be it said, in spite of tremendous pressure brought to bear upon it and promises of intervention that had been made in its behalf, resisted this plan, and a subcommittee of the Senate Committee on Foreign Relations, after exhaustive hearings on the subject, developed nothing to justify such a step, in the exaggerated press stories of the destruction of American life and property.

BUT Madero was doomed, nevertheless. During the closing years of the Diaz régime, a concession had been granted Lord Cowdray, formerly Sir Weetman Pearson, controller of the Pearson Interests, for the exploitation of the fabulously rich oil lands of Mexico, including not only the sinkings of oil wells, even upon private property on the banks of rivers, but pipe-line privileges as well. Up to Lord Cowdray's time, the graft from these concessions to influential officials had been on a comparatively small scale. But Lord Cowdray issued a million and a half dollars in preferred stock of El Aguila (The Eagle) Oil Company paying eight per cent. interest, and distributed this where it would do him the most good. According to Senator Fall, Lord Cowdray was the only partner Diaz ever had. Cowdray gave 800 shares, of \$10,000 each, to Porfirio Diaz, Jr., the President's son; a like amount to G. Landy y Escandla, Governor of a Federal District; 100 shares to Enrique Creel, Minister of Foreign Affairs, and formerly Ambassador to the United States; and six other lots of 100 shares each, to lawyers, bankers and capitalists, who constituted the inner circle of the Invisible Government of Mexico. These same stock-holders were then made directors of the National Railways of Mexico in which Cowdray did not own a share. The curiously inclined may see the Mexican name, *Ferrocarriles Nacionales de México*, on the office doors of the twelfth floor at 25 Broad Street, New York.

PRESIDENT MADERO at once ousted the Científicos directors, who had been bribed with stock in El Aguila Oil Company and put Mexicans instead of Americans to operating the railroad. Lord Cowdray had constructed the Tehuantepec National Railway, built by government bonds, at a cost to the government of twice what the work was worth, and was managing it for a third more than it ought to have cost. So his friends were put off the Mexican directorate of the National Railways of Mexico.

Henry Clay Pierce, of the Waters-Pierce Oil Company, now the Pierce Company, after a long contest with Standard Oil for the control of his corporation, finally won his case in the Missouri Courts. Pierce was the rival also of the Aguila Company, as its concession was inimical to his interests as a refiner and distributor of oil in Mexico. Lord Cowdray sold his product to Standard Oil, and it is alleged there is a still closer alliance than that of this contract. The Mexican Oil Company, the Dehoney interests, was also doing a large business with the Standard, which was the only company with tank steamships for obtaining the oil at tidewater. The Adler concession consisted of pipe line privilege of extraordinary terms, from the State of Vera Cruz, and this was confirmed at the beginning of the Madero Administration, apparently under a misapprehension, for Madero immediately announced to prospective or actual stockholders that this concession would be of no value.

THE Mexican Constitution declares against the granting of concessions of a monopolistic nature and Madero was advised by Mexican lawyers that the Lord Cowdray concession among others was unconstitutionally granted.

So here was Madero, President of Mexico, with the Científicos and the Científicos and the American and other foreign commercial interests arrayed against him, living in Mexico City, the hot-bed of graft and intrigue and favoritism, with the powerful feudal lords fearing that they would have to "restore and divide the lands," and he an idealist and a dreamer, a man of peace, too tenderhearted to execute a traitor even though caught red-handed.

Felix Diaz, always the stupid tool of others, and General Reyes inaugurated a revolution in Vera Cruz. The Mexican oil lands stretch up the coast from Vera Cruz northward to Tampico. It was planned to march upon Mexico City and capture Madero. Who were the backers of the plot may never be known. It is difficult enough in New York City to find the "men higher up." But Madero captured Reyes and Diaz and spared their lives. Diaz was confined in the penitentiary and Reyes in Santiago Military Prison, in Mexico City. Then, on February 9, 1913, Sunday morning, General Mondragon, Commander of the Military School at Tlalpán, having conspired with the Científico element in Mexico City, marched there with his cadets and garrison and liberated Reyes, then marched with Reyes to the palace, where they were met with such terrific fire from the machine guns that they retreated, Reyes being slain. Another detachment marched to the penitentiary and liberated Felix Diaz, then captured the Citadel, where were stored the cannon and other munitions of war. Trustful Madero put General Huerta in command. The rest of the fighting was a sham battle, each party, probably by previous agreement with Huerta, firing over the other's heads. Madero was taken prisoner on the 18th, by Huerta, who had by that time openly allied himself with Felix Diaz. Madero was forced to resign, then Lascruán, Minister of Foreign Affairs, under duress, resigned and Huerta was made Minister of the Interior and therefore successor to the Presidency. The resignations were presented to the Chamber of Deputies, surrounded by armed soldiers, and Huerta was made Provisional President, though, as there was no quorum present, not even the forms of law were carried out. On the day that President Madero was taken prisoner, his brother, Gustavo Madero, the practical man of the Madero Revolution, was murdered. On the 22nd, President Madero and Pino Suarez, the Vice President, were murdered, under the plea that they had attempted to escape.

Instantly, American interests through the press controlled by them began to demand the recognition of Huerta, as the only strong man who could pacify Mexico. Henry Lane Wilson strongly advised it and the European Powers did not wait for the United States to grant recognition. President Taft wisely left the problem for his successor, who became President ten days after the murder of Madero.

LATER, Huerta justified more fully President Wilson's refusal to recognize his blood-stained title. The Mexican Congress was assembled. The concessionaires again flocked to the palace and rich pickings were promised them by

Huerta. But the Madero Congress would not grant such concessions and refused to legalize those that had been pronounced unconstitutional. Huerta threw into jail 110 of the House of Delegates, then released 50, leaving the exact Liberal strength of 60 in prison. It is said that five of these have been put to death. Consider the fate of Senator Belisario Dominguez. He made his will, said farewell forever to his family, and then arose in his seat in the Senate and denounced Huerta as a murderer and the enemy of his country. He was arrested, of course, and killed.

American and foreign interests, centering around Mexico City, with their mining and oil and rubber concessions, have been the financial backers of Huerta. The contributions have kept the army satisfied. The Church also gave what it could, until Huerta's course alienated its support. There have been loans to the Government by American and French and Belgian bankers, in the ordinary course of business, with ample security.

ON the very day that Madero was overthrown, another Revolution, that has swept over the greater part of Mexico, began. Born fifty-eight years ago, of pure Spanish stock, with gray eyes that have come down to him from his old Goth or Vandal ancestors who settled Spain, Venustiano Carranza was educated for the law in Mexico City, but gave up his studies because of defective eyesight. He is a farmer, with a small fortune of \$400,000 and has had no affiliations either with the great landed proprietors, such as Madero had through his family, or with the Mexico City cabal. He was elected from the State, Coahuila, in the North, to the Senate, under the Diaz régime, but he opposed Diaz and finally resigned from the Senate by way of more emphatic protest. He joined the Madero Revolution, was made Provisional Governor of Coahuila, and then was elected Constitutional Governor, and remains so, on the theory of Huerta's title to the Presidency being false. He has been recognized by the Governors of Sonora, Sinaloa, and Durango, and by the military chiefs of each State, as possessing the same Federal power over their territory as if he were already President. His military chiefs, acknowledging his leadership, including Zapata, are operating in every part of Mexico.

There is an historic parallel for lifting the embargo on the exportation of munitions of war for Carranza's benefit. Juarez, the greatest of all Mexican Revolutionary leaders, was contending against the ill-fated Maximilian, who occupied the throne. The United States, just emerging from the Civil War, was not minded to tolerate an Emperor in Mexico. So General Sheridan marched to convenient places on the Mexican border, and carelessly left 30,000 stand of rifles in various places. Juarez accidentally found the arms for which they had been waiting, and then was able to conquer Maximilian's army. If Juarez had lived, the history of Mexico might have been that of a real Republic.

The will of the people, so far as can be manifested without another election, is shown by the fact that 25 of the 27 Governors of the States of Mexico, elected by the people, were Maderistas and have been deposed by Huerta, wherever he controlled affairs. Peace will never reign with the Government an inverted pyramid, resting upon a few thousand land-holders and foreign investors, among 13,000,000 Mexicans.

A New Shylock

By N. H.

Forbes-Robertson in "The Merchant of Venice"

WHAT do you suppose," Ellen Terry once said to me, "is the most steadily popular play that Henry Irving and I have ever produced, the one that we can fall back upon when every other fails? It is the good old 'Merchant.' That comedy has done more for us than anything else we ever had."

The drama contains two of the greatest acting parts in existence, and the stage life of any play is very much helped, of course, by its being suited to test at the same time the powers of the greatest actor and the greatest actress. Among Shakespeare's plays, "Macbeth," "Romeo and Juliet," "The Merchant of Venice," and "Much Ado About Nothing" are the only ones in which the man and the woman actor together find themselves provided with parts that test the rarest talent.

BUT "The Merchant of Venice" is as popular in the closet as on the stage, and especially among the young. It is a wonderful romance. Nobody quite believes, of course, that Portia's father could have picked out an ideal husband for her by the device of the caskets, but to the young mind that episode is extraordinarily picturesque, interesting and sympathetic. No one quite believes that when the leading merchant of Venice was in danger of death, laws plainly written on the statute books, making him safe, would be overlooked by everybody concerned, until an attractive young woman, disguised as a Doctor of Laws, appeared from a distance; but if we are living in the land of romantic license few inventions compare in charm with these. The attractiveness of the plot, tragic intensity combined with bright comedy and dramatic action, added to the fact that the two leading characters are such brilliant acting parts, make "The Merchant of Venice" perennially successful.

FORBES-ROBERTSON is going to many of the principal cities in the East, including Boston, Washington, Norfolk, Richmond, Baltimore, Philadelphia, Albany, Rochester, Buffalo and Pittsburgh. I wish he were going to every town in America. As this is his last appearance, every serious theatergoer ought to see him in "The Merchant of Venice." Those persons who allege that they like to read Shakespeare but would rather see something else on the stage (usually meaning a farce, a musical comedy, or some popular young actress in an empty trifle) are usually what in the language of the day are called "four-flushers." Anybody who likes Shakespeare will profoundly enjoy the Forbes-Robertson production. Shylock shows the distinguished actor at his best. In no character has Shakespeare shown more dazzling the power of genius to draw so truly that a character can be seen by different audiences in as many different ways as a real person is

seen. Mr. Roosevelt is the savior of society to some, a destroyer to others; he is a brilliant originating mind or a vulgarizer, according to the standpoint. Shylock, to the community, that first saw him was an unexcused villain, richly deserving the worst, so that the misfortunes which befall were broad comedy. Times changed. We throw ourselves more into the state of mind of the underdog, and Shylock becomes the tragic symbol of an oppressed race. Edwin Booth played him along broad tragic lines, Henry Irving kept the tragedy but put in more elements of what we call character parts, and he also made the irony very bitter and very terrible. Of numerous prominent actors in the part scarcely one has been a failure, because the many-sided Shylock lends himself to the interpretation of any well-equipped intelligence. Forbes-Robertson does not emphasize the cruelty or the idiosyncrasies.

HE plays these sides honestly, but his heart and his talents go into imaginative sympathy into the way the Jew sees his own life, into those burning passages in which he endeavors to make the contemptuous Christians realize that a Jew is human. The play is unsurpassed for richness in what the French call *force* and what the Americans call "stunts." Where is the argumentative eloquence that can surpass the passage beginning, "If it will feed nothing else it will feed my revenge!" And after that superlative outburst of intimate and passionate explanation comes without pause the scene with Tubal in which the overwrought love of money, the hatred of Antonio, the agony about the daughter show in wild incoherence. Sir Johnston, depicted probably the most formidable Shylock I have known. With all its little-nesses, its harshnesses, its faults of a creature kept constantly at bay, the mind of Shylock is a noble mind, and the memory Forbes-Robertson leaves is one of nobility, of tenderness, of suffering. It suggests in the actor that understanding of alien natures which comes from a kindly nature and an open heart. He rather minimizes such lines as the satire on lending for Christian courtesy and as those on the lodged hate and loathing for Antonio. We carry away the picture of a nature that is big but goaded by oppression into actions that are small.

THOSE citizens of the fortunate towns where "The Merchant of Venice" is played will also see a company which acts the charming old drama with taste, with adequate training, with affection. The minor characters, of whom nearly all have distinctness, stand out in their own persons. Their lines are not chopped away to make more time for the stars. Even Antonio and Bassanio, usually colorless, arouse sympathy and interest. Gertrude Eliott's Portia, while it has not that gale of spirits that Ellen Terry has associated forever with the part, has intelligence, brightness, graciousness, and no quality whatever which is out of key.

Simplicity in Shakespeare

THE Merchant of Venice, with its strength and its delicacy, its heights and its tender valleys, fully illustrates two sides that are nearly constant in Shakespeare's best work, but I wish to wander on now to other plays. The highest flights, no doubt, are in the grand style, as in the marvelous soliloquies of Macbeth, but frequently he is as perfect in utter simplicity. The grander passages can be appreciated even less from their content, but the simpler ones gain their force from their appropriateness to character and the situation. Ophelia's sayings: "No more but so!" and "I was the more deceived," do not carry much of their strength when they are taken alone, but in their setting nothing could be more perfect. So with many of the speeches of Miranda or with Hamlet's "The rest is silence," or with Lear's, "You do wrong to take me out of the grave." It is a stirring fact that the man who could handle language with unexampled gorgeousness should also write like this:

But shall I move for that, my dear?
The pale moon shies by night;
And when I wander here and there
I then do go most right.

Often this simplicity is combined with intensest passion, as:

Take all my loves, my love, yea, take them all—

The gorgeous style can be written in its perfection only by a man who is also a master of the simpler style.

Comparison Between Shakespeare's Comedy Drawing and Jane Austen's

WHEN Jane Austen is compared to Shakespeare, many are struck with surprise. Of course, the comparison is meaningless, except along one narrow line. What it signifies is that both artists are objective and paint characters impersonally rather than coloring them with their own temperaments. The sympathies of Miss Austen's mind and talent were both strongly with the stage. She might well have been a distinguished writer of comedies, on account of the ironical, good-humored quality of her talent. She played the piano and sang, but when she wrote to a concert, she spoke, not of the music, but of the people she saw there. A similar tendency was shown in picture galleries, as she explains herself in her Journal, but when she went to the theater, she talked about the play but not about the audience. This distinction is natural in a person whose interest is in human beings, and it is what gives the drama its appeal. She used to act when she was a child, and some of her early compositions were in dramatic form. Those of us who are especially fond of this novelist, and at the same time especially fond of the theater, can not help regretting that she did not carry this impulse further. What would make the most delightful of comedies is precisely the touch that created Mr. Woodhouse and Miss Bates.

SIR JOHNSTON FORBES-ROBERTSON AS SHYLOCK

"The people wonder vaguely what he has to live for"

The Eternalist

By J. FRANCES COOKE

Illustrated by Thomas Fogarty

HE lives up there among the evergreens and birches. You can see the smoke rising from his cabin chimney every morning, and again at evening when the cool mountain twilight creeps upon the valley and the fair east wind sets inland from the sea.

I call him the eternalist because his thought, his activity, his whole existence is carried on with intuitive reference to an enduring personality. Things that are of first importance to men who consider themselves short-term occupants of the universe—for example, fame, recognition, success—do not seriously concern the eternalist at all. In fact he dreads them. They would only agitate his soul, even as the great sea-going vessels are agitated by the short, choppy waves of a channel. His ambition is vague even to himself, and moves with slow but colossal undulations, and is commensurate with the incalculable possibilities of an immortal life.

He is still young—or is he? Alas! we have too good warrant for instinctively ascribing youth to loveliness. No, in reality he is growing old. And yet he is, and will always be, more beautiful than the young.

He has realized in miniature, no doubt, that modest dream of Horace: "A portion of land not excessive, and near it a snug little wood, and a spring that ne'er faileth." His spruce-log cabin has a wide window on every side, and no other pictures adorn his walls. What need has he for pale copies of Bucklin, Ruysdael, or Claude Lorraine? I have seen him

stand, I know not how long, at his east window that frames in this picture: An upland hay-field strewn with boulders in the foreground; above that, a strip of pasture land—mere waste of rocks and junipers to high-headed man, but nourishing a few sheep and cattle; then as an invisible valley pushing farther back the long, low mountain clothed in black pine and spruce. Crowning all and following like a fringe the uneven crest of the mountain, a thin line of giant trees stands up against the sky, the pale daylight glancing through their trunks beneath the massed, lushy tops.

His house contains the very minimum of furnishings. Like an experienced traveler, he has learned not to cumber himself with things not suited to the long road, things that eventually he must leave behind. "I deal in nothing cheaper than *endurance*," he once said to me with a holy smile.

His friends in cities and in foreign lands often send him beautiful and costly things. He caresses them, croons over them for a little while as if they were flowers loved only for their fragrance; then he gives them away. He has a weakness, almost a passion for giving gifts. "It is wonderful and touching," he exclaims, "that people should derive so much happiness from the crude sensation of owning things." Not being able to share this feeling, he over-compensates for the lack of it by exaggerating and idealizing the pleasure he bestows on the recipients of his gifts, just as men frequently idealize and over-estimate maternal love.

HE lives alone. He is absolutely democratic. His exclusiveness is only relative: it is a moral and physical reaction against humanity's noise and coarseness and uncleanness. I have heard him say, "I could die for the people, but I can not live with them." He hires no one to wait upon him or to serve him directly. He keeps his own house and wood-yard, cultivates his trees and his garden, reads, writes, takes long walks and plays the violoncello. He is writing a book that will be published only after his death—or, as he himself would say, "After I am dead in this world."

His neighbors, the village people, understand no more of him than if he belonged to a different species. They know he is kind; their dogs know the same, and know it more steadfastly. The people wonder vaguely what he has to live for, seeing that, unlike themselves—and the birds and foxes—he has no mate, no young, no excitement of seeking food all day long. For the rest, they treat him as one of themselves, with kind-hearted, neighborly intimacy. He would not have it otherwise. A sense of humor in him or a great stretch of sympathetic insight will not let him approach any human being from a superior altitude. He can not treat men as inferiors even in those cases where to do so would win their servile respect. If men can not communicate with him at his own level, he descends to theirs. With the deftness of a magician he is able to transform himself into something like one of them. Not by the quiver of a nostril does he betray his repugnance for

their obscene jests, their preoccupation with the most primitive aspects of sex, their interest in crime and its punishment. In fact he will go out of his way to carry the daily newspapers to a poor old cripple who loves to read of horrors. "It will be a treat for him," says the eternalist. "He has as good a right to his sort of pleasure as I have to mine." Nevertheless, this brave countering, this going out of himself, this descent into the repudiated and forgotten sources of his own nature, does violence to that nature as it now is, and really costs him dear. He comes back depressed and nauseated from a near view of the mental and spiritual possessions of his fellow-men. If they were but clean in their meanness, or rich and reassuring in their uncleanliness!

WHEN he mixes with men, I can see that he suffers from disgust but not from scorn; that he feels disappointment but not disdain. There is more love in his disgust and in his disappointment than in all the praises of his tribunes. He has never flattered them, but he has descended to their level, taken on their very shape, their accents, in order to communicate with them sincerely. He has even assumed, at times, something of their grossness rather than embarrass them or make them ashamed.

A lady who sometimes visits him once asked him whether he were not another Tolstoy among his peasants, or a Balzac's "Country Doctor" to his neighbors? "What!" exclaimed the eternalist, "am I a useless and barren rock seeking to justify my existence by attaching to myself all the barnacles in my neighborhood? Impossible! We live as equals here."

No, his conduct toward his fellow-townsmen is as lacking in classical proportions as is the face of Socrates. And yet—like that face—it expresses an intuitive comprehension of all that lies between God and commonest man. He has created no marked division in the life of what he calls "this humble grade of immortals." Though he often takes a gratuitous hand in their affairs, his advice is seldom followed. They trust his heart, but not his foreign standards. His habits of life seem to them troublesome and dangerous to health. If an epidemic breaks out, the midwife and the old nurse of the village have more authority than he. His cleanliness, his demand for fresh air, his abstemiousness, his scruples against getting the best of a bargain, in a word, his incalculable variations on customs well tested by common use have long ago hounded him under the caption, Lacking in Common Sense. He is like a trained and instructed member of a primitive community who has returned home to his people ambitious of lifting them in one generation on to a high plane of culture; but who has found to his bitter disappointment that his exotic leaven does not work. And he himself now circling lonely outside the field of influence, now squatting by the campfire as of old, watches sometimes with impatience but oftener with resignation, the snail-like movement of the stubborn mass.

HE says, "They knew by intuition from the beginning that they and I could not cooperate, that our equipments were too unlike. So they steered clear away from me. They are no barnacles. As free swimmers they have lived, as free swimmers they will, if need be, die. That is their virtue."

They are only grown-up children. Al-

ways his soul deserts him and goes over to their side, and insists on looking at things and at himself with their childlike eyes. And he quiets his impatience by saying to himself: "It is only a question of time, and I have a whole eternity."

I once asked him: "Whence comes to you the feeling of immortality?"

HE did not reply immediately but sat looking out before him. His gaze seemed to travel farther and farther away. At last he repeated slowly, "Whence comes to me the feeling of immortality?" And after a pause he resumed, "It is only by borrowing symbols from the material world that I can answer you at all. We human seers and diviners of immortality may be likened to the marine mammals. They hurrow under water as nimbly as the true fishes until they have used up the oxygen they took down with them from the surface. Born to two elements contrary and opposed, they live only by diving to and fro. So it is with us. We dive down into the intellect and move in it like the race of common thinkers and reasoners. But we can not breathe there. We must come up, we must snatch our inspirations from the upper air—the intuition."

"Whence came to Beethoven the melodies and harmonies he bequeathed to the world? Not from his intellect—not from his reason. Intellect can not create, it can but discover. It is our splendid tool for subjugating matter, but it is a prosaic tool. I once had a fellow-student—a genius in intellect but with no ear for music and no eye for beauty—who used to maintain that my joy in hearing certain works of music was nothing else than a mild attack of hysteria! The western world suffers from lack of intuition, of spiritual insight. The Orient has always suffered from lack of the practical, prosaic intellect. Its abundance of soul appears passive and ineffectual to the eyes of the intellect because it can not work through matter. But the intellect ever wrestling with material facts or their symbols and counterparts, ever hurrowing in the earth, is already digging trenches toward the East—for its own practical ends. And back through these trenches, against the will of the crude digger, in spite of his contempt, will rush the pent-up spiritual wealth of the East. Beethoven might have heard his melodies and harmonies through the medium of his own soul. But without mechanical instruments he could never have given them to the world."

THE instinct of immortality may perhaps never be adequately described. It is too vague and too ineffable. But we know that it deposits in the soul a feeling of joy and a feeling of greatness. It has nothing to do with pleasure or with gratified ambition. It does not exclude pain. It may fill the soul on the scaffold, or at the stake, or on the cross. It bursts into hymns of freedom on the lips of an exile. It is what we hear in Beethoven's music, especially in the great pieces composed after his deafness. The instinct of immortality or its deposit of joy and of greatness is in the soul of the captain and the seaman who voluntarily go down with their ship. It is the essence of all disinterestedness. And again there are moments when the feeling of immortality seems like an infinite extension of the sweetest feeling of our childhood, the sense of being loved and owned."

The beautiful serene face of the eternalist tells us one now that he once suf-

fered terribly. It was in his youth, in the sunniest time of his life. Death darted down like an eagle from the rocks and snatched away the one he most loved. He had made no provision for the loss, not so much as by a thought, a wandering, careless fear. And lo, all happiness was gone before he had even pictured sorrow. He refused to look at her as she lay in the darkened chamber. He refused to replace the living image with the lifeless one. But involuntarily he identified himself with her. He too was dead, he too lay rigid and cold in the narrow box with the frightful name, he too was going down into the grave. She should not go alone, she should not bear alone this horrible injustice. All that is monstrous and blood-curdling to the young in the physical aspect of death he laid upon himself. And out of the familiar daily life that flowed around him, his own anguish and her dead form were the only reality. All motion and traffic, voices and laughter in the streets, even the playing of children—all was a phantom show, yet cruel and insulting in its unreality.

BUT when the last moments came and he knew by the dread movements in the chamber where she lay that they were shutting her away from the light forever, he felt a sudden terror and remorse that he should have been about to let her go without a farewell look. There was yet time. He hurried into the room, pushed the people aside and stood looking down at her.

How did it happen? He could not tell. But it was never for one moment what he had expected. He had thought to find her dead, and he was looking through a transparent mask into the clear eyes of her spirit. He saw no vision, no apparition, and yet it was as if she smiled at him across a narrow chasm. It was all so simple. It was not even strange.

People say of the eternalist, "Poor man, how lonely he must be!" And he says of himself, "I am never lonely—I am not even alone. There are all my great Loves, to say nothing of the lesser ones: love of nature, love of knowledge, love of music, love of Love, and love of giving gifts! And just the other day a new love appeared above the horizon. It is the love of growing old. By its light I can look back on my accumulated years: all are precious, not one could be spared, each has brought its invaluable contribution. And more than this, it rose—it dawned—just beneath an irritating little cloud and shot it all away. That little cloud was the fear of growing old. My spirit has long felt that life is not passing but accumulating. Henceforth my body will learn to feel this too, and unlearn its vain regrets."

LAST night we lingered by his fireside later than usual, talking of Life and Love and Death. At the end he exclaimed:

"Only see what Life has accomplished already in what we call the past! Who shall set bounds to its future? It has brought us here to this fireside. True, the fire on this hearth will die. The earth will grow cold. Suns will be extinguished. Yet you and I, if we will, may sit down again at a fireside of the universe. And dead worlds shall come and go, recreated by a thought, extinguished by neglect; as even now our memories reconstruct and then let fall again at will some period of our childhood."

PEN AND INKLINGS

By OLIVER HERFORD

CONFESSIONS OF A CARICATURIST

XXIV

DAVE WARFIELD has no right, I fear,
In this collection to appear.
I stupidly forgot to ask
The kind permission of Belasco.

XXV

WHEN I endeavored to portray
The late King Edward, strange to say,
The likeness, of its own accord,
Turned into that of James L. Ford.

Musings of Hafiz

WHAT gets my angora goat (to paraphrase human slang) is the way people talk on subjects they know nothing about.

The other day I overheard a visitor, not overburdened with tact, remark in my presence, that short-haired cats are more intellectual than long-haired cats. As I happen to wear my hair quite long, and am the only cat member of the household, the remark showed execrable taste, and I am glad to say, was received in stony silence by the rest of the family. The speech was all the more foolish, when it is known that while I have never been actually mistaken for him, people have often exclaimed at my remarkable resemblance to the great human dramatist, Heinrich Ibsen.

blance to the great human dramatist, Heinrich Ibsen.

IF you doubt this, you have only to look at my picture which is printed at the top of my articles, like Mr. Roy McCardell's, in the *World*.

I admit Mr. McCardell's picture is larger, but it is not so large as mine in proportion to the size of the page, also, Mr. McCardell's fur, to judge by his picture, is much shorter than mine. If, as I am told, he has angora tendencies, I fear he must keep them in check, which is a pity, as otherwise I should have cited him to prove the absurdity of the statement that short-haired people are more intellectual than angoras.

BUT why cry over spilt fur when there is Bliss Carman, to prove my case. The only picture I have of Bliss is this one taken behind his back, but it places him without question in the angora category and as such establishes their supe-

riority both poetically and intellectually beyond dispute.

ANOTHER well known angora is Mr. Richard Le Gallienne (see picture, also a back view) a master of opalescent water-color poetry. Still another is Mr. Edward Markham who, I am told, put the "Hoe" in *Homo*. Mr. Markham's angoralizings form one of the most attractive features of the *Saturday American*.

To the realm of music, the human au-

gora reigns supreme. A complete collection of the portraits of famous musicians might easily be mistaken for the illustrated catalog of a fur merchant. Take for example the Albi List and Herr Mendelssohn, specimens of two very different breeds.

When discovered (by Columbus) this country was inhabited exclusively by angoras.

American hair has fallen off alarmingly in the last four or five centuries. It is still falling off.

Since Colonel Cody ceased to be an angora the Wild West has lost its charm. What will become of American opera if Mr. Melzer cuts his hair, is no purring matter!

WHAT will become of the dinner music of the hotels? Deprived of its *scherso* stimulus to fast eating, the diners will soon relapse into Fletcherism, and the hungry guests waiting for tables will have to go elsewhere for food.

As everyone knows, violin music is composed of human hair, equine hair and catgut in equal parts; we and our equine collaborators have never failed in our share of the compact. But what will become of hotel music if the human angoras fail in theirs?

WHAT is true of poetry and of music is true also of painting. All the expensive painters of the past were angoras, and their prices are still going up. On the other paw, the prices of the short-haired pictures grow steadily less. I am told their colors are not fast.

How true is the motto of the painter *Arx longa, vita brevis*. I did not know what it meant till I found the translation in a little red notebook on the desk in the study. It read like this: *The artist's hair is long, the bon vivant's hair is short.*

The Passionate Friends

An indictment of jealousy and the romantic ideal of love

By FLOYD DELL

MR. WELLS' new novel seems to be finding but little favor—especially among his admirers.* It is generally condemned as a poor story, and as being particularly shaky in its ethical foundation.

Well, it is a poor story. Its ethics are another thing. But it is a poor story precisely because it is so vehement, so passionate a presentation of an ethical issue. It is, indeed, not a novel at all—it is a furious cry of despairing anger against the ethics of romantic love.

So hard is it for readers and reviewers to conceive of any one really objecting to these ethics that they are solemnly pointing out to him what he has done. He has made his heroine marry a rich man whom she doesn't love. Ignoble! Worse still, when she has an opportunity to escape from her loveless marriage, after her liaison is discovered, in flight with her lover, she refuses. Cowardly! And her suicide in the end, to prevent the scandal of a divorce—the final folly of a weak and worthless woman!

These criticisms are just and inevitable from the romantic point of view. If love is the greatest thing in the world, if the world is well lost for love, then Lady Mary was a coward and base in all that she did. If she had only had the courage to declare her love to the world—say the reviewers—we might have admired her. It is true that the ideal of romantic love, which is the ideologic basis of monogamous marriage, is also the excuse for romantic violations of convention—at least in poetry and fiction. The ideal of The One Woman as the crux of life, the center of all aspirations, thoughts, desires, whom to love, honor and possess is the height of achievement—this is Romantic Love; and this is the very ideal against which Mr. Wells in this book utters his violent and despairing protest.

HE is ready to justify his heroine in her seemingly cowardly actions because each of them was a defiance of Romantic Love, and of that sexual jealousy, which is the core of Romantic Love. His novel is an account of the effort of two people to deny, in the interest of the larger life of the world, the insistent claims of this sexual jealousy, and their failure—which is in the view of Mr. Wells the tragic failure of the world, and the fatal flaw in life which may make it impossible for mankind to realize its greatest dreams.

At first, with these claims pouring in upon her from the lips of her penniless lover, Lady Mary is steadfast against them. Stephen is prepared to give his whole life, subordinate all his ambitions, to the effort to maintain their home. "But I don't want it, Stephen," she says.

"I don't want it. I want you to go on in the service of the empire. I want to see you do great things, do all the things we've talked and written about. Don't you see how much better that is for you and for me—and for the

world and our lives? I don't want you to become a horrible little specialist in feeding and keeping me. . . . You will not be able to marry me for years and years and years—unless you neglect your work, unless you throw away everything that is worth having between us in order just to get me. . . . Why are you so greedy, Stephen? Why are you so ignoble? If I were to come now and marry you, it wouldn't help you. It would turn you into a wife-keeper, into the sort of uninteresting preoccupied man one sees running after and gloating over the woman he's bought—at the price of his money and his dignity—and everything. It's not proper for a man to live so for a woman and her children. It's dwarfish. It's enslaving. It's—it's indecent."

And when their secret love is found out, and her husband and her lover press her with these passionate personal claims, she repudiates those of both.

"Why must I choose between two men? I want neither of you. I want myself. I'm not a thing. I'm a human being. I'm not your thing, Justin—nor yours, Stephen. Yet you want to quarrel over me—like two dogs over a bone. I am going to stay here—in my house! It's my house. I made it. Every room in it is full of me. Here I am!"

NEVERTHELESS, she is herself the victim and the creature of these claims. After a long separation, when Stephen has married and she herself is the mother of children, she writes to him in confession. "I spent," she says, "my very considerable superfluous energies in wrecking your career." She goes on:

"Because you know I wrecked it, Stephen. I knew I was wrecking it, and I wrecked it. I knew exactly what I was doing all the time. I had meant to be so fine a thing for you, a nothing friend, to have that dear consecutive kindly mind of yours steadying mine, to have seen you grow to power over men, me helping, me admiring. It was to have been so fine. So fine! Didn't I urge you to marry Rachel, make you talk of her. Don't you remember that? And one day when I saw you thinking of Rachel, saw a kind of pride in your eyes!—suddenly I couldn't stand it. I went to my room after you had gone and thought of you and her until I wanted to scream. I couldn't bear it. It was intolerable. I was violent to my toilet things. I broke a hand-glass. Your dignified, selfish, self-controlled Mary smashed a silver hand-mirror. I never told you that. You know what followed. I pounced on you and took you. Wasn't I—a soft and scented hawk? Was either of us better than some creature of instinct that does what it does because it must? It was like a gust of madness—and I cared, I found, no more for your career than I cared for any other little thing, for honor, for Rachel, for Justin, that stood between us."

AND as for the great dreams of Stephen and the rest of us for reconstructing the world—"All this great world-state of your man's imagination is going to be wrecked by us. . . . We are going to be the Goths and Vandals of another Decline and Fall. . . . The State indeed! All your little triumphs of science and economy, all your little accumulations of wealth that you think will presently make the struggle for life an old story and the millennium possible—we spend. And all your dreams of brotherhood!—we will set you by the ears. We hold ourselves up as my little nephews do some coveted object and say *Woe!* and the whole brotherhood shouts *Mine!* to the challenge. Back you go into Individualism at the word and all your Brotherhood crumbles to dust again."

Stephen himself comes to see this personal passion, and the whole brood of personal passions, as the real problem of society. He sets about seeking to remedy this social disease, in the only way he knows, by the spread of knowledge, scientific and imaginative. There are some inspiring pages in the book on Stephen Stratton's great publishing company, which creates a "world literature," and actually distributes it to the world. Magazines and newspapers are founded and subsidized. By such means he hopes to destroy the personal and group egotisms and passions which he found at the bottom of religious persecutions, race conflicts, wars, and that most stubborn of all anti-social vices, the jealous, hateful and deadly love of one man for one woman.

BUT in the end he fails, so far as his own personal problem is concerned. Lady Mary, as a protest against the jealous savagery which would flog her career and Stephen's and that of Stephen's girl-wife into the bloody pit of the divorce court, kills herself. She absolves him, but he cannot absolve himself. He meets her husband after her death. The man grips him by the arm.

"Stratton," he said, "we two— We killed her. We tore her to pieces between us. . . ."

Well, and what then? What does Mr. Wells want us to do about it? The answer is vague only in largeness,—its staggering implications. He wants us to root out the romantic idealism which turns men and women into beasts; he wants us to destroy all those institutions, customs and moralities which are the expression of that romantic idealism.

That is asking a great deal. But Mr. Wells would say, What is your civilization worth? It is—he would say—a thing monstrous, bloodstained, filthy. Let it be shattered by all means, and let us create a decent civilization, one in which men and women can live and work and achieve, a world where all the ancient prophecies and dreams shall be fulfilled, a clean star at last in the face of the everlasting skies!

*—"The Passionate Friends," by H. G. Wells. \$1.50 net. Harper & Brothers.

BRICKLEY'S FOURTH FIELD GOAL

The picture shows the remarkably effective protection afforded the brilliant Harvard kicker. Although the ball has already left his foot there is not a Yale man within striking distance of him. The figure in the foreground is Percy Houghton, the Crimson coach

Current Athletics

By HERBERT REED ("Right Wing")

HARVARD closed the football season at Cambridge with a triumph over Yale that was impressive to a degree, and proved that the Crimson system has made greater strides, with all its tendency toward conservatism, than any other in the East. Harvard labored under the serious disadvantage of being a top-heavy favorite for the greater part of the season, and the coaches were obliged constantly to guard against a tendency toward over-confidence. Again, in the Princeton game the team did not come up to expectations, and on eleventh hour change had to be made in the line-up, a change, by the way, that worked out splendidly, although the value of Hardwick as a half-back was lost to a considerable extent because of the necessity of having a first class offensive end. As in almost every year since Houghton has been in charge at Cambridge, the Crimson turned out an alert, thinking team, that while not in individual instances as well built as the Elis, was capable of sustained power, and capable of making a fighting finish against a plosky Blue eleven.

RIGHT here I should like to come to the defense of O'Brien, one of the best ends of the season, against whom is charged the safety scored by Yale. O'Brien picked up a Yale kick-off that struck the goal post and carried it back over his own line, thinking that it would count as a touch-back. The situation was most unusual, and I know that many of the players on the field, on both sides, would have done as O'Brien did, had the chance come to them. Probably not two per cent. of the crowd knew the proper way to handle the play—even men who have followed football, both as player and coach, for many years. It simply happened that O'Brien was the man nearest the ball, and hasty critics have not hesitated to call his play, what is known in base-

ball parlance, as an exhibition of ivory. Granted that O'Brien should have known better, this one flaw in his work should not be allowed to overshadow his all-around good play as an end. This was the one mistake that Harvard made, and while, of course, it might have proved costly, it was hardly a serious blenheim upon an otherwise perfectly played game.

HARVARD is the one team in the East that absolutely refuses to give the ball away on fourth down without shooting at the goal, and the consistency of this type of play is largely responsible, I think, for the Crimson success, if we admit also that the Crimson has rejoined in the best of coaching and the aid of stars. There seems to be some popular misconception about these stars. No doubt both Brickley, that terror of a drop kicker, and Mahan, the good punter and broken field expert, would shine on an inferior eleven, but their individual play has been cleverly "built into" the Harvard system, with the result that Houghton has been able to get splendid results from their work even when not engaged in the specialty for which they are famous.

BRIKLEY, for instance, would be welcomed on any first-class eleven, even if he were not so adept at drop and place kicking, while Mahan, even if he could not punt, would also make a place on any first-class eleven. Brickley proved himself in the Yale game a hard, efficient runner who could keep his feet and fight his way along when tackled, and Mahan showed that he was a master of the end-skirting art when aided by a high-class team. No doubt Mahan could make many a pretty dash when unaided by such pretty interference as Harvard has shown, but it was his ability to fit into a fine system that was one of the outstanding features of his work.

It required a long time to make of Mal

Logan the kind of quarter-back needed to run such a powerful offense as Harvard's, and the fact that he did develop into just such a quarter is a fine tribute to the Harvard coaching method. The main plan of Harvard generalship has come to be something of a habit, but the credit for selecting certain immediate plays belongs solely to Logan. It is all but impossible to find a flaw in the Harvard generalship as shown this year, and it is also next to impossible to find a flaw with the quick choices of the quarter-backs when they faced the burden of proof. It has taken time to build up the present Harvard system, but it is well worth copying.

AAINST so effective a team as Harvard's Yale played a game that was earnest of better things to come, but the Elis were overmastered in the backfield, and not even a most efficient line could make up the difference. The kicking game and the running back of kicks went against the Elis, and this proved a severe handicap. Yale put on a running game that was extremely attractive, and that will be even more effective another year, but the recrudescence of the Blue eleven was too recent to permit of the men maintaining their pace throughout a hard game. There seems to be no doubt, however, that Yale is once more on the right track, and that the Blue will turn out standard eleven in the near future. Certainly the present coaching system has justified itself, and with good material and an efficient leader another year Yale should be thoroughly on the football map again.

AFTER many years of waiting, Cornell smothered Pennsylvania on Thanksgiving Day, the Ithaca eleven showing a better brand of football than at any previous stage of the season. The team was full of fight, was ably led by Captain Munns,

MAHAN, THE CRIMSON TERROR

The picture shows the Harvard back making one of his stirring runs. He was the quickest starter and the hardest man to stop of any on the field, and a serious factor in the Harvard triumph

who played the best game of his career, and was a better coached and better built eleven than the Red and Blue. The victory was a triumph for the entire team, but more especially for the forwards, who held the Quaker line at bay throughout, and gave the backs an opportunity to get under way.

HOWARD FRITZ, who played both end and half-back, was easily the star of the game, and the down-field work of the entire Cornell eleven was better than anything that has been seen on Franklin Field in many a year. Recent coaching of the Cornell wing men has developed the fact that in Ray Van Orman, the Ithacans have as clever a man as instructor in that position as has appeared in the East in some years. Dr. Sharpe, the old Yale star, swings into the third coaching season with the prestige of a championship basketball team, and a football team that smothered Pennsylvania behind him. Cornell is apparently out of the woods, and there is now every opportunity to build for the future. There is reason to

expect that the procession of defeats at Franklin Field is permanently checked. In justice to George Brooke, the new Pennsylvania coach, it is well to mention that his material was not impressive, save in a few instances, and that when his eleven went into its big games, it was not evenly enough developed to carry through anything like a continuity of attack. The kicking of Chester Minds in the Cornell game was worth traveling miles to witness, and had his ends been up to the standard of the Cornell wing men he might have been able to keep down the score.

CHICAGO'S Conference championship was well earned, for the Maroon played consistent football from start to finish, using the open game when that best served the purpose of Conch Stagg, and smashing attack when the chances to make it go seemed especially bright. The proper use of the wide open game, is of course a moot point and one that never will be settled until a ranking Western eleven meets a ranking Eastern eleven, and perhaps not even then, for the "breaks"

in such a game might be brought about in such a way as to prove little or nothing of lasting value.

AT this writing the University of Washington team seems to be on the high road to its sixth consecutive championship of the Pacific Coast, with the Oregon "Aggies" finishing in second position. Coach Dobie of Washington has made a remarkable reputation on the Coast. This year, however, Oregon, according to far Western critics, has the better line, while Washington is stronger in the backfield. "Hap," sometimes known as "Bullet" Miller, being the bright particular star.

CORNELL'S cross-country team has once more won the championship in the East, and Jack Moakley, the clever coach, has proved once more that he can build up a successful team even when without the services of some of the stars of the past. The individual triumph went to Boyd, of Harvard, but the best type of team running gave the Ithacans the championship with a little to spare.

CORNELL'S CROSS-COUNTRY TRIUMPH

Boyd of Harvard won the annual hill and dale race, but the Ithacans regained their supremacy as a team over the course at Van Cortlandt Park

The Autopilgrim's Progress

Lemuel Driveth Friendship Past the Speed Limit

LEMUEL'S motor, now leading the way,
Didn't keep down to low speed—not a bit of it.
Poor Mrs. Bogg began softly to pray,
Seeing Lem's temper was in for a fit of it.
Lem kept ahead,
But the swifter he sped,
Silas's runabout, hugging the rear,
Clung to its own
Like a dog to a bone.
Si's irritation was growing, 'twas clear.

NOW they were plowing through dust-banks so deep
Infinite clouds of it rose to the sky—
Rose to the heavens and fell upon Si;
Mad with it, blind with it, tortured and sick,
Cursed he all Buggs, yet continued to "stick."
Swifter and swifter sped Lemuel's steed,
Faster and faster grew Silas's speed.
If the truth
Must be told,
There is youth
In the old—
And the fierce joy of twenty brought Si's blood to par,
When 'twas plain to be seen
That his little machine

Was steadily gaining on Lemuel's car.
Creeping up, creeping up, all to the good,
Now they were stretched side by side, hood to hood.
Lem, glancing round, was distinctly aware
Of Si's look of triumph, the old, hateful glare,
As he cackled out, "Cast be ye!
Givin' me dust, be ye?"
Lem, though religious, could scarcely forbear
The terrible joy of a soul-reaching swear,
As mile after mile they continued to dart,
Less than the space of a hand's
breadth apart.

"MEN, blind with anger!"
(I'm quoting a sage),
"Fate, the arch-enemy, mocks
at your rage;
Faithful she stays to her Sty-
gian oath
To wait till you grapple, then
collar you both."

THUS, while the fire of old
rivalry blazed,
Silas and Lemuel, equally
crazed,

Scorched through Buck's Township and neither one saw
The black and white sign-painted word of the law.

Plainly exhibited,
"SPEEDING PROHIBITED."

BACK of the bushes near Hanberry's lots,
Deputy Constable Pilkington Botta,
Crouched in a hollow, the veriest weed-trap,
Working a speed-trap.

Lem saw him not,
But wary old Si,
Being a lot
More clever and sly,

Got a quick glimpse of the man in the bushes,
Slowed down his speed with hysterical pushes
And while Lem, deaf ahead, still continued the pace,
Si turned around and abandoned the race.

JUST a mile down the turnpike, poor Lemuel slowed
His car to a creep; for a chain 'cross the road
Revealed that the constable, 'ware of his crime,
Had gotten his number and taken his time.
'Twas clinched,
"You're pinched!"
Quoth Constable Bessley,
Looking quite merrily,
"Fined proper ye'll be,
If y' just foller me."

DUMB, driven cattle and pen-circled hogs
Ne'er more despairingly walked than the Bogg.
Over Lem's spirit deep shame followed rage—
Oh, what disgrace to befall his old age!
He who had basked in his neighbors' opinion
Hurried to jail by the law's heartless minion!
"Oh Fa!"
Sniffed Ma,
"Though some sorrier I've bore,
Ther's none of our kin been arrested before!"

IN front of the Court House,
A tangle of wheels,
Stood quite a number of auto-
mobiles.
Numerous culprits, some very
well dressed,
Walked up the steps and
seemed scarcely depressed.
"Hope, if I'm hung, I'll be
tried by a jury,"
Lemuel groaned with a
sorrowful face.
Mother repined, "Wonder
what will Katury
Say when she hears of it.
Father's disgrace?"

(TO BE CONTINUED)

Finance

By ALBERT W. ATWOOD

First Principles

LET us turn aside this week from big events and broad currents to consider an apparently simple request for information which at first glance would seem to be of the most elementary nature. The inquiry comes from a physician in Pennsylvania:

"Is there not a book published that explains the value of the different stocks and bonds dealt with on the stock market, and that tells which stocks are dividend payers and which are not? Please send me title of book and publishers' names and addresses."

This letter is exactly the sort which thousands of intelligent citizens might write. I have received scores of similar letters. It is typical and representative.

A Complex Subject

FINANCE, or at least that branch of it which goes by the name of Investment, or Investment and Speculation, is naturally an intricate subject. To employ exact, accurate terms is particularly difficult. In France most people who invest their savings do so through banks, receiving certificates issued by the bankers. These certificates are backed, of course, by stocks and bonds, but often the individual investor does not know more than its name, and probably in numerous instances peasant investors do not know even so much. That is, the banker generally substitutes his judgment for that of his client, whereas in this country the methods of selling securities require freedom of judgment on the part of the investor. Of course, there are many reliable investment bankers who perform numerous services for clients, but the main statement of fact stands. In Europe generally, speculation in stocks is largely confined to a professional class. In this country, at least at certain times, all manner of men and women buy stocks, more or less speculatively.

THE fact that the average person knows little about securities does not mean he is ignorant. To know much about them implies a complete knowledge of the whole range of economic life.

Knowledge of stocks and bonds is a big subject. Even those who pretend to be experts touch but the merest fringe. There is as yet no science of investment. Perhaps in time such a science will be built up. At present we grasp pretty much in the dark.

BUT, admitting all these bemoaning facts, there is something wrong when an intelligent person who owns two or three bonds can not even remember their names. The writer has frequently met such persons. A chance acquaintance upon learning of my profession, or a relative or intimate friend with nothing better to talk about, will often say:

"Oh, by the way, I have a bond. I wonder whether it is good or not. I bought it from Mr. So-and-So."

"What is your bond?" say I. "What is the name?"

Now \$900

New Series Model 31, Completely Equipped

With five years of splendid achievement the EMPIRE stands as a car of remarkable worth.

And with its score of new refinements and improvements, which make it better than ever, the new series model 31 sells for just \$900.

\$50 less than last year's car.

Four-fold increase makes this new low price possible.

Here you have a light, strong, five-passenger touring car of surplus energy and strength. A car that offers you all the service and beauty of heavy touring cars, without the extra price, or the heavy cost of operation, or the added care. It is well called, "The Little Aristocrat."

Read the Complete Equipment of the

EMPIRE

"The Little Aristocrat"

110-Inch Wheel Base—Unit Power Plant

Demountable Rims
Mohair Top
Top Envelope
Rain Vision Windshield
Tool and Tire Kits

Extra Rim
Stewart Speedometer
Pratt-O-Lite Tank
Gas Head Lights
Turkish Upholstery

Eisenmann Magneto
Side and Tail Lamps
Double Tire Irons
Oil Sight Feed
Dash Air Adjustment

Wide Safety Margin

Empire axles are over size, as are also the steering knuckle, brakes, springs and other vital parts. These are made of the same materials employed in cars twice the weight and cost.

And this with the light weight and the powerful Unit Power Plant afford a capacity and serviceability that give the EMPIRE the efficiency of cars many times its price.

The light weight also means economy of fuel, minimized strain on parts and tire—almost all-round efficiency at least cost of operation and upkeep.

The "EMPIRE" Idea

The first EMPIRE car was built to the order of a wealthy Indianapolis man. He wanted a light car, a strong car, a car that would hold five people, a car that would go anywhere—a car with all the beauty, distinction and serviceability of larger cars—a car that would be associated with low priced cars only in point of price and minimum upkeep.

That was five years ago. Now the yearly output of the EMPIRE is many thousands. Although our facilities are increased four-fold, every evidence points to a demand for the 1914 EMPIRE that will far exceed the supply.

Behind the EMPIRE are men of great financial resources. All of their business ventures have always been successful.

3,766 Miles

Let us send you the story of the transcontinental EMPIRE that ran 3,766 speedometer miles, with the "big fellows" in the Indiana-Pacific Tour, the first and only car of its class to accomplish the feat. The book is full of pictures of transcontinental motoring in the Rockies, the desert, the Sierras. It shows the roads actually traversed by the EMPIRE on

this great trip—roads that no other tour even attempted. The book is the last word in transcontinental travel and has an added value to all who are interested in touring.

What Dealers Think

Dealers everywhere are enthusiastic over the EMPIRE. The little open territory that still remains is being taken up quickly.

Dealers are quick to see in the EMPIRE the very car that meets every requirement for a light, serviceable, beautiful touring car, and at this unusual price of \$900.

Dealers, write for our broad, liberal sales plan, and rare opportunity for permanent connection where territory is still open.

DO YOUR BRAINS INTERFERE WITH YOUR GOLF?

Is it true—

—that golf and brains don't assimilate?

—that golf is a strictly physical and not at all a mental exercise?

—that the time you now spend in practice is absolutely wasted?

—that the veteran professional and the young lad just starting play essentially the same sort of game?

—and that *their* careless swing is fundamentally more effective than the system you have so carefully studied out?

Marshall Whitlatch says:—"Yes!"

For Mr. Whitlatch's article "Mind vs. Muscle in Golf," see *Dress and Vanity Fair* for December. This is the first of a series of practical illustrated articles on golf to appear throughout the winter. The series shows how you can do much to improve your golf by discarding the old, self-conscious, think-of-this-then-think-of-that style of play. See *Dress and Vanity Fair* for December, page 51.

"Well, I don't just remember the name, but I think it is some kind of an electric company out West somewhere. Mr. So-and-So said it was all right, and you know Uncle Alfred had the greatest confidence in him. Why, he buys all the investments for the orphans' home?"

I QUICKLY suppress an instinct to say "Damn," and do not succeed in wiping out an expression between a smile and a frown in time to prevent my cousin's great-aunt from seeing it. But after an effort to be tactful there is finally elicited from this respectable lady, after much serious cogitation on her part, something that sounds like the name of a corporation. I then look in one of the two or three great, bulky manuals with their list of sixty or seventy thousand different corporations and find three or four electrical companies with names so like the one my cousin's great-aunt has given me that only the most careful deductive study finally identifies the correct company.

At last! But no, this company has six separate bond issues and there is not enough information at hand to discover of which issue she is an owner, and the bond itself is locked up several hundred miles away.

Information Easy to Get

IT is evident that the Pennsylvania physician whose letter is quoted above desires to know what he is doing when he buys stocks. I do not know what the physician means when he asks for a book which gives the "values" of stocks and bonds. If he means a list of "prices" the question is easy to answer. The price of a thing of course is the amount of money it will command, which may be wholly different from its worth. The confusion of the two words is barbarous, and yet financial people use "value" for "price" every day.

NOW if any one wishes to make quite a business of studying securities we advise him to subscribe \$10 a year for the *Commercial & Financial Chronicle*, the foremost and most nearly official financial periodical. If one does not object to having his name on brokers' mailing lists, it is possible to secure without cost from any member of the New York Stock Exchange a booklet giving quotations, rates of dividends and much other information about practically all well known securities. But for the average person who does not wish to spend \$10 a year, and who does not care to receive even a small favor from a broker, there is a much simpler way of getting what is wanted.

THE *New York Times*, which costs one cent in New York City and two cents elsewhere, publishes each Monday morning a complete list of all securities dealt in on the Stock Exchange, and a very full list of those dealt in in New York off the Exchange, with rates of dividends for stocks and rates of interest for bonds. In regard to all stocks listed on the Exchange, the total amount outstanding is given, also the range of prices for the week, year and previous year. No doubt other papers give the same information, and probably much the same detail is afforded in regard to local securities by newspapers in such cities as Boston, Chicago and Philadelphia.

How to Study "Values"

OUR correspondent asks for a book which "explains" the values of stocks and bonds. The use of the word "explains" may possibly indicate that what he wants to see is not a list of prices, but an analysis of merits and worths, earning power, assets, and so on. We do not know any book which covers that subject. There are countless pamphlets and books which attack small portions of it, but from the necessity of the case no one book can master such a task.

There are innumerable ways of getting information about the better known companies upon which one may form one's own judgment. If a daily paper is desired the *Wall Street Journal* is perhaps best. For about the same cost the *Commercial & Financial Chronicle* furnishes a bulky weekly paper giving authoritative news about several hundred of the better known companies, and every few months special supplements containing essential facts about several thousand. If a yearly reference book is desired Poor's or Moody's Manuals for about twice the cost of either of the other publications contain essential facts about more than fifty thousand companies.

IT is assumed that the inquirer has little time to give to an orderly study of the subject of investments. To do this would probably require one's spare time for a year. As recently explained in *Investment* by Charles W. Gerstenberg, Secretary of the New York University School of Commerce, Accounts and Finance, to make a scientific study, one should proceed from the abstract to the concrete, from the general to the particular. The method of doing this will be taken up in detail in a future article. Suffice it now to say Mr. Gerstenberg recommends a study of the following subjects in the order named: economics (Tausig, Seager, Seligman or others), money and credit, panics, fundamental business conditions, corporation finance (from the manager's point of view), investments *per se* (concrete study of different kinds of securities), and analysis of reports.

IT is assumed from the letter printed at the beginning of this article that its writer wishes to confine himself to the concrete and particular. But, even so, if he has made no study of finance he should read at least one or two elementary books before making any sort of plunge. S. S. Pratt's "Work of Wall Street," published by D. Appleton & Co., is probably as complete a general book as would be understood by the beginner. It has to do mostly with stocks and stock markets, and relatively little with bonds, but it is probably the most useful single book at that. Many excellent elementary circulars on bonds and investment subjects in general have been written by practical investment bankers, and there are innumerable magazine articles; but no one book stands out as all around satisfactory, although there is an excellent advanced treatise on bonds.

Perhaps some day the Investment Bankers' Association will take up educational work along this line. It is sorely needed. If the work were done by this association in the right spirit, free from suspicion of commercialism, it would be of distinct value to many thousands. For, as this article shows, there is no larger subject, and none where a clear understanding of terms and principles is more necessary.

Announcement

Several months ago, we advertised Cooper's Leatherstocking Tales in five volumes for \$1.00 a set. Our announcements stated that the supply was limited and could not be replenished.

Though a considerable period has elapsed since these advertisements have appeared the orders keep arriving in goodly quantities.

We take this method of announcing to HARPER'S WEEKLY readers that we cannot fill any more orders for The Leatherstocking Tales, as the edition is totally exhausted.

At the present time we are offering a Bigger Bargain; The Masterpieces of Hugo for \$1.00; see advertisement in this issue.

Our edition of Hugo is also limited and like the Cooper offer a Prize To The Prompt.

Readers desiring to take advantage of this offer should apply promptly, as our special edition is selling rapidly

What They Think of Us

Mrs. Corra Harris, Pine Bog (Ga.)

I have never written a complimentary letter to an author, but if George Eliot, or Hugo, or Stevenson were living, I should not have been able to resist. . . . I think this issue is wonderful. It breathes—not daintily, delicately like a lady with a literary fan—not strenuously, smotheringly, like a furious man trying to climb the last hill of civilization with his coat off and a bludgeon in his hand, but it has in it the breath of a great nation, easy, long drawn, deep, as if the lungs of all men were in it. You'll be in a bad fix if you cannot keep it up, for you have set a Homeric stride for yourself. When you begin to straddle or mince, we'll all see it.

Chicago (Ill.) Extension Press

The devil is frankly engaged in "down-lift" work through such publications as *HARPER'S WEEKLY*, though the subtlety of the prince of darkness is lacking in the brainless efforts of such editors as Haggard.

Charles F. Amidon, Judge of the District Court of the United States, Fargo (N. D.)

I have been buying *HARPER'S WEEKLY* at the news-stands since you took charge of the paper, but I cannot take the chance of missing any of Mr. Brandeis' articles. I therefore enclose annual subscription of five dollars.

Mr. Brandeis' thinking works well when applied to life. It accomplishes the greatest good to the public with the least harm to business. . . .

I am glad to have a journal with the sanity and forward vision which the *WEEKLY* has become under your editorship.

Colonel W. R. Nelson, The Kansas City Star, Kansas City (Mo.)

You are making a real magazine of the *WEEKLY* and it is bound to win provided you can keep them from sawing off your financial legs before you get established.

Alice Hubbard, East Aurora (N. Y.)

Your magazine represents to me the first free, public expression is a woman's world of woman's problem.

Lewis J. Johnson, Professor of Civil Engineering, Harvard University, Cambridge (Mass.)

I look forward with much interest to each appearance of *HARPER'S WEEKLY*. I take great pleasure in your comprehensive grasp of the woman question. I agree with you most cordially that while suffrage is an immediate desideratum, the whole movement for the liberation of women is even more significant. May the shadow of *HARPER'S* never grow less.

The Sun (N. Y. C.)

How! What is this? The most gifted people in their great period without knowledge of uplift? Can it be that there was no Brandeis in Sparta to expose the "invisible government"? No Haggard at Athens to pray for eugenics and purge the white slavers?

Lincoln Steffens, New York

I found throughout the West a lot of interest in the *WEEKLY*.

Ben B. Lindsey, Denver (Colo.)

Allow me to congratulate you upon the glorious victory over Tammany, and especially the part played by yourself and *HARPER'S WEEKLY*.

It is the aim of the publishers of *HARPER'S WEEKLY* to render its readers who are interested in sound investments the greatest assistance possible.

Of necessity, in his editorial articles, Albert W. Atwood, the Editor of the Financial Department, deals with the broad principles that underlie legitimate investment, and with types of securities rather than specific securities.

Mr. Atwood, however, will gladly answer, by correspondence, any request for information regarding specific investment securities. Authoritative and disinterested information regarding the rating of securities, the history of investment issues, the earnings of properties and the standing of financial institutions and houses will be gladly furnished any reader of *HARPER'S WEEKLY* who requests it.

Mr. Atwood asks, however, that inquiries deal with matters pertaining to investment rather than to speculation. The Financial Department is edited for investors.

All communications should be addressed to Albert W. Atwood, Financial Editor, *Harper's Weekly*, McClure Building, New York City.

Business Progress

A PRIZE has been offered for the best essay on the Altman art collection, and much praise has been given to Mr. Altman for the purposes to which a large part of his money was devoted. This praise is well, and will encourage others. The more business men are praised for what they do outside of their business the better, but still heartier praise ought to come to those who make improvements in the very methods by which their business is built up. The National Retail Dry-goods Association is now having Miss Elizabeth Gannon, well known as a student of social welfare, study the situation in various cities with a view to reporting on what can be done toward progress. What we most need to do is to make business a profession and solve the problems which are at the root of business in its relation to the community. A man who puts into commerce the same kind of intellectual thought about the human aspects of his work that go into the learned professions will see that what makes a profession worth following is that it is being pursued, not merely for one's own advantage, but also largely for the advantage of the world. Many signs today point toward this conception.

Price Cutting Sustained Again

THE decision just made by the United States Supreme Court in the so-called Book Trust Case again brings into prominence the matters discussed by Mr. Brandeis in his recent article on Cutthroat Prices. In accordance with previous cases the Court held that in selling copyrighted books the Macy department store had a right to cut the retail prices fixed by the publishers, and also that the Sherman law forbade the publishers and booksellers to protect themselves by combining to prevent sales of books to the Macy store.

Mr. Brandeis would agree that the producers of competing articles should not be allowed to combine. But he showed that in preventing the producers of a well-known article from fixing the price at which it should be sold to consumers in competition with articles of the same kind the Supreme Court had fostered unfair competition injurious to the public and tending to breed monopoly instead of checking it.

The Supreme Court has settled the law. Congress must now consider whether it is rightly settled. Mistaken rulings in practical matters of this kind would be far less likely to occur if a trade commission were created, as Mr. Brandeis and others have urged, to study the facts of indus-

try and so learn what trade practices are hurtful to the general welfare and what are beneficial. Facts only can teach the answers to such questions, and courts have neither the machinery nor the time for gathering and sifting the facts.

Freedom

OUR radical contemporary the *Masses* is in trouble, as told by Floyd Dell in this issue. When Mr. Eastman said the Associated Press news was "sold to the highest bidder," he presumably spoke figuratively. The complaints with which he preceded that allegation related to the news from the military despotism in West Virginia; the point of his article was that the Associated Press does not give the news of labor troubles in a way that would seem fair to a disinterested mind, in other words, that the Associated Press, instead of being colorless, is the organ of plutocracy. Now when a story or charge is concocted against a person or even an institution, that person or institution should have redress; but, when a very serious evil exists, and a criticism is leveled against it which lacks moderation in language but is based on a just complaint, is it wise for the criminal law to punish the offender? The criminal law ought to be rather severe in punishing attacks on private individuals, or gossip about private individuals, but a public institution is in a different situation, and wholesome democratic life enlists for much liberty in comment on any force which, like the Associated Press, is something on which we must all depend.

A Doubtful Verdict

VICTOR L. BERGER always endeavors to tell the truth. A verdict has been found against his paper for seventeen thousand five hundred dollars, and the case is to be appealed. The *Leader* printed a charge made by an alderman that the City Clerk in Milwaukee had illegally paid five or six of his assistants for overtime when forbidden by statute. He used the word "graft" in telling the story. Before the trial of the *Leader* case a judge decided that the payment was illegal. The severe verdict was found on the ground that the word "graft" implied dishonest intention. The case does not deal with criticism of a private individual but of a city official. Unhappily, various elements in Milwaukee are concentrated in a fight against the Socialists. There were no Socialists on the jury, and there were at least several men who might well be surmised to be hostile to the Socialist propaganda. The verdict is a heavy one, and if it is not overturned, it will be a severe blow to an honest, intelligent organ.

Blocking an Army

HE was the newspaper proprietor who employed one William Jennings Bryan as a reporter. He supported Bryan for the presidency and Bryan him for the House and the Senate, but there has never been any love lost. Hitchcock is a Progressive before election. The open breach with Bryan came when Hitchcock, following Bailey's lead, advocated the nomination of Harmon for the presidency. What Bryan did to Harmon at Baltimore naturally displeased Hitchcock. There have been only two opportunities for Hitchcock to embarrass the Wilson Administration and he has made the most of them. He bolted the Democratic Caucus on the Tariff, because it would not include his anti-trust programme. Then he was an obstructionist on the Currency Committee, thus delaying the Wilson trust program for the regular session of Congress. When it was evident that every Democratic Senator except three on the Currency Committee favored the Glass-Owen bill, O'Gorman and Reed went with their colleagues, but Hitchcock voted with the Republican Senators, and so the Committee stood six to six, and it was impossible for the six Democrats to report a bill early in December. The Senator was thus able to occupy the strategic position of the animal with the long ears in a mountain defile, whose balking delayed an army.

Rural Credit

PERHAPS the most important outcome of the work of the Southern Commercial Congress has been the study of rural credit. The subject is only touched upon in the Glass-Currency Bill and the Administration is pledged to the passage of another measure. The Currency Committee of the House is already studying the subject, and the report of the United States Commission on the Study and Investigation of Rural Credits will be at their disposal. The Landschaften banks of European countries have revolutionized agriculture in the last quarter of a century. In America the national banks have been used exclusively for commercial and industrial enterprises, being forbidden to lend money on real estate. But the land-mortgage banks are established for the purpose of making long-time loans, at a low rate of interest, to farmers. A bank is organized, sometimes with the foundation capital supplied by the government, sometimes by private capital. A farmer, with a ten thousand dollar farm, wishes to borrow five thousand dollars. He gives a mortgage to the bank for \$5,000. He is charged four per cent. on the loan, one-half of one per cent. for the sinking fund which takes up the loan in fifty-four years, and a quarter of one per cent. for administration. The bank issues bonds, in hundred-dollar denominations, against this mortgage, bearing four per cent. interest, which become quick assets, easily circulating. With the payment of every hundred dollars of the mortgage, a bond for that amount is cancelled. There is no reason, except perhaps prejudice against the unfamiliar, why the government of the United States should not issue currency against such bonds, endorsed by the land-mortgage banks and secured by the land itself.

Boys and Porkers

THE Boys' Corn Clubs in the South and West have become famous, and the boy who makes the most corn on an acre of ground, stands for a while, a national figure, with public commendation by the President. Now the Department of Agriculture is planning to organize Boys' Pig Clubs, to teach the human youngsters how to turn the corn into pork. With the next generation there must be either a noticeable decrease in the cost of living or a large crop of farmer millionaires.

Fraternity

THE Secretary of the Interior is trying to break down the caste system in his department. Our bureaucracy at Washington has developed a system of rank and title as astonishing as it is grotesque. A nine-hundred-dollar-a-year stenographer may not presume to mingle socially with thousand-dollar-a-year clerks. The wife of a bureau chief must be careful how she speaks to the wife of an assistant secretary. The matter of leaving cards, of telephoning, of asking to dine, is so full of subtle distinction, of mysterious significance, of intricate art, that the casual visitor to Washington is shamed into seclusion. Mr. Lane is a westerner. When he has a free moment he looks about his department for a precedent to break or an established custom to demolish. Last summer, he shook Washington by giving a reception to the four thousand workers in his department. Mrs. Lane assisted him. The reception was held in the open court of the Patent Building. There were men and women who attended that reception who had grown white-haired and feeble in the Department's service. Some of them told Mr. Lane that they never before had spoken to a Secretary of the Interior, that they never before had even seen the wife of a Secretary of the Interior.

Not long ago Mr. Lane asked the workers of his Department to meet him in the Masonic hall and form a Home Club with him. They came, nearly two thousand of them, old and young, men and women, crippled and straight, the folk who run the clumsy wheels of our government for us. With the Secretary leading them they formed a vast coöperative club wherein all the workers in the department, from the Secretary to the lowest paid clerk, are to meet on terms of complete equality. The club is to have a house. It is to have parties and plays and dances. It looks forward to the time when it will have a coöperative store and a coöperative Tent City for summer vacations.

Such a club is unprecedented in the City of Washington. It is a manifestation of the real desire of Mr. Wilson's régime to democratize the government, to return it to simple ways, not for the mere purpose of disintegrating but that there may become possible in the government the pulling power of the coöperation which the caste system destroys.

The event is a concrete expression of the administration's attempt to bring back that old simple American spirit which Mr. Kipling says "in the teeth of all the schools shall save us in the last."

Single Tax Progress

THE Single Tax means everything or anything, from the full demands urged by Henry George, in "Progress and Poverty," down to the shortest practicable step in the direction of those demands. George agitated the socialization, not of land as is sometimes said, but of the annual values of land. In order to secure that result he proposed that all taxes on personal property and real estate improvements be abolished and that public revenues be derived exclusively from a tax measured by land values. In order to carry out that program he proposed to begin by abolishing all taxes except on land values. In practice, frequent proposals have been made to start at points still further away from the goal proposed by George than the immediate abolition of all taxes on land values. This is the reason that any movement for the abolition, in any degree, of taxes on improvements is called the Single Tax. It is the reason, for instance, that movements like those in New York for reducing taxes on improvements without reducing those on land values are called Single Tax movements. Of this kind was the proposal adopted last month in Pueblo, Colorado. The referendum proposed to exempt improvements beginning with 1914 to the extent of 50 per cent. of their valuation; and in 1915 to the extent of 99 per cent.; whereas land is to continue to be valued for taxation at 100 per cent. of its true value. This is equivalent substantially to abolishing, for local purposes, all taxes except on land values.

Shadows Before

ALEXANDER STEPHENS was as brilliant a man as his times produced. He was young in 1832, when he wrote:

"Went to a party. Witnessed the new dance, the waltz, which disgusted me very much. Oh, the follies of man!" In the same year he wrote: "The railroad is the topic of the day. Railroads, it is true, are novel things. The greatest obstacle is the greatness of the enterprise. The stupendous thought of seeing steam-engines moving over our hills at the safe and rapid flight of fifteen miles an hour, produces a greater effect in dissuasion of the undertaking than any discovered defect in arguments in its favour."

The first remark may give us a little perspective about the tango and the turkey trot. The second, with the Twentieth Century express in mind, inevitably makes us smile.

Derivations

WE had rather imagined that a certain popular dance derived its name from the Latin verb *tango*—"I touch." But, lo! a reader of the *Saturday Review* owns a copy of the "Dictionary of the Royal Spanish Academy" (thirteenth edition), and writes in to say that it comes from *tangir-tocar instrumentos*—"to play on an instrument." Anyway, the Spanish dictionary adds that the dance is confined to *negros ó gente de pueblo en América*. And Sem, the Paris cartoonist, adds that it originated in the "frog quarter" of Buenos Ayres—the *barrio de las ranas*. Next!

Dean Swift on Reformed Spelling

IN the eighteenth century we find Jonathan Swift, whose mastery of prose is one of our delights, writing as the very first article which appeared over his acknowledged name, *A Proposal for Correcting, Improving, and Ascertaining the English Tongue*. He lamented that the English tongue was becoming debased; but he attributed the cause, in part, to the liberties which Dryden and the other poets of the Restoration had taken in shortening their syllables by omitting those very *e's* which our spelling reformers would eliminate.

"These gentlemen," wrote Swift, "although they could not be insensible how much our language was already overstocked with monosyllables, yet to save time and pains, introduced that barbarous custom of abbreviating words to fit them to the measure of their verses so that most of the books we see nowadays are full of those manglings and abbreviations." "Disturb'd," "rebu'd," are among the words he finds especially unpleasant. Swift was further annoyed at "a foolish opinion, advanced of late years, that we ought to spell exactly as we speak; which, beside the obvious inconvenience of utterly destroying our etymology, would be a thing we should never see an end of." Also he noted with impatience in 1712:—"It is sometimes a difficult matter to read modern books and pamphlets: where the words are so curtailed, and varied from their original spelling, that whoever has been used to plain English will hardly know them by sight." How many of our "new" controversies were waged centuries ago!

Methusalem Did It, Too!

SAYS BENJAMIN FRANKLIN, in his little essay "On the Art of Procuring Pleasant Dreams":

It is recorded that Methusalem, who, being the longest liver, may be supposed to have best preserved his health, that he slept always in the open air; for when he had lived five hundred years an angel said to him: "Arise, Methusalem, and build thee an house, for thou shalt live five hundred years longer." But Methusalem answered, and said: "If I am to live but five hundred years longer, it is not worth while to build me an house; I will sleep in the air, as I have been used to do."

This dialogue is not reported in the fifth chapter of Genesis, to be sure; but it is reproduced here, out of respect to Franklin, as evidence that outdoor sleeping is no fad, but a wise return to the manners of our ancestors.

Ideal Nurse Maids

DO not girls from ten to fourteen make the best nurse maids for younger children? The little children desire vitality and want to be rushing about and need enthusiasm in their keepers. The girl of ten to fourteen has outgrown her dolls. She is naturally a little mother, and it is much more fun to take care of a real child than of any toy. The relationship, therefore, between her and the little child suits both of them, and has much more vigor in it than the relationship between a lively person of three or four years old and a staid woman of forty.

Criminals I Have Known

By T. P. O'CONNOR

Illustrated by William M. Berger

1. Father Jardine

JUST a few words of preliminary explanation. I use in this title the two words "criminal" and "known" not altogether in their full sense. The word "criminal" I would apply with some hesitation to some of those unhappy figures which will appear in my articles, and some of them I have known only in the sense that I have seen and studied them from so near a point that I feel as if I had actually had personal acquaintance with them.

The first of these qualifications applies especially to the very first figure in my gallery of portraits. I found myself in the early 'eighties, while on a lecture tour in the United States, at a reception given in my honor by the Mayor of Kansas City, who, being himself an Irishman, and in agreement with the mission in which I was engaged, sought to make my visit agreeable. It was a very heterogeneous gathering that came to meet me, and one that revealed that splendid freedom from racial and religious differences which is one of the best characteristics of Western America. There were there, for instance, the Catholic bishop of the city and the Anglican clergyman. I remember the bishop very well across

the long space of time that intervenes between that date and now,—a tall, simple, gentle old man, who seemed to be equally popular with the members of his own and of other communions. He looked, as he was, an Irishman, coming from the robust peasantry of his country, a stately and vigorous, rather than a delicate figure. And that made the contrast more remarkable between him and the Anglican clergyman. The moment I entered the Mayor's drawing-room I was struck by this curious figure. He looked the typical curate of the cathedral town who sweeps the hearts of all his female flock. He was of moderate stature and of rather plump frame. The face was extraordinarily young. Round, rosy-cheeked, regular and dainty in feature, he looked half cherub, half priest, or shall I say something between a Cupid and an acolyte. The ladies flocked around him.

All these striking things about him were brought into relief by his air and by his dress. He was in a beautifully-fitting

black coat; he wore the Roman collar; to his tiny gold watch chain there was hung a small gold cross, just like that worn by my friend C. F. G. Masterman, the brilliant politician and journalist; and his manner was smiling, gentle, unaffected. I had learned from a friend before I met him that, curiously enough, all the leanings of the Episcopal clergymen of the United States—that country of such utter realism as I thought—were toward the extreme High Church position, and therefore I was not altogether surprised by the Roman collar, the gold cross, nor even when I heard the company address the Protestant clergyman by the Roman title of "Father."

"Even here the story does not end. When the body was examined there was found a girl's of hard knots"

Let me add, lest my description should suggest a false idea, that the little cherub clergyman looked a thoroughly manly fellow, and that he took quite unaffectedly the devotion which was so palpably offered to him. And he and the Catholic bishop seemed to be on the best of terms with each other. Finally, Father Jardine—that was, I found, his name—was the rector of a large and fashionable church in the city.

I WAS off the next day on one of those long journeys which make so hard the task of a missionary to the United States—to make the same speech, to attend the same receptions, to undergo the same deadly rush from city to city, hotel to hotel, hall to hall, and train to train. I might well have forgotten this particular figure in the vast and whirling crowds through which I passed, meeting sometimes thousands of people in the course of a single week, but somehow or other, the face, the figure, the whole man impressed themselves upon

me; and not merely in himself, but because he represented a type which I had not expected to meet in the United States, which showed, among other things, how little I understood, then, the very complex American character. For while on one side there is no character more realistic, on the other there is no character more idealistic. The American temperament is at once the coldest and the warmest, the most self-controlled and the most emotional of any in the world; it is a bundle of contradictions. Sometimes, and from some aspects, it strikes you as almost pagan in its materialism, and then you come across some manifestation which makes it look almost superstitious, and primevally Christian in its tendencies and possibilities. Some of this I had begun to learn just before I met Father Jardine, for I had become acquainted in the neighboring city of St. Louis with another Episcopal clergyman, Father George Betts. A word or two about him is necessary to understand my story. Very tall, very thin, ascetic in looks, but a light-hearted Irishman with a cigar always in his mouth, George Betts immediately won your heart, and was one of the most popular clergymen in America.

He was especially popular with the Irish Catholics, for though brought up in the somewhat isolated Protestantism of Ireland, he was ardently, even fervently Irish in his opinions, and was the head and front of every Irish movement, constitutional and the reverse. Unselfish, simple, all heart, he was just the man to whom all those heavy laden with personal suffering would come, and that accounts for the part he played in the tragedy I am telling. It was he who first conveyed to me the information, which was a revelation, that his church in America leaned to the poetry of the High Church section of the Episcopal Church. And among his most intimate friends was this Father Jardine. They had the same religious outlook, they were both simple and unselfish souls, and they belonged to the same diocese.

YEARS passed, and I never heard anything about Father Jardine. Suddenly one morning I found in a London newspaper a telegram which stated that Father Jardine had appeared in the pulpit of his church with a revolver on either side of his desk. Here was an astounding transformation in the life of the cherub-faced, well-groomed, placid, gentle little rector I had seen years before. The telegram was not followed by any other, and the story was left thus in mid-air so far as I was concerned. It was only years afterward on the occasion of another visit to America, I think, that I heard the sequel. And this is what had happened. Among his congregation Father Jardine had a member with whom, for some reason or other, he came in conflict, and as a result he refused to allow him to approach the sacrament. I do not know even the name of this man, but evidently he had a strong, a disagreeable and obstinate character, and in coming into conflict with him Father Jardine took a step which was destined to bring him to tragic ruin.

By some means or other the recalcitrant parishioner discovered that Father Jardine had a past. In his boyhood he had committed some small crime—I think it was a petty theft; had been tried, convicted, and sent to the famous jail at Sing Sing, in New York State. I should explain to those who do not know America well that owing to the vast extent of the country it is sometimes easy for a man to leave behind him his record in one state when he migrates to another, and especially when he migrates from the East to the West. Thus it has been possible for men in the past to be married in one state and to pose as a bachelor in another. The parishioner had made his inquiries with regard to Father Jardine with such effectiveness that he was able to tell the whole story of his youthful mistake. He brought into the fight a newspaper which, either because it disliked Father Jardine or because it could not resist sensational copy, took up the cause, and immediately a tremendous campaign was started against the unfortunate little minister. All the resources of the newspaper were brought into the fight. There were, for instance, illustrations, in one side of which you saw the prisoner doing time in the prison garb, and in the other the honored priest in his robes at the high altar celebrating the ceremonies of the church.

BUT all the fight was not on the one side. Father Jardine's piety, kindness, and, indeed, perfect saintliness of life, appealed to many of his flock—evidently, indeed, to the majority of them. The fight, as it went on, assumed the bitterness of all theological controversy, and apparently the life of the poor hunted priest must have been threatened. This can be the only explanation of that appearance in the pulpit with the revolvers on each side of him of which I had read in the telegram. When Americans enter into a conflict of this kind, they do so with all their hearts, and they fight it out relentlessly. Anyhow, it is evident that Father Jardine found plenty of fanatical supporters, as well as a relentless opponent.

In the end the case was brought to the judgment of the bishop. Father Jardine went to St. Louis, the capital of the diocese, to await events, and to whom should he go in this dark hour of his fortunes but to that large-hearted, indulgent Irish clergyman who shared his

views, had been his friend, and was ready to stand by him to the end? In the house, then, of Father George Betts, Father Jardine passed the anxious days between him and his final fate. By some means or other, the information was conveyed to him some days before any public pronouncement had been made by the bishop, that judgment had gone against him. He acted with promptitude. Saying nothing to anybody—not even, I believe, to his friend, Father Betts—he retired to his bedroom. The next morning his lifeless body was discovered on the floor, and an empty bottle, which had contained poison, told the story of how he came by his death.

Even here the story does not end. When the body was examined there was found about the waist of the poor little minister a deep gnarled girdle of wounds and hard knots. He had worn some belt of iron in self-in-

flicted torture as a penance for the sin of his youth. What a strange contrast between the chubby, cherub-faced, the spotless Roman collar, the shining black clothes, the neat watch-chain with the small gold cross, and underneath all this elaborate and complacent finery this iron ring of torture to the suffering flesh.

Then came the final episode in the tragedy, at once its terrible irony and its final vindication. The generous hearts of those who had stood by the erring but redeemed and noble creature burst through the bounds. Amid profound popular sympathy, doubtless with the gorgeous and imposing ceremonies which he loved so much, a window, with his image upon it, was placed in the church. And there, to-day and for all time, the worshipper can recall his tragic story, in which there is a moral which he who runs can read.

Next week will appear "Richard Pigott," the second of this series. Mr. O'Connor, always a vivid depicter of character, has used his powers in describing some of the most weird and amazing persons in recent history.

Shall We Fight?

By DAVID STARR JORDAN

A CONFEDERATE officer in Virginia once said to me, "We are glad that the Union is restored. We are glad that slavery is abolished. We are glad that the old Aristocracy has passed away and glad that we have free schools, but for war, as war, there is not one word to be said." And in this he is right. War brings no good to any one. War is the breaking down of all law. When law is destroyed bad laws and bad institutions go with the good ones. And when men begin again they sometimes make new traditions. But no good came from any war that would not sooner or later have come in some other way, if the war could have been averted.

War brings displays of heroism. It does not cause them, and equal heroism will be shown in an earthquake, a shipwreck or a fire. Peace brings greater heroisms without display. War brings out the hidden nature of men, and the most evil displays of cruelty and selfishness, of lust and greed ever seen in this world are those uncovered by war. For men in war have found justification for all crimes and red-handed murderers have been extolled as defenders of country and of religion.

OUR fundamental count against war is its inherent wickedness. We know what is right because it makes for righteousness, for abundance of life. We know what is wrong by its bad fruits, and the fruits of war are evil. War is murder nationalized and glossed by sanctions of patriotism and religion. It is murder by the political group, not alone by the individual. By every code of morals, private war is condemned. By every code of morals, by every test of science, public warfare should be condemned with it.

The nation which goes to war suffers morally, physically, financially. No war can pay its way in any of these re-

gards. It suffers morally because war breaks those bonds of self-restraint it is the purpose of all character building to strengthen. War lets loose all the evil passions in its barbarian's work of man hunting and man killing. To the average soldier this becomes an exhilarating sport, appealing to the latent instincts of savagery. But this obscene sport is opposed to all good morals. War creates and intensifies race and national hatreds, themselves, again, unreasoning survivals of savagery. Moreover, war, war scares and war preparations are incidents about which center the grossest exhibitions of human greed. For those who scent from afar "the cadaverous odor of battle" have furnished the dominant motives for which most wars have been fought. The wickedest cities on earth are among those who have been swollen through the lust of great campaigns. War has for centuries perverted the teachings of history, of patriotism, of morals, or religion throughout the world. War has filled the earth with horrors until the word horror has lost all other meanings. War has filled the world with sorrow. It has been the heaviest burden borne by womankind throughout the ages. If as the Arab proverb says, "God counts a woman's tears" He has an awful charge against us men who so long have glorified successful slaughter.

WAR has made the earth, with all its riches, a bankrupt concern in the hands of its creditors. The nations of the world still owe nearly forty billions of dollars in gold for the cost of past wars. But one great nation has made a beginning towards the repayment of these debts. Were it not for war no nation would ever need to borrow a dollar, and the interest paid yearly on this uncountable sum is small compared with the cost of the wars which are now on. Germany and France, and after them, England and

Russia, with their satellites are engaged in war today, war all the more repulsive because not one of them knows what they are quarreling about. Not actual fighting, now nor at any future time, for none of these can get the money to begin, while those unwary nations which have actually fought on borrowed money are exhausted in men and credit for half a century to come. The cost of war, past and present, is felt every day in the increase of taxation, that is in rising cost of living throughout the earth. The civilized world is an economic unit, and wherever wastes any part of its substance in his degree robs the pocket of each one of us. There is no way of abolishing poverty that does not first strike at the root of waste.

WAR cripples the nation physically by cutting off, without posterity, its strongest and boldest men. The key to national strength in the future is found in the good parentage of today. Like the seed is the harvest. This is the law of heredity. It applies to nations as well as to families, to men as well as to the lower beasts. No nation has ever fallen save through failure to breed from the best. Rome fell when she ceased to breed Romans. Greece declined when her children were no longer Greeks. The evil effect of reversal of selection,—of allowing the weak, the diseased, the timid, the cautious, the greedy,—all those whom war could not use, to serve as fathers of the new generation is the dark cloud which overshadows the history of Europe. So long as "we send forth the best we breed" for war and imperialism, so long shall we at home breed from the second best, and we shall have all the ills of alim-living, of weakness and incompetence, dark shadows in days of peace cast by the splendors of war. For as Benjamin Franklin sagely observed "War is not paid for in war time; the bill comes later!"

The Musings of Hafiz

The Blue-eyed Peril

WHEN a Popular Phrase is in everybody's mouth, it is as hard to remove as a piece of Peppin guns from the jaws of an excited Pomeranian Puppy.

SOME years ago a seemingly intelligent old gentleman, with a bulging forehead, examined seventeen thousand or so blue-eyed cats, and just because a certain percentage of these cats pretended, from sheer boredom, not to hear his tiresome remarks, the S. I. O. G. immediately wrote a large, fat book to inform the Human world that all Blue-eyed Cats were deaf, and in less than no time the Phrase "Blue-eyed cats are deaf" was in everybody's mouth.

HUMAN people, as I have said before, are strangely inconsistent. Many years before this, the same S. I. O. G. (then not so old), had told them that the Human family was descended from the Ape family, and the (to my thinking self-evident) statement was received with yowls of rage and indignation.

The belief that the Blue-eyed cat is deaf has put him into a privileged class. He goes everywhere "upstairs and downstairs and in my lady's chamber"—into the latter most especially. No matter how his fur tint may jar with the color scheme of the boudoir, so long as his eyes are blue he is allowed to remain, and (how little do they suspect it!)—listen to everything that is said. Nor do the Human people resort to that most aggravating of all expedients, spelling words in his presence. For choice morsels of scandal, the deadliest society Dictaphone, has nothing on the Blue-eyed cat.

It is lucky for Human people that Blue-eyed cats cannot repeat what they hear. If the gift of human speech should miraculously descend upon these cerulean-eyed cavedroppers, how many homes would remain intact?

IT is lucky for Human people that Blue-eyed cats are deaf, as that pink-eared rabbits are color-blind or that cross-eyed elephants are subject to Hay fever in the month of January.

How many banks solvent? How many Governors would stay in their chairs?

ONCE knew a cat that everyone supposed was blind in one eye—the good eye was blue—the other eye, which was always closed, was naturally supposed to be the same color. Everyone believed him to be a perfectly blue-eyed cat. He had all the privileges of his assumed deafness. It was only after his ninth death that they discovered his secret—the other eye was brown. He expired very suddenly at a pink tea (attended exclusively by ladies). I am told that he died of heart failure.

IT is time that Human people were told the truth. It is as absurd to suppose that Blue-eyed cats are deaf, as that pink-eared rabbits are color-blind or that cross-eyed elephants are subject to Hay fever in the month of January.

Nor have these heavy charges been confined to industrial concerns. Even railroad securities, supposedly of high grade, have been subjected to like burdens. At a time when the New Haven's credit was still unimpaired, J. P. Morgan & Co. took the New York, Westchester & Boston Railway first mortgage bonds, guaranteed by the New Haven at 97½; and they were marketed at 96¼. They took the Portland Terminal Company bonds, guaranteed by the Maine Central Railroad—a corporation of unquestionable credit—at about 88, and these were marketed at 92.

A large part of these underwriting commissions is taken by the great banking houses, not for their services in selling the bonds, nor in assuming risks, but for securing others to sell the bonds and incur risks. Thus when the Interboro Railway—a most prosperous corporation,—financed its recent \$170,000,000 bond issue, J. P. Morgan & Co. received a 3 per cent. commission; that is, \$5,100,000, practically for arranging that others should underwrite and sell the bonds.

The aggregate commissions or profits so taken by leading banking houses can only be conjectured, as the full amount of their transactions has not been disclosed, and the rate of commission or profit varies very widely. But the Pujo Committee has supplied some interesting data bearing upon the subject: Counting the issues of securities of interstate corporations only, J. P. Morgan & Co. directly procured the public marketing alone or in conjunction with others during the years 1906-1912, of \$1,950,000,000. What the average commission or profit taken by J. P. Morgan & Co. was we do not know; but we do know that every one per cent. on that sum yields \$19,500,000. Yet even that huge aggregate of \$1,950,000,000, includes only a part of the securities on which commissions or profits were paid. It does not include any issue of an intra-state corporation. It does not include any securities privately marketed. It does not include any government, state or municipal bonds.

It is to exactions such as these that the wealth of the investment banker is in large part due. And since this wealth is an important factor in the creation of the power exercised by the Money Trust, we must endeavor to put an end to this im-

proper wealth getting, as well as to its improper combination. The Money Trust is so powerful and so firmly entrenched, that each of the sources of its undue power must be effectually stopped, if we would attain the New Freedom.

How Shall Excessive Charges Be Stopped?

THE Pujo Committee recommends, as a remedy for such excessive charges, that interstate corporations be prohibited from entering into any agreements creating a sole fiscal agent to dispose of their security issues; that the issue of the securities of interstate railroads be placed under the supervision of the Interstate Commerce Commission; and that their securities should be disposed of only upon public or private competitive bids, or under regulations to be prescribed by the Commission with full powers of investigation that will discover and punish combinations which prevent competition in bidding. Some of the state public service commissions now exercise such power; and it may possibly be wise to confer this power upon the interstate commission, despite the recommendation of the Hadley Railroad Securities Commission to the contrary. But the official regulation as proposed by the Pujo Committee would be confined to railroad corporations; and the new security issues of other corporations listed on the New York Stock Exchange have aggregated in the last five years \$4,545,404,923, which is more than either the railroad or the municipal issues. Publicity offers, however, another and even more promising remedy: A regulation of bankers' charges which would apply automatically to railroad, public-service and industrial corporations alike.

The question may be asked: Why have these excessive charges been submitted to? Corporations, which in the first instance bear the charges for capital, have, doubtless, submitted because of banker-control; exercised directly through interlocking directorates, or kindred relations, and indirectly through combinations among bankers to suppress competition. But why have the investors submitted, since ultimately all these charges are borne by the investors, except so far as corporations succeed in shifting the burden upon the community? The large

army of small investors, constituting a substantial majority of all security buyers, are entirely free from banker control. Their submission is undoubtedly due, in part, to the fact that the bankers control the avenues to recognizedly safe investments, almost as fully as they do the avenues to capital. But the investor's servility is due probably, also, to his ignorance of the facts. Is it not probable that, if each investor knew the extent to which the security he buys from the banker is diluted by excessive underwritings, commissions and profits, there would be a strike of capital against these unjust exactions?

The Strike of Capital

A RECENT British experience supports this view. Last spring nine different issues, aggregating \$135,840,000, were offered by syndicates on the London market, and on the average only about 10 per cent. of these loans was taken by the public. Money was "tight," but the rates of interest offered were very liberal, and no one doubted that the investors were well supplied with funds. The *London Daily Mail* presented an explanation:

"The long series of rebuffs to new loans at the hands of investors reached a climax in the ill success of the great Rothschild issue. It will remain a topic of financial discussion for many days, and many in the city are expressing the opinion that it may have a revolutionary effect upon the present system of loan issuing and underwriting. The question being discussed is that the public have become loth to subscribe for stock which they believe the underwriters can afford, by reason of the commission they receive, to sell subsequently at a lower price than the issue price, and that the Stock Exchange has begun to realize the public's attitude. The public sees in the underwriter not so much one who insures that the loan shall be subscribed in return for its commission as a middleman, who, as it were, has an opportunity of obtaining stock at a lower price than the public in order that he may pass it off at a profit subsequently. They prefer not to subscribe but to await an opportunity of dividing that profit. They feel that if, when these issues

The syndicate which promoted the Steel Trust took, as compensation for a few weeks' work, securities yielding \$62,500,000 in cash

Publicity has already played an important part in the struggle against the money trust

were made, the stock were offered them at a more attractive price there would be less need to pay the underwriters so high commissions. It is another practical protest, if indirect, against the existence of the middleman, which protest is one of the features of present-day finance."

Publicity as a Remedy

COMPEL bankers when issuing securities to make public the commissions or profits they are receiving. Let every circular letter, prospectus or advertisement of a bond or stock show clearly what the banker received for his middleman-services, and what the bonds and stocks net the issuing corporation. That is knowledge to which both the existing security holder and the prospective purchaser is fairly entitled. If the bankers' compensation is reasonable, considering the skill and risk involved, there can be no objection to making it known. If it is not reasonable, the investor will "strike," as investors seem to have done recently in England.

Such disclosures of bankers' commissions or profits is demanded also for another reason: It will aid the investor in judging of the safety of the investment. In the marketing of securities there are two classes of risks: One is the risk whether the banker (or the corporation) will find ready purchasers for the bonds or stock at the issue price; the other whether the investor will get a good article. The maker of the security and the banker are interested only in getting it sold at the issue price. The investor is interested primarily in buying a good article. The small investor relies almost exclusively upon the banker for his knowledge and judgment as to the quality of the security; and it is this which makes his relation to the banker one of confidence. But at present, the investment banker occupies a position inconsistent with that relation. The bankers' compensation should, of course, vary according to the risk he assumes. Where there is a large risk that the bonds or stock will not be promptly sold at the issue price, the underwriting commission (that is the insurance premium) should be correspondingly large. But the banker ought not to be paid more for getting investors to assume a larger risk. In practice the banker gets the higher commission for underwriting the weaker security, on the ground that his own risk is greater. And the weaker the security, the greater is the banker's incentive to induce his customers to relieve him. Now the law should not undertake (except incidentally in connection with railroads and public-

service corporations) to fix bankers' profits. And it should not seek to prevent investors from making bad bargains. But it is now recognized in the simplest merchandising, that there should be full disclosures. The archaic doctrine of *caveat emptor* is vanishing. The law has begun to require publicity in aid of fair dealing. The Federal Pure Food Law does not guarantee quality or price; but it helps the buyer to judge of quality by requiring disclosure of ingredients. Among the most important facts to be learned for determining the real value of a security is the amount of water it contains. And any excessive amount paid to the banker for marketing a security is water. Require a full disclosure to the investor of the amount of commissions and profits paid; and not only will investors be put on their guard, but bankers' compensation will tend to adjust itself automatically to what is fair and reasonable. Excessive commissions—this form of unjustly acquired wealth—will in large part cease.

Real Disclosure

BUT the disclosure must be real. And it must be a disclosure to the investor. It will not suffice to require merely the filing of a statement of facts with the Commissioner of Corporations or with a score of other officials, federal and state. That would be almost as effective as if the Pure Food Law required a manufacturer merely to deposit with the Department a statement of ingredients,

instead of requiring the label to tell the story. Nor would the filing of a full statement with the Stock Exchange, when incorporated, as provided by the Pujo Committee bill, be adequate.

To be effective, knowledge of the facts must be actually brought home to the investor, and this can best be done by requiring the facts to be stated in good, large type in every notice, circular, letter and advertisement inviting the investor to purchase. Compliance with this requirement should also be obligatory, and not something which the investor could waive. For the whole public is interested in putting an end to the bankers' exactions. England undertook, years ago, to protect its investors against the wiles of promoters, by requiring a somewhat similar disclosure; but the British Act failed, in large part, of its purpose, partly because under it the statement of facts was filed only with a public official, and partly because the investor could waive the provision. And the British Statute has now been changed in the latter respect.

Disclose Syndicate Particulars

THE required publicity should also include a disclosure of all participants in an underwriting. It is a common incident of underwriting that no member of the syndicate will sell at less than the syndicate price for a definite period, unless the syndicate is sooner dissolved. In other words, the bankers make, by agreement, an artificial price. The agreement is probably illegal under the Sherman Anti-Trust Law. This price maintenance is, however, not necessarily objectionable. It may be entirely consistent with the general welfare if the facts are made known. But disclosure should include a list of those participating in the underwriting so that the public may not be misled. The investor should know whether his adviser is disinterested.

Not long ago a member of a leading banking house was undertaking to justify a commission taken by his firm for floating a now favorite preferred stock of a manufacturing concern. The bankers took for their services \$250,000 in cash, besides one third of the common stock, amounting to about \$2,000,000. "Of course," he said, "that would have been too much if we could have kept it all for ourselves; but we couldn't. We had to divide up a large part. There were fifty-

The main cause of these large fortunes is the high tolls taken by those who control the avenues to capital and to investors

seven participants. Why, we had even to give \$10,000 of stock to ——— (naming the president of a leading bank in the city where the business was located). He might some day have been asked what he thought of the stock. If he had shrugged his shoulders and said he didn't know, we might have lost many a customer for the stock. We had to give him \$10,000 of the stock to teach him not to shrug his shoulders."

Think of the effectiveness with practical Americans of a statement like this:

*A. B. & Co.
Investment Bankers*

WE have today secured substantial control of the successful machinery business heretofore conducted by ——— at ———, Illinois,

The subject to be discussed in the next issue is "Where the Banker is Superfluous"

which has been incorporated under the name of the Excelsior Manufacturing Company with a capital of \$10,000,000, of which \$5,000,000 is Preferred and \$5,000,000 Common.

As we have a large clientele of confiding customers, we were able to secure from the owners an agreement for marketing the Preferred stock—we to fix a price which shall net them in cash \$95 a share.

We offer this excellent stock to you at \$100.75 per share. Our own commission or profit will be only a little over \$5.00 per share, or say, \$250,000 cash, besides \$1,000,000 of the Common stock, which we received as a bonus. This cash and stock commission we are to divide in various proportions with the following participants in the syndicate:

C. D. & Co., New York
E. F. & Co., Boston
G. H. & Co., Boston
I. K. & Co., New York.

Were such notices common, only reasonable compensation would ordinarily be taken; and the investment bankers would "be worthy of their hire."

For marketing the preferred stock as, in the case of Excelsior Manufacturing Co. referred to above, the investment banker was doubtless essential, and as middleman he performed a useful service. But he used his strong position to make an excessive charge. There are, however, many cases where the banker's services can be altogether dispensed with; and where that is possible he should be eliminated, not only for economy's sake, but to break up financial concentration.

The Friendship of Boy and Girl

By ELIZABETH KING-MAURER

Illustrated by Alice Beach Winter

MY friend Wayne is a young business man. The other day he came in with a disgusted expression on his face.

"I've been fishing," said he.

"Judging from your long lure, you didn't catch any," said I.

"Mostly thoughts on life," he replied soberly. "Now that I have the hobby, all the girls in the office are suddenly fascinated with fishing."

"That's fine," said I. "I'm glad to see girls have a genuine interest in out-door sports."

"That's just the trouble. You mustn't laugh at my lack of modesty, but their interest is in me, or rather in somewhere to go and some one to take them there. I tried it. I asked the most enthusiastic one. She accepted with great alacrity. I had to provide her tackle, bait her hook, help her over logs, carry her coat, and what not. Then she chattered so she scared all the fish away. When I told her so, she grew angry and pouted till I had to try the approved masculine arts to keep her from the sulks. No more girl pals for me."

Helen came to me dejected. She flung off her kodak, tossed her hat to the other side of the room, and swung her feet disconsolately.

"Out with it," said I.

"Oh, it's such a queer world. Why can't a boy be just a chum, and not a silly love-maker?"

"I dare say there are plenty who can," and I thought of Wayne.

"I'd like to find one and put him in a glass case. There I go kodaking with Mr. Goodwin; he has to stop and buy me candy, and the way he offered it to me showed he considered it one of the regular female baits. I took two pieces gingerly and he had to carry the box all the way. I could see it piqued him that I didn't jump at the candy. Then I jolly soon found he wasn't looking for anything to photograph. When we got to beautiful trees and nice little lanes where I wanted to try my skill, he up and got sentimental. And then when I got disagreeable and told him plainly that I was out for snapshots and not for any other game, he only became more persistent in his stupid jolly. In other

words, he thought my resistance was part of the little manning game that females are always supposed to play. I loathe him. I'll kodak alone after this."

SO there were Helen and Wayne, unfortunately not living in the same town, each longing for a fine friendship with one of the opposite sex and each unable to find it.

The Helens are partly to blame, and the Waynes are partly to blame; but mostly to be censured are you and I, society, mothers, fathers, older sisters and brothers, teachers and writers of boys' and girls' books. There are many full-fledged Helens and Waynes in America, and very many more incipient ones.

Why do they find frank and joyous comradeship with the other sex so difficult and so rare?

First, comes sex consciousness. Is it rare, even now, that children grow up without being teased about one another? I have seen supposedly intelligent adults tease little boys and girls of three and four years about their sweethearts and beaus. I have heard a college Professor (his subject was not psychology) tease an eight-year-old girl about marrying. The mischief starts right there in childhood. Children of four cannot play together without being reminded of differentiations in the function of two human beings which should not affect them for at least a dozen years.

THEN there are sex manners. It is quite true that a little boy should be polite to a little girl, but what sort of politeness is needed that he should not also apply to his boy comrades? The little girl and the little boy are very early impressed with the girls' being weak and delicate. He mustn't romp and play roughly with her. So his real self is stifled till he gets among his boy playmates. The girl is already a different order of being. Very early he is taught the same sort of manners to her as to his feeble grandmother, and the more thoroughly he is inured with the necessity of treating her as he treats his grandmother, the more nearly alike is his opinion of the two.

She, on the other hand, is even nowadays, decked out in ribbons and starched clothes, in dresses in which she cannot turn somersaults nor do anything else a real, live little girl should want to do. She is still taught that it is not lady-like to run fast and to play heartily; and, above all, are boys' games, that is, games that take intelligence, skill and physical strength and control, sternly tabooed.

So the little boy early becomes conscious of his superior strength and skill. Of course he generalizes, as do his elders, and all boys are superior in every way to all girls. And the little girl becomes conscious of her clothes and her lady-like manners; so a gulf already separates these two young humans. This early-arrived sex consciousness remains all through the early school-days and with each year increases.

NOTES and gifts, a stick of candy, a rosy apple, a tender valentine pass between two playmates; they are desperately in love. Romance will not perish from our hearts. Sickly sentimentalism may die a lingering death, the sooner the better. But with hearty comradeship and spontaneous friendship of boy and girl, there is at last a chance of real romance. That the two, especially the girl, will not dwell on it so long and so secretly will make it only the more healthy, beautiful and genuine when it comes.

The high school boy and girl have always presented the problem of the adolescent. Helping the boy out toward humanness, toward his rightful place in the world, has always been considered worth while. Virile books are written and able magazines edited for him; games are designed to bring out all his growing powers. Hunting, fishing, outdoor sports in general, kodaking, building, gardening, and caring for pets have all been considered his natural rights. All countries of the world, all creatures of the animal kingdom have been described in fascinating boys' books, that his mind may be trained, his imagination stimulated, and his troublesome physical self forgotten. There is every good influence to take him away from sex consciousness.

What has the adolescent girl? Recently, very recently indeed, there have been girls' books of games in which sports needing intelligence and physical strength are described. But she is led by all writers on love-stories. In the girls' columns are always instructions in formal manners—fancy boys stand-

idea that she is only a female with a Manifest Destiny.

THERE has, let us rejoice, gradually come a change. Any number of girls, from high school on, resent being forever fastened to a set destiny. They are earning their way through college and

sible comrade or a much-desired chum, but as if he were a self-conscious member of the opposite sex who expected the conventional old-fashioned attitude. So each would do the other wrong. Very many times have the genuine Helens and the genuine Waynes come to me; high school girls and boys, univer-

"She, on the other hand, is even nowadays, decked out in ribbons and starched clothes"

ing that sort of thing! They are told what they may and what they may not permit boys to do, as if boys were some strange, wild and dangerous species of Fiji Island savage. Innumerable suggestions are also offered as how to entertain "company" and especially on how to adorn their valuable persons. While the boy is sex conscious, he is usually only casually so; he is first of all a citizen of the world which he sets out to conquer. Whereas, the girl, until very recently and sometimes even today, is thoroughly impressed with the

university, and, against great odds and many handicaps, they are forging ahead in all manner of professions. They are striving to be human beings, just as are their brothers, and are aiming to take whatever place in the world their talents warrant.

Were Helen and Wayne to meet in college, so great is the force of mental attitude and common prejudice, it is quite possible that they would not become friends at once; perhaps not at all. Each one would distrust the other. Each one would act, not as if the other were a pos-

sible students, women and men already inducted into the professional or business world, always with a yearning for friendship, yet always with a complaint as to its rarity.

As so many young women are now entering the professions or the business world, it happens more and more frequently that Helen and Wayne will work together on a human basis. They may be in the same library, or teach in the same school, or work in the same office. They may act in the same play or take the same concert tour. The more quickly

any artificial conventions are broken down and the two can meet in honest, sincere friendship, the soldier, more sensible, the higher, more spiritual will become the ultimate relation between man and woman.

There are, unfortunately, altogether too many girls who look to men as bringers of American beauties, of theater tickets, of chocolate creams and, ultimately, of diamond rings. They measure the man's worth by the amount he brings.

There are also, unfortunately, altogether too many young men who want the companionship of young women as they want vaudeville, or comic opera. They want pretty dresses, sweet smiles, clever "jolly." Above all they want to be adored and looked up to; they want their vanity tickled. They marry, often late in life, sweet girl graduates in pale blue, who assuredly will never come within hailing distance of being the equal of their high and mighty lords and masters. Said lords and masters are willing to pay in the approved commodities—candy, flowers, invitations—for it strengthens their self-conceit.

THE more genuine interests Helen has in life, the easier for her to make real friends among men. For one of the frequent reasons men give for not treating girls as friends is that the girls are not interested in anything that they are; that their interests, like the young woman who went fishing, are merely adventitious. So they soon give up trying to find any real basis of friendship. If Helen is in earnest about kodaking and genuinely admires good pictures and criticizes the poor ones of the men who also kodak, she will find that they soon treat her respectfully.

When Helen goes to college, she is quite likely to find that many of the best men students are earning their way. Helen has quite as much money as they; she may have much more. Suppose she meets Fred, who rows as well as she does herself. By foolish convention, he is not only supposed to ask her to go rowing, but to pay for the boat. So he does not ask her often.

Perhaps Charles loves the theater, as does Gertrude. While he has money enough to go in a modest seat alone, he notices that the men who invite girls sit downstairs in expensive seats; that they visit a Palace of Sweets afterward; and that their "girls" wear flowers. If Gertrude could go to Charles and tell him there is no one else with whom she would like so well to go to see Ibsen and

propose a Dutch treat, students' rates, he will gladly accept, if he be fitted for real friendship.

The initiative must come from the girls, despite the fact that that prerogative was supposed to belong solely to the masculine half of creation. He may feel in his heart that, inasmuch as she has as much money or is earning as much as he, that there is a certain unfairness in his having to pay all, and in being scorned, too, if he is not generously frequent enough in his invitations. He is right. But he cannot suggest the change. Rather than do so, he keeps away and many good times are lost on both sides.

AS I was on my way across the ocean to study in Rome, I met a young man who, by chance, was going to the same school. When the boat stopped at Gibraltar, we went together to see the town. He graciously gave all the numerous necessary tips. It set me thinking. I knew that I had quite as much money as he. Furthermore, I saw that we were becoming good friends; we certainly had a great many interests in common. So the next time we went out together, I secretly kept account of what he paid out. Then in the evening, I gently explained my viewpoint.

"We could enjoy so many things together, Mr. X," I said, "but there is always that tipping. I am sure we want to be good friends, but it is not worth your while to have it cost you so many liras every time. Now you spent four liras today. Two of them are coming back to you. You must let me pay half, each time; then we can go together at any time we wish." He saw the reasonableness of it and acquiesced. So we went to museums, theaters, operas, always good friends. Back home was his sweetheart waiting for him. He joyfully told me of her, as if I had been a good sister of his. I felt it as a delicate compliment. So we had many beautiful days as only two people can in such a wonderful city as Rome. But had I not put our friendship at once on what I may term a non-paying basis, very few of our good times would have been possible.

Because women are now coming nearer and nearer to economic independence, their financial relations to men ought accordingly to change. As they ought now to do their half, it is they who must tactfully suggest the change. As this equality of responsibility and initiative is brought about, perhaps the greatest

barrier against the friendship of young women and young men will be torn away. Friendship is now on a mercenary basis. A man is actually considered "small," "mean," if he does not "take a girl out." Listen to young men when they mean what they say, and you will soon find out that instead of regarding it as a wonderful privilege and badge of manhood, that the sensible ones look upon this never-ending "cashing up" as a decided nuisance. It is embarrassing to many, and just when they most need the friendship of women, during their early struggles toward finding themselves and toward making their career, they can least afford to pay for it. What some of them choose as substitutes is a dark question into which fond mamma and frivolous daughters would be unwilling to probe.

YOUNG men often avoid the association of young women because they must leap too many fences of formal etiquette. Girls seem to stand that sort of instruction may be very wise, but it is curious that Wayne, although he really needs the advice, never gets it. He is supposed to know how to behave and if he does not, no one seems to dare to offer any suggestions on conduct. When Helen and Wayne or Charles and Gertrude have their heads full of all manner of common interests, studies, sports, politics, modern questions, then they need very little of these eternal admonitions. A few sensible talks on the reasons why self-restraint in one's emotional nature, especially during the adolescent period, is necessary, will give all those young people who are capable of having a right mental attitude the necessary impetus towards self-control.

So there will come a new relationship between man and woman, spontaneous, unhypocritical, without set rules of conduct or special duties or privileges according to sex; with equal initiative on both sides and with real interests in common. This new friendship will bring out the best of womanhood and the best of manhood, for it is on the high spiritual plane of humanness.

Should Helen and Wayne marry, they will find that this same beautiful friendship with its community of ideals and interests in the same world, is one of the very strong and fine foundation stones of a happy married life.

The Secret

By WITTER BYNNER

TAKING women as they come,
I like them better as they go—
That is what I used to say
And smile to have it so.

Liking women as they went,
That was the way I wisely chose. . . .
Why I asked one not to go
God only knows.

Lemuel Tasteth the Fruits of Antowickedness

MANY a martyr to Justice, they say,
Shackled and pale to the gibbet has fared;
Emmet, Sid Carton and Lady Jane Grey
Walked to their dooms with their necks bent and bare.
Sad folk were they, but not nearly so scared
As Lemuel Bogg when, to face condemnation,
He entered—the sport of the Buck's Township Court—
Charged with exceeding the speed limitation.

SLOW beat his heart like a dirge in his breast,
Low dropped his beard on his bombazine vest.
"Husband, bear up!"
Mrs. Bogg thus consoled him,
"It's a dark, bitter cup,
But y' need it," she told him.
She nobly refrained, though just itching to scold him.

MANY spectators who loafed on the benches,
Hoboes and yokels and fresh country wenches,
Greeted Lem's bitter
Plight with a titter.
Bright beamed the bald spot on Lemuel's head
As he followed the path where the constable led,
Up to the bar where The Law, rather fat,
Paring his nails with a pocket-knife, sat.

SEVERAL felons in motor attire,
Hardened, no doubt, by their former convictions,
Fumbled crisp bills in their heedless desire
To pay their way out and forget their afflictions.
Lem looked in vain for the sinister traces
Of criminal history writ on their faces;
One of them, mentioned as "Mr. O'Connor,"
Took it so light as to joke with "His Honor!"
At last quaking Lem was dragged forth into view,
"Case forty-thousand-six-hundred-and-two!"
Sing-sang the Bailiff—"and that's meaning you,
Charged with offendin' our legalized power
By drivin' through town fifty miles to the hour. . . ."

Close to the bar
Faltered poor Lem,
"Not in my car—
I got one o' them
That only goes twenty. . . ."
"Silence! That's plenty!"
Thundered the Judge,
"More o' that fudge
And I'll send you to jail.
Refusing you hail,
I suppose you'll say next that you think you
know more
'Bout the speed of your car than the Court
does?" Before
His wife could prevent him, poor Lem
answered faint,

"If it's all the same to you,
Guess mebbe I do—
I've drove that durned car most a week, and you aic't."
O what a frown
Did Justice dart down
As from His Honor there burst with a snort,
"Send him to jail for contempt of the court!"
The Constable eager to drag him to shame,
His heart in the game,
Advanced—evil dream!
When suddenly, clear,
A feminine scream
Startled each ear;

And, facing His Honor, stood Lemuel's wife.
"Spare him, kind Judge, for I value his life,
Though he's gone kind o' wheels
Over automobile
And gittin' some slack about comin' to meals;
Spare him from jail for the sake of his name—
For me and my family can't bear the shame.
Though one o' the Boggs was once rode on a rail,
There never was one of 'em sentenced to jail;
And think of the shock
That the prisoner's dock
Would give to my son-in-law, Percival Brown,
Of very fine family livin' in town.
And think of Katurah—Yer Honor, you oughter
Spare Mr. Boggs for the sake of his daughter
Who never could face
The awful disgrace
Of court house publicity come to her
race. . . ."

But the Court, merely sneering, "What's
next on the docket?"
The voice of the Bailiff uprose like a rocket,
"Case forty-thousand-six-hundred-and-
three—"
And out of the gloom,
Into the room,
Happy and prankish and jolly to see,
Strode Daughter Katurah and Percival B.,
Case forty-thousand-six-hundred-and-
three!
Mother cried, "Daughter!"
Daughter cried, "Ma!"
Ma sobbed, "You oughter
Do something for Pa—
He's total disgraced—we're arrested,
we be!"
Katurah smiled lightly
And chirruped quite brightly,
"Arrested? What fun! So are we!"

(TO BE CONTINUED)

"There was something in that nervous, eager walk that seemed to speak ill for Père Michel's household."

The Eye of a Needle

By MARJORIE L. C. PICKTHALL

Illustrated by William J. Glackens

"HERE he is, the blessed man."
"A blessed man, Zephyrine, and a blessed sermon. I could see the fires of hell playing round old Dunoir's head."

"He is one of the holy saints, already. It is but to shut one's eyes, and roûd, there he is with wings and a crown, looking as natural as life."

"Tais-toi, Adolphe. Wipe thy nose, misérable. M'sieur le curé comes."

"B'soir, b'soir, mon père."
"The blessing of God be upon you, my children. Bon soir, Madame. Bon soir, Ma'am'selle Zephyrine."

Père Michel, as usual, shot past his waiting flock with a long stride, his rusty soutane flapping round his heels. At the corner under the great willow by Dunoir's house he stopped and wiped his face upon a blue checked handkerchief. "Holy saints," groaned Père Michel, "that they do not know that they are asking the blessing of a miser."

At the smithy Telephore and Tante Amélie's Apollon were waiting, hat in hand. Père Michel hurried past them with a few muttered words, though Telephore had a small sunflower in his button-hole, and Tante Amélie's Apollon was evidently filled to the brim with news. "They do not know," sighed Père Michel, "that they offer confidence to an accursed miser."

At the bridge a child was waiting shyly with a bunch of white waterlilies. M'sieur le curé laid his hand on the smooth black head, and hurried on faster than ever. There was something in that nervous, eager walk that seemed to speak ill for Père Michel's household. At the height of the windy road he paused and wiped his face again, and looked out and over the valley below, with the white houses and the narrow fields dreaming in the twilight. "Holy Virgin," cried Père Michel, flapping the poor lilies violently up and down, "they do not know, they do not know, that they offer flowers to Achan!" He fairly ran into his own gate.

With the sorrows of a whole parish to one's heart it is difficult to be a miser. Père Michel felt that he had achieved the difficult. He was hoarding to buy a crucifix.

There was a place, and even a nail, waiting for it beneath his single shelf of

battered books,—on the sunny wall facing the window, where the shadows of wild grape leaves danced all day in the pleasant river winds. But the crucifix still stood, as it had for months, in Monsieur Dunoir's window among the dusty rosaries and the clipped china saïots. It had been made by some old French iron-worker; the cross was of interwoven thorn, and the face of the Christ was touched with a strange rigid beauty. Perhaps Monsieur Dunoir was right in valuing it so highly. As he said above his brandy, "Who knows that this blessed cross was not used by one of the holy martyrs who preached long ago to the assassinating Iroquois? I have never seen so fine a one, I. And the price is ten dollars."

TEN DOLLARS.—As well have said a hundred, with the care of three villages in one pair of old hands. And what would they have said,—Trois Maisons, Terminais, and St. Xavier de Killarney,—if they had known them for the hands of a miser? Père Michel might revolve himself innocently on Monsieur Dunoir by preaching on two Sundays out of four on the sin of intemperance in general and the use of brandies in particular. But the price of the iron cross would not be reduced thereby. And Père Michel might not revenge himself on his own soul. When he recited the Eight Beatitudes, the Seven Deadly Sins, and the Three Evangelical Counsels, he sighed over the poor in spirit, trembled at Covetousness, and blushed for Voluntary Poverty.

Père Michel was no longer voluntarily poor. He had a hoard.

"Accursed hoard," cried Père Michel, as he hurried into his own gate. Little Mère Linot, his housekeeper, met him at the door, dropped a courtesy, took the lilies from his hand and the hat from his head, brushed the dust from his soutane, and swept him into his study,—all in one movement, as it were. "There is a savoury omelette for supper," she said benevolently, and shut the door. Poor Mère Linot. She thought his reverence would be at his prayers. But his reverence, with a guilty face, had taken a little bag from his cupboard and was counting the contents.

"Accursed poverty," said his reverence defiantly.

IT was on this, that bag. It held three or four soiled bills, a silver dollar of the United States, and a ten-franc piece with a hole in it, fondly supposed by Père Michel to be of festimable value,—hélas, without the hole.

Only that day Père Michel had seen a stranger looking in at Dunoir's window. The sight had put him in a fever.

"What is one to do?" he sighed fretfully, as he weighed the bag in his lean brown fingers. "Money comes in at the door like a snail and flies out of the window like a grasshopper. The parish is full of gaping mouths and grasping hands,—God forgive me. First there is poor Flore's baby, and no robe for the christening, and holy saints, if Monsignor had known!—Then there was Telephore and his affair, and then the sickness of Émile. A good man, Émile. And Flore wept for a little lace—But there shall be no more of it. I will give no more to these ingrates."

When Mère Linot came in with the omelette, Père Michel was gazing at the blank wall under the books. He gazed so hard that it seemed that the thorny cross and the face of the Christ grew slowly out of the shadows. But there were only shadows, and the cross was still in M'sieur Dunoir's window.

Unless someone had bought it—
"Malediction," said Père Michel, so suddenly that Mère Linot all but dropped the omelette, "there shall be no more of it. I will give no more." Mère Linot went out in a hurry and reported to Antoine that his reverence would give no more rope in the matter of the handiars, and that old Dunoir might now proceed to hang himself.

PÈRE MICHEL ate his supper. Outside, in the narrow garden, the red phlox and the hollyhocks were in bloom; tobacco flowers shone in the night like stars, and great moths passed driftingly across the beam of light from his reverence's lamp. The crickets whirled in the long, sun-scented grass, and the bullfrogs croaked in the pool below the bridge.

A cow moved far down the road, and it was so dewily still that Père Michel could hear her tearing at the clover between the muffled tinkles of her bell. It was an hour that had been used to bring him peace.

THE good folk going to bed in little Terminais down by the river saw the beam of the lamp. "That is the good man still at his prayers and his sermons," said they. But Père Michel was not praying. He was feverishly calculating how soon, if he gave away no more, the board in the bag might increase to ten dollars.

A faint rustle under the window, at last made him clap the bag into the table drawer and start to his feet. The house had long been still, and only here and there a light burned in the little white houses of Trois Maisons. Terminais, and St. Xavier de Killarney. Père Michel was used to strange visitors at strange hours, — rumor had it that the Evil One had appeared to him one midnight and had asked for some plug-tobacco, — and with his treasure in heaven, he had feared no man. Now that he was laying up treasure on earth in a little brown bag, he feared robbers. The rustle came again.

"It may be an assassin," murmured Père Michel, "come to steal my hoard." He looked round for a weapon, but there was nothing save the fork with which he had eaten his omelette. It was a long steel fork; he thrust it up the sleeve of his soutane and went boldly to the window. "Qui est?" he cried sternly, and thrust out his head among the drifting moths, the dew and the perfume of the summer night. "Qui est?"

A YOUNG man was leaning against the wall within reach of his hand. The light shone on a face new to him, yet forever unforgettable, — a wild dark face, with eyes that gleamed in the shadow like the eyes of a trapped deer, and torn black hair wet with dew. The whole of him showed drenched and torn as if with heavy storms. Yet all the night was peace.

"Who are you? What do you here so late?"

There was no answer. The eyes were like the eyes of some dazed animal, and there was such wild dread in them that Père Michel straightway forgot his own.

"What hast thou, my son?"

"M'sieur," — the words came slowly, as from one unused to speech, — "M'sieur, I would — speak with you."

"Do you know me, my son? I do not know you. Or I have forgotten."

"Mon père," — the title came, as it were, unwillingly, — "mon père, I cannot eat nor rest. And perhaps you have not heard. *J'en suis incrédule*!"

"I heard. Speak then, my child," said Père Michel placidly, and sat down in his old chair.

The lad stared at him, leaning against the wall. He seemed to be urged on by some overwhelming need, brid back by some great terror. His breath shook him as he stood, as though he were running, and he moved his lips again and again before he spoke.

The words seemed to be wrenched from him, so that he spoke against his will, and yet with a passionate eagerness.

"My father"

"Go on, my son."

"My father, I have killed a man —"

The little room was very still. A moth drifted in at the open window, and settled on the curtain like a white flower. Père Michel did not look up. He was an unlearned, simple old man, but for forty years he had known the souls of men and women. That little room had heard many a strange confession.

"Go on, my son."

BUT the lad leaning against the wall, his head a blur of black and white in the shadows where the crucifix would hang, only said again, "I have killed a man, m'sieur." He seemed to waver to and fro like a flame in the wind.

"Little Mère Linot, his housekeeper, met him at the door, dropped a courtesy, took the titles from his hand and the hat from his head

"M'sieur, you do not know me. I saw you today — for the first time."

"At mass?"

"M'sieur, no. I am an unbeliever."

"Come in, my son."

The lad hesitated, came forward slowly, and climbed, slowly as an old man, through the low window. All the ragged length of him suggested strength, yet he moved as an old man moves under a heavy weight. Père Michel had seen that look before.

"There is a chair, and food and drink. Sit down and eat, and speak when thou art ready."

The wild eyes shifted from the lamp to the old man's face, and stayed there.

"In malice or in anger?"

"I struck in rage before I knew, but I hated him, and hate still. I had no thought to kill him, and I hate him, but I cannot rest. No one will find me or know where I have fled, but I cannot rest."

"No, my son, I know."

"I ran away at once. I have been in the forests for days." He stretched out his hand to the light of the lamp as to a fire, and shivered as with cold. "I cannot rest. I have been running all the time, I think. And I have been alone. If that one came near me I would strike him again, but I would rather be alone than that I should be alone with the trees

and the night. I had no sorrow, but I had fear. It was as if one followed me."

"Yes, I know. *Le Bon Dieu* followed you."

"But I do not believe. I came to you as a man, *m'sieur*, not as a priest. I have no God."

"But God has you."

"I do not know. All these days I have been alone. I might not speak to a man, nor see a man's face. Only the trees and the unsleeping nights and the wind in the nights. When I thought of—that one—I was glad that he was dead, yet all night I wept. When I stooped to drink, I saw his face in the water with the look it wore when I struck, yet I cannot strike him now. I thought, if I do not speak of it, I shall go mad. But I do not know

"To find rest?"

"I—I think so, *m'sieur*. To—escape—"

Again there was silence. Père Michel drew a long breath like a sigh.

"My son, you do not believe. Therefore I cannot lay my word upon you nor take any promise from you. I do not even know your name, and do not ask to know it. I can only speak as an old man who has seen much sin and much sorrow born of sin. I will help you—"

A flash seemed to pass over the dark face before him.

"I will help you," went on Père Michel, very gently,—"to go back."

The soft air seemed to take his words and whisper them. There was no sound in the room but the sound of the shabby

Shame and sudden splendid pride touched the shabby old priest. And he turned to the table. "My son, I will help as my Master helped,—with all I have."

HE took out the little brown bag and emptied the soiled hills and the silver dollar and the little gold piece into the hand that had shed the blood of man. And as he did so the man began to sob. He bent above the old man's fingers and his tears fell on them. "You ask nothing, *mon père*, and give all. Perhaps *Le Bon Dieu* is like that. Perhaps—"

Père Michel could not speak, but he laid his hand upon the rough hair. Presently the lad got to his feet, thrust the money into his belt, and stumbled to the door. He did not look back. He was

"I can only speak as an old man who has seen much sin and much sorrow born of sin"

why. Then I came to this place where no one knew me, and I was afraid when I saw faces again, afraid that I should speak of it against my will,—afraid that I should see the men running to take me, and the women shrinking away, and the little children staring—"

THE room was very quiet again, quiet as it had been when it held only the yellow lamplight and the scent of tobacco flowers. Now, suddenly as the fall of a dream, it held hate, terror, despair. The white moth still clung to the shabby curtain, fluttering like a flower as it swayed. A great beetle droned round the lamp, struck the hot shade, and fell. Père Michel lifted it gently and laid it on the cool leaves outside the window. Then he went to the lad and looked him keenly in the face.

"Why did you come to me?"

"*M'sieur*, I do not know. Yours was the first face I did not fear. I thought you would help me—"

curtain swinging, and the whirling of the crickets outside.

"My God," whispered the unbeliever stupidly,—"to go back—"

He stared at the old man, and suddenly hid his wild face in his hands. Without a movement, Père Michel waited.

When the face lifted, it was changed. "That is it," he said with a child's simplicity, "that is it. I do not understand, but, *non d'un zom*, if I go back, I shall rest. I did not think of it." He spoke with the sudden blank acquiescence of a tired child. "I will go back and rest. It will be good to rest, even in prison. But I am weak from running in the forests, and I have no food or money. *M'sieur*, will you help me?"

For one moment a cold thought laid hold on Père Michel's heart and he hesitated.

"You know nothing of me, my father, save that I am a black sinner. But you will help me?"

crying as a child cries, and Père Michel could hear his sobs dying out in the distance and the dark.

Again it was still and sweet in the shabby room, and the sin and tragedy that for a little while had filled it were already no more than a memory and a dream.

Père Michel was down on his knees, praying that a soul might be led into the way of peace. And for himself—

He looked at the empty wall, and it seemed for a moment that the cross hung there, and that the iron thorns blossomed, and the face of the Christ smiled. But it was only a shadow.

"How hardly," he sighed, looking at the empty brown bag, and remembering that moment of hesitation, "how hardly shall a rich man enter into the Kingdom."

"Nevertheless," said Père Michel, humbly bowing his gray head, "with God are all things possible."

ETHEL BARRYMORE IN "TANTE"

By JAMES MONTGOMERY FLAGG

Popularity In Drama

1. Good Work by Ethel Barrymore

ETHEL BARRYMORE began her stage career when she was very young, and, aided by her personal charms and the theatrical fame of her family, gained immediate popularity. She has not been satisfied to rely on that, but has sought parts to test her powers, has worked hard, and has improved immeasurably her grasp and her technique. Her work in "Tante" is much the best I have seen her do. The character is forced sometimes to life, often upon the stage; it appeals naturally both to the dramatic artist and to the public. When it is found in life, it is often in persons endowed with talent of the kind that expresses the thoughts of other persons; the more creative talent is less likely to have vanity, selfishness and waywardness.

In the play, "Tante" is mitigated somewhat from the character as it is drawn by Mrs. Sedgwick in the novel, and the mitigation probably makes it somewhat more representative of life. Mr. Haddon Chambers is an adept at dialogue, skilful in selecting parts of a story that will make a play, and, in this case, happy in inventing an ending which, without in any way contradicting the story, enables us to feel the side of the spoiled-artist which, after all, sets her aside from others. Some of us are tempted at times to speak of the decay of the stage. As an obvious fact, the stage is not decaying but is becoming more interesting, both in the worth of the plays produced, and in the level of the acting. Nobody in "Tante" acts badly, whereas in Frohman productions of ten years ago, the usual rule was for the majority of the actors in any one piece to be wholly futile. There is not a part in "Tante" which is not taken efficiently. Of course it is a play for a star, and, therefore, it centers about the part taken by Miss Barrymore. The famous pianist, living on flattery, witty, penetrating, full of social gifts, is depicted by her in the various phases of the character with entire success. It is a portrait with

which the actress may well be satisfied. The various personages in the play, as well as the play itself, are suggestive, stimulating, worth an evening. The soul seeks confession, and in going on to the next play treated this week, I feel compelled to confess that my democracy is not sufficiently complete to feel that an evening is fairly spent at many of the dramas most satisfactory to my countrymen.

2. A Popular Play

SEATS are being sold, I am credibly informed, to "Potash and Perlmutter" sixteen weeks in advance; certainly on the night when I observed that work of art, there was not a seat vacant in the house, and there was not a moment when nineteen out of twenty persons in the audience did not seem in the very abyss of hilarity. Most of the time it was pure joy, joy composed of sympathetic, admiring amusement. Every syllable that fell from the lips of the comedians seemed to the audience wit compared with which the best of Falstaff would be dull. This riot of humor was broken by pathos, and suspense, and virtuous sacrifices, just often enough to form a contrast, so that the whole emotional gamut could be played upon, without, however, requiring any effort of attention, or any real stirring of the graver feelings. It is a happily concocted dish, with sheer amusement for the substance, and slight ingredients of trouble for the flavoring. It was not difficult to realize with one's imagination why the great American people were having such a marvelous joy-ride. It is not difficult, indeed, to believe that our democracy can seldom give its amplest material rewards to the highest expression of the human spirit (why should it?) but rather to the greatest common denominator; to those expressions which are standardized; which get at the average, and reflect the average back to itself. As soon as you put in anything exceptional, at all out of the reach of the nineteen out of twenty, you decrease your audience. You may please one out of twenty keenly, but the only

possible way to please twenty out of twenty is to put in something which has a general human appeal and also to keep everything out which is not within the reach of all.

"Potash and Perlmutter" is almost exclusively concerned with money. The form of it is the German Jewish jocosity so well known through a multitude of performances. This humor is laid on a plot that tells of the troubles of some garment makers, and it is fair enough to say that while the characteristics of the kind of trades-people depicted are exhibited in a merely farcical way, they are exhibited with intimate knowledge, which is one of the reasons that the piece is so much liked by audiences no small part of whom are composed of people in similar lines of business. It is pleasant for a human being to see those things with which his life is filled reflected on the stage, if the reflection shows knowledge and also induces cheerfulness.

A STAGE which properly fulfilled its place in society would have a great many more plays of literary and ideal quality than we have now, plays giving the most creative thought of the most creative minds; but it would also have a large number of extremely welcome productions with no superiority of any kind, unless indeed the ability to turn out a production that supplies the popular demand is in itself a superiority. At any rate, the only rational censure of our stage is that it does not yet compare with many countries of Europe in plays and acting and producing which lead, even as colleges, libraries, museums, and symphony orchestras lead. It is not a censure of the stage that it feeds to a multitude what the multitude wants. Nobody will be found, probably, complaining of our most successful plays, of our most successful magazines, of our most successful articles of commerce, when we have brought about a civilization in which there are also supplied periodicals, books, plays and articles of commerce which satisfy the alert and best trained minds.

N. H.

Madison Square

By JEFFERSON B. FLETCHER

During the recent campaign for endowment of the Young Men's and the Young Women's Christian Associations, an electric "clock" on the Metropolitan Tower indicated the progress of the fund

THE place now lieth still as sleep,
Lulled by the mother-city's croon.
O'er many a dainty minaret,
In silhouette,
Pagan Diana seems to leap
Across a ragged moon.

Yet higher, there glimmers, pricked in light,
A clock, whose hand—a flaming rod—
For all men measures, hour by hour,
From yon dark tower,
What Mammon yieldeth of his right
For quittance unto God.

Around me, dim shrunk twisted forms,
Face upward to the tearless stars,
On benches coil, or overhang,
The hour-bells clang.
Through bright arcades gay fashion swarms
To throbbing motor-cars.

The Mexican Revolution

By McGREGOR

The situation in Mexico today and the character of its leaders. Some of the reasons why this peasant uprising has such devoted supporters

AMERICANS are accustomed to speak of the Madero Revolution, the Orozco Revolution, the Huerta Revolution, the Carranza Revolution, while the Zapatistas hardly deserve the name of Revolutionists, considered to be merely roving companies of bandits with loot their aim, and murder their pastime. But to the Revolutionists themselves, the Revolution is one. They call it The Revolution. There are but two parties in Mexico: Friends of the Revolution, Enemies of the Revolution. Orozco is detested as a traitor to the Revolution, for having taken up arms against President Madero at the instigation of the Chihuahua City Científicos. Zapata is honored as a patriot because he refused to make peace with Madero when the President had endeavored to harmonize all interests by appointing Científico leaders, enemies of the Revolution, as his Cabinet Ministers. Huerta is a traitor to the Revolution because it was in the culmination of a Científico plot against Madero that the President was deposed and assassinated, and when this plot was revealed, during the bombardment of Mexico City, Zapata sent word to Madero that he would march to his relief, a message that came too late. It is all very confusing. Yet Zapata, in his consistent course, is the key to the Mexican Revolution.

HE is a Mexican, half Spaniard, half Indian, illiterate but not uneducated, having the wit to surround himself with trained men, among whom an unknown school-teacher has become conspicuous. He comes from the mountainous State of Morelos, where, next to Chihuahua, the land problem has become most acute, and he is passionately determined to make no compromise with any one until this problem is solved for Morelos. Caesar had some experience with those he styled *homines asperi* of Montani. Zapata organized his rough mountaineers before Madero landed in Mexico from his exile in the United States, and when Madero's forces captured Juarez, Zapata was heading an army that was only six hours from Mexico City, and this menace from the South had perhaps as much to do

with the resignation of Diaz as the larger uprising in the Northern States.

When de la Barra became Provisional President, Zapata offered to lay down his arms on the condition that no Federal troops should be sent to Morelos and that the people should be allowed to elect their own governor without the presence of Federal officials. This offer was declined and Huerta was sent to subdue Zapata, with indifferent success. He continued to fight for the Revolution under Madero's Administration, during its last days being the only one who kept alive the Revolutionary flame, though there was smoldering discontent all over Mexico, that the enemies of the Revolution were in power at the capital. He has continued his warfare under the Huerta régime, in spite of a wholesale massacre of his people, and with Morelos as a base has now extended his operations into the State of Mexico on the West and into Puebla on the East of the capital city, so that his forces now surround it on three sides. In the meantime he has acknowledged allegiance to Carranza, as being a true friend of the Revolution.

CARRANZA also, while personally loyal to Madero, had begun to despair of securing any permanent results from the Revolution when the news came of Madero's overthrow, accompanied by a telegram to all the governors of the Mexican States, demanding allegiance to the Huerta régime. Carranza declined to acknowledge the legality of the bloody proceedings at the capital city, which position has been declared the correct one by the President of the United States. Those who have been misled by the newspaper stories or have been biased by a certain provincial attitude of mind toward Latin-Americans generally and Mexicans in particular, are invited to consider the orderly progress of the Revolution, under Carranza's leadership, which Madero began but did not complete. By the same token, Huerta is the successor of Porfirio Diaz, the same Científico politicians controlling the Huerta as controlled the Diaz régime. The Federal soldiers are the remnants of the old army of Diaz, supplemented

now by recruits impressed into service. The State militia, on the other hand, are Friends of the Revolution. Saltillo, the capital of Coahuila, of which Carranza was governor, duly elected by the people, was in the hands of a Federal garrison. Carranza left his capital with fifty men and sent word to the militia to rally to his standard. He had collected a militia force of 5,000 men for the war against Orozco. With the first 300 that assembled, he attacked Saltillo, but was repulsed. He then retired to the Guadalupe Ranch, and there, largely through the good offices of R. V. Pease, a member of the Mexican Congress, Carranza was brought into conference and correspondence with other Governors of States and with the military chiefs. These adopted the Plan of Guadalupe, repudiating the government under Huerta, executive, legislative and judicial, proclaiming Don Venustiano Carranza, Chief of the Revolutionist forces, then named "Constitutionalists," granting him executive authority in the States that acknowledged the Government of Huerta, and executive power in the Nation upon the occupation of the City of Mexico, with authority to convolve an election by the people, when he is to surrender the Presidency to the person elected. The land question is held in abeyance until the Revolution is successful, but the platform to which Carranza and all Friends of the Revolution subscribed calls for the restoration and division of the lands, the San Luis Potosí Manifesto.

SOME knowledge of the geography of Mexico is necessary to a proper understanding of the success of the Revolution under Carranza. Lower California is a Territory, sparsely settled, not worth while contending for, as yet, by either party. South of Arizona lies Sonora; next comes Chihuahua, touching New Mexico and Texas; then along the Texas border, Coahuila, Nuevo Leon, and Tamaulipas, on the Gulf. In Sonora, Governor Maytorena sent 2,000 militia under General Obregon, collected under a former Governor for war against the Yaqui Indians, into the field against

Photo by Paul Thompson

The government's crack regiment in the streets of Mexico City

to the mountains where he lived for years an outlaw. Such stories are numerous enough in Mexico, and remind one of the condition of the French peasants and their treatment by the nobility, of the *jur primas* north and other legal chains upon the persons of the peasants, before the French Revolution set them free from oppression and outrage. When Madero entered Mexico, Villa presented himself before him, told his

and went to El Paso, living there until the Revolution under Carranza began. He left El Paso for Chihuahua with seven men, in March, and by June his force had grown to an army of 1,200, and all of Chihuahua was under his control except Juarez and Chihuahua City, where Federal garrisons were stationed.

IN Carranza's own State of Coahuila, the Federals were soon pent up in Saltillo, the capital, and in Piedras Negras, opposite Eagle Pass, Texas. General Pablo Gonzales was made Commander of the Division of the Northeast as General Obregon was of the Northwest. Gonzales rapidly over-ran Nuevo Leon and Tamaulipas, leaving only Monterrey in the first and Nuevo Leon and Tampico, in the second, under Federal control, garrisoned cities.

The second tier of States, south of these just mentioned, starting with the West Coast are Sinaloa, with Tepic just South of it, Durango, Zacatecas, San Luis Potosi, touching the northern part of

Veracruz.

Felipe Riveron, Governor of Sinaloa, was ordered to Mazatlan, by Huerta, where it was planned to sink him quietly in the waters of the harbor. But through the protests of his wife, he was sent on to the penitentiary at Mexico City, whence he escaped, going first to Cuba, and later joining Carranza. Over in Los Angeles, going to school, was one of Madero's generals, Iturbide, twenty-four years of age. Riveron sent for Iturbide, who, with the help of the victorians

Federal General Ojeda, defeating him in the first pitched battle of the present war, at Santa Rosa, where a thousand men were engaged on either side.

Huerta sent heavy reinforcements of picked troops to Ojeda and, on August 13, the important battle of Santa Maria was fought, with 4,000 men on each side. Obregon out-generalled Ojeda, the militia proved themselves better soldiers than the Federals, and Ojeda was overwhelmingly defeated, losing 600 prisoners and 10

field pieces to Obregon, while he reached safety at Guaymas on the Gulf of California, with only a thousand men surviving. Huerta characteristically strove to offset the rumors of defeat by promoting Ojeda, to the huge delight of the Constitutionals.

Governor Abraham Gonzales, of Chihuahua, refusing to acknowledge Huerta, was taken prisoner and ordered sent to Mexico City, and was murdered, en route, under the well understood fiction of the Law of Flight, "killed to prevent escape." But Francisco Villa, now the popular hero of the Revolution, took up the Revolutionary banner in Chihuahua. Let us consider him a moment, for his case is typical. He was born a peon, and was living his humble life on one of the great haciendas of Chihuahua, when his sister was brutally outraged by his feudal lord. There was no redress in law for the peon, so he took the law into his own hands and killed the hacienda lord. Nor was there protection for Villa, by written or unwritten law, and he escaped

story, and was welcomed into the Revolutionary ranks. His courage and his native gifts of leadership were conspicuous in the first capture of Juarez under Madero, and he was promoted. Later, in the war against Orozco, Huerta accused Villa of disobedience to orders, court-martialed him and would have executed him except for Madero's interference. He was taken to the penitentiary at Mexico City, escaped,

Rebels returning to camp after the victory of Juarez

Sonora troops, cleared Sinaloa of Federal troops, except the garrison in Mazatlan. Governor Martin Espinosa, of Tepic, had a like experience, was captured and sent to the Mexico City penitentiary, escaped to Cuba, then joined Carranza, and organized the Constitutionals in Tepic, clearing it entirely of Federal troops. In September, Calixto Carreras and Tomaso Urvina, took possession of the whole of Durango. Pastor Román, a Mexican scholar of French descent, being appointed Governor. The northern part of Zacatecas and of San Luis Potosí also came under Constitutional control.

South of Tepic, the Pacific Coast runs almost East and West, and the Pacific States remaining are Jalisco, Michoacan, Guerrero, Oaxacan, and Chiapas, touching Central America. Jalisco and Oaxacan have each a population of more than a million souls, a happy, contented, prosperous people, living on their own farms, and with none to make them afraid. They have been undisturbed by the Revolution, and the Revolutionists have no desire to disturb them, because for them the land question was some way solved without a revolution. There are Federal garrisons in their capitals. But in Colima and Michoacan, Gertrudis Sanchez, a powerful and popular leader, is operating, while Zapata's operations extend from Morelos into Guerrero, another mountainous State, warlike by nature as well as by name, its people also protesting against the alienation of the lands from the users of them.

ON the Gulf Coast, opposite, lie the four States of Vera Cruz, Tabasco, Campeche, and Yucatan. General Candido Aguilar is operating in Vera Cruz among those precious oil wells, on the Coast. Governor Camero Valles of Yucatan, in exile, but hovering near, is directing the organization of Constitutional forces in Yucatan and Campeche, while in Yucatan are the deported Yaqui Indians, working on the henequin plantations, from which come the jute which is sold to the American Harvester Company, by a multimillionaire Mexican

corporation. The Yaquis have wronged to avenge. A thousand of them in Sonora have been fighting on the side of the Constitutionals with the primitive bow and arrows, for want of firearms.

Remain the States surrounding the Federal District, somewhat larger than the District of Columbia, in which the National Capital is situated. Beginning on the West there are Guanajuato, Queretaro, Hidalgo, Tlaxcala, Puebla, Morelos and Mexico, the last three overrun by the Zapatistas. The others are in the hands of the Federals.

ABOUT the middle of October, after long and careful planning, Carranza deemed the time ripe for a simultaneous attack upon the cities where Federal garrisons were located.

General Villa was sent against Torreon, an important city on the Mexican Central Railroad, about half way between Juarez and Mexico City. Torreon was taken. And, by the way, the consular reports from Torreon, after the battle, do not bear out the press dispatches concerning the wholesale murder of defenseless prisoners. We Americans might remember that General Scott celebrated his entry into Mexico City by hanging forty deserters. Next Monterey was captured, but was evacuated when Federal reinforcements arrived. Villa marched northward from Torreon to Chihuahua City and attacked it, attaining his object of withdrawing the Federal troops from Juarez, then, on November 16, made his unexpected night attack upon Juarez and captured it. Meantime, on November 14, Culiacan, the Capital of Sinaloa, was taken, and on the 17, Victoria was taken by Gonzales, then evacuated, then retaken the last days of November. General Salazar, a soldier of Madero and therefore deemed a traitor to the Revolution, was sent by Huerta from Chihuahua to fight with Villa and to retake Juarez. Villa met him, a few miles south of Juarez, and on November 25 and 26 won the most signal victory of the Revolution, overwhelming Salazar, capturing 700 prisoners, many field pieces and much ammunition, sorely needed,

and driving the Federals southward again toward Chihuahua City, which was later evacuated by the Federals. While the battle South of Juarez was raging, General Gonzales, at Santa Cruz, defeated a force of 4,000 Federals, driving them back to Monterrey, which he proceeded to besiege. And General Aguilar, threatening Tuxtepec, holds the line of communication between Tampico and Vera Cruz, with millions of dollars in oil and oil properties under his sole protection.

THE latest authentic news from Mexico City is that the garrison is reduced to three regiments, two of them officered by boys from the Military School at Tlalpam, whence, less than a year ago, Mousdragon marched to the capital to overthrow Madero.

If Zapata had any cannon, he could probably capture the capital before the Revolutionists from the North could reach the city.

AND the plans are all made for the rapid convergence of the forces from Sonora and Sinaloa and Durango, under Obregon, uniting with those of Coahuila and Nueva Leon and Tamaulipas, under Gonzales, and the victorious army under Villa, in the center, for the march along the old National Road, the Mexican Central Railway, now, to Mexico City. Guaymas, Mazatlan, Saltillo, Monterrey, and Tuxtepec are surrounded. Then there remain only four garrisoned cities, Zacatecas, Aguas Calientes, (with San Luis Potosí to the East), Guanajuato, and Queretaro, between the united armies of the North and the capital. The borders of Morelos, Zapata's State, are only twenty miles south of the capital.

Whether Huerta will die defending the capital, or whether he will escape to Europe as so many of his predecessors among Latin-American Dictators have done, or whether Uncle Sam will have something to say about that, and whether he will be tried under law for his crimes, or suffer the fate of poor Madero—all this is on the knees of the gods.

What They Think of Us

The Weekly Harper

Lily S. Richard, Newspaper Enterprise Assn. Cleveland (O.)

I am now ready to offer my tribute to the new WEEKLY. I waited until you had tuned it up and have studied details as well as policy and spirit. All are fine and the improvement is most encouraging. At first I feared you might overshoot. But my newsdealer tells me you aren't. And I am glad to see how well you are securing the elusive lightness of touch and variety of appeal.

James McCarty, Consulting Engineer, Hudson Falls (N. Y.)

Enclosed please find check for \$1.40 for which kindly forward by parcel post twelve copies of Nov. 22 issue of HARPER'S WEEKLY.

I feel that the long night of innocent stupidity of the industrious producers of real wealth, on this continent, is coming to an end; and, that day of economic intelligence dawns through the light which the last number of HARPER'S WEEKLY radiates through the land.

After thirty-eight years of modest effort, mingled with hopes and fears, as to the final outcome of the struggle for economic justice, which was made in the seventies, the last issue of HARPER'S WEEKLY makes me more fully appreciate the sentiment which Jacob expressed upon finding his favorite son Joseph still living, and exclaimed in the fervency of a grateful heart: "Now let me die."

Edward D. Eaton, President, Columbia Graphophone Company, New York City

As a practical observer and student for twenty-five years of the problems presented in my own business by Our Foreign Markets, I wish to express my appreciation of the insight and grasp shown in Mr. Amos Stote's article in HARPER'S WEEKLY for November 1. Mr. Stote has compressed a great deal of valuable information into small space. You and he are to be thanked for giving publicity to such helpful and necessary knowledge of an important subject.

Edward H. Huxley, New York City

I have been much interested in the articles covering Foreign Trade, which have been appearing recently, written by Mr. Stote.

My business leads me to be very much interested in foreign trade, and I have been pleased to notice that these articles seem to have a distinct commercial value, which is perhaps somewhat unusual in the writings of a literary man.

Krook (Iowa) Constitution-Democrat

To see in which direction the cat would jump, the Constitution-Democrat has withheld comment until the present on the change in the editorship and policy of that "Journal of Civilization," HARPER'S WEEKLY. The conclusion arrived at, after some two months' watching of the feline, is that she has made straight for the cream. Sure thing, there is no skinnier milk in the offerings of HARPER'S new editor. Haggood is making a periodical that by its tone must force to rattle the dry-as-dust bones of national journalism. His hits at political and social piracy are all from the shoulder; and the campaign for modernism has no stronger exponent than this man who is not afraid. Good luck and success to him.

From the Century Magazine

Evening Sun (N. Y. C.)

Who, in the beginning, waked our "sense of sinning," made our morals stronger? Took away our youth and stripped us without ruth and left us kids no longer?

Answer: HARPER'S WEEKLY, who was it that bleakly froze the innocent sense of mild diversion known to Greek and Persian?

Whence our moral mentor?

Dang it, Mr. Haggood! Hang it, Mr. Haggood!—it was you that done it!

When the world was warmer there wasn't no reformer.

The first one, he begun it.

And now our joy has died, sir, you aren't satisfied, sir?

You take the world, and run it!

Towson (Maryland) New Era

Newman Haggood is writing some sprightly and stimulating editorials for the rejuvenated HARPER'S WEEKLY. Then, too, he is publishing some cartoons by Cesare and others that show up humanity in the raw and get on the nerves of people who think plush-covered thoughts.

Now Haggood touches your mind like a wind after a rain. Makes you think "It ought to be spring pretty soon." All that he brings you is face and fair,—and yet you know it's only a promise of better to come.

Strange as it may seem, he admits there are women on this earth, and that they face problems similar to those which male men faces, and that they have brains to think with and that many of them use them.

Chicago (Ill.) Public

HARPER'S WEEKLY is never without interesting matter, but the issue of November 8th contains much of extraordinary interest.

New Haven (Conn.) Courier

HARPER'S WEEKLY has printed, with the obvious consent of President Wilson, the informal address he made to the newspaper writers stationed at Washington when he first made their acquaintance at the White House. It was an extraordinarily intimate address, and that it was regarded by the newspaper men as sacred stuff is shown by the fact that not one word of it appeared in print until released months afterward by the President himself.

George W. Brown, Portland (Me.)

You are giving us illustrations just the same, the ill part is surely correct. It makes us sick to our stomach to look at them. It gives your paper a sick look and we believe it will make it had for your circulation. We like Leslie's very much. It is a clean, wholesome, high grade illustrated publication.

Margaretta Tuttle, Cincinnati (O.)

I am deeply interested in the stir your paper is making among the women.

Edna Porter, The Everywoman Company, En route (N. Y.)

Just by way of letting you know how much I enjoy the "WEEKLY." You are to be complimented upon such articles as "The Young Suffragists" by Winifred Harper Cooley, "The Woman of It" by Ethel Watts Mumford, and others. I enjoy every number.

THE BATTLE OF THE LINES

Splendid defensive work of the Navy forwards when first their goal was menaced. The secondary defense is shown running up, but with nothing to do. Toward the close, however, the Army forwards got the jump on the Annapolis line, especially in the tackle positions

Current Athletics

By HERBERT REED ("Right Wing")

THE Army defeated the Navy in one of the most brilliant games of the 1913 football season largely through superb coaching, generalship, and condition. The fact that the coaches used what has come to be known as the "open game" when within striking distance of the goal line has led hasty critics to believe that the soldier players borrowed something from the West. As a matter of fact no play used by the Army in its big game came from any other source than its own coaching staff, and the entire football campaign at West Point was laid out and committed to paper by September 13. I had myself thought that the remarkable success of Notre Dame with the forward pass had convinced the Army coaches that this play was an unusually effective scoring weapon. Since that time, however, I have learned that Lieut. Daly and his aides had been working on this particular feature of football from the beginning of the season.

THE victory over the Navy, taking into consideration all the hands of football played by the West Pointers, belongs first to the team, and second to purely Army coaching. It is true, of course, that the Army's head coach was influenced to some extent by his football schooling at Harvard University, but it must be remembered that Lieut. Daly was also a remarkable player while a cadet at West Point, and that his chief assistant, Capt. Ernest Graves, was a product of the same school, although, like his chief, thoroughly in touch with Harvard football. The theories of line play promulgated by Capt. Graves are known in Boston as "Graves' Bible." He has set his mark on football as indelibly as any other man who has ever played the game. About Lieut. Daly no follower of football has ever been in doubt.

Such a combination would naturally lead to the selection of an able corps of assistants, and a coaching system that would perfect get under way with the opening of the season. When such a staff as this is in charge of the building of an eleven it is idle to presume that any extraneous influence would be allowed to upset it at the eleventh hour.

I YIELD to no one in consideration and appreciation of the best of Western football, but it is a mistake to suppose that the so-called and the real "open" games are not known in the East, and used with effect when opportunity offers. Any one who saw the Colgate game at West Point must have realized that the Army coaches were overlooking nothing in the way of the open game, and must have realized also that when the eleven met the Navy the Soldiers would be prepared to use every form of attack known to modern football. When the test came at the big game it was apparent, as it had been all season at the Point, that there was little or no chance to accomplish anything in the line of direct attack against what was probably the strongest line on the field this year.

Fortunately for the soldiers, the sharp charging of their own forwards offset to some extent the natural physical superiority of the first line of Navy defence. After that it remained for the Army backs to show more speed, more versatility, which means in the long run a more resourceful coaching system.

In the face of such a game as the Army played it is remarkable that any one should credit for a moment the story of the intervention of a strange coach either at the last moment before the game, or between the halves. There was nothing revolutionary, nothing of the "brainstorm" about the type of the Army play. It was the style of game which the rule-makers had intended should be played, and, indeed, the Navy, albeit defeated, was not far from the same standard. It was unfortunate for the midshipmen that one of their best backs, McReavy, was disabled at an early stage, but in the end I don't if their first string would have survived an ill-planned defence.

ESPECIALLY in the wide-open game used by the Army in the best tactical territory was the precision of the soldier coaches justified. The Army forward passes used from the proper place and on the proper down, were so perfectly protected that there was no chance of their acting as boomerangs. When Pritchard, the little field-general of the Army eleven, failed to find his man uncovered, he

dashd the ball to the ground, which cost him nothing but the loss of a single down. In the case of the successful passes, the guarding against a possible interception and run-back was the best I have seen this season. Much has been said about the use and abuse of the forward pass, and little about the use and abuse of what is best known as the "long gainer." Both Harvard and Yale, the former with Mahan, the latter with Ainsworth, not to mention the Navy, with Nicholls (from the kick formation) sought to shake a man free for a touchdown, but it remained for the Army, carrying an end around behind the prettiest interference of the season to cover the opponents' territory to such an extent as to insure practically a touchdown.

OPEN play, real and so-called, has been used as a "demoralizer" before this season, but the effect of the successful "long gainer" in this respect was never more in evidence than in the Army-Navy game. Had the Army reached the vicinity of the Navy goal by any other method, it is doubtful to my mind whether the succeeding plays would have been so eminently successful. Used at the psychological moment, considering not alone the position on the field, but also the state of the Navy defence, the one "pinwheel" used by the soldiers was practically without flaw. It seems strange that a play of this character should be considered as radical, in the light of the fact that some of the best coaches in the East as well as in the West have been working along these lines.

It was fortunate for the game that the final match showed something approaching the full possibilities of the modern strategy and tactics. The tactical department has survived every change in the rules from time immemorial, but it is only in recent years that the strategic department, today the supreme test of the game, has had full sweep. All of which means that we are rapidly approaching an ideal game, in that one team, one coaching staff, and one captain, learning from the other, will help lift the play to that standard beyond which only individual genius can progress.

For Cheering Refreshment

—for delicate flavor—for tempting aroma—for uniformity of blend you should serve Ridgways Tea.

Every cup brims with the goodness of the choicest India and Ceylon crops—grown, picked, cured and blended with the expert skill that has made Ridgways the favorite tea in England for over 75 years.

Packed for American tea-lovers in air-tight packages of 1-4 lb., 1-2 lb. and 1 lb.—full weight guaranteed. Sold by all grocers.

Get your daily supply of Nylo chocolates and send with you. They are sold only at a limited number of stores including Nyal Drug Stores. Write name and address plainly. Send to: New York & London Drug Co., 175 Park St., New York City. Windsor, Ontario, Can.

A Case of Libel

By FLOYD DELL

THE *Masses* ran in its July issue a cartoon by Art Young, one of the nineteen artists and writers who cooperatively edit and publish this radical review of contemporary life. It showed a reservoir, the source of supply for the cities and towns seen in the background of the picture. Into this reservoir, which was labelled "The News," a man was depicted as pouring "lies," "suppressed facts," "prejudice," "slander," and "hatred of labor organizations." The figure of the man was labelled "The Associated Press." There was an editorial to correspond.

In publishing this cartoon and this editorial, the *Masses* expressed vividly and morbidly a resentment which has been expressed many times, more mildly or more indirectly, by those who have struggled with the problem of getting the news in which they were especially interested before the people. The resentment may or may not be just. But thousands of persons can be found who believe, as a result of personal experience, that the Associated Press does suppress and distort certain kinds of news.

The fact seems to be that the general policy of the majority of American newspapers is unfavorable to the publication of news in the interest of various reforms and practically all revolutionary activities; and that the Associated Press, which serves those papers, is imbued with the same prejudices. This is only human. It is not necessary to imagine that there is a definite conspiracy to falsify and suppress news. But the power and influence of the Associated Press makes it inevitably stand, in the minds of many people, as being morally responsible for the state of affairs that exists. The *Masses* cartoon merely said what among radicals—including Socialists, reformers, workingmen and journalists—is very generally believed. What these people think, the *Masses* cartoon said.

BUT among other classes of people, indubitably those who conduct the activities of the Associated Press, a different view is held. Therefore John Doe proceedings were brought in the Municipal Court of New York against the *Masses* for criminal libel. The case was brought before Justice Brever, who looked at the cartoons and dismissed the case for lack of evidence.

The grand jury took the case more seriously, and found an indictment for criminal libel. At first, it is understood, the whole nineteen editors were to be proceeded against. But this may have seemed too much like "indicting a nation," and the proceedings were narrowed down to two of the editors, Max Eastman and Art Young.

Art Young is an artist with a strong vein of satiric comedy in his disposition. Max Eastman is a poet, a lecturer, and a former professor of philosophy at Columbia University; he is the author of two recent books, "Enjoyment of Poetry," and "Child of the Amazons," a volume of poems.

If these two men are found guilty, they will get a prison sentence of one year, or a thousand dollars fine, or both.

And they may be found guilty.

Club Cocktails

No one on earth can mix two cocktails equally well by guesswork. The whole charm of a cocktail is in the smoothness that comes from accurate blending and aging.

That is why Club Cocktails are always a fine and smooth—there is no mixture of the best liquors—then aged in wood.

Get your favorite kind at your dealer's.

HARPER'S WEEKLY

It is the aim of the publishers of HARPER'S WEEKLY to render its readers who are interested in sound investments the greatest assistance possible.

Of necessity, in his editorial articles, Albert W. Atwood, the Editor of the Financial Department, deals with the broad principles that underlie legitimate investment, and with types of securities rather than specific securities.

Mr. Atwood, however, will gladly answer, by correspondence, any request for information regarding specific investment securities. Authoritative and disinterested information regarding the rating of securities, the history of investment issues, the earnings of properties and the standing of financial institutions and houses will be gladly furnished any reader of HARPER'S WEEKLY who requests it.

Mr. Atwood asks, however, that inquiries deal with matters pertaining to investment rather than speculation. The Financial Department is edited for investors.

All correspondence should be addressed to Albert W. Atwood, Financial Editor, Harper's Weekly, 100 Broadway, New York.

FOR it will be necessary, in order to win the case, to prove that their criticism of the Associated Press is true. It would be almost as hard to prove that the Associated Press falsified the news as it would be to prove that the Associated Press was honest. Matters of this sort are not easily simmered down to provable facts. An impression exists of the un-

fairness of the Associated Press, and that the putting of two men in jail will not dispel it. In some minds a strong feeling will exist that the Associated Press has taken advantage of an antiquated law, of which only its millions and its power have prevented its being itself made the victim, to stamp out the spirit of free criticism in America.

Finance

By ALBERT W. ATWOOD

The Bucket-shop Curse

ONE of the most noxious growths on the financial body of this country has been the bucket-shop. It is a subject of general and personal importance at all times, for three broad reasons.

1. The bucket-shop induces gambling, and leads to losses on the part of persons who can least afford loss.

2. It is opposed to economic well-being.

3. Its continued existence makes for loose and illogical thinking on financial subjects.

For many years public authorities and newspapers as well as the regular stock exchanges have waged relentless warfare upon these financial pests. In 1910 the Federal Department of Justice arrested the heads of no less than 250 bucket-shops. Largely owing to newspaper influence they were practically driven out of Massachusetts, but that state is said to be the only eastern or middle-western commonwealth that is really free from them. Despite repeated attack, the evil persists. Like other forms of gambling and vice in general it takes different shapes from time to time. But it is strangely persistent.

The subject of speculation in stocks, grain and cotton affords one of our most timely bones of contention, although speculation existed far back in the early stages of human life however recent organized speculation may be. Just how serviceable is the speculation which is carried on within the precincts of the New York Stock Exchange and other similar institutions is a debatable subject. Perhaps it should be greatly restricted as well as regulated. But certainly the consensus of economic opinion holds that a certain amount is necessary.

Now the public has been often regaled with accounts of gigantic speculation on the New York Stock Exchange, manipulation of stocks and so on. Unquestionably many persons operate on this and similar exchanges from a purely gambling instinct. There is no study of "intrinsic" merits and worths, no desire for a normal return upon capital invested, but solely a passion for high stakes. But the man who buys or sells on these exchanges is compelled to deliver actually the securities he is trading in. The stocks are bought outright just as a housewife buys a piece of cloth. No doubt the buyer borrows most of the money from a bank, but there is a real purchase and a real sale for all that.

Now and then rules of these institutions are disobeyed, as are all rules. But taking the New York Stock Exchange as the leading and largest market, it may be said that the constituted authorities are sharply on the lookout for evasions, and there is frequent and serious punishment. The speculator may want to be solely a gambler, but he is forced into a real over-

chandising transaction, and the broker who does not have the stock on hand for which the speculator has paid, is guilty of one of the worst offenses the Exchange is cognizant of.

What is a Bucket-shop

OUTWARDLY the bucket-shop differs little from the member broker. High sounding names are used, such as Standard Stock Co. On their signs often appear such statements as: "Member of the Exchange," "Member of the Board," "Bankers and Brokers," and so on. Names of famous houses are imitated. The real backers often keep out of sight. Like many properties used for purposes of prostitution or other evils, these places are often owned by persons of prominence. Able lawyers with political influence are engaged to defend them. One group of proprietors is said to have made \$20,000,000. One firm alone had seventy branches. Many of the groups have gone by the name of "Exchanges" and "Syndicates." Their secret power and outward appearance cover up the degenerate nature of their business.

Vast numbers of persons do not know the difference between a bucket-shop and a regular broker. It is even hinted that some persons in very high places are befuddled on this exceedingly simple subject. Let us get at the distinction gradually.

It is well known that speculation is carried on by a system of margins for the most part, that is, the speculator supplies only part of the necessary funds. The New York Stock Exchange has no rule as to how much margin its members must ask, although 10 per cent. is the broad, general custom. The Exchange, however, pounces down upon any member which in the opinion of its Business Conduct Committee does not ask enough to do business conservatively with. Now the bucket-shop charges only 2 per cent. Of course the danger of loss is far greater here because 2 per cent. is much more easily wiped out by a decline in price than is 10 per cent. It is true that the 2 point man loses less, if he does lose all, than the 10 point man. But the 10 point man not only has a longer run before he is destroyed, but he deals with more responsible people, who are less likely to dream over night, he has more reliable quotations, and he has a better opportunity to pay up in full and thus become the real owner of his stock.

In the larger cities bucket-shops often succeed in stealing the Stock Exchange prices, or quotations, but in smaller places the prices quoted are unreliable, and the speculator has to take the manager's word for them. Of course in both cases the speculator pays a commission, which under any system works against his net profits. But when he has a leeway of only

Robust Health

Is built principally upon the sturdy foundation of

Right Food

Purity first—then nutrition to meet the law of daily waste and repair of body, brain and nerve cells. But,—the food must contain all the essential elements, or there cannot be robust health.

Injurious preservatives are not permitted by the pure food laws; but the law does not prohibit millers from leaving out of some kinds of flour certain parts of the wheat berry which contain vital mineral salts—grown in the grains by Nature—and necessary for the normal balance of body, brain and nerves.

This lack in daily food is responsible for many common ailments.

Grape-Nuts

FOOD

made of whole wheat and malted barley meets every requirement. It has delicious taste and retains in perfect balance all the nutrition of the grains, including the mineral salts—thus admirably supplying what many foods lack.

For robust health try
Grape-Nuts.

"There's a Reason"

TRUST YOUR EYES

to the man who has this sign in his window or office.

C-WELL EYESIGHT HELPS

Have your eyes examined, glasses made and fitted here by an **OPTOMETRIST**

There you will find an optometrist who practices

OPTOMETRY

the scientific, intelligent, drugless, efficient adaptation of glasses for the aid of vision and relief of headache and eyestrain.

As practically all the efficiency and satisfaction of your glasses depend on the skill and judgment of the man who examines your eyes, accept the mounting and lenses he recommends.

C-well Mountings are sold only by optometrists who agree not to sell you one unless, in their judgment, it will give you equal or better satisfaction than any other mounting.

Personally, as manufacturer, I don't want anyone dissatisfied with C-well mountings or the services of optometrists fitting them.

C-well Mountings, including careful adjustment, sell for \$3.00, gold filled, and \$5.00, solid gold, without lenses. These prices include any adjustment that is necessary during the life of the mounting to keep your glasses accurately placed on your nose and comfortable. You need glasses if you can't read this small type easily at 12 inches.

ROCHESTER OPTICAL CENTER

two points, gets cheated perhaps a quarter of a point on the price itself and has to pay a commission in addition, there is little hope for him. Even when the market goes decidedly his way the bucket-shop keeper often refuses to pay up and leaves overnight.

The Wrong Scent

PROPRIETORS of bucket-shops often speak of themselves as independent dealers. The idea is assiduously cultivated that they are the poor man's stock exchange, the friend of the people; and the regular stock exchanges are spoken of as monopolies. Well, the latter charge may be true, and if it should develop that the New York Stock Exchange is a monopoly, and a harmful one at that, suitable steps should be taken to abate the nuisance. But even granting such to be true, the real issue regarding the parasites we have been talking about is simply leeked out by taking up a wholly different question.

Bucket-shops are in no sense financial friends of the people. In the first place they draw primarily upon the weaker and more ignorant, whereas intelligent Stock Exchange and expert financial opinion veers more and more strongly to the view that speculation should be restricted to the more intelligent and experienced. But the real point is this: bucket-shops do not buy stocks at all. They simply receive wagers or bets upon whether the prices being made upon the Stock Exchange, perhaps a thousand miles away, will go up or down.

The distinction between the two processes is a great one. If I buy 100 shares of Reading stock on the New York Exchange, whatever my motives may be, that purchase has an effect upon the price of Reading. But if I bet that Reading will go up my bet has no conceivable effect upon prices. In other words the bucket-shop steals from its customer the one thing most worth while, a market. A statement was made before the Missouri legislature that 50,000,000 bushels of wheat had been "bought" in bucket-shops in that state within a short period. If that amount of wheat had been purchased on a real exchange, instead of being merely wagered at, the price of wheat might have gone up \$1.50 a bushel and the purchasers given quite a large profit.

Often the purchase of only five or six thousand shares of stock on a real exchange will put prices up. No doubt as much if not more than this amount is "bought" at the same time in the form of bucket-shop bets, which have no price influence, but if this operation had been real buying it might have driven prices twice as high. The purchaser is deprived of the effect which his purchase should have on the market. In one day in a large city in New York State bucket-shops bought 8500 shares to the 1550 shares purchased by the real brokers.

A Gullible People

THERE are many other great evils connected with these pestiferous excrescences upon the financial system. Nearly all their patrons buy instead of sell, and thus when the market goes up the owners of these financial pool rooms "stand to lose." Such establishments often do close up in advancing markets, but in markets such as we have seen in the last few years they flourish like the green bay tree. If prices go up they can often afford, by banding together, to make a drive against the real market

through real brokers, and thus wipe out their customers. Such raids are common, and have been customary for years past.

Testimony was given before the Massachusetts legislature that at one time 54 such places had existed in Boston alone, and had taken \$10,000,000 from their dupes in one year. But in general they flourish best in the smaller towns and cities where the average man is perhaps less familiar with fine distinctions in stock trading matters than in the larger cities. In a small town not far from New York, noted for its beauty, quiet refinement, historical memories and relies as well as for its famous university, there existed for quite a time a big bucket-shop freely patronized by students. No class of persons could be more ill-fitted to speculate than college students, and a reputable brokerage firm would probably not take their accounts at all.

It is wholly probable that in the minds of many patrons of bucket-shops there is a confused idea that all brokers are more or less alike. Thus the Stock Exchange gets blame which it does not deserve. Moreover the Stock Exchange would like at least part of the business which goes to the bucket-shops. If true speculation helps to develop a country, and thus far nearly all economists have held that it does, then it is unfortunate that millions of dollars which could be directed into useful channels are wasted. Then, too, Stock Exchange members feel that they have the right to suppress bucket-shops because the latter usually steal their quotations. Finally, state after state has passed laws against them.

BUT these considerations are, after all, of minor interest. The chief point of attack is the personal, moral one. The Stock Exchange may be wronged, but it is a pretty strong institution. It can look after itself. The real curse of the thing is that so many people are willing to deceive themselves, willing to act under false pretences. Men who would not bet on a horse race are willing to take a "flier" in a bucket-shop. The towns most infested with these places are quite generally communities where churches and temperance societies flourish.

It is far more honest to bet on a horse race than on a stock, for the horse race is an amusement solely, in keeping with the gambling instinct, whereas when one bets on a stock he is making a farce of great industrial and commercial processes. Take a stock like Amalgamated Copper which represents one of the largest producers of one of the most useful metals in the world. If one really believes such a business is to become more valuable in course of months and is prepared to stake quite an amount upon that belief, he is engaging in legitimate speculation. In that case a certificate of ownership in this vast copper-mining concern will be made out to him. But in the bucket-shop a man simply guesses that in a few hours or days the person just described will buy enough of that stock to put it up, and he who has done nothing will benefit by the other man's action and bet upon its result. This is making a mockery of the great processes of industry, and trying to live upon them without taking part in them.

The term "bucket-shop" was first applied to low dives in the East End of London where dregs of beer kegs and slops collected from taverns were sold. The name in its present application fits precisely, and no citizen worthy the name ought to patronize such an abortive financial process.

[10 Cents a Copy
\$2.00 a Year]

Nearly Five Million

A MAN thirty-four years old assumes in a few days an office which intimately affects the welfare of several million Americans. The residents of Greater New York are almost five million, and, if we include those who reside outside of the city but do business in it, the number is over five million. The success or failure to solve this problem in New York is of importance to all parts of the country. It is of importance to the whole progressive movement.

As Mr. Sydney Brooks clearly points out in this issue, it is wholly possible for the recent overwhelming victory over Tammany Hall to mean little. It will mean little unless it is followed up. Whether the defeat of Tammany this year means the continued rule of the independent citizens depends on several things.

1. It depends on the wisdom of the eight men, who compose the Board of Estimate, and are the governing power of the city. The Committee of One Hundred and Seven for several months had a desperate struggle to hold together the different elements in the city long enough for them to fuse and present a united front to Tammany. It was able to do this largely because of the excellent record of the Board of Estimate for the four years preceding. There is every sign that Mr. Mitchel and his companions are well fitted to give to the city the best government it has had.

2. But that is not enough. Even after four years of excellent government, a continuation of that government would have been impossible had not the Committee of One Hundred and Seven interfered in a purely voluntary way, and in a way that cannot be relied upon for the future. No week went by between March, when the first mass meeting was held, and October, when the different factions finally got together, that the collapse of the movement was not enthusiastically foretold in the newspapers. There must be something much more stable than such informal uprisings if there is to be an end to machine government. The two most important things for New York City to obtain during the next four years are home rule and a rational ballot. The city should have a charter, giving it almost complete power to govern itself. It can never be well governed as long as nearly five million people have to be ruled by farmers up state. This self-government ought to be carried on by a small board, like the present Board of Estimate. That Board ought to choose the mayor. The mayor should be a city manager, hired and discharged like any great executive in private business. These men, to be entrusted with the power, should be elected on a ballot containing their

names alone, with no party designations. This would disfranchise everybody who did not care to study the situation; and it would take away what the machine lives on.

If New York can take these few steps in the next four years, the victory of November, 1913, will have had a vast influence. Otherwise, it may differ little from other spasms of reform.

Protest from a Senator

SENATOR CHILTON, in a letter to us, indicates that he thinks our contributor, McGregor, did him injustice, because in an article on the Converted Senate he called Senator Chilton a reactionary. The Senator calls himself a progressive Democrat, and points out his support of the Administration. He has indeed worked with his progressive Democratic colleagues on most questions. It was doubtless his speech and his vote against the Children's Bureau Bill, his vote against any amendment liberalizing the Sutherland Workmen's Compensation Act, his objection to an investigation of the Lawrence strike and of the West Virginia reign of terror, and his vote to seat Senator Stephenson, that led to McGregor's expression, along with certain state matters in West Virginia. HARPER'S WEEKLY, however, has no wish to quarrel with any senator who wishes to be ranked as progressive. We have little doubt that Senator Chilton will be found on the right side of the big questions about to be voted upon.

Directors' Appetites

JAMES J. HILL declared that our difficulty in making both ends meet is due largely to the Cost of High Living. Recent New Haven disclosures indicate that this may be the cause, also, of some railroads' troubles. While the Interstate Commerce Commission was engaged last March with the investigation of this luncheon-managed corporation, the directors met in New York to consider its necessities. Their dinner cost the Company \$12.50 per person; each luncheon averaged \$6.15 per person. The New Haven has just passed its dividend—after an unbroken dividend record of more than 40 years. During all that time the New Haven has been preëminently a widows' and orphans' investment. Half the stockholders are women. More than ten thousand of the stockholders are presumably of small means; for they own only from one to ten shares each. It would be interesting to compare their luncheon and dinner menus with those which the directors enjoyed at the stockholders' expense.

The Outcome in Mexico

SO far the President's tnet in handling the enormously difficult Mexican situation has been strikingly justified. He has avoided a war. He has changed the point of view of foreign nations. He has used just enough influence to encourage an outcome that may mean a permanent advantage to Mexico instead of a further series of bandit rulers. It may seem a shocking remark to many of our readers, but this publication will not be at all sorry to have the civil war in Mexico continue for some time. If it were to end now, there would be no solution. There is indeed only one solution to the Mexican situation, and that is a different distribution of land. When the Mexicans have realized this more fully, when they have fought until the situation makes possible a redistribution of land, and brings forward the right ruler to help carry it out, a peace may be brought about that will be a real peace.

The Clock

HIGH in a court-house tower in the greatest of our cities, a clock has given the time to several generations of men. By day, black hands on a white face are visible down the streets and avenues that radiate from the triangular court-house which uplifts the tower and its time-keeper. That bland face in the sky starts the newsboy on his rounds with his sheath of penny papers, and keeps tabs on the loiterer leaning against the railing far below, or half-slumbering on the steps. Girls of the department stores, scurrying to work, glance up at the early morning face and slacken when the day still gives them a portion of grace. Motormen, chained to their schedule, and clanging their way through choked traffic, speed up their laden compartments, under threat of those ongoing hands.

By night the tower is a pillar of light, and time to a fractional minute can be read for a half mile. With a fire in its belly, the clock throws its beams into the naughty world of midnight, speeding the tardy lover, rebuking the roisterer who staggers past its base as it circles toward the new day. And soon it signals the corner tavern that the gracious evening is ended, and time is for turning out of doors the befuddled customer, mumbling in his cups.

It seemed to those who have lived in sight of this sure-footed and lofty witness, that it would conduct their journey to the end. But, of late, workmen have been tinkering with its stately process, and have obscured it with their laths and timbers. From the ground clear to the summit of the tower has sprung a rude temporary structure of ladders and scaffolding, which sprawl across the high red pillar in uneasy zigzag lines. The tangle of woodwork is as dense as a thicket, so that you can no longer read the face of time. All the unfailing witness is quite blotted out.

But in evening hours, when the busy repair is silenced, the face of the clock becomes luminous through the network of structure. The hands are again pricked out in black, as they sweep around with the revolving night. Truth glows through the shallow tracery.

Hope

IN South Dakota, dwelling upon a reservation that can be measured by a hundred miles in any direction, the strongest of Indian tribes is turning to the setting sun. Great chiefs there were once, great chiefs and rich. Today there is poverty and sickness and death. Out upon the hills and plains that travel toward the Bad Lands, lies the white of tents where some missionary or priest has dragged a tuberculosis-ridden Indian from his cabin that he may make his last fight in the open air. On ration days at the agency, they come straggling in, eager for the food that will carry them through another period of waiting. The tepees, the furs, the game and the riches of the days of war and plunder have vanished, and vanishing also is the race. The Sioux were kings—today they crowd about the visitor to the reservation and are happy over the gift of a nickel. The chiefs were proud. Today they have forgotten pride of bearing. The sun is setting. The end is near.

And yet they hope. For what, they do not know. They hope, they smile, they extend their hands, they say:

"Mebhe by'm-by things change—huh? Mebbe by'm-by—who knows?" It is hope alone that makes us live. The man of the sick bed hopes as the last minutes pass; the man of the cell looks into the future, even as they buckle the straps upon his wrists.

A Needed Change

AN American type-foundry registered an original type-face design in foreign countries. A British type-foundry pirated the design and the matter was taken into the British courts. The presiding justice compared the sheets and came to an immediate decision. He said in effect, "of course, this is a direct imitation," and he fined the British type-founder and ordered the confiscation of the type already produced. An American type-maker pirated another original design, issued by the same foundry. Action against him was begun about two years ago and the case may drag along for two or three years. A decision may not afford relief, because in similar cases the courts have decided that the patent laws do not grant exclusive ownership in designs.

American manufacturers of type, furniture, wall-paper, fabrics, laces, silverware and like commodities, are directly interested in the matter, and action on their part recently brought about the passage, in the interest of the Panama-Pacific Exposition, of the so-called Kahn Bill. The bill provides protection during the exposition, and for three years after its close, to "proprietors" of designs registered in the country where the exhibitor lives. A foreign exhibitor, who had pirated and registered in his own country the original design of an American manufacturer, would have the exclusive right to produce the design in America.

The promoters of the exposition think that to amend the bill would annoy foreign exhibitors. As a remedy they propose the passage by Congress of a joint resolution stating what Congress meant to say. Obviously there is need of an adequately designed registration law.

The Oak Park Idea

SOME Chicago ladies have been criticising the "rag-time novelists." They complain because novels nowadays are not "slices of life" but rather "a ragged hole in life into which the authors have poked and experimented." This is complicated, but when Mrs. Johnson of Oak Park comes down to tucks we understand:

"A good criterion upon which to judge a book, to my notion, is to ask yourself whether you would tolerate the hero or heroine in real life. The situation in American literature today is such that we would not relish the acquaintance of the characters of our novelists."

On that principle what about the old favorites? Would you like to shake hands with Bill Sykes? Pitt Crawley is no gentleman in spite of his title; the Marquis of Steyne it wouldn't be safe even to meet. Could you tolerate Iago and Lady Macbeth? It would never do to invite either of these persons to tea in Oak Park.

A Theater Enterprise

IN opening the Little Theater this month, Los Angeles falls in with an interesting tendency already shown in New York, Philadelphia, Boston and Chicago. The theater is supported by a club of well-to-do business men. It has a seating capacity of only three hundred and thirty-four. There are no boxes, no balconies, and only fourteen rows of seats. It has a club atmosphere, cigars, cigarettes, tea and coffee being served gratuitously, and the actors of the company meeting the audience on the same friendly terms that marked the green-room days of earlier times. There are to be no leading men or women, each player being called upon for whatever part the management desires. The plays selected promise well. Along with Shakespeare, Molière, and Sheridan comes the work of moderns, including Maeterlinck, Shaw, Schnitzler, Ibsen, Galsworthy, Brieux, and various Americans.

Enterprising cities all over the country will soon have theaters of exactly that type, and much will be done by them for the raising of dramatic standards.

Foreign and American Plays

SOME interesting aspects of the theatrical situation in this country are brought out by the fact that the Stage Society of New York, which has produced such interesting plays and produced them so well, is compelled to give more foreign plays and fewer American plays than it wishes to. Just now, for example, it particularly desires to give an American drama, and finds it impossible to get hold of the right one. The American drama is in a much more promising condition than it ever has been before, but it will have a long distance to travel before it will produce much that can be ranked with the best work of Germany, France and Great Britain. Although that distance is long, it may be travelled with speed, since so many of the young men and women now coming out of our colleges are turning their attention toward the theater as the forum from which they can reach the whole public and reach it in a peculiarly human and appealing form of art.

Humility

WE tell this story because it seems to us a beautiful story that ought to be told. It concerns General Bell and the opening of the gigantic amphitheater in Manila that follows the lines of the land. The general was much praised for having built this imposing and enormous structure. He pointed to the savage Igorrotes that were standing about, trying to understand what was going on. "I did not build it," he said. "God Almighty built it; but if you want to take building in a different sense, to consider what we did, using the great plans of nature, those poor fellows built it."

Speed

NO orchestral concert should last over two hours, if as long as that. But last night's lasted nearly two hours and a half." So wrote a newspaper of a distinguished performance by the Philharmonic Orchestra.

What has become of our faculty of attention! In our larger cities, well-fed persons will linger over the multitudinous courses of a dinner for several hours. But when artists render beauty they are timed to their finish as if they were on a speed race.

In the early days, the Puritans, a hardy folk, hemmed in by Indians, took over a continent, and subdued a granite soil. And yet they had time enough to sit all day and listen to their parson uncover hell, and picture heaven. To us of today the outer conditions of living are easy. Never was there so much time to spare for whatsoever things are excellent. The hours of our work are cut down to ever-diminishing limits.

Yet, too restless to enjoy, we bring our jaded taste to each fresh offering, and expect it to win its way through fatigue and ennui. If it can't reach our jangled mood, we say, "It hasn't got the drive." How can anything great break through that tension? You might as well write on the shifting sands as make a lasting impression on tortured readjusting nerve centers.

Where are those evenings when Dr. Johnson would talk his fill through a series of golden hours? Now we crowd an afternoon with a round of calls, a half hour to a place, and then tune up the motor for the next fluttering descent and departure. A person will go from a Paderewski recital to a Bridge party, and then top off with a late supper and a cabaret performance. And when the variegated day is ended, no echo of Chopin is left.

How else can beauty establish its own conditions, and become a presence, except as one goes to the appointed place early, and catches the hush, and lives quietly with that presence, and comes away to a period of rest for reflection? Today the romance and unfolding tragedy of life must be reduced to an anecdote. A speech must be susceptible of being boxed in as a string of epigrams. A policy in statecraft must be rendered in a head line. "Speed is life," said the rich young ruler who died the other day. But speed is the great refusal to live. It is the attempt to cover emptiness with sensation. Speed carries us far away from home, from noble poetry, from quiet thought.

Christabel Pankhurst's outstanding quality is valiant purity

WHAT is she like?
Well, if you care to take my word for it, she is, in sum, unlike anything the world has seen before.

I ought to begin by admitting that I am not a wholly uncritical observer of Miss Pankhurst. I do not agree with all her theories, I am not with her in all her practice.

But any one can make a fancy sketch of a young woman who presents as many points of attractiveness as the Organizer-in-Chief of the W. S. P. U.

While my sketch will be fact rather than fancy, it will not pretend to be all the facts, even in so far as I see them. The hour for final judgment is not yet.

To the meantime women who realize what is involved in the fight for the Suffrage have no duty more binding than to prevent misrepresentation of those who are in the forefront of the fight, those captains who, by the various roads, are leading the legions which converge towards the Parliaments of the world.

The duty I speak of is most imperative towards those most grossly misrepresented.

I have often refused to do a study of Miss Pankhurst. She seemed so much more capable than most people of making herself clear.

The misunderstanding of her that I find current on my arrival in America moves me to set down these impressions from our acquaintanceship extending over something like eight years.

She lives in the memory of most, turning up that round chin of hers to meet a question as to tactics; a slender body braced for defense; flinging out a hand to

Christabel

By ELIZABETH ROBINS

send home some thrust, shrivelling criticism in the caustic of her wit; intolerant of opposition, hurrying objections under weight of controverting fact; reconciling the objector by an imperturbable good-humor; often harnessing him to the Movement by virtue of her own completeness of dedication.

WE saw her "full face" in the early raids on Westminster, those called with an audacious irony: "Going on Deputation to the Prime Minister,"—much as a warder might go to the door of a cell and ask the prisoner, "will you kindly come out, sir, and be hanged."

One sees again the face under a hat awry, yet every flower, or end of ribbon, showing flag-like where was the thickest of the fight and where the straight way lay—the way to the rudest publicity for matters over so fully stated before.

One sees her facing the police, stopped by them, protesting, always with self-possession and with apparent expectation of succeeding in the impossible errand.

Profile, this time, as she rises in the dock. A half sheet of paper in her hand with its three or four notes; the stylograph stuck back in the case which is pinned to the yoke of her gown. You see her lifting that face to the perplexed Jury, to the scandalized Judge. "Come," she seems to say, "let us reason together."

She is complimented from the bench upon her able advocacy, and sent to prison.

She seems to have had her fill of such compliments.

No one must suppose that she wears always the militant face. I think of the one I saw flushed with fever, lying on a sofa in a Yorkshire Hotel. I had just heard her speak in the market place—speak with strange patience in the teeth of ignorance and insult, speak to an audience I wondered she would care about convicing. She was ill at the time, struggling with a cold that would have extinguished most people. I had watched her standing for an hour in the windy market place, had listened to her clouded voice, growing hoarser as she explained to the foolish, and endured the drunken.

HALF an hour after, she lay in my room with closed eyes and fever-bright cheeks, while her mother went out to buy quinine, or what oot. Had this not been our first meeting I should have known better than to waste breath urging her to stay on the sofa all the evening. She had, I knew, no meeting of her own, but up she stands and we three go to a man's political gathering. The girl I had thought fit only for bed, rises in her place and attacks a scheme advocated by the man, afterwards her (and all women's) good friend, George Lansbury. That night he was explaining the need of an appropriatioo fur poor boys' school games and athletics—to the name of the betterment of the race. He found no fault with, he even defended, the grotesquely smaller provision proposed for the benefit of poor girls (and presumably fur the benefit of such little share as they might conceivably have in that matter—of bettering the race). Suddenly the girl was on her feet by my side, hardly audible at first, through the fog of her stifling cold, but still able hotly to denounce Mr. Lansbury for not protesting against unfair discrimination in favor of physical training for the stronger sex. He, poor man, astounded, a little injured, feeling apparently that he had done rather well (considering the strength of conservative opposition to get any appropriation whatsoever), modestly looking, as I thought, for congratulation—to find himself hauled over the coals, and baited and troozed by this little girl with the hoarse voice.

I rather think that was the first time Mr. Lansbury ever saw Christabel "full face." Little enough in any case could he have dreamed then, that he would listen to that voice till it should lead him and his children to prison.

Another time I see her lying in the shade of a cypress tree in a Sussex garden—a lissome, relaxed figure in an apple-green gown. In the dark eyes none of the fire we had seen burning on Westminster raids, but a light that seemed more a childish gladness of spirit.

She lies there and gives and takes chaff with a school-boy. He, not a being of easy enthusiasms, is soon among Christabel's friends. They sit side by side, he showing her some illustrations in the *Sphere*. An Anti-militant, struck by the tableau, drew me aside—"I've watched her for two days. I have the very strongest feeling there must be some mistake. That little schoolgirl can't be making all this trouble."

That was the opinion in the adjacent village, though obviously shaken by her ringing up the London Headquarters office to insist that the Mayor of Dublin should be held to the promise that had been extracted from him—heaven knows how—the amazing promise to make an official visit to London in order to exercise an ancient and forgotten right, unused for centuries, to plead before the bar of the House of Commons. The plea in this case was of course: "give women a share in citizenship"—and Christabel in Sussex pulled the strings that brought the chief civic dignitary out of Dublin and drew him over the Irish Sea to stand in his mayoral robes and insignia before the English Commons—adjuring them "do justice to women!"

WE have in London a great music hall whose name, the *Pavilion*, was long associated solely with the most frivolous form of variety entertainment. This hall has been crowded to its capacity, year in, year out, at the Monday suffrage meetings, and not only by those interested in the women's movement. We have seen the boxes there filled with the gilded youth turning their backs on the stage and talking among themselves on those Monday afternoons, just as they are in the habit of doing during the less diverting "turns" at night. We have seen, at Christabel Pankhurst's standing up to speak, all those backs turn, and the faces of the men crane over the box, curious, alert, responsive to as much as they understood—to the life and youth and valor of her, if nothing more—nudging one another at some hit; seizing her points, laughing with her at her enemies, applauding her impassioned attacks upon the government with as much enthusiasm as though she were a Russian dancer.

And when Christabel Pankhurst's "turn" was over we have seen the entire party rise and leave the hall.

The Christabel these young gentlemen thought such good fun was the Christabel who, already for some years, had been trudging up and down the country, going through mud and rain, holding little obscure meetings in stuffy rooms; the Christabel who was the first to brave the horrors of the unreformed Holloway; the Christabel who gave the flower of her youth to make votes for women the most vital issue of the day.

HAD you called to see Miss Pankhurst?—so had all these sitting in the entry room. At last you stood in her little office. The only room she had of all the many in use by the Union was a sort of passage.

A big desk occupied a good share of the space. On a swivel chair, a little person writing an editorial. One window, two doors, and in and out of these doors a constant procession—girls with armfuls of literature, girls with letters, girls with telegrams, girls and women hurrying through one way or another no matter who was there, or what was being said, written, or thought out. In the heart of that hurly-burly all the most vital business of the Union was shaped and launched, up to the hour when she left that night just in time to escape the clutches of an exasperated government.

In the great new building in the Kingway, Christabel has her more comfortable quarters. She has never occupied them, never seen them.

WHEN the W. S. P. U. Fund had rolled up its staggering sum, to women's innocent surprise, the mere financial prosperity of the Union bred in the breasts of politicians a respect they had never shown towards the principles of justice, or the spectacle of devotion to an ideal. The Fund became also a source of envy and all uncharitableness in certain adherents of causes less generously supported.

The air grew thick with vague suspicion and open charges that the Pankhursts were feathering their nests. They were living extravagantly on the fat of the land. Mrs. Pankhurst and Miss Sylvia lived enough of their time in prison to take the point out of any application of the charge to them. So it was oftener referred to the Pankhurst who was constrained to live on the fat of "the pleasant land of France."

Christabel Pankhurst in three years of militant martyrdom has changed from the girl shown in the right hand picture to that shown in the left

Coming down from the mountains of Savoy I dropped in one evening on the exiled Organizer. I found her in the luxury she had then for months been steeped in—living *en pension* in a third-class hotel in a town on the coast.

One room served the controlling spirit of the rich Union—one room to sleep in and to work in. That narrow bed-chamber on the top floor—no lift—reached only by climbing endless stairs, that place of meager, dingy furnishing, constituted not only the luxury of her personal establishment, but served as editor's office for the Union paper—the real Headquarters of the Movement. Out of that little room went forth the energy which, if it was not responsible for keeping the question of Woman Suffrage intensely alive, did certainly control and guide the more militant forces.

TALKING till late into the night, we spoke of a woman whose latitude of view in matters of sex-relation had given much offense both to Suffragists and Antis. Christabel had no love for the theme, but she pitied the woman—explained her as a doctor diagnoses disease.

Her attitude to the subject reminded me of another midnight talk a year or so before. She had come down into the south of England for a little rest and I was remorseful at letting her sit up so late. I offered her a novel to take to bed. Yes, she would like a novel. She took the one I offered and with a gesture of distaste gave it back. "I began it," she said, "but I couldn't stomach those scenes between the wife and the husband." I had not myself read the book, which had not long been out. Miss Pankhurst described cursorily, with an effect of haste to be done with it, a certain scene which, along with the critics' comment on its "strength," and

Maupassant-like veracity, the world in general had swallowed without blinking.

At sight of Christabel Pankhurst's loathing, I remembered the unblushing utilitarian she is. Whatever expresses the views she shares she will applaud, however little literate the effort may be. However well done, what runs counter to her views she sees no merit in. In fact she cannot "see" it at all.

SO I urged the right of the artist (and the author in question is one) to treat of any and everything under heaven. In any case, as Christabel could not deny, scenes far more *risqué* had been written by men of repute. Whereupon she jumped down my throat. That was precisely the trouble, she said, with this woman-writer. She was trying to go one better—or worse—than men. Men have some excuse. They *have* to invent. They know very little about women. But "women must stop going to men for information about their own sex."

I had long known that many women, and not a few men, accustomed to look upon themselves as fastidious in matters touching sex-dignity recognized in Christabel Pankhurst an unconscious critic of their meaner standards.

Not only is the mind of this young woman constitutionally incapable of making a case use of unsavory topics, she is (not deliberately, but inevitably, because so was she created,) a touchstone of moral soundness.

If I were told that, leaving out the politician and speaking of the essential woman, I must give in two words the sum of eight years' knowledge—I would, out of all the resources of the dictionary, content myself with saying that Christabel Pankhurst's outstanding quality is a valiant purity.

Was Tammany Really Destroyed?

A British View of an American Triumph

By SYDNEY BROOKS

Illustrated by Herb Roth

FIRST let me congratulate you and all your colleagues and associates in the Fusion ranks on the magnitude of your victory over Tammany last month. Then let me temper my congratulations with the reminder that the real test and proof of the value and durability of any and every electoral triumph is the use made of it in office. What New York accomplished on November 6th was essentially a work of destruction. It got rid of Tammany. But that is a fact it has frequently performed before, and always with the same result of Tammany regaining at the next election every inch of the ground it had temporarily lost. Do I exaggerate in saying that the whole history of municipal administration, not merely in New York but throughout the United States, shows that while Americans can pull down they cannot build up? They can overthrow a bad government; they have yet to prove they can sustain a good one. Some too flagrant scandal may rouse them for a moment to wreck a "machine" and to fill the air with good resolutions. But good resolutions are fleeting things, and the "machine," in the long run and under present conditions, is well-nigh indestructible. I do not say that those are wholly wrong who see in the recent election a sign that New Yorkers, like the American people generally, are beginning to cut loose from the domination of the "bosses" and to treat municipal govern-

ment as primarily a business and not a political problem. But that movement will have to develop far more strength and constancy than it has done so far if it is to win more than a casual victory or to endanger Tammany's security at all permanently. The citizens of New York have won a respite for the next four years. But they have not won freedom nor anything like it.

I FANCY this would be more clearly realized were it not for the common American habit of regarding the suffrage as the essence of democracy. So long as they could vote at recurring periods for a multitude of short-term officers, your people have persuaded themselves that little more was needed to fulfil the amplest ideal of popular government. They have always had a tendency to look upon the ballot-box as an end in itself, to think more of success at the polls than of efficiency in office, to regard the problem of government as solved when they had elected one set of candidates to office in preference to another set, to spend their energies on choosing their representatives and then to forget to watch over them, to pay too much attention to who is to do the work, and too little to how it is being done, and to sleep with the comfortable assurance of a public duty adequately performed from the morrow of one election day to the dawn of the next. I need not tell you

that a political philosophy so defective as all this is singularly ill-equipped for grappling with the concrete and positive problem of city government. Democracy, of course, is criticism, is control, is an alert and informed public opinion, and is not really machinery at all. While, therefore, I rejoice with you that Mr. Mitchell has been elected to the mayoralty I still maintain that we shall not know what his election means until the votes are counted in November, 1917.

WHY is it that New Yorkers cannot be induced to support a reform administration for more than a single term of office and that Tammany has never, in all its long and makelorous history, been beaten twice running? Sometimes, undoubtedly, it is because the reform administration neither reforms nor administers and sometimes because it reforms and administers too much. I know of nothing more comical than a reform mayor prowling round New York in a fever to detect "vice." You are dealing, remember, with a cosmopolitan, vivacious, pleasure-loving population, pagan in its tastes, its habits and its opinions, imbued with the mercenary view of politics, and always in more or less open revolt against the laws with which the state legislature, largely elected and controlled by rural votes under the guidance of machine politicians, attempts to regulate its behavior. It is a popula-

tion that takes readily to the ideal of a free and easy life in a free and easy town. It is no ideal with which Tammany wholeheartedly sympathizes and one that, for a price, the price of blackmail, it will undertake to translate into fact. It is here, as it seems to me, that the passion of the state legislature for reforming the morals of New York does Tammany such inestimable service. Laws are passed at Albany forbidding—not merely punishing but forbidding—immorality, gambling, Sunday drinking and so on in New York City. To enforce these laws is, of course, impossible; to repeal them is equally impossible because no legislator will dare to have it said of him that he favors gambling or Sunday drinking or "vice" of any kind. At the same time the laws being on the statute book and all the "good citizens" clamoring for their enforcement, something has to be done about them. Reformers of Mr. Roosevelt's kidney will try to carry them out rigidly and inflexibly and so convulse the city. Reformers of a less categorical cast of mind will punish serious and too open violations and leave the rest alone. The Tammany method, after all, is the most consistent and the easiest. To the proprietor of the saloon and the gambling den and the disorderly house Tammany

many rule are taken as a matter of course, become grave offenses when committed by reformers. Moreover, no reform administration that I can recall has yet mastered the secret which Tammany so perfectly comprehends, of combination, of "team-play." The heads of the various Departments work far too independently of one another; they are too much like a company of star actors; they quarrel with one another and criticize each other's conduct with a publicity and freedom quite destructive of any real unity.

THEN, too—though I may, of course, be utterly wrong—I cannot persuade myself that the average New Yorker really likes to be governed by men of refinement, independent means, and superior social position. At a time of strong moral excitement he may vote for them, and even elect them to office, but he quickly wearies of their air of aloofness, exaggerates their detachment from the "plain people," and comes in the end to resent their presence and activity as a sort of affront to democracy.

It is asking a good deal of human nature to rise to the height of a religious crusade once every four years, and New Yorkers, for all their idealism,

time to the business can hope to manipulate it—and how preposterously the absence of local home rule plays into the hands of the machine, and how slight is the average citizen's interest in good government, and with what merry cynicism he is apt to accept graft as one of the essentials of politics, and how deftly Tammany gets among the poor and befriends them without once seeming condescending or self-righteous—when I reflect on all this the wonder to me is not that Tammany should sometimes lose but that it should ever be defeated.

You have made endless mechanical efforts at reform. You have tried withdrawing the police, the schools and the licensing power from municipal control. You have tried Mayors with autocratic powers and Mayors with no powers at all; cities with two legislative chambers and cities with one; elections every year, every two years, every three and four years; police boards under a single head and police boards governed by non-partisan commissions; and some three hundred cities, I understand, have had the courage of their declining faith in legislative councils and assemblies, and are experimenting with variations of the Galveston and Des Moines ideas. This last strikes me as a very interesting in-

"Every reform administration lives in a glass house, with all the electric lights turned on, and a reporter at each window and keyhole"

simply says, "Pay me so much a month and I will protect you." In the result everybody is satisfied. The law remains on the statute book, a glowing testimonial to the "morality" of New York; it is not put into action, so nobody feels its inconvenience; and Tammany grows rich on the proceeds of its non-enforcement. Tammany would be well on the way to starvation if the laws under which New York is governed were in accordance with the wishes and opinions of its inhabitants. In this aspect Tammany, I have often thought, is really New York's and human nature's protest against legislative altruism and Puritanical meddlingness.

The reformers set their standard high, and by that standard are they judged. Mistakes that under a Tam-

many rule are taken as a matter of course, become grave offenses when committed by reformers. To let Tammany win is always the path of least resistance. On the Reformers' side there is human nature as it ought to be and as it may occasionally be wrought up into being. On the side of Tammany there is human nature as it is.

When I recall, indeed, the perfection of Tammany's organization and how vast is the number of beneficiaries of all classes it has gathered around it, and with what skill it is often able to evade its local reputation by an appeal to party loyalty and regularity, and how bewilderingly the machinery of politics has been over-organized in New York as throughout America—until only professional experts giving their whole

stance to the growing American tendency to call in autocracy for the purpose of safeguarding democracy against itself; and I believe it has really done something to affect the standard of public opinion and change the average man's views of the place that politics should hold in municipal administration. But I would suggest that New Yorkers during the next four years have an even better chance of striking a blow for civic reform. If they stand by Mr. Mitchell and elect him, or at any rate keep Tammany out, every city in the land will be the better for it. That would be an inspiring, genuine, unprecedented and (I hope) not incredible achievement; but you will not, perhaps, mind if I continue to view its possibility with a certain skepticism.

Yes, Indeed

By REBECCA HOOPER EASTMAN

Illustrated by Everett Shinn

MISS MINNIE McSMITH hadn't seen Paul Parkie for months, until the afternoon when she was drinking tea and eating French pastry all alone in a crowded T. R. (Tea Room). Minnie had a good excuse for eating and drinking alone: she was hungry, as people sometimes are, when they haven't had time for lunch. She had been aware for some time that there was a man standing in the T. R. doorway, when she suddenly noticed that it was Parkie, posing. Feeling unusually charitable, she waved her microscopic napkin at him, at which fringed signal, he came elegantly over. As he threaded his gracious way among the women whose chairs and wraps filled the passage, he was the true gallant in every gesture—for might not the surrounding women and girls be pinching one another, and saying:

"Look, Maudie, there goes Paul Parkie, the actor."

THEREFORE he seated himself more impressively than was necessary, considering the years that he had known Miss McSmith, and began, as she had known he would:

"You have never seen anything like the enthusiasm created by my entrance on the Harlem Opera House stage, when I returned to New York."

"Indeed?" quoth Miss McSmith, hitting a motator candied cherry from the top of a delicate cream puff.

"Oh, yes. I was playing 'Brewster's Millions' at the time, and you remember that the entrance is made in the dark?"

"I remember." She poured herself another cup of tea, but inopportunely refrained from asking Mr. Parkie to join her. (She had known him, as has been said, for years.)

"Yes, I enter in the dark. Well, the minute that vast audience heard my voice, they applauded and called for me; they absolutely refused to let me go on with my part. I stepped into the wings, and said to the stage manager, 'You'll simply have to throw a spot-light on my face, and let them see me.' He saw that it was impossible for me to proceed, with their applause growing more deafening

every minute. So he put the spot on my face, and when they had calmed down, I stepped forward and said, 'My friends, I said, 'I thank you. At the end of the act I shall have an opportunity to say what I really, at this moment, feel.' Even then, they would hardly let me go on. But when that act was over! Minnie, I simply cannot describe their furor. They not only stamped and clapped,—

broidered green satin pincushion at a church fair, and tackled it curiously.

"Minnie, did I ever tell you what Belasco said about my voice?"

"No."

"He said to me, 'Parkie,' he said, 'Parkie, there isn't another voice like it.'"

"I guess that's true," said Miss McSmith, indifferently. Mr. Parkie's voice had always vaguely reminded her of

"The other day, now, I was on the Avenue just as Mrs. Van Blank came out, and she stared at me"

they cheered! They hopped right up on the seats, and, think of it! waved American flags."

"Oh."

"Yes, yes."

"How did they happen to have the flags with them?"

"Oh, I don't know. . . . But they had them, Minnie."

"Oh."

"Yes."

As the waiter passed more French pastry, Miss McSmith selected a round, shiny thing that looked like an em-

Black Bean Soup; it was so unnecessarily rich and heavy.

"Getting three hundred a week," confided Parkie, idly.

"Oh."

"Yes. Mrs. Fiske wanted me in her company one time, you know, but I had only one rehearsal with her. Then I was forced to leave: from my own choice, understand."

"Why?"

"Well—it's a delicate matter. She saw that I would get all the applause. I was splendid in the part, Minnie; it was made for me. I shall never forget how

well I read my lines at that first rehearsal. But it wouldn't do. I couldn't stay on in the presence of such jealousy."

"Indeed?"

"Yes. These stars!"

"Indeed?" The pistachio satin pin-cushion was proving delicious.

"Oh, certainly. Ethel Barrymore is simply mad to have me with her. She said to me, 'Mr. Parkle,' she said, 'I have never in my life seen anything like your work.' But I said, 'Miss Barrymore,' I said, 'I cannot leave the people who love me so, even to play with you. I must stick to stock.'"

Miss McSmith gave a signal for her check.

Miss McSmith took out her purse and paid the waiter.

Miss McSmith gave the waiter a fee, when he returned with her change.

learned toward her earnestly. "Allow me, please, Minnie. Here, waiter!" he called to the wrong man's back. "Where is your check, Minnie?"

"Paid."

"Paid? What a sleight-of-hand performer you are!" They rose. "I suppose I told you what Maude Adams did the time I was with her in 'The Little Minister?'"

HE was following her out of the T. R., John Drewishly.

"Yes."

Either Mr. Parkle failed to catch her monosyllable, or else he pretended that he thought she said "No."

"She said to me, 'Paul,' she said—she always would call me Paul—'Paul,' she said, 'you are the only man in this country who can read Shakespeare intelligibly. Shall I tell Charlie?—meaning of course,

"Yes. And yet, Minnie, in spite of all this, there are people right here in New York who have never heard the name Paul Parkle."

"Indeed."

"Oh, yes. I doubt if Society, by which, of course, I mean the four hundred, is even aware of my existence. The other day, now, I was on the Avenue, just as Mrs. Van Blank came out, and she stared at me with singular interest. I, of course, affected indifference, but I knew. I knew how she felt. I knew what she was thinking—"

THEY had been walking briskly up Broadway, when Miss McSmith suddenly turned into a narrow alley.

"Why, Minnie, where are you going? This is the stage entrance of the Majestic."

"Yes. I'm going here to a rehearsal."

"I didn't know they allowed reporters at rehearsals of the new productions."

"I'm not on that newspaper any more."

"You haven't—you, with your figure, Minnie,—you haven't gone on the stage?"

"No—I wrote the play."

Paul stopped.

"You what?"

"I wrote the play."

"You WHAT?"

"Oh, it's nothing much; just a little comedy. But they think it's going to make a hit. I wrote it under the name Lloise Llewellyn, because, although the name McSmith's always brought me luck, it doesn't seem to tickle the imagination."

"You—have—written—a—play—for—Broadway?"

"Yes. You may come in, if you like." She was dashing ahead, but he seized her arm with such a grip that his fingers felt like teeth, and she was sure that there would be holes in her sleeve.

"Say, Minnie, you haven't got a small part, have you? A nice little part where you could use an old friend?"

"What—with you getting your three hundred a week?"

"Well, er—the company closes Saturday night. And while three hundred a week is—nominally my salary, I never, as you might say, have received it."

She stood and looked at him, irresolutely.

"There's the part of a policeman in the third act—"

"Splendid, Minnie, splendid!"

"But he has only one line." She didn't dare look at him. "I guess the manager would give it to you. Although, of course, you wouldn't look at it. But if you want it, come on."

No time at all elapsed.

He came.

"There's the part of a policeman in the third act—" "Splendid, Minnie, splendid!"

Mr. Parkle, however, did not seem to see any of this little pantomime. He was staring at the cornice with romantic and melancholy eyes, for he had just noticed that the two girls at the next table were looking at him, and whispering, and he was appearing unconscious. Miss McSmith, having paid for her tea, remarked: "Going."

"Oh—where's your bill, Minnie?" He

Mr. Charles Frohman, "Shall I tell Charlie to get up a company with you for Hamlet and me for Ophelia?" I refused; how could I do anything else? There were no actors capable of filling the minor roles. When I pointed this out to her, she saw what I meant, and gave up speaking to Mr. Frohman."

"Oh."

A GIBBON STORY WITH BELLOW'S PICTURES

The strongest fiction offering of the new HARPER'S WEEKLY will come next week in Percival Gibbon's unusual story, "The Darkened Path." It is a story of a white man ostracized from his own people, living his weird life, against an African background. It is the kind of a story which many magazines will not print; but it finds a place in HARPER'S WEEKLY, because of its merit.

Lemuel Taketh Favor from the Hand of Percival, and
Joy Bells Are Ordered for Two More

ARRESTED? What fun! So are we!" said Katury
And father looked up for the first time, not sure he
Was fully awake

And cried, "Mercy sake!"
(Though the ranks of the culprits were rapidly thinning,
The leisurely props of the courtroom sat grinning.)
"D'ye think it's a picnic or some sort o' sport
For the whole House o' Bogg to be dragged into court?
Ain't ye shamed some to stand there and face
The public disgrace?"

Katurah showed mirth and no other emotion;
Her husband grinned, too. "What an old fashioned
notion!"

He cried, "In this Gasolene Epoch the best
Sort of people are frequently under arrest.
Indeed, if you haven't been pinched once or
twice

They take it to mean
That you've got a machine
That's only equipped for delivering ice.
Now don't bear a grudge."

Percy winked at the Judge
And whispered to Lem, "Sure His Honor will
soften;

He knows his old friends and refuses to host
'em or
Bleed 'em. In fact, I've been pinched here so
often

He gives me cut rates like a regular customer."

AGAIN at the Mercy Seat Percival winked
And o'er the broad face of the Justice there twinked
A rosy-red, cynical,
Sort of a grinnal

Smile like the sun on the morning's first pinnacle.
Percy drew nearer and secretly hore
A word to The Law, who sat smiling some more,
Then with a nod to Katurah and Pa

And Percy and Ma,
"Since we've got the whole family, needless to state
You ought to be fined at our Bargain Club Rate.
Your charges are: Speeding, (my dockets attest),
Contempt o' the court and resisting arrest.

Since business is slack and the day's rather hot,
Let's say twenty dollars to cover the lot."

A PERFECT quartette,
They warbled their thanks;
But the Judge's face set
Toward the criminal ranks
As the Bailiff arose with his usual roar,
"Case Forty-thousand-six-hundred-and-four!"
And, twined like a bridal wreath, paced through the door
The "nice Mr. Hill" and his Gwendolaine Jones,
Nestled so near
You almost could hear
That overture joy-march of old Mendelssohn's.

WHAT?" roared the Judge, and
full red grew his face,
"Is this thing a wedding or a criminal
case?"

"Both," warbled Percy
Who, begging for mercy,
Rose up again and edged close to
the bar,

"They are arrested for speeding their
car;

But this explanation
In extenuation
I make: They were screeching so fast
and so far

In search of your regal
Office and legal,
Your gifts to employ for the
rite matrimonial."

WELL," drawled the Judge, and his air was
baronial.

"Cases like that sure deserve a life sentence—
Hasty decisions mean years of repentance.
Seventeen dollars will cover the crime.
Come here at noon and we'll turn on the clime."

ONE o'clock struck and at Johnson's Hotel
A crisp wedding breakfast was spread from
the well-
Stocked larder or forage,
(Mostly cold storage)
And the party sat down to the tap of the bell.

THE Judge made a speech when they opened
champagne
They all liked the wine, except Lem, who spoke plain,
"Thou new-fangled lubber!
Git up my nose,
One o' the troubles
Of life, I suppose.

They didn't drink that, sir, when I was a boy;
But this Gasolene Age has plumb changed all our joy.
Used to be so, when a man was arrested,
He just quit the town where his cash was invested,
But now, when ye're jailed, if the Judge gits the sign,
He marries ye first, then reduces the fine
And asks y' to dinner with sody-pop wine!"

Lem scratched his ear
And remarked, "It's dum queer,
When y're autoin' round, just a-thinkin' and settin',
What new-fangled, dew-dangled fixes y' get in!"

(THE END)

"Russell went on involving the trembling and discomposd wretch in the box in new and even more palpable lies"

Criminals I Have Known

By T. P. O'CONNOR

Illustrated by William M. Berger

II. Richard Pigott

I SAW him when I was quite a youngster, and never did there seem a man less likely by nature to play a prominent part in a mighty and historic crime and tragedy. He looked the good-natured, easy-going, laughter-loving *bon vivant* in everything—in the rather obese body, the full and flushed face, in the careful clothes with a prominent white waistcoat, and in the single eyeglass. Good-nature, self-indulgence, frankness, a certain Falstaffian humor—these were the impressions he was calculated to produce at first sight. Later, all this was increased by a premature baldness and prematurely white hair, the latter in contrast with the face that remained full, unlined, flushed, and juvenile. And there occurred, while he was still a comparatively young man, an incident in his career which was calculated to make one think of him kindly as one who took the strokes of even inauspicious fortune with undisturbed good humor. He and the late Mr. A. M. Sullivan were condemned simultaneously to imprisonment for hot articles written in times of excitement. The sentence of Mr. Sullivan was for six months and that of the other for twelve; but Mr. Sullivan was a restless, nervous, and a delicate man, and he suffered se-

verely, and said so. The other man held his tongue, and apparently was quite content to remain in his cell as much at ease as in his house.

SUCH was the Richard Pigott I knew in the early 'seventies of last century. By and by I knew him better. He was the conductor of two Irish weeklies—both advanced in views and both rather antagonistic to the Constitutional movement to which I was already attached; but he always spoke of me kindly. He himself had no special gifts for writing, and indeed was too lazy ever to do work he could get others to do for him. And he paid very small salaries. But nevertheless he produced good papers in which many men of fine enthusiasms and great literary abilities wrote. It was generally known that he was one of the large race of men who are constantly hard up. That flushed cheek was not attained without considerable indulgence in the pleasures of the table, solid and liquid. And as time went on there were ugly whispers of defalcations. His papers were the treasuries of several political funds destined for the families of political prisoners or for the temporary relief of the prisoners when they got out of prison. And one

dark evening, in the street in which the papers were published, his cashier was fired at and seriously wounded, and the awful suggestion was made that the poor man, who was represented as a traitor, was only a faithful accountant who knew too much about the ugly story inside the newspaper office. Then the moment came when Richard Pigott found it impossible to go on, and he sold his chief paper to the party of which Mr. Parnell had become the leader. The money received was apparently soon lost, and Pigott was thrown back on his wits for a livelihood; and, as his tastes were expensive, the wits had much work to do.

IT was then that the evil instincts and the sinister gifts of the man were given full play. He became the prince of begging-letter writers; he carried on an odious trade in the dissemination of foul literature and pictures.

Then came the moment of the tragic and titanic fight between Parnell and the mighty forces of English and of Irish life, which, after centuries of omnipotence, that extraordinary man was threatening to pull down. Pigott saw the opportunity for a part which has so often been played in revolutionary times,

He had been the chief voice of the revolutionary section for years, and the suggestion was inevitable to such a nature in the Ireland of that day as in the Russia of this, that he should turn State informer instead of revolutionary. Mr. Forster was then Chief Secretary for Ireland, and engaged in a fierce struggle with all the forces of the revolution in Ireland, and to Mr. Forster Pigott applied. Mr. Forster was at once a merciless opponent and a good-natured man, and, partly in the hope of help against the terrific forces he was fighting, and partly because he was really moved by Pigott's letters—which were quite admirable from the begging-letter point of view—he gave Pigott considerable sums of money.

BUT Pigott suddenly found an El Dorado whose treasures were as Golconda to him in comparison with anything he had ever seen before. The *Times* newspaper had carried on a fierce, a brilliant, and a damaging campaign against the Irish leaders, and especially against Mr. Parnell. Its object was to destroy Parnell, and, in destroying him, to destroy the mighty and apparently irresistible movement of which he was the head. And this object could be attained if in any way it could be shown that Parnell had direct participation in any of the terrible events by which the Irish, like all revolutions, had been accompanied. One crime stood out in terrible relief. As is well known, Lord Frederick Cavendish, going over to Ireland on a mission of mercy and reconciliation, was murdered in Phoenix Park along with Mr. Burke, the permanent Under Secretary for Ireland. It is difficult at this time of day to realize all the world-wide horror which this crime created. For a time it shook the Irish movement to its very foundations, and not only the movement, but the life of Parnell was in danger. But the tempest blew over for a year, and then it was revived in all its horror, and perhaps even increased in its violence by the revelations made by Carey, who, having been one of the organizers of the dreadful conspiracy of which the Phoenix murders were the outcome, had turned informant and revealed to the horrified and startled world the ghastly interior of the whole terrible story.

THE *Times* felt that its story had at last received confirmation, and it began soon to hint that other and more terrible revelations were coming. For the *Times* by then had got into communication with Pigott, and Pigott suddenly found himself in the position of being able to command sums which to him were beyond the dreams of avarice, by the very simple method of forging letters and signatures. He forged and forged, but apparently both the appetite and the purse of the *Times* were inexhaustible, and he went on with more forgeries and getting more money until at last his gains from this source amounted to several thousands of pounds.

At last, on the morning of the day when the second reading of a Coercion Bill was about to be put to the test of a division in the House of Commons, the thunderbolt fell on an astounded and horrified world. The *Times* published a letter bearing the signature of Parnell and indicating sympathy, if not connivance, with the Phoenix Park murders. Never in the history of British politics

editor of a paper, and I took on myself the duty of describing the important scenes in this exciting drama, and thus I had the opportunity of seeing perhaps the most tragic cross-examination the courts of law have ever seen. The cross-examiner was the late Lord Russell—then Sir Charles and still at the Bar. He towered, even amid the legal giants engaged in this case, as easily above them all as does the Matterhorn above all the other Swiss mountains. And, confident in his case, Russell fell upon Pigott with all the tremendous and almost cruel force of his own strong personality and of the still stronger force of the facts he knew. And poor Pigott, in the course of half an hour, was reduced to pitiful pulp. You could see the unfortunate wretch crumpling up and, as it were, dissolving, under the pitiless cross-examination.

"As time went on, there were ugly whispers of defalcations"

was there a revelation which seemed destined to transform so utterly an entire political situation and more certain to bring to earth a mighty fabric wrought by hands so potent as those of Gladstone and Parnell. For by this time Gladstone had taken up the cause of Parnell, and had committed a great British, as well as the Irish, party to the cause of Home Rule. Reckless, penniless, greedy of appetite and of money to satisfy it, Pigott may have hoped that he could escape the final Nemesis.

An inquiry was ordered by the House of Commons, and after long delays and apparently great reluctance, the *Times* was compelled to put Pigott in the box. The day of retribution had come slowly but surely.

It was not long before it was seen by everybody that Pigott was the author and the writer of the terrible letter which had created such a cyclone. I was then

BUT to the court generally the spectacle descended from tragedy to farce. As begging-letter after letter was read, with their untruths white and their hypocrisy, nobody could keep his countenance, and peals of laughter resounded through the court. The comic effect was increased to an almost intolerable degree by the strange spectacle on the bench where the three grave judges sat, aloof from all this bubbling and seething welter of human and political passions on the seats below. One judge, the late Mr. Justice Day, had excited a strange feeling because, alone of the three, he had never opened his lips throughout the whole inquiry. But to the amusement of everybody, Pigott broke down this composure and aloofness. Mr. Justice Day writhed in laughter, he seemed to become almost hysterical, and this strange and unexpected sight set the roar all over the court, until in the end the laughter seemed to end in one universal shriek. And meantime Russell went on involving the trembling and discomfited wretch in the box in new contradictions, new and even more palpable lies; until in the end it almost looked as if a great bruiner were kicking to death the weak opponent he had already bruised into pulp.

NO one was surprised when the court met the next day that Pigott was no longer in the box, and soon the news came that he had fled. He had in the meantime, with the characteristic weakness and treachery of such a nature, made an attempt to save himself by going into the opposite camp. In Mr. Labouchere's house before the keen, searching, and merciless eyes of that master cynic and of the late Sir George Lewis, he told the whole story of the forgeries, even revealing the methods which he had employed to give some approach to resemblance to the signature of Parnell. Detectives pursued Pigott hotfoot to Madrid, whither he had fled. They found him in a hotel of that city. On some excuse he managed to be allowed to go to his bedroom, and there he blew out his brains.

WARUM? OR

By JAMES F.

Where the Banker Is Superfluous

By LOUIS D. BRANDEIS

Being Part VI of "Breaking
the Money Trust"

In Baltimore, with the assistance of "The Sun," \$4,766,000 were sold "over
the counter" on a 4 1-2 per cent. basis

THE abolition of interlocking directorates will greatly curtail the bankers' power by putting an end to many improper combinations. Publicity concerning bankers' commissions, profits and associates, will tend effective aid, particularly by curbing undue exactions. Many of the specific measures recommended by the Pujo Committee (some of them dealing with technical details) will go far toward correcting corporate and banking abuses; and thus tend to arrest financial concentration. But the investment banker has, within his legitimate province, acquired control so extensive as to menace the public welfare, even where his business is properly conducted. If the New Freedom is to be attained, every proper means of lessening his power must be availed of. And a simple and effective remedy, which can be widely applied, even without new legislation, lies near at hand:—Eliminate the banker-middleman where he is superfluous.

Today practically all governments, states and municipalities pay toll to the banker on all bonds sold. Why should they? It is not because the banker is always needed. It is because the banker controls the only avenue through which the investor in bonds and stocks can ordinarily be reached. The banker has become the universal tax gatherer. True, the *pro rata* of taxes levied by him upon our state and city governments is less than that levied by him upon the corporations. But few states or cities escape payment of some such tax to the banker on every loan it makes. Even where the new issues of bonds are sold at public auction, or to the highest bidder on sealed proposals, the bankers' syndicates usually secure large blocks of the bonds which are sold to the people at a considerable profit. The middleman, even though unnecessary, collects his tribute.

There is a legitimate field for dealers in state and municipal bonds, as for other merchants. Investors already owning such bonds must have a medium through which they can sell their holdings. And those states or municipalities which lack an established reputation among investors, or which must seek more distant markets, need the banker to distribute new issues.

But there are many states and cities which have an established reputation and have a home market at hand. These should sell their bonds direct to investors without the intervention of a middleman. And as like conditions prevail with some corporations, their bonds and stocks should also be sold direct to the investor. Both financial efficiency and industrial liberty demand that the bankers' toll be abolished, where that is possible.

Banker and Broker

THE business of the investment banker must not be confused with that of the bond and stock broker. The two are often combined; but the functions are essentially different. The broker performs a very limited service. He has properly nothing to do with the original issue of securities, nor with their introduction into the market. He merely negotiates a purchase or sale as agent for another under specific orders. He exercises no discretion, except in the method of bringing buyer and seller together, or of executing orders. For his humble service he receives a moderate compensation, a commission, usually one-eighth of one per cent. (12½ cents for each \$100) on the par value of the security sold. The investment banker also is a mere middleman. But he is a principal, not an agent. He is a merchant in bonds and stocks. The compensation received for his part in the transaction is in many cases more accurately described as profit than as commission. So far as concerns new issues of government, state and municipal bonds, especially, he acts as merchant, buying and selling securities on his own behalf; buying commonly at wholesale from the maker and selling at retail to the investors; taking the merchant's risk and the merchant's profits. On purchases of corporate securities the profits are often very large; but even a large profit may be entirely proper; for when the banker's services are needed and are properly performed, they are of great value. On purchases of government, state and municipal securities the profit is usually smaller; but even a very small profit cannot be justified, if unnecessary.

How the Banker Can Serve

THE banker's services include three distinct functions, and only three:

First: Specifically as expert. The investment banker has the responsibility of the ordinary retailer to sell only that merchandise which is good of its kind. But his responsibility in this respect is unusually heavy, because he deals in an article on which a great majority of his customers are unable, themselves, to pass intelligent judgment without aid. The purchase by the investor of most corporate securities is little better than a gamble, where he fails to get the advice of some one who has investigated the security thoroughly as the banker should. For few investors have the time, the facilities, or the ability to investigate properly the value of corporate securities.

Second: Specifically as distributor. The banker performs an all-important service in providing an outlet for securities. His connections enable him to reach possible buyers quickly. And good-will,—that is, possession of the confidence of regular customers—enables him to effect sales where the maker of the security might utterly fail to find a market.

Third: Specifically as jobber or retailer. The investment banker, like other merchants, carries his stock in trade until it can be marketed. In this he performs a service which is often of great value to the maker. Needed cash is obtained immediately because the whole issue of securities can thus be disposed of by a single transaction. And even where there is not immediate payment, the knowledge that the money will be provided when needed, is often of paramount importance. By carrying securities in stock, the banker performs a service also to investors, who are thereby enabled to buy securities at such time as they desire.

Whenever makers of securities or investors require all or any of these three services, the investment banker is needed, and payment of compensation to him is proper. Where there is no such need, the banker is clearly superfluous. And in respect to the original issue of many of our state and municipal bonds, and of some corporate securities, no such need exists.

IN preceding articles, Mr. Brandeis has shown the need of abolishing interlocking directorates and of having full publicity regarding bankers' commissions, profits and associations. He now takes up the large question of the immense control of the investment banker even within his own legitimate province and lays down a simple and effective remedy which can be widely applied even without new legislation.

Six years before the fall of the great system, the hidden dangers were pointed out. Proof was furnished of the rotten timbers

Where the Banker Serves Not

IT needs no banker experts in value to tell us that bonds of Massachusetts or New York, of Boston, Philadelphia or Baltimore and of scores of lesser American cities, are safe investments. The basic financial facts in regard to such bonds are a part of the common knowledge of many American investors; and, certainly, of most possible investors who reside in the particular state or city whose bonds are in question. Where the financial facts are not generally known, they are so simple, that they can be easily summarized and understood by any prospective investor without interpretation by an expert. Bankers often employ, before purchasing securities, their own accountants to verify the statements supplied by the makers of the security, and use these accountants' certificates as an aid in selling. States and municipalities, the makers of the securities, might for the same purpose, employ independent public accountants of high reputation, who would give their certificates for use in marketing the securities. Investors could also be assured without banker-aid that the basic legal conditions are sound. Bankers, before purchasing an issue of securities, customarily obtain from their own counsel an opinion as to its legality, which investors are invited to examine. It would answer the same purpose, if states and municipalities should supplement the opinion of their legal representatives by that of independent counsel of recognized professional standing, who would certify to the legality of the issue.

Neither should an investment banker be needed to find investors willing to take up, in small lots, a new issue of bonds of New York or Massachusetts, of Boston, Philadelphia or Baltimore, or a hundred other American cities. A state or municipality seeking to market direct to the investor its own bonds would naturally experience, at the outset, some difficulty in marketing a large issue. And in a newer community, where there is little accumulation of unemployed capital, it might be impossible to find buyers for any large issue. Investors are apt to be conservative; and they have been trained to regard the intervention of the banker

as necessary. The bankers would naturally discourage any attempt of states and cities to dispense with their services. Entrance upon a market, hitherto monopolized by them, would usually have to be struggled for. But banker-led investors, as well as others could, in time, be brought to realize the advantage of avoiding the middleman and dealing direct with responsible borrowers. Governments, like private concerns, would have to do educational work; but this publicity would be much less expensive and much more productive than that undertaken by the bankers. Many investors are already impatient of banker exactions; and eager to deal direct with governmental agencies in whom they have more confidence. And a great demand could, at once, be developed among smaller investors whom the bankers have been unable to interest, and who now never buy state or municipal bonds. The opening of this new field would furnish a market, in some respects more desirable and certainly wider than that now reached by the bankers.

Neither do states or cities ordinarily need the services of the investment banker to carry their bonds pending distribution to the investor. Where there is immediate need for large funds, states and cities—at least the older communities—should be able to raise the money temporarily, quite as well as the bankers do now, while awaiting distribution of their bonds to the investor. Bankers carry the bonds with other people's money, not with their own. Why should not cities get the temporary use of other people's money as well? Bankers have the preferential use of the deposits in the banks, often because they control the banks. Free these institutions from banker-control, and no applicant to borrow the people's money will be received with greater favor than our large cities. Boston, with its \$1,500,000,000 of assessed valuation and \$78,033,198 net debt, is certainly as good a risk as even Lee, Higginson & Co. or Kidder, Peabody & Co.

But ordinarily cities do not, or should not, require large sums of money at any one time. Such need of large sums does

not arise except from time to time where maturing loans are to be met, or when some existing public utility plant is to be taken over from private owners. Large issues of bonds for any other purpose are usually made in anticipation of future needs, rather than to meet present necessities. Modern efficient public financing, through substituting serial bonds for the long term issues (which in Massachusetts has been made obligatory) will, in time, remove the need of large sums at one time for paying maturing debts, since each year's maturities will be paid from the year's taxes. Purchase of existing public utility plants are of rare occurrence, and are apt to be preceded by long periods of negotiation. When they occur they can, if foresight be exercised, usually be financed without full cash payment at one time.

Today, when a large issue of bonds is made, the banker, while ostensibly paying his own money to the city, actually lends the city other people's money which he has borrowed from the banks. Thus the banks get back, through the city's deposits, a large part of the money so lent. And when the money is returned to the bank, the banker has the opportunity of borrowing it again for other operations. The process results in double loss to the city. The city loses by not getting from the banks as much for its bonds as investors would pay. And then it loses interest on the money raised before it is needed. For the bankers receive from the city bonds bearing rarely less than 4 per cent. interest; while the proceeds are deposited in the banks which rarely allow more than 2 per cent. interest on the daily balances.

Cities That Helped Themselves

IN the present year some cities have been led by necessity to help themselves. The bond market was poor. Business was uncertain, money tight and the ordinary investor reluctant. Bankers were loth to take new bond issues. Municipalities were unwilling to pay the high rates demanded of them. And many cities were prohibited by law or ordinance

from paying more than 4 per cent. interest; while good municipal bonds were then selling on a $4\frac{1}{2}$ to 5 per cent. basis. But money had to be raised, and the attempt was made to borrow it direct from the lenders instead of from the banker-middleman. Among the cities which raised money in this way were Philadelphia, Baltimore, St. Paul, Utica, and New York.

Philadelphia, under Mayor Blankenburg's inspiration, sold nearly \$4,175,000 in about two days on a 4 per cent. basis and another "over-the-counter" sale has been made since. In Baltimore, with the assistance of the *Sun*, \$4,700,000 were sold "over the counter" on a $4\frac{1}{2}$ per cent. basis. Utica's two "popular sales" of $4\frac{1}{2}$ per cent. bonds were largely "over-subscribed." And since then other cities large and small have had their "over-the-counter" bond sales. The experience of Utica, as stated by its Controller, Fred G. Reusswig, must prove of general interest:

"In June of the present year I advertised for sale two issues—one of \$100,000 and the other of \$10,000, bearing interest of $4\frac{1}{2}$ per cent. The latter issue was purchased at par by a local bidder and of the former we purchased \$10,000 for our sinking funds. That left \$90,000 unsold, for which there were no bidders, which was the first time that I had been unable to sell our bonds. About this time the 'popular sales' of Baltimore and Philadelphia attracted my attention. The laws in effect in those cities did not restrict the officials as does our law and I could not copy their methods. I realized that there was plenty of money in this immediate vicinity and if I could devise a plan conforming with our laws under which I could make the sale attractive to small investors it would undoubtedly prove successful. I had found, in previous efforts to interest people of small means, that they did not understand the meaning of premium and would rather not buy than bid above par. They also objected to making a deposit with their bids. In arranging for the 'popular sales' I announced in the papers that, while I must award to the highest bidder, it was my opinion that a par bid would be the highest bid. I also announced that we would issue bonds in denominations as low as \$100 and that we would not require a deposit except where the bid was \$5,000 or over. Then I succeeded in getting the local papers to print editorials and local notices upon the subject of municipal bonds, with particular reference to those of Utica and the forthcoming sale. I enclose you copies of our notice of sale and bidding blank, which was virtually a subscription blank. All the prospective purchaser had to do was to fill in the amount desired, sign his name, seal the bid and await the day for the award. I did not have many bidders for very small amounts. There was only one for \$100 at the first sale and one for \$100 at the second sale and not more than ten who wanted less than \$500. Most of the bidders were looking for from \$1,000 to \$5,000, but nearly all were people of comparatively small means, and with some the investment represented all their savings. In awarding the bonds I gave preference to residents of Utica and I had no difficulty in apportioning the various maturities in a satisfactory way. I believe that there are a large num-

ber of persons in every city who would buy their own bonds if the way were made easier by law. Syracuse and the neighboring village of Ilion, both of which had been unable to sell in the usual way, came to me for a program of procedure and both have since had successful sales along similar lines. We have been able by this means to keep the interest rate on our bonds at $4\frac{1}{2}$ per cent., while cities which have followed the old plan of relying upon bond houses have had to increase the rate to 5 per cent. I am in favor of amending the law in such a manner that the Common Council, approved by the Board of Estimate and Apportionment, may fix the prices at which bonds shall be sold, instead of calling for competitive bids. Then place the bonds on sale at the Controller's office to any one who will pay the price. The prices upon each issue should be graded according to the different values of different maturities. Under the present law, as we have it, conditions are too complicated to make a sale practicable except upon a basis of par bids."

The St. Paul Experiment

ST. PAUL wisely introduced into its experiment a more democratic feature, which Tom L. Johnson, Cleveland's great mayor, thought out (but did not utilize), and which his friend W. B. Colver, now Editor-in-Chief of the *Daily News*, brought to the attention of the St. Paul officials. Mayor Johnson had recognized the importance of reaching the small savings of the people; and concluded that it was necessary not only to issue the bonds in very small denominations, but also to make them redeemable at par. He sought to combine practically, bond investment with the savings bank privilege. The fact that municipal bonds are issuable ordinarily only in large denominations, say, \$1,000, presented an obstacle to be overcome. Mayor Johnson's plan was to have the sinking fund commissioners take large blocks of the bonds, issue against them certificates in denominations of \$10, and have the commissioners agree (under their power to purchase securities) to buy the certificates back at par and interest. Savings bank experience, he insisted, showed that the redemption feature would not prove an embarrassment; as the percentage of those wishing to withdraw their money is small; and deposits are nearly always far in excess of withdrawals.

The St. Paul sinking fund commissioners and City Attorney O'Neill approved the Johnson plan; and in the face of high money rates, sold on a 4 per cent. basis, during July, certificates to the net amount of \$302,200; during August, \$147,000; and during September, over \$150,000, the average net sales being about \$5,700 a day.

Many cities are now prevented from selling bonds direct to the small investors, through laws which compel bonds to be issued in large denominations or which require the issue to be offered to the highest bidder. It is said that Governor Cox of Ohio, a very progressive magistrate—has "given his pledge that a law will be passed at the special session of the legislature this winter to permit cities to offer their bonds first to the common people in \$10, \$25, and \$50 lots."

Salesmanship and Education

SUCH success as has already been attained is largely due to the unpaid educational work of leading progressive

newspapers. But the educational work to be done must not be confined to teaching "the people"—the buyers of the bonds. Municipal officials and legislators have quite as much to learn. They must, first of all, study salesmanship. Selling bonds to the people is a new art, still undeveloped. The general problems have not yet been worked out. And besides these problems common to all states and cities, there will be, in nearly every community, local problems which must be solved, and local difficulties which must be overcome. The proper solution even of the general problems must take considerable time. There will have to be many experiments made; and doubtless there will be many failures. Every great distributor of merchandise knows the obstacles which he had to overcome before success was attained; and the large sums that had to be invested in opening and preparing a market. Individual concerns have spent millions in wise publicity; and have ultimately reaped immense profits when the market was won. Cities must take their lessons from these great distributors. Cities must be ready to study the problems and to spend prudently for proper publicity work. It might, in the end, prove an economy, even to allow, on particular issues, where necessary, a somewhat higher interest rate, than bankers would exact, if thereby a direct market for bonds could be secured. Future operations would yield large economies. And the obtaining of a direct market for city bonds is growing ever more important, because of the huge increase in loans which must attend the constant expansion of municipal functions. In 1898 the new municipal issues aggregated \$105,084,793; in 1912, \$380,810,287.

Savings Banks

IN New York, Massachusetts and the other sixteen states where a system of purely mutual savings banks is general, it is possible, with a little organization, to develop an important market for the direct purchasers of bonds. The bonds issued by Massachusetts cities and towns have averaged recently about \$15,000,000 a year, and those of the state about \$3,000,000. The 194 Massachusetts savings banks, with aggregate assets of \$202,103,755.84, held on October 31, 1913, \$90,536,381.52 in bonds and notes of states and municipalities. Of this sum about \$60,000,000 are invested in bonds and notes of Massachusetts cities and towns, and about \$8,000,000 in state issues. The deposits in the savings banks are increasing at the rate of over \$50,000,000 a year. Massachusetts state and municipal bonds have, within a few years, come to be issued tax exempt in the hands of the holder, whereas other bonds held by savings banks are subject to a tax of one-half of one per cent. of the market value. Massachusetts savings banks, therefore, will hereafter naturally select Massachusetts municipal issues for high-grade bond investments. Certainly Massachusetts cities and towns might, with the cooperation of the Commonwealth, easily develop a "home market" for "over-the-counter" bond business with the savings banks. And the savings banks of other states offer similar opportunities to their municipalities.

Coöperation

BANKERS obtained their power through combination. Why should not cities and states free themselves from

the bankers by coöperation? For by coöperation between the cities and the state, the direct marketing of municipal bonds could be greatly facilitated.

Massachusetts has 33 cities, each with a population of over 12,000 persons; 71 towns each with a population of over 5,000; and 230 towns each with a population of less than 5,000. Three hundred and eight of these municipalities now have funded indebtedness outstanding. The aggregate net indebtedness is about \$180,000,000. Every year about \$15,000,000 of bonds and notes are issued by the Massachusetts cities and towns for the purpose of meeting new requirements and refunding old indebtedness. If these municipalities would coöperate in marketing securities, the market for the bonds of each municipality would be widened; and there would exist also a common market for Massachusetts municipal securities which would be usually well supplied, would receive proper publicity and would attract investors. Successful merchandising necessarily involves carrying an adequate, well-sorted stock. If every city acts alone, in endeavoring to market its bonds direct, the city's bond-selling activity will necessarily be sporadic. Its ability to supply the investor will be limited by its own necessities for money. The market will also be limited to the bonds of the particular municipality. But if a state and its cities should coöperate, there could be developed a continuous and broad market for the sale of bonds "over-the-counter." The joint selling agency of over three hundred municipalities,—as in Massachusetts—would naturally have a constant supply of assorted bonds and notes which could be had in as small amounts as the investor might want to buy them. It would be a simple matter to establish such a joint selling agency by which municipalities, under proper regulation of, and aid, from the state, would coöperate.

AND coöperation among the cities and with the state might serve in another important respect. These 354 Massachusetts municipalities carry in the aggregate, large bank balances. Sometimes the balance carried by a city represents unexpended revenues; sometimes unexpended proceeds of loans. On these

balances they usually receive from the banks 2 per cent. interest. The balances of municipalities vary like those of other depositors; one having idle funds, when another is in need. Why should not all of these cities and towns coöperate, making, say, the State their common banker, and supply each other with funds as farmers and laborers coöperate through credit unions? Then cities would get, instead of 2 per cent. on their balances, what their money was worth.

The Commonwealth of Massachusetts holds now in its sinking and other funds nearly \$30,000,000 of Massachusetts municipal securities, constituting nearly three-fourths of all securities held in these funds. Its annual purchases aggregate nearly \$4,000,000. Its purchases direct from cities and towns have already exceeded \$1,000,000 this year. It would be but a simple extension of the state's function to coöperate, as indicated, in a joint, municipal Bond Selling Agency and Credit Union. It would be a distinct advance in the efficiency of state and municipal financing; and what is even more important, a long step toward the emancipation of the people from banker-control.

Corporate Self-Help

STRONG corporations with established reputations, locally or nationally, could emancipate themselves from the banker in a similar manner. Public-service corporations in some of our leading cities could easily establish "over-the-counter" home markets for their bonds; and would be greatly aided in this by the supervision now being exercised by some state commissions over the issue of securities by such corporations. Such corporations would gain thereby not only in freedom from banker-control and exactions, but in the winning of valuable local support. The investor's money would be followed by his sympathy. In things economic, as well as in things political, wisdom and safety lie in direct appeals to the people.

The Pennsylvania Railroad now relies largely upon its stockholders for new capital. But a corporation with its long-continued success and reputation for stability should have much wider financial support and should eliminate the banker altogether. With the 4,700 stations on its

system, the Pennsylvania could, with a slight expense, create nearly as many avenues through which money would be obtainable to meet its growing needs.

Banker-Protection

WAS there ever a more be-bankered railroad than the New Haven? Was there ever a more banker-led community of investors than New England? Six years before the fall of that great system, the hidden dangers were pointed out to these banker-experts. Proof was furnished of the rotting timbers. The disaster-breeding policies were laid bare. The bankers took no action. Repeatedly, thereafter, the bankers' attention was called to the steady deterioration of the structure. The New Haven books disclose 11,481 stockholders who are residents of Massachusetts; 5,682 stockholders in Connecticut; 735 in Rhode Island; and 3,510 in New York. The city directories disclose 140 banking houses in Boston, 20 in Providence, 33 in New Haven and Hartford, and 337 in New York City. Of the New Haven stockholders 10,474 are women. Of the New Haven stockholders 10,222 are of such modest means that their holdings are from one to ten shares only. But who, connected with those New England and New York banking houses, during these five long years which preceded the recent investigation of the Interstate Commerce Commission, raised either voice or pen in protest against the continuous mismanagement of that great trust property or warned the public of the impending disaster? Some of the bankers sold their own stock holdings. Some bankers whispered to a few favored customers advice to dispose of New Haven stock. But not one banker joined those who sought to open the eyes of New England to the impending disaster and to avert it by timely measures. New England's leading banking houses were ready to "coöperate" with the New Haven management in taking generous commissions for marketing the endless supply of new securities, but they did nothing to protect the investors. Were these bankers blind? Or were they afraid to oppose the will of J. P. Morgan & Co.? Perhaps it is the banker who, most of all, needs the New Freedom.

Other banker-diservice and other remedies will be discussed in the next issue under "Big Men and Little Business."

Bankers carry bonds with other people's money, not their own

The Desire to Soar

By BERTON BRALEY

Ambition

I WANT to be a Highbrow
Who follows mystic creeds,
And laurel-decks the shy brow
Of poets no one reads,
I'd join the weird outré rites
Of ultra Highbrow bands,
Discussing unknown playwrights,
Whom no one understands.

I want to be a Highbrow,
With air of perfect poise,
Who lifts a scornful eyebrow
At all the rough world's noise,
Oh, I could fill with glee so
Desirable a shelf,
—A Highbrow seems to be so
Delighted with himself!

I want to be a Highbrow,
I want to take my stand,
With elevated eye-brow
And manner very grand,
Amid the tea-room chatter
And learnedly rehearse
Exactly what's the matter
With all the universe.

I want to be a Highbrow
With esoteric ways,
Who looks, with very wry brow,
On things that others praise;
Who passes cruel strictures
On artists who can draw,
But raves o'er Cubist pictures
With rapt adoring awe!

Temperament

WHEN I was but a baby and I didn't get my way
I threw my rattle from me and I howled night and day;
They tried to pacify me but it wouldn't work at all,
I answered all their efforts with a loud and lusty squawl,
And not until I got my wish could I be made content
And people all remarked on my "artistic temperament!"
I'm so temperamental
You can plainly see
I got the habit early
And it clung to me,
Some people call me selfish
But they're wrong, my dear,
I'm SO temperamental
THAT'S what makes me queer!

And now that I'm an actress and my name is on the sign
I want the stage's center and the spotlight all for mine;
I sulk and pout and sputter if I cannot hog the scene,
The author says I'm selfish and the actors call me mean,
I'm jealous of the chorus and I snub the leading gent;
So everybody says I have "artistic temperament!"
I'm so temperamental
That I throw a fit
Unless at every minute
I'm the Great Big It!
Some people think I'm crazy
And they don't know why,
But I'm SO temperamental
—And it all gets by!

Tchekhov's Plays

By NEITH BOYCE

THESE three quotations from Tchekhov's letters may be found in Mr. George Calderon's introduction to his translation of "The Sea-Gull" and "The Cherry Orchard."

"I am neither a liberal, nor a conservative, nor a moderate, nor a monk, nor an indifferent—I want to be a free artist and nothing more.

"Be objective—look at everything with your customary, kind eyes; sit down and write us a story or play of Russian life, not a criticism of life, but the joyful song of a gold-finch about Russian life and human life in general—life which is given us but once, and which it is foolish to waste on exposing the wickedness of so and so.

"Peasant blood flows in my veins and

you cannot astonish me with the virtues of the peasantry. I have always believed in progress from my childhood up, and could not help believing in it, for the difference between the time when I used to get thrashed and the time when I stopped getting thrashed was something tremendous."

These three passages perhaps explain why Tolstoi thought the young Tchekhov "a demoralizing influence for the youth of Russia." Tchekhov's lack of interest in definite moral propaganda, and his humor, must equally have displeased the stern prophet of the voice of God, who believed in art only for morality's sake, and who certainly would have agreed with Shelley that "the world will never be re-

formed till humor is abolished. However, a devoted admirer of Tchekhov, Abraham Cahan, who fifteen years ago translated some of Russian's short stories—says that Tolstoi in his last years, recanting much of his morality, became also an enthusiast for Tchekhov's stories, but said to him: "Anton Gregorivitch, you will never be a dramatist!" From which one may conclude that Tolstoi even at the end did not properly appreciate Tchekhov.

Tchekhov's plays—he wrote five, besides a multitude of short farces—are full of humor—and of sadness and irony—they are full of life. They are sweet and bitter. They are as vivid and vague as dreams, and full of the dream that we call

reality. They will never be popular, though they are, of course, well-known on the Continent and some even have been acted in England. But to a person who likes that sort of thing, as we say, they are exactly the sort of thing he likes. To a person who is not—or is only mildly—interested in definite moral propaganda, to one who cares for the sort of criticism of life which is involved in its simple presentation by an artist of subtle and passionate temperament—to such a person these plays of Tehekhov may be pure delight, a well of enchantment. There is a Russian folk-song—the song of the boatmen on the Volga—which expresses in its deep, haunting, melancholy cadence something of the spirit that moves in these plays, and that looks at us out of the portrait of Tehekhov, the softly-bearded face with its sensitive, firm, sensuous mouth and its deep-brooding eyes. It is a typically Russian spirit. It is the voice of that strange country where so much vitality exhausts itself in vain, where so much idealism ends in self-destruction.

WE are familiar with the Hamlet type of Russian literature—the man of deep feelings and weak action, suffering from the harshness of life and unable to react effectively. Ivanov, in Tehekhov's play of that name, is another of these idealists whose fire burns too fiercely and burns itself out too quickly. In his youth he has dreamed high dreams; he has loved and married a Jewess; has thrown himself against the wall of caste and class feeling. And he has been crushed. When the play opens he is living, or existing, on his estate in the country and at thirty he has exhausted his life-impulse. His wife is dying, and his love for her is dead. With her heavy sentimentality and her reproachful clutch on him she drives him further and further away. In spite of her appeal and the protests of her doctor, who stands for morality and assures Ivanov that he is killing his wife, Ivanov nevertheless leaves her every evening for a neighbor's house where there is cheerful company, gambling, and, as it happens, a young daughter. This girl falls in love with Ivanov. After the death of his wife, Ivanov and the girl are betrothed. The doctor, in the name of morality, is positive that Ivanov has caused the wife's death in order to get her fortune and to be able to marry the young girl, with another fortune. And he is so furious at this success of crime that he is ready to murder Ivanov. The girl's family dislikes the marriage, nevertheless the day set for the wedding arrives. The father, in a touching scene, expresses the common feeling about Ivanov and his own fear and doubt, and begs his daughter to reconsider; she admits that, in spite of her love, she, too, doubts. Arrives Ivanov and begs her to release him. She refuses and he shoots himself. A more vivid and convincing picture of the man who has out-lived life, out-lived himself, and of the general and natural attitude of misunderstanding and dislike toward such a survival, it would be hard to find. But, as in the case of all of Tehekhov's plays the story, the theme, the main character or characters are only part of the interest. The background is so rich, each personality is so suggestive, the details so vital, that one has the impression not only of a firm design, but of an endless interplay and fringe of inter-relationships, and of that individual isolation in the midst of a common life, a common atmosphere, that we feel all about us as we live.

The "Sea-Gull" shows us in four short acts a group of persons whom it would be impossible, short of a book, to describe. This play was first introduced in 1896 at St. Petersburg, and was hissed off the stage. Tehekhov wrote to a friend about it: "Everybody assured me that the characters were all lunatics, that my play was clumsy in technique, that it was stupid, obscure, idiotic even." The next year, at the Artistic Theater in Moscow, the play made a striking success. It is difficult to say why it was thought obscure, to say nothing of the other remarks on it. Its story is simple, and might be summed up in the note made by one of the characters, Trigorin, a successful author: "A subject occurred to me; a subject for a short story. A girl—like yourself, say—lives from her childhood on the shores of a lake. She loves the lake like a sea-gull, and is happy and free like a sea-gull. But a man comes along by chance and sees her and ruins her; like this sea-gull, just to amuse himself."

IT is true that when one has summed up the story thus, it is only to realize that there are a dozen stories in the play that escape the summary. Thus only, one would think, could it have seemed obscure or clumsy—from its richness. Each person in the play has a story: Arcadina, the successful actress, middle-aged but keeping her youth, careless, conventional, cruel; Trigorin, who is her lover, and is bored by his success and tired of writing, and tired of Arcadina, and yet has nothing better to do than to go on writing and being fond of Arcadina; Nina, the young girl of the lake, the "sea-gull," who is drawn away from her youthful love by the fascination of the famous man; Constantine, son of Arcadina and lover of Nina, the young poet whose just efforts are ridiculed by his mother and her companions and who sees his love go from him to another; and half a dozen other characters, each clear, defined in a few words, rounded out by almost invisible touches. Nina follows Trigorin, bears him a child, becomes a wandering actress, and returns one night for a glimpse of the place where, as a girl, she had been happy. Trigorin has gone back to Arcadina. Constantine has begun to be recognized as a writer. He begs Nina to return to him or to let him follow her. She still loves Trigorin. She goes away. Constantine, left alone, begins methodically tearing up his manuscripts, then he goes out. A few minutes later, when Arcadina and Trigorin and others are playing cards and chattering and drinking claret, the end of the play comes thus:

(Report of a pistol behind the scenes. Everyone starts.) Arcadina (alarmed): "What's that?"

Dora: "It's all right. I expect something's busted in my traveling medicine-chest. Don't be alarmed." (Exit R., and returns a moment later.) "As I expected. My ether bottle's burst." (Singing) "Once more, once more, before thee, love—"

Arcadina (sitting at the table): "Good heavens, I was quite frightened. It reminded me of that time when—(covering her face with her hands.) I felt quite faint."

Dora (taking up magazine, to Trigorin): "There was an article in this paper a month or two ago—a letter from America, and I wanted to ask you—(Puts his arm around Trigorin and brings him to the footlights.) I'm very much interested in the question— (In a lower tone) Get Trina (Arcadina) away from here. The fact is, Constantine has shot himself. . . ."

Suicide is the common refuge of these very Russian heroes. "The Cherry Orchard" is the only serious play of Tehekhov that does not end with a pistol shot. This was his last work, and was produced in Moscow in 1904, when the author was dying. It is the most characteristic, the most appealing, of all his plays, and, more than any other, impossible to describe. The plot is this: Madame Ranevsky returns with her seventeen-year-old daughter Anya to her Russian estate, after five years spent in Paris with a man who has ill-treated and robbed her, but whom she still loves. Her property, including the cherry orchard which is famous throughout the country, is mortgaged and about to be sold. On this old family estate are living her brother and a group of retainers and servants, living on nothing, for there is nothing to be done. Madame Ranevsky weeps for joy on her return to the old home which she loves; throws away what money she has left, giving a sovereign to a tramp because she has no silver; faces the coming sale with terror, or rather does not face it. Lopakhin, the grandson of a serf on her estate, who has made a fortune in business points out her only chance of escape—to cut up her property in villa lots, tear down the old house, cut down the cherry orchard.

"Cut down the cherry orchard!" cries Madame Ranevsky. "Excuse me, but you don't know what you're talking about. If there's one thing that's interesting, remarkable, in fact, in the whole province, it's our cherry orchard." And as she looks out, in the dawn, she cries again: "Oh, my childhood, my pure and happy childhood! I used to sleep in this nursery. I used to look out from here into the garden. Happiness awoke with me every morning; and the orchard was just the same as it is now; nothing is altered. It is all white, all white! Oh, my cherry orchard! After the dark and stormy autumn and the frosts of winter you are young again and full of happiness; the angels of heaven have not abandoned you—what a wonderful orchard, with its white masses of blossoms and the blue sky above!"

THE day of the sale approaches and nothing is done. Everyone has some scheme for getting the money, but nobody gets it. Lopakhin presses his suggestion urgently but is ignored. They live, eat, talk, scheme, and bemoan themselves. Madame Ranevsky gets telegrams from Paris demanding her return. And then the sale comes, and Lopakhin buys the property—half-delighted at his success, half-ashamed of it, for the peasant, the self-made man, has a sensitive soul, and feels the sadness of the old order passing away. And in the last act Madame Ranevsky and Anya are leaving for Paris, and the axe is laid to the cherry-orchard.

It is impossible to convey the charm of this play, either through such a bare outline or through any amount of talking about it. There are already many commentaries on Tehekhov, many critical essays, many attempts to explain his philosophy, his method, his meaning. In to his plays many things have been read, even revolutionary propaganda, which probably would considerably astonish him. It is well to talk or write about Tehekhov, but simply for the purpose of getting people to read him, or for the mere pleasure of expressing, however inadequately, the pleasure that he gives.

Two plays, "The Sea-Gull" and "The Cherry Orchard" by Anton Chekhov. New York: The Theatre Guild. Three plays, "Uncle Vanya," "The Three Sisters," and "The Sea-Gull," by Anton Chekhov. New York: The Theatre Guild.

PEN AND INKLINGS

By OLIVER HERFORD

DRAWING-ROOM STUFF

Déjàd stuff

MR. AUGUSTUS THOMAS once singled out a certain one of our young leading men as the most perfect exponent of the Drawing-room Manner upon the American stage. Doubtless intending this for a compliment, the Distinguished Dramatist unconsciously summed up in two words all the concentrated awfulness of the Drawing-room gymnastics that pass for high-life manners on the American stage.

THE Drawing-room Manner! What can better describe the difficult, not to say dangerous, feats of this social aerobut—his glad, rushing entrance, his prancing exit, his marvelous skill in mounting or dismounting from a fiery, untamed chair, or a skittish settee, fresh from the trackless plains of Grand Rapids and totally unbroken to the Drawing-room. The still more difficult stunt of standing balanced on both feet—the variation of an inch in the position of the patent leather shoe, in the angle of the knee, the parting of a coat-tail, as he drops into his chair seat, may mean instant social destruction.

AND that most thrilling, nerve-wrecking act of all, the tanning of the Hands. The savage treacherous Hands! How perfect his control of them! How he keeps them in check by the fearless gaze of his human eye! We hold our breath, each moment dreading some fearful fatality.

IN an agony of suspense we watch the treacherous Hands as they spring from their hiding place in the side pockets. What will they do with their dangerous liberty? Which way will they spring next?

Once again we breathe freely as, after a desperate, breath-stopping swing, they alight harmlessly on the thighs.

ONCE more they spring, once more we hold our breath as, eluding the watchful eye of their trainer, they meet in a convulsive grip behind his back. We tremble at his peril. Only for a moment. Already they are emerging—stealthily—hungerily. For a moment they pause dangerously near the tempting coat lapels they long to clutch; we follow them in terrified fascination—they approach the forbidden vest armholes. To hang there even for the fraction of a second would mean a horrible social death for the fearless trainer.

WILL they? We shut our eyes—we shudder—we all but scream. At last we open our eyes. Allah be praised!—once more he is safe, once more the treacherous Hands are caged in the dark coat-pocket.

In vain they struggle, shaking the pockets and causing them to flap like the preposterous wings of a joyful hen-cousin who has just laid the foundation of a new generation.

The Income Tax In Operation

By C. M. KEYS

Illustrated by Wallace Morgan

Lawyers are the real beneficiaries. Their incomes go up, figuring ways and means of exemption for others

THERE seem to be three main principles underlying the Income Tax law, which has recently gone into effect in the United States. These principles are:

First—That every man or woman who enjoys an income over and above \$3,000 or \$4,000 a year shall pay a tax of one per cent. on the amount of the income over and above that limit.

Second—That every man or woman who enjoys a very large income shall pay no additional tax graded according to the degrees of his or her surplus annual wealth.

Third—That business in the form of corporations shall not thereby escape the normal taxes laid upon unincorporated wealth.

The first of these principles is the most important one. It is laid down in the law and in the treasury regulations that income gained from all sources, whether investment, speculation, business, trading, or any other money-producing activity, shall be taxable under these regulations. The only exceptions made are first that the income from bonds of a state, or a political sub-division of a state, shall not be taxed; that the income of the President of the United States during his term shall not be taxed; that the salary of judges of the federal courts at the present time shall not be taxed; and that the salaries of officers and employees of states and political sub-divisions shall not be taxed except on salaries paid by the federal government itself.

THESE exceptions prove the rule. The exception in the case of municipal bonds is made in order to avoid constitutional complications which might destroy the law, or at any rate interfere for a long time with its operation; for the Constitution of the United States had to be amended before this law could be framed, and in order to get this amendment three-quarters of the states had to agree to it. It was a clear enough understanding that municipal bonds would be exempted before this Constitutional amendment was agreed to by the several states.

In considering the Income Tax, it is not important to keep clearly in mind

this principle of a general and universal taxation on all income above a certain minimum. The Income Tax levied takes the place of universal indirect taxation through customs duties.

The second principle, namely, that the very wealthy should pay a very much larger proportion of tax on their incomes than the people of small wealth, finds expression in the law in the form of a surtax, which is added to the normal tax on incomes from \$20,000 a year upward. This surtax is one per cent. on incomes between \$20,000 and \$30,000; two per cent. on incomes between \$30,000 and \$75,000; three per cent. on incomes between \$75,000 and \$100,000; four per cent. on incomes between \$100,000 and \$250,000; five per cent. on incomes between \$250,000 and \$500,000; six per cent. on incomes above \$500,000.

Our federal legislators, in a spirit of high patriotism, have not exempted themselves

Clergymen lucky enough to receive more than a \$5,000 income ought to be perfectly willing to be taxed

The third principle, that incorporated wealth shall not fare differently from unincorporated wealth, is also a sound and equitable principle. There has been, for several years, a corporation tax upon the net incomes of corporations, which seemed to many a discrimination against the corporate form of wealth. This inequality, if it was inequality, is now swept away and the corporation, so far as the normal tax is concerned, is regarded as similar to an individual or firm.

IT is well to have these cardinal principles clearly in mind before undertaking a study of the actual operation of the law; for if they are kept in mind many of the administrative features of the law, which seem on the face of them to be harsh, unjust, and burdensome, will be found to be almost, if not quite, necessary to the equitable administration of the law on these principles.

Since the law did not go into effect until late in 1913, the calendar year 1914 will be the first full twelve months' period in which the law will be in operation. It is worth while to take the case of a typical business man of many activities, drawing an income from many sources, and to sketch, in some detail, the various methods by which he will pay an Income Tax on his income for the calendar year of 1914, and what he himself will be obliged to do in connection with the collection of that tax.

SUPPOSE that Mr. John Bright, a middle-aged, married business man in New York City, be taken as the subject of inquiry. As an individual, he is in business for himself, and the actual net profits of the year in his business, after proper allowance for depreciation, bad debts, running expenses, interest on accounts payable, taxes, etc., amount to \$30,000. In addition he is a silent partner in a realty firm, consisting of three men, each holding a one-third interest. The profits of the firm in 1914 amount to \$18,000, none of which is distributed in any form to the partners, but all of which goes back into the business. In addition to these two business interests, Mr. Bright is Chairman of the Board of Directors of an out-of-town bank and receives a salary

Nothing is more painful than paying in cash

It's bad enough to draw your check, but—

Perhaps the operation is easiest when the cashier takes it out of your envelope
Methods of Extraction—All Painful

of \$3,000 a year for that service. These are all his active business interests.

He is, however, a small capitalist in addition, owning municipal bonds which yield him an income of \$2,000 a year; corporation bonds of the class that declare the holder free of federal taxes, which yield him an income of \$3,000 a year; and other corporation bonds giving him an income of \$1,000 a year. He is a stockholder in four different corporations whose stocks are listed on the New York Stock Exchange, the dividends upon which in 1914 amount to \$11,000. He is also a stockholder in five different small close corporations, whose dividends to him amount to \$8,000. He owns an apartment uptown in New York which is leased to another man who pays \$5,000 a year rental, and he has three small residence properties renting at an average rental of \$600 a year apiece. His investment in real estate mortgages consists of one large mortgage paying interest of \$4,000 a year and four small mortgages paying \$200 a year apiece in interest. He has an annuity bought from a life insurance company some years ago, which pays him \$1,000 a year. Like a good many other business men he speculates a little, and he finds that he has lost \$4,000 for the year.

Mr. Bright's experience with the Income Tax begins on January 1, when some of his bond coupons are payable. He finds that he is obliged to file, with the coupons of each bond issue, a certificate setting forth that he is the owner of the bonds, and that he claims or does not claim an exemption with regard to the amount of the coupons. He has consulted a lawyer who has told him that if any of these coupons are payable without deduction for federal taxes, he should, under no circumstances, claim an exemption on those coupons. He decides that inasmuch as he has an income very much in excess of \$4,000, he will not claim exemption on any coupons, or on any other interest income that he may have during the year, that is taxed "at the source." Therefore, he sends his coupons through for collection with the certificates attached. With regard to municipal bonds, he finds that he is not even obliged to fill out a certificate, and he takes some comfort out of the fact that in this case at least he is not obliged to record himself on the books of the federal government as the owner of certain specific securities.

At the end of the year, Mr. Bright is in the position to review all his experience with the Income Tax law. He finds that in actual operation his profits in his own business have come to him without any deduction at the source. He also finds that his share of the profits in the realty firm has not yet been taxed. He has received his salary from the bank in two payments of \$2,500 each, and he finds that from each one of them the bank, with due apologies, has subtracted \$25, or one per cent., this being the normal tax rate. His interest from the municipal bonds, \$4,000, has come to him without any deduction. Similarly his coupons on corporation bonds which contained the clause that they would be payable without deduction for any federal tax, have paid him their \$3,000 in full. From the coupons on his other corporation bonds, there has been a deduction of \$10, or one per cent., which was held back by the trust companies, or other agents, paying the coupons. He has received his dividends in full, without any deduc-

tion, both from the big companies whose stock was listed on the Stock Exchange and from the small corporations whose stocks were not listed.

He has had a rather puzzling experience with his rented property. The man who leased the apartment building from him has held back \$50 from the annual rental of \$5,000. On the contrary, the people who owed him rent for the three small properties paid their rental of \$600 in full without any deduction. Mr. Bright's lawyer informed him that the law requires any one paying a rental of \$3,000 or over, to withhold the tax at the source, but anyone paying a smaller rental than that pays it in full. He encountered the same experience and the same explanation with regard to his mortgages. His debtor on the large mortgage subtracted \$40 from the year's interest of \$4,000, but his four smaller debtors all paid their interest in full. The annuity of \$1,000 was paid without any deduction.

His lawyer informs him that in addition to the Income Tax which has been held back from various parts of his income, he will be obliged to make a return to the tax-collector on or before the first of March, 1915, covering all his sources of income and declaring this income for proper taxation. The lawyer tells him that what he ought to do is to make his return cover all his income, except the income from municipal bonds, which he is not required to declare at all, and that then he should deduct such part of his income as has already been taxed at the source, whatever losses he has had, whatever interest he has paid on debts, whatever debts due him have been discovered to be worthless during the year, whatever part of his income is not taxable at all and his exemption of \$4,000 provided under the law. He proceeds to compile his return.

His list, when he gets it completed, will be about as follows:

	A	B	C
Net Income From Business	\$30,000		\$30,000
Overhead Profits of Realty Co.	4,000		4,000
Interest on Bonds	4,000	\$4,000	
Dividends on Stocks	12,000		\$12,000
Rentals	5,000	5,000	
Interest on Mortgages	4,000	4,000	
Annuity	1,000		1,000
Salary	5,000	5,000	
	\$71,000	\$19,000	\$50,000

A—This column includes the items that have been taxed at the source.

B—These are the items that are specifically declared to be exempt.

C—These are the taxable items which are not taxed at the source but are to be fully described in the return.

The item "net income from business" was computed with a good deal of legal help. The gross business was \$109,000. His lawyer allowed Mr. Bright's bookkeepers to subtract the following items: cost of materials, \$40,000; wages and salaries, \$80,000; depreciation, \$3,000; interest on a mortgage, \$1,000; taxes paid, \$1,000; loss of goods in a wreck, uninsured, \$2,000; bad debts charged off, \$5,000. That made total deductions of \$132,000 and left \$50,000 as the net taxable result of the year.

The bookkeepers had some other items to deduct, but the lawyer rejected them. They were the cost of a wing built on the plant, a new mailing machine, an assessment paid to the city for street improvement, a contribution made by the business to a church charity, and an allowance to Mr. Bright for personal living expenses.

THE amount of taxable income which Mr. Bright will return to the tax collector on or before March 1 works out as follows:

Table as Shown Above	\$100,000
Deduction for Speculative Loss	4,000
Net	\$96,000
Exemption of \$4,000	4,000
Net Taxable Income	\$92,000

Mr. Bright is now in a position to figure that his full normal tax of 1914 amounts to \$450 for the year.

The surtax provides for an additional one per cent. on the amount of income which he has between \$20,000 and \$50,000. Since Mr. Bright gets this additional \$30,000 of income, his surtax on it will be one per cent., or \$300. In addition to that on the income between \$50,000 and \$75,000 the surtax is two per cent. On Mr. Bright's income, the amount is \$41,000, and the surtax \$450. He can now figure out his entire taxes for the year:

Paid at the Source	\$100
Normal Tax on Return	\$450
One per cent. Surtax	\$300
Two per cent. Surtax	\$450
	\$1,300

WHEN, in time, his return is complete and he has discovered what he has to tell the United States, as well as what he has to tell the public at large, he is somewhat appalled by the extent of the publicity to which his affairs are going to be exposed. He discovers, for instance, that he cannot cash a single coupon of any corporation bond without filing a certificate with that coupon declaring ownership of the bond. He knows that these coupons, which he presents to his bank, go first through the bank and then through some trust company or other bank which is the paying agent of the corporation, and then to the corporation itself, and then to the United States Government. He has learned also that in many cases there is another party to this transfer of the coupons, because in the case of corporation coupons that are payable, for instance in San Francisco, there is frequently a private banking house or bond house in New York which pays the coupons, and his bank, instead of sending them direct to the Western office, sends them to this private banking house. He comes to the conclusion that his name will probably get on a good many minding lists as a result of the handling of these coupons through so many channels. As a bondholder he has always owned coupon bonds because he was not obliged to register his name the same as he had to do when he owned stocks of corporations. Now this privacy is invaded by a law which not only forces him to disclose his identity to the corporation itself, but also forces him to disclose his ownership of bonds to his own bank, to other banks that he knows nothing about, and in many cases to private banking houses, with which he may or may not do business, as the case may be. This is the element of the Income Tax law that he does not like at all.

It is much worse than that, however, his lawyer tells him, in that the return which he makes on or about the first of March is to be filed in the office of the Commissioner of Internal Revenue and shall constitute public records and be open to inspection as such, on the order of the President of the United States, under rules and regulations to be prescribed by the Secretary of the Treasury. He also tells him that this provision is put into the law in the section relating to returns made by corporations; but appears to

apply also to individual returns. It is also provided that these records shall be open to the state taxing authorities, if the state has an income tax law of its own; but this provision appears to relate only to corporation returns and Mr. Bright has a rather vague and faint hope that the taxing authorities of his own state or city will not have access to these records. There is, however, a general impression in his mind that whatever records are made of these returns are likely, in the course of time, to become a basis for local taxation as well as for federal taxation, for he is a little doubtful of the ability of Washington to keep so good a secret as that.

LOOKING it all over, the taxpayer discovers that there are only two or three forms of income that really escape the Income Tax. The most important of them seems to be the direct obligations of states and political subdivisions of states. These he is not obliged to report at all, or even to mention or hint at, in any of his returns. An income in the form of an annuity appears to be returnable to the government but is not taxable under the law. Dividends of corporations which themselves pay the normal tax are exempt only in so far as the normal tax of one per cent. is concerned, and he has to pay the surtax on these dividends. He finds that he has to pay the Income Tax on his share of the profits of the realty partnership, whether those profits are divided or not; so that there is no use trying to avoid the payment of taxes on his profits by letting them accumulate in the form of divisible surplus, or even reinvesting them in his business.

On the whole the taxpayer comes to the conclusion that the law is designed to see to it that everyone who enjoys a large income in the United States, whether he be a citizen or a foreigner, will be forced to pay a proportion of the expenses of running the government based upon the size of his income. That seems to be the basis of the law and it also seems likely to be the result of the law. There are some questions that have to be settled. Perhaps, for instance, in reckoning the surtax, Mr. Bright will be allowed to deduct his losses of the year from his income. The average lawyer figures that he would have a good case under the phrasing of the law. These, however, seem to be minor questions and the main intent and purpose of the law seems likely to be fulfilled.

SINCE the passage of this law, there have been a good many rulings by the Treasury Department in respect to its administration. Since this article was written one of these rulings has brought it about that the holder of bonds may, if he chooses, ask his bank to send the certificate of ownership direct to the Treasury Department instead of through the various banks and bankers who might otherwise have access to it. In such a case the bank substitutes its own certificate which does not give the name of the holder of the bonds or any other details about him. In this way a great deal of unnecessary publicity is eliminated. Similarly it has been ruled that it is not necessary to put on the certificate the serial numbers of the bonds from which the coupons were clipped. This is, apparently, simply to avoid heavy routine work for those who have large amounts of bond coupons to cash. Similar minor rulings are likely to come out from time to time and perhaps many of the administrative features of the law will be changed before it has been in operation a full year.

If your income is very large, consult a lawyer

If not so large, study it well yourself

If very small, toss it in the waste-basket

The All-American Football Team

By HERBERT REED ("Right Wing")

BUTLER

WHITNEY

PENNOCK

DES JARDIENS

CRAIG

THIS All-America football team is chosen without the customary apologies to those critics who cry down the very idea of such a selection. I have sought to bring together on paper eighteen men—and these are none too many under the existing rules—who could be cobbled into a team that, while in the geographic sense would be fairly representative, could play every department of the game up to the hilt. Did space permit I should like nothing better than to discuss at length the relative merits of Eastern and Western football so far as I have had opportunity to compare them, and further, I should enjoy cataloging the merits of men both East and West who would give any of the players selected a hard run for first position. I shall confine myself, however, to the team at hand.

JUST one word of explanation is necessary. This is not a reward of merit team by any means, but the team, representing as wide a territory as it seems possible to cover by personal observation combined with "information and belief" gained from competent judges, that I should like to see in action on the field. There are no substitutes on the list. Every man would appear in action at one time or another.

Let us first consider the line, for it is upon the line as a unit from tackle to tackle that I am building. In choosing an All-Eastern team I divided the line into offensive and defensive forwards, partly in order that men whom I knew to have special ability in one branch or the other should not be found unavailable. In looking over the entire country, however, I do not think this consideration necessary, and so have selected five men who, I believe, could play the stiffest sort of football from whistle to whistle, whether in offensive or defensive territory, and

THE BEST ALL-AROUND PLAYERS OF 1913

the men named as "alterosbes" in special situations.

TO return, then, to the line. All five are men of remarkable physique and strength, able to stand the gaff of the hardest game played, and at the same time gifted with experience under heavy fire. I doubt if a fiercer-charging quartet could be brought together. It is barely possible that some man from one of the Southern teams could strengthen the combination, but if so, I have failed to make him to the surface even through the most searching inquiry. Three of these five powerful forwards I have myself seen in action, and the support of the other two by excellent judges, for whose opinion I have the utmost respect, has led me to displace Eastern players of whom I have a high opinion, in order to make room for them in the combination.

Des Jardiens, the new Chicago captain, and the premier center of the West, combines the roving qualities of some of the best Easterners, with a passing ability so necessary to the full fruition of versatile play, found only rarely this year in the East. Probably in passing, Garlow of the Carlsde Indians, would prove his equal, but the Westerner is so thoroughly an all-round man that I want him as a pivot for this particular All-America. A hard charger, a practically perfect passer, a roving tackler, and a fast down-field player—what more could one ask?

BBROWN, of the Navy, is the greatest guard in the country. Every expert in line play with whom I have talked says that he is the fiercest charger from coast to coast. In addition he has a glorious physique, a cool head, is a terror down the field, and can add a few points when opportunity offers by deadly placement kicking, although this last accomplishment is the least of his virtues. Penneck,

MAHAN

LAW

could hold the pace that a team of this caliber must set.

I ADMIT frankly having sought in this quintet all the power, weight and drive I could find, for, all other things being equal, that is more than half the battle. I have chosen three ends, three quarterbacks and seven backs for three reasons—first because the terrific wear and tear of the versatile and yet powerful game this eleven would play, would tell heavily on the wings and on the backfield men; second because I wanted to preserve intact for use at any moment the two forward passing "hulteries" that have been most successful at critical stages this year; and third because I should like to use

GUYON

BRICKLEY

ROCKNE

RUSSELL

PRITCHARD

DORAIS

the solidly built Harvard guard, is another driver who carries his charge through to the finish and is close to Brown's class. Here is a pair with plenty of "lift." With these two flanking Des Jardiens, well might a coach say of the trio, "Hit them at the shoe-logs or you are lost."

Brooks of Colgate, and Butler of Wisconsin, are of superb build, and of remarkable speed for men who always crowd the 200-lb. mark. Butler has probably the widest range of any of the Western tackles, and his work stood out sharply this season, even when playing on a team that was far below its last year's form. Both men are rich in experience against high class elevens, and would addy fill out a "strong man's" but brainy line.

COMING to the ends, my first choice is O'Hearn of Cornell, who, although unable to finish the season because of injury, was the hardest man in the country to drive off his feet, or to fool. A splendid diagnostician, he was also a great line leader, and was able to combine in his work perfect individual execution with fiery play and cool-headedness. The other two ends are Merrilatt of the Army, the receiving end of that forward pass battery the delivering end of which is Pritchard of the Army; and Rockne, Notre Dame, receiver for that wonderful passer, Dorais, of the same eleven. Yet both the Army and the Notre Dame ends are in the first class in the regular work

of the position, and down the field. It would be possible to hurl into the game either forward-passing combination at any stage of play, as even when not indulging in a specialty, both Pritchard and Dorais are quite capable of running a smooth and powerful engine of attack up to the hilt. Both these forward passing quarters can also run back kicks, and in other respects are all-round men.

IN general, however, I should like to see the team run by Russell, the Chicago newsreel, who has made a remarkable record in his first year, and has at command every quality of the first class field general, as a study of the play of the Maroon eleven in its important games will show. He can kick field goals when necessary, and although Hughitt of Michigan, Hightower of Northwestern, and Huntington of Colgate, press him closely, I believe he could produce the best results in the long run. He has handled a middle Western eleven whose coach seems not to abandon the good running game when he has the men at hand to make it go, while not despising open play, either real or so-called.

BRICKLEY of Harvard gets one of the backfield positions, for reasons that have been reiterated to weariness. Suffice it to say that he is as good an all-around back, nearly, as any of them, and in addition is a terror in kicking goals from any spot clear back to the center of the field.

Mahan, also of Harvard, is the best end runner in the country, is uncanny in running back kicks, and is every inch the perfect back. His play is the same against a team of the first class as it is against an eleven of inferior rank. Never have I seen such a combination of brilliance and reliability. Also, he is a fine kicker. I consider him the best back of the year. With this pair I would place Craig of Michigan, who, according to good judges who have watched him work, "has everything." He is nearly the same type as Mahan, and should fit in nicely with the other two men chosen.

LAW gets a place as "alternate" for his wonderful kicking in defensive territory, and for his combined fire and cool courage. Guyon of Dartmouth, and Whitney of Dartmouth, get their places for their terrific "punch" when anywhere within striking distance. Miller, the star of the Northwest, and one of the best men who ever played on the University of Washington's championship team, is useful in any part of the field, and had there been better means of comparison between the far East and the far West, might have ranked even higher.

To conclude: here is a team that could play every conceivable style of football and play it with both speed and power. It is no mere paper eleven, but a real field team that it would be a joy to coach.

MERRILLATT

O'HEARN

BROWN

BROOKS

Here is the "Biggest" Automobile in the World

Maxwell²⁵/₄\$750

Extravagant Assertion?—Let's Analyze It

WHO WAS the "biggest" general in the world? Napoleon, he could not have been, for he was five-feet three inches tall and weighed only 155 pounds.

WHO WAS the "biggest" general in the world? Bismarck, he could not have been, for he was five-feet three inches tall and weighed only 155 pounds.

SO YOU SEE, MERCEDES DOESN'T determine who car what is the "biggest." It is an achievement that confers that title "biggest."

WE MAINTAIN that the biggest automobile in the world is the one that does the biggest things—and does bigger things than a bigger car can do at the same cost.

AND THAT CONFERS THE TITLE on the Maxwell "25," which sells for \$750, and which, though of simple capacity for carrying five full grown adults anywhere any car will go, yet weighs only 1,650 pounds.

THIS CAR CANNOT BE CALLED either small or large—in

WHEN ASKED TO SPECIFY, they said the farmer's car should be like a farm wagon or a dump cart—or some other familiar vehicle.

SO THEY MADE A FEW of those ridiculous, high-wheeled, air-cooled "putt-putters," and gleefully invited the farmer to come and see.

FARMERS DIDN'T COME—they were too busy inspecting the latest improvements in real automobiles. So the high-wheeler soon went out of business.

THAT PROMPTED US one day to make a little investigation and to compile a few statistics—and what do you think?—

WE FOUND that, contrary to the prevalent supposition—the best

THAT'S CHILD'S PLAY as compared with the task set our engineers—*to design a touring car of simple construction, yet to take five full grown adults anywhere, over any roads, in comfort;*

SO STRONG it will withstand the usage and neglect such a car receives at the hands of the average owner who drives—but has no time or inclination to care for it—himself;

SO LIGHT that the tire bills and the maintenance cost will, like the purchase price, be within the reach of that "lot" of people who insist an automobile should be an economy, not an extravagance.

AND FINALLY, of external design to conform to the current mode of "arcane body," and finished and upholstered so that the wife and children will be just as proud of the appearance as

WE WERE PRECULIARLY IDEALLY EQUIPPED TO DO IT. Had no old models to get rid of—none with which we would compete. We had the plants, the capital, the talent and—the experience. You can't beat that combination.

NOTE

There's a good deal of territory still open. And other territory where we have closed but are not satisfied with the representation. So, in any event, undisturbed and tell us your qualifications. We'll be glad to consider you. Write to General Office at Detroit.

ITS BEAUTY is shown in looks and in performance—handsome as a handsome deer—and handsome as a lion.

THE BUYER WHO must take a peep into the purse before buying, here finds a car within his reach and made to his heart's desire. ON THE OTHER HAND, the buyer who is easily able to pay the first cost, but whose experience has taught him to look still more closely into maintenance cost afterward, finds in this 1,600-pound, five-passenger car the one he has been looking for—because it will do all any 1,600-pound car will do—and more and at half the upkeep cost—or less.

COST OF UPKEEP increases as the square of the weight, the tire makers tell us. And Standard Oil dividends confirm the fact.

CUT THE WEIGHT IN TWO and you divide the upkeep cost by four! Get that—it's the kernel.

BUT WE'RE A NATION OF ANTI-CRUSTACEANS—no matter how we prosper we're determined to keep the weight down. Every American car has a weight of 1,600 pounds. We have a 1,600-pound, five-passenger car per capita than any other people in the world.

AND SO IT HAPPENS that your American demands more than any other car in the world—it wants style as well as size. A FEW YEARS AGO a lot of misbegotten persons had a brilliant idea. They maintained that the "farmer's car" had not yet been built.

The "25-4" Roadster

A sassy, classy, speedy, two-passenger car that will go anywhere any car will go—and faster. Same chassis specifications as the touring car (Send for the Book). Price \$725, fully equipped.

MAXWELL MOTOR COMPANY
(INCORPORATED) DETROIT, MICHIGAN

DEALERS

Some makers demand exclusive representation. With others (right on your taking on a full line in order to get the best results) you are free to bring and represent as many cars as you wish. We have no restrictions. We want you to stand this car on the floor beside any other at any price—and the Maxwell will get the lion's share.

THE HARTFORD FIRE INSURANCE COMPANY

With the coming of 1914 The Hartford Fire Insurance Company begins the 104th year of its existence. During all these years it has not only promptly paid every individual loss, but has given safety and satisfaction to its policy holders in all the conflagrations of American history.

The Hartford stands today with large assets and ample financial resources, the leader among fire insurance companies. But its proudest asset is its reputation for commercial honor and good faith. It will sell you honest and safe insurance. Is not this the Company you want?

It is the aim of the publishers of HARPER'S WEEKLY to render its readers who are interested in sound investments the greatest assistance possible.

Of necessity, in his editorial articles, Albert W. Atwood, the Editor of the Financial Department, deals with the broad principles that underlie legitimate investment, and with types of securities rather than specific securities.

Mr. Atwood, however, will gladly answer, by correspondence, any request for information regarding specific investment securities. Authoritative and disinterested information regarding the rating of securities, the history of investment issues, the earnings of properties and the standing of financial institutions and houses will be gladly furnished any reader of HARPER'S WEEKLY who requests it.

Mr. Atwood asks, however, that inquiries deal with matters pertaining to investment rather than to speculation. The Financial Department is edited for investors.

All communications should be addressed to Albert W. Atwood, Financial Editor, Harper's Weekly, McClure Building, New York City.

Finance

By ALBERT W. ATWOOD
Rock Island Collaterals

Question: I purchased a Rock Island collateral trust 4 per cent. bond at 7½ a year or so ago, and it has now dropped to 50, after one of the most prosperous years the Rock Island has had. The drop in price seems to shadow a receivership. I can well afford to hold on, but what would you do? In the event of a receivership, do I get an individual share of the collateral—one share of the Old Rock Island Company? Also, in event of a default, can I institute foreclosure proceedings on my own initiative without joining the usual "committee"? (Chicago.)

Answer: It is by no means certain that the fall in the price of the 4 per cent. collateral trust bonds of the Chicago, Rock Island, and Pacific Railroad foreshadows a receivership. It is quite true that this system of railroads is barely earning enough to keep it going; but if a receivership were in contemplation, it is highly probable that the insiders in the company would be buying up these 4 per cent. bonds, for in case of a receivership the bonds would control the situation, as they are secured by the stock of the railway company which is the actual operating concern. For years past, the expenses of the Rock Island railway have been increasing rapidly and eating up the earnings. In the last two years the railway company earned only \$441,466 above the amount sufficient to pay 5 per cent. dividends, this rate of dividend being necessary to maintain the interest on the 4 per cent. bonds. An average surplus of only \$200,000 a year for two years above dividends is dangerously close to serious trouble.

At the same time, the company spent \$3,000,000 more in the last year for maintenance charges than it did the year before, so that, if net earnings continue to decrease, receivership would probably be warred off at least a year longer, if not permanently, by reducing the charges for maintenance. In case of a receivership, the trustees for the bonds would sell the stock to pay off the bonds. No doubt a committee would be formed, and it is extremely unlikely that you would be able to institute foreclosure proceedings on your own initiative. That sort of thing does not happen in railroad reorganizations. The individual security-holder is entirely at the mercy of the committees which are formed to represent him. This does not necessarily mean that the committees do not make every effort to protect the security-holders.

While the Rock Island system is a shaky, topheavy structure, it is not necessarily in immediate danger of receivership, and in case of a general improvement in railroad conditions the whole proposition may work out to every one's satisfaction. Moreover, the recent increased activity of the Phelps, Dodge interests in the company promises well for the future because of the conservatism and high reputation of this group of men.

The financial article for January 3 will contain a list of good bonds, and that for January 10 will deal with Income Insurance, one of the newest and most useful methods of safe investment which has yet been devised.

Elihu

THE original Elihu was one of "Job's comforters" to whom Job made the remark, often quoted since: "No doubt but ye are the people and wisdom shall die with you." It was after Elihu's long and able address, extending over six chapters, that the Lord inquired: "Who is this that darkeneth counsel by words without knowledge?" But this was Elihu, the son of Barachel the Buzite, of the kindred of Ram.

Senator Elihu Root, in a long and able address, prophesied such an inflation of the currency through the Glass-Owen Act as would weaken the confidence of European nations in our financial system. He referred to railroad securities in particular, mentioning the passing of the New Haven dividend. He might have mentioned the shock to American credit, especially in France, from the recent Frisco fiasco. Senator Root might also have mentioned the destruction of confidence in the former Street Railway system in New York City, through another kind of inflation by the Whitney-Ryan interests, ably engineered by Senator Root himself, as their attorney. The Senator was wise not to have any illusions about the presidency. The attorney of Ryan, Whitney, and of guilty New York Aldermen and bosses will have enough to explain, if he attempts to retain his Senatorship in a popular election. The Senator's vigorous opposition to the constitutional amendment prescribing a popular election had a commendable degree of foresight.

The Senator from Illinois

CARL VROOMAN is a candidate for the Democratic nomination for Senator from Illinois. So is Roger Sullivan. Mr. Vrooman is a man of very high standing, and of special education in public affairs. He is recognized as an expert in transportation matters. He spent four years investigating railway conditions and problems in Europe and America. His book on American Railway Problems has been praised by Franklin K. Lane, Commissioner B. H. Meyer, former Commissioners Knapp and Fifer, Louis Brandeis, Senator Gore and many other men especially qualified to speak. He has been a Regent of the Kansas State Agricultural College. He is a well-known public speaker.

About Roger Sullivan, we asked a few weeks ago if he had sold his gas stock. We understood that he has sold it. It would be a pleasure to know when he sold it, and to whom; when he got it, and from whom; and in what his money is invested now.

Food Standards

THE desire of the American people to know what they are buying is meeting a sympathetic response from enough food manufacturers, and enough periodicals and newspapers to assure the public of improving standards. The fact that one of the big publications for women has just engaged an expert chemist of national reputation to pass on all its food advertising is a symptom of the new spirit. Women are almost one hundred per cent. of the purchasers of the advertised foods. When the *Ladies' World*, therefore, with a circulation of over a million, engages Professor Allyn not only to write a page every month, giving such information about the food situation as he thinks needed, but to veto any food advertising that he wishes to veto, an important step ahead is taken. Professor Allyn's experiment at Westfield began on a small scale, and has in a short time become a national influence. A few grocers and a few consumers in a small New England town decide that it is for the welfare of everybody that purchasers going into a store should know that certain foods have passed the test of the Westfield laboratory. Therefore it speedily becomes impossible for any food to get a market at Westfield that has not Professor Allyn's endorsement. This little experiment, being so successful, is repeated on a national scale, with results so satisfactory that the leading manufacturers accept and approve it, and many change their standards in order to meet the test. Professor Allyn, in the *Ladies' World*, will continue his principle of giving special attention to pointing out the food that is exactly what it purports to be. He keeps the privilege of criticising undesirable foods, but will rely mainly on the constructive work of promoting the best. If attention is fixed upon the best, the survival of the poorer grades becomes difficult, and wide-awake manufacturers hurry to meet the standards insisted upon by a public that is being educated rapidly.

Two Kinds of Sweetness

THERE is a sweetness of the child, and a sweetness of the old. The sweetness of the child is largely independent of his personality. It is in his ways and in his looks, and the same thing is true, though not quite so much of the young woman. But when sweetness comes at sixty, it is the expression of the very nature of the soul. Mr. Burrie somewhere, we believe, has said that no woman is really beautiful until she is fifty-three. The beauty that is worth most is the beauty that is connected with the character itself.

A Chicago Event

THE removal of Mrs. Ella Flagg Young from the superintendence of the Chicago Public Schools was a catastrophe that for once brought warring forces into complete accord on a public issue. The mass meeting at which their wrath against a clique of pettifogging politicians found expression was accomplished by Chicago women, armed with the halloo and no longer to be put off with courteous evasion. The official heads of five of Mrs. Young's enemies on the board of education fell into the basket. It was important as a demonstration of the power of enfranchised women, and significant also, because it brought together social forces that almost never meet in the public forum except for combat. Idealists have shaken their heads after watching the conflict at Lawrence and Los Angeles. On that Chicago platform sat socialists and trade-unionists, capitalists and reformers, defenders of the established order, and fiery rebels. There was even one anarchist. All were moved by the same wrath and demanded the same action.

To the people of Chicago Mrs. Young stood for something outside political or economic theory. Mrs. Young was head of the public schools. She taught neither capitalism nor socialism, neither conservatism nor radicalism. What she did strive to accomplish was that each of Chicago's 350,000 school children be permitted to develop into a man or woman with a healthy body, a mind capable of forming its own conclusions from evidence recorded by senses trained to accuracy, a spirit alert to beauty, and a fitness for doing some part of the world's work.

Smoot

WHEN in a recent article on "The Converted Senate" McGregor inadvertently omitted the name of Senator Reed Smoot from the group of Republican leaders who "reached their later prominence by regularity, experience and the operation of the old priority rule," patriotic inhabitants of Utah arose to claim the credit. Their claim is sound. Smoot was Aldrich's right-hand man in the debate on the Payne-Aldrich Tariff Bill and in the preparation of that fore-doomed measure. His chief characteristic is a remarkable memory for facts and figures, and Aldrich turned over to him the memory work necessary. Since Aldrich's retirement Smoot has sunk to his real level. He is one of the remaining "Old Guard" so fearfully injured by the election contests of the last four years. He voted with Gallinger, Penrose, Warren, Crane, Guggenheim and Wetmore, when even the other regulars revolted. Latterly, with the popular election of Senators becoming a reality, and his own term expiring on March 4, 1915, Smoot has tried to develop into an orator, rushing up and down the middle aisle of the Senate and shaking threatening fingers at the opposition, accomplishing on the whole a laughable performance. Smoot is likely to have as his Democratic competitor a Mormon, Judge King, appointed Judge by Cleveland. Unless Utah wishes to keep a reactionary Senator who will be merely able to protest against progressive measures, Smoot will be a desirable Senator to keep at home.

Virility

ONE of the most energetic thinkers of our acquaintance has written us a protest about the Mexican policy of the Administration. He says:

"I like your kind of Feminism which says women may do more, but I loathe the Bryanistic middle-class Feminism which says men shall do less. That stops fighting, swearing, and wars for conquest. In faith, the only excusable war is a sure thing war of conquest, when the superior crushes the inferior race. That's progress. Wars between equals are much less likely to make for progress. The other Chautauqua Feminism that is abolishing capital punishment and all other masculine sports,—nix. I think your old pal Wilson is troubled with that. We took a piece of Mexico, before, for the basest of reasons. *Aren't you glad we did it?* If not, would you give it back? The old hymn says, 'dare to do right.' Anybody dares to do right. What a nation needs now and then is a man who dares to do wrong,—to other nations, like various Romans, Peter the Great, Bismarck, and most English except Gladstone. I was for Wilson until he got sentimental in international politics. In this zeal for the higher, softer civilization, he is keeping civilization from spreading naturally. He's a damned vegetarian, I believe."

There is, in the first place, a vast difference between doing what you think to be wrong at the time, and what you later decide was wrong. The general conscience of the country was not against the Mexican war, although the conscience of certain enlightened individuals like Abraham Lincoln was. The conscience of the white man was not against the general treatment of the Indian, although it would have admitted the faults of individuals. Moreover, any one who reads the history of Pennsylvania and William Penn will realize that the Indian could have been put into a subordinate place without crime. It is something of a slip in logic to look upon a certain part of the world's history, and observe that it included progress, and therefore to justify all that was done. Is it not probable that progress would have come without the particular faults, and that it would have been a higher progress? The world is not perfect, and it might have been better if man had been guided by kinder motives. Mr. Wilson's policy in Mexico is exactly the opposite of timid or soft. It takes a great deal of boldness to state to the world that the United States will take the responsibility of avoiding war, and at the same time of skillfully steering the Mexican Revolution toward an outcome which may have some real advantage to the Mexican people. It takes much more courage for Wilson to pass a genuinely lower tariff, and then to proceed to a currency bill, and then to pass right on to grappling with the essentials of the trust problem, than it would to send some soldiers down to Mexico, to get a few of them killed, and a few Mexicans. If we are to use masculine as a word of praise, is it not more masculine to grapple with the profound economic, industrial, and ethical questions of today, than to imitate the violence of the past?

A country becomes great by carrying out greatly the ideals of its own time.

Three P's in Pennsylvania

PENROSE, BOIES, is one of them of course. He will be the Republican nominee to succeed himself in the Senate. He stands for everything the American people as a whole have deeply resolved to be rid of in political methods and causes.

Palmer, A. Mitchell, is another. He is the leader of the Pennsylvania Democracy by virtue of sheer ability. He is urged to become the nominee either for the Senate or the Governorship in the pending campaign.

Pinchot, Gifford, is also a citizen of Pennsylvania, although as a figure he is national. Palmer has a worthy ambition to become Governor of Pennsylvania and to redeem the state from its long era of corruption and incompetency at Harrisburgh, an era replete with scandals that have cried to Heaven. The Democrats have no leader so conspicuous as Palmer, the Progressives none so acceptable as Pinchot. Under the primary system, Democrats and Progressives will each nominate a Governor and a Senator, and this will preclude any formal fusion. But with Palmer for Governor and Pinchot for Senator on their respective tickets, it will be hard to prevent, in the popular elections, a sentimental fusion on Palmer for Governor and Pinchot for Senator. There may even be formed an Anti-Penrose party, casting no inconsiderable vote, which will nominate Palmer and Pinchot, and hold the balance of power. The contest will be close, in any event. The vote in the Presidential election in 1912 was: For Roosevelt, 447,426; for Wilson, 395,619; for Taft, 273,305. But Roosevelt's powerful personality and Taft's inherent weakness will not be factors in the pending campaign. The Pennsylvania Progressives voted for the Democratic Tariff Bill. No one has ever accused Penrose of not being a Protectionist. There will hardly be a more interesting contest in the nation than that in which Palmer, Penrose and Pinchot will be the central figures.

A Sign of the Times

MR. KEITH has given orders that anti-suffrage jokes are to be cut out of his vaudeville circuit. The first standardized joke that he cut out was the mother-in-law joke. That was probably removed merely because of triteness, but the probable reason for stopping the anti-suffrage jokes was lack of sympathy in the audiences. Changes in vaudeville audiences are one of the best possible examples of the general change in the public's point of view. The only still more significant changes, as reflected from the stop, are those which take place in moving picture audiences.

A Change

AS late as 1894, actors, merely through being actors, were supposed to be damned through all eternity. It cannot be denied that the human race in some ways improves. We have no such superstition now, even about managers.

A New Othello

THE person who loves literature is likely to care more for tragedy when he is sixteen than when he is forty. Is this because his fiber grows softer? Not entirely. It is partly because high comedy, the picture of actual characteristics of mankind, becomes more interesting with experience. It is partly because tragedy strikes the high points in human experience instead of the details, and youth needs the landmarks of life. Youth needs background and gets it from these great generalizations. Youth is the age of reflection on its more emotional side, and tragedy gives thought highly colored with emotion.

As the distinguished actor, Forbes-Robertson, has just given an Othello new to this country, the question of the place of the world's greatest dramatist in the intellectual life of today is again naturally brought forward. If a genius as great as Shakespeare were writing about people and events of today, the populace would welcome him with gratitude and enthusiasm. The language and characters and stories of Shakespeare are far away from the average experience, and so our people go to see the work of inferior men dealing with matters within their range. Usually, when the spectator is heard making remarks at a Shakespearean performance, it is about some strictly human side. At "Othello," for instance, a woman who sat behind us remarked that Iago was "certainly some villain." She probably had not the training to appreciate the extraordinary eloquence of Iago, his richness in style, his nobility in expression. Never was villain expressed in more magnificent language.

The great rôle played by Iago is indeed one reason that Othello has not as human an appeal as the other three of the marvelous quartette written so near together. In "Hamlet," "Macbeth," and "King Lear," the spectator is not put so on the rack. There is more light and shade; there is more reconciliation, more acceptance. What happens to Hamlet does not seem outrageous. It is at least connected with his character. The horrors of "Macbeth" are all a part of the ambition of the warrior and his wife. The tragedy of "Lear" is accepted as the natural fate of an old man who has spoiled himself and spoiled his children. In "Othello," however, the frightful distress grows from an external cause. If Iago's villainy had caused a general catastrophe in which he himself was the most conspicuous sufferer, it would have been more acceptable tragedy, but his fate is a detail, and the main spectacle is of one character suffering through the villainy of another. Such a conception is almost entirely pain although it is a wonderfully constructed play, perhaps in construction the greatest of Shakespeare's, but it has nothing like his usual variety of mood and type. Nevertheless, although "Othello" does not rank in our affections with its three companions, or with "Romeo and Juliet," its greatness makes life less commonplace and makes purpose larger. Forbes-Robertson is not the violent, primitive Moor that Othello is usually conceived to be, but a highly civilized cerebral type, although goaded to frenzy. Not all sides of the Moor are realized, but the pathos, the tenderness, the pity of it are there,—and that is much.

The Darkened Path

By PERCEVAL GIBBON

Illustrated by George Bellows

THE captain reached a hand forth and touched the mate's arm.

"Set down, James," he said quietly.

The mate made a curious quick grimace and sat forthwith. "Shove off," ordered the captain.

Johnny Cos, the yellow, woolly-haired boatman, plying his oars, sat perfect in face of his passengers and close to them. He would have preferred it otherwise; there had been something in the mate's face which daunted him. He glanced at it again furtively as he pulled away from the square-sterned American schooner which had ridden over the bar in the twilight of dawn and anchored, spectral and strange, in Beira Harbor. The mate's face was strong and sunburnt, the face of a man of lively passions and crude emotions; but as he sat gazing forth at the little hectic town across the smooth harbor, it had a cast of profound and desperate unhappiness. Johnny Cos had not words to tell himself what he saw; he only knew, with awe and a certain fear, that he moved in the presence of something tragic.

"James," began the captain again.

The mate withdrew his miserable eyes from the scene. "What?"

"There ain't any reason why—" began the captain, and paused and looked doubtfully upon the faithful Johnny Cos. "Do you speak English?"

"Yes, sar," replied Johnny ingratiatingly. "You want good 'otel, cap'n? Good, *cheap* 'otel? I geeve you da eard; 'Otel Lisbon, sar. All cap'n go there."

"No," said the captain shortly. "We can talk better when we get ashore, James," he added to the mate.

"You c'n wait to take me aboard agin'," said the captain when the wharf was reached; and the two men went slowly together into the town, along the streets of ankle-deep sand, toward the office of the consul.

IT was an hour later that the loafers on the veranda of the Savoy Hotel observed their slow approach. They had done whatever business they had with the consul. They were deep in talk; the captain's grizzled head was bent toward his shorter companion, and something of the mate's trouble reflected itself in his hard, strongly graven face. In the merciless deluge of sunlight, and upon the openness of the street, they made a singular grouping; they seemed to be by virtue of some matter that engrossed and governed them, aloof and remote, a target set up by Destiny.

By the steps of the hotel the captain paused, wiping the shining sweat from his face. The eavesdroppers in the long chairs cocked their ears.

"James," they heard him say, "it's bad, it's just as bad as it can be. But it ain't no reason to go short of a drink with a saloon close handy."

He motioned with his head toward the shade of the long veranda, with the bar opening from it and its bottles in view. The mate, frowning heavily, nodded, and the pair of them entered and passed between the wicker chairs with the manner of being unconscious of their occupants.

From within the bar their voices droned indistinctly forth to the listeners.

"Leavin' you here," they heard the captain say, "James, I'm sorry right through; but you said yourself—"

"Sure," the mate's voice answered hoarsely. "Here or hell, or anywhere, what's the difference to me now?"

After that they moved to the window, and what they said further was indistinguishable. The loafers on the veranda exchanged puzzled looks; they lacked a key to the talk they had heard. When at last the two seamen departed they summoned forth the harnass for further information. But that white-jacketed diplomat, who looked on from the sober side of the bar at so much that was salient to the life of Beira, was not able to help them.

BUT the mate's conduct continued to be as unusual as his words overheard on the veranda. He did not accompany the captain back to the ship, and in the afternoon he was seen sitting on the parapet of the sea-wall, his face propped in his hands, staring out across the shining water of the harbor. The vehement sun beat down upon his blue-coated back and the hard felt hat that covered his head; he should have been in an agony of discomfort and no little danger, clad as he was; but he sat without moving, facing the water and the craft that lay at their anchors upon it. It was Father Bates, the tall Scotch priest, who saw him and crossed the road to him.

"My friend," the priest accosted him, with a light tap on the shoulder, "you'll die the sooner if you take your hat off; but you'll die anyhow, if you go on sitting here."

At his touch the mate looked round sharply. The tall white-clad father, under his green-lined sun-umbrella, rested a steady look on his face.

"You're in trouble, I'm afraid," said the priest. "Is there anything a man can do for you?"

"No!" The word came hoarsely but curt from the mate's throat. "Leave me alone!"

The tall priest nodded. "Nothing a man can do, eh?" he said. "Well, then—you know who can help you, don't you?"

The miserable rebellious eyes of the young man hardened.

"Leave me alone," he growled. "Say, you're a kind of a missionary, ain't you? Well, I don't want none of your blasted cant—see?"

The father smiled. "I know how you feel. My name is Father Bates, and any one will show you where I live. Bates—don't forget! And I really wouldn't sit much longer in that sun if I were you."

A sound like a snarl was his answer as he passed on. Looking back before he turned the corner, he saw that the mate had returned to his old posture, brooding in his strange and secret sorrow over the irresponsible sea.

He was still there at sunset when the schooner went out, holding himself apart from the little group of Beira people who halted to watch her departure. Upon her poop a couple of figures were plain to sight, and one of these waved a hand toward the shore as though to bid farewell to the man they left behind. The mate, however, made no response. He watched unmoving, while she approached the heads and glided from view, her slender topmasts lingering in sight over the dull green of the mangroves, with the sunset flush lighting them delicately. Then she was gone, like a silent visitor who withdraws a presence that has scarcely been felt.

The mate crossed the road and addressed the man who stood nearest.

"Where's the depot?" he demanded abruptly. "The railway station?"

The other gave directions which the mate heard, frowning. Then, without thanking his guide, he turned to walk heavily through the foot-clogging sand in the direction indicated.

IT was a hundred and fifty miles up the line that he next emerged to notice, at Maodigos, that outpost set in the edge of the jungle, where the weary telegraphists sweat through the sunny monotony of the days, and are shaken at night by the bitter agues that infest the land.

The mate dropped from the train here, still clad as at Beira in thick, stifling sea-cloth and his hard hat, though his collar was now but a flimsy frill. He came lurching, on uncertain feet, into the establishment of Hop Sing, the only seller of strong drink at Maodigos. The few languid, half-clad men who lounged within looked up at him in astonishment. He pointed shakily toward a bottle on the primitive bar. "Gimme some

"She was crying and begging pitrouslg for water. They said she held out her arms to them and bowed her head between"

of that," he croaked from a parched throat.

The sailing Chinaman, silk-elad and supple, poured a drink for him, watched him consume it, and forthwith poured another. With the replenished tumbler in his hand the mate returned his look.

"What you starin' at, you Chow?" he demanded.

The subtle-eyed Chinaman ceased neither to smile nor to stare.

"My t'ink you velly sick man. Two shillin' to pay, please."

"Sick!" repeated the mate. "Sick! you—you know, do ye?"

"SAY," he demanded hoarsely, "it—it don't show on me?"

The Chinaman made soothing gestures. "My see," he answered. "But

dem feller behing here, him not see nothing. All-a-light folt him. Two shillin' to pay, please."

The mate dragged a coin from his pocket and dropped it on the bar. He turned at last to the others, as though he now first noticed them.

"What's back of here?" he asked abruptly, motioning as he spoke to the still palms which poised over the galvanized-iron roofs.

"How d'you mean?" a tall, willowy man in pajamas answered him surprisedly. "There's nothing beyond here. It's just wild country."

"No white man?" asked the mate.

"Lord, no!" said the other. "White men die out there. It's just trees and niggers and wild beasts and fevers." He looked at the mate with a touch of amusement breaking through his curiosity. "You weren't thinking of goin' there—in that kit—were you?"

The mate finished his drink and set his glass down.

"I am goin' there," he answered.

"But look here!" The telegraphists broke into a clamor. "You've been too long in the sun; that's what's the matter with you. You can't go up there, man; you'd be dead before morning."

The tall man, whom the mate had spoken to first, laid in shrewd word to add. "If it's any little thing like murder, don'tcher know, why—the border's just a few hours up the line."

"Murder!" exclaimed the mate, and uttered a bark of laughter.

THEY were possibly a little afraid of him. He had the physique of a fighter and the presence of a man accustomed to exercise a crude authority. Their protests and warnings died down; and, after all, a man's life and death are very much his own concern in those regions.

He gave a half-nod to the other men, but no word, pulled his hard hat forward on his brow, and walked out to the setting sunlight and toward a path that led between two iron huts to the fringe of the riotous bush. The telegraphists crowded to look after him, but he did not turn his head. He passed beneath the great palms, where the ground was clear; then the thigh-deep grass, which is the lip of the bush, was about him, gray, dry as straw, rustling as he thrust through it with the noise of paper being crumpled in the hands. A green parrot, balancing clown-like on a twig, screamed rancously; he glanced up at its dazle of feathers. Then the wall of the bush itself yielded to his thrusting, let him through, and closed behind his blue-clad back. Africa had received him to her silence and her mystery.

"He had run away from the sight of men of his own color"

BUT the end of the tale came later. It was told in the veranda of Father Bates' house at Beira, by Dan Terry, as he lay on his cot and draok in the air from the sea in life-restoring drafts.

It was evening when he told it, propped up on his pillows, with the blankets drawn up under his chin, and his lean, leathery face, a little softened by his fever, fronting the long, benevolent visage of Father Bates. The father had a deck-chair, and sprawled in it at length, listening over his deep Boer pipe. A faint, hither ghost of an odor tainted the still air from the mangroves beyond the town, and there was heard, like an undertone in the talk, the distant shimmerous murmur of the tide on the beach.

"But how did you first get to hear of him?" the father was asking, carrying on the talk.

"Oh, that was queer?" said Dan. "You see, I was makin' a cut clean across country to that river of mine, and, as far as I could tell, I was in a stretch of land where there hasn't been one other white man in 'twenty years. Bad travelin' it was—swamp, cune, and swamp again for days; the mud stinkin' all day, the mist poisoning you all night, the case cutting and scratching and slashing you. It was as bad as anything I've seen yet. And it was while we were splashin' and strugglin' through this that I saw, lying at the foot of an aloe—of all created things—an old hat. I thought for a moment that the sun had got to my brain. An old, hard, black derby hat it was, caved in a bit, and soaked, and all that, but a hat all the same. I couldn't have been more surprised if it had been an iceberg. You see, except my own hat, I hadn't seen a hat for over two years."

Father Bates nodded and stroked the big bowl of his pipe with a practiced thumb.

"It might ha' meant anything," Dan went on: "a chap makin' for my river, for instance. So the next Kafir village I came to I went into the matter. I sat down in the doorway of the biggest hut, and had the population up before me to answer questions."

"They were willing?" asked the father.

"I HAD a gun across my knees," explained Dan; "but they were willing enough without that. And a queer yarn they had to tell too: I couldn't quite make it out at first. It began with an account of a village hit by smallpox close by. Their way of dealing with smallpox is simple: they quarantine the infected village by posting armed men round it until all the villagers are starved to death or killed by the smallpox; then they burn the village. It costs nothing, and it keeps the disease under. This village, it seems, was particularly easy to deal with, since it stood three hundred yards from the nearest water, and the water was placed out of bounds."

"It must have been about the third day after the quarantine was declared that the incident occurred. A man and a girl, carrying empty water-pots, had come out of the village toward the stream. The armed outposts, with their big stabbin' spears ready in their hands, ordered them back, but the poor creatures were crazed with thirst, and desperate. They were pleading and crying and still creeping forward, the man first, the girl a few steps behind, and for just water. What happened first was in the regular order of things in those

parts. The fellows on guard simply waited, and when the man was up to them one stepped forward and drove the thirty-inch blade of a stabbing-assagai clean through him. Then they stood ready to do the same to the girl as soon as she arrived.

"She had tumbled to her knees at the sight of the killing, and was crying and begging piteously for water. They said she held out her arms to them and bowed her head between. After a while, when they did not answer, she got to her feet and stood looking at the dead body stretched in the sun, the long blades of the spears and the shining of the water beyond. It was as though she was making up her mind about them, for at last she picked up her water-pot and came forward toward her sure and swift death. The assagai-men were so intent on her that none of them seems to have heard a man who came out of the bush close behind them. One of them, as I was told, had actually flung back his arm for the thrust—and the girl, she hadn't even flinched! The thing was within an inch of being done: the stabbing-assagai goes like lightning, you know: she must have been tasting the very bitterness of death. The man from the bush was not a second too soon. The first they knew of him was a roar, and he had the shaft of the assagai in his hand and had plucked it from its owner.

He must have moved like a young earthquake and bellowed like a full-grown-thunder-storm. All my informants laid stress on his voice; he exploded in their midst with an uproar that overthrew their senses, and whacked right and left with fist and foot and assagai. He was a white man; it took them some seconds to see that through the dirt on him; he was clad in rags of cloth, and his head was bare, and he raged like a sackful of tigers. He really must have been something extraordinary in the way of a fighter, for he scattered a clear dozen of them and sent them flying for their lives. One man said that when he was safe he looked back. The white man, with the assagai on his shoulder, was stumping ahead into the infected village, and the girl—she was lying down at the edge of the water

drinking avidly. She hadn't even looked up at the fight."

Father Bates nodded. "Poor creatures," he said. "Yes?"

"Well, the cordon being broken, those of the villagers who weren't too far gone to walk on their feet promptly scattered, naturally, and no one tried to stop them. When at last the people from the neighboring kraals plucked up courage to go and look at the place, they found there only the bodies of the dead. The white man had gone too. They never saw him again, but from time to time there came rumors from the north and east—tales of a wanderer who injected himself suddenly into men's affairs, withdrew again and went away, and they remembered the white man who roared. He was already passing into a myth.

"I couldn't make head nor tail of the thing; but one point was clear: since this white man had neither knif nor gear he couldn't hurt my river, and that was what chiefly mattered to me just then. I might have forgotten him altogether, but that I came on his tracks again, and then, to finish with, I saw the man himself.

"HE must have been getting a reputation for uncanniness from every village he touched at. By the time I came up with the scene of his next really notable doings he was *umtagait* in full form—supernatural, you know, a thing to be dreaded and conciliated. And I don't wonder, really. Here was a man without weapons, bareheaded in the sun, speaking no word of any native language, alone and nearly naked, plunging ahead through that wild unknown country and no harm coming to him. You can't play tricks of that sort with Africa, the old girl holds too many trumps; but this chap was doing it. It was against nature.

"He'd made his way up to a place where I always expect trouble. There is, or rather, there was then, a brute of a chief there, a fellow named N'Komo, who paid tribute to M'Kombi, and was sort of protected and supported by him. He was always sloping over his borders

"A district with N'Komo's mark on it, torture, you know, mutilation—barbarism"

with a handful of fighting men and burning and slaughtering and raping among the peaceful kraals. A devil he was—a real, black devil for cruelty and lust. He had just started on a campaign when this lonely white man arrived in the neighborhood, passing through a bit of a district with N'Komo's mark on it in the form of burned huts and bodies of people. A man N'Komo had killed was a sight to make Beelzebub sick. Torture, you know; mutilation—bestialness! The white man must have seen a good many such bodies.

"N'Komo and his swashbucklers had slept the night in a captured kraal, and were still there in the morning when the white man arrived. I know exactly the kind of scene it was. The carcasses of the cattle slaughtered for meat would be lying all over the place between the round huts, and bodies of men and women and children with them. The place would be swarming with the tall, black spearmen, each with a skin over his shoulder and about his loins; there would be a fearful jangle, a clatter of voices and laughter, and probably screams, horrible screams, from some poor nigger whose death they'd be dragging out hour after hour, for their fun. Near the main gate N'Komo was holding an *indaba* with his chief huts. I've seen him many times—a great coal-black brute, six-foot four in height, with the flat, foolish, good-natured-looking face that fooled people into thinking him a decent sort. I wish I'd shot him the first time I saw him.

"WELL, the *indaba*—the council, you know—was in full swing when up comes this white man, running as if for his life, and wailing—wailing! The Kafir who told me had seen it from where he was lying, tied hand and foot, waiting his turn for the firebrands and the knives. He said: 'He wailed like one who mourns for the dead!' There was a hurst kraal not a mile away, so one can guess what he had been seeing and was wailing about. 'His face,' the nigger told me, 'was like the face of one who has lived through the torment of N'Komo and is thirsty for death—a face to hide one's eyes before. And it was white and shining like ivory!' He came thus, pelting blindly at a run, into the midst of N'Komo's war *indaba*.

"He picked out N'Komo as the chief man there in a moment; that was easy enough; and he broke into a torrent of words, gesticulating and pointing back in the direction from which he had come. Telling him of what he had seen, of course—poor beggar! Can't you imagine him, with those tall, surprised black soldiers all round him and the great dangerous hulk of negro king before him, trying to make them understand, trembling with horror and fury, raging in homely, useless English against the every-day iniquity of Africa? Can't you imagine it, Padre?"

"Sh! You'll get a temperature," warned Father Bates. "Yes; I can imagine it. It makes me humble."

"You see, I know what had maddened him. The first work of N'Komo's I ever saw was a young mother and a baby—dead and—finished with; and it nearly sent me off my head. If I'd been half the man this poor beggar was, I'd have had N'Komo's skin salted and sundried before I slept. He—he didn't wait to mourn about things; he went straight ahead to find the man who done them and deal with him.

"Probably they took him for a lunatic; at any rate, they soon began to laugh at him, shaking and talking in their midst. He was a new thing to have sport with and N'Komo presently leaned forward, grinning, touched him on the arm, and pointed. The white man's eyes followed the black finger to where a poor devil lay on the ground, impaled by a stake through his stomach. It was N'Komo's way of telling him what to expect, and he understood. He stopped talking.

"THE nigger who saw it all and told me about it said that when the white man had looked round on all the horrors he turned again toward N'Komo, and at the sight of his eyes N'Komo ceased to grin. His brute face went all to bits, as a Kafir's does when he is frightened. But the white man made a little backward jerk with his hand,—that's what it seemed like to the nigger who told me,—

and suddenly, from nowhere in particular, a big pistol materialized in his grip. He must have been pretty clever at the draw. His hand came up, there was a smart little crack, a spit of smoke, and N'Komo, the great war-chief, was rolling on the ground, making horrible noises like—like bad plumbing, with half his throat shot away, and the man who had done it was backing toward the main gate with the big revolver swinging to right and left across the group of warriors.

"And he got away, too. That, really, is the most wonderful part of the whole thing. I expect that as soon as N'Komo was settled, the usual row and the usual murders began by various would-be successors. By night they had all started north again, on a hot-foot race to occupy and hold the head kraal, and the country was clear of them, and the white man's credit as a magic-worker stood higher than ever. He could have had anything he liked in any of the kraals for the asking; he could have been lawgiver, king, and god. But he was off in the hush again, alone and restless and mysterious, with his ivory-white face and his eyes full of pain and anger."

"Aye," said Father Bates, "pain and anger—that's what it was! And at last you saw him yourself, didn't you?"

"YES," said Dan, "I saw him. I was at my river then, coming the gold out of it, when a Kafir trekking down told me of him. He was at a kraal fifty miles away—two days' journey, lying up with a hurt foot. The gold was coming out of that river by the bottleful; it wasn't a thing to take one's eyes off for a moment; but a white man, the white man who had killed N'Komo—well, I couldn't keep away. I span a yarn to my men about a lion spoor that I wanted to follow, and off I went by myself and did that fifty miles of hush and six-foot grass and rocks in thirty hours, which was pretty good, considerin'. It was afternoon when I came through a patch of palms and saw the kraal lying just beyond.

"I hadn't much of an idea what kind of man I expected to see. I rather fancy I expected to be disappointed, to find him nothing out of the way after all, and to learn that nine tenths of the yarns about him were just nigger lies. I was thinking all that as I stopped in the palms' shade to mop the sweat out of my hat, and then—I saw him!

"He was passing between me and the huts, a strange lame figure, leaning on a stick, with a few rags of clothing bound about him. His head, with its matted thick hair, was bare to the thresh of the sun; he was thick-set, shortish, slow-moving, a sorrowful and laborious figure. I saw the shine of his bare skin, and even the droop and sorrow of his heavy face. I stood and watched him for perhaps a minute in the shadow under those great masts of palms; I saw him as clearly as I see you; and suddenly a light came to me, and I knew—I understood it all. His loneliness, his pain and anger, his wanderings in that savage wilderness, the wild misery of his eyes and the ivory-white of his stricken face—I understood completely. He had run away from the sight of men of his own color—he would have no use for me. So then and there I turned and went back through the palms and started on the trek for my own camp. It was all I could do for him."

"But," said Father Bates, "you've not said what it was that you saw."

"Padre," said Dan, "that poor, poor fellow who loomed to the Kafirs like a great and merciful god,—he was a leper as white as snow!"

"Holy saints defend us!" The father made a startled motion of crossing himself, staring at Dan's lean, somber face in a blankness of consternation. "So that's what it was then! A leper!"

"That's what it was," said Dan. "I've seen it before in the East."

"He said," continued the father—"he said he had no use for my blasted cant. And he hadn't—he hadn't. He knew more than I."

"The most harm-bearing incident of the trusts is their promotion of financial concentration. Industrial trusts feed the money trust"

Big Men and Little Business

By LOUIS D. BRANDEIS

Being Part VII of "Breaking the Money Trust"

IN the preceding articles Mr. Brandeis has described the formation of the money trust, its evil effects, and some of the methods, such as legislation and publicity, by which it may be broken up. In this article he answers the argument that the investment banker is to be credited with financing our pioneer industries.

J. P. MORGAN & CO. declare, in their letter to the Pujo Committee, that "practically all the railroad and industrial development of this country has taken place initially through the medium of the great banking houses." That statement is entirely unfounded in fact. On the contrary nearly every such contribution to our comfort and prosperity was "initiated" without their aid. The "great banking houses" came into relation with these enterprises, either after success has been attained, or upon "reorganization" after the possibility of success had been demonstrated, but the funds of the hardy pioneers, who had risked their all, were exhausted.

This is true of our early railroads, of our early street railways, and of the automobile; of the telegraph, the telephone and the wireless; of gas and oil; of harvesting machinery, of our steel industry; of the textile, paper and shoe industries; and of nearly every other important branch of manufacture. The initiation of each of these enterprises may properly be characterized as "great transactions"; and the men who contributed the financial aid and business management necessary for their introduction are entitled to share, equally with inventors, in our gratitude for what has been accomplished. But the instances are extremely rare where the original financing of such enterprises was undertaken by investment bankers, great or small. It was usually done by some common business man, accustomed to taking risks; or by some well-to-do friend of the inventor or pioneer, who was influenced largely by considerations other than money-getting. Here and there you will

find that banker-aid was given; but usually in those cases it was a small local banking concern, not a "great banking house" which helped to "initiate" the undertaking.

Railroads

WE have come to associate the great bankers with railroads. But their part was not conspicuous in the early history of the Eastern railroads; and in the Middle West the experience was, to some extent, similar. The Boston & Maine Railroad owns and leases 2,315 miles of line; but it is a composite of about 166 separate railroad companies. The New Haven Railroad owns and leases 1,996 miles of line; but it is a composite of 112 separate railroad companies. The necessary capital to build these little roads was gathered together, partly through state, county or municipal aid; partly from business men or landholders who sought to advance their special interests; partly from investors; and partly from well-to-do public-spirited men, who wished to promote the welfare of their particular communities. About seventy-five years after the first of these railroads was built, J. P. Morgan & Co. became fiscal agent for all of them by creating the New Haven monopoly.

Steamships

THE history of our steamship lines is similar. In 1902, many years after individual enterprises had developed practically all the great ocean lines, J. P. Morgan & Co., floated the International Mercantile Marine with its 854,744,000

of 4½ bonds, now selling at about 60, and \$100,000,000 of stock (preferred and common) on which no dividend has ever been paid. That was ninety-five years after Robert Fulton, in 1807, with the financial aid of Robert R. Livingston, a judge and statesman, not a banker, demonstrated with the *Claremont*, that it was practicable to propel boats by steam. It was sixty-nine years after the three Cunard brothers of Halifax and 232 other persons—stockholders of the Quebec and Halifax Steam Navigation Company—joined in supplying about \$80,000 to build the *Royal William*,—the first steamer to cross the Atlantic. Just sixty-two years after the first regular line of transatlantic steamers—The Cunard—was founded, Mr. Morgan organized the Shipping Trust.

Telegraph

THE story of the telegraph is similar. The money for developing Morse's invention was supplied by his partner and co-worker, Alfred Vail. The initial line (from Washington to Baltimore) was built with an appropriation of \$30,000 made by Congress in 1843. Sixty-six years later J. P. Morgan & Co. became bankers for the Western Union through financing its purchase by the American Telephone & Telegraph Company.

Harvesting Machinery

NEXT to railroads and steamships, harvesting machinery has probably been the most potent factor in the development of America; and most important of the harvesting machines, was

Cyrus H. McCormick's reaper. That made it possible to increase the grain harvest twenty- or thirty-fold. No investment banker had any part in introducing this great business man's invention.

McCormick was without means; but William Butler Ogden, a railroad builder, ex-Mayor and leading citizen of Chicago, supplied \$25,000 with which the first factory was built there in 1847. Fifty-five years later, J. P. Morgan & Co. performed the service of combining the five great harvester companies, and received a commission of \$3,000,000. The concern then consolidated as the International Harvester Company, with a capital stock of \$100,000,000, had been previously capitalized, in the aggregate, at about \$10,500,000—strong evidence that in all the preceding years no investment banker had financed them. Indeed, McCormick was as able in business as in mechanical invention. Two years after Ogden paid him \$25,000 for a half interest in the business, McCormick was able to buy it back for \$20,000; and thereafter, until his death in 1884, no one, but members of the McCormick family had any interest in the business.

The Banker Era

It may be urged that railroads and steamships, the telegraph and harvesting machinery were introduced before the accumulation of investment capital had developed the investment banker, before America's "great banking houses" had been established; and that, consequently, it would be fairer to enquire what services bankers had rendered in connection with later industrial development. The firm of J. P. Morgan & Co. is fifty-five years old; Kuhn, Loeb & Co. fifty-six years old; Lee, Higginson & Co. over fifty years; and Kidder, Peabody & Co. forty-eight years; and yet the investment banker seems to have had almost as little part in "initiating" the great improvements of the last half century, as did bankers in the earlier period.

Steel

THE modern steel industry of America is forty-five years old. The "great bankers" had no part in initiating it. Andrew Carnegie, then already a man of large means, introduced the Bessemer process in 1858. In the next thirty years our steel and iron industry increased greatly. By 1898 we had far outstripped all competitors. America's production about equaled the aggregate of England and Germany. We had also reduced costs so much that Europe talked of the "American Peril." It was 1898, when J. P. Morgan & Co. took their first step in forming the Steel Trust, by organizing the Federal Steel Company. This followed the combination of the tube mills into an \$80,000,000 corporation, J. P. Morgan & Co. taking for their syndicate services \$20,000,000 of

common stock. About the same time the consolidation of the bridge and structural works, the tin plate, the sheet steel, the hoop and other mills followed; and finally, in 1901, the Steel Trust was formed, with a capitalization of \$1,492,000,000. These combinations "initiated" no development in the steel industry.

"The men who contributed financial aid are entitled to share our gratitude for what has been accomplished"

The Telephone

THE telephone industry is less than forty years old. It is probably America's greatest contribution to industrial development. The bankers had no part in "initiating" it. The glory belongs to a simple, enthusiastic, warm-

hearted, business man of Haverhill, Massachusetts, who was willing to risk his own money. H. N. Casson tells of this, most interestingly, in his "History of the Telephone":

"The only man who had money and dared to stake it on the future of the telephone was Thomas Sanders, and he did this not mainly for business reasons. Both he and Hubbard were attached to Bell primarily by sentiment, as Bell had removed the blight of dumbness from Sanders' little son, and was soon to marry Hubbard's daughter. Also, Sanders had no expectation, at first, that so much money would be needed. He was not rich. His entire business, which was that of cutting out soles for shoe manufacturers, was not at any time worth more than thirty-five thousand dollars. Yet, from 1874 to 1878, he had advanced nine-tenths of the money that was spent on the telephone. The first five thousand telephones, and more, were made with his money. And so many long, expensive months dragged by before any relief came to Sanders, that he was compelled, much against his will and his business judgment, to stretch his credit within an inch of the breaking-point to help Bell and the telephone. Desperately he signed note after note until he faced a total of one hundred and ten thousand dollars. If the new 'scientific toy' succeeded, which he often doubted, he would be the richest citizen in Haverhill; and if it failed, which he sorely feared, he would be a bankrupt. Sanders and Hubbard were leasing telephones two by two, to business men who previously had been using the private lines of the Western Union Telegraph Company. This great corporation was at the time their natural and inevitable enemy. It had swallowed most of its competitors, and was reaching out to monopolize all methods of communication by wire. The rosier hope that shone in front of Sanders and Hubbard was that the Western Union might conclude to buy the Bell patents, just as it had already bought many others. In one moment of discouragement they had offered the telephone to President Orton, of the Western Union, for \$100,000; and Orton had refused it. 'What use,' he asked pleasantly, 'could this company make of an electrical toy?'

"But besides the operation of its own wires, the Western Union was supplying customers with various kinds of printing-telegraphs and dial-telegraphs, some of which could transmit sixty words a minute. These accurate instruments, it believed, could never be displaced by such a scientific oddity as the telephone, and it continued to believe this until one of its subsidiary companies—the Gold and Stock—reported that several of its machines had been superseded by telephones.

"At once the Western Union awoke from its indifference. Even this tiny nibbling at its business must be stopped. It took action quickly, and organized the 'American Speaking-Telephone Company,' and with \$300,000 capital, and with three electrical inventors, Edison, Gray, and Dolbear, on its staff. With all the bulk of its great wealth and prestige, it swept down upon Bell and his little body-guard. It trampled upon Bell's patent with as little concern as an elephant can have when he tramples upon an ant's nest. To the complete bewilderment of Bell, it coolly announced that it had the only original telephone, and that it was ready to supply superior telephones with all the latest improvements made by the original inventors—Dolbear, Gray, and Edison.

"The result was strange and unexpected. The Bell group, instead of being driven from the field, were not once lifted to a higher level in the business world. And the Western Union, in the endeavor to protect its private lines, became involuntarily a 'bell-wether' to lead capitalists in the direction of the telephone."

EVEN then, when financial aid came to the Bell enterprise, it was from capitalists, not from bankers, and among these capitalists was William H. Forbes (son of the builder of the Burlington) who became the first President of the Bell Telephone Company. That was in 1878. Over twenty years later, after the telephone had spread over the world, the great house of Morgan came into financial control of the property. The American Telephone & Telegraph Company was formed. The process of combination became active. Since January, 1900, its stock has increased from \$25,886,300 to \$344,600,400. In six years (1906 to 1912), the Morgan associates marketed about \$300,000,000 bonds of that company or its subsidiaries. In that period the volume of business done by the telephone companies had, of course, grown greatly, and the plant had to be constantly increased; but the proceeds of these huge security issues were used, to a large extent, in effecting combinations; that is, in buying out telephone competitors; in buying control of the Western Union Telegraph Company; and in buying up outstanding stock interests in semi-independent Bell companies. It is these combinations which have led to the investigation of the Telephone Company by the Department of Justice; and they are, in large part, responsible for the movement to have the government take over the telephone business.

Electrical Machinery

THE business of manufacturing electrical machinery and apparatus is only a little over thirty years old.

J. P. Morgan & Co. became interested early in one branch of it; but their dominance of the business today is due, not to their "initiating" it, but to their effecting a combination, and organizing the General Electric Company in 1892. There were then three large electrical companies—the Thomson-Houston, the Edison and

It is within ten miles of State Street, Boston; but Thomson's early financial support came not from Boston bankers, but mainly from Lynn business men and investors; men active, energetic, and used to taking risks with their own money. Prominent among them was Charles A. Coffin, a shoe manufacturer, who became president of the Thomson-Houston Company upon its organization and president of the General Electric when Mr. Morgan formed that company in 1892, by combining the Thomson-Houston and the Edison. To his continued service, supported by other Thomson-Houston men in high positions, the great prosperity of the company is, in large part, due. The two companies so combined controlled probably one-half of all electrical patents then existing in America; and certainly more than half of those which had any considerable value.

In 1896 the General Electric pooled its patents with the Westinghouse, and thus competition was further restricted. In 1903 the General Electric absorbed the Stanley Electric Company, its other large competitor, and became the largest manufacturer of electric apparatus and machinery in the world. In 1912 the resources of the Company were \$131,942,144. It billed sales to the amount of \$88,182,185. It employed directly over 60,000 persons,—more than a fourth as many as the Steel Trust. And it is protected against "undue" competition, as one of the Morgan partners has been a director, since 1909, in the Westinghouse,—the only other large electrical machinery company in America.

The Automobile

THE automobile industry is about twenty years old. It is now America's most prosperous business. When Henry B. Joy, President of the Packard Motor Car Company, was asked to what extent the bankers aided in "initiating" the automobile, he replied:

"It is the observable facts of history, it is also my experience of thirty years as a business man, banker, etc., that first the seer conceives an opportunity. He has faith in his almost second sight. He believes he can do something—develop a business—construct an industry—build a railroad—or Niagara Falls Power Company,—and make it pay!

"Now the human measure is not the actual physical construction, but the 'make it pay'!

"A man raised the money in the late '80s and built a beet sugar factory in Michigan. Wisacres said it was nonsense. He gathered together the money from his friends who would take a chance with him. He not only built the sugar factory (and there was never any doubt of his ability to

the Westinghouse, besides some small ones. The Thomson-Houston of Lynn, Massachusetts, was in many respects the leader, having been formed to introduce, among other things, important inventions of Prof. Elihu Thomson and Prof. Houston. Lynn is one of the principal shoe-manufacturing centers of America.

do that) but he made it pay. The next year two more sugar factories were built, and were financially successful. These were built by private individuals of wealth, taking chances in the face of cries of doubting bankers and trust companies.

"Once demonstrated that the industry was a sound one financially and then bankers and trust companies would lend the new sugar companies which were speedily organized—a large part of the necessary funds to construct and operate.

"The motor-car business was the same.

"When a few gentlemen followed me in my vision of the possibilities of the business, the banks and older business men (who in the main were the banks) said, 'fools and their money soon to be parted'—etc., etc.

"Private capital at first establishes an industry, backs it through its troubles, and, if possible, wins financial success when banks would not lend a dollar of aid.

"The business once having proved to be practicable and financially successful, then do the banks lend aid to its needs."

Such also was the experience of the greatest of the many financial successes in the automobile industry—the Ford Motor Company.

How Bankers Arrest Development

BUT "great banking houses" have not merely failed to initiate industrial development; they have definitely arrested development because to them the creation of the trusts is largely due. The recital in the Memorial addressed to the President by the Investors' Guild in November, 1911, is significant:

"It is a well-known fact that modern trade combinations tend strongly toward constancy of process and products, and by their very nature are opposed to new processes and new products originated by independent inventors, and hence tend to restrain competition in the development and sale of patents and patent rights; and consequently tend to discourage independent inventive thought, to the great detriment of the nation, and with injustice to inventors whom the Constitution especially intended to encourage and protect in their rights."

And more specific was the testimony of the *Engineering News*:

"We are today something like five years behind Germany in iron and steel metallurgy, and such innovations as are being introduced by our iron and steel manufacturers are most of them merely following the lead set by foreigners years ago.

"We do not believe this is because American engineers are any less ingenious or original than those of Europe, though they may indeed be deficient in training and scientific education compared with those of Germany. We believe the main cause is the wholesale consolidation which has taken place in American industry. A huge organization is too clumsy to take up the development of an original idea. With the market closely controlled and profits certain by following standard methods, those who control our trusts do not want the bother of developing anything new.

"We instance metallurgy only by way of illustration. There are plenty of other fields of industry where exactly the same condition exists. We are huddling the same machines and using

the same methods as a dozen years ago, and the real advances in the art are being made by European inventors and manufacturers."

To which President Wilson's statement may be added:

"I am not saying that all invention had been stopped by the growth of trusts, but I think it is perfectly clear that invention in many fields has been discouraged, that inventors have been prevented from reaping the full fruits of their ingenuity and industry, and that mankind has been deprived of many comforts and conveniences, as well as the opportunity of buying at lower prices.

"Do you know, have you had occasion to learn, that there is no hospitality for invention, now-a-days?"

Trusts and Financial Concentration

THE fact that industrial monopolies arrest development is more serious even than the direct burden imposed through extortionate prices. But the most harm-bearing incident of the trusts is their promotion of financial concentration. Industrial trusts feed the money trust. Practically every trust created has destroyed the financial independence of some communities and of many properties; for it has centered the financing of a large part of whole lines of business in New York, and this usually with one of a few banking houses. This is well illustrated by the Steel Trust, which is a trust of trusts; that is, the Steel Trust combines in one huge holding company the trusts previously formed in the different branches of the steel business. Thus the Tube Trust combined 17 tube mills, located in 16 different cities,

The modern steel industry of America is forty-five years old. The "great bankers" had no part in initiating it. Andrew Carnegie introduced the Bessemer process.

scattered over 5 states and owned by 13 different companies. The wire trust combined 19 mills; the sheet steel trust 96; the bridge and structural trust 27; and the tin plate trust 36; all scattered similarly over many states. Finally these and other companies were formed into the United States Steel Corporation, combining 228 companies in all, located in 127 cities and towns, scattered over 18 states. Before the combinations were effected, nearly every one of these companies was owned largely by those who managed it, and had been financed, to a large extent, in the place, or in the state, in which it was located. When the Steel Trust was formed all these concerns came under one management. Thereafter, the financing of each of these 228 corporations (and some which were later acquired) had to be done through or with the consent of J. P. Morgan & Co. That was the greatest step in financial concentration ever taken.

Stock Exchange Incidents

THE organization of trusts has served in another way to increase the power of the Money Trust. Few of the independent concerns out of which the trusts have been formed, were listed on the New York Stock Exchange; and few of them had financial offices in New York. Promoters of large corporations, whose stock is to be held by the public, and also investors, desire to have their securities listed on the New York Stock Exchange. Under the rules of the Exchange, no security can be so listed unless the corporation has a transfer agent and registrar in New York City. Furthermore, bank directorships have contributed largely to the establishment of the financial offices

of the trusts in New York City. That alone would tend to financial concentration. But the listing of the stock enhances the power of the Money Trust in another way. An industrial stock, once listed, frequently becomes the subject of active speculation; and speculation feeds the Money Trust indirectly in many ways. It draws the money of the country to New York. The New York bankers handle the loans of other people's money on the Stock Exchange, and in some way the Money Trust is enriched by the large amounts paid in commissions. The aggregate amount paid for brokers' commissions on Stock Exchange transactions is very large. For instance: There are 5,084,332 shares of United States Steel common stock outstanding. But in the five years ending December 31, 1912, speculation in that stock was so extensive that there were sold on the Exchange an average of 20,380,888 shares a year; or nearly six times as much as there is Steel common in existence. With few exceptions, sales on the Exchange involve the payment of twenty-five cents in commission for each share of stock sold; that is, twelve and one-half cents by the seller and twelve and one-half cents by the buyer. Thus the commission from the Steel common alone afforded a revenue averaging over \$7,000,000 a year. The Steel preferred stock is also much traded in; and there are 138 other industrials listed on the New York Stock Exchange, largely trusts.

Trust Ramifications

BUT the potency of trusts as a factor in financial concentration is manifested in still other ways; notably

This subject will be discussed in our next issue under: "A Curse of Bigness."

A Very Small Room

By LAUDER CLEMENT

SHE would often lie crying at my feet in the earlier days of her husband's commitment, entreating me to get him out of prison, but she was able to support her three children throughout the six years of his sentence.

From her first days of despair she soon stepped forth. She began, unarmoured, and ended each day with one intent. Through six years she rushed with a splendor on her mind; through a fierce asceticism and self-denial toward a complete self-indulgence. She was often tired, but in the main her strength increased. She became very strong and handsome, with the distinction of a vigorous single-mindedness that never once had broken down.

Nor in the new delight and power of herself did she forget her first object or grow to think less of the reward. Her love for her husband remained lively and fresh, her compassion leaping and intense. During the six years, she had accounted for her over-weening ardor—as an excuse too much love and folds it deeper in the rose by offering a likely and a selfish motive—saying, "He will be a great help to me when he gets out." I told her she could not be sure he would be much help after his six years. She had scarcely listened and had answered, leaning her head to one side, "I hardly care about that."

At the end of the six years her husband was discharged from jail. When he had been at home a few months I went to see her. "He's no help," she said. "It comes

to this"—I saw the twist of a new humor on her mouth—"He's got three children—they are all his too" (her lips compressed like the lips of young men on street-corners whose slightly-smiling mouths absorb one more obscenity with a faint tremor and sensation of thanks), "it comes to this. He's got three children—as I say, all his; and I have four, himself the fourth. He's no help. He's cold too. There's no pleasure in a man like that. He's no help."

"He is ill, though," I said.

"Yes," she agreed, "he's sick enough." She took some white, wet fish from a pot

I FOLLOWED her down a passage with the wind blowing in it and stood with her outside a small door. "Why do you keep him out here?" I asked.

"He wants it," she said. "It was a good storeroom for provisions having a window, but since he got back from his jail he wants a very small room. So I cleared the onions and fruit out of this and his saws and tools he used to use, and he sits on the edge of the bed with his legs apart. He's no help, you can see for yourself."

"He is ill, though," I said. "It seems to me you have changed."

"He's sick enough, surely. Yes, I've changed enough. You can't like a man like that, timid and quiet. He's quiet enough. Sometimes he puts on his vest wrong side out, but that's all he does. And he wants his meals handed in through

through their ramifying operations. The endless chain is forcibly illustrated by the General Electric Company's control of water-power companies; and of the street-railway and light and power plants,—whether supplied by hydro-electric power or by steam. The policy of conservation demands that federal and state governments should preserve all remaining rights in and over water powers and public franchises. This is demanded likewise by the policy of the New Freedom. And unless the process of concentration is promptly arrested, it may become necessary soon to exercise the taxing power and the power of eminent domain, in order to recover rights which should never have been surrendered. But that is another story, to be told later.

The Sherman Law

THE Money Trust cannot be broken, if we allow its power to be constantly augmented. To break the Money Trust we must stop that power at its sources. The industrial trusts are among its most effective feeders. Those which are illegal should be dissolved. The creation of new ones should be prevented. To this end the Sherman law should be supplemented both by providing more efficient judicial machinery, and by creating a commission with administrative functions to aid in enforcing the law.* When this is done, a long step will have been taken toward securing the New Freedom.

But additional legislation relating specifically to railroads is required in order that the Money Trust may be broken.

*This subject was discussed by Mr. Brandeis in our issue of Nov. 8, 1913, under the title "A Solution of the Trust Problem—A Program."

a crack in the door. He will not have a lot of blue and yellow and white rushing in at him from outside when he's used to his grey stones, nor a crowd of children—all his, as I say—before his eyes, and the cold walking in and out amongst them."

SHE opened the door. "Well, how are you?" I said to the man inside. I saw a small room with a window over the bed on which the man sat, with his legs apart and his waistcoat on wrong side out. I saw the manager branch of a peach-tree cross and recross the pane in the slight gusts of spring. "That tree, I dare say, is a pleasure to your eyes," I said to him.

"I don't like it," he said. "The window is too large. And the room's too large. I like a very small room and a small window." His eye fell on the plate of food in his wife's hand and he threw out his arm with the gesture of shutting a door. He took no further notice of me. We went out again. His wife smiled the smile she had got.

"That fish will be cold enough," she said to me. Then in the kitchen, looking toward the glass, "I'm losing my looks. What do you think?"

"I don't know," I said.

"You can see for yourself he's no use," she remarked from the top step. "And no comfort, either."

"That prison was too much for him," I said.

"Yes," she agreed, "he's sick enough."

MORE DRAWING-ROOM STUFF

Adhesive Kid Stuff.

AS in acrobatics, the Drawing-Room stunts that seem easiest are often the most dangerous: pulling off the gloves looks easy and easy it is, while it lasts. But as the best trained Drawing-Room performer knows, once they are off, then more than ever are they upon his hands.

How shall he get rid of them?

THEY cling to him as the scent of the rose to the shattered vase—as the albatross to the Ancient Mariner. He may wring them to the point of strangulation, hut, unless Parker (the second footman) takes them from him, it were better he had left them at home, better he had never worn them. Each moment they grow more monstrous until, with arch-teuthian fingers, they crush him utterly.

Call-me-early Stuff

BUT thrilling as they are, these exhibitions of Hand-Taming, they are as naught beside the wonder of the Listening Act. By some, the art of appearing to listen is considered the supreme test of perfect acting.

Even the Box Parties are hushed as, spellbound, they watch the intrepid young gymnast perform his famous Listening Act.

THE Duchess Velours de Laine speaks to him in low muted thirds. Instinctively (it would seem) he draws himself to his full height, his chin is slightly raised, his eyes droop earnestly, the Hands—the treacherous Hands, at last they are completely cowed. They hang limply at each side, the first finger parallel to the seam of the adjacent trouser.

NOT a wrinkle mars the perfect cylinder of the coat-sleeve. The profile of the trousers' crease is like the cameo forehead of a Greek god. No one hears what the Duchess Velours de Laine is saying because she belongs to the new school of acting and having been told that she is better than Mrs. Fiske, she speaks in low, inaudible thirds. But even the deafest of us can hear Lord Aberdasher listening and (to judge from his footman's attitude) this is what the Duchess should be saying: "Now, James, you can set the tea in the blue room, and don't forget to clean the globes in the library, and when you've aired the pink bedroom in the west wing, you can wash Pinglo; and, James, see if you can comb out the kinks without making her howl the way you did last time."

And then Lord Aberdasher kisses the Duchess's hand, raising it aloft to his lips in the perfect Drawing-Room Manner, like a flagon of Würzburger.

'Le Caron was one of the men on whom the strange being thought it necessary to put his spies'

Criminals I Have Known

By T. P. O'CONNOR

Illustrated by William M. Berger

III. Henri Le Caron

THE name of Pigott not unnaturally suggests that of the other figure which played so important a part in the moving melodrama of the Parnell trial. I have already asked the reader to interpret the word criminal in a broad sense. It is open to question whether Henri Le Caron could properly be designated by that title. He himself insisted that his occupation had been honourable as well as beneficial. He never showed any sign of excitement except when Sir Charles Russell put to him a question that threw doubts on the nature of the part he had played in the Irish Revolution. His face flushed, his eyes sparkled, as he claimed that he was a military spy, and that he had acted in the interests of his country. Military spies have played an important and honourable part in history; spying is both a necessary and a perilous occupation. So let Henri Le Caron be taken at his own estimate, and find his place in this gallery, not as a criminal, but as one who figured in a great State trial.

I remember the first time I heard the

name of this extraordinary man. It was from one of the ardent and extreme leaders of the Irish movement, and it was in the lobby of the House of Commons. My friend spoke with enthusiasm of this daredevil, who was described as bolder, more daring, more extreme than even the extreme in the rank of the Irish-Americans. This eminence in courage and in vehemence was rendered the more remarkable in the eyes of my friend by the fact that he was not an Irishman, but a French-Canadian, as the name showed. As a matter of fact, the French-Canadian was an Englishman named Beach, and almost the very moment when his patriotic Irish zeal was being extolled to me, was walking up and down one of the corridors of the House of Commons, conversing with Mr. Parnell and attempting to trap that wary and suspicious political leader into some dangerous and perhaps fatal admissions which might have landed him in jail or dragged him to the gallows. To make the tragic comedy complete, this fateful interview described many years afterwards in a public court

when Parnell was fighting for his life and for the life of his cause, was communicated a few moments afterwards to Sir Robert Anderson, then at Scotland Yard, and one of the most powerful and almost fanatical opponents of everything that Parnell represented.

WHEN, therefore, one of my young reporters on the *Star* informed me that a man named Le Caron was giving evidence, I pricked up my ears, and I resolved to go to the court the next day and study and chronicle the man's evidence. Never was I so rewarded. For three full days I watched this man's extraordinary face, writing my description almost without ever looking at my manuscript. It was one of the most remarkable faces I have ever seen. If ever a man looked his desperate and terrible part, it was Le Caron.

One of the revolutionaries whom he mentioned promiscuously in his evidence declared that he had never trusted him because of his "Mephistophelian" face. It was not a bad description. Imagine

"He began on address of thanks for the patience with which his terrible story had been heard"

a little man with a body thin almost as a skeleton, surmount this with a face more like the edge of a razor than the ordinary face of flesh and blood, with a skin as yellow as though he had jaundice, with cheek bones that seemed to obtrude through the thin flesh, with sunken cheeks, and then add a tiny black moustache and, above all, add a pair of black, piercing, almost burning eyes, and you have some conception of this extraordinary figure.

IN spite of the palpable delicacy—for the man was already stricken with mortal disease—there was an air of restless alertness. And in spite of the eyes that seemed always to be burning and speaking, there was usually a look of impenetrable mystery and brooding reticence. He was just the man whom it

was impossible for even the most scrutinizing observer to read. It was the mask of a yellow Sphinx. At times you might almost trace a resemblance to that terrible Corsican who conquered and dominated Europe, and who also when he wished, could hide his thoughts from a million eyes, and who, even on a bloody battle-field in which his life, his throne, and his gigantic interests were involved, revealed to not one of the hungry and anxious troops who looked upon him whether he was confident or hopeless of the issue. In daring, in cunning, in impassivity, in coolness in the face of appalling danger, Le Caron had something that was Napoleon.

He had an astounding becoming associated by early period of his life

some of the leaders of the then powerful revolutionary section of the Irish movement in America, Le Caron conceived the idea that he should devote himself to the part of a spy. By his assumption of the part of a man more daring, more merciless, more violent than any other, he gradually established his reputation, and was advanced from point to point, till he finally became one of the innermost and small circle that guided the whole movement. Those who have studied such movements, whether in Russia or in Italy, in the days when a struggle for greater liberties had to face all the innumerable weapons of a powerful and a despotic government, will realize that men in that terrible

innermost circle wield a power more dreadful than even the despotic governments they are fighting. It is one of the inevitable and awful consequences of a revolutionary conspiracy that the fidelity of its members should be, when needs be, guaranteed by the decree of death against treason. This is why in Russia, for instance, there are often as many assassinations of the conspirators as there are of the officials of the government. In Russia, too, it has happened that a watchful and cunning police with all the funds of the State at their disposal are able not only to buy the most daring, cunning and impressive revolutionary, but to place him at the very head of that terrible inner ring which decides on life and death. The story of Azeff is a remarkable instance of this.

LE CARON was the Azeff of the Irish Revolution in the United States. He was one of three men known as the "Triangle," before whom came all the most serious and sometimes tragic issues. One can imagine the feelings of Le Caron when sitting in a room with three or four men to decide perhaps the life of another human being, and on the very question whether or not he was guilty of treachery, with the certainty within his bosom that if the awful secret of his own life were known he would

not have been allowed to leave the room alive. And it was his duty, perhaps, to condemn another man for the very deed of which he himself was guilty. I can still remember the shock when Sir Charles Russell quietly asked Le Caron what he had done on such occasions, and Le Caron replied, "I voted with the majority."

Le Caron was naturally a chemist in a small town near Chicago. He attended to his duties in connection with the revolutionary organization with the most scrupulous care, and naturally, for that was after all the chief business of his life. The organization was divided into what were called camps. At each of these camps the whole business was discussed, and now and then proclamations were read that informed the members of the future tactics of their

to tell
at an
with

leaders. It was strictly ordered that the proclamations should be burned immediately after they had been read, so that no trace of them might remain behind. And this further precaution was adopted, that a copy was given only to the few men who, like Le Caron, held the highest and the most trusted offices in the organization. When Le Caron returned to his chemist's shop from the meeting of the camp he calmly took a copy of the proclamation, and by the next post it was on its way to England to a private address, and within a few hours afterwards it was in the hands of Sir Robert Anderson, and placed among the archives which he was piling up for use at the proper time against the deadly foes with whom he was waging war. Many of these proclamations were read out during the trial. They were somewhat turgid in style, and with their apparent confidence in their strictest secrecy while this dark-skinned man with the burning eyes was all the time sending them to the formidable chief of Scotland Yard, they produced a rather ironical effect.

ONE of the few occasions in which Le Caron departed from his usual gravity and impassivity was when his counsel read out a letter of introduction given to him when he was about to visit some of the camps in the southern states.

The terms of perfect confidence in Le Caron as a true member of the organization who could be implicitly trusted were in such contrast with the man standing in a witness box in London and giving the whole story and all the men away, and

was at once so poignant and so comical that Le Caron's grim face relaxed and was covered by a broad smile.

DURING all these three days he was giving his evidence Le Caron remained to me a figure of absorbing interest. The coolness of the man, the grimness, the sense of the many hours through which he had passed when even a look might have meant his immediate death, and all this so well symbolized in the death's-head face, the sunken cheeks, and the blazing eyes, made him a figure to admire, to wonder at, to shudder at. He seemed scarcely human in his superiority to ordinary fears, weaknesses and scruples. It was one of his astonishing qualities that he felt so utterly self-confident, and even self-complacent. There was an amusing example of this when he had concluded his examination. He turned to the three grave judges and began what was evidently intended to be a florid address of thanks and of all-round congratulations to the Bench for the patience with which his terrible story had been heard. It was almost as if for the moment he thought that he was the presiding judge and the chief figure of the court. But Mr. Justice Hannen, who presided, had a short and stern way with him, and he stopped the intended oration very abruptly, and Le Caron had to leave the box with the oration unfinished.

Here is a curious little bit of secret history in connection with this extraordinary man. Henry Labouchere was then alive and taking an active

interest in the political struggle of the time. Labouchere had an insatiable interest in plots, conspiracies, and all the dark places of the world. It was his incessant working that produced the interview between Pigott and Sir George Lewis at which the forger confessed to his work. It was "Labby", also, who contributed to Pigott's exposure by examining correspondence which was known to come from Pigott's hand. In tracing a conspiracy "Labby" forgot the hard-fistedness which was part of his character, and he spent money freely on his own service of detectives. Le Caron was one of the men on whom the strange being thought it necessary to put his spies. Thus it came about that while Le Caron was amusing himself in seeing the sights of London, which, by the way, included frequent visits to the Aquarium of those days, when its purposes were somewhat different from those of today, and while Le Caron walked about in the company of the detective who was always with him to guard him against any attack, "Labby's" detective was always on the heels of both of them, and every morning there was on "Labby's" desk an account of Le Caron's doings on the previous night. It was reported at the time that Le Caron had received a large sum from the *Times* for the great services he had rendered it during the Parnell trial, and that he was secured in a comfortable income for the remainder of his days. But he did not enjoy the income long. He died not long after the close of the tragic scene in which he had played so astounding a part.

Next week will appear "Mme. Humbert," the fourth of this series of stories by T. P. O'Connor

Mum's Point of View

By VIDA SUTTON

MUM is the wife of a workingman in East Ham, London. In all her life she has scarcely been outside that sordid, dull, factory-bounded area. Her experience is in common with thousands of other women who manage by some miracle to keep a clean home and bring up a family on a pound a week, self-respecting and above charity. Now Mum's work is done. Her family is grown and she has taken to dropping in at the "pub" for company, much to the worry of Dad. Today she has had a glass and is a bit talkative.

"Now, Dad, don't you scold me. Don't you say a word to me. I didn't mean no 'arm. I ain't done nothin'. I on'y stopped in to see my frien's. Tell 'em you was bringin' a ledgy down to 'ave tea with me. I'll be alright in a minnit. Interfere your ledgy frien'.

"I'm sure I'm pleased to meet you, Ma'm, an' myke you welcome to our 'ome. It's 'umble—but it's 'ome. Six bob a week we pgs an' 'as four rooms. I seen the time when 'im an' me an' six byhies wuz livin' in one room.

"Stir the fire, Dad. Put on the kettle.

"YOU'LL 'ave to tyke pot-uck and wyte till the kettle boils. I'm ashamed as I 'aen't got things ready. Ye see, Ma'm, I'm upset along o' lookin' fer my lad comin' 'ome from the army. Ain't seen 'im in ten years. Mykes you think of a lot o' things when your kyhy comes 'ome a growed man. I feels a bit teary, I

does, an' I stops fer a drop now an' agin to myke me forget my troubles. Dad 'ere, 'e scolds me fer it— 'E's temperance.

"But I'm 'appy-go-lucky, an' I likes to be jolly, now an' agyn.

"'E's up an' off an' gone all dy, an' I'm 'ere, settin' all alone. I cleans my 'ouse an' sits 'ere by the fire an' thinks o' them as is gone. Amusin', ain't it, an' jolly, fer a 'appy-go-lucky like me?

"So I drops into the pub, I does. Syme as the others. Them w' kyhies too, as oder be 'ome. An' the kiddies sittin' on the steps wytin'. 'It's a shyne,' I says to one of 'em. 'It's the law,' she says, 'I cahn't tyke 'em in.'

"That's the way with 'em. A gossipin' lot. But I ain't hlysin' 'em. I ain't blysin' noobody. A pint o' 'ade do myke you jolly. An' it's sociable, it is.

"BUT I must say if it weren't fer my eyes, I'd rather stop to the pictoor palaces, when I 'as a spare copper. My word! They are jolly, them pycles. In-juns an' black men an' sojers a-fightin', an' 'ouses burnin' down, an' bobbies a-chysin' themselves and these 'ere suffragin' wimmen knockin' their 'usbands abaht. His shyneful the way they do be 'yve. 'Im workin' an' cookin' an' lookin' arter the kids an' gettin' knocked abaht when 'er comes 'ome.

"I wonds as any man stands it! "My old man, 'e says it's all myde up. "But I say, 'ow could they tyke the pictoors if it 'aen't true?

"Dad 'ere, 'e's took up with these wimmen as talks Votes. I gets called 'Suffo' too. An' I 'as it fur dinner an' supper an' 'tea, I 'as. But I don't know what 'e's talkin' abaht.

"I looks on the sly in the bloomin' books an' pyppers 'e brings 'ome, but I ain't 'ad no edikysun an' hlyme me if I knows wot it's all abaht.

"THE world is 'ard on wimmen. Syme as it is on men. 'E works all the time, an' 'er works all the time besides 'avin' byhies all the time an' ryzin' a family on twenty bob a week. It's 'ard. It's the bloomin' 'ard. But thinkin' 'ow 'ard it is don't myke it no easier. I say, myke the best of it and die gyne. That's me.

"I'm 'appy-go-lucky, I am. An' I pgs no attention to things as I cahn't 'elp.

"'Unger an' cold an' bringin' byhies inter the world an' huryin' 'em, that's wimmen's work as I knows it. Twelve I've 'ad, and eight I've buried, an' it's a puzzle to me wot it's all fer.

"But I hafs an' shuts my eyes an' goes on a-doin' of it.

"Dad 'ere 'e knows all abaht 'ow things can be myke better. 'E's a 'owler, 'e is. Ever 'ard 'em 'owl?

"An' these 'ere Suffos as think they can 'elp. Let 'em all try! I says.

"'Happy-go-lucky is lookin' on!

"Go at it, my dears, an' if you can myke 'end or tyle of the bloomin' 'aix-up, it's a jolly good thing fer us all, I says."

JAMES MONTGOMERY FLAGG

CYRIL MAUDE AS "GRUMPY"

By JAMES MONTGOMERY FLAGG

Cyril Maude as "Foxy Grandpa"

CYRIL MAUDE is a finished actor. It is not difficult to understand why much the most popular piece in which he has played in the United States is "Grumpy." In the first place, it is newer than some of his other productions which were familiar without being great enough to make it interesting to compare different methods of acting them. Moreover, "Grumpy" belongs to an extraordinarily popular type. This is an age in which the majority of reading people read, not great books, but current novels and periodicals and newspapers. They read for pastime, not for growth.

SIMILARLY, they go to the theater not for the pleasure of strengthening their understanding of life and art, but for the pleasure of being stimulated and diverted out of the current of their daily thoughts in some startling or lightly pleasing way. The effective thriller, however, is one of the recognized types of dramatic success, and what is more thrilling than a detective? Since the enormous success of "Sherlock Holmes," the majority of editors, and possibly the majority of playwrights and fiction writers, have been trying to think up some detective idea that will combine personality, plot and difference from Sherlock. We have had a priest detective, a woman detective, a little boy detective, a chemist detective, a reporter detective, a real detective, and I know not how many others.

"Grumpy" has solved the problem of furnishing a fresh type. The man who traps the robber in this play moves through a plot which is intense throughout. To follow the fatal clue of the one important camellia, and the various other camellias which are false clues, would require about three pages in this highbrow weekly. Taken as a mere distraction for the so-called mind of the average man this series of adventures is hard to equal. Detective stories are among the indulgences which I permit myself while being a little ashamed. Doubtless, it would be better to seek relaxation from serious work only in things which themselves have value, but that is an ideal and not many of us get along without a moderate amount of alcohol, or a moderate amount of nicotine, or a moderate amount of bridge whist, or a moderate amount of turning over periodicals like the *Cosmopolitan*, or a moderate amount of going to the most popular plays of the season.

I HAD a splendid time myself at "Grumpy," and feel a good deal as I should if I had been off to a frivolous dinner, with champagne, gay company, and no thought, and found myself the next morning with no indigestion. Mr. Maude acts the grotsky and penetrating old grandfather with a distinction which does much to make us forget how melodramatic the plays. Old men of superior type have a picturesque

charm. Their unpleasant qualities, especially their nervous irritability and tendency to bully others if they can, are presented by Mr. Maude with a friendly humor which keeps them from being offensive, and their sympathy and effectiveness get their full value. Grumpy is very old. He is almost on the verge of the grave; he cannot go to bed without help. He has retired from practice, after being the most successful criminal lawyer in London. Suddenly the occasion calls for all his old powers turned into a new channel, and bearing upon the welfare of his granddaughter and the man whom she is to marry. This young man has preferred his own opinion to Grumpy's on the question of looking up in the safe a jewel worth \$450,000. A few minutes after this decision is made, and Grumpy has gone to bed, the young man is struck down in the dark and the jewel is taken away from him. The only real clue is a camellia. The astuteness with which Grumpy, jumping into the situation and following it rapidly to an end, runs down all clues, solves all situations, and foils the high-class villain, really puts him so nearly into the class of Sherlock Holmes that I shall be surprised if the same old man is not made the hero of another detective play or novel. If he is, however much I may prate about high art and the larger experience, I shall certainly go to see the play and read the novel. N. H.

The Life of Ellen Key

A PERIODICAL which means to interpret Feminism, week by week, as part of its permanent excuse for existence must, of course, take interest in Ellen Key, the intellectual chief of that movement. HARPER'S WEEKLY in a fortnight begins the publication of a series of articles on the essence of Feminism by the great Swedish leader.

Havelock Ellis, who is one of the men who understand this movement thoroughly, has written the introduction to the English translation* of a new life of the Swedish reformer. "Here at the spot where she stands," Mr. Ellis continues, "the nature and direction of the Woman's Movement of the future must be determined. That alone suffices to make the study of her work indispensable."

SHE stands with neither of the two extreme parties. One party declares that woman is the mother, that home is her sphere, that by seeking to do everything done by men she becomes unfit for the work she alone can do. The other party declares that woman is a human being, and demands in her the same rights and privileges as man. Between these two parties comes Ellen Key declaring,—"Yes, woman is the mother, and also woman is a human being, and because she is both she needs complete freedom for development, and the power to exercise all human rights, not in order to imitate man or to do any work which he may be better fitted to do; but to enable her to do her own

work, to follow her own natural impulses, and to exercise that function of motherhood in a wider sense. The new demands which every age must make are to be insisted upon, not at the expense of the ancient traditions, but the better to maintain those traditions."

The leading Danish critic, Georg Brandes, said on the sixtieth birthday of Ellen Key that she had influenced women as no one else had influenced them. And Maeterlinck wrote of her as "the great Liberator who in our children will find more enlightened, more enthusiastic, more trustworthy followers."

HER parents were highly educated and progressive. The mother taught Ellen and the other children through her own example to be lenient with others and strict with themselves. Apparently there could have been no better bringing-up. While the children were young, they ate standing up at a table where only bread and milk were served. No waiting on the children was allowed. If the children gave orders, they were to be led out of the kitchen with a dishrag around their necks. Complaints were looked upon as squarish, and Ellen Key has often said: "He who enters the game must endure the play." She had the higher humor, which is so close to tears. She cried over Don Quixote more often than she laughed over him. She went through struggles with the orthodox beliefs of her surroundings; she pored over the confessions of Augustine, and finally, she drifted away from religion altogether. In history, she spent no enthusiasm over royalty,

and the heroes whom she loved were not the butchers but the really great.

WHILE she loved literature and art, she threw herself also into the fight for liberty. She defended August Strindberg when he was indicted for blasphemy. As far as she could, she kept away from public discussion, but occasionally, when her deep convictions have forced her, she has come forward, alone and independent of parties, to speak her faith. She has never ceased to believe and to say that, for a woman who has in herself all the possibilities of woman, the heart life is the central thing, but this, to her, has meant no limitation of interests. Her love of freedom has been misinterpreted. It has been thought of sometimes as a cheap tendency toward self-indulgence and it has been attacked by people without a thousandth part of Ellen Key's nobility. Even the suffragists have misunderstood her and misrepresented her often, but she has gone on her way unperturbed, and the world is catching up with her. She enjoys life. She stopped dancing when she was twenty-five, but in her old age she has returned to it, and even now, with intimate friends, takes a turn in an old waltz. Over the door of the home where she lives today stands Goethe's reversal of the Roman motto: *Memento vivere*: "Remember to live."

It is a book to read, because Ellen Key is a woman in whose life a warm interest is taken by all whose sympathies are with the movement for a wider life for women and a consequently larger life for all.

* Ellen Key, *Her Life and Her Work*, by Lorenz Nordin-Hammarström. Translated from the Swedish by E. B. Fenn. G. P. Putnam's Sons, New York and London.

What Is Pantomime?

An Interview with Mirzah Cheslir

By GERTRUDE MARVIN

IT was across a tea-table at the Gamut Club that I first saw Mirzah Cheslir, the young Russian artist who played the part of slave in the Berlin production of *Sumurun*. Supple and lithe, she wandered into the room full of women artists, actresses and writers, marked by an air of distinction and isolation as though she crossed an empty stage. In spite of her quiet repose of manner, she radiated vitality and alertness.

IT was a twilight afternoon in her home high up in a studio building just west of Central Park in the Sixties, that I saw her again. She herself opened the door to me, and led the way across the high-ceiled room with its picture-covered walls, to a quaintly carved Italian chair. A great north window filling one side of the room let in the soft gray twilight. The coppery silk of a lamp-shade made a circle of warmth in the shadows. A pier glass poised on gleaming steel pivots shone ghostily, suggesting the hours of patient posing and study of that charming grace, which in its perfection seems so unstudied and spontaneous.

We were talking of pantomime.

"Pantomime," said Miss Cheslir, "combines the highest and the lowest elements of drama, but it ignores the middle

ground of the commonplace and the mediocre. Pantomime expresses the unutterable, the inarticulate, those subtle nuances which may not be spoken, but which rise like an aroma between words. And from the sublime heights of the drama, it leaps to the other extreme and expresses the elemental primitive things: hate, murder, revenge, passion, deceit." Miss Cheslir named them slowly, and her mobile face reflected each primitive force in turn, her eyes flashing, her nostrils quivering with the abandon of an artist.

MISS CHESLIR speaks, not with words only, but with her glowing eyes, her delicate hands, her sensitively lined face. Her supple body gives itself as completely to her words as does her mind, and she reaches out or shrinks back into herself, intensifying her words with a most captivating, unconscious pantomime. She was dressed in a clinging, black crepe dress—straight, simple lines from her throat to her feet. Long narrow scarfs of the dress material hung from her shoulders, and floated as she walked. A collar of silver tissue fell away from her throat, and a scarab ring of ruby brown and jade green was her only jewel. The scarab was given her by her husband, and on the under side are the words carved

centuries ago in Arabic, "May Allah protect the bearer."

HUNG on the walls were mystical, elusive studies, photographs taken by Miss Cheslir's husband, Ivan de Kosenko, for most of which Miss Cheslir posed. Half hidden in veils and soft gray lights, a woman's body lay, washed up by the tide; another, with arms upraised, seemed the embodiment of the aspiration of a soul. A study of St. John the Baptist, with tired eyes and sunken ascetic cheeks, seemed an astonishing metamorphosis of the radiantly vital woman beside it. Laughingly she turned to some pictures of the half-naked voluptuous slave in *Sumurun*, and I glanced at the ghostly mirror with new respect.

"Pantomime," Miss Cheslir resumed, "is to the drama as the symphonic poem to music. The plot of a pantomime must be like the plot of an opera, simple and elemental, or else all made of poetry and fantasy."

"The most important quality in pantomime is poise, and pantomime even teaches it. You must have confidence and assurance to hold a gesture until you feel that it has vibrated across the footlights to your audience, and that they have received it."

"This up-your-sleeve variety of acting is all very well for drawing-rooms. But in a theater, where the element of distance enters as a handicap, where there is a real, assorted audience including the deaf, dumb, blind and paralytic, there must be the emphasis of pantomime, even in the spoken drama. You hear managers talking and complaining about things not 'getting across.' Of course a motion doesn't get across if it is done shamefacedly.

"Pantomime must be unafraid. It teaches the actress to dare to hold her position until she feels that the vibration of that gesture has reached the farthest member of her audience. If there is occasion for an actress to give the sense of reaching up to a great height, and she reaches up—just as high as she can—" Miss Chesler sprang from her chair and reached up painfully, with a sense of tense muscles and pitiful inadequacy. She made a laughing grimace.

"In pantomime, one learns never to carry any motion to its limit. To give the sense of reaching high—just do it very slowly and gradually—higher and higher and higher—until you can give the sense of reaching on and on into infinity itself—because you never let your arm reach its actual physical limit." Miss Chesler's slender, black-sleeved arms were lost in the shadows above us. She sank back into her chair.

"Pantomime is motion—you know I have a theory—of course, it isn't my own new theory, but anyway, it is mine too,—that everything is motion. This wooden table which resounds so oddly when I knock it, is merely a combination of whirling molecules, held together by a certain sort of motion. When I was in Paris, Loie Fuller showed me something very interesting. She had a splintroscope which Madame Curie had given her, and which fits in the eye like one of those jeweler's glasses they use for examining precious stones. And she had a piece of some salt, which

glitters with mica and has a rough surface like sand paper. I held over this crystal a little compass-like glass box, which had on the tip of a needle a particle of radium so tiny that it was invisible to the eye.

The room was darkened, and the radium threw a brilliant concentrated light on the piece of crystal, and showed it to be not a lifeless stone—but a whirling dancing snow storm.

"You know, to me, it was wonderful—thrilling—to see that heavy inert atom dissolved, right before my eyes, back into its free, whirling moving particles. And it is wonderful to realize that all life is motion, and that pantomime is merely an attempt to interpret the essential motion of feeling. As language is the medium of thought, so pantomime is the medium of feeling.

"Pantomime is motion without language, but it is not necessarily motion without sound. It is permissible to breathe in pantomime, and just so, it is permissible to stop breathing—to

Mercilessly cool disdain

Miss Chesler in pantomime, expressing hatred and pleading for revenge

gasp, to choke—even to cry out. In fact, if the plot of a pantomime involves the need of spoken words, I think it much better that they should be spoken than that there should be a sense of muteness, of limitation in the pantomime, or of the use of clumsy expedients.

"The place of music in pantomime is a delicate matter. It should not be used as an accompaniment, nor should pantomime be used to accompany music. Rather, music should skirt the edge of the action, an outer vibration of the action, as though its meaning were so patent and so beautiful that it had translated itself into sound.

"AT other times, music may be used to halt action, or, if there is going to be a climax, to urge it on. I have used Grieg's music so; the shrieks of Ose's mother for instance, not as human shrieks, but as the shrieking of the elements in some great tragic climax. There is a German word—*stylisiert*—which most nearly expresses my sense of the function of music with pantomime. And I would translate it 'stylified.' That lampshade with its futed pillars is only conventionalized, but

these little flowers,"—she picked up a vivid Futurist work-bag—"they are more than conventionalized in design, they are stylified. This poster, too, is more than a conventionalized piece of decoration—it includes that, but it has also an atmosphere, a suggestion, far beyond the conventional. So—if you catch my meaning, song is sound stylified through rhythm and pitch. Pantomime is action stylified by music. Therefore neither may accompany the other, but music harnesses action as science harnesses electricity.

"Besides the music and the sound and the poise, there is one thing about pantomime which is oh, so important, although it must be always left out. Pantomime, in in-

terpreting life, must take into account the unseen influences of the people next door and the telephone girl down on the street floor, and the wind blowing into this window over the roof-tops, and the broken skyline, and the river which we can not see but which we know is over beyond there. All those things have such a tremendous influence on our real lives, and we can not leave them entirely out of account in pantomime, although of course the limitations of art will not allow of too much digression. It is these influences which make any real interpretation so complex. That broken skyline out there, which is so black and shadowy at night, with all the lights of the Ansonia pricking through—oh it is thrilling and moving, and it has had an actual definite influence on my life in concrete ways.

"Well"—she threw her hands out in an ineffable gesture—"you can picture to yourself the difference in effect in coming home to look out on such a scene, or perhaps to look on a courtyard, with a little bell-boy with his cap over one ear standing in a doorway, opposite.

Pantomime conveys feeling as words convey thought. They must be beautiful feelings or hideous feelings, but they must not be mediocre. For the subtle fragrance, for the elemental moments, we don't use words—we go back instinctively to pantomime."

Retreating with a fear that she tries to hide

For the Women of Virginia

IT is significant that the working out of more real and complete democracy in political and industrial life in various parts of the United States is exactly coincident with the enlargement of the opportunities for women, and the recognition of their equality and significance. In the South, the old aristocratic view of women has not yet been touched by the larger view of the times, in the same degree that other aspects of life have been touched by the larger freedom. We have heard much in recent years about the new industrial South. It now shares with the West the commercial and industrial prospects of the future. Many southern states are also progressive politically and are well represented by the younger generation at Washington. In social matters alone, is the South behind the age. A discussion is now being waged in the State of Virginia, about the advisability of a coordinate college for women. The University of Virginia is one of the oldest and most honored colleges in the country and one of its true historic spots. For generations it has been preeminent in educational and social circles. Its graduates have been leaders, not only in the South, but all over the country. The importance of any educational step which the university chooses to take, can hardly be overestimated. This question of a woman's college is therefore one of the utmost importance to women, as it is one of the most important steps that could possibly be taken toward bringing before the people of that part of our country the new ideas which are permeating the social life of our day. The recognition by the university of the equality of women in the intellectual field would work toward recognition of the equality of women in other fields.

THE spirit of the South is against coeducation. The sentiment of any university which has been masculine for several generations is also antagonistic to so radical a change. It would be unfortunate if coeducation were in any way forced upon the University of Virginia. The friends of women in the South are advocating a coordinate college to be established at the university, using the advanced apparatus and laboratory and library facilities of the university under direction of the university authorities, while still keeping its classes and social life entirely separate, a college such as are Radcliffe, Barnard and Sophie Newcomb. The feeling against coeducation is not only a matter of sentiment. The education of woman is becoming less and less the last survival of the education of a gentleman and more a separate, carefully differentiated curriculum

which gives women the broadest culture, and at the same time develops their own peculiar possibilities and fits them for the kind of life which the average normal woman will be called upon to lead. And women have a far more satisfactory social life in a college of their own. The coordinate college for women gives them their own social life, their own athletic and dramatic activities, exactly as a separate college for women does. But it has the very great advantage of giving to the woman's college the faculty and superintendence with the advanced instruction and apparatus of the university, as well as the prestige and educational standing which the university degree carries with it. It is needless to say that in such a college the utmost care is given

requiring special attention which they cannot get at a large university; it divides the field with the very advanced finishing schools. But there is nothing whatever to be said for the small university. The Dean of Harvard said, in connection with this Virginia dispute, "I believe that one of the great evils of our American educational system has been the establishment of little colleges in place of a grafting of new colleges upon foundations of established worth." Though we may not all agree with him as to the value of the small college for certain people and in certain places, when it comes to the establishment of a state university for women, his remark is unanswerable.

The friends of this movement are of so many kinds and from so many walks in life, that it would seem to be a very general movement of the people. The labor organizations, the farmers' organizations, many industrial organizations wish the college established that their daughters, as well as their sons, may have the opportunity of being educated in Virginia at the institution which has been so long supported by the tastes of all the people. The women of Virginia are asking to share with their brothers, the privileges of the university which they have been brought up to honor and to love. They cannot see why their presence at the university would be any more dangerous to the social life of the boys than is their presence in the home. The need for this college is particularly emphasized in the case of the high school teachers, many of whom have absolutely no way of receiving an adequate education unless they go outside of Virginia, and who feel that they are doing a service to the state which deserves the best training the state can afford.

The opposition comes largely from the alumni. As one member of the faculty of the university remarked: "The alumni of all colleges are always opposed to any change." There seems to be a deep-rooted antipathy in the heart of the college alumnus to anything that will make the dear old Alma Mater in any way different from what it was when he was a boy, unless, of course, he is one of the fortunate ones who can afford to be benevolent and present a building.

THE University of Virginia missed one of its greatest opportunities for growth and influence through this very sentiment, when a few years ago it refused to incorporate into its body an agricultural and technical school. The founding of the Virginia Polytechnic Institute in another part of the state has

The wall surrounding the University of Virginia built by Thomas Jefferson very narrow on account of the scarcity of bricks and serpentine to keep the wind from blowing it down

to the social life of the girls. The opponents of the establishment of such a college wish to establish a separate institution. The expense would be exceedingly great, as all the expensive apparatus and small advanced courses requiring specialists would have to be unnecessarily duplicated. Moreover, the standing of the college would have to be maintained for a considerable number of years before it could bear any comparison to that of the State University.

It is always more difficult to get the best faculty for a woman's university than for a man's, even when paying the same salaries, as men prefer to teach at least a few men.

There is much to be said in favor of the small college. It fills a need in the education of girls. Literature or

divided the loyalty of the people. The old appeal to precedent cannot go back to the great founder of the university without meeting with an idea the exact opposite of that held by the exclusive alumni. Thomas Jefferson's great dream in life was a complete system of public education throughout the state. It is only within the last seven years that Virginia has had a system of public high schools. Until then the educational system of the state presented a gap between the public primary schools and the public university, which kept the university separated upon a pinnacle by itself. The establishment of high schools has completed the pyramid of public education, rising from the elementary schools to culminate in the university. Many more girls are graduated from the high schools than boys, and in order adequately to fulfill its function as head of the public school system of the state, the university must provide for the girls.

The fact that the founder of the university did not foresee what the future would do for women, is no reason for supposing that he would not have favored this institution if he were here to give his opinion. He believed, with all great minds, that the worst thing any institution can do for itself is to follow precedent and the ideas of its founder at the expense of change demanded by the progress of times. He himself said in speaking of the university: "A system of general instruction which shall reach every description of our citizens, from the richest to the poorest—as it was the earliest, so it will be the latest of all public concerns in which I shall permit myself to take an interest. Nor am I tenacious of the form in which it shall be introduced. Be that what it may, our descendants will be as wise as we are and will know how to amend and amend until it shall suit their circumstances. Give it to us then, in any shape." It is interesting to know

that the president who most nearly resembles Mr. Jefferson, Woodrow Wilson, also counted among the alumni of the University of Virginia, is very much in favor of the establishment of this college for women. He says, "I can, therefore, say, with a great deal of confidence, that it seems to me that the plan promises more than any other plan could, for the advancement of the education of women in Virginia."

The sentiment in favor of the woman's college is growing so rapidly that it will probably not be long before we shall see the beautiful University of Virginia rising to its opportunities for leadership, and going forward as the champion of equal opportunity for women. The effect which this will have upon the status of women in the South will be hard to over-estimate. The South will undoubtedly rise to this occasion and will show us the new freedom and the new democracy, not only in politics and industry but in education also.

Progress and Femininity

By C. L. MELLER

A ROOSTER cannot lay an egg, a hen cannot crow. That law is fundamental. It has ever been so. Why then all this veneration of spirit since hens seek to roost as high as roosters? One cackles and the other crows, a mere matter of expression and altogether incidental. The essential, however, is that both must scratch for a living, and along this fundamental need lies their equality and their salvation.

PLACID is the march of progress, placid as a mighty stream flowing through a vast plain, and its taming life and vast strength is not of the surface. To hinder or to help it were like trying to hinder or help the Mississippi with bucket or paddle. The stream cannot be stayed, the ocean it must reach. The march of progress is irresistible, fulfilling its destiny. Those chips of humanity bobbing on the surface, wildly gesticulating, are apart from its strength and deepest life. They can be helped, they can be hindered, but they cannot help, they cannot hinder. They merely indicate which way the current flows.

Woman is coming into her own; that has been, and is, a certainty. Those who are working for it are the quiet ones, unit parties in this march of progress, unassuming almost of the current because they are a part of the stream. As numberless they are almost as humanity. They are the workers.

WOMEN will get what they need when they need it. That has ever been so. When our desires become our needs, they also come within our reach. During the earlier, coarser stages of human progress, woman needed protection and she got it. Some there were who did not need protection; they received rights, privileges, position and some had their heads cut off—treated in every re-

spect exactly like men. To mention names were idle gossip; every grammar school child has heard of some of them.

Even so today. No matter what women may desire, they will achieve their desires only as their desires become their needs. The fact that a woman wants to vote is no indication that she will have an opportunity. When she needs to vote, then the opportunity will be hers. But does she need to vote? Some do and that is a goodly number, only their need is not yet strong enough to make them even conscious of that need. Some who desire to vote, and they are really an agitating minority, imagine they need to vote, but that does not establish their need any more than it puts a child into actual battle when, on his hobby horse with a paper helmet and wooden sword, he imagines himself leading his hosts on to victory.

WHEN a man marries a woman and provides for her in every way she does not need to vote; he will do all the voting necessary, as he is doing everything else, and do it right. If she is the right sort under these conditions, she would only vote as he suggests and, like as not, failing to see the use of her vote, she would not care to vote. But when that man's daughters grow up, and force of circumstances compels them to become breadwinners, then there arises a need for their votes. They become man's economic equals and man's needs become their needs in every way. The idea of the weaker vessel is lost sight of; competition eliminates that, since in this competition the individual woman often renders better service or achieves a better product than the individual man. Working side by side in the workshop and the office, in the laboratory and the studio, in short in all the activities by which men earn their bread and provide for their

families, man takes woman as a fact in his workaday life. It is in his workaday life that he needs the vote and he will be the first to realize that in this workaday life which women now have entered they also need the vote. He will help her get it just as now he is helping her enter every field of human endeavor as well equipped as his sons. At first he was balky, he had to grow accustomed to his new harness mate, to her need of the harness and his need of her in this new relation.

SO whether we like it or not women are going to vote on an equality with men, as indeed some are already doing. Humanity is ever moving forward toward its destiny, a little slower here, a little faster there, but moving forward inevitably. That is the law of life; none can retard it, none can hasten it. These human particles winning their bread and struggling for the comforts and even luxuries of life, human molecules that constitute humanity are bringing the enfranchisement of women to pass all in due time, themselves for the most part unconscious of the movement since they are a part of this movement. In the aggregate they are the movement, even as the drop of water, a part of the stream, is in its vast aggregate the stream itself; its irresistible power. To pour a bucket of water or any part thereof back into the stream makes it as much a part of the stream as ever it was. Even so with woman. Take her from home into the bread-winning occupations of man and then back again into the home, and she is as much a part of it, the very foundation of it, as ever she was. Let the chips of humanity on the surface bob wearily or sadly as they list, the stream beneath heeds them not. It flows placidly, irresistibly on its appointed course.

THE PRODIGAL SON

By CONSTANTIN MEUNIER

MEUNIER'S "The Prodigal Son" is profoundly significant of the selfishness, the impotence of the individual. The sculptor illustrates the closing scene in the domestic tragedy when the son, after shattering the authority of the house, is seen kneeling in his despair at the feet of the father. Meunier was fifty years old before he found himself, becoming known as the apostle of labor. He abandoned the studio as he had discarded the Academy years before, and turned to the worker, practically living with him in the mine, the quarry, the workshop, the glass-house—wherever the laborer happened to be. With him he withstood the heat, the nauseating gases, the burden of the day. But it was in his three years in the Academy of Brussels, the period as teacher of drawing in Louvain, the days passed in Fraikin's studio that he acquired that practical knowledge of Academic law which was his equipment. Constantin was a little, puny fellow, entrapped, in his early years, in the serene beauty of the antique, a conscientious worker, a willing acceptor of classic precedent. But he wearied of the machinery of classic idealism. He determined to devote the balance of his life to depicting his fellow worker whose heart he had won, whose life he had shared. Although Rodin was working a short distance away, it is not known that Meunier ever met him, not even at the time when Meunier's "Hammerman" was the center of attraction of the Salon, and for which he received an honorable mention, his first substantial public notice. His work is direct, and imbued with the intensity of life. An exhibition of Meunier's sculpture will be held at Columbia University, January 25 to February 15.

KING

"THE CAR OF NO REGRETS"

\$1095
WITH EQUIPMENT

Patented
Water Pump
Starter and
Generator
\$100 and
additional

30-35 Horse Power

One moderate-priced car with the solidity, longevity and dependability of the best "expensive" cars. The KING'S economy of operation is remarkable; and its unequalled

cantilever springs make rough roads velvet, without auxiliary shock-absorbers. To buy carefully you must examine the KING before choosing any car.—King Motor Car Co., Detroit. New York, 1670 Broadway.

The Energizer of Business

In a metropolitan power-house there must be generators large enough to furnish millions of lights and provide electrical current for thousands of cars and factories.

Each monster machine with the power of tens of thousands of horses is energized by an unobtrusive little dynamo, which is technically known as an "exciter."

This exciter by its electric impulse through all

the coils of the generator brings the whole mechanism into life and activity.

A similar service is performed for the great agencies of business and industry by the telephones of the Bell System. They carry the currents of communication everywhere to energize our intricate social and business mechanism.

United for universal service, Bell Telephones give maximum efficiency to the big generators of production and commerce.

Universal Service

It is the aim of the publishers of **HARPER'S WEEKLY** to render its readers who are interested in sound investments the greatest assistance possible.

Of necessity, in his editorial articles, Albert W. Atwood, the Editor of the Financial Department, deals with the broad principles that underlie legitimate investment, and with types of securities rather than specific securities.

Mr. Atwood, however, will gladly answer, by correspondence, any request for information regarding specific investment securities. Authoritative and disinterested information regarding the rating of securities, the history of investment issues, the earnings of properties and the standing of financial institutions and houses will be gladly furnished any reader of **HARPER'S WEEKLY** who requests it.

Mr. Atwood asks, however, that inquiries deal with matters pertaining to investment rather than speculation. The Financial Department is edited for investors.

All communications should be addressed to Albert W. Atwood, Financial Editor, Harper's Weekly, McClure Building, New York City.

Finance

By ALBERT W. ATWOOD

Inquiries will be answered as soon as possible, but considerable time is often required to secure reliable information. This magazine does not have the facilities to assist in raising capital for even worthy enterprises.

More Good Bonds for Investment

I AM a doctor in a town of about 10,000 and getting about \$5,000 a year, or just about enough to live on. I have \$6,000 in different banks drawing from 3½ to 4 per cent. interest. What would you advise in regard to increasing its earning power?

"I am a retired bishop with a few hardly-earned thousands, which I am afraid to invest as things are, as with my responsibilities I cannot afford to lose a dollar. The money is now in substantial savings banks. Can I do better with as much security?"

"I have \$1,000 which I want to invest. I have been thinking of buying railroad bonds, and would like you to advise whether this is a good investment. Are any bonds better than railroad bonds?"

These and many other similar inquiries have been answered by letter, with special relation to the individual needs of each. But all such inquiries suggest this practical question: What specific investments are safe and desirable? In **HARPER'S WEEKLY** for November 15 a list of good bonds was given, and each bond analyzed. There are other safe and desirable investments such as first mortgages on real estate and certain stocks, but the interest aroused by the former article on bonds makes it worth while to present another list of securities of this type.

Why Buy Bonds Now?

BONDS have one great advantage over stocks; there is never any loss of income if the purchase is made just after the payment of interest. Bonds are practically always quoted "and interest," or "with interest," the two terms both meaning that whenever a person buys a bond he or she receives the exact amount of interest which the length of time they have held the bond entitles them to. If bond interest is paid every six months on January 1 and July 1, \$20 being paid on each date, and you purchase a bond on June 1, you will receive exactly one-sixth of \$20 for that half year. Purchasers of stocks on the other hand must be "holders of record" of a certain date to receive dividends. If you buy stock a few days after that date you may lose an entire year's dividend. Much the same is true of savings bank accounts.

BONDS are especially desirable at this time because they have declined much in price in the last few years. It is not the purpose of this article to discuss the causes of such decline, but one thing may be assumed, that bonds now selling well below their face value and backed by enormous assets and earnings will be paid off at their face value when they come due. Without further preliminary remarks there is here presented a list* of

*Unless otherwise stated bonds are issued in amounts of \$1,000 or multiples thereof.

what the writer believes to be good bonds, and he backs up his opinion with facts and figures:

Atlantic Coast Line Railroad, first consolidated mortgage 4s, now a first mortgage on 1021 miles, and a second or third mortgage on 2944 additional mileage, the latter having prior liens of \$30,000,000; thirty-nine years to run. A few years ago this bond sold to yield only 3.80 per cent. Now it may be had to return 4½ per cent. The Atlantic Coast Line is one of the most prosperous of American railroads.

City of Omaha, Nebraska, water works 4½s, 28 years to run. Legal investments for savings banks in all eastern states, free from Federal income tax. Yield 4½ per cent.

Manhattan Railway, consolidated mortgage 4s, 87 years to run. Yield 4.55 per cent. Free from personal tax in New York State. These are first mortgage bonds on all the elevated lines in New York City (Manhattan Borough). They are followed by \$5,400,000 second mortgage bonds, and by \$60,000,000 stock upon which the Interborough Rapid Transit Company, which leases the elevated lines, has guaranteed 7 per cent. dividends for 999 years. In 1912 the company earned \$7,435,000 to pay \$1,637,656 interest and rentals, and after paying 7 per cent. on its large stock issue had a surplus for the year remaining over of \$1,601,000.

Pennsylvania Railroad, general freight equipment 4½ per cent. certificates, issue of 1913, coming due in installments from April 1, 1914, to April 1, 1923. Price to yield 4.80 per cent. Equipment bonds are not listed on the Stock Exchange, but as explained in a previous article (October 4) they are always easy to sell. This bond is safe and bears an attractive rate of interest considering its high degree of security.

Duluth, Missabe & Northern Railway, general mortgage 5s, 28 years to run. Yield 4.70 per cent. This company is controlled by the Lake Superior Consolidated Iron Mines, which in turn is controlled by the United States Steel Corporation. Bonds are listed on the Stock Exchange. It is true that the freight rates of this company have been subjected to much criticism as being exorbitantly high; and regulation by the Interstate Commerce Commission and a possible dissolution of the Steel Corporation under the Sherman law may somewhat alter the position of this company. At the same time the \$4,112,500 stock, which of course comes after the bonds, pays 240 per cent. dividends a year. So there is room for contraction.

Chesapeake & Ohio, first consolidated mortgage 5s, 26 years to run. Yield 4.80 per cent. A first mortgage on about 600 miles of main line, practically the company's first mortgage.

Chesapeake & Ohio, general mortgage 4½s. In time will become a first mortgage on practically entire property; seventy-nine years to run. Yield 4.90 per cent. Not generally regarded as quite as good as the other bond, but probably will improve with time.

TWO bonds of railroads now under construction may be considered, although this type of bond is hardly to be regarded as of the highest even when the corporations backing them possess ample credit. However, persons in a position to judge for themselves would do well to consider these two issues, the first mortgage 5s of the St. Louis, Peoria & North Western Railway, guaranteed principal

and interest and to be assumed by the powerful Chicago & North Western, and the first mortgage 4½s of the New York Connecting Railroad, severally and jointly guaranteed by the Pennsylvania and New Haven railroads. The first named company is a branch line of the North Western now being built in Illinois. The Connecting Railroad is a line connecting the Pennsylvania and New Haven companies in New York City. It is to be about nine miles long, and \$9,000,000 has already been spent upon it. Of course enormous traffic will go over this line, and the bonds are sure to be safe. They are free from personal taxation in New York State and yield 4.80 per cent. The St. Louis, Peoria & North Western bonds yield 4.85 per cent.

Colorado & Southern, first mortgage 4s, 16 years to run. Yield 4.65 per cent. A very attractive bond. Now selling at 80½; it sold last year at 97. These bonds are a first mortgage on 1048 miles of road and a second mortgage of 800 miles additional. There are only \$20,000,000 of the bonds, and practically no more can be put out. They are followed by \$50,803,000 refunding mortgage bonds, which are often recommended for investment and by \$48,000,000 of dividend paying stock. The road is owned by the powerful Burlington which in turn is owned by the Great Northern and the Northern Pacific, so that anyone who has confidence in James J. Hill's ability should expect to see the Colorado & Southern become an increasingly valuable property.

THERE are several issues of railroad debenture bonds which must be considered. A debenture bond is a mere promise to pay, but with a rich railroad this promise is worth more than the mortgage bond of a very poor company. The St. Paul debenture 4s are unquestionably safe, but return only 4.70 per cent.

The Lake Shore & Michigan Southern debenture 4s, two separate issues of \$30,000,000 each, return 5 per cent. on the investment. In 1912 the company, after paying interest on its fifty millions of first mortgage bonds and on one hundred millions of debentures, distributed 18 per cent. dividends on its fifty millions of stock and had nearly \$8,000,000 surplus remaining over. One of the Lake Shore debenture issues runs for only fifteen years. The New York Central, which owns the Lake Shore, is trying to create a large new issue of bonds to cover the Lake Shore as well as the Central, but to be subject, that is, follow, the present three issues of Lake Shore bonds. Anyone who wants a truly "gilt-edge" investment, to return only one tenth of one per cent. more than the savings bank 4 per cent. rate will do well to buy Lake Shore first mortgage 3½s. Nothing could be safer than these bonds, which are secured about twelve or thirteen times over. However the debentures are plenty safe enough.

The City of San Francisco recently sold an issue of bonds to yield 5 per cent. It proposed to put out another issue to be split up in \$100 amounts to bear 5 per cent. interest, and probably to be sold at a price to yield 5 per cent. San Francisco has only \$34,000,000 of bonds out and owns property worth \$62,000,000, in addition to its taxing power over private property assessed at \$625,000,000. These San Francisco bonds are legal investment for eastern savings banks, and are exceedingly attractive at the price.

The National Tube Company, first mortgage 5s, 39 years to run. Yield

EMPIRE

"The Little Aristocrat"

Now \$900

Completely Equipped, New Series
Model 31, 5-Passenger Touring
Car, 110-hp. Wheel Base

At just \$900 the EMPIRE Touring Car offers a marvelous car value. It is more sumptuously appointed than ever. It is completely equipped.

This new low price — \$50 less than last year's car — is due to our quadruple output.

Thus "The Little Aristocrat" of motordom establishes a new value standard that instantly appeals to dealers and automobile buyers everywhere.

Completely Equipped \$900, Including

Removable Glass	Front-Drive Tack
Motor Top	On Road Light
Top Covering	Side and Tail Lamps
Left Power Plant	Emergency Signals
Right Power Plant	Double Tire Irons
Tail and Tire Kite	Oil Sight Feed
Extra Rim	Shock Absorbers
Swivel Speedometer	Turkish Upholstery

The trend today is toward lighter cars. For lightness means economy, less wear and tear, greater mileage, lower fuel cost, reduced upkeep all 'round. And it was to meet these very requirements that the EMPIRE Car was designed.

This is its fifth year. And despite our four-fold increased facilities, this year's output will again fall short of the demand.

With the "Big Ones"

This is the car that traveled nearly four thousand miles in the great Indiana-Pacific Tour. Traveled with cars many times its weight and price. Traveled over trails never before attempted by any tour. It made a wonderful record.

Its light weight has not meant a sacrifice of power. Oversize axles, steering knuckle, brakes, springs, etc., mean super strength — the utmost margin of safety.

This one model only. One policy. One concentration of effort. Built by successful men of large resources. A car that has long won success and popularity.

Write for the 9 x 12 illustrated book that tells the great story of the Transcontinental Tour. Sent Free.

Enthusiastic Dealers

Dealers everywhere favor the EMPIRE because it has met every demand for a light-weight touring car, while this new price has even increased its popularity.

Dealers in open territory should write for our sales plan which shows how we will help them sell more cars.

EMPIRE AUTOMOBILE CO.

449 N. Capitol Avenue

Indianapolis, Ind., U. S. A.

(Ind.)

5.5 per cent. These bonds are a first mortgage on the steel plant at Lorain, Ohio, and the National Tube Company is controlled by the Federal Steel Co., which is owned by the United States Steel Corporation. The bonds are selling at 95 although they were originally brought out in 1912 at 101½ and apparently plentifully subscribed for at that price. The bonds are guaranteed by the Steel Corporation.

THERE are scores of good bonds of electric light, traction and power and gas companies. Among the many may be noted those of two companies operating in Detroit, a growing and highly prosper-

ous city with half a million population. The Detroit Edison Company first mortgage bonds may be had to yield about 5 per cent. Earnings are about two and half times the interest on these bonds, and dividends of 7 per cent. are paid on the \$10,000,000 stock; twenty years to run, with franchises extending beyond that time. The company is controlled by the North American Company, a holding concern. Detroit Edison supplies all the electricity to Detroit, whereas the Detroit City Gas Company, an entirely separate concern, supplies all the gas. The latter company has an issue of general mortgage bonds which may be had to yield 5.20 per cent. Earnings are five or six times as large as

the interest on these bonds. The company is owned by the American Light & Traction Company, one of the most successful of the hundreds of holding companies of this class. Possibly a person may not have confidence that gas will continue to be used as extensively as electricity, but as these bonds have only ten years to run there need be little fear on that score.

WITH the exception of the municipal bonds mentioned, nearly all those named in this article are listed on the Stock Exchange. The municipal bonds are free from all Federal Income Tax and several of the others also are free from this tax.

What They Think of Us

A. Heymoolen, Holland (Miss.)

I do not think that when HARPER'S WEEKLY was sold, it was the intention to murder it on the 16 of August, but this is what has been done. The old HARPER'S WEEKLY is dead, and in its place, what do you give us? Great Scott! I never was more disgusted with a change in the make-up of a magazine than I am with the change that has taken place in HARPER'S WEEKLY.

Daniel Lynch, Mineola (N. Y.)

Civilization, like terrestrial magnetism, moves in cycles, and a publication such as you have made this, becomes a powerful factor in accelerating the return to savagery. You still carry the name "HARPER'S" at your masthead, and this, if not piracy, is certainly "sailing under false colors."

Rev. Ernest C. Mobley, Gainesville (Texas)

Brandeis hits the bull's-eye every shot. Your stage notes are superb. The editorial commendations of President Wilson are worth the price of the periodical.

Wilmington (Del.) Evening News

After reading his contribution to HARPER'S WEEKLY and other publications about the "Money Trust," how to "break it" and what to put in its place, and about various other details of government that ought to make a people happy and prosperous, the average reader will incline to the opinion that if Mr. Louis D. Brandeis could be installed in supreme charge of the government of the entire country, state as well as national, everything would be lovely. Still, it is not surprising that people should hesitate about giving the experiment a trial.

James McCarthy, Hudson Falls (N. Y.)

No man ever did so much to enlighten the people, by a single article, as you have in your contribution which was published in the last HARPER'S WEEKLY. I have sent for a dozen extra copies, which I propose to mail. I wish that five hundred thousand extra copies could be distributed.

Letter to Mr. Louis D. Brandeis,

New York Globe

We once thought we understood the trust doctrine of Louis D. Brandeis. We believed we had mastered its intricacies both as presented in its original form by himself and as preached in a derivative form by the distinguished apostle of the New Freedom. But a reading of articles by Mr. Brandeis in the last two issues of HARPER'S WEEKLY persuades us that we were mistaken.

R. P. Cunningham, Darlington (Ind.)

I have read with more than ordinary care your issue of November 10. And I must say, as magazines and periodicals go, it is mighty fine.

But if Mr. Brandeis and Dr. Eliot represent the editorial mind and point of view with their doctrine of a fumigated and disinfected competition as being the way out of all our difficulties, I desire to warn you that you will get nowhere in particular, and that you will find yourselves on the muster rolls of the sounding brass and tinkling cymbals brigade.

The New York Times Annualist

The United States Supreme Court has declared invalid that form of contract by which the manufacturer of a trademarked, nationally advertised article sought to prevent retailers from cutting the price.

In HARPER'S WEEKLY, Louis D. Brandeis has written powerfully on the other side.

Montgomery (Ala.) Journal

HARPER'S WEEKLY has drawn a graphic picture of the inner workings of the money power, how they have repeatedly pulled one thing after another over the people during all these years of struggle of the progressive democratic party to regain control of their government, that they might have a government of the people, by the people and for the people.

Leslie's Illustrated Weekly, New York City

The whole trend of the times is against cutthroat competition, as much as it is against cutthroat combination. The standard price for an article, the same price to one and all, is the best protection to the customer, the public and the manufacturer.

A strong argument in support of this policy is presented by Mr. Louis D. Brandeis in HARPER'S WEEKLY. The American Fair Trade League, made up of some of the most representative business concerns of the country, calls the attention of the million retail merchants of the country to the importance of taking as active interest in pending legislation regarding the one-price-to-all system. The advantage of incorporating in this legislation the views set forth by Mr. Brandeis cannot be over-estimated.

Mr. Brandeis points out the undeniable fact that the greatest progress in trade morals has been made in the last generation, in the retail trade, and that the first important step was the introduction of the one-price system, which tended to secure fair prices for nationally advertised goods.

J. A. Martin, Advertising Manager, "The Progressive Farmer," Birmingham (Ala.)

You are making a great paper out of HARPER'S WEEKLY.

Boston (Mass.) Evening Herald

It is the HARPER'S WEEKLY idea that there is too much to be done in this country, for the attention of the country and the work of Congress and of the President to be bothering about Mexico.

Angelus (Cal.) Tribune

A little group of newspaper people were looking at a copy of HARPER'S WEEKLY, when attention was riveted on a double page cartoon.

The artist of the group seized his hat and started for the door precipitately. To the inquiry as to where he was going he replied that as the result of looking at the cartoon he was on his way to the booby hatch.

It may be necessary to explain that "booby hatch" is artistic slang for crazy-house.

Nevertheless, a very intelligent woman was heard to remark lately that she not only took pleasure in reading HARPER'S WEEKLY, but regarded the reading of it a liberal education in politics and economics. She said she had learned more from it than from all her reading of other publications professing to cover these fields.

Brooklyn (N. Y.) Life

Our only fear is that Mr. Mitchell and Mr. Norman Hapgood may become so intoxicated over the plurality by which the mayor-elect won that nothing will be capable of holding them down, and if these two gentlemen should ever attach any more importance to themselves than they have been in the habit heretofore of attaching, God knows what would happen.

Macon (Ga.) News

Perhaps the keenest, most comprehensive estimate of Sulzer yet written appeared in HARPER'S WEEKLY.

Phoenix (Ariz.) Republican

HARPER'S WEEKLY devotes from a half page to a page of each issue to newspaper or personal comment on the journal under the new management. Praise and criticism are impartially published; the latter, coming largely, we suppose, from subscribers to the old WEEKLY, predominates. The new magazine is called a "fright" and even worse names. One critic describes it as an illegitimate half-breed "wallowing in the shadow of an honored name." Yet Mr. Hapgood smiles and goes on with the revolution.

A YOUNG GIRL

BY RANDALL DAVET

THIS portrait, by possibly the youngest of America's big men, will be readily catalogued in the general mind as a fine example of the new school. In reality, it is as old as human feeling and as fresh as youth, belongs to no school other than the artist's understanding and might well be called "A Poem in Paint to a Woman." It is a detail of a large canvas.

Grammar and the Press

IN the midst of heavier concerns, it is pleasant to indulge in warfare with those who hurl javelins against our use of English. Some weeks ago a number of papers were ironical because the editor of this paper wrote a letter in which he used the expression: "You are a man who do your own thinking." Among the newspapers that felt called upon to complain of this construction was the *Columbia Record*, which observed, "We hope he do." Another inquired severely, "He do, do he?" The *Chattanooga Times* asked if the editor of HARPER'S WEEKLY "can't keep his grammar on straight, who can?" Even the scholarly editorial page of the *New York World* protested. At the moment, although our instinct was strong, we had no time to go through enough English literature to prove the case. Here, however, are a few examples that may convert some of our learned contemporaries.

From Carlyle, "Past and Present":

"Thou art an unreasonable mortal: or rather thou art a poor infirm mortal, who, in thy narrow clay prison here seemest so unreasonable."

From Longfellow, "Flower-de-Luce":

"Thou art the Muse, who far from crowded cities,
Huntest the sylvan streams."

These quotations have been verified, but there is one from Macaulay which we have not been able to find, although we are rather confident that it is correctly remembered:

"Oh, England, you are the sybil who do your own kind to death."

What would our critics answer? Perhaps that Carlyle, Longfellow and Macaulay did not know how to write.

Our Favorite Season

HERE in the midst of winter, which many enjoy, we fall to thinking about the charms of the seasons that are to come. Let others tell why spring or summer is their favorite, or even winter, but to our mind, autumn comes first. As Shelley says:

"The day becomes more solemn and serene

When noon is past;

There is a harmony

In autumn, and a luster in its sky

Which through the summer is not heard or seen."

Possibly autumn is the favorite season of those in whom thought predominates; spring the favorite of those in whom emotion is more dominant; and winter loved by those in whom are great physical vigor and love of active life.

Price Maintenance Upheld

IT is fallacy to assume that the price-cutter pockets the loss. The public makes it up on other purchases." This is from an opinion of the Supreme Court of the State of Washington which has just decided that a retail grocer was liable for breaking his contract not to sell a brand of flour below the price fixed by the manufacturer. As the case did not involve interstate commerce, the court was not bound by the decisions of the United States Supreme Court, and significantly refused to follow them. In its opinion it is not contrary to public policy to let a manufacturer, who has given a reputation to his product, fix the retail price to the consumer, if competition is not barred or a monopoly created. As the court points out, the competition which benefits the public is between manufacturers or brands, and the independent action of each manufacturer in fixing the price of his own brand does not affect competition among them. The decision is another expression of the growing belief that the views of public policy in regard to price maintenance taken by the majority of the United States Supreme Court is unsound and mistaken, and that the position taken by Mr. Brandeis in his article on "Competition that Kills" in our issue of Nov. 15 is sound. The attention of the reader who is interested in this question may also profitably be turned to the letter of Mr. George Eastman on page 32 of this issue.

Things Move

AGAIN do conditions change so fast that Mr. Brandeis' series of articles on the Money Trust is illustrated by events after the articles go to press. In his article last week, called "Big Men and Little Business," he told the story of the telegraph, and how Morse's invention was developed by the money of Alfred Vail. He also told the story of the telephone, and how the money came from William H. Forbes, who was not a banker. The great bankers came into the situation twenty years later, after the telephone had spread over the world, and by these great bankers the combination was formed. Mr. Brandeis' article was being printed when the news came that the Western Union had shown such excellent judgment as to separate itself from the telephone company voluntarily. It is in order to congratulate Mr. Vail and his associates on taking a step that was obviously inevitable. Whenever a big business man acts in that way, he increases good will. When he fights to the bitter end for a cause that is lost, he merely inflames public feeling.

Working in the Dark

VASTLY important is a spirit of confidence and coöperation between the public and the leaders of industry, but before this can exist, there must be willingness to do certain things. Woodrow Wilson's attitude toward business is right. He took his stand relentlessly after certain principles had been decided, and went ahead to carry them out, without allowing the questions to be reopened. When, however, big corporations showed a willingness to carry out the law, Wilson welcomed them.

The public must show a sympathetic comprehension of business methods, but the public will never do it until the leading men in industry take a modern view of ethics. Not long ago one of the oldest and most respectable papers in Boston published an editorial objecting to investigation by the Public Service Commission into the affairs of the New Haven Railroad. That investigation, a few days later, showed that a reporter for the same paper was in the pay of the New Haven Railroad. He was not being paid because of his superlative general ability, but because he was attached to a great newspaper. Not only was the *Transcript* man in the employ of the road, but also a reporter on the *Globe*, and reporters on many other New England papers, and a representative of the Associated Press, which is supposed to feed uncolored news to the whole country. Most dramatic was the revelation that a man who had been for years a professor in the Harvard Law School, telling young men what they ought to think about railroad matters, was receiving ten thousand dollars a year from the New Haven Railroad, and keeping this fact dark. Now let us all persistently urge reasonableness upon the public; but the only possible way of securing public sympathy with big business is for the leaders to drop such worn-out ethical conceptions as that they can secretly buy up professors, periodicals and newspapers, and yet be fulfilling their duty toward a public so dependent upon them.

A Lynch Law

AN Irish immigrant by the name of Lynch settled, before the Revolution, in what is now Campbell county, Virginia. He had two sons: Charles, who as an officer of the Revolutionary Army summarily executed certain Tory marauders in his part of the country and gave his name to the death-penalty as inflicted at the hands of a mob; and John, the founder of Lynchburg, lying on the paternal acres. In Lynchburg, a little more than a half century ago, were born, two years apart, two boys. One went to Oklahoma, and upon the creation of the new state, he became one of its first Senators, this year finding himself Chairman of the Senate Banking and Currency Committee. The younger boy remained in Lynchburg, later going to Congress, and this year finding himself Chairman of the House Committee on Banking and Currency. This much of history is related here for the sake, not of putting Lynchburg on the map, but of indicating how easily it may be proved that the Glass-Owen Currency Act is a Lynch Law.

Another Woman Hamlet

MADAME SUZANNE DESPRÈS has been playing the Prince of Denmark in Paris, and apparently playing it with intelligence and some success. Judging from the pictures and reviews, she came as near masculinity as could be expected. One French critic remarks that Hamlet at any rate is a feminine type, citing indecision as evidence. The author of "Man and Superman" would not agree. Hamlet, in truth, as Goethe said, is all of us, but he is more a typical man than a typical woman. A typical woman is practical and active. The type that philosophizes at length, and seems far removed from affairs, is more often found in men.

A Man's World

IN the old days, before women were given a respectful hearing when they carried their campaign for ballots, a certain busky New York lawyer attended every soap-box rally he could get to. He had lived for a time in a Central American state, where the people, cowed and subdued, spoke of new causes in whispers only. His faith in the need to fight to bold every inch of ground on behalf of free speech and the right of public discussion had been quickened by that experience, so that he made the cause of woman's suffrage his own cause. He mixed it with ruffians who shield epithets or tried to break up women's rallies. In the course of his work as a radical supporter of woman's suffrage, Joseph F. Darling took up, on assignment from the court, the defense of a woman charged with larceny. The woman, according to the complaint, had extracted money from the pocket of a man who had invited her to drink with him in the back room of a saloon. The man complainant, the trial judge, the jury, and the prosecuting attorney joined in the view that the woman deserved heavy, suppressive punishment.

Darling saw an opportunity to throw into strong relief the view that society takes of men who occasionally consort with women in the back rooms of saloons, that they are romancers out for a fling, while the women are seen as criminals. To the argument of the prosecutor that the designation, "a woman of the town" should settle the case, Darling interposed that under a standard soon to be set up a "man of the town" would seem equally bad. He summoned the complaining witness's wife, and when judge, jury and prosecutor were scandalized, Darling spoke of an on-coming day when a voting wife might parade such a husband to court to exhibit him to the whole voting sisterhood of wives. Such a proceeding in a court-room was not tolerated. He was declared to be in criminal contempt and was sentenced to thirty days in jail. The Bar Association took up his case and has made a motion of disbarment.

This is an era when we are trying to loosen the technicalities of the law. If, as we understand, Darling has always had an honorable career, might it not be well for the Bar Association to struggle along with the offender still in its ranks until changes in the times make his ideas less alarming?

Huerta and Roosevelt

EX-AMBASSADOR HENRY LANE WILSON and his fellow-critic of the Administration's Mexican policy, Major Cassius M. Gillette, are fond of repeating in their lectures the statement that Huerta's title to the Presidency of Mexico is as clear as was Theodore Roosevelt's to the Presidency of the United States, when he succeeded McKinley. Suppose an insurrection in Washington, for the overthrow of the Government. The White House is attacked, and successfully defended, but the commandant is wounded. President Wilson sends for General Wood, who proves to be a traitor. Wood sends infantry and cavalry, known to be loyal, to attack a citadel armed with cannon and machine guns, he himself declining to use his own artillery. The loyal soldiers are thus massacred. The disloyal ones, on opposing sides, fire over each others' heads. At General Wood's orders, President Wilson and Vice-President Marshall are arrested and imprisoned. They resign under duress. Secretary of State Bryan becomes President for five minutes, in which period he appoints General Wood to a place in his cabinet that is next in line of succession. He resigns, General Wood becomes President. These appointments must be confirmed by Congress. Congress has dispersed. Enough members of the House and Senate are found to go through the form, surrounded by bayonets, of confirming General Wood's appointment. Incidentally President Wilson and Vice-President Marshall are assassinated. As these two lecturers keep on talking they increase the number who believe that Mr. Wilson's refusal to acknowledge Huerta's title was a wise decision.

Some Southern Newspapers

THE *Times-Union* is one of various papers in the southern states, which, with the Associated Press franchise, are able to present their reactionary views to the public along with their indispensable news.

A Southern correspondent writes:

With the people of Florida as the stakeholders, you would have won your wager in the dark, "that the *Times-Union* is the reactionary agent of its neighborhood." It is the most reactionary paper of the South. Its news columns have been perverted and its opinion columns controlled by the Flagler-East Coast Railway interests for many years, and it opposes every legislative reform within the state and every national measure that in the remotest degree appears to affect unfavorably the big corporations. The end of such a course was inevitable. The *Times-Union* now helps any cause it opposes and its antagonism is an asset much coveted by candidates for office. At the last session of the Florida legislature, it was the special delight of the House to pass by unanimous vote any measure the *Times-Union* opposed, the Senate concurring by a good majority. The *Times-Union* is the advocate of the last abuse and the enemy of the next reform.

So we guessed. There are other papers, however, which in their respective states stand for progressive measures, in state and nation, such as the *Lynchburg News*, the *Raleigh News and Observer*, the *Columbia State*, the *Atlanta Journal*, the *Birmingham Age-Herald*, the *Nashville Tennessean*, the *New Orleans Item*, the *Dallas News*.

A Point About Hagar

MARY JOHNSTON'S latest novel should rank high. It contains in its early chapters a singularly attractive picture of the modern girl set against the background of the conventional group of relatives who are horrified because Hagar reads Darwin, Hawthorne, Fielding, and is interested in convicts and in why women don't have money. There are many delicate and sure touches in these early chapters: fine is the ironical accuracy with which the arguments of the old-fashioned people are given. Hagar in these early years is a peculiarly lovable human being and everybody is genuinely created. Later, the hook remains intelligent, but somewhat more an argument than a creation. There is scarcely any one of the subjects that make up the Feminist movement that is not admirably stated. There is only one protest among those that have been made, with which we feel inclined to sympathize. Hagar, having decided to marry, says that she would like to have a child. A child! Is not that anæmic? In drawing the picture of a woman who is to stand as the embodiment of the Feminist movement, would it not be more adequate to have painted one with vitality enough to wish for a more generous family? Hagar speaks of wishing to be with it whenever it needs her. Is that the only time the most perfectly developed woman wishes to be with her child? Miss Johnston recently wrote an article in a newspaper in which she charmingly describes the change in her thought on these subjects.

"In any active intellectual life there are apt to be great tracts to which the mind, lacking just the needed stimulus or preoccupied with other regions and provinces, has simply not yet turned. It was so with me."

Miss Johnston has been primarily an artist. Now that she has turned to embodying in her books an aggressive movement of the time, our prophecy is that the next novel of hers dealing with feminism will have the charm and intelligence of the first, will be less argumentative, and will give the heroine a fuller equipment of fundamental human impulses.

Trust the Young

LOUIS XV'S remark (or was it Mme. Pompadour's) "After us the Deluge," is better known but much less interesting than what Voltaire said: "Happy the young men for they shall see beautiful things." Voltaire lived to be old, but his mind never stopped. It never lost its openness.

It should be the story of all, as they grow old, to keep their minds hospitably open to the thoughts and wishes of the young. And so can they remain young themselves.

These were the last words of the Lincolnshire boor to his master:

"What with faith, and what with the earth a-turning round the sun, and what with the railroads a fuzzing and a whuzzing, I'm clean stoned, muddled, and beat."

Our Lincolnshire friend took progress as it is taken by the majority of the elderly. Voltaire took it as it is taken by the minority of the elderly.

DESIGN FOR A MEXICAN PAPER-WEIGHT

By O. E. CESARE

Culture and Agriculture

By LINCOLN STEFFENS

Illustrated by Herb Roth

AN old girl friend of mine told me a year or so ago that she had a daughter growing up who showed a distinct talent for writing, and she asked me where to send her to college. I advised one of the great schools of agriculture.

"But," she gasped, "what she needs is culture!"

"I know," I said, "that's why I suggested an agricultural college."

She was not to be convinced. She thought I was joking. And I find that hardly anybody will take seriously the idea that there is culture for human beings in agriculture, engineering and—all that sort of thing. Even the officers and professors of schools of agriculture and engineering won't accept it. I visited a lot of them out West last fall, and I tried to make them see the opportunity they had for culture in the highest sense. In vain. They showed it to me, but I couldn't show it to them.

Why not? One can get culture out of most anything. Men used to find it in Latin and Greek and Belles-Lettres. Mayor Gaynor did. And I knew a painter once who got an education, with finish, out of art.

THIS case will illustrate my point pretty well. The man I mean was Louis Loeb. I met him first in Paris where we both were students, he at the Beaux Arts, I at the university. He had been a lithographer, self-supporting from boyhood, and he was making an artist of himself. But he grieved privately because he had not been able to put himself through school and college too. He was hungry for the things he thought I had, and when I offered to give them all to him, I remember his first question was as to the difference between prose and verse. Taking him up to my room, I showed him that and a few other rudiments of the art of writing. I illustrated what I told him with readings from such books as I had there and suggested others; all related more or less to his art. And I declared that he, wanting it, could gather more culture from a study of painting in its relation to history, thought, taste, conduct and—life, than a high average college student acquired. To his dying day, Louis Loeb seemed not to believe this, but he proved it. He went on painting and reading, painting and thinking, painting and conversing and living, till he was one of the most cultured men I knew. When, later, as the city editor of a newspaper, I wished to have an art

"The young ladies' seminaries for young gentlemen will never teach this isn't culture"

idea expressed in English or a conception of life stated in its relation to art and general culture, I sent one of my post-graduate reporters to Louis Loeb. He knew what he knew in its relation to life, and that is culture.

"I have found my philosophy in my art," he told one reporter; "and all the secrets of life; not only beauty and strength and health, but ethics also. For example," he said, painting away, "take honesty. Why be honest? Art will tell you why. If I could see things as they are, honestly, I should be great. I might not be a great painter, but I'd be a great man. If now, seeing straight, I could report things straight, if I could paint them truly, I'd be not only a great painter, I'd be a genius. The trouble is it's hard to be honest. We may be able, as children, to see honestly; I doubt it; the aboriginal artists couldn't see much as it is. So we go to the art schools and the museums to see as the great artists saw. Good; and necessary; but dangerous. The good student has a hard time after that to find himself and his own eyes. If he can't recover his own vision, he's a scholar; not," and he smiled, "not a reporter; not an honest, open-eyed, faithful, sure-handed painter."

THE agricultural schools have the first requirement for culture. They have students who want to learn. The average student at a "regular" college is one of the funniest things on earth. He has no interest in learning; he is hardly willing to be taught. One reason for this, of course, is that he has no intellectual curiosity. His mind is an infant's, unawakened; for the schools don't tell him what he needs to know; they cram him with

"President Wilson is a shock to the popular belief that there is a conflict between scholarship and practical life and politics"

what the colleges require him to pass on. So they go on "passing," for the most part, after they are in college. And many of them are just plain loafers, with a little sporting interest in football or athletics. Even that isn't cultural.

If it were; if our college athletes were what many of the Greek athletes were, they might be interested in Greek. For, of course, that is the language and literature of athletics; of strength, grace, beauty, courage. And a student who learned to love these qualities might arrive somewhere near where the Greeks arrived: at a love of life lived on a physical foundation and expressed in the forms of all the arts and in philosophy.

There is culture to be had in sport, and since that is a real student interest, it might serve as a starting point for a living system of education. And there is, by the way, a sculptor in charge of athletics at the University of Pennsylvania. If they would put the Greek department under him, and he would see to it that the professors of Greek took their departure from the heroic and physical interest, the students might see the relation to life of a dead language. But, no, Greek is a science now; so is Latin. Therefore the experiences and the reflections of these two great peoples are lost to the life of the American people who are going through the same experiences.

PERHAPS that is too broad a statement: Greek and Roman history are brought into relation with American life. You hear it cited from the soap-boxes on street corners, and with some understanding, too. The "demagogues" seem to have read all history from the cultural point of view; to get the meaning out of it for modern life. And, of course, history is full of light, not only on our past and present, but on our future, too. There is light on our lives in anything and everything; in political economy and chemistry; in astronomy and metaphysics and poetry. And that is culture, and I admit that the soap-box orators have some of it and are giving it to the common people on the streets. And college students get it there, too. Many an undergraduate has

had his mind opened to the questions of life and to the sources of light upon it in his college curriculum, at street or Socialist club meetings. Culture is like life itself; it must be.

BUT my plan is for culture in colleges, and especially in the agricultural colleges. Any college has a clue to the way to it. Interest is the beginning—any interest. It has been noted often that graduate students who loafed through their undergraduate years, woke up in the law school or medical department, and worked with industry and ability. Why is that? The answer is obvious. They saw the relation of law or medicine to life—to their lives. The history they "took" had a relation to life, too; and to their lives. So had Greek and poetry, English and—anything offered them. But it wasn't so taught. It was taught, probably, as abstract knowledge, as science. Why? There's a theory, and a cause to account for that. The theory is that science exists for the sake of knowledge; not for use, but for its own sweet sake. Like the theory of art. Nothing exists for its own sake; not even the stars. Everything is related to everything else, and the whole is greater than any part—greater and more interesting. But the cause of this anti-social, anti-cultural point of view in faculties is that the teaching is done very largely by ex-grinds who learned what they know out of a moral sense of duty, had no lives themselves, and do not see the relation to

life of what they learned. In other words, our faculties, like our scientists, lack culture. They are day-laborers in the fields of knowledge; that's one reason why they get a day-laborer's pay. And they do not know what their piles of facts mean till a cultural mind like Darwin's comes along and sees the significance of them to what human beings are thinking and doing.

This accounts for the student's lack of interest. And the "utilitarian" view which prevails in the professional schools accounts for the loafer's sudden interest and industry. It isn't much; not yet; it is only "applied knowledge" in the narrow sense. But it's a start.

"Just what the old Roman *markkrakers* said in the original Latin"

The agricultural schools have it. Just as the law schools have students who are interested in their studies because they are intending to practice law, and just as the medical schools have students absorbed in their clinics because they are going to make a living at it—so the agricultural and engineering schools, which are multiplying out West and spreading even toward the East, have the advantage of a student body who are learning what they are intending to practice. Parents, legislators, voters and the youth of the West, both boys and girls, are all for these schools. Some of the old-fashioned "cultural" colleges out West, the state universities, get money and live only by hanging on to the coat-tails of the cow-colleges. It was by expanding and developing the agricultural college, for example, that the great University of Wisconsin was made acceptable to the people of Wisconsin. And in Oregon this year, the

travagance of the university, and to cut the appropriations to the bone." When I got to Madison I heard stories of how Mr. Van Hise had gone before these legislators and so "shown them" that they gave him every cent he asked for. President Van Hise explained that the legislature was perfectly right; it wanted to know what was the use of the university. He was able to answer all their proper questions. But he went on to say that it was comparatively easy to lay facts before a few hundred representatives of the people. It will be harder to communicate with the people themselves; and yet he is glad of the coming referendum, because, as he told his faculty, each head of a department must find a way to show the use of his subject to the people of Wisconsin. It staggers some of the professors; they don't see their own use, apparently. Mr. Van Hise didn't say that—I say it. But I can see, and I suspect the wise

"The average student at a regular college is one of the funniest things on earth"

state college, which is, unfortunately, separated by some thirty miles from the agricultural college, had a hard fight to make on a referendum as to its appropriations.

President Van Hise foresees and welcomes such a referendum on his university. He thinks it is good for the faculty. He is a geologist, by the way, but cultured in the modern sense, like President Wilson. Both these men saw the meaning to life of their acquired academic knowledge, and they both use it all the time, and everywhere—Van Hise to the glory of the University of Wisconsin, and Wilson to the scandal of Princeton. President Wilson is a shock to the popular belief that there is a conflict between scholarship and practical life and politics. President Van Hise is just as good a politician, in his way, as Wilson, and he showed it in a conversation I had with him a month or so ago. I had heard that the last legislature had come to Madison "to put a stop to the ex-

Wisconsin president of seeing, that the process of democracy is going to compel his teachers to look for the culture in their subjects; for the bearing his teachings have on life. Every subject taught at Madison (or Cambridge, or New Haven, or Princeton) has such a bearing; but the point is that if the Wisconsin professors find it, they may find a way to show it, not only to the people, but to the boys and girls of Wisconsin.

THE agricultural schools out West, whether they are connected with or separate from the other colleges, have not used their popularity against their rivals; but for one reason that is bad. The heads of them, in conversation with me, spoke of the old-fashioned colleges as cultural; as if their own, the agricultural and engineering schools, were not cultural. Well, they are not; at least not many of them. One is; the rest are not, but that is

because the presidents and faculties don't realize their opportunity. There they are with thousands of young students, younger by four or five years than the students of post-graduate law and medical colleges; therefore at the best age for culture, and all interested in their work. The reason of their interest is, as I have said, the sense they have that their studies are for use; professional use. They are going to be farmers or engineers, and so they are already on the job. This is practical—yes, it is utilitarian; and the young ladies' seminaries for young gentlemen will sneer that this isn't culture. And they will be right. But I will recall that one can get culture by starting with any subject and following it through all its relations to life: languages, ancient or modern; history; physics; art or music—anything. And so students can get culture from agriculture or engineering.

BUT there's a chance to use these two fields for a peculiarly rich and modern culture. Take engineering first. Professor Johnson of Harvard gives his students of engineering the culture of his subject by showing them that what they learn of physical forces is probably true of social and political forces. He has written a pamphlet on "Political Engineering," and it is sound. And his students see it. They are interested in political and social questions because they see, what we all need to see today, that it is forces, not men, that we are up against. The colleges are turning out thousands of men every year who carry into politics and life the old, dead cultural notion that bad men make bad government and that good men would make government good. A cultural school of engineering, which would do what Professor Johnson

does, would apply its knowledge not only to professional use, but to the practical use of the politician, reformer and sociologist; it would interest its students in the search for the unmoral and impersonal cause of all our evils: political, industrial and social. And if that general, human interest were fed and cultivated by a wise faculty, such students could be led on to want to know anything; just what the old Roman muck-rakers said in the original Latin; just why and when art comes and why it doesn't; and just what the matter is today with poetry.

AND as for the agricultural schools, they can reach out in the same way. All they have got to do is to teach that all they are learning about pigs and oats is true of men. They know, too, what the old moral culturist doesn't know: that if you want a good crop, you must select the seed and prepare the soil. That is true of men. Ignorance and disregard of that knowledge are causes of the slums of cities. I need not go into the obvious bearing of husbandry and grain-breeding upon eugenics; nor into other details. All I want to suggest is, that if faculties of our agricultural schools would take the utilitarian interest of their students in the course of agriculture and would show them the human, social significance of all they are learning, they could not only give them a very modern and a sadly needed culture, but they could easily incite them to an interest in life which would carry them through any of the subjects known to the old culture of the old schools. What they need, really, is not only this hint, but some of the conceit of our great universities; the proud sense that they indeed have something fine and enlightening and humane—as they have.

Criminals I Have Known

By T. P. O'CONNOR

Illustrated by William M. Berger

IV. Madame Humbert

PUBLIC memory is so short a thing that, doubtless, a good many people have already forgotten the strange story of Mme. Humbert. Yet it is one of the stories of successful, audacious, gigantic, and tragic fraud that can never be forgotten. The central figure in it deserves a high place among the most audacious and successful swindlers the world has ever produced. In force of character, in self-command, in cunning, above all, in the pose of influencing other human beings, it is doubtful if the world has ever produced a more striking personality.

Mme. Humbert was a provincial of somewhat modest birth and beginnings. She was fortunate enough to make the acquaintance of the family of the Humberts. The head of the family was a provincial lawyer, but in the whirligig of French politics, after the war and the fall of the Second Empire, M. Humbert became a prominent politician. He had great learning, had all the appearance of one of those Puritan Republicans who profoundly impress the French imagination, and who had their glorious day when the Napoleonic despotism, against which they had fought all their lives, had at last been succeeded by the Republic to which they had always given their adhesion—even in days when to do so involved exclusion from all the emoluments and digni-

ties of public employment, with now and then, also, a sentence of imprisonment. Humbert the elder had around him the aroma of one of those saints and martyrs whose years of self-abnegation and stern poverty made them the natural leaders when the Republic and the Republicans had come at last to their own. If I might try to illustrate his position by an English example, I would describe him as holding in French life the same position as a combination of Dr. Clifford and Lord Morley would hold in the life of England. Thus, he became a Cabinet Minister, and held the important office of Minister of Justice—the office that has to do with the administration of justice in all its departments and that corresponds somewhat to the English Attorney-Generalship, with a good portion of the work of the Home Office thrown in. Then he was chosen for the high position of one of the vice-presidents of the Senate—the Chamber where good Republican veterans find their comfortable income and the pensions for their declining days.

HUMBERT PÈRE had a son named Frederick. He is a somewhat enigmatic figure in the story. He is a little man with a delicate physique, a subdued manner, some considerable artistic abilities as a painter, and a soft and pleasant manner. How far he inspired and how

far he was the creature of the extraordinary woman he married, it is difficult to say. However, he married Thérèse d'Auvignac as she then was. When you saw this woman, your astonishment at the extraordinary position to which she attained, grew and grew. Never was there a commoner figure. Short, stout, yellow-skinned, obese, she looked the typical French cook. And she had the further disadvantages of a terrible provincial accent, of faulty education, of something like a lip; and from this obese body there came with a shock to you a thin, weak voice. Of all that deadly charm of the Frenchwoman who captivates the hearts of men, she had not a trace. On the other hand, it did not require more than a brief look at her face to discover the iron will that enabled her to do such astounding things. The full-heavy jaw seemed as if it were of iron instead of flesh and blood. The heavy brow gave the same impression of rude strength. She looked for all the world like the embodiment of that fierce, strong, inhuman, greedy race of peasant blood who form so much of the strength of the men and the women who win in the tiger-struggle for wealth and power in France. And there was evidence during the trial of her possession of some of the deadly gifts that make the successful struggler in the fight for life. Her nervous must have been of iron; her power of

"The guests were entertained thus lavishly in the hope of exploiting or of compromising them"

deception almost inhuman; she could pursue her fight for wealth and luxurious life apparently without an emotion over the dead bodies of ruined hearts, and even suicides, whom she had dragged from wealth, eminence, and all the easy joys of domestic and prosperous life to the black abyss of ruin and self-inflicted death. She had also immense powers of acting. On one occasion she had to get out of a tight place by declaring that she had been suffering from an attack of rheumatism, and she actually proceeded to limp on legs that were as robust as her bountiful frame.

THE story she told was startling in its simplicity, and the wonder remains that it ever found anybody to accept it. She created two imaginary uncles. She gave them a name, she invented a gigantic fortune of millions for them, she produced letters that they were supposed to have written—above all, she created for them a will that was as fantastic as anything

else in the strange story she told. The name of these purely fictitious Americans was Crawford. They had left—so the story of Mme. Humbert went—a vast fortune to her and her sister, but on conditions that were romantic, unparalleled, and impossible. And the chief point in this story was that the millions, of which Mme. Humbert and her sister were the lucky possessors, were all locked up in a safe. But this safe, which was exhibited to everyone who wished to see it, was out to be opened unless with the consent of the imaginary uncles. If the prohibition were disobeyed, then the whole vast fortune was lost and the Humberts and their creditors were reduced from boundless wealth to bankruptcy and poverty. It seems as ridiculous and incredible a story as ever was invented, but it is astounding to relate that the story was believed by some of the most cynical and some of the most brilliant wits of France. You could not well imagine a race more trained in the ways of the wicked, and especially the

spendthrift, world than the shopkeepers of the Rue de la Paix—that main thoroughfare of all the luxury and all the extravagance and all the vanities of this world; and yet in the Rue de la Paix Mme. Humbert found great diamond merchants to lend her millions on the strength of the supposed contents of this safe. She did everything on a scale of magnificence that places her almost in the very first rank of the gigantic swindlers of history, until, in the end, her debts amounted to something like that of a small State. Of course, she borrowed on ruinous terms. It was not likely that anybody would lend money on such a security without big interest; and thus the debts went on accumulating at a tremendous rate.

MEANTIME it was a necessity of her existence that she should make a great dash, and she did. No hostess in Paris entertained more generously and more frequently. A good dinner, good wine, a pertinacious hostess, are able to

bring together a large and even an illustrious list of guests in any great city; and thus it was that Mme. Humbert was able to count on her visiting list the names most conspicuous in the great political, literary and dramatic world of Paris. Cabinet Ministers, judges, Academicians, financiers, all passed through the salon of Mme. Humbert. It is scarcely necessary to say that the guests were entertained thus lavishly in the hope of exploiting or of compromising them, and that the long escape of Mme. Humbert from pursuing creditors and the severity of the law was partly due to the influence she was thus able to exercise in influential circles.

Her final method of keeping creditors at bay deserves the merit of startling originality. She instituted suits in the law courts, in which there were imaginary plaintiffs or imaginary defendants in the imaginary persons whom she had invented and adopted as uncles; and it always ended in the same verdict: the Crawford brothers insisted that the safe should not be opened under the same dread penalty in case of disobedience;

the millions which it contained would be lost. For years this process went on; first a verdict on behalf of the apparently long-suffering Mme. Humbert that she should be allowed to touch the millions; then a verdict against her; then an appeal to a higher court and a verdict in her favour with the right to open the safe and possess and distribute the millions; then another appeal, and the uncles, so wicked, fantastic, unreasonable but stubborn, asserting their right to keep the safe still closed and the creditors put off for another year.

Men died, some by the iron hand; great businesses were ruined, splendid names besmirched; but still the swindle went on and Mme. Humbert thrived, gave great entertainments, dazzled all Paris with her splendour and her atmosphere of boundless wealth,—until one day the criminal courts were put in motion, and at once they proceeded to act with that swiftness and security which are in such contrast to the dilatoriness of civil proceedings, and Paris woke to find that the whole Humbert family had fled. A court gave the order to open the safe, and, in the midst of a jeering Paris crowd, the safe was lowered to the street. It was solemnly opened; it contained, not millions, but a button, a few old coins, and a few old newspapers. The papers contained columns of the extraordinary story. Every man who, innocently or knowingly, had even paid a single visit to Mme. Humbert, was threatened with ruin, and at one time it looked as if even the Republic itself was shaken to its foundations.

In time Mme. Humbert and her family, including her husband and her two brothers, were arrested in Spain and were put on their trial. I was fortunate enough to be in Paris at the time, and I obtained admission to the court. At last I was able to see in the flesh this marvellous woman who had caught my imagination. She was just as I have described her—short, obese, vulgar, yellow-skinned. Now and then one heard that strange voice, so thin and so common, and in such contrast with the robust body. The wretched husband, small, fragile, sat silent throughout, with cold perspiration pouring down his face, white as parchment, and with the suffering of imprisonment and of all those years of terrific anxiety written on his face in lines of terrible legibility. I felt stifled in the crowded court; I could not help feeling a certain degree of sympathy with that group of trapped wretches fallen from their splendour and their fame, and waiting for their inevitable doom. And above this scene of sordid human passions, of brutal human appetites, of miserable vanities, there rose the figure of Christ on the cross—a figure that then surmounted every judicial bench in Europe, but has since been removed by the decree of the French Parliament. It was a strange and striking commentary on the poor effects of a beautiful gospel and of the most touching figure in human history.

OF course, the Humberts were condemned and served their rather short term of imprisonment. Mme. Humbert remained true to herself. Interviewed immediately after her release, she calmly repeated her story—announced that the mythical Crawfords would appear in their own due time—and since then has vanished into obscurity. One fact finally, as a further instance of the ironies and contradictions of human character. The Humberts had one child—a young girl. It was shown that this daughter of gigantic swindlers had been brought up with scrupulous care and almost convent-like seclusion and severity. An English governess who had once been employed by the family for some months wrote an account of her experiences. And one of these was that the whole family of accomplished and deadly liars were thrown into a fever of anguish when the governess had to reveal that her pupil had been guilty of a small fib. The parents wept in despair.

Next week will appear the fifth of this series of stories by T. P. O'Connor, "Palmer, the Rugsey Murderer."

"In the midst of a jeering Paris crowd, the safe was lowered to the street and solemnly opened"

The Art of Skating in America

By
IRVING BROKAW

MR. BROKAW is one of the best known skaters in the world. He was champion of America in 1906, and is the author of the "Art of Skating." When he talks about skating, as he does in this article, what he says may be taken as authoritative

"Friends of the flitting skate, behold in this A Renaissance's dream of earthly bliss, Sketched by the fountain pen of one who thinks That heaven is paved with everlasting rinks, Where cherubs romp forever and a day Smooth, rapid as that never melts away, While graceful, gay, god-damned lovers blend,— To endure time, in circles without end."

—The Muse in Pouch

ICE skating as a means of necessity or of convenience has existed from the remotest times, but only within about two hundred years has it been practiced as a pastime, or reduced to an art in the form of figure skating. Perhaps it began from man's fondness for moving about from place to place, the nomadic instinct in the strong, virile races of the North; or it may have been a lazy man's contribution to easy motion with the least expenditure of energy.

"No precise date can be fixed for the introduction of figure skating in America," says John F. Lewis in his "Skating and the Philadelphia Skating Club." "Philadelphia seems to have witnessed it as soon as any place in the country, and this is not unlikely from the fact that the amusements of the old city were largely under Quaker influence; and certainly no manly exercise more beneficial to the soul and body can be conceived than the art aptly described as 'the poetry of motion.'" It is certain that skating early became a sport in which Philadelphia was noted. Graydon, in his "Memoirs," says "though Philadelphia has never, like Londoners, reduced skating to rules nor connected it with their business like Dutchmen, I will yet hazard the opinion that they are the best and most elegant skaters in the world." And he had seen "New England skaters, old England skaters, and Holland skaters." . . . "The Delaware River, whose majestic waters washed the gateways of the old town, was the place

where our forefathers learned to skate." Another famous member of the Philadelphia Club, James C. Parrish, said: "The winter climate of Philadelphia is peculiarly adapted for figure skating. Cold snaps are followed by thaw and rain, usually some two, three or four times during the winter. The ice is thus covered with

water and not with snow, as in the more northern climes, and a single cold night will often congeal the watery surface and thus afford a fine field for sport." When the cold weather lasted a sufficient time, the Schuylkill River was frozen and became the resort of thousands who roved its polished surface from Fairmount Dam to the Falls.

Benjamin West, the famous American painter, was a skilful skater and used to delight thousands in London on the Serpentine with his graceful evolutions. He renewed his acquaintance, made in Philadelphia, with General Howe of the Colonial War, when one day, while skating on the Serpentine, some one suddenly exclaimed, "West, West!" It was General Howe. "I am glad to see you," said he, "and not the less so that you come in good time to vindicate my praise of American skating."

The New Skating

SPEAKING with historical freedom, it may be said that the period from about 1860 to 1880 represented the origin of an American style of figure skating. The period from about 1880 to 1910 represented a development of the same American style, with many interesting and original figures and movements contributed by skaters of individual merit. In the year 1908 the writer, after winning the championship in the American style, contributed several exhibitions of skating in the international style, which he had learned from the most noted foreign experts, at a number of the leading skating resorts of this country. Credit should be given to the following American skating experts, whose skill influenced this entire period. There were many others, but it is possible to mention only this limited number: Haines,

Anna Hulder and Heinrich Burger, world's champions in pair skating. More complicated figures, and waltzing on the ice, make this form of skating more spectacular and graceful than single skating

Copyright, Powers Expressing Co.

Miss Constance Wilkinson and Mr. Brokaw executing a spiral. The symmetrical figures of pair skating are duplications and elaborations of single skating figures

Goodrich, Bishop, Curtis, Story, Good, Rubenstein, Phillips, Bacon, Evans, Keane, Doffy, Bassett, Williams.

HAVE we not then already arrived at the "skating of the future?" I believe we have. . . . We have a definite system to follow: rules of carriage and movement clearly outlined; carefully drawn diagrams to show correct print; a preparatory course of skating as found in the school figures, and a section for the highest exponents of the art—the free skating.

The International School of Skating represents all of the above, and is the accepted standard wherever skating is regarded as an art in the highest sense of the word. The time has at last come to admit that this new skating is the most ideal form of the art ever invented. And besides it is truly American.

There is no question but that the standard of skating is higher now than for many years. The best proof is that some devotees of the game of hockey are joining the ranks of the figure-skaters. They have left hockey because they feel that modern skating is no longer of the "fancy" sort they used to see on rinks and parks; that, after all, it is an athletic exercise of a very agreeable type; that those seen practicing seem to be intensely interested in what they are doing; that older persons, as well as young, can really become very proficient; and that it may be learned from printed instructions.

NOT so very long ago figure-skating was popularly supposed to be a little too difficult to be attainable by the ordinary skater, or too "fancy" to deserve his serious consideration. It is not difficult to account for this superstition.

The available stock skates were seldom capable of efficient adjustment under the middle of the foot, and were often too long or too short in the blade, or fastened with straps that bound the ankle and stopped the circulation of blood. Figure skating with such tools as these was difficult, and it was little wonder that so many skaters took to the flat blade of the hockey skate and went in for skating "straight ahead." The most expert skaters of today could

accomplish little with this inefficient equipment. One must have skates properly adjusted, the boot well-fitting, or the skates will not go where they are wanted, or the ankle will not support the weight sufficiently for such an athletic sport.

THE earliest figure-skating done in New York was during the winter of 1860, on what was known as "Beckman's Ponds," at Fifth Avenue and Fifty-ninth Street, the site at present of the Hotels Plaza, Savoy and Netherlands. The most select of these ponds was called the "Fifth Avenue Pond." It covered about eleven acres of ground. "The building for the accommodation of skaters was about two hundred feet long and embraced every convenience that the lovers of the invigorating sport could desire.

Mr. Brokaw skating on "outside backward rocker"

Many of the older people were accustomed to sit comfortably in their carriages above, on what was then called Middle Road, later Fifth Avenue, and watch the evolutions of the merry skaters below."

The so-called international style of skating, really a development in European countries during the last fifty years of the American style, has undoubtedly come to stay; and the writer may be pardoned in feeling a personal gratification in view of the fact that its re-introduction to America was due largely to his efforts. To put it briefly, it is an art, both "natural and uncramped, in which the movements of the skater are allowed full play to assist the execution of figures by the skater, expressing and intensifying the effect, so as to produce a harmonious and graceful result."

THE golf enthusiast loves the intricacies of the game on account of the many things that contribute to the accomplishment of the various strokes. Even more intricate is the modern form of skating; there is the carriage of the head, movement of arms, twisting of shoulders, tilt of body, and swing or quiet movement of the balance foot, to be considered at every move. Then there is a system to follow throughout all the movements. I should advise one to start by all means at the very beginning and work up gradually from the simplest of the plain circles; after these are mastered, proceed to the changes of edge, which is next in order; then to the three—single and double; the loops; benches; rockers; and counters. These I have called the Fundamental School Figures, as fully described in "The Art of Skating."

The second section embraces, "combinations in paragraph form." These figures are skated in the three-lobed eight diagram. Here the above figures are combined with each other in various ways, but chiefly by the change of edge. In the third section I have placed the single Foot Figures (foot eights). Only skaters who have worked hard and faithfully on the other two sections can be expected to execute these with any degree of precision or power.

Mr. and Mrs. Irving Brokaw in pair skating. "Carriage of the head, movement of the arms, tilt of the body, and swing of the balance foot, must be considered at every move"

I have defied Free Skating as the harmonious combination of edges, turns, pirouettes or toe movements, jumps, spread eagles and spirals skated in field. It differs from School Figures in that the skater has the whole rink at his disposal instead of a small portion.

This is the branch of skating which will bring out the individuality of the performer and in which he may exercise his ingenuity in the invention of new figures, moves and combinations. I hope it will not be discouraging to admit that every one cannot soon excel in this branch of the art. Some persons have a natural faculty of harmonizing difficult and original intricate moves in a coherent unit, while at the same time lacking in the qualifications that make them excellent skaters of school figures, and vice versa. My advice is to master at first the school figures, becoming equally proficient on either foot; and if one foot is the weaker, practice on it all the more. If there is a disinclination to its use, use it all the more, until the weakness is conquered. In every movement you acquire, be careful that you track the left to do its duty until it is as proficient as the right. Do not be a one-legged skater.

STRIKING developments have taken place in the last few years in the art of skating. The theory has been made so simple, and its exposition so clear and practical, that not only may older people learn to skate from printed instructions, but boys and girls will find it worth while to substitute what I may call real skating for their present idea of enjoyment as practiced on the flint blade of the hockey skate.

During the past season we have witnessed some remarkable developments in ball-room dancing which threaten to monopolize the leisure time of all classes; but who can compare a turkey trot or Tango with the abandoned intoxication of a waltz or two-step on ice with a congenial partner? The number of dances known and practiced on the ice rinks at home and abroad is practically unlimited. A unique opportunity is offered to New Yorkers in the presence amongst us, for the winter season, of Mr. and Mrs. E. Worsley, of Manchester, England, who perhaps

more than any one else have studied the question of skating on the European rinks. Their pair-skating has again revealed to American skaters the possibilities of "dancing on the ice." Those who feel that a pair of skates is a handicap can see for themselves that a ball-room floor cannot compare with a sheet of ice as a means of demonstrating the ease with which the most graceful and elaborate movements can be executed.

It is very difficult to express by mere words or diagrams the essential qualities that make pair skating the most attractive and pleasurable kind of skating. To catch the action of skaters even by the most accurate of snap shots, to record skating movements in diagrams, is still to miss almost entirely the essentials of the art—the pace, the go, the harmony, the

rhythm and the grace of it all. The pictures illustrated in this article cannot therefore be taken as anything but a guide. To be convinced, one must witness an exhibition by a capable pair.

BESIDES the pleasures of skating, it is the most beneficial form of exercise in existence. The extension of the arms, needful to counterbalance the motions of the lower limbs, and to maintain the upright position, and the bending of the body backward necessary for back edges, expands the chest, thus permitting the lungs to be inflated with fresh air. Hence, the rapid circulation of the blood is promoted. Not only all the organs of respiration, but the muscles, are invigorated by this exercise, which insures greater activity in all parts of the body than any other known pastime.

From the double standpoint of a highly beneficial, physical exercise and a most fascinating sport, the modern style of skating ought to appeal to every man and woman. Without much expenditure of strength the practice of figure skating results in correct, graceful carriage, and a general quickening of the entire physical organism which is delightful and which leaves no ill effects. It has the advantage of being a social pastime in which one has company.

The modern dancing on skates will instantly appeal to women especially. With capable instruction at hand, and all the steps and changes carefully analyzed in diagrams, it is not difficult for the fairly accomplished skater to learn many of these dance figures within a few weeks.

With correct modern equipment and a book available illustrated by instantaneous photographs of the world's best skaters in action, almost any one can learn enough to skate the waltz, two-step, Lancers, and other hand to hand or dance movements. Recent developments have proved that the waltz will be more effective to raise the standard of proficiency among skaters in general than any other figure, for the reason that persons otherwise unambitious to acquire proficiency will be aroused enough by seeing the waltz well performed (and incidentally noting its superiority over the ball-room dance) to practise it as an essential to skating.

A Curse of Bigness

By LOUIS D. BRANDEIS

Being Part VIII of "Breaking the Money Trust"

IN the preceding articles Mr. Brandeis has shown that the money trust is an undue extension of the powers of the investment banker and is harmful to the average citizen. He has described some methods by which it may be broken up. In this article he shows how the trust is harmful to big business itself

BIGNESS has been an important factor in the rise of the Money Trust. Big railroad systems, Big industrial trusts, Big public service companies; and as instruments of these Big banks and Big trust companies, J. P. Morgan & Co. (in their letter of defence to the Pujo Committee) urge the needs of Big Business as the justification for financial concentration. They declare that what they euphemistically call "cooperation" is "simply a further result of the necessity for handling great transactions"; that "the country obviously requires not only the larger individual banks, but demands also that those banks shall cooperate to perform efficiently the country's business"; and that "a step backward along this line would mean a halt in industrial progress that would affect every wage-earner from the Atlantic to the Pacific." The phrase "great transactions" is used by the bankers apparently as meaning large corporate security issues.

Leading bankers have undoubtedly cooperated during the last 15 years in floating some very large security issues, as well as many small ones. But relatively few large issues were made necessary by great improvements undertaken or by industrial development. Improvements and developments ordinarily proceed slowly. For them, even where the enterprise involves large expenditures, a series of smaller issues is usually more appropriate than single large ones. This is particularly true in the East where the building of new railroads has practically ceased. The "great" security issues in which bankers have cooperated were,

with relatively few exceptions, made either for the purpose of effecting combinations or as a consequence of such combinations. Furthermore, the combinations which made necessary these large security issues or underwritings were, in most cases, either contrary to existing statute law, or contrary to laws recommended by the Interstate Commerce Commission, or contrary to the laws of business efficiency. So both the financial concentration and the combinations which they have served, were, in the main, against the public interest. Size, we are told, is not a crime. But size may, at least, become noxious by reason of the means through which it was attained or the uses to which it is put. And it is size attained by combination, instead of natural growth, which has contributed so largely to our financial concentration. Let us examine a few cases:

The Harriman Pacifics

J. P. MORGAN & CO., in urging the "need of large banks and the cooperation of bankers," said:

"The Attorney-General's recent approval of the Union Pacific settlement calls for a single commitment on the part of bankers of \$125,000,000."

This \$125,000,000 "commitment" was not made to enable the Union Pacific to secure capital. On the contrary it was a guaranty that it would succeed in disposing of its Southern Pacific stock to that amount. And now that it has disposed of the stock, it is confronted with the serious problem—what to do with the

proceeds? This huge underwriting became necessary solely because the Union Pacific had violated the Sherman Law. It had acquired that amount of Southern Pacific stock illegally; and the Supreme Court of the United States finally decreed that the illegality cease. This same illegal purchase had been the occasion twelve years earlier, of another "great transaction,"—the issue of a \$100,000,000 of Union Pacific bonds, which were sold to provide funds for acquiring this Southern Pacific and other stocks in violation of law. Bankers "cooperated" also to accomplish that.

Union Pacific Improvements

THE Union Pacific and its auxiliary lines (the Oregon Short Line, the Oregon Railway and Navigation and the Oregon-Washington Railroad,) have made, in the past fourteen years, issues of securities aggregating \$375,158,183 (of which \$46,500,000 were refunded or redeemed); but the large security issues served mainly to supply funds for engaging in illegal combinations or stock speculation. The extraordinary improvements and additions that raised the Union Pacific Railroad to a high state of efficiency were provided mainly by the net earnings from the operation of the railroads. And note how great the improvements and additions were: Tracks were straightened, grades were lowered, bridges were rebuilt, heavy rails were laid, old equipment was replaced by new; and the cost of these was charged largely as operating expense. Additional equipment was

added, new lines were built or acquired, increasing the system by 3,384 miles of line, and still other improvements and betterments were made and charged to capital account. These expenditures aggregated \$191,512,328. But it needed no "large security issues" to provide the capital thus wisely expended. The net earnings from the operations of these railroads were so large that nearly all these improvements and additions could have been made without issuing on the average more than \$1,000,000 a year of additional securities for "new money," and the company still have paid six per cent. dividends after 1906 (when that rate was adopted). For while \$13,679,432 a year, on the average, was charged to Cost of Road and Equipment, the surplus net earnings and other funds would have yielded, on the average, \$17,750,984 a year available for improvements and additions, without raising money on new security issues.

How the Security Proceeds Were Spent

THE \$375,000,000 securities (except to the extent of about \$15,000,000 required for improvements, and the amounts applied for refunding and redemptions) were available to buy stocks and bonds of other companies. And some of the stocks so acquired were sold at large profits, providing further sums to be employed in stock purchases.

The \$375,000,000 Union Pacific Lines security issues, therefore, were not needed to supply funds for Union Pacific improvements; nor did these issues supply funds for the improvement of any of the companies in which the Union Pacific invested (except that certain amounts were advanced later to aid in financing the Southern Pacific). They served, substantially, no purpose save to transfer the ownership of railroad stocks from one set of persons to another.

Here are some of the principal investments:

1. \$91,827,200, in acquiring and financing the Southern Pacific.
2. \$66,261,400, in acquiring the Northern Pacific stock and stock of the Northern Securities Co.
3. \$43,499,200, in acquiring Baltimore & Ohio stock.
4. \$37,824,250, in acquiring Illinois Central stock.
5. \$23,253,275, in acquiring New York Central stock.
6. \$10,264,000, in acquiring Atchafalpa, Topoka & Santa Fe stock.
7. \$6,847,750, in acquiring Chicago & Alton stock.
8. \$11,819,387, in acquiring Chicago, Milwaukee & St. Paul stock.
9. \$4,330,423, in acquiring Chicago & Northwestern stock.
10. \$4,636,600, in acquiring Railroad Securities Co. stock (Illinois Central stock).

The immediate effect of these stock acquisitions, as stated by the Interstate Commerce Commission in 1907, was merely this:

"Mr. Harriman may journey by steamship from New York to New Orleans, thence by rail to San Francisco, across the Pacific Ocean to China, and, returning by another route to the United States, may go to Ogdén by any one of three rail lines, and thence to Kansas City or Omaha, without leaving the deck or platform

of a carrier which he controls, and without duplicating any part of his journey.

"He has further what appears to be a dominant control in the Illinois Central Railroad running directly north from the Gulf of Mexico to the Great Lakes, parallel to the Mississippi River; and two thousand miles west of the Mississippi he controls the only line of railroad parallel to the Pacific Coast, and running from the Colorado River to the Mexican border. . . .

"The testimony taken at this hearing shows that about fifty thousand square miles of territory in the State of Oregon, surrounded by the lines of the Oregon Short Line Railroad Company, the Oregon Railroad and Navigation Company, and the Southern Pacific Company, is not developed. While the funds of those companies which could be used for that purpose, are being invested in

and the Southern Pacific. Within a few months after Mr. Harriman's death the serious equipment scandal on the Illinois Central became public, culminating in the probable suicide of one of the vice-presidents of that company. The Chicago & Alton, (in the management of which Mr. Harriman was prominent from 1899 to 1907, as President, Chairman of the Board, or Executive Committeeman), has never regained the prosperity it enjoyed before he and his associates acquired control. The Père Marquette has passed again into receiver's hands. Long before Mr. Harriman's death the Union Pacific had disposed of its Northern Pacific stock, because the Supreme Court of the United States declared the Northern Securities Company illegal, and dissolved the Northern Pacific-Great Northern merger. Three years after his death, the Supreme Court of the United States

ordered the Union Pacific-Southern Pacific merger dissolved. By a strange irony, the law has permitted the Union Pacific to reap large profits from its illegal transactions in Northern Pacific and Southern Pacific stocks. But many other stocks held "as investments" have entailed large losses. Stocks in the Illinois Central and other companies which cost the Union Pacific \$129,894,991.72, had on November 15, 1913, a market value of only \$67,851,500; showing a shrinkage of \$42,043,491.72 and the average income from them, while held, was only about 4.50 per cent. on their cost.

Bankers

KUHN, LOEB & CO. were the Union Pacific bankers. It was in pursuance of a promise which Mr. Jacob H. Schiff—the senior partner—had given, pending the reorganization, that Mr. Harriman first became a member of his Executive Committee in 1897. Thereafter combinations grew and crumbled, and there were vicissitudes in stock speculations. But the investment bankers

prospered amazingly; and financial concentration proceeded without abatement. The bankers and their associates received the commissions paid for purchasing the stocks which the Supreme Court holds to have been acquired illegally—and have retained them. They received commissions for underwriting the securities issued to raise the money with which to buy the stocks which the Supreme Court holds to have been illegally acquired, and have retained them. They received commissions paid for floating securities of the controlled companies—while they were thus controlled in violation of law—and have, of course, retained them. Finally when, after years, a decree is entered to end the illegal combination, these same bankers are on hand to perform the services of undertaker—and receive further commissions for their banker-aid in enabling the law-breaking corporation to end its wrong doing and to comply with the decree of the Supreme Court. And yet,

"John M. Forbes had the imagination of the great merchant, the patience and perseverance of the great manufacturer, the courage of the seafarer, and the broad view of the statesman."

stocks like the New York Central and other lines having only a remote relation to the territory in which the Union Pacific System is located."

Mr. Harriman succeeded in becoming director in 27 railroads with 39,354 miles of line; and they extended from the Atlantic to the Pacific; from the Great Lakes to the Gulf of Mexico.

The Aftermath

ON September 9, 1909, less than twelve years after Mr. Harriman first became a director in the Union Pacific, he died from overwork at the age of 61. But it was not death only that had set a limit to his achievements. The multiplicity of his interests prevented him from performing for his other railroads the great services that had won him a world-wide reputation as manager and rehabilitator of the Union Pacific

throughout nearly all this long period, both before and after Mr. Harriman's death, two partners in Kuhn, Loeb & Co. were directors or members of the executive committee of the Union Pacific; and as such must be deemed responsible, in part, for the illegal acts.

Indeed, these bankers have not only received commissions for the underwritings of transactions accomplished, though illegal; they have received, also, commissions even for agreeing to underwrite a "great transaction" which the authorities would not permit to be accomplished. The \$126,000,000 underwriting (that "single commitment on the part of bankers" to which J. P. Morgan & Co. refer as being called for by "the Attorney General's approval of the Union Pacific settlement") never became effective; because the Public Service Commission of California refused to approve the terms of settlement. But the Union Pacific nevertheless paid the Kuhn, Loeb Syndicate a large underwriting fee for having been ready and willing "to serve," should the opportunity arise; and another underwriting commission was paid when the Southern Pacific stock was finally distributed, with the approval of Attorney General McReynolds, under the Court's decree. Thus the illegal purchase of Southern Pacific stock yielded directly four crops of commissions; two when it was acquired, and two when it was disposed of. And during the intervening period the illegally controlled Southern Pacific yielded many more commissions to the bankers. For the schedules filed with the Pujo Committee show that Kuhn, Loeb & Co. marketed, in addition to the Union Pacific securities above referred to, \$334,000,000 of Southern Pacific and Central Pacific securities between 1903 and 1911.

THE aggregate amount of the commissions paid to these bankers in connection with Union Pacific-Southern Pacific transactions is not disclosed. It must have been very large; for not only were the transactions "great"; but the commissions were liberal. The Interstate Commerce Commission finds that bankers received about 5 per cent. on the purchase price for buying the first 750,000 shares of Southern Pacific stock; and the underwriting commission on the first \$100,000,000 Union Pacific bonds issued to make that and other purchases was \$5,000,000. How large the two underwriting commissions were which the Union Pacific paid in effecting the severance of this illegal merger, both the company and the bankers have declined to disclose. Furthermore the Interstate Commerce Commission showed, also, while investigating the Union Pacific's purchase of the Chicago & Alton stock, that the bankers' profits were by no means confined to commissions.

BUT such railroad combinations produce injury in the public far more serious than the heavy tax of bankers' commissions and profits. For in nearly every case the absorption into a great system

of a theretofore independent railroad has involved the loss of financial independence to some community, property or men, who thereby become subjects or satellites of the Money Trust. The passing of the Chicago, Burlington & Quincy, in 1901, to the Morgan associates, presents a striking example of this process.

After the Union Pacific acquired the Southern Pacific stock in 1901, it sought control, also, of the Chicago, Burlington & Quincy,—a most prosperous railroad, having then 7912 miles of line. The Great Northern and Northern Pacific recognized that Union Pacific control of the Burlington would exclude them from much of Illinois, Missouri, Wisconsin, Kansas, Nebraska, Iowa, and South Dakota. The two northern roads, which were already closely allied with each other and with J. P. Morgan & Co., thereupon purchased for \$215,227,000 of their joint 4 per cent. bonds, nearly all of the \$109,584,000 (par value) outstanding Burlington stock. A struggle with the Union Pacific ensued which yielded soon to "harmonious coöperation." The Northern Securities Company was formed with \$400,000,000 capital, thereby merging the Great Northern, the Northern Pacific and the Burlington, and joining the Harriman, Kuhn-Loeb, with the Morgan-Hill interests. Obviously neither the issue of \$215,000,000 joint 4's, nor the issue of the \$400,000,000 Northern Securities stock supplied one dollar of funds for improvements of, or additions to, any of the four great railroad systems concerned in these "large transactions." The sole effect of issuing \$615,000,000 of securities was to transfer stock from one set of persons to another. And the resulting "harmonious coöperation" was soon interrupted by the government proceedings, which ended with the dissolution of the Northern Securities Company. But the evil done outlived the combination. The Burlington had passed forever from its independent Boston owners; and the Morgan allies remain in control.

THE Burlington—one of Boston's finest achievements—was the creation of John M. Forbes. He was a builder; not a combiner, a banker, nor a wizard of finance. He was a simple, hard-working business man. He had been a merchant in China at a time when China's trade was among America's big business. He had been connected with shipping and with manufactures. He had the imagination of the great merchant; the patience and perseverance of the great manufacturer; the courage of the sea-farer; and the broad view of the statesman. Bold, but never reckless; scrupulously careful of other people's money, he was ready, after due weighing of chances, to risk his own in enterprises promising success. He was in the best sense of the term, a great adventurer. Thus equipped, Mr. Forbes entered, in 1858, upon those railroad enterprises which later developed into the Chicago, Burlington & Quincy. Largely with his own money and that of friends who confided in him, he built these railroads and carried them through the panic of '37, when the "great banking houses" of those days lacked courage to assume the burden of a struggling ill-constructed line, staggering under financial difficulties.

UNDER his wise management, and that of the men whom he trained, the little Burlington became a great system. It was "built on honor," and managed honorably. It weathered every other great financial crisis, as it did that of 1837. It reached maturity without a reorganization or the sacrifice of a single stockholder or bondholder.

INVESTMENT bankers had no place on the Burlington Board of Directors; nor had the banker-practice, of being on both sides of a bargain. "I am unwilling," said Mr. Forbes, early in his career, "to run the risk of having the imputation of buying from a company in which I am interested." About twenty years later he made his greatest fight to rescue the Burlington from the control of certain contractor-directors, whom his biographer, Mr. Pearson, describes as "persons of integrity, who had conceived that in their twofold capacity as contractors and directors they were fully able to deal with themselves jointly." Mr. Forbes thought otherwise. The stockholders, whom he had aroused, sided with him and he won.

MR. FORBES was the pioneer among Boston railroad-builders. His example and his success inspired many others, for Boston was not lacking then in men who were builders, though some lacked his wisdom, and some his character.

Practically every one of these 121 companies, was acquired by the New Haven in violation either of the state or federal law or of both

the enterprise and capital constructed, in large part, the Union Pacific, the Atchafalaya, the Mexican Central, the Wisconsin Central, and 24 other railroads in the West and South. One by one these Western and Southern railroads passed out of Boston control; the greater part of them into the control of the Morgan allies. Before the Burlington was surrendered, Boston had begun to lose her dominion, also, over the railroads of New England. In 1900 the Boston & Albany was leased to the New York Central—a Morgan property; and a few years later, another Morgan railroad—the New Haven—acquired control of nearly every other transportation line in New England. Now nothing is left of Boston's railroad dominion in the West and South, except the Eastern Kentucky Railroad—a line 36 miles long; and her control of the railroads of Massachusetts is limited to the Grafton & Upton with 19 miles of line and the Boston, Revere Beach & Lynn—a passenger road 13 miles long.

The New Haven Monopoly

THE rise of the New Haven Monopoly presents another striking example of combination as a developer of financial concentration; and it illustrates also the use to which "large security issues" are put.

In 1892, when Mr. Morgan entered the New Haven directorate, it was a very prosperous little railroad with capital liabilities of \$45,000,000 paying 10 per cent. dividends, and operating 308 miles of line. By 1899 the capitalization had grown to \$80,477,000, but the aggregate mileage had also grown (mainly through merger or leases of other lines) to 6017. Fourteen years later, in 1913, when Mr. Morgan died and Mr. Mellon resigned, the mileage was 1907, just 80 miles less than in 1899; but the capital liabilities had increased to \$445,955,000. Of course the business of the railroad had grown largely in those fourteen years; the road-bed was improved, bridges built, additional tracks added, and much equipment purchased; and for all this, new capital issues were needed; and additional issues were needed, also, because the company paid out in dividends more than it earned. But of the capital increase, over \$400,000,000 was expended in the acquisition of the stock or other securities of some 121 other railroads, steamships, street railway, electric-light, gas and water companies. It was these outside properties, which made necessary the much discussed \$67,000,000, 6 per cent. bond issue, as well as other large and expensive security issues. For in these fourteen years the improvements on the railroad including new equipment have cost, on the average only \$16,000,000 a year.

The Bankers

FEW, if any, of those 121 companies which the New Haven acquired, had, prior to their absorption by it, been financed by J. P. Morgan & Co. The needs of the Boston & Maine and Maine Central—the largest group—had, for generations, been met mainly through their own stockholders or through Boston banking houses. No investment banker had been a member of the Board of Directors of either of those companies. The New York, Ontario & Western,—the next largest of the acquired railroads,—

had been financed in New York, but by persons apparently entirely independent of the Morgan alliance. The smaller Connecticut railroads, now combined in the Central New England, had been financed mainly in Connecticut, or by independent New York bankers. The financing of the street railway companies had been done largely by individual financiers, or by small and independent bankers in the states or cities where companies operate. Some of the steamship companies had been financed by their owners, some through independent bankers. As the result of the absorption of these 121 companies into the New Haven system, the financing of all these railroads, steamship companies, street railways, and other corporations, were made tributary to J. P. Morgan & Co., and the independent bankers were eliminated or became satellites. And this financial concentration was proceeded with, although practically every one of these 121 companies was acquired by the New Haven in violation either of the state or federal law, or of both. Enforcement of the Sherman Act will doubtless result in dissolving this unwieldy illegal combination.

Other Railroad Combinations

THE cases of the Union Pacific and of the New Haven are typical,—not exceptional. Our railroad history presents numerous instances of large security issues made wholly or mainly to effect combinations. Some of these combinations have been proper as a means of securing natural feeders or extensions of main lines. But far more of them have been dictated by the desire to suppress active or potential competition; or by personal ambition or greed; or by the mistaken belief that efficiency grows with size.

Thus the monstrous combination of the Rock Island and the St. Louis and San Francisco with about 16,000 miles of line is recognized now to have been obviously inefficient. It was severed voluntarily; but, had it not been, must have crumbled soon from inherent defects, if not as a result of proceedings under the Sherman law. Both systems are suffering now from the effects of this unwise combination; the Frisco, itself greatly overcombined, has paid the penalty in receivership. The Rock Island,—a name once expressive of railroad efficiency and stability,—has, through its excessive recapitalizations and combinations, become a football of speculators, and a source of great apprehension to confident investors. The combination of the Cincinnati, Hamilton and Dayton, and the Erie Marquette led to several receiverships.

There are, of course, other combinations which have not been disastrous to the owners of the railroads. But the fact that a railroad combination has not been disastrous, does not necessarily justify it. The evil of the concentration of power is obvious; and as combination necessarily involves such concentration of power, the burden of justifying a combination should be placed upon those who seek to effect it.

Recommendations

SIX years ago the Interstate Commerce Commission, after investigating the Union Pacific transaction above referred

to, recommended legislation to remedy the evils there disclosed. Upon concluding recently its investigation of the New Haven, the Commission repeated and amplified those recommendations, saying:

"No student of the railroad problem can doubt that a most prolific source of financial disaster and complication to railroads in the past has been the desire and ability of railroad managers to engage in enterprises outside the legitimate operation of their railroads, especially by the acquisition of other railroads and their securities. The evil which results, first, to the investing public, and, finally, to the general public, can not be corrected after the transaction has taken place; it can be easily and effectively prohibited. In our opinion the following propositions lie at the foundation of all adequate regulation of interstate railroads:

1. Every interstate railroad should be prohibited from expending money or incurring liability or acquiring property not in the operation of its railroad or in the legitimate improvement, extension, or development of that railroad.

2. No interstate railroad should be permitted to lease or purchase any other railroad, nor to acquire the stocks or securities of any other railroad, nor to guarantee the same, directly or indirectly, without the approval of the federal government.

3. No stocks or bonds should be issued by an interstate railroad except for the purposes sanctioned in the two preceding paragraphs, and some should be issued without the approval of the federal government.

It may be unwise to attempt to specify the price at which and the manner in which railroad stocks and securities shall be disposed of; but it is easy and safe to define the purpose for which they may be issued and to confine the expenditure of the money realized to that purpose."

These recommendations are in substantial accord with those adopted by the National Association of Railway Commissioners. They should be enacted into law. And they should be supplemented by amendments of the Commodity Clause of the Hepburn Act, so that:

1. Railroads will be effectually prohibited from owning stock in corporations whose products they transport;

2. Such corporations shall be prohibited from owning important stockholdings in railroads; and

3. Holding companies shall be prohibited from controlling, as does the Reading, both a railroad and corporations whose commodities it transports.

If laws such as these are enacted and duly enforced, we shall be protected from a recurrence of tragedies like the New Haven, of domestic scandals like the Chicago and Alton, and of international ones like the Frisco. We shall also escape from that inefficiency which is attendant upon excessive size. But what is far more important, we shall, by such legislation, remove a potent factor in financial concentration. Decentralization will begin. The liberated smaller units will find no difficulty in financing their needs without bowing the knee to money lords. And a long step will have been taken toward attainment of the New Freedom.

Still another remedy will be discussed in our next issue under, "The Inefficiency of the Oligarchs"

"She sees Fear itself, without thought or reason"

Afraid of the Dark

By HONORÉ WILLISIE

Illustrated by Alice Bech Winter

SOME day, Mary Jane would make a noble looking woman. At twelve she ran somewhat to arms, legs and eyes. Mary Jane was tall for her dozen years, tall and slender and strong. She had a fine head, set on promising shoulders. Her cropped brown hair was thick and wavy. Her gray eyes were liquidly clear.

During the day, Mary Jane led a sane and comparatively tranquil existence. Her nights were a horror that hoarded on frenzy. Her father and mother considered that a person of twelve, a healthy, well-developed person, was competent to battle the Fear alone. So they treated the matter facetiously, and Mary Jane cultivated a deadly shame of her weakness that helped her up the Thing-haunted stairway, and along the dark dank hall, at bedtime. Nevertheless, the nightly hunt for the match-safe was an ordeal so fraught with demoniacal menace that, nightly, Mary Jane flashed out of the darkness a face like a little marble Fear. To put the cat down cellar at bed-time was to add a year, a decade, of mortal anguish to one's life.

MARY JANE'S Brother Jim, at seventeen, was possessed of inventive genius. It was the display of this genius that changed Mr. and Mrs. Webster's attitude of facetiousness to one of apprehension. It was a rainy night in November. That day, old John Williams who lived just down the road, had died. Mary Jane was finishing the supper dishes while Brother Jim filled the wood-box.

"Move Jane," said Brother Jim. "I dare you to run through the dark and bring back one of the flowers in John Williams' trap."

Mary Jane set down a tea-cup and turned a whitening face to Brother Jim. She looked like a puppy at whom a whip has been shaken.

"Oh, Jim!" quavered Mary Jane, "Don't dare me!"

The code by which Brother Jim had educated Mary Jane was simple. The person who took a dare was a coward, a quitter, an earthworm and a sneak. Therefore, Mary Jane had protested, "Don't dare me, Jim!"

But Brother Jim nobled coolly. "Sure, it's a dare!"

Mary Jane stared at her big brother, her very lips blue with fright. "I hate you, Jim Webster!" she said, and then she darted out the back door.

A LONG-LEGGED shadow, she pelted through the lark of the night, sobbing a little in utter anguish of spirit; snatched a faded geranium leaf from the twisting, sodden creeper; returned on tissue-paper legs that scarcely could hold up her leaden body, and quietly dropped in a faint beside the wood-box.

What Father and Mother Webster said to Brother Jim has no particular bearing on this story. What Father Webster said to Mary Jane is a different matter.

After Brother Jim had withdrawn haughtily to bed and Mrs. Webster was putting Baby Rose to sleep, Father Webster tucked Mary Jane's long, shaking little body into his lap, not seeming to mind that the thin legs dangled awkwardly.

"Now, Mary Jane," said Father Webster, "as man to man, what are we going to do about this thing? Everything at the quarry has gone to smash, and Jim

and I have got to work up in Indianapolis to get money enough to move you and Mother and Baby up there. I've got to have Jim's help just now. I thought I could leave you as mother's right-hand man, but you won't be any more good to her than Baby Rose. You're such a 'frailty-cat!'"

Mary Jane stopped trembling ever so little. "Why, Father Webster!" she cried indignantly.

"Well, you won't!" went on Father Webster. "Here, the nearest neighbor is half a mile away, now that John Williams is gone. I'll get Charlie Reeves to come over and milk and do the chores. But if mother's the baby is taken sick at night, what will become of them?"

Mary Jane disentangled her legs and sat erect. She spoke with grandmotherly dignity. "Leave them to me, father. I'm—I'm not going to be afraid ever again. I'm just nervous."

"Very well!" said Father Webster. "I'll trust them to you. You must see that the chicken coop is closed every night and the cow all safe. You must lock the house, and see that the fires are banked in. When I leave on Saturday, I'll turn the keys over to you."

Mary Jane's trembling ceased and the color came back to her face.

ON Saturday, Mr. Webster and Brother Jim left for Indianapolis. On Monday, Mrs. Webster fell down the cellar steps and sprained her ankle. Mary Jane shouldered her burdens like a man. To be sure, she shut the chickens in the coop long before sundown and harried young Charlie until he finished milking an hour

before time. But she locked the house carefully and took good care of her mother and Baby Rose.

One morning, Charlie failed to appear, and Mary Jane, with much travail, milked the perturbed Jersey. When the doctor arrived, he bore the news that the Reeves family was quarantined with diphtheria, and that an epidemic of the disease threatened the little village. Not long after the doctor left, Baby Rose developed a hoarse cold that grew worse during the day. Under her mother's direction, Mary Jane dosed the tot with horsetee, and swathed her with mustard plasters, much to that two-year-old's disgust.

THAT evening, while Mary Jane was washing the supper dishes, her mother gave a sudden scream from the sitting-room. Above her screams rose the gasping of Baby Rose, White-faced, Mary Jane dashed to the rescue. The baby lay in her mother's arms, gasping.

"Get the ipsece! Get the kettle of boiling water! It's croup!" panted Mrs. Webster.

That was a strange half hour, a mad, confused half hour. At its end, Baby Rose was breathing easier, though still spasmodically, still with a hoarse roar that filled the house. She lay with one hand grasping Mary Jane's, the other, her mother's.

"Mary Jane," said Mrs. Webster, "you will have to go after the doctor!"

Mary Jane covered as she knelt by the couch. "Mother," she whispered, "it's an awful night,—dark and cold, and I'd have to pass old Williams' house and the cemetery. I'll sit up all night with baby. Don't make me go out in the dark, mother!"

Mrs. Webster, sat rigid, her face white, her eyes terrible. "Mary Jane, God will be punishing me for some sin I don't know of, in giving me a coward for a daughter. Put your things on and go!"

But Mary Jane's nerves had not yet recovered from Brother Jim's dare. It would take tragic necessity to drive Mary Jane out into the night. The thought of the lonely, goblin-haunted road to the village set her grovelling. "I can't, mother! I can't!" she whimpered.

FOR a moment Mrs. Webster sat in helpless silence. At this moment Baby Rose opened her eyes and struggled a little as she tried to cough. Mary Jane lifted the writhing figure, and the baby looked into her sister's face and tried to smile. Child as she was, Mary Jane knew that however long she lived she was not to forget that look in little Rose's eyes—such a look of helplessness and appealing trust. In after years that look was to goad Mary Jane, in moments of weakness, like an accusing conscience.

"I think she has diphtheria!" panted Mrs. Webster.

Mary Jane whitened. She rose instantly and slipped into her coat and cap. Then she wrapped the baby in a blanket, slipping hot-water bottles snugly about her. She was in frantic haste of a sudden, was Mary Jane.

"What are you doing?" Mrs. Webster's voice was sharp with anxiety. Mary Jane laid the baby in her carriage. "Mother," she said, "if Baby Rose has to wait until I get into town and find the doctor and bring him back, she'll choke to death. We can't waste a minute. Don't be afraid, I'll take care of her."

Mrs. Webster made a motion as if to rise, then sank back, half fainting. "Yes!

Yes! Mary Jane, you are right. Horry! Take the fur robe. Tell the doctor——"

But the front door had slammed on Mary Jane and her charge.

The Webster house was a mile from the village. The only house on the way was the deserted Williams place. It was a night of scudding clouds over-head and heavy snow under-foot. Mary Jane walked firmly out of the gate to the road, pushing the carriage carefully. The baby's stertorous breathing deadened the creaking of the wheels in the snow. Mary Jane began by telling herself that if the fear panic should make her faint, Baby Rose would die in the cold. She would not faint! No! Not if all the Things that made the darkness foul were to grab her skirts and hurry her heels!

As her eyes accommodated themselves to the intermittent starlight, she could see the snake fence bounding the road before her. Unconsciously, huddled forms crouched in every fence corner, heered at her, reached for her with rattling fingers as she panted by. Baby Rose's breathing was so loud that were the Things to come up in the road behind her, she could not hear in time!

IN front of the Williams house was a drift through which the carriage plowed slowly, oh so slowly! Mary Jane began to talk.

"I'm here, baby! Mary Jane's here, and not a b-b-bit afraid of the Things that live at Williams'. No, I'm not! Oh, little Rose, don't breathe so hard! I can't hear them if they come! If I should die before I wake, I pray the Lord, my soul to take! I'm here, baby. Mary Jane loves you. She isn't a bit afraid. She'll take care of you. Oh, don't breathe so hard—it hurts me to hear you!"

The wind howled maliciously around the bleak old house. There was a coffin-shaped shadow at the pump. A gibbeted Thing flapped from the clothes-line. But somehow the drift was passed, and Mary Jane broke into a run. The sweat ran down her face, and she wiped it off with one mittened hand. The road beyond the Williams place wound through a stretch of wood. The darkness here was so deep that Mary Jane had difficulty in guiding the carriage. She pushed violently into something, and screamed with the startle of it, then sobbed when she realized that it was only a tree. When she emerged into the starlight, Baby Rose had a choking spell and Mary Jane stopped to ease the little thing by lifting her. The baby was in a stupor and made no response to Mary Jane's endearments.

"She's dying!" said Mary Jane aloud. Then she lifted her mittened fists to the stars. "Oh God!" she called. "If you let Baby Rose die, I'll never pray to you again for anything! Do you hear?"

She felt a strange, wrathful strength after her blasphemy, and started on at a run. A long stretch of pasture land, and then came the cemetery. Mary Jane closed her eyes, but opened them at once as she could not steer the carriage. Ghastly shapes whispered and gibbered among the graves. Goblin forms slipped through the shrubbery.

"Mary Jane's here, baby," sobbed Mary Jane. "She-she-she's not afraid! God, there isn't any such Person as You! If there was, you wouldn't let a baby like little Rose suffer so. If I should die before I wake, I pray the Lord my soul to take!"

Then words failed her. Thought failed her. Mary Jane had reached the acre of

"She had touched the great actual tragedy, and all unreal fears were scared away."

terror now. She was Fear, itself, without thought or reason. She embodied all the fear instincts of the race, touching terror with a thousand sensations, sensing it without knowing it. Again she closed her eyes and ran, screaming as she did. At once she careened into a drift and the carriage toppled over. Mary Jane stood still.

"I've killed her," she said aloud, slowly. "My afraidness has made me kill my little sister!"

SHE righted the carriage and lifted the little, unprotesting form that still was wrapped in its blankets and still, as Mary Jane turned it over, breathless with labored sobs. In the sudden relief, Mary Jane forgot everything save that Baby Rose still was alive. Exhausted, trembling, crying, she started on. Beyond the graveyard the road turned abruptly, and afar Mary Jane saw the lights of the village. Somehow she pushed the carriage through the drifts of the hollow, somehow she reached the village street and the doctor's house.

When the doctor opened the door, Mary Jane shoved the carriage in without ceremony. "Baby Rose!" she panted.

The doctor lifted the baby, put his ear to her chest and shook his head. "I'm afraid it's too late," he muttered, "but we'll put up a fight."

In the moments that followed, while the doctor inserted the silver tube, Mary

Jane sat rigidly on her hands, her long legs twined in the chair rungs, waiting. Within the safe haven of the doctor's house, the full meaning of Baby Rose's peril swept into her brain and heart. If Baby Rose died! Never to hear the pipping voice, never to feel the clinging hands! It was too terrible! Such a thing could not be. Nothing in the world mattered save that Baby Rose was dying. How lonely for such a little thing to die! Did nothing matter to God, anyhow?

For the first time Mary Jane was facing Real Fear. For the first time life's universal tragedy was turning her soul to lead. The first of life's bitter realities was tearing its way to her sensitive spirit. Mary Jane sat silent, the noble head a little defiant, the sturdy shoulders a little drooping, a little patient, as if her woman heart foresaw the many, many years of learning ahead.

SUDDENLY Baby Rose's sobbing breaths stopped—caught—stopped, then began again, slowly but deeply, more easily. The doctor turned to Mary Jane.

"She'll live! You got her here just in time. It's not nine o'clock. Are you afraid to slip home and put your poor mother out of her agony? Tell her the baby will be all right, and in the morning I'll have the two of you up here and give you anti-toxin."

Mary Jane tiptoed over to the couch where little Rose lay in the sleep of ex-

haustion, and looked at the little broken thing she had salvaged from death. And Mary Jane's eyes were the eyes of all the madonnas. Then she ran out into the night once more. Out into the country road; alone, under the stars! And listen!—Mary Jane was not afraid! Life had taken her by the throat and had thrust her face about into life's great primal fear. She had touched the great, actual tragedy and all unreal fears were seared away.

MARY JANE trotted along the road looking up into the stars. The scudding clouds were gone. The stars were very near and clear in the winter sky. Snow-covered fields, violet sky, merged in a silver radiance too soft, too ethereal, for the mind fully to grasp. Mary Jane paused with a little inarticulate cry of exaltation, that felt without understanding. Suddenly she had found the Universe. Suddenly the sense of oneness with the sky and the earth, which is the human's un-speakable birthright, swept through the child spirit. Stars and windswept sky, trees, and tender, enfolding shadows—she was a part of them.

Once more Mary Jane lifted mittened hands to the sky. But this time her hands were not clenched. "God!" she cried, "all this is You—You—You!"

Then, swift as a little bird, night-winging south, she ran toward home and her tortured mother.

The Home Newspapers and Others

By F. J. BRUNNER

A PERTINENT article on a debatable subject, by Mr. E. L. Clifford, "Newspapers, Morals, and Women," printed in HARPER'S WEEKLY for December 6, 1913, opened with the question, "Does it pay the publisher?" It does. But, for a better understanding, let the trilogy be reversed to read, Women, Morals, and Newspapers.

Women, according to environment, taste, and education, read matter that interests them. The newspaper is a local issue. In New York, a majority of the women who read at all absorb their daily requirement of mental food from the "yellows." For proof of that fact, measure up the department store advertising in the "yellows" and find the test by comparison with the space used by these stores in the recognized clean papers. The advertising managers of "world asters under a single roof" know what women read. Their whole energy is concentrated on an increasing campaign to attract women shoppers—and their known results from advertising makes paying the highest line rate for space a genuine pleasure. Why? The clearance reports from all departments demonstrates the moving power of the display advertisements in the "yellows."

What boots it if psychopathic wards fill with victims of the store's neighbor, the pill purveyor who, from the same printed page, shaking a warning finger at the ignorant, almost pokes the digit through the column rate into the fetching lady displaying the latest thing in tango togery! The department store man is getting results. So is Dr. Pill. And women are supplying the results to both advertisers impartially.

The characteristic of newspapers of enormous circulation one cannot ignore,

is what is commonly called, in the newspaper profession, "sex stuff." The saffron-tinted newspapers were raised to half million and greater circulations on this class of matter. Crime, vice, divorce, underworld incidents, get all the "top" heads and, if the story can be worked up to a fine frenzy, it goes out on the first page embellished with photographic reproductions. Does one need better proof that women like this sort of thing?

Enter any department store and look about you. Where are the men? Surely, not buying the bargains advertised in the "yellows." But the women are swarming—attracted by the alluring announcements they have found in the papers of known big circulation. And all of these publications are home papers to these shoppers.

DOES it pay the publisher? Immensely. He knows the business from the inside. Oh, yes, he has ideals; but applied to newspaper publishing, ideals don't pile up fortunes nor make for a certain sort of influence in the community. He gives the women what they want. If he hadn't done that, his circulation never would have mounted to the half-million, the three-quarter-million. It would have stuck at the clean-news-paper mark, well below 500,000. And isn't he logical when he insists that figures tell no lies, for he can show you that the issues from the offices of three papers specializing in "sex stuff" have more circulation than all the other New York daily papers combined?

The home newspaper has been published without a let-up since the first sheet came off the hand press in Boston nearly two centuries ago. Its influence cemented these United States. It has

always been making things better—and it will everlastingly stick to its job. Every day it is a better paper than ever was published. Clean, honest, square with the public, a thorn in the flesh of the fakery and the Dr. Pills. But its circulation has never reached tremendous proportions. Its appeal has ever been to that limited circle which, after all, moves and leads the nation's thought and action.

THE home newspaper has upheld the standard of morality in God's legions. And it has fought under this standard the righteous causes which made man free. American newspaper history is a page brilliant with the deeds of the home newspaper, triumphing over secrecy and darkness by holding the moral side of American manhood close to the straight line. It shed the light that marked the way out of the wilderness of bigotry, intolerance, narrowness. It gave to all freedom from the thrallism of ignorance. And this is all true—else HARPER'S WEEKLY never could have survived the printing of Edith Livingston Smith's story of "Unmarried Mothers."

THE clean newspaper always has gone into the clean home, where the mind is clean as well as the body. But the "yellows" prove that mental indolence craves a sex stimulant and feeds on the dreps served in the stories of life's shadowy side.

To women, the fettered and repressed half of the human family, belongs the blame for the injustice (it's a mild term) done the poor, the sick, the discouraged, the ignorant, through filthy and fraudulent advertising. The case is proved against her three hundred and ten shopping days in the year.

Woodrow Wilson the Man

By AN ONLOOKER

PRESIDENT WILSON, as he sits here at Washington, in his daily habit, transacting business, is still a puzzle and as enigma. He is a new and an unknown type to Washington. He has been here now over ten months, and so one has found a key to his mystery. He has no intimates. He sees as few persons as possible. He transacts his business with them in the briefest possible space of time. He seeks no confidences and he gives none. He does not require advice. His constitutional advisers have only nominal duties in that capacity. He chooses to live in a social vacuum. There are no anecdotes about Mr. Wilson. There is no cloud of human interest stories about him, such as are commonly built up about occupants of the White House. There is no Wilson legend. To the common run of men he meets in his daily walk he is as undecipherable as a billiard ball, and presents a few avenues of approach; his points of contact are rounded and as smooth. He presents no salients to eager and curious observers.

WASHINGTON likes to know all about the President, his daily habits, his manner of thought, his little weaknesses, all of the little human qualities that go to make up the man as he is at his ease. It seeks to discover his private habits, what time he gets up, whether he takes morning exercises in his bedroom, whether he shaves himself or has an attendant come in and perform that task for him, what he likes to eat, what he reads, what time he goes to bed, his choice of intimate friends and on what basis his choice is made. It irritates Washington that it knows none of these things about Mr. Wilson.

I find that members of Congress and the newspaper correspondents here are probably more puzzled and more baffled by Mr. Wilson than any one else. It is an essential part of their duty to their constituencies to know all that there is to know about the President of the United States, whoever he may be. It is one of their tasks to dramatize and interpret the personality of the President to the millions of people in the United States who have access to no channel of information about the head of the government other than the newspapers. Mr. Wilson has apparently never recognized this or, recognizing it, has never acknowledged it by lending a helping hand. There is no reason for believing that the President knows or cares what impressions the daily press gives of him or what it says about him. He shows no indication of seeking the good-will of the newspapers or of fearing their ill-will. Mr. Wilson receives the correspondents twice a week—on Monday mornings at ten o'clock and on Thursday afternoons at half-past two o'clock. He stands behind his desk with his back to the light, facing the semi-circle of writing men, who ask him any questions they see fit. He replies or not, as he sees fit. Nearly always he replies in the fewest possible number of words, seldom adding anything to throw additional light. The newspaper correspondents here are men of varying capacities, of different political beliefs, and represent newspapers of varying degrees of influence, prestige and power. Some of the men are devoted personal and political

adherents of President Wilson. They represent papers holding the same beliefs. They sought by every legitimate use of the agencies of publicity at their command to bring about Mr. Wilson's nomination at Baltimore, and after the nomination they redoubled their energies to induce people to make him President. At the same time there are men here who are ardent Roosevelt men, others who are old-line stand-pat Republicans. Some of the newspapers represented are virtually without influence, others reach hundreds of thousands of people who depend upon them for political guidance. The President discloses himself in the same degree to all these conflicting personalities and equations.

IT is apparent, under the unvarying courtesy of the President's manner to all of his callers, that he resents the demands they make upon his time. He said last April, after he had been in the White House a little more than a month, that he could count upon the fingers of one hand all of the persons who had come to see him with their business fully prepared in their minds and ready for compact, succinct, clear presentation. He even remembered their names, and they acquired merit with him through their preparedness. Again, in the course of a casual conversation, one of his visitors said, apropos of some uppermost public question: "I have no opinion on it, but I am giving the whole problem the most absorbed and sustained thought of which I am capable."

"Ah," burst out Mr. Wilson, in mock despair but with real yearning in his voice, "will I ever again have opportunity really to sit down and think out undisturbed the solution of a question in which I am interested?"

President Wilson comes over from the White House to the Executive offices every morning about half-past nine o'clock. He spends half an hour with his secretary, looking at the morning's mail. At ten o'clock precisely he begins to receive visitors by appointment. On his desk is a typewritten card showing his list of appointments for the day; carbon copies are on the desks of his secretaries, and another is posted in the outer waiting room. Any one who chooses may come in and see with whom the President is talking. These appointments are seldom longer than fifteen minutes each; rarely they run to half an hour. The caller is supposed to present himself promptly on time, and to terminate his visit on the moment so, that the next man on the list may not be kept waiting. The President usually indicates by some gesture or slight movement when the appointment has come to an end. There is a little clock before him on his desk. The last appointment invariably comes to an end at one o'clock, when the President goes to lunch. He is back in his office at two o'clock or, at the latest, half-past two. Usually he has an appointment after lunch, and then goes out to play golf. Probably twice or three times a month the President makes an appointment in the evening. These evening appointments, however, are made on his own initiative and not by solicitation. Mr. Wilson tries to play golf every afternoon. Invariably his partner is Dr. Cary T.

Grayson, of the Navy, his physician and personal aide. Mr. Wilson plays at all golf courses about Washington except Chevy Chase. He has never played there. He plays over each course in turn. He is not keenly interested in the game. His main concern with it is that it "keeps him out in the open air," and gives him a certain amount of needed exercise. His score is a matter of absolute unconcern, and he has no lust for the game for the game's sake. Sometimes he does the eighteen holes in the nineties; again he may go over a hundred. It is all one to him, and he motors back to the White House with a serene mind in either event.

Mr. Wilson has become an almost habitual theater-goer. President Taft was fairly constant in his attendance at the local playhouses, and President Roosevelt tried to see all the very good plays; but Mr. Wilson exceeds both of them in his devotion to this form of entertainment. He goes regularly to all sorts of plays, good, bad and indifferent, and, when nothing better offers, finds amusement in vaudeville. He always sits through the play, and apparently it cannot be so bad nor so incompetently performed as not to afford him some measure of enjoyment. These eyes have beheld him at an Eva Tanguay "show," and his interest did not flag. The local popular-price stock company presenting "successes" of other seasons has become familiar with his presence at their representations. Apparently he finds needed relaxation in theatrical performances that would bore almost to extinction more fastidious playgoers.

ONE of the things that members of Congress do not understand about the President, and the thing that they resent in his attitude toward them, is that he won't talk and he won't let them talk. That acute and alert "itinerant analyst," Henry James, noted when he revisited American scenes that Washington was the conversation capital. Discourse, free and unrestricted, is the avocation of everybody in official life here and the vocation of many. To these it is unthinkable that a man who can talk won't talk. The tides of conversation run free and strong in this town, and amidst all the rush of words the President says nothing. He discloses his views briefly and at stated times. In the intervals he maintains a silence that becomes impressive by contrast. People ask one another: "How does he spend his time out of his office when he isn't playing golf or going to the theater?" They know that before he became President he used to spend many evenings reading Wordsworth aloud in the bosom of his family. The presumption is that, being a man of more or less fixed habits, he continues the practice. This appeals to the average Washington intelligence as being absolute zero in indoor sports. Not that that view would affect Mr. Wilson. Because the President won't talk, Congressmen complain that they find him cold. The simple truth is that he embarrasses them. He is so much better educated, he has thought to so much better purpose, he has so much keener an intelligence than the average member of either branch of Congress, that they are rather afraid of him. He

won't talk in an easy, gossip, discursive way, but insists at once on getting down to bedrock and applying the formal and fixed rules of logic to any matter of discussion. And he is so polite and civil and deferential about it, too. His manners are perfect. He seems to hang upon your words, and yet they say "it is hard to do business with him." That means that he won't do as he is asked to do simply because he is asked, but insists upon putting everything on the basis

of a major premise, a minor premise and a conclusion. Query: What can you do with a man like that? The Members of the House (the Senate concurring) reply at once: "Nothing."

If I may venture to introduce into these undefiled precincts the inelegant but forcible jargon of the pave, Mr. Wilson is the "whole thing" at this juncture. He dispenses the high and the low and the middle justice. He has suffered no notable rebuff in putting into effect his

plans and his ideas. The processes of government reflect his will. The Members of Congress do not love him, but they do not doubt the quality of the man. Nobody hints any longer that he is "academic." His resolute will, his firm grasp of the public business and his strong executive ability are clearly seen. His capacities and his abilities measure up to the office he holds. He is, indeed, chief magistrate to the uttermost fringe of his authority. Everybody at Washington knows it.

To See "Ourselves" As Others See It

By ETHEL WATTS MUMFORD

THE SINGLE STANDARD; and the gold standard. Are we to admit the baser metals into the currency of morality, which we stamp with our own image?

Youth. Are we to fling it aside because of the errors of youth? Are we to deny to youth its natural expression—its play, its expansion, its craving for companionship, in an effort to "reform?"

Sex attraction. The strongest thing in the world. Are we to leave the young untaught as to its purpose? Are we to leave to blind instinct the enlightenment that calls for the very best of our thought, our ideals and our efforts for the future of the race?

To see a large, mixed audience reacting from such startling questions is an interesting experience. "Ourselves" by Rachel Crothers did not please the general public and had a short life in consequence. Possibly this was because so many plays dealing with the same subject has been rushed on to take advantage of the interest aroused. At any rate, it interested a limited number of persons extremely and has been very widely talked about, and I hope it may be revived some time. I am going to give my impressions in the present tense, as I remember back to a performance which left me very much impressed indeed. The gist of the play is an attack on Special Privilege—the Privilege men have arrogated to themselves—that they may select one woman whom they choose to honor, and consider the rest fair game for which no adequate protection has been devised.

As might be expected, men are in the minority. Some have very obviously been led in, pulling on their halters and with their ears laid back. About half of the male representation have come expecting something more conventional and to their taste.

NO motion picture can offer anything more enlightening or funnier than the changes of expression on the face of one of these male victims who didn't know the play was loaded. The first act, showing a reformatory for delinquent girls, startles the men. There is a look, which interpreted, would read, "Well, well! what will they stage next?" "Look at 'em, the little Devils!" "What's the sense of all this twaddle about 'em, anyway?" "More expense for the taxpayer!" "Rather good looking, the Molly girl!" "Woman going to take one of 'em into her home, is she? Gad, that's a notion

it won't do to foster!" "Poppycock!" Curtain.

Act II. His next set of expressions is more complex, for he begins to see the set of the current. But the "Molly girl's" easy winning by the conscienceless villain gives him a few moments of smug satisfaction, a sort of "I told you so" contentment. Curtain.

Act III. The expressions follow each other with variety and intensity. "Absurd!" "Nonsense!" "Woman's sentimental foolishness." "Knows nothing about life." "Overdrawn!" "It's got to be." "Too bad, of course, but what are you going to do about it?" "Morality for men?" "Oh, go on!" "Oh, Lord!—what! responsible?" "Well, now, how do you expect a fellow—" "Oh, say, what's it all about, anyway? It's always been so. It always will be so." "Hard luck if you get born a girl in that class—that's all." "Ridiculous!" "Silly!" Then he decides to go out and get a drink, and not come back. He does the first, but not the last. He is back for the fourth act, hating himself for it. "Just came in to see what sort of a fool a woman playwright will make of herself if you give her her head." "It's the most idiotic point of view possible!" By this time he is beginning to think in spite of his reluctance, and to feel vaguely uncomfortable—something like a cross between conscience and indignation begins to nag him. Memories are awakening in the forgotten niches of his brain, and various well-laid ghosts begin to turn over and even threaten to walk. By the time he reaches the street the sneer has begun to fade from his face, like breath from a window-pane. If he happens to be with other men, there are shrugs and laughs and a rapid fire of reassurances as to the impracticability of it all. If he happens to be in a party with his wife and others, he is hopeful that the others may perhaps defer discussion but he apprehensively glances at his wife.

NOTICEABLE is the number of young, unaccompanied women, of obvious respectability. They behave very much as if they had played hooky in order to attend the performance. Probably they have—more grouse to their run-away shoe-soles! Women must make a holocaust of their Pride and Prejudice. The woman of the Home must cease to bask in her respectability, and glory in the invulnerable shield of wifehood, for that shield is not invulnerable, nor her respectability respectable, when it is coupled with the careless acceptance of the deg-

radation of her sisters, and wilful blindness to the crimes of Special Privilege.

THESE women, clear-eyed and attentive, find themselves confronted with something that begins to look very much like labors for Omphale, which will make those of Hercules pale into insignificance. A look of puzzled despair spreads over their faces. How are we to bring this before Tom and Dick and Harry? We will have to make ourselves "everlasting nuisances" in order to do it. How are our men to be forced to take these things seriously?

A group of over-dressed, bejeweled, gaudy women giggle continuously. They are troubled with no such questions. The play and its proposition is providing them with conversational ammunition with which to amuse male admirers. It is not so much as these that the serious-minded, thoughtful women may look for cooperation.

BY the exit, sit five or six boys and girls, fifteen to twenty years of age, whom to have arrived directly from the gas-house district—the little girls with kalsomed faces and ragged hair; the boys in sweaters, their lean, dissipated faces betraying their youth. Self-evidently, the girls are graduates of the reformatories. Some one with a belief in the psychological power of visualization may have sent them here. They chew gum, and their faces express complete inattention. But that great composite somebody—the Public—is doing a lot of thinking. We no longer bleed fever patients, give liquor anesthesia for amputations, nor angleworm soup for rickets.

For the sake of humanity let us not treat the moral and mental maladies of our fellow beings with the fallacies of the past—and the signs of the times are hopeful, this audience, for example, has a look of being practical. The applause, except for Miss Elliston's well-deserved curtain calls, is slight. They are considering the Case, disgustedly, hopefully, determinedly, according to their age, sex, and previous condition of servitude—but not apathetically. Some day somebody will get up and do something, and, thinking himself alone, will prepare for St. Stephen's well-known martyrdom, only to find himself part of an army that he had not dreamed existed, except as a remote possibility on the lap of the gods.

Then there will be a sharply affirmative answer to a new version of an old question—

"Am I my sister's keeper?"

Love in a Dutch Garden

By NEITH BOYCE

Illustrated by Frances W. Delehanty

A GARDEN carefully constructed to keep Love out, with a gate that locks, with tall green hedges that shut out sight of the world—the busy, naughty world.

Inside the garden, a prim little house, carefully-kept walks, well-regulated flowers, and a fountain. Love stands over the fountain, with a viol and bow in his hands—but he is a stone statue.

There are three old gardeners to keep down Nature in the garden, to trim the hedges to perfect rectangularity, to keep out the weeds, to make the flowers orderly. There is a boy with clappers, to chase away the birds.

"Oh, you naughty little birds! Now, come into my garden, and I'll kill you!"

There are three strict, spinster aunts, Prim, Prude and Privacy, to keep Nature down and Love out of a young heart.

And there is Prunella—inocent, inquisitive maiden.

A road runs by the garden-gate, and all the naughty world may travel by that road—and does. A band of wandering Mummies, from the village fair, passes by. The locked gate and shut windows of the house cannot keep them out. A shower of confetti invades the garden—and in through the hedge careless, wanton Pierrot creeps, and finds Prunella.

Pierrot is Lovelace—but to Prunella he is Love, the World, Life—everything that has been forbidden her, everything she is longing for. His mad companions terrify her. But the transparent sham of his quick wooing carries her away. A ladder is put up to her window at night, and she comes down into his arms. And now Love, the statue, wakes and plays upon his viol. He is in league with Nature, the World, the Birds, the Mummies and Pierrot, to seduce Prunella not of the garden, . . .

And yet he is a moral Love, as the sequel shows. . . .

"Prunella" speaks to the eye. The garden, scene of all three acts, is a pretty place. The sky is sometimes lit by the moon, sometimes spangled with stars, sometimes both together. We see and hear a great deal throughout the play of the moon, the stars, of birds, and—naturally—of Love.

Against the tall, clipped, formal hedges the old-style dresses are charming. In the first act the aunts, in sweeping dresses of different lilac shades, with caps, stomachers, lappets and what-not, and Prunella in a straight little gown of green are quite lovely. Pierrot, too, is sweetly dressed—in white in the first act, in black

and white in the second, all in black in the third. The maid-servants, Queer and Quint, are nice, too, in the picture; and the Mummies quite cubistically bizarre. The gardeners are perhaps a trifle obvious—but then, good heavens, if we are going to quarrel with "Prunella" for being obvious—!

WE are not. We take the little play for what it is—a conventionalized decoration on the theme of Love—a light fantasy on the eighteenth-century Lovelace motif, with all the sting left out. We admit frankly that it is sentimental, in the most recognized English style. There is nothing that isn't sweet about it, nothing shocking, not even the kiss that Pierrot gives Prunella—

"And now—she knows!"

This, too, is in accordance with the best English tradition, for a kiss cannot shock—can it?—except, of course, very pleasantly. Equally proper is the marriage of Pierrot and Prunella, duly taking place after their midnight elopement in the second act. To be sure, Pierrot deserts Prunella afterward, marriage not being one of his habits, but that can be remedied—and is.

Act III shows the garden three years after Prunella's flight—a sad, deserted garden, gone to weed and seed. The gate, half of its hinges, stands open. The three gardeners are gone, and two of the aunts. Only Aunt Privacy, softest-hearted of the three, remains, mourning in a very pretty dress of gray and white and black. A stranger has taken the little house, and she waits to give him the key. He comes—it is Pierrot, all in black, with a settled melancholy on his visage, once

so wanton and so gay. . . . In short,

Pierrot has repented. Though he won't, at first, admit it, he misses Prunella, and is sorry that he left her—for a year—returning then to find her gone.

Poor Pierrot! He is a mournful spectacle, as, in fact, repentance generally is—like washing the dishes after a feast, necessary but certainly irksome. Pierrot repents at leisure, and to music—there's no doubt about it, he is very much cut up. But we can't feel as sorry for him as we might, for we know all

the time, of course, that Prunella is coming back. If she had not come!—now that would have been something original!

But she comes—a poor, travel-stained wail, wandering back to her old home. Here she is met by her erstwhile companions, the Mummies, who have followed Pierrot and now bore him to distraction.

THEN the final curtain on the two, reunited, with the sun rising—rather a relief, the sun is, after so much of the moon and stars. Love, the statue, presides over this reunion and plays triumphantly upon his viol—thus proving himself, as we have said, in spite of his little escapades, an eminently English and moral Love.

The play is given with music; and with its sweetly pretty setting and dresses, and its light sentiment, it has pleased many people. Jaded theater-goers and critics like it. We have heard it called "charming," and even "adorable." It all depends on whether you like whipped cream or prefer cheese and salad.

It isn't easy to say why "Prunella" recalls to one's mind Alfred de Musset's play, "*On ne badine pas avec l'Amour*." It must certainly be by force of contrast. Here are two comedies of sentiment, with the requisite touch of pathos. The French play is a beautiful thing. Of course, it's breaking a butterfly on the wheel to try "Prunella" by such a standard. . . . But why is it that English sentiment has such terrible difficulty in being light in form and true in substance? It seems sometimes that only the most intense feeling can fire the English mind; that it is like hard wood, flaming gloriously when once thoroughly kindled, otherwise producing more smoke than light.

"BILLY" WALSH

By JOHN SLOAN

CONTRARY to popular dogma, the "specialist" has never been a master artist; conversely, the master artist is always a man of the broadest and deepest attainments; all subjects, all mediums are grist to his mill. Few men attain to this free mastery over life and materials. Among these, John Sloan is surely to be numbered. A master in understanding, an intense self urge for the truth, gives to his work, in whatever medium or from whatever motif, a dignity and an intimacy with life rarely met with among the artists of any generation. This is a fine example of Sloan as a portrait painter.

A Landmark

THE famous Oregon case, in the United States Supreme Court, established the principle that the people of a state have a right to make special legislation protecting women in industry. If it is constitutional to demand that women shall not be forced to work more than certain hours in certain industries, it must be constitutional, if the law has any sense in it, to establish a minimum wage for women, for it would be a feeble performance to cut down their hours and then allow their wages to be cut down accordingly. The case of *Stettler versus O'Hara* and others will come up before the Supreme Court soon, and will settle the question of a minimum wage for women.

The defendants in the case are the Industrial Welfare Commission of Oregon. In the Circuit Court, Judge Cleaton decided in favor of the constitutionality of the act of the Commission in establishing the minimum wage of \$8.64 per week for women employed in manufacturing establishments in the City of Portland. The world is beginning to realize the loss that comes to it through poverty and the resulting disease, crime, immorality and inefficiency. The community pays indirectly for the disastrous results far more than it would cost directly in wages.

The Worst Subsidy

EVERY person who is receiving less than a subsistence is helping to make a non-subsistent wage the rule. The department-store manager who advertises for girls "living at home" is advertising for the non-subsistence wage. The wages of women have not been fixed by the value of the services rendered nor by what the industry could afford. They have been fixed by the unregulated law of supply and demand. That law, in its unregulated and destructive form, has seen the end of its career.

If the bounties are to be paid, let them be paid in hard cash. We want no more secretly subsidized industries, and any industry which pays less than a living wage is receiving a subsidy of the very worst kind. The minimum wage has been tried since 1896 in Victoria, N. S. W., and for a shorter time in England, and all the experience thus far acquired is very favorable. It makes toward industrial peace. It stimulates the employer to reduce cost by improvements in organization and by new inventions, and also to develop and keep the most efficient workers. It stimulates the workers to prove themselves efficient. It will be a foundation-stone of the industry of the future.

Competition

PRESIDENT WILLARD of the Baltimore and Ohio Railroad, advocating higher freight rates, declares that the increase in the price of coal during 1913 over 1910 cost his company \$448,000. It would be interesting to know how it is that various progressive gas companies have succeeded in reducing the price of gas while the price of coal and of oil has risen. The Citizens' Gas Company brought a Christmas gift to Indianapolis with a further reduction to fifty-five cents. What is the explanation? Does it lie in a new efficiency bred of competition with electric light?

A Good Example

THE firm of J. P. Morgan & Co. showed good judgment in withdrawing from many interlocking directorates and we hope their withdrawals will soon carry out the principle completely. Much of the best intelligence in this country, especially since the Civil War, has gone into business, and when that intelligence undertakes to cooperate with the public, and with the spirit of the times, it can make itself of the highest value to the community. The example of the Morgan firm is undoubtedly an aftermath of the recent history of the New York, New Haven and Hartford Railroad, and if the disastrous experience of that railroad causes a willing and rapid reorganization of our financial system along enlightened, modern, ethical lines, it will be a striking example of the truth that if we accept things in the proper spirit much good can often be brought out of misfortune.

Fear

NEARLY all games are won on the other fellow's mistakes. After the Tariff Bill was passed, the air was filled with talk about the danger to the country of passing the Currency Bill. When that act was passed, reactionaries said it would be a good thing, but warned the community against further legislation. Even so brave a man as the President may well be made a little nervous, especially when some members of Congress, and possibly some members of even his own Cabinet, have decided that the time has come to put on the soft pedal. Mr. Wilson, so far, has gone ahead and done the work he went in to do. He has carried out his program and the program has been accepted. There is only one course of safety for him, and that is to pass his trust program with the same cool determination and clear reasonableness with which he passed the other two big bills.

Unfit Directors

DURING the investigation of the New England railroad situation by the Interstate Commerce Commission, the Boston & Maine insisted that it must very materially increase its transportation charges. Commissioner Prouty invited the State Commissioners of Maine, New Hampshire, Vermont and Massachusetts to join him in considering the application, and their unanimous report has recently been made public. Concerning the directors of that company, the report says:

"If these gentlemen have in recent times given any actual attention to the management of their properties, their failure to see and to do is evidence of their conspicuous want of fitness for the place. If, upon the other hand, being vested with the duty of management, they have utterly neglected that duty, and know nothing about the operations of these companies, that fact is even clearer evidence of their unfitness for these positions."

The report contains much sound advice to both railroad managers and investors—and ample justification of the term "The Inefficiency of the Oligarchs," which Mr. Brandeis has chosen as the title of his article in the present issue.

Chairmen

THE CITY CLUB OF CHICAGO held a discussion recently on the subject of the city's "garbage problem," a discussion admirably conducted, thoughtful and constructive. But the chairman, we think, gently imposed upon his audience when he said:

A rather trite expression has it that the degree of civilization attained in a community is indicated by the efficacy with which domestic and other wastes are disposed of in that community.

Were "waste disposal" erected into a scale for measuring civilization where would Greek civilization have been? Listen to this:

In spite of all the talent at her [Athens] disposal, asking for nothing better than to do her bidding, her organization was more primitive than that of our most backward country town. . . . Her streets were narrow and crooked, dirty, unlighted and ill-paved. She had no sewers, or even cess-pools, and over the whole department of sanitation it is best to draw a veil. . . . The Athenians lived under the Acropolis, as many generations lived under the spires of Oxford, in "squalid magnificence."

Our theory is that the chairman yielded to the strong pressure of the occasion and unconsciously invented a generalization which would link up the subject of "garbage disposal" with what he vaguely felt were the "higger issues of life." All presiding officers do it. The toastmaster at the annual banquet given by the hardware dealers' association will say:

A rather trite expression has it that the degree of civilization attained in a community is indicated by the ingenuity and multiplicity of the small tools available in that community. (Encouraging patter of applause.)

Unless a chairman guards against the peculiar temptations of his calling, he will be as quaint as Buckle in his remarks and as insecure as Benjamin Kidd.

To Unlock Alaska

THE first real test of the progressiveness of the Democratic majority of Congress will be the vote on the bill "to authorize the President of the United States to locate, construct and operate railroads in the territory of Alaska." The Democratic party was committed in its platform to the revision of the tariff and of the currency. Only the Progressive platform called for "the prompt acquisition, construction or improvement by the government of such railroads, harbors and other facilities for transportation [in Alaska], as the welfare of the people may demand." President Wilson, however, in his December message to Congress said: "Alaska, as a storehouse, should be unlocked. One key to it is a system of railways. These the government itself should build and administer, and the ports and terminals it should itself control in the interest of all who wish to use them for the service and development of the country and its people." The pending measure therefore has the support of the Administration, including the strong backing of Secretary Lane. The bill contemplates the expenditure of \$35,000,000 in the construction of 733 miles of railways, which will open the coal-fields, furnish transportation for gold-mining machinery to the enormously rich gold-fields of the interior, vastly increasing the gold supply of the United States, and will enable the great agricultural resources of Alaska, probably its richest asset, to be developed and the lands settled. The conditions proposed for the extension of the present lines were the opening of the coal-fields for monopolistic exploitation, such as was rendered forever impossible by the Pinchot victory over Ballinger.

The public should let Congress hear from it. Will the Democrats give up to the Progressives, the field of constructive opening of Alaska?

Congress and the D. C.

WASHINGTON newspapers are excited over one or two proposals by members of the House to abolish the half-and-half system. They are indiscriminate in their condemnation of every effort to establish an equitable system of taxation in the District. The assessments have been raised under the new Board of Assessors, so that the Commissioners were able to make their estimates of expenditure upon a basis of \$14,000,000, half to be raised by taxation and half to be paid from the national treasury. The House Committee on Appropriations cut this down to \$11,000,000, and says it found a debt of a million and a half dollars due from the district to the federal government for forty years, heretofore concealed by faulty bookkeeping. Instead of seeking to establish the justice or injustice of this claim, the Washington papers simply arraign the Committee as enemies of the District. There is an increasing demand for the right of self-government. The federal government should be responsible for making the national capital what it ought to be, but it should give the District the right to raise its own taxes for municipal purposes. Taxation without representation is not the thing to be legalized at the capital of the nation horn in a protest against that form of tyranny.

A Talker in Athens

SOCRATES called himself "The Gadfly of the State." What made him such an influence was that while he stirred and challenged other minds he was modest and just about his own. It will be remembered that when the oracle said he was the wisest man, he could explain it only on the ground that he knew the limits of his own mind, and others did not know even that much.

"I am one of those who are very willing to be refuted if I say anything which is not true, and very willing to refute any one else who says what is not true, and quite as ready to be refuted as to refute; for I hold that this is the greater gain of the two, just as the gain is greater of being cured of a very great evil than of curing another." And again, "If unintentionally I have said anything wrong, I pray that He will impose on me the just punishment of him who errs; and the just punishment is that he should be set right."

Athens tired of him at length and gave him the hemlock, just as she tired of hearing Aristides called "The Just." She was a volatile country, but after all, she was full of genius, and while she may have punished the great at times for their troublesomeness, she did not reward the commonplace as so many other nations have done and still do.

Steinmetz

WE talk a lot about the early Christians and the homespun Puritans, but as soon as we get a little temporary glory and our salary climbs, we don't care to be simple. The near-great—those that are merely successful and prosperous—are hedged around with a man-servant and a gaudy front and a chilly wait. The nearer they come, the more they exude distance. But Steinmetz sees you if you are the veriest obscure stranger. The unknown man is the one whom he is readiest to help. And his help and his recognition mean something, for, of all the living, he is the leader in his profession. Charles Proteus Steinmetz is greatest of the electrical engineers. With the planet leaking electricity, he came among us to draw off that supply. He fills the night of our modern cities with a blaze and a bonfire like noon, when his magnetite lamps flicker through space. He has helmed us in to the vagrant and immense tides of the air.

He is a man who might have been a pampered invalid or a stuffy professor. In body he is crippled, but the Givers for once were lavish when they came to the making of his mind, and they gave him intuition and accuracy, a scholarship that could tear secrets from new regions, and an insight into lightning and the hidden magnetic field. His tables of electrical laws have simplified method, so that practice results. His one hundred inventions have brightened our world for us. As light comes out of carbon, so reality comes out of his mind.

And when he is not diagramming his cold illuminants, he reads the Greek and Latin literatures. The mythologies used to tell of god-like persons who had fleetness, and a mastery over the elements. But this imperturbable worker in the blue flannel shirt, laying hold of the viewless drifting currents, has enlarged us beyond the early dreams of the race.

Our Lady Friends

DO you know El Iman El Jarace? Well, we confess our own knowledge on the subject is not wide, but the following is a quotation:

"It is desirable for each man before he enters upon any important undertaking to consult ten intelligent persons among his particular friends; or if he have not more than five such friends, he shall consult each of them twice; or if he have no more than one friend, he shall consult him ten times at ten different visits; if he have not one friend to consult, let him return to his wife and consult her, and whatever she advises him to do, let him do contrary; so shall he proceed on his affair to gain his advantage."

It is not so much to the general amusing skepticism of this that we wish to call attention, as to the last touch, the slap at the advice of the wife. There you find the Orient speaking. The Occident speaks perhaps at its best in certain lines in which Emerson tells what a woman friend means to him:

"O fair and stately maid, whose eyes
Were kindled in the upper skies
At the same torch that lighted mine;
For so I must interpret still
Thy sweet dominion o'er my will,
A sympathy divine."

Even the Orient is beginning to change. Even there it is becoming less inevitable that one half of the race shall look upon its own point of view as the only point of view that deserves to count in the working out of our destiny.

A Man

THE recovery of Leonardo's lady, still smiling, is a reminder that in greeting her painter she may well have thought of him also as a man. If you know Leonardo only as the smile-maker, the depicter of St. Anne, the creator of that too-beautiful boy St. John, you have yet to meet the real da Vinci. One reads that he invented the wheelbarrow. He was an ardent student of the flight of birds. He projected flying-machines—and if Wilbur Wright had only been there to help him stick to it, rest assured that we should have been flying three hundred years ago. He was a military engineer—rich in plans for movable bridges, fearsome cañons—all sorts of works offensive and defensive. If he had lived in the twentieth century, he would have shared Goethals's job diggi'g the Panama Canal, and then he would have designed a statue for the entrance—a statue to be cast in concrete, and visible for three miles—serving as a lighthouse on dark evenings. He was architect and toy-maker for Francis I. of France. He worked in all the sciences—in music, in poetry and in philosophy. He made pumps. Today we all blink when Shaler proves that he can write an epic as well as a geological report—that he can be a soldier as well as a scientist, a citizen as well as a teacher of youth. We gasp when a Weir Mitchell leaves the consulting-room and rests himself by writing half a dozen best sellers. As La Gioconda often told herself while sitting for that much-traveled portrait: "There is a MAN!"

Keeping Money at Home

By EDWARD K. GRAHAM

Acting President of the University of North Carolina

IN recent years a great many writers and speakers have shown extraordinary interest in this section in which we live. They have spoken fair words of praise of our resources, our history, our "native stock," our manufactures, our farms, our water-powers, and they have shown their faith in our future in the best way strangers can show it—by putting their money here. But the main interest they feel in this section is not the opportunity it has of developing its material resources, but the unparalleled opportunity it has of building up a great civilization.

I was reading the other day in HARPER'S WEEKLY an article that spoke of a certain man as a fine type of new Southerner, not the vaguely idealistic type, fine but ineffective, not the type exactly that is building our peculiarly successful commercial cities, such as Atlanta and Birmingham; but the kind of man who is hammering his ideals into his business and his citizenship, and who is invigorating his ideals with practical performance.

That is the reason we are interested in this civilization we are making in Mecklenburg. We are justly proud of every particle of material prosperity that we have won; but there is a deeper reason for our eager civic interest than our material success. We are not working here merely to have the richest county and the biggest city in the country. If we have 200,000 people and fifty skyscrapers in Charlotte in the next half century, we'll only match Atlanta of today, and there will be two or three hundred more just like us. We are glad of the prosperity, and the more of it we get the gladder we are; but it is for the use we can make of it, in setting us free from the slavery of poverty, that we may be fully at liberty to work for precisely the sort of civilization that we want here, that we are mainly glad.

That is the interesting, the thrilling thing that the material prosperity we have won has done for us: it has put us where the manly man and the manly civilization asks to get—the position young Solomon was in when the Lord challenged him to make his choice. We do not ask for the biggest town or the richest town, so that the people at the top can have enough money to stop work. We do ask for wisdom enough to know what the permanent and progressively good things to work for are, the civic will to work for them, and the material prosperity to put wheels under them to make them go.

What we have learned is that it is wise to work together for a good place to live—a good town, in a good county, in a good state. And we mean by a good place to live, a place both to make a good living and to live a good life—good money, good water, good streets, good schools, good churches. A good place to live is a place to invest money and get bigger returns, and to invest life and get bigger returns.

What do we get on our investment here? What, and how much? That is the problem of agriculture, business, education and citizenship: translating lower values into higher values in quantity and quality.

AND as we have worked at this problem here during these past fifty years of privation and struggle we have learned that conditions for getting good material things (good food, health, clothing, roads) are not separate from the good spiritual things (good churches, good schools, good government), but that they are interdependent, all a part of the same good civilization, just as sound physical health is a part of sound spiritual health. Our commercial and "booster" organizations have learned that it is necessary to have good schools and good churches; it is likewise necessary for education and religion and citizenship to remember that the ma-

terial well-being of all the people is a part of the spiritual ministry of us all.

We cannot separate them and win this great game of Christian Democracy that we are playing. The Good Samaritan did a religious act when he healed the physical wounds of the man by the road, and provided him with money for his material comfort, and Christ commended him. The man He condemned was the priest who ignored the man's material need. One other man He condemned: the rich materialist who invested his active life in filling his barns, with the idea that when he got them full to bursting he would cultivate his spirit. Both the priest and the farmer were wrong, and for the same reason: they separated material needs and practice from spiritual needs and practice. The life we lead in our stores, fields, factories, offices, is not and cannot be separate from that we lead in our homes, schools, churches.

Whatever promotes the material welfare of the largest number of people is an essential of good government, as it is of good education and of good religion. Good citizenship is not a fierce struggle in our business to take all the other fellow has and then endow a school and church for him to go to for consolation. It is not a margin of education, philanthropy and religion around a pool of commercialism. Big men in business are more and more coming to discover the value of profit-sharing and co-operation between all factors, even in business itself; and fortunate will be that community which extends to every detail of its economic life that same doctrine of fraternal co-operation which gave us democratic government and the Christian religion.

WHEN we look at the facts of the conditions of our schools, our churches, our roads, we are apt to feel discouraged, and to wonder what is the trouble with our government and theories of government. We do not like it when we see that we stand near the bottom of the long roll of states in illiteracy, and near the top in the proportion of our children that work in factories. Some of our friends tell us that these children live under better conditions in their mill homes than they did in their farm homes. Perhaps they do; but none of us can deny that the economic condition that makes this true is a wrong condition. We are responsible for it, as well as the mill owners. It is a good thing to pass a law requiring compulsory attendance and a six-months term; but we must go deeper than that. The economic welfare of the whole community must have a sound foundation to be able to enjoy these privileges and pay this money. We conduct these enterprises on the community surplus, and when we come to examine the facts and find there is little surplus, we see clearly enough why it is that our public enterprises are weak and the State treasury exhausted.

Dr. Bradford Knapp told the bankers in Asheville a few months ago that the people of North Carolina are sending \$39,640,885 out of the state every year for supplies that might be raised at home. The commission appointed by the Governor reports that the feed stuff imported into the state this year will amount to over \$30,000,000. It says that the farmers pay from 12 per cent. to 30 per cent. for their loans. Our farms created \$200,000,000 of wealth in 1900, but their feed bill was \$223,000,000. We have produced in two and one-half years more than we have accumulated on our tax books in two and one-half centuries. Any man who will study the figures that represent our productive life will agree with Professor E. C. Branson when he says that "the wealth-creating power of North Carolina is enormous, but its wealth-retaining power is feeble." And it is on the yearly cash balance of the community that all of our public enterprises of uplift depend for support.

This then is the problem for the good-schools people, the good-roads people, the good-churches people, for good citizenship of every sort: how can we make this community bank account more prosperous? Or can we make this question more definite still: How can we protect and promote the material prosperity of the home of the productive man on the farm? For if we picture North Carolina civilization from any angle we choose, looking at it through the school, the church, the store, the railroad, the town, we see as the saving grace of it the prosperous farm, tilled by its owner. There is the living heart of the matter! If our civilization is planted on the prosperous home-owned farm, it will be as a tree planted by rivers of water; planted on a political and social economy that prevents and discourages house ownership, its leaf and fruit will be withered and barren. Under present conditions it seems more profitable to move to town, take stock in the bank and run a store; and we may expect the owner to move, but we needn't expect the one-year tenant to borrow at the bank, buy at the store, and have enough money and ambition left to be a forward-looking, upward-building citizen. None of our institutions will be safely prosperous if this productive farm-home is not safely prosperous. The facts tell us it is not safely prosperous.

Home ownership of our producing farms is decreasing instead of increasing. In 1880, 33 per cent. of the farmers in North Carolina were tenants; in 1890, 34 per cent.; in 1900, 41 per cent.; in 1910, 42 per cent. In our own town of Charlotte, population and wealth have multiplied at a fairy-like speed. We have gained 88 per cent. in population, and practically doubled our wealth with each decade. But the population in the county has shrunk 11 per cent. Sixty-four per cent. of the farms in Mecklenburg are cultivated by tenants against 62 per cent. in 1900. In spite of the great increase in the cost of farm products, very few more acres, relatively speaking, are under cultivation, and only 53 per cent. of the land is improved. Over one third of the total area of the county is in woodland and unimproved farm land.

TENANCY has left its black blight across civilization after civilization, scorching the spiritual as well as the material life of the people. Under tenancy and other bad economic conditions of agriculture the whole social scheme falls into decay. Sir Horace Plunkett, prime-mover in restoring landless peasants in Ireland to land-ownership—and England is spending \$940,000,000, in this enterprise and thereby redeeming Ireland,—says of our farm tenancy system: "It is the worst of which I have any knowledge in any country."

But I do not mean to discuss in any detail the question of farm tenancy. It is a symptom rather than a disease. I have dwelt on it because it is typical of many questions set for us to solve, and to emphasize the great fact that it and many other seemingly material questions are vitally related to every higher aspect of citizenship, and that they are to be solved not merely by the cooperation of farmers, but by the cooperation of all good citizens: the banker, the lawyer, the teacher, the preacher, the merchant—the Charlotte Club as well as the Farmer's Union.

I have the temerity to believe that good citizenship in solving them will express itself here in some form more constructive, statesmanlike, and democratic than great philanthropic gifts to alleviate human poverty and crime. True citizenship and philanthropy are those that prevent poverty and crime rather than attempt to relieve them after they have been created. Asylums and jails are more often a sign of bad civic economy than of deliberate sin and of bad human motive. Education that goes with a plan of increased tax in one hand, should go with a plan of increased ability to pay in the other; Christian philanthropy that goes with a plan of salvation in one hand should go with a liberal land lease and credit system in the other; politicians and public men who on election day "view with alarm" in-

iquitous conditions in Wall Street, should also look with studious care and sympathy on facts that every day are making or marring life on Trade Street and Pineville road. The real fight for representative government is to be fought before conditions of ordinary living grow through neglect into great evils.

WE need conferences on education by the school people, and on roads by the roads people, conferences on various special interests by labor people, bankers, and merchants; conferences for the good of the farmers and for the good of the city people; but we need non-partisan conferences by all of the people, for the common good of all. We need conferences where we would see our civic life for what it truly is: a single thing—not made up of separate antagonistic divisions but all members of one body, in which the blood strengthens the mind and purifies the spirit, and where it will be seen that there is no permanent progress for any without due regard for all of the interests of all.

It may be objected that such cooperation is not practical. But it is! There never was a time in our history when any class of our people in a crisis failed to rise to a great civic or human need. The great opportunity of our section is not for heroic civic service in the hour of disaster, but for that daily civic service that prevents a disaster and promotes general happiness.

A few days ago the newspapers pictured an incident that because of certain sensational features of interest transfixed the attention of the world. A ship loaded with hundreds of human souls was burned at sea in a terrific storm at night. The shell of wood in the grip of wind and wave and darkness, and the precious freight it bore was a pitiable spectacle to its apparently hopeless contest with the omnipotent forces that sought to destroy it. But the same Power that rode in devastating violence upon the storm, had provided through the patient and painful civilization of the centuries the means of salvation. Terror-stricken instinct for self-preservation was controlled by educated discipline, and a disgraceful panic of each-man-for-himself was changed to a cooperative effort for the rescue of all; the miraculous voice of the wireless—the result of the expeditious years of labor and research and capital, called above the fury of wind and wave, and assembled the sympathy and courage of the citizenship of the sea; it reached through miles of darkness and storm and found a representative of perfectly organized business efficiency—the oil ship. And the warfare of the most terrific of natural forces was stilled into peace.

BEHIND this divinely thrilling and dramatic spectacle we can see in miniature the not less thrilling spectacle of our civilization working out its salvation through the cooperation of the same forces: knowledge taking account of material fact, and individual self-interest and using its facts to build to higher knowledge, and joining with commerce and faith and heroism and brotherhood to build to still higher power and freedom and the more abundant life that comes through learning the ways and laws and use of material forces, and transmuting them into ever higher values.

The thing that happened there on the sea makes up our every-day life. The river slips by the tow and runs to the sea, a muddy, turbulent stream. Its force is caught and converted into usable power. It turns the factory wheels, lights the streets, lights the school and the home and the church. It purifies and cleanses the town and gives it health. We have mastered the fact of it, its ways and its laws, and the turbulent, muddy stream is no longer material, undirected force; it is spiritual life.

We call this process of mastering the ways and laws of material forces that they may lend to higher and higher productivity, education. It cannot go too high; it knows no high nor low. Its business and the business of all forward-looking, upward-leading men is to be vitally interested and mutually helpful in all of the forces that make up our actual, active life.

The maids' sitting-room, which is keeping girls off the street

Miss Deaver and the Hotel Maid

By SARAH COMSTOCK

What is being done in the Hotel Astor to make the life of the female servant a little more worth while

TO get at the sort of thing that Miss Mary Julia Deaver is doing, take, for instance, the case of Poli Oleksy and the "graft."

Poli was one of the molecules which pass through the sieve of Ellis Island. The graft was a complete, compact, exquisitely-worked-out system in the help's dining-room of one of New York's greatest hotels. In its small way, it was worthy of police, or city officials, or senators even. It was a pocket-edition outrage.

Take this Polish girl of seventeen, very homesick, very shy, and totally ignorant of English, and the graft was too much for her to cope with. She had just been through her trial by water, which meant that she had been given an elevator to clean, and, having passed muster, had been installed as a scrub in the hotel. She had now gone down to the dining-room for her first meal. Waiters were dashing about with trays of food; a fat old woman on Poli's right received a bowl of soup; a dly-eyed Hungarian girl on her left had a plate of stew; but Poli sat on and on, while others ate and departed.

Tooshy and destitute of English to make her wants known, she slipped away at last, hungry. As she went out, a tall person, usually leaving the room, eyed her keenly; but, as yet, Poli did not know Miss Deaver.

At supper she sat again, unsevered while others ate. Famished, desperate, she turned at last to her fat old neighbor. "Why don't I get anything to eat?" she

asked, and found that the woman knew her language.

"Huh!" grunted the woman. "Where's your nickel?"

This, then, was the condition that obtained in the help's dining-room. Unless a tip, squeezed from the maids' wages, was laid down at the beginning of a meal, not a crumb of food was served them; and five cents was the minimum. The tips sometimes ran as high as fifty cents a day, the whole of a girl's wages.

Poli had learned her lesson. The next morning a five-cent piece, cherished to buy postcards for the old country, brought her a breakfast. But still more important was the fact that Miss Deaver had caught just enough of the little drama to get an inkling.

THE story of how she ferreted out this scandal, which had long been hiding itself shrewdly, has a spectacular denouement, which was the official discharge by an indignant management of the entire help's kitchen crew of sixty-five, including the chef. But for Miss Deaver, the bleeding of the maids might be operating successfully today.

She is the welfare worker of the Hotel Astor in New York. She is employed by the management to study and improve the living and working conditions of its employees. This sort of thing is being done in many factories and department stores, but in hotels it is pioneer work.

And everybody who knows the old hard-luck story of "living-in" knows that the hotel employee needs it perhaps more than any other working girl. Dark and filthy sleeping quarters, wet floors to breed disease, unwholesome and meager food, unventilated bunks—all these have been sordid elements of the tale in countless places. No wonder that the eyes of people interested in industrial conditions all over the country are watching what Miss Deaver is doing.

HERE is a handful of the things she has already done:

She has reformed food conditions for the servants—I'll tell you about the spoiled cutsup later.

She has induced the city's board of education to transport bodily, teacher and all, a school to her hotel, where ignorant foreign girls are being taught English. (To meet her, you might think her a modest person.)

She has handled her little emergency hospital so skilfully that dozens, scores of petty accidents and illnesses which might have run on into the most serious of cases, have been arrested and the worker saved—a carpet tack in a thumb being less trivial than the houseman supposes.

She has made the maids' sitting-room so attractive that they now have a place where they like to go in the evenings—and the tragedy of no place to go, evenings, is the tragedy we all know.

"It is no easy to take an ailment there and come away cured"

As soon as Poli Olesky can speak English, she can throw light on what Miss Deaver is doing; for Poli had encountered another phase of hotel life before she, the weeping molecule, came into juxtaposition with Miss Deaver. She had reached Ellis Island alone, and homesick to the point of agony. She had flattened her stevedore pillow with tears all the way over. An agent, looking for raw recruits for service, had observed jocosely, "You won't need no pail o' suds when you're a scrub; your tears'll do." Then, because girls were scarce that day, he added, "Dry up and come along;" and then he led her to a hotel where she was set to work.

That night she sought her sleeping quarters, drenched and aching. She slipped off her dripping dress and looked about for a hook.

Somebody laughed. "Hang it on your nose, greeny."

THERE was no hook. Twenty-eight girls slept in the room, all in double-deck beds; just one chair was provided. In the end Poli laid her drenched garments across the foot of her short bunk and crawled in under them.

Unsanitary plumbing in the ill-kept bathroom endangered her health, even though she did not know it. Windows in the dormitory seemed rooted to their casings and there was no ventilation except through the door. A crowded, dark cellar-room was used as the help's dining-room.

Every day when work was over Poli crawled into her bunk. She knew nowhere else to go. Often she was alone in the room for hours.

"Where are the other girls?" she asked once.

A shrug answered her.

That shrug is a sidelight on the value of Miss Deaver's sitting-room.

No wonder that when Poli drifted to another hotel, and was shown the sitting-room, and her own single bed, and drawers for her garments, and a private locker, and a rocking-chair—no wonder she melodramatically covered Miss Deaver's hand with Polish kisses, and inquired whether she had died and arrived at the pearly gates.

PICTURE a long, lean, dark person; as erect as the obelisk; plain of feature; plain of hair-dressing; angular of movement; but possessed of a remarkable pair of eyes. There is a sort of fascination in the eyes, and in fact in the very long-lean-awkwardness of her; it is herself.

Mary Deaver came to New York from the South. She was born, brought up, and trained to nursing in Virginia. She practiced there. Nobody ever heard of her.

She never expected to be heard of. She was the sort of person who set about her work and gave it her best effort because it was hers to do. She has the extremely rare faculty of working intensely without looking for results. Modern mental scientists teach this as a get-rich-quick scheme, and Christ taught it on the basis of seeking first the Kingdom of God. During nineteen centuries it has been difficult for human nature to practice it, but it has never yet failed to work. In her case, it created a chain of doctors and patients who passed on the news that she was wonderful, until it reached the managers of this hotel who had decided to have a nurse to carry out their welfare plan.

She came modestly to the position. There was no blushing of trumpets.

Apart from her work, she is exceedingly shy in manner. She said a curious thing when she took the position. It was:

"Why, I don't really need all this!" when she saw the large room and private bath assigned her.

"One of two things," observed a worldly-wise bystander. "Either she's too self-effacing to be worth her salt, or she's too big to be interested in herself."

It was in October 1912 that she was installed. It was agreed that the employees should know her as Nurse, because such a term as "welfare worker" might to their ignorance suggest a spy. She was altogether an experiment; perhaps she would not be worth while in either capacity.

She was given a white office, aseptic of countenance, in the maids' quarters where between two and three hundred girls live. The men, too, could go to her there.

At first the office, with its emergency cot, looked rather strange and alarming. Cases dribbled in. A kitchen boy turned his finger and was sent to Miss Deaver; a parlor maid had a sore throat, and the housekeeper showed her the way to the office; a chambermaid became ill as the result of a five-pound box of candy given her by a guest. All told, the first month showed forty-eight cases treated.

BUT the popularity of the white office grew. It was no easy to take an ailment there and come away cured. When matters were very serious, Miss Deaver called a cab, and went along herself with the patient to a hospital, and then went to see him every day. She had a way of making people feel better the minute she began to talk.

A recent month showed a total of one hundred and seventy-one cases brought to the white office. Largely, they are

burns and cuts from the kitchen. A houseman who selected his thumb instead of the floor for the placing of a carpet tack was checked in his career toward blood-poisoning. It has even reached this point:

A kitchen man blunders in shyly. "We've got a baby to home," he says, beaming and embarrassed. "And my wife she wants to know, what can she give it to cure it of teethin'?"

Judge from this whether Miss Deaver has won the employee's confidence.

WHEN she was not too busy bandaging thumbs, she cast her eye about the sleeping rooms.

Already the hotel management was cutting up the large dormitories into smaller rooms where four or five girls, instead of thirty, could be grouped. This is a vital point, for the old-time hotel system gives maids no privacy, and the hours of work cannot correspond among so many; some are trying to sleep while others are up and moving about. Miss Deaver found this condition being bettered, but there was still plenty for her to do. She made a raid upon the double-deckers.

"The double-deckah is the established curse of livin'-in," she declared. "It's enough to ruin a girl's health. We ought to have a single, open bed for every girl in the place."

This from the modest person from the South who had thought the suite conferred upon her for her personal comfort altogether too much! . . . The double-deckers went. The change involved far more than expense; it involved tradition. But once begin, where is the line to be drawn? The modest person from the South, always in a gradual, tactful way, but always with a firm chin, wanted first

one and thing then another; for instance, chiffonieres instead of the old shelves and hanging mirrors. Well, let her have 'em. Buy sixty at once and see how that suits her. She wants the walls of the bedrooms all freshly and cheerfully painted. She wants extra lights for the maids' comfort. She wants new mattresses for their beds. And then the matter of lockers—

"You see these girls like to keep theah Sunday frocks all nice and smooth, same's the guests do," she explained sweetly. "And it makes 'em all such a lot moah contented if you-all encourage 'em in bein' neat and self-respecting. They do theah work so much bettah."

Each maid now has a private locker and her own key to it.

The maids' sitting-room is furnished in the mahogany and dark green of the best suites. It has low lamps, and there are three desks where the Aomies and the Katis can plow their inky way across Grant's Tomb postcards. Miss Deaver has a way of dropping in and chatting. She brought table games and taught the girls how to play them. She sees to it that magazines are on the table. If a girl can't read, she can at least gaze upon the work of our illustrators and glean from it the latest styles of hair-dressing. You can't tell about the things that sitting-room has done without sounding like the "Virtue" and "Sin" allegories in an old recitation book. Summed up, this is the story of the maids' sitting-room which Miss Deaver has charged with her personality: it is keeping girls off the street.

IT was really the spoiled catsup which started the food investigation.

Miss Deaver happened in at the help's

dining-room one day and saw a waiter condensing the remnants left in several catsup bottles.

"That looks pretty old," she observed. "Why don't you throw it all out and buy new? The management isn't stingy."

She picked up one of the bottles and sniffed. Nobody could have mistaken the odor.

"Spoiled!" cried Miss Deaver with vehemence. "And what you took from this bottle makes all the rest dangerous. Don't you know what the results from spoiled catsup may be?"

That was the beginning. The plot thickened to a thrilling climax: it was discovered that tainted fish and meat were being served to employees.

THE investigation was hers, the discovery was hers, the reform was hers. The management was aghast at what she reported as going on under its very nose. It bore down upon the kitchen and swept it clean of danger. If it had been in doubt as to the value of a welfare worker, its mind was clear now.

The hotels get their maids through agents who take them as soon as they arrive from Europe. The maids' quarters sound like a Tower of Babel. A large number of the girls cannot speak enough English to make themselves understood.

The other day I was with Miss Deaver when she spoke to a Polish girl in the hall. "Sophie, won't you please get my book?" she said. "I left it on the table in the sitting-room—" embellishing her directions with nods and gestures. Sophie went. She returned triumphantly with a csa-opener.

"Do you wonder I started a school for non-English-speaking bath-maids, chambermaids, parlor-maids, cleaners, laundry

"When Poli was shown her own single bed, and drawers for her garments, and a private locker, no wonder she melodramatically covered Miss Deaver's hand with kisses"

help, and pantry girls?" she asked me.

When I dropped in for a chat with Miss Gertrude Beeks, the biggest authority on welfare work in the country, I said, "How did Miss Deaver ever get that school started?"

Miss Beeks' hands arose in the air. "How did she?" she cried. "How does she get everything she goes after? The Board of Education never did such a thing before."

THE modest, shy, plain, quiet, surprising Miss Deaver merely asked for it. She had decided that it was needed. These girls must learn English if they were to have a fair chance in our land. They could not go to the school, therefore the school must come to them.

She calmly presented her request to the Board of Education, and the Board first gapsed, then complied.

It selected a teacher, it gathered books, it installed a school for four evenings of each week in the hotel.

Of course there can be nothing compulsory about the matter; but Miss Deaver drums up attendance as if she were an expert revivalist or a glad-hand politician.

"Girls, the moah English you know the moah money you can make," she offers skillfully. It works. Furthermore, the school is winning out through sheer interest in the lessons.

I heard the earnest teacher addressing her class of twenty-three. "This is my nose," she said slowly, and with careful utterance. "Show me—tell me—this is my nose."

"Tees ees my naws," repeated the twenty-three, clutching wildly in the desperate effort to remember which part of the anatomy "nose" might be. One seized a right ear, another a left eye.

Later in the week I dropped in again. Every girl knew her nose. I agreed that it was much to have found one's nose in English.

But as the weeks are progressing, the results are of the kind that one reckons with. These girls are writing English sentences, are framing English sentences, are reading English sentences. Their minds remind me of inflammable little bundles to which a match has been touched. They have gone off in a flash, flaming up hungrily for knowledge and more knowledge. Miss Deaver's school is in its infancy, and already it is making history.

"The Psychology of Revolution"

By JOHN B. HUBER, M. D.

A DECADE and more ago appeared Le Bon's well-nigh epochal work "The Crowd: A Study of the Popular Mind," in which he held that the mind of the human unit in the crowd exhibits phenomena by no means akin to those characterizing the isolated individual. In the crowd the higher psychic centers, those latest developed in the aeon-long process of evolution, the nearer "supermannish" of the human faculties—reason, intellect, judgment, self-mastery, the kingship of all that is under one's own hat—are for the time being cut out of the normal circuit in the nervous system; they are temporarily in abeyance, and the organism passes under the domination of the earlier developed centers, which underlie the primitive instincts and emotions. In the crowd the mind of the unit is as that of the savage or of the child; it is basic, primeval, impulsive; he, in the crowd, does things at which, immediately on becoming free of its dreadful contagion, he is amazed, and of which he is heartily ashamed; he is precisely as one who has been hypnotized, which state is possible only through inhibition of the higher cerebral centers; the conscious has been abased, the subconscious has become exalted and paramount. And yet, the subconscious in man, besides being fundamental, is the repository of racial traditions, of the soul of a people, of a faith perhaps long since ignored or forgotten by the conscious mind, of aspirations hopeless of attainment in reason; wherefore the crowd, though it is capable of, and has all too often in history done, things most horrible (witness St. Bartholomew's and the French Revolution), is also capable on the other hand of most wondrous heroisms (as witness the Crusades). Both extremes have been possible through utter absence of any sense of responsibility, or of any calculation such as would normally obtain in the individual who would, as an individual, never think of attempting them. Le Bon's thesis has abundant attestation in the anatomy and physiology of the nervous system. The evolution of the human mind has been a most laborious, painful process. Step by step, the nervous centers first formed in evolution. Those in the spinal column are basic; the higher nerve centers have ascended consecutively up the spine to the neck, thence

to the base of the brain, and finally to the apex supreme ganglia in the cerebral cortex, immediately beneath the calvarium—the latter having for their office intellection, judgment, aspiration, altruism, the *volle zum guten*, divine reason, by means of which faculties has been evolved civilization as we know it to-day. Herein lies the differentiation of man from the brute, by which the former has become the most magnificent product we have any knowledge of. And the psychiatrist will explain the mental contagion by which ideas (the most powerful entities for good or for ill in the cosmos), rushing through pathways of discharge in the nervous system, are in crowds in the instant acted on and so often made terribly real. Thus it is that the parliamentary crowds, by "spinal cord legislation" (how superb the phrase, which is not Le Bon's) oftentimes enact the wildest and most iniquitous laws. And the physical phenomena exhibited by religious camp meeting crowds are possible by reason that psychism, directed to any one area, determines an excessive flow of blood to it. Through such congestion come about the hideous things done by the Holy Rollers, the Holy Laughers, the Barkers and the like; by suggestion and imitation, the stimuli are transferred to the allotted nervous area controlling the muscles employed in that act.

AN important tenet of Le Bon is that in the crowd (by which he designates any sort of collectivity, from a jury to a mob) the individual's normal cerebration avails him not at all; from the moment they are in the crowd the ignorant and the learned are equally incapable of observation, equally elemental, equally prone to epidemic emotionalism. Give the veriest sharper only time to get his repeated asseverations imbedded in the subconscious, and he may have in his train the most enlightened and the best educated of his age. Let him who doubts this read of Meunier in Carlyle's *French Revolution*.

Again, as to the leader in his relation to the crowd: Such men are by no means the greatest or the worthiest of their era; they are men of action rather than thinkers; oftentimes they are themselves half-mad (*demi-fous*), morbidly nervous, excitable. Their power lies, oftentimes, not in reason but in the ability to call up images and to excite illusions, such as children dream of. Blatant affirmation can never be too violent, repetition of

words and formulae are the tools of their trade. Slogans, fascinating words and phrases—Democracy, Socialism, Liberty, Equality, Fraternity—are their surest material. They debate nothing, argue nothing. Such leaders are intolerant, fanatic, not necessarily intending wickedness, oftentimes fearfully conscientious. Their ideas are eagerly spread by crowds; such ideas presented in the guise of images become sentiments, not always just, oftentimes most meretricious. To spread such ideas, such sentiments, is life to the devotee, oftentimes more than life. Given, on the other hand, a leader intelligent, well-poised, highly educated, "the possession of these qualities does him, as a rule, more harm than good." An attribute absolutely essential in the leader is prestige, which, and not reason, constitutes the fundamental element of persuasion. Success gives prestige; the leader, however worthy of leadership he be, is "down and out" with his first obvious failure.

IT is these principles which Le Bon has applied in his fascinating book on the "Psychology of Revolution." Though the phenomena of revolution in general are considered, the French Revolution is by far the one most dwelt upon. His very pregnant observation is that other writers and thinkers have sought to explain this epic tragedy by rational logic; whereas its events were governed by "affective, collective and mystic logic." And here one should observe that practically all of Le Bon's writing is very naturally tinged with the Gallic spirit; and almost all his observations are based on the psychology of the Latin peoples. They are therefore to be taken by the American and English critic with an occasional grain of salt; since the latter peoples are more stable in temperament and less impressionable than the Latin races. And yet, in the main, his enunciation of the physiological laws controlling the actions of peoples and of crowds are universal application.

One point Le Bon seems never to have made: that the physical condition of the crowd to some extent determines its behavior. Dickens discerned this in describing the Chartist riots. In the beginning the crowds were orderly and restrained, but as want of food, drink and sleep came during the first and second days, there developed by the third day the hellish mob depicted in "Barnaby Rudge."

"The Psychology of Revolution." By GUILLAUME LE BON. Translated into English by Bernard Mallat. G. F. Putnam's Sons. (\$2.50).

Inventor of Arcadia's fra—
Grant mixture—writes, too, by the way.

Musings of Hafiz

(The Persian Kitten)

APROPOS of my article on the intellectual superiority of long haired feline and human people, I found the following note on the bag desk in the study this morning. It was accompanied by a picture of the writer, which I reproduce below.

"Waddye mean intellectual! I'm a short haired cat meself except in spots where it's been tore off complete, and I'll engage to slap the intellectual fluff off any angora guy that'll stand up wit me for two rounds in any back yard youse like to name."

Lefty.

THE signature is evidently an assumed name, so of course I shall pay no attention to the ill-bred challenge.

In the course of the last few weeks I have received hundreds of letters, many from thoughtful angoras endorsing my views, others from short-haired cats, most of these are unfit to print.

An important letter from Ali Baba and Simbad Haskell, two well-known members of the exclusive younger set of Kansas City, came as I was going to press. I shall print it next week.

ANOTHER correspondent who signs herself Gloria Thompson (I am told she is a member of the family of Mr. Vance Thompson, the famous psychologist, whatever that may mean)—takes me to task for not including the great composer, Handel, in my list of angora musicians.

It is true that Handel is the longest

haired male composer that ever lived and for that reason he is rated in England, as the greatest of all composers. Mindful of this I had placed him at the head of my list.

What was my dismay to learn just as my musing was going to press, that Handel's fur was false!

OF course I cut it (the article and picture, I mean) at once.

I have since learned that the handle of the hard-gurly took its name originally from this imitation furred composer.

Lines on an Antique

(Appreciatively dedicated to Oliver Herford)

By RICHARD LE GALLIENNE

A KNOCK came to my winter door:
"Pity," said I, "that creatures poor
On such a night should roofless roam,
Without a wife, without a home!"
There, shaking in the bitter cold,
Stood one abominably old,
Toothless and tottering, rheumy-eyed,
Source strong enough to crawl inside.
"Poor soul!" I said, "something's amiss
With a world that's let you come to this.
Come drink this down—"twill warm you up,
And you must stay and with me sup,
And rest you till to-morrow's sun—
Then shall we see what can be done."
But the old man scarce understood,
So thin and ancient was his blood,
And mumbled with a piteous sigh:
"So old, and yet I cannot die!
How many times since I had birth
Have these old bones gone round the earth!
Surely 'tis time, as you can see,
They let me die in peace," said he;
"But no! they will not let me rest."
I asked the name of my strange guest.
He turned on me a haunted glare—
"I am that joke about your hair!"

The Joke

Criminals I Have Known

By T. P. O'CONNOR

Illustrated by William M. Berger

V. Palmer, the Rugeley Murderer

I WAS about nineteen at the time, and had been only a short time on the Press. Luckily for me, though I did not realize it then, this first professional engagement was on a provincial newspaper. Luckily, I say, because the provincial newspaper differs from the metropolitan largely in the fact that there is no specialization as a rule, and that the young journalist has to turn his hand to everything. In London you become a leader-writer or a dramatic or a musical or a literary critic. Or you are a reporter and remain one. In my Dublin office I had to do everything in turn. In the course of a single day I have paid a visit to a police court, to one of the High Courts, I have gone to an inquest, reported a fire, and wound up with a criticism of a theatre.

THIS accounts for the fact that one of my early and painful experiences was to see an execution. The story was of one of those petty and sordid disputes which take place in every country where there are small farmers. The magic of property, which, according to the saying of the old economist, Arthur Young, can turn the desert into a garden, and which brings out some of the most valuable qualities of mankind—thrift, industry, and self-respect—has also its reverse to the moral, and generates in some natures selfishness, greed, and sometimes even brutal ferocity. This was the origin of the crime the expiation of which it was my ill-fortune to have to see. There was a dispute about

a little bit of land between two peasant neighbors; bad blood was created, and the end was that one of the parties was murdered by a brother and a sister. The story went in the neighborhood that the person who was mainly responsible for the crime was the woman, and not the man. She had the reputation of being a terrible virago, fearless, brutal, and greedy. The theory also was that her brother, if left to himself, would have been incapable of such a black deed. And what I saw at the execution was a confirmation of this version of the crime.

HOW well I remember that morning more than forty years ago! Writing this article in a foreign hotel, all my own youth comes back to me with that curious and pathetic appeal which is common to all of us when we look back from the later stages to the beginnings of our lives. To my young and vigorous frame and my even younger inner spirit, for I was, then and long after, younger in spirit than my years, a morning of sunshine, especially in the month of May—for many reasons the month dearest to Irish hearts, the month of Mary, as they are accustomed to call it—made a special appeal. Thus there was an additional horror in the fact that it was on a beautiful morning in May that I saw the consummation of this dreadful tragedy, and all my recollections of it, in spite of its sordidness, still are suffused by the wondrous sunshine in which everything was bathed on that

awful morning. The execution derived, also, additional importance from the fact that it was the first execution in Ireland which followed the passage of the Bill that had very properly abolished the hideous happenings of public executions. I never saw a public execution, but I knew plenty of people who had. It is one of my own boyhood's recollections that every morning, when going to my college, I passed the door of the jail of Galway, outside which you could see the scaffold from which innumerable wretches had paid the last penalty. Among my old friends was Joseph Parkinson—once one of the best-known figures in London, who ended life as a big and wealthy director of a great oil company, but had begun it as a journalist and in the Civil Service—and he used to tell me how his account of the mysteries, the drunkenness, and the ribaldry of an execution he had seen outside Newgate, was quoted that same night in the House of Commons and helped to carry the Bill for substituting private for public executions. The name of Palmer, the terrible Rugeley murderer, is still remembered by many people; and an old journalist still among us, Mr. Quilterton, who was present at his execution, has told me some interesting details, two of which I remember well. The first was that on the morning of the execution, and just as Palmer was about to start for the gallows, the sheriff, anxious to relieve the public mind, sent to Palmer's cell and asked him to acknowledge the justice of his sentence. "By no means, sir,"

"He confided to me the secret of the mask and the awkwardness of the executioner"

was Palmer's reply: "I go to the scaffold a murdered man." It was quite characteristic of the man whose cold-blooded cruelty was capable of killing several people for no better reason than to get their money. The second detail is that when Palmer appeared on the scaffold, a number of his associates on the race-course called out to him, "Palmer! Palmer!"

THESE were the reasons why I went down on that lovely May morning to an execution inside the walls of the jail at Tullamore, where these two people were to be hanged. We were a fairly large company of journalists, nearly all from Dublin, who had come to the town the night before, and who rose in the early morning and before breakfast went off to do our duty as chroniclers of this tragic event. There were, besides, some local journalists, one of whom, though I have forgotten his name, I still remember very well, because of an observation he made after the execution. The jail at Tullamore has the grimness of such places, as I remember it, with its walls of a gray stone, high and regular. The yard, too, was spacious, and its ground was, I remember, not grass, but gray gravel. Grayness was the universal color, and even that fact added something to the grim gloominess of everything. The Irish people look on death always with much solemnity. With their strong religious beliefs, it is regarded more as the beginning of a new life, and one of eternal bliss or eternal suffering, rather

than as the ending of this brief and transient existence upon earth. Thus it was that there was around this whole business a certain air of passionate interest, and something also of passionate regret; for the generous Irish nature gives its sympathy even to the convicted murderer. It is one of the many points in which I have seen a certain curious resemblance to the inner nature of the Russian and the Irishman. The governor of the jail, the sub-governor, even the warders, and certainly the sheriff—a charming and handsome young man—as well as the reporters, were full of this strange sentiment of horror and pity.

And the surroundings were calculated to accentuate this atmosphere of pity and solemnity. For the procession had to pass through the yard what was, for such an occasion, a considerable distance. And it was a fairly large procession, with warders and other officials, and above all, with two priests, who in their white surplices stood out conspicuously from the other figures. And in the midst of the procession were the poor wretches, brother and sister, man and woman, who were about to pass out of all this sunshine of the world at its best into the black darkness of night. High above the awed stillness of the yard, where you could almost hear the anxious beatings of men's hearts, there rang out the beautiful words of the Litany for the Dead, with its pathetic and appealing refrain of "Lord, have mercy on us, Christ, have mercy upon us;" the responses coming clearly and distinctly from the doomed man and

woman. It was some relief to most of us that there was this consolation to the dying creatures in this appeal to the beautiful figure which stands for mercy.

I HAVE said that the responses came clearly and loudly from the prisoners, but I have since been told that all through the interval between the cell and the scaffold the woman carried on at the same time a conversation *sotto voce* with her brother, telling him to be brave and to die without exhibiting any cowardice that might shame her and him. And there was plenty of other evidence to prove the universal belief that the stronger and fiercer being was the woman and not the man. In physique you saw the difference between the two. She was a short, stout woman, with an iron jaw and a face of daring and defiant expression. The man, on the other hand, was tall, thin, and delicate-looking, and he exhibited many signs of nervousness in sharp contrast with the defiant and inflexible air of the woman. Even on the scaffold the man showed his hatred of death. The executioner approached him to put the cap over his head and the rope around his neck. Instinctively, as it were, the poor wretch lifted his arm to prevent the executioner from thus doing away with his last chance of life and liberty. Then came one of the priests and whispered in his ear something which I guessed to be for Jesus' sake, and the poor creature immediately desisted, and the preparations were allowed to go forward.

And here there was a terrible moment. There is an abiding and incurable horror and even hatred, in Ireland, for the executioner. No hangman could dare to carry on his trade as a shoemaker openly in Ireland, as some executioners have done, and perhaps are to this day doing, in England. The hangman has to come to Ireland, when he is an Englishman, furtively, to sleep in the jail the night before the execution—possibly his life would not be safe unless he did. On this occasion one of the first things that struck me was that the hangman wore a black mask. There were slits in it for his eyes; otherwise you saw nothing of the face. He was evidently an amateur or a beginner, and this almost led to a dreadful accident. He was just on the point of pulling the lever that let down the drop before he had put the ropes around the necks of the unfortunate wretches; but the deputy-governor, a smart young fellow, shouted to him, and then he adjusted the ropes and pulled the lever, and in a second the two bodies were swinging in the pit below.

AND then we went away. I noted the fact that we none of us liked to reveal any of the keen emotion through which we had gone; we unconsciously exaggerated, I believe, our detachment. As an instance, I remarked to the provincial reporter of whom I have spoken that the religious service impressed me. To me he replied that it reminded him of Hamlet's saying about reducing sweet religion to a litany of words. We all ate a good breakfast, with the hearty appetite of youth whetted by an hour of the open air on this lovely morning. And by a singular coincidence I met in a theatre that same night, on my return to Dublin, all my comrades who had been at the execution. It seemed a common impulse to forget the ghastly horror of the morning by something gay in the evening.

Two more incidents to complete this narrative of a strange and painful experience. I traveled with the sheriff a part of the journey home; he confided to me the secret of the mask and the awkwardness of the executioner. It was his first, and I believe his last, appearance in this odious trade. He was a tinker who had been sentenced, along with his wife, to a year's imprisonment. He con-

The next of this series of stories by T. F. O'Connor will be "Henry Wainwright, the Bigamist Murderer"

"There was evidence to prove that the fiercer being was the woman"

sented to do the execution on two conditions: that he should receive ten pounds to enable him to get to America, and secondly, that he should be released two months before his wife.

Finally, I want to say a word about my own sensations. But I defer that

until I come to my next article. The story will throw some light on the difference which a few years of London life and London's grim experiences had made in the robust, fresh, and hopeful dreamer I was when I witnessed that grim scene in an Irish jail.

The Socialists' Position

MANY letters have come to us in answer to an editorial in this publication called "A Question to Socialism." The question was hung upon Professor Simkhovitch's book "Marxism versus Socialism" which combats the theory of increasing misery. Of the answers, the most authoritative seems to us to be that of W. J. Ghent, and it is printed here as representing the reply of the best informed Socialists:

To the Editor of HARPER'S WEEKLY:

The figures of per capita consumption in England for the years 1840 and 1881 may be quite true, and yet not argue a marked improvement in the condition of the working class. England was wretchedly hungry in the mid-century period; the phrase, "the hungry forties," has become

hackneyed as a characterization of that time of general privation. A vast increase in per capita consumption might argue no more than an increased buying power on the part of the better conditioned classes.

Probably, however, no one denies some improvement in the condition of even the poorest classes of England since 1840. Sidney and Beatrice Webb, in their "Labor in the Longest Reign," while showing the absurdity of the claims made by Giffen, Levi and others, yet admit certain gains. The theory of increasing misery is no part of Socialist doctrine. Prof. Simkhovitch to the contrary, it is doubtful if Marx meant by it any more than a natural tendency which could be overcome both by state action and by action on the part of the organized workers. If at any time he meant by

it more than this, he showed, in his song of triumph in 1864 over the passage of the ten-hour law, that he recognized its qualifications.

The material condition of labor is a thing so variable in time, place and circumstance, as to make generalization difficult. In the United States all wage-labor is in a far better condition in 1914 than it was in 1840. There is small doubt, however, in spite of certain sophisticated figures put out by the Federal Labor Bureau, that in the matter of the purchasing power of wages, labor has suffered a progressive loss ever since 1896. State action and the trade-unions have prevented a greater discrepancy between wages and prices, but they have not been able to neutralize the loss.

The Inefficiency of the Oligarchs

By LOUIS D. BRANDEIS

Being Part IX of "Breaking the Money Trust"

IN the preceding article Mr. Brandeis has described the formation of the Money Trust, its evil effects, and some of the methods, such as legislation and publicity, by which it may be broken up. He has answered the argument that the investment banker is to be credited with financing our pioneer industries; and he has shown that mere corporate bigness involves inefficiency. In this article, which brings the series to a close, he shows that banker-management, from its very nature, is foredoomed to failure; and he points out that only by coöperation, by establishing industrial democracy, can the Money Trust be broken

THE Interstate Commerce Commission said in its report on the most disastrous of the recent wrecks on the New Haven Railroad:

"On this directorate were and are men whom the confiding public recognize as magicians in the art of finance, and wizards in the construction, operation, and consolidation of great systems of railroads. The public therefore rested secure that with the knowledge of the railroad art possessed by such men investments and travel should both be safe. Experience has shown that this reliance of the public was not justified as to either finance or safety."

This failure of banker-management is not surprising. The surprise is that men should have supposed it would succeed. For banker-management contravenes the fundamental laws of human limitations: First, that no man can serve two masters; second, that a man cannot at the same time do many things well. We must break the Money Trust or the Money Trust will break us.

Seeming Successes

THERE are numerous seeming exceptions to these rules; and a relatively few real ones. Of course, many banker-managed properties have been prosperous; some for a long time, at the expense of the public; some for a shorter time, because of the impetus attained before they were banker-managed. It is not difficult to have a large net income, where one has the field to oneself; has all the advantages privilege can give, and may "charge all the traffic will bear." And even in competitive busi-

ness the success of a long-established, well-organized business with a widely extended good-will, must continue for a considerable time; especially if buttressed by intertwined relations constantly giving it the preference over competitors. The real test of efficiency comes when success has to be struggled for; when natural or legal conditions limit the charges which may be made for the goods sold or service rendered. Our banker-managed railroads have recently been subjected to such a test, and they have failed to pass it. "It is only," says Goethe, "when working within limitations, that the master is disclosed."

Why Oligarchy Fails*

BANKER - MANAGEMENT fails, partly because the private interest destroys soundness of judgment and undermines loyalty. It fails partly, also, because banker directors are led by their occupation (and often even by the mere fact of their location remote from the operated properties) to apply a false test in making their decisions. Prominent in the banker-director mind is always this thought: "What will be the probable effect of our action upon the market value of the company's stock and bonds, or, indeed, generally upon stock exchange values?" The stock market is so much a part of the investment-banker's life, that he cannot help being affected by this consideration, however disinterested he may be. The stock market is sensitive. Facts are often misinterpreted "by the street" or by investors. And with the best of intentions, directors susceptible to such

influences are led to unwise decisions in the effort to prevent misinterpretations. Thus, expenditures necessary for maintenance, or for the ultimate good, of a property are often deferred by banker-directors, because of the belief that the making of them now, would (by showing smaller net earnings,) create a bad, and even false, impression on the market. Dividends are paid which should not be, because of the effect which it is believed reduction or suspension would have upon the market value of the company's securities. To exercise a sound judgment in the difficult affairs of business is, at best, a delicate operation. And no man can successfully perform that function whose mind is diverted, however innocently, from the study of, "what is best in the long run for the company of which I am director?" The banker-director is peculiarly liable to such distortion of judgment by reason of his occupation and his environment. But there is a further reason why, ordinarily, banker-management must fail.

The Element of Time

THE banker, with his multiplicity of interests, cannot ordinarily give the time essential to proper supervision and to acquiring that knowledge of the facts necessary to the exercise of sound judgment. The *Century Dictionary* tells us that a Director is "one who directs; one who guides, superintends, governs and manages." Real efficiency in any business in which conditions are ever changing must ultimately depend, in large measure, upon the correctness of the judgment exercised, almost from day to day, on the important problems as they arise. And how can the leading bankers, necessarily

*This subject was discussed by Mr. Brandeis in the issue of August 10, 1918, under "Banker-Management."

engrossed in the problems of their own vast private businesses, get time to know and to correlate the facts concerning so many other complex businesses? Besides, they start usually with ignorance of the particular business which they are supposed to direct. When the last paper was signed which created the Steel Trust, one of the lawyers (as Mr. Perkins frankly tells us) said: "That signature is the last one necessary to put the Steel industry, on a large scale, into the hands of men who do not know anything about it."

Avocations of the Oligarchs

THE New Haven System is not a railroad, but an agglomeration of a railroad plus 121 separate corporations, control of which has been acquired by the New Haven since that railroad attained its full growth of about 2000 miles of line. In administering the railroad and each of the properties formerly managed through these 121 separate companies, there must arise from time to time difficult questions on which the directors should pass judgment. The real managing directors of the New Haven system during the decade of its decline were: J. Pierpont Morgan, George F. Baker, and William Rockefeller. Mr. Morgan was, until his death in 1913, the head of perhaps the largest banking house in the world. Mr. Baker was, until 1909, President and then Chairman of the Board of Directors, of one of America's leading banks (the First National of New York), and Mr. Rockefeller was, until 1911, President of the Standard Oil Company. Each was well advanced in years. Yet each of these men, besides the duties of his own vast business, and important private interests, undertook to "guide, superintend, govern and manage," not only the New Haven but also the following other corporations, some of which were similarly complex: Mr. Morgan, 48 corporations, including 40 railroad corporations, with at least 100 subsidiary companies, and 16,000 miles of line; 5 banks and trust or insurance companies; 5 industrial and public-service companies. Mr. Baker, 48 corporations, including 15 railroad corporations, with at least 138 subsidiaries, and 37,400 miles of track; 18 banks, and trust or insurance companies; 15 public-service corporations and industrial concerns. Mr. Rockefeller, 37 corporations, including 23 railroad corporations with at least 117 subsidiary companies, and 26,400 miles of line; 5 banks, trust or insurance companies; 9 public-service companies and industrial concerns.

Substitutes

IT has been urged that in view of the heavy burdens which the leaders of finance assume in directing Business America, we should be patient of error and refrain from criticism, lest the leaders be deterred from continuing to perform this public service. A very respectable Boston daily said a few days after Commissioner McChord's report on the North Haven wreck:

"It is believed that the New Haven pillory repeated with some frequency will make the part of railroad director quite undesirable and hard to fill, and more and more avoided by responsible men. Indeed it may even become so that men will have to be paid a substantial salary to compensate them in some degree for

the risk involved in being on the board of directors."

But there is no occasion for alarm. The American people have as little need of oligarchy in business as in politics. There are thousands of men in America who could have performed for the New Haven stockholders the task of one "who guides, superintends, governs and manages," better than did Mr. Morgan, Mr. Baker and Mr. Rockefeller. For though possessing, perhaps, less native ability, the average business man would have done better than they, because working

coöperation—should be substituted for industrial absolutism, there would be no lack of industrial leaders.

England's Big Business

ENGLAND, too, has big business. But her big business is the Coöperative Wholesale Society, with a wonderful story of 50 years of beneficent growth. Its annual turnover is now about \$150,000,000—an amount larger than the sales of any American industrial, except the Steel Trust; larger than the gross receipts of any American railroad, except the Pennsylvania and the New York Central systems. Its business is very diversified, for its purpose is to supply the needs of its members. It includes that of wholesale dealer, of manufacturer, of grower, of miner, of banker, of insurer and of carrier. It operates the biggest flour mills and the biggest shoe factory in all Great Britain. It manufactures wooden cloths, all kinds of men's, women's and children's clothing, a dozen kinds of prepared foods, and as many household articles. It operates creameries. It carries on every branch of the printing business. It is now buying coal lands. It has a bacon factory in Denmark, and a tallow and oil factory in Australia. It grows tea in Ceylon. And through all the purchasing done by the Society runs this general principle: Go direct to the source of production, whether at home or abroad, so as to save commissions of middlemen and agents. Accordingly, it has buyers and warehouses in the United States, Canada, Australia, Spain, Denmark and Sweden. It owns steamers plying between Continental and English ports. It has an important banking department; it insures the property and person of its members. Every one of these departments is conducted in competition with the most efficient concerns in their respective lines in Great Britain. The Coöperative Wholesale Society makes its purchases, and manufactures its products, in order to supply the 1390 local distributive, coöperative societies scattered over all England; but each local society is at liberty to buy from the wholesale society, or not, as it chooses; and they will buy only if the coöperative wholesale sells at market prices. This the Coöperative actually does; and it is able besides to return to the local fair dividend on its purchases.

Industrial Democracy

NOW, how are the directors of this great business chosen? Not by England's leading bankers, or other notabilities, supposed to possess unusual wisdom; but democratically, by all of the people interested in the operations of the Society. And the number of such persons who have directly or indirectly a voice in the selection of the directors of the English Coöperative Wholesale Society is 2,730,000. For the directors of the Wholesale Society are elected by vote of the delegates of the 1390 retail societies. And the delegates of the retail societies are, in turn, selected by the members of the local societies;—that is, by the consumers, on the principle of one man, one vote, regardless of the amount of capital contributed. Note what kind of men these industrial democrats select to exercise executive control of their vast organization. Not all-wise bankers or their dummies, but men who have risen

Alphonse Desjardins made democratic banking possible in Canada by establishing 140 credit-unions, or coöperative credit banks

Albert Sonnicksen, Secretary of the Coöperative League, with which 83 retail consumers' organizations in New York City are affiliated

Men who have furthered industrial democracy by the establishment of coöperative alliances

under proper conditions. There is great strength in serving with singleness of purpose one master only. There is great strength in having time to give to a business the attention which its difficult problems demand. And tens of thousands more Americans could be rendered competent to guide our important businesses. Liberty is the greatest developer. Herodotus tells us that while the tyrants ruled, the Athenians were no better fighters than their neighbors; but when freed, they immediately surpassed all others. If industrial democracy—true

"Oppose to the great trusts a world-wide cooperative alliance which shall become so powerful as to crush the trusts"

from the ranks of cooperation; men who, by conspicuous service in the local societies have won the respect and confidence of their fellows. The directors are elected for one year only; but a director is rarely unelected. J. T. W. Mitchell was president of the Society continuously for 41 years. Thirty-two directors are selected in this manner. Each gives to the business of the Society his whole time and attention; and the aggregate salaries of the thirty-two is less than that of many a single executive in American corporations; for these directors of England's big business serve each for a salary of about \$1500 a year.

The Cooperative Wholesale Society of England is the oldest and largest of these institutions. But similar wholesale societies exist in 15 other countries. The Scotch Society (which William Maxwell has served most efficiently as President for thirty years at a salary never exceeding \$38 a week.) has a turn-over of more than \$50,000,000 a year.

A Remedy for Trusts

ALBERT SONNICHSEN, General Secretary of the Cooperative League, tells in the *American Review of Reviews* for April, 1913, how the Swedish Wholesale Society crushed the Sugar Trust; how it crushed the Margarine Combine (compelling it to dissolve after having lost 2,500,000 crowns in the struggle); and how in Switzerland the Wholesale

Society forced the dissolution of the Shoe Manufacturers Association. He tells also this memorable incident:

"Six years ago, at an international congress in Cremona, Dr. Hans Müller, a Swiss delegate, presented a resolution by which an international wholesale society should be created. Luigi Luzzatti, Italian Minister of State and an ardent member of the movement, was in the chair. Those who were present say Luzzatti paused, his eyes lighted up, then, dramatically raising his hand, he said: 'Dr. Müller proposes to the assembly a great idea—that of opposing to the great trusts, the Rockefeller of the world, a world-wide cooperative alliance which shall become so powerful as to crush the trusts.'"

Cooperation in America

AMERICA has no Wholesale Cooperative Society able to grapple with the trusts. But it has some very strong retail societies, like the Tamarack of Michigan, which has distributed in dividends to its members \$1,144,000 in 23 years. The recent high cost of living has greatly stimulated interest in the cooperative movement; and John Graham Brooks reports that we have already about 350 local distributive societies. The movement toward federation is progressing. There are over 100 cooperative stores in Minnesota, Wisconsin and

other Northwestern states, many of which were organized by or through the zealous work of Dr. Toudy and his associates of the Right Relationship League and are in some ways affiliated. In New York City 83 organizations are affiliated with the Cooperative League. In New Jersey the societies have federated into the American Cooperative Alliance of Northern New Jersey. In California, long the seat of effective cooperative work, a central management committee is developing. And progressive Wisconsin has recently legislated wisely to develop cooperation throughout the state.

Among our farmers the interest in cooperation is especially keen. The federal government has just established a separate bureau of the Department of Agriculture to aid in the study, development and introduction of the best methods of cooperation in the working of farms, buying, and distribution; and special attraction is now being given to farm credits—a field of cooperation in which Continental Europe has achieved complete success, and to which David Lubin, America's delegate to the International Institute of Agriculture at Rome, has, among others, done much to direct our attention.

People's Savings Banks

THE German farmer has achieved democratic banking. The 13,000 little cooperative credit associations, with an average membership of about 90 persons, are truly banks of the people, by the people and for the people.

First: The banks' resources are of the people. These aggregate about \$300,000,000. Of this amount \$375,000,000 represents the farmers' savings deposits; \$50,000,000, the farmers' current deposits; \$6,000,000 the farmers' share capital; and \$13,000,000, amounts earned and placed in the reserve. Thus, nearly nine-tenths of these large resources belong to the farmers—that is, to the members of the banks.

Second: The banks are managed by the people,—that is, the members. And membership is easily attained; for the average amount of paid-up share capital was, in 1909, less than \$5 per member. Each member has one vote regardless of the number of his shares or the amount of his deposits. These members elect the officers. The committees and trustees (and often even, the treasurer) serve without pay; so that the expenses of the banks are, on the average, about \$150 a year.

Third: The banks are for the people. The farmers' money is loaned by the farmer to the farmer at a low rate of interest (usually 4 per cent. to 6 per cent.); the shareholders receiving, on their shares, the same rate of interest that the borrowers pay on their loans. Thus the resources of all farmers are made available to each farmer, for productive purposes.

This democratic rural banking is not confined to Germany. As Henry W. Wolff says in his book on cooperative banks:

"Propagating themselves by their own merits, little people's cooperative banks have overspread Germany, Italy, Austria, Hungary, Switzerland, Belgium. Russia is following up those countries; France is striving strenuously for the possession of cooperative credit. Serbia, Roumania, and Bulgaria have made such credit their own. Canada has scored its first success

on the road to its acquisition. Cyprus, and even Jamaica, have made their first start. Ireland has substantial first-fruits to show of her economic sowings.

"South Africa is groping its way to the same goal. Egypt has discovered the necessity of cooperative banks, even by the side of Lord Cromer's pet creation, the richly endowed 'agricultural bank.' India has made a record beginning, full of promise. And even in far Japan, and in China, people are trying to acclimatize the more perfected organizations of Schulze-Delitzsch and Raiffeisen. The entire world seems girdled with a ring of cooperative credit. Only the United States and Great Britain still lag lamentably behind."

Bankers' Savings Banks

THE savings banks of America present a striking contrast to these democratic banks. Our savings banks also have performed a great service. They have provided for the people's funds, safe depositories with some income return. Thereby they have encouraged thrift and have created, among other things, reserves for the proverbial "rainy day." They have also discouraged "old stocking" hoarding, which diverts the money of the country from the channels of trade. American savings banks are also, in a sense, banks of the people; for it is the people's money which is administered by them. The four and a half billion dollars deposits in two thousand American savings banks belong to about ten million people, who have an average deposit of about \$450. But our savings banks are not banks by the people, nor, in the full sense, for the people.

First: American savings banks are not managed by the people. The stock-savings banks, most prevalent in the Middle West and the South, are purely commercial enterprises, managed, of course, by the stockholders' representatives. The mutual savings banks, most prevalent in the Eastern states, have no stockholders; but the depositors have no voice in the management. The banks are managed by trustees for the people, practically a self-constituted and self-perpetuating body, composed of "leading" and, to a large extent, public-spirited citizens. Among them (at least in the larger cities) there is apt to be a pre-dominance of investment bankers, and bank directors. Thus the three largest savings banks of Boston (whose aggregate deposits exceed those of the other 18 banks) have together 81 trustees. Of these, 51 are investment bankers or directors in other Massachusetts banks or trust companies.

Second: The funds of our savings banks (whether stock or purely mutual) are not used mainly for the people. The depositors are allowed interest (usually from 3 to 4 per cent.); in the mutual savings banks they receive ultimately all the net earnings. But the money gathered in these reservoirs is not used to aid productively persons of the classes who make the deposits. The depositors are largely wage earners, salaried people, or members of small tradesmen's families. Statistically the money is used for them. Dynamically it is used for the capitalist. For rare, indeed, are the instances where savin-

productively one of the depositor class. Such persons would seldom be able to provide the required security; and it is doubtful whether their small needs would, in any event, receive consideration. The largest of Boston's mutual savings banks,—the Provident Institution for Savings, which is the pioneer mutual savings bank of America, managed—in 1914—\$35,000,000 of people's money. Nearly one half of the resources (\$14,802,978), was invested in bonds—state, municipal, railroad, railway and telephone and in bank stock; or was deposited in national banks or trust companies. Two fifths of the resources (\$10,764,770) were loaned on real estate mortgages; and the average amount of a loan was \$32,569. One seventh of the resources (\$7,366,612) was loaned on personal security; and the average of each of these loans was \$34,836. Obviously, the "small man" is not conspicuous among the borrowers; and these large scale investments do not even serve the individual depositor especially well; for this bank pays its depositors a rate of interest lower than the average. Even our admirable Postal Savings Bank system serves productively mainly the capitalist. These postal saving stations are in effect catch-basins merely, which collect the people's money for distribution among the national banks.

Progress

ALPHONSE DESJARDINS of Levis, a Province of Quebec, has demonstrated that cooperative credit associations are applicable, also, at least to the smaller urban communities. Levis, situated on the St. Lawrence opposite the City of Quebec, is a city of 8,000 inhabitants. Desjardins himself is a man of the people. Many years ago he became impressed with the fact that the people's savings were not utilized primarily to aid the people productively. There were then located in Levis branches of three ordinary banks of deposit—a mutual savings bank, the postal savings bank, and three incorporated "loaners;" but the people were not served. After much thinking, he chanced to read of the European rural banks. He proceeded to work out the idea for use in Levis; and in 1900 established there the first "credit-union." For seven years he watched

carefully the operations of this little bank. The pioneer union had accumulated in that period \$80,000 in resources. It had made \$200 loans to its members, aggregating \$350,000; the loans averaging \$120 in amount, and the interest rate 6½ per cent. In all this time the bank had not met with a single loss. Then Desjardins concluded that democratic banking was applicable to Canada; and he proceeded to establish other credit-unions. In the last 5 years the number of credit-unions in the Province of Quebec has grown to 141; and 19 have been established in the Province of Ontario. Desjardins was not merely the pioneer. All the later credit-unions also have been established through his aid; and 24 applications are now in hand requesting like assistance from him. Year after year that aid has been given without pay by this public-spirited man of large family and small means, who lives as simply as the ordinary mechanic. And it is noteworthy that this rapidly extending system of cooperative credit-banks has been established in Canada wholly without government aid, Desjardins having given his services free, and his travelling expenses having been paid by those seeking his assistance.

In 1909, Massachusetts, under Desjardins' guidance, enacted a law for the incorporation of credit-unions. The first union established in Springfield in 1910, was named after Herbert Myrick—a strong advocate of cooperative finance. Since then 25 other unions have been formed; and the names of the unions and their officers disclose that 11 are Jewish, 8 French-Canadian, and 2 Italian,—a strong indication that the immigrant is not unprepared for financial democracy. There is reason to believe that these people's banks will spread rapidly in the United States and that they will succeed. For the cooperative building and loan associations, managed by wage-earners and salary-earners, who joined together for systematic saving and ownership of houses,—have prospered in many states. In Massachusetts, where they have existed for 35 years, their success has been notable,—the number, in 1912, being 102, and their aggregate assets nearly \$75,000,000.

Thus farmers, workmen, and clerks are learning to use their little capital and their savings to help one another instead of turning over their money to the great bankers for safe keeping, and to be themselves exploited. And may we not expect that when the cooperative movement develops in America, merchants and manufacturers will learn from farmers and working-men how to help themselves by helping one another, and thus help to attain the New Freedom for all? When they do, money kings will lose subjects, and swollen fortunes may shrink; but industries will flourish, because the faculties of men will be liberated and developed.

President Wilson has said wisely: "No country can afford to have its prosperity originated by a small controlling class. The treasury of America does not lie in the brains of the small body of men now in control of the great enterprises. . . . It depends upon the inventions of unknown men, upon the originations of unknown men, upon the ambitions of unknown men. Every country is renewed out of the ranks of the unknown, not out of the ranks of the already famous and powerful in control."

The Philanderer

IT is pleasant that America appreciates George Bernard Shaw even although Shaw thinks poorly of America. It is part of his technique to make faces at those who praise him. It must be admitted, however, that the small boy aspect of Shaw, shocking the community, is less prominent as time goes by. He has not changed; but we have. The world today stands nearer Shaw than it did when the "Philanderer" was written. Winthrop Ames is a man of taste. He is a man who loves the theater. He is a man who knows literature and the world of ideas. Therefore he is the type needed as the manager of a theater. He represents the most cultivated taste of the metropolis. His theater is very beautiful; everything he puts on is well acted, and acted by companies that play together; and he selects plays that have some art quality. As the "Philanderer" has never before been produced in this country, Mr. Ames gives us a new light on one of the most characteristic playwrights of our generation.

You cannot know a play fully until you see it acted. When you read a play, you are more or less at the mercy of the author. When you see it, you are more or less at the mercy of the actors.

Mr. Shaw indicated in his stage direc-

tions, and in his preface, and by the very title, that he wished us to look down upon or condemn Charteris. On the other hand, Mr. Charles Maude plays the part with such gaiety and reasonableness that one is inclined to be on his side. Mr. Shaw evidently thinks that the shortcomings of Charteris are due to our unreasonable marriage contracts. He uses that character as one step in his proof that the law in regard to matrimony ought to be brought nearer to the facts. This bit of dialogue shows what he thinks of the underlying ideas of right in personal relations. Grace has said she would not steal Charteris away from Julia.

Charteris: "Grace: I have a question to put to you as an advanced woman. Mind! as an advanced woman. Does Julia belong to me? Am I her owner—her master?"

Grace: "Certainly not. No woman is the property of a man. A woman belongs to herself and to nobody else."

Charteris: "Quite right. . . . Now, tell me, do I belong to Julia; or have I a right to belong to myself?"

Grace: "Of course you have; but—"

Charteris: "Then how can you steal me from Julia if I don't belong to her?"

Charteris has flirted a great deal. Women have flirted with him. One of those women has seriously loved him, and

he wishes to be rid of her and marry another. He wishes to marry Mrs. Grace Tranfield because he likes her. He can love any woman—that is, any pretty woman—but permanent liking is what he wants in marriage. He belongs to a club which does not admit either womanly women or manly men; that is to say, it does not admit women who fall back on hysteria or violent self-pity when their wishes are thwarted, and it does not admit men who have the old-fashioned ideas about the need of keeping women from leading reasonable lives of their own. This modern point of view is expressed so rationally and so charmingly by Charteris that it is rather a shock at the end to see him doomed to go on philandering all his life without wife, home or children. Perhaps it is the fault of the excellent acting but he does not seem to deserve so cruel a fate. The play is a delightful ethical farce. It has not so much dramatic substance as *Man and Superman*, for instance, or so consistent a theme, but it reminds us that Shaw's wit and gaiety are beyond almost anybody's writing today. Let us hope that those people who complain about the American stage will turn out in large numbers to see the "Philanderer" and that Mr. Ames, year by year, will reap a reward that will encourage others also to turn their theaters into not too stupid places.

On Shore Leave

By C. STERRETT PENFIELD

HE was a very drunken Jackie—the negro against whose shoulder he lurched as the train started, rose and moved to the platform.

"Disgrating!" shuddered a proper lady across the aisle. The proper lady's husband was president of a company that had quietly financed a recent banana revolution in behalf of trade. The result had permitted the embargo of the proper lady's wraps at the shipmunk—and the rumor of possible intervention by the United States of Financiers had lent zest to the recruiting sergeant's plea—had, in fact, induced this particular lad to enlist.

"A disgrace to the nation," agreed the Minister. He had just preached a stirring sermon on patriotism, and was in consequent good humor. There was every probability of his being called to the vacant pulpit of the Second Wealthiest Parish. His appeal for intervention, immediate and unsparring, had evoked approval from the most important vestrymen—most important politically, financially, and hence spiritually. As the probable Chosen One of the Second Wealthiest Parish, he was inexpressibly shocked and horrified by the drunken sailor boy. "They should report him to the Admiral—or whoever has charge of such matters,"

the Chosen One remarked. "I'd do it personally, only of course it's scarcely my place."

The proper lady smiled approval. Her vestryman husband, having had a finger in the revolutionary pie, which he had carefully licked off, was now clamoring for intervention. The plums had not been quite as juicy as he had supposed.

The guard left his post and shook the boy (he seemed scarcely twenty), with rough kindness. "Where to, my hearty?" he asked.

The boy mumbled something. Then his idiotic little hat fell off. He stooped, groping for it, and fell headlong to the floor. The negro and the guard helped him into his corner again. The one was dust and the other was mud. They brushed him up.

At the end of the street, the proper lady and her husband left. The Chosen One passed on impressively: "Remember, my son, you are wearing the insignia of the United States—your native country."

The boy looked angrily after the president and his mentor. "Damn the United States!" he muttered.

The sailor's last exclamation of The Man Without a Country! Times have changed. No one avenged the insult.

The T. C. girl gasped. She was from Hartford, where Flag Day and Fourth of July and Decoration Day and the twelfth and twenty-second of February and Thanksgiving are always celebrated by appropriate school and family exercises.

I studied the sullen face of the boy. He was so very young; the recruiting sergeant had promised such wonders—travel, education, munificent pay, rapid advancement. Instead had been monotonous drilling, only the navy yard, petty unimaginative tasks, no glory—and all that one nation might point to him and his fellows and say to the lands overseas, "*Nemo me impune lacessit*," which is, in the interpretation: "We have guarded our shores with lads who are at present busily scrubbing down decks and washing clothes; at a moment's warning they will face your guns and be killed; it is for that destiny that we are spending millions every year. Send us your own armies, recruited under like conditions, or worse, if you will. The nation that has most men left afterwards will be victor. Meanwhile, we are ready."

And the boy who had drunk himself to foolishness for a little while, stumbled from the train.

"It is pleasant that America appreciates George Bernard Shaw"

By JAMES MONTGOMERY FLAGG

New Wine in Old Bottles

By CORRA HARRIS

WE have a custom in this country of interviewing prominent men upon the issues of the day. What the Honorable Toots thinks of the political situation or of any other current situation is of importance because he is the Honorable Toots. But it is not the custom to interview an unknown private citizen upon such matters, although his opinion may better represent that of the average man.

Neither is it the custom to interview an old retired gentleman upon any subject. The interviews published from women are always given by actresses, authors, uplifters, suffragists, or prominent wives about to get divorced, or criminals who have murdered their husbands. The opinion of an old lady who parts her hair in the middle and sews on the family buttons and says her prayers, is usually accounted of no importance when it comes to the affairs of the nation.

Recently a file of HARPER'S WEEKLY beginning with the new management, was given to an elderly country-woman living in the South. She is not the leader of any movement, not prominent in church work, not much of a mind—just a respectable sinner, without the martyr instinct of her sex, which is probably her only distinction. She was asked by an enterprising reporter to give her opinion of the WEEKLY, a request the editors never would have made. For, while an editor will hold up the mirror to public affairs, in every phase, it is not in his nature to hold up a mirror before his own performances.

The reporter who asked the opinion of the old lady made a departure in his business, which is likely to prove unsuccessful and remain unpublished.

When she had finished reading the last of three months' issues of the WEEKLY she lifted her spectacles, made a dinner-window arch of them on top of her head and said:

He is new wine in an old bottle, that editor. If he keeps on getting more into it, something will happen. There is too much of it—too much wine, I mean.

The WEEKLY is not for individuals, but for peoples. It would be a good thing if this nation could be called together every Saturday afternoon to listen while the current issue is read aloud through a megaphone. Come to think of it, the reading should begin in the forenoon, for if there were any Tammany patriots, prudes or anti-vivisectionists present, interruptions would follow, which would consume time.

That is the limitation of the WEEKLY, which one is not apt to discover by reading only one issue. The editor deals too much with things "by the horn," and from the national viewpoint. He sees, not himself, nor any one of the hundred problems which face the one man or the one woman in living, but he thinks of conditions such as a whole people, or a race, or a society, socially, and politically. Thus a complement to the officer's breadth of vision, but it is not flattering enough to the ten cents a copy man who will sell the WEEKLY and read it. These him we seek and seek out, the average man is far more conscious of being a private individual than he is of being a citizen. It is only on election day that he curls his citizen tail over his tail and votes his Democratic

horn, or his Republican horns or his Bull Moose antlers, and rumps forth to do or die or get drunk in the name of the nation.

The editor will be obliged to do something about this. He is remarkably right, it seems to me—better than that, bravely right. No little two-by-four self-respecting man is willing to sit down and permit another man to cram the whole nation with all its terrific problems down his throat once a week, without resenting the diet. If the editor would consent to run one of Laura Jean Libbey's novels serially (or get some narrow, stupid old saint to write a maudlin essay on "Mother, Home and Heaven") he would rest his readers without doing them any harm.

The editorials are wonderful. It is a long time since Pericles, Herodotus, Sophocles, Marcus Aurelius, Enriques, all the ancients, except Jehorah, have cast the grave and steady light of immovable intelligence upon modern affairs, if they ever have been allowed to do it. But they do in the WEEKLY, and what is quoted from them reads as if it was written yesterday for us. The flavor is delightful. It raises us to the dignity of the ancients.

The editorial entitled "What is a Nation?" seems to me one of the most typical expressions of the new editor, even if it is not the best. And he could not have given a better definition of a nation if he had been "making a night" of it with Socrates and Alcibiades. "A nation is a state of mind. It is a spiritual principle. . . . A nation is composed of the sacrifice which its people have made and of those which they are willing to make."

If he should follow up this with one entitled, "What is a Man?" he would cast even more light upon a subject where there is very little, and always has been very little. The Scriptures do not reveal him, neither does history, nor poets, nor revolutions. They only tell what he did, that day, that century. God is revealed to us by His everlasting works, which stand unchanging, immutable from age to age. But man is the mysterious, incredible, unknown and unknowable quantity in the puzzle of creation. I reckon as good a definition of him as can be had would be a parody upon this one the editor gives of a nation. He is a state of mind. He is composed of the sacrifices which he has made for others, and those which he is willing to make.

It is all, or nearly all, in the way you do a thing. For example, other periodicals are so much more successful in this country because of the distinction in this country in favor of the Feminist movement. But I have not stratched the attention of those who are read upon the WEEKLY. The point is this: the average journal has pulled off its shirt and tugged suitably into line with the movement, so as not to bring down all its sales, too many popular leaders on their whimsical feet, and the WEEKLY puts on the whole armor of the movement, and some extra trappings besides. We shall see what we shall see. The editor may not be in the predicament of the old man who caught his earling by the tail, and was thereafter chased by the said yearling around a tree while he called for some one to "help, but let me." One

thing is certain, he is stirring up the emotions of the wronged, helpless and suppressed woman in every walk of life. And if he is not a very patient man, he may get tired of the fuss they will make. I look to see a long line of martyred women wringing their hands and sobbing their way through fiction. The procession is already beginning.

I think if the editor errs at all in his policy for the Feminist movement, it is on the side of too much sympathy for every kind of woman, good, bad, or indifferent. He is not morally wrong, you understand. They are all equally unfortunate. But my belief is that too much, too broad, sympathy is enervating. It brings too many tears to the eyes. It does not stiffen the backbone enough. Martyrs make good examples, provided there are not too many of them. But they never did make a nation or build a civilization. It was the fellows who refused to be martyred that founded this great republic. Women are already too much inclined to get themselves burned at the stake. They love martyrdom because they have never had the chance to love liberty. If anybody sympathizes with them too much, they will just cry and cry, and do nothing else but tell you all about what they have suffered.

The paper entitled, "What Women are After" is clear, so simply expressed and at the same time so comprehensive a statement of the Feminist movement, that even the women who are "after it" will understand and applaud. This is a compliment, for, barring a few thousand women who really think, the rest of us merely feel and suffer what we have neither mental liberty nor intelligence to think; and of the two kinds those who feel are apt to do most of the moving, because there are more of us and more emotion back of our effort to advance. Emotion is the dynamo of every great movement which the mere thinkers construct.

The editor of HARPER'S WEEKLY is the author of one of the shrewdest and most intelligent arguments in favor of the new position of women in our civilization, when he points out that it will result in the saving of the boy babies, and, therefore, in more men to offset the present plurality of women. This over-supply of women is a serious matter and is growing more serious.

The paper on "Unmarried Mothers" seems to have raised a storm of protest. There is nothing wrong with it, except that the author makes a mistake when he includes the story of James' persistent faithfulness to the incontinent, anti-rational, and unscientific. It affords the reader, especially the one of the masculine gender, an opportunity for attack—I say an excuse, not a comment. For there is many a James who took a husband as incontinent, as evilly ill as this Louise, without knowing it. Turn about is, well it is not always fair play, but, it's "turn about."

If the editor of the WEEKLY would include in his expositions of the Feminist movement as an evolution of national standards and ideals an article, say, on the "Bachelor Ballot," we should have some light upon the past, which is always a help when we are about to attempt a new adventure in living. This country is,

and has always been, governed by the bachelor ballot. A man may be married at the breakfast table. He may be a devoted husband and father in his home, he may be the most generous of benefactors when he is paying his wife's bills, or even when he is dining out with her somewhere; but let him swagger down to the polls with his hands in his overall pockets, or let him motor down, or let him ride his old hackback mule from the farm to the nearest voting precinct to cast his ballot, and the moment he gets there, he is a bachelor. He is not nearly so much a husband or father as he is a Democrat or Republican, or something else just political. He puts forward his candidate like a sport at a cockfight. He forgets everything and everybody, every issue involved, if it is not his own pocket. He always has, and he always will, so long as he is a bachelor unaccompanied by the reminding presence of his women-kind.

We shall have new and astonishing political corruption when women get the ballot, but they will never forget their children at the polls, because they are mammals. They think always in the terms of their young—even when they are old maids with no children of their own. You may mean a child, but it is difficult to wean a mother. Every half-starved, prim-faced little country school-ma'am will vote for her forty children. And you cannot offset a ballot like this with that of the degraded white slave woman or of any other corrupt woman. There are not enough of them, even if they voted four times, as Tim Sullivan's "repeaters" did. Most women are good.

My impression is that the thing the editor was striving after was gaiety and lightness, which is a necessary feature of such a periodical. But it is hard for an editor who has lived long in New York to remember what gaiety is, much

less find an artist who can interpret it. New York is not a gay place. You take your pleasures there knowing exactly what they are, what they mean, and what you are paying for them—which neither lightens the mind nor renders the spirit joyful. The best you can do is to be philosophical and analyze your emotions as they rise with the fumes of the dance. Gaiety is another thing altogether. It has in it the elements of innocence, of belief in something, the sweetness of hopes turned to laughter before they are turned to tears. Something like that. I do not know how such effluence could be illustrated, but I have seen it many times, in villages, in this remote valley where I live, in old-fashioned homes—never in New York. That place is horribly sophisticated, and gaiety is not. The trouble with many of the illustrations is not that they are masterpieces of art as well as of interpretation of ideas and conditions, but that they are depressing. They are the only local coloring in the WEEKLY, which is otherwise splendidly national in its scope. New York is not the place to see life. It is the place where one sees life exhausted, hollowed out, hurried up.

One thing the WEEKLY lacks that will be missed by those of its readers who do not live in great cities, nor in flats, nor on pavements, nor in subways and shops. This is the Earth. And the Earth is the greatest living character in this world. She is doing more than all the nations put together. And she has never had a "publicity bureau." She is the one everlasting economist who wastes nothing, who even makes a fertility of the dead. She is beyond the influence of politics or "windy doctrines." She is neither Catholic nor Protestant, neither Gentile nor Jew. She is the patient mother of them all. To leave her out of a big thing is to leave the biggest thing out. Yet she does not

appear in the WEEKLY. There are articles on "Agriculture," on "Conservation," a good deal about the "arithmetical" of that passing thing on her surface, "Civilization." Occasionally there is something about the "Country," very good in its way. Le Gallienne's poem, "Country Gods" is near-poetry. But that word "country" is merely a provincial term which shows the limitation of a city-bred man's mind. It sustains the same relation to the whole that a handkerchief would, spread out upon the grass—it doesn't cover much more of the idea. There is not a hint in the WEEKLY of the history which the sun writes day by day in shadows upon the ground in the forest. This is a mighty script, significant, ages old and altogether good. There are, in the WEEKLY, no meadow spaces unpeopled by the littleness of man; no familiar hills—though I believe there is a reference to the Grand Cañon, which is a freak out of Nature with the "sublime mildness" of the Earth.

But here again the editor faces a difficulty. A great man who is also a great poet, would be required for this business. And in this country, so overstocked with thinkers, economists and mere writers, there is scarcely one qualified to interpret such Scriptures. However, if he could put one of his best men on a strict diet of Ossian's poetry and keep him out of every city long enough, he might get results worth while. In the poetry of Ossian there is no mention of God, men are mere symbols, small striving, suffering, dying well, leaves blown in the wind. But the great characters are the Earth and the Sky. The real dialogue is the wind, the rain, and the weather. Men pass through that, dim shapes, always falling. But the dialogue keeps on. It is the only book I ever read where the author had the proper sense of proportion between the lasting and the passing.

Mr. Brandeis and Investment Banking

To the Editor of HARPER'S WEEKLY:
Sir:

We have noticed in the very forceful articles which Mr. Brandeis is writing for the WEEKLY a somewhat persistent repetition of the term "investment banker," and what would almost seem to be a special effort to link investment bankers as a class with the various financial and corporate evils which he is discussing.

This is hardly fair to the conservative and independent investment banking houses of the country, to whom the term "investment banker" more particularly applies than it does to the large financial powers which Mr. Brandeis is really criticizing. We could not object, of course, to his criticizing any particular investment banking house as such, if it falls within the field of his article, but we do object to his linking "the investment banker" as a class with the acts of the individual he is discussing. Mr. Brandeis is too intelligent a man not to realize the unfairness of this attitude and its injustice, once the matter is called to his attention.

The Investment Bankers' Association of America at its recent convention in Chicago evidenced in many ways the independence and conservatism of the majority of its members. It is neither

partial to the abuses that exist in the financial world, nor opposed to constructive reforms.

Its feeling is one of friendliness toward those who are seeking genuine improvements in our laws, as it believes the business of its members rightly conducted is a business of service, and a part of the general welfare. It may not agree with Mr. Brandeis as to methods, but its ideals are those which he purports to advance.

Though Mr. Brandeis is a lawyer, the Association will not hold the legal profession responsible for his mistakes.

Very truly yours,

[Signed] CALDWELL, MASSIECH & REED,
General Counsel, Investment Bankers'
Association of America.

To the Editor of HARPER'S WEEKLY:
Sir:

Noting a controversy between you and Messrs. Caldwell, Massiech & Reed, as detailed in this morning's *Times*, perhaps the following statement may interest you:

Last Spring, when I was working on blue-sky legislation in Illinois, I made a very careful study of the act proposed by the Investment Bankers' Association as a model blue-sky law. Considering that the intent of a blue-sky law is to protect

investors against the flotation of securities of little value, the act presented in behalf of the Investment Bankers' Association was a remarkable document. It extended practically no protection to investors. The state authority invested with the alleged power of protection was made nearly powerless, and as far as I could see, the only result of such a law would be to deceive investors into the notion that the state supervision guaranteed honest securities when, as a matter of fact, there was no supervision and no guaranty. I prepared a bulletin on the act at the time, but have no copy nearer than Chicago; else I should send it to you. In that bulletin considerable surprise was expressed that the gentlemen who are supposedly most interested in cultivating the market for honest securities by restoring public confidence in corporate securities should officially put forward a bill of such a character. In view of the statement of their counsel that this Association is "neither partial to the abuses that exist in the financial world nor opposed to constructive reform," this appears to be another case where actions merit greater attention than words.

[Signed] DONALD R. RICHBERG,
Director of Legislative Reference Bureau
Progressive National Service, New York.

"Softly there came from across the table a whisper: 'Maskim'!"

A Beard and a Candlestick

By ELIAS TOBENKIN

Illustrated by John Sloan

LORD of Abraham, Isaac and Jacob—" Mrs. Snitkin began the prayer which was to absolve the Sabbath. But she could go no further. The tears which she kept back for twenty-four hours now came welling from her eyes.

All week Mrs. Snitkin had been too busy to cry. True, she had no one but herself to support. Still, even the four dollars which enhanced her weekly expenses were hard to eke out from her basket of Sabbath-candles and hodgepodge of needles and hairpins which she was selling. From early morning until late into the night she sat near one of the entrances to Seward Park sizing up every passerby and spying a probable customer for hicks away. There was no time here to indulge in the luxury of tears.

ON Fridays Mrs. Snitkin would close her day's work at four o'clock, for by that time every woman in the ghetto had bought her Sabbath-candles. Hastily she would pack her basket and hurry to her two rooms on the rear of a six-story tenement in the East Street. In less than an hour her humble home was transformed into a castle where the Princess Sabbath was welcomed as her guest for twenty-four hours. The magic which transformed the humble dwelling, in the eyes of Mrs. Snitkin, was the five braided candlesticks which, during the week, she kept securely locked in a chest. The minute she had covered the table with a white cloth and set the candlestick on

one end of it, the magic transformation was consummated and the bliss and solemnity of the Sabbath was in the air.

While thus putting her house in order for the Sabbath, Mrs. Snitkin would invariably think over her life in the last two years; and by the time she had finished her work she would feel a strong desire to weep for at least a quarter of an hour. Invariably, however, the sun would set just then. Princess Sabbath was standing at the gate and the luxury had to be foregone. Hastily she would change her workday clothes, light the five candles in the sparkling candlestick, and, shielding her eyes with her hands, she would say the prayer which ushered in the Sabbath.

After the evening meal, when the Lord had been duly praised for his wisdom in creating the world in six days and making the seventh a day of rest, Mrs. Snitkin would read the Bible in her Yiddish translation until the candles burned out; and then she would retire for the night. Saturday afternoon she would chant the Song of Solomon in honor of her guest—Princess Sabbath.

AT four o'clock, however, when the Princess seemed to be losing her gracious smile and was getting ready to depart at sundown, Mrs. Snitkin, too, would become anxious to have the time pass as quickly as possible. Her Sabbath cheerfulness, as a rule, was rigidly demanded by the Church of Israel, would

linger lower and lower on the horizon, would change into an ever-deepening gloom.

WHEN the last ray of the sun had disappeared she would strain her face against the window-pane, restlessly searching the sky for stars. And when she beheld three stars, she would wash her hands and begin to say the prayer absolving the Sabbath.

"—Lord of Israel," continued Mrs. Snitkin after the first stream of tears released her throat, "the holy Sabbath is departing. Bless the coming week. Let it be a week of honor and glory to thy people and let them earn their bread in abundance. Amen."

And now Mrs. Snitkin could light the gas, but she would not cut the thread of her memories; and so she sat sobbing softly until the twilight passed over into deep, black night.

A knock at the door awoke her from her reveries. Hastily she lit the gas.

"A happy week to you," came a soft, dignified voice, as Mrs. Snitkin opened the door and stood back amazed.

In the doorway stood a man who for more than a year had been passing her with a pushcart several times a day. Yet the man looked so different now, that for a moment she could hardly believe her own eyes. His body was no longer bent. His shoulders were erect, his head high. In his eyes there was not that hunted look, which she had so frequently seen in them. When the policeman ordered him

to "move on." Now his gaze was mild and seemed removed from things earthly, while his long galbarde and flowing beard, liberally interwoven with silvery hair, suggested something of the patriarch, and called to mind shepherd scenes from a distant past in the misty, shrouded Orient.

The man likewise seemed somewhat surprised, when he stood face to face with Mrs. Suitkin; but he continued in the same even voice in which he had greeted her:

"I just moved here last Tuesday," he said simply. "Coming from the synagogue now I heard some one weeping here, and I came in to find out, to—"

He looked at Mrs. Suitkin, on whose face the tears had not yet dried, at the room, as if he were searching for the cause of her tears, and continued in a voice which grew still softer, almost apologetic: "I came to tell you that it is not proper to usher in the new week with tears— It is, to say the least, like tempting the Lord. It shows little faith."

"Is it a sin?" Mrs. Suitkin asked, holding up her hands in horror. "A sin, and I have been doing it for two years. My God, forgive me!"

"For two years?" the man repeated weighing his words carefully. "For two years. You must have a great sorrow."

"Yes," she said, "a great sorrow, a great sorrow—children."

"Children," said the man, in a voice which signified that he grasped the meaning of her words, "yes, they are a great sorrow—in America."

Mrs. Suitkin looked at him full of gratitude. For the first time in many years she was understood and sympathized with. She moved a chair in his direction.

"Children," the man repeated as he seated himself near the table and sighed. And that sigh of his told volumes to Mrs. Suitkin.

Nervously, hastily, as if she were justifying herself, clearing herself of some painful charge, and at the same time fearing that he might leave before he heard her confession, Mrs. Suitkin began to tell her story.

IT began with the death of her husband, five years ago. She remained alone in the Russian village—her children were all in America. And they began to clamor for her to come to them, to come here. Her oldest son was rich. She would be happy in his house and would rejoice in his prosperity and good fortune, he wrote. Still, she hesitated long. America, she heard, was hard on the religion of her fathers. She wrote so to her son. He assured her she could worship her God here just the same as she did there. There were synagogues here and rabbis. The devil was not as black as they painted him. She came.

"Goyim" (gentiles) she said falteringly, "Goyim, that is what they are here. I saw it from the first. But then I was here. It could not be helped. So I tried to do my own cooking, to live by myself and not to look in to their affairs. And so things went for a year—two. Then—thus—"

A look strange, desperate, and at the same time pitiful, came into her eyes. For a moment she cast about as if in search of words. Then, pointing to the candlestick which stood on the table, she gasped: "See this? It came to me from my mother. She in turn got it from her mother. And so it has come down in the family, from mother to daughter for three hundred years.

"There was a pogrom in our village sometime before my husband died. Everything we possessed was lost, burned—we were robbed, plundered. But this," she clutched the candlestick in her hands, "this I saved. I threw pepper in the eyes of the frantic mob, blinded them and saved this."

"Then I come here—and my son requests me not to put the candlestick on the table Friday nights. The children, he explained, were annoyed with questions about this strange candlestick by their playmates. It was a gentle neighborhood, he said, and he did not want to be conspicuous, to draw attention to himself. If I wished, I could light my candles in the bedroom—Sabbath-candles in a bedroom!"

Of course Mrs. Suitkin left her son's house. She rented these two rooms here and had since been making her livelihood selling Sabbath-candles in the street.

AS Mrs. Suitkin's words died away and she looked at the man who sat opposite her, she read a strange pathos in his eyes. Was it pity for her or was the man remembering a great sorrow of his own? He evidently understood the meaning of her searching gaze, for he rose suddenly and hiding her good night, left the room.

The next day, however, as he passed Mrs. Suitkin on Hester Street, he stooped his pushcart and talked to her for a few minutes. The following day he did the same. And on the third day he stationed his cart alongside of Mrs. Suitkin's stand, and for more than an hour he stood there, talking to her earnestly, thoughtfully.

That Friday, Mrs. Suitkin went home an hour earlier than usual. Just why she did this, she did not exactly know. Neither did she know why she took such pains to make the candlestick sparkle and glitter as if it were the eve of the Passover or of the New Year, and not of an ordinary Sabbath. When, finally, she lighted the candles, Mrs. Suitkin, for the first time in those two lonely years, did not experience a desire to weep.

After the evening meal she took the Bible, as usual, and began to read aloud in the peculiar singsong of the synagogue.

Just then there was a faint tapping on the door. Mr. Hatoff—this was the name of the pushcart man—entered. His dress, his appearance, was even more dignified now than it was on the previous Saturday night, but his step seemed more uncertain and strained. He hesitated for an instant on the threshold, as if he were abashed at his being there. When he was finally seated near the table, Mrs. Suitkin poured tea. He drank, and praised it with the air of a man who knows all about tea, the fine distinctions in color, flavor, taste, and price.

The snatches of conversation were followed by moments of embarrassing silence.

"You spoke of children," Hatoff suddenly began, as if he were resuming a conversation which had just been broken off. "I, too, have children here, in New York. They are rich and—I have nothing against them; but I, too, find it more to my liking to live here in a little room to earn my own bread and to be left alone."

"YOUR children," Mr. Hatoff went on, as if something within him was compelling him to speak, "object to your candlestick. Mine object to my beard."

"Beard?" Mrs. Suitkin exclaimed. "How could they? It is a beard!" And she gazed fondly at the tresses which framed Mr. Hatoff's face.

him such an air of distinction, made his face so reminiscent of the rabbis, and prophets, and priests of old.

"Trim it, that is what my son wanted me to do," continued Mr. Hatoff with a sad irony in his voice. "For thirty-five years my beard had never seen a pair of shears or a razor, and now he would have me—trim it."

A look of indignation flitted across his face for a moment, but he continued without bitterness, without hate, though with extreme sadness.

"The history of the Jews can be fairly read in their beards. The Amalekites, Spain, and Torquemada, could not make us forsake our God, our Torah; but here, in the land of freedom, where each one may worship as he pleases, my son would have me trim my beard, because he lives uptown and wants to be like his next-door neighbor."

He chuckled softly at the folly of it all, and, with a voice which rang with a sort of pity for his son, his weeping son, who feared his next-door neighbor more than he did the Lord, he added: "I have nothing against him. Nothing at all. Let him go his way. I will go my way. I am still able to earn my bread—what more do I want?"

"Who would have believed six years ago," she sighed, more to herself, "that we will end our declining years in America, in such misery? Whoever expected such a dreary, hopeless old age, in a land which has no use for the old and the feeble?"

As she spoke Mr. Hatoff gazed at the candles. They were burning rapidly now, for more than two-thirds of each candle was already gone. In twenty minutes, he figured the house would be dark. It was Sabbath and you could not strike a match to light the gas. He would have to leave. And he felt that he could not leave in this way—he came there with a purpose.

The last words of Mrs. Suitkin kindled an idea in his mind which lighted up his way for him, as it were, pointed out the course of procedure. "No," he said, before she had finished her sentence, "even here old age is not always hopeless, at least it need not be hopeless—not in all cases."

"This afternoon I saw the housekeeper hang out a sign that there is a three-room flat vacant on the floor above this one—an excellent opportunity for some one."

"Yes," said Mrs. Suitkin, fixing her eyes upon the empty tea glass which stood in front of her, "an opportunity, an opportunity."

Two of the five candles had completely melted away, but their fires were still glimmering as if trying to live, to burn a minute longer. Three feet away the darkness was thickening.

All the words Hatoff could think of in Yiddish seemed too common. They seemed lacking in dignity for the occasion. If he were a boy and she a young girl, it would be different; these words would be appropriate. As it was they seemed too trivial. Finally he lighted upon the word, the proper word. It was in Hebrew, the ancient Hebrew of the prophets.

"Maskim?" (agreeable) he asked. "Maskim?"

Softly, tenderly, there came from across the table a whisper: "Maskim."

Two more candles had by this time flickered their last. The fifth one was reduced to a blue flame which was dancing on top of a little pool of molten tallow. In the twinkling light Mr. Hatoff perceived the eyes of Mrs. Suitkin. They were full of tears. But he did not rebuke her, for from his own eyes likewise two tears escaped and hid in the long tresses of his beard.

Where Is Your Daughter This Afternoon?

By ETHEL WATTS MUMFORD

JUST what is afternoon tea? Do you picture it, oh, New York mother, as a peaceful gathering over a silver pot and steaming cup, chats at Sherry's, chatter at the Plaza? Daughter has told you repeatedly, "And then we had afternoon tea." Have you inquired further? Are you sure that she is not being drawn into the whirling vortex of the afternoon "trots" that spangle the city with bright false-night lights from "the Thirties" to "the Sixties." It is well to be very sure where this important function of "tea" takes place. The older generations, secure in the idea of a decade ago that daylight means security, do not dream that the miasma of the evil night has risen, with its *fata morgana* of electric coruscations and its poison of alcoholic indulgence, and trespassed upon the safe and protected hours. Let them inform themselves, and quickly. Let them go from four till seven, and see the young girls, many of them obviously of breeding and refinement, who, cheek by jowl with professionals whose repute is not even doubtful, are footing it gaily, and learning the insidious habit of the early cocktail—girls who, thirsty after a prolonged dance, feel self-conscious and ashamed to ask for a glass of water (rickety and pale pink, innocent looking gin beverages become the "thirst quencher"); and when, frightened by the lateness of the hour, she must hurry home to explain "that they went to tea with Eleanor and Gwendolin after the matinee." She scolds her throat with hot coffee or gulps a hasty mint in fear of detection of alcoholic fumes. Nor is this unhealthy atmosphere and the drinking habit thus easily and early formed the only or the worst danger. The careless forming of undesirable acquaintances, the breaking down of barriers of necessary caution, make for carelessness in after life, recklessness of demeanor and action, which is the greatest security of the girl's habitual environment, develops a laxity of moral responsibility and a state of mind that is corruptive and vitiating to the last degree.

THE evil influence is inevitable. The very air of these places is heavy with unleashed passions. No mother or father would for one moment permit a daughter the run of dance-halls at night—certainly not unchaperoned—even with boys and girls of her own set. If by chance they should attend such a performance after a theater party, the parents would regard it in the light of "slamming." They do not dream that these very boys

and girls are frequenting these self-same places under cover of "Afternoon tea"; that these "trots" are in no way modified from the night's performance, except, perhaps, for the elimination of paid performers, who in nine cases out of ten, are more decent and self-respecting in their dancing than the "guests" who throng the floor. Young girls—little debutantes who think it exciting and funny to see their unfortunate sisters hawking the wares of their miserable trade rush blindly into the environment of life's ugliest phase, and without realizing it themselves, take on its garish color. All youth is chameleon-like. Environment acts quickly on sensibility, fresh and new. Youth has had no time to see results in life. It can judge only by its quick emotions, the appeal of glamour, the excitement of sensations. Youth will always answer to the call of the flesh, as is natural and right; but from its very inexperience of the inexorable logic of life it will answer to the call of all that is wasteful of energy and destructive of ideals with blind enthusiasm.

LET Youth have its fling—hot not where it will be soiled and despoiled. There is the *de dansant* that is decent. There are a few places where young people may go and dance with impunity and at least quasi-respectability. Perhaps Mother or Auntie has been to one of these, and seeing it innocuous, if somewhat of an innovation, has given a grudging permission to return. Waltzing has given way to the tango. Why not afternoon "trots" after all?

But from these afternoon teas the next step is to the more advertised, more seductive places—places more difficult of access, atop of some restaurant, cordoned by waiters, crowded with softly lighted tables.

As the dinner hour approaches, it is not an uncommon thing to see young girls dizzily endeavoring to right themselves, to "pull themselves together," vaguely realizing that something must be done to still suspicion at home, while an anxious escort suggests a quick taxi spin around the park as a staidier. "My maid will fix me up all right. Mother's going out to dinner somewhere else." That remark, overheard literally in the elevator of one of these restaurant-dance-halls, tells the whole story. There is a menacing condition present that parents must look into.

Daylight privileges—afternoons at matinee or afternoon teas—let guardians be very sure that the use of these

hours is as innocent as it should be. Go, see for yourselves—you who have reason to desire to know—what traps the city is laying for young, unwary feet. These places are not hard to find. A very little questioning will reveal their whereabouts, and a very short visit will reveal their nature. They are only too accessible, in the heart of the most frequented districts, near the theaters and shops, not far from the best hotels. Go and be convinced. The whole dance-mad town has seemingly remained blind to the ever increasing incursion of the daughters of good families into the Tenderloin realm. The tango mania has been the cause of an amused shrug or two. Parents have not realized that the dance-halls have hailed the innovation of the *de dansant* with delight, and that with wide-thrown doors, they are luring young girls into a worse environment than these same blind parents would dream could ever reach their little girls. Young men who urge their girl friends to attend such dances are to blame. They are to blame if they consent to take young girls, even when the foolish virgins themselves want to go. Many a lad excuses his presence at an afternoon dance-hall, with girls of his own class, with the time-worn phrase: "She'd heard about it, and wanted to go, and so of course I took her." Perfectly true, no doubt, but no excuse nevertheless.

The Matinée Girl, with her soda and caramels, her romantic "smile" on the leading man, whose photograph she hides in her bureau drawer, and to whom, in a fit of ecstatic admiration, she indites poetic epistles, is a being metamorphosed into—what?

GO and see for yourselves. A word to the wise is sufficient; but how many words must one use to convince the unwise that they may awake to their folly? Forget your "bridge" for one moment, my dear madam, and, kind sir, curtail that contented before-dinner-hour at the club. There is something important for you to learn—a phase of the day that you should investigate. Pray also, that when you go you do not find the children of your friends, or your own nearest and dearest, amid the fumes of the cup that inebriates but does not cheer.

There are May dances and merry dances, Christmas dances. There are also *Narrestanten*—"the dance of fools"—and perhaps you've forgotten—the Dance of Death.

Finance

By ALBERT W. ATWOOD

State Bonds

Inquiries will be answered as soon as possible, but considerable time is often required to secure reliable information. This magazine does not have the facilities to assist in raising capital for even worthy enterprises.

THE great problem of investment is to being the applicant for, and the owner of, capital together. So varied are the forms which investment securities take that somewhere there must be the exactly suitable security for every man's need.

With this idea in mind it may be worth while to direct attention to the increasing output of state bonds, which as a class have been little known until recently, except in certain lamentable and disastrous periods of our country's earlier history.

Every beginner in American history or political science knows that to our states adhere the rights of a sovereign. A thorough and at all lengthy discussion of state bonds would of necessity go back to the days of Alexander Hamilton, Thomas Jefferson, and the great decisions of our most renowned Chief Justice. But it is enough here to say that with sovereignty held by the states the value of state bonds depends as a general principle solely upon the will and good faith of the sovereign, which is the people.

An Ugly History

THERE have been two great periods of default and repudiation of American state bonds. In the thirties the northern states lent their credit to banks and railroads, and when panic and extreme depression came there were not the funds at hand to meet their obligations. After the Civil War, and during the Reconstruction Period, the southern states issued bonds to the amount of perhaps \$300,000,000, which were defaulted or repudiated. Both of these investment holocausts were due to extreme material impoverishment. There would have been no such disgraceful chapters if material resources had been large. Only because the burden of debt had become distressing did the easy-going and ruined planters fail to pay their obligations.

There is an English body of investors known as the Corporation of Foreign Bondholders, which follows the southern states like a Nemesis and gradually compels them to arbitrate and settle, this being accomplished by continual publicity and opposition to new bond issues, there being, of course, no legal redress.

No dispassionate observer can fail to sympathize with the southern states. Confederate bonds and the obligations of its member states, naturally were worthless, and English investors had to swallow the losses of war. But the Englishmen could not and cannot see why the bonds of carpet bag governments which followed the war should not be paid. Well, the assessed value of property in the south fell from four to two billions of dollars from 1860 to 1870. Leaving aside the fact that the carpet bag governments

which created these bonds did not represent the south, and suppressing all the strong moral and sentimental factors that made the southerners reluctant to pay these debts, the simple fact is that the south did not have the resources to pay.

A New Era In State Debts

BUT the South is paying up, and its maturing indebtedness is being consolidated and funded. Louisiana recently sold to a group of the most reliable New York investment bankers \$10,991,500 of its bonds, which were offered in turn to individual investors to yield 4.55 per cent. The Corporation of Foreign Bondholders objected to the ruling of the Attorney-General of New York that these bonds were legal for savings bank investment, on the ground that Louisiana had never paid off a small issue of "baby" bonds, \$5 certificates issued some forty years ago and bearing the likeness of a little girl of those days. These were the only unpaid obligations of Louisiana, and the Attorney-General of New York ruled that they were not, strictly speaking, debts of the state as they had been specifically secured by unpaid taxes.

But enough of history. These new Louisiana bonds are surely safe enough. Not only do they mature serially year by year until 1904, a new and wholly commendable principle as applied to state finances, but the state constitution has been so amended that the authorities must always see to it that each year enough taxes are levied to pay off the bonds which come due that year. Only in case the value of all the property in Louisiana falls so low that the people rebel against taxation will the bonds be endangered.

More than fifteen Commonwealths have no bonds, including Pennsylvania, with its six billions of assessed property, New Jersey, Ohio, Michigan, Illinois, and Iowa. These and other states have not had to resort to debt because there are so many other sources of income open to a state, such as incorporation taxes, gross earnings tax on corporations, inheritance taxes, stock transfer taxes, secured debt recording taxes, and many other forms of remunerative taxation. And yet the credit of Massachusetts and New York, so superior although these commonwealths have the largest bonded debt. The assets behind state bonds are intangible, but are highly sensitive to the tangible assets. As long as the people will it, state bonds are secured by the taxing power over all the property in the state.

NEW YORK had no bonds in 1893. In September, 1913, there were \$108,455,000, mainly issued for highway and canal improvement. But the assessed value of property in New York is at least twelve billions of dollars, and in some years the state has so much income from other sources that it does not need to tax this property at all to pay the interest on its bonds. In 1913 it taxed each dollar only $\frac{1}{1000}$ of a mill.

Opportunity Awaits

ON Wednesday next New York will sell \$51,000,000 of 4½ per cent. bonds in amounts of \$100 and multiples thereof. Up to 1910 most of its bonds bore only 3 per cent. interest. Then, as investors the world over demanded more, the rate went up to 4 per cent., and now for the first time it is 4½ per cent. Louisiana tried at first to sell 4s, but there were bids for only \$102,000 out of \$11,000,000, so up went the rate to 4½ per cent.

No one can tell at this writing what price the New York 4½s will bring, but if it is around 104.105 or 106, as now seems likely, the conservative investor will do well to buy them.

There are certain facts about these and all other state bonds which are not widely enough known. All state bonds are exempt from the federal income tax. The owner does not even have to mention them in his return to the Internal Revenue Collector. State bonds are nearly always free from state and local taxes in the commonwealth in which they are issued. This is of course true of the New York 4½s. Local taxes often amount to 1.82, so that if the bonds can be had to yield 4.69 per cent., their real yield, if we allow for federal income and local taxes, is 7 per cent. Of course there are not many persons taxed as fully as this, but the illustration, while extreme, is wholly valid.

Or take the Connecticut 4s. These may be had only in \$1000 denominations and multiples thereof. They return slightly less than 4 per cent., but are free from all taxes, federal and local, when held by residents of Connecticut. The state has only \$11,064,000 bonds, but there is taxable property of \$1,300,000,000 in addition to railroads, street railroads, banks, insurance companies and trust companies.

California highway 4s may be had to return 4.30 per cent., and there are the Maryland 4s to be had in \$100 amounts, which also is true of the New York and Louisiana 4½s. If one believes that Canada is rich let him buy Province of Alberta 4½s to yield 5 per cent. The proceeds of these bonds go largely to build a telephone system and grain elevators which are self-sustaining.

THE Province has property of its own of \$113,765,363 and a debt of but \$10,000,000. Thus it is able to pay interest on its bonds without any resort to taxation, and has never levied a direct tax.

The issue of state bonds is sure to increase as the policy of internal improvements spreads. Massachusetts builds highways, makes harbor and river improvements, and constructs great park systems and water works. New York constructs barge canals and highways. As time goes on Western states will build more and more highways and will probably bond themselves.

It is possible the states might issue too many bonds, but their good faith is not in question, and the only other cause of default and repudiation in the past, the extreme impoverishment of the people of the state, is surely no longer to be feared.

Last Days of the Big Bargain

Our Low Tariff Sale is drawing to a rapid close. The supply is growing smaller every day. While the stock lasts, we are able to offer

A Beautiful Imported Set of For Only Victor Hugo's \$1.00 Romances

Bound in Red and Gold
Duotone Illustrations

3000 Pages Printed from New
Plates on Bible Finish Paper

These are, beyond doubt, the Greatest Romances Ever Written. They portray the tragedy and comedy of life at its darkest and brightest, and the human passions at their worst and best.

They tower above all other books like a mighty mountain over the foothills.

And Remember This: You get just as much enjoyment reading this edition as you would from a set that would cost you many times a dollar.

THIS RARE BARGAIN is essentially A Prize to the Prompt Send Your Order Today

—ADDRESS—

McCLURE'S MAGAZINE

251 Fourth Avenue

New York City, N. Y.

Not necessary to use this coupon if you mention Harper's Weekly

McCLURE'S MAGAZINE

251 Fourth Ave., New York.

Enclosed find \$1.00 (or \$1.50) for which please send me Victor Hugo's Romances, in 5 Volumes.

The Greatest Romance
ever written
For Only **\$1.00**
for the complete set.

Our supply is limited. To avoid disappointment send this coupon today.

11-17-14

Owing to the low price, delivery charges must be paid by the purchaser. As a special rate, we as publishers can send the books for 50c if charges are prepaid. If you want us to prepare the express, add 50c to your remittance. We ensure they be done, as the cost will be higher if paid on delivery.

A Ballad of Dead Girls

By F. DANA BURNET

SCARCE had they brought the bodies down

Across the withered floor,
Than Max Rogosky thundered at
The District Leader's door.

Scarce had the white-lipped mothers come
To search the fearful noon,
Than little Max stood shivering
In Tom McTodd's saloon!

In Tom McTodd's saloon he stood,
Beside the silver bar,
Where any honest lad may stand,
And sell his vote at par.

"Ten years I've paid the System's tax,"
The words fell, quivering, raw;
"And now I want the thing I bought—
Protection from the law!"

The Leader smiled a twisted smile:
"Your doors were locked," he said.
"You've overstepped the limit, Max—
A hundred women. . . . dead!"

Then Max Rogosky gripped the bar
And shivered where he stood.
"You listen now to me," he cried,
"Like business fellows should!"

"I've paid for all my hundred dead,
I've paid, I've paid, I've paid. . . ."
His ragged laughter rang, and died—
For he was sore afraid.

"I've paid for wooden hall and stair,
I've paid to strain my floors,
I've paid for rotten fire-escapes,
For all my bolted doors.

"Your fat inspectors came and came—
I crossed their hands with gold.
And now I want the thing I bought,
The thing the System sold."

The District Leader filled a glass
With whiskey from the bar
(The little Silver Counter where
He bought men's souls at par).

And well he knew that he must give
The thing that he had sold,
Else men should doubt the System's
word,
Keep back the System's gold.

The whiskey burned beneath his tongue:
"A hundred women dead!
I guess the Boss can fix it up,
Go home—and hide," he said.

* * *

All day they brought the bodies down
From Max Rogosky's place—
And oh, the fearful touch of flame
On hand and breast and face!

All day the white-lipped mothers came
To search the sheeted dead;
And Horror strode the blackened walls,
Where Death had walked in red.

But Max Rogosky did not weep.
(He knew that tears were vain)
He paid the System's price, and lived
To lock his doors again.

Baseball and the Theater

By EDWIN DAVIES SCHOONMAKER

THE trouble is that the national theater has not been defined. In spite of all the discussion we have had the public mind is still confused with regard to what constitutes a national theater. And in this particular the leaders of the various movements looking to the betterment of the situation are themselves not agreed. We find one group that thinks a national theater is a training school for actors; another, that it is a free stage for our young playwrights who have had no chance under the present system; a third maintains that it is a sort of theater-extension affair, the object of which is to give the public better plays and also to educate that public up to an appreciation of them. There are those indeed who seem to have concluded that a national theater is a hindrance.

One thing is sure: the plan must not be evolved from the brains of the few with the expectation that it will meet the needs of the many. This is the mistake we have made in the building of our government and industrial systems. Let us learn from these and start right. It is a waste of energy to go on and build upon aristocratic lines and then, a century later, when some Lincoln arises, have it all to go over and reconstruct.

In the case of our government there was some excuse for this mistake. At the time of its founding there was no institution that had been built by the American people to which the builders of our government could look as a model. They were obliged to rely upon their own conceptions of what a free government should be and to square these, when thought advisable, by the experience of European governments. But to build our theater in this way is unnecessary and would be the height of folly. For we have today at least one institution that has been wholly built by our people, democratic to the last degree, and vibrant with that peculiar enthusiasm which all the world recognizes as characteristically American. I refer to our institution of baseball.

I AM perfectly aware that the suggestion that we take this "creature of the mob" as a model for our national theater will bring out a sneer from those who look upon the drama as an art form belonging to the upper classes, created for their particular enjoyment, and whose destiny therefore is to be determined by themselves. And unfortunately the movement toward a national theater has been chiefly in the hands of just such men.

But in spite of these sneers let us go back to the only institution we have built with which we seem to be perfectly satisfied, the only one which seems to have met the needs of our national life. State, Church, our schools, our industrial system, our theater—all these have been attacked on every side. But no one has found fault with our baseball. That alone has escaped the pull of the muck-rakers. And with good reason, for this is the only institution in which our joy of life finds expression, the explanation of course being that it is the only free, living, nation-wide offspring of the American democracy.

It is evident, therefore, that if our national theater is to express the life

of the people to the full, it must be built up in the same way and after the same plan which we have unconsciously followed in the development of our great national game. To one who has seriously considered this matter, it is as plain as day that those points in which our present theater has failed most conspicuously are the very points in which it has diverged furthest from the natural lines along which baseball has developed.

LET us make a detailed comparison between these two institutions, the one a tremendous national success, the other almost as tremendous a national failure, and see if the above statement is a failure.

I indict the present theater as is true (first) from the viewpoint of the playwright; (second) from the viewpoint of the actor; (third) from the viewpoint of the general public.

Has it failed from the viewpoint of the playwright?

NO one who has even the slightest acquaintance with our theater will claim that it affords anything like a national expression for our drama. Constituted as it is, it is impossible that it should. No institution held as tightly in the hands of a few men as our theater is held could in the nature of things afford an outlet for the passions and aspirations of millions. It is utterly futile for a nation to go on seeking to voice its vast and stirring heart in plays, if a few men are to have it in their power to close the gate to all except such as fall in with their tastes and their intelligence. To allow this shackling of the nation's mind is just as absurd and unrepresentative of American democracy as it would be to allow a few men to say what part of all the legislation which the people demand should be enacted into laws. We are applying the recall to our law-makers and our judges. It is high time we were applying it to our theater-managers, indeed to the whole theater system. For under this monstrous system nine-tenths, or more, nearly sixty-nine one-hundredths, of the dramatic expression of the nation, is being left to rot in the fields to make soil for some indefinite Golden Age. In matters industrial we are bending heaven and earth to utilize our waste products. But what a stupendous waste product is here! If the present theater were in actual touch with the people, this condition of things would not be tolerated for a moment. Imagine, if you can, a system that would make it necessary for the nation's farmers to ship their crops to New York, or for the manufacturers of the nation's shoes and clothes to send their output to New York, the fate of these vast products to be left in the hands of a few men! Would there be any hesitation in pronouncing such a system a failure?

Has it failed from the viewpoint of the actor?

IT is tragic to contemplate this one great gate of the theater piled up to choking with plays, many of which are never even read; and that other gate crowded with actors seeking, and seeking in vain, for parts to play. They are so near to each other, these unfortunates,

these actors who are seeking their plays and these plays that are seeking their actors! And yet they are hopelessly kept apart by the theater group that keeps permanently in New York an immense over-supply of trained actors who, under proper conditions, would very readily find employment elsewhere. And the trained actors, he it remembered, represent probably not one-hundredth part of the dramatic talent of the nation. Every one has personal friends and acquaintances whose life-long ambition it has been to get on the stage. Given an actual national theater, and there is not one of these but would have his chance. Here is another great national asset, of the greatest cultural importance, that is going to waste. It is impossible to characterize a system which permits of such waste by any other term than a failure.

Is it a failure from the viewpoint of the general public?

When we stop to think, as we seldom do, that the dramatic instinct is quite as old in the race as the religious one, we are amazed to see how inadequate an equipment there is for furnishing an outlet for this instinct. Go into any small town and see how many churches you will find. Observe, too, the methods that have been employed to foster the religious interest. Then look at this other racial instinct in the small towns and see how it has been neglected. At most, one small theater is all we ever find, and this too, like the great system of which it is a part, absolutely cut off from the people so far as offering any channel to their creative impulse. Plays are brought in from the outside; they are never drawn out of the people themselves. And with the larger towns and cities it is relatively the same. The whole system is based upon that false idea, which has for so long dominated our educational system also, that education consists in stuffing rather than in developing. It is we who have failed; we who have left to the exploitation of private enterprise a great racial instinct whose development ought without further delay to be taken over and made, along with music and manual training, an important part of our educational system.

IT is self-evident, therefore, that our national theater must be something more than a building, something more than a training school for actors, something more than a free stage for our playwrights, something more even than a theater-extension for the elevation of the theater-goer. It must be all of these and more. It must be to our higher life what baseball is to our lower. Unshackled by any central organization arbitrarily controlling the whole system, from top to bottom—the curse of the present theater—it must allow and encourage a free and full expression of the dramatic instinct of the whole nation. This provided, better actors and better plays and better taste in things dramatic will come of themselves, just as improvement always comes with better education.

Going back now to the comparisons we were making between our provincial theater and our national game of baseball, with a view to finding the secret of the success of the latter, just as we

found the secret of the failure of the former, let us consider them in their respective relations to those taking part in them—the players. We are at once struck by the fact that while there are always vast numbers of unemployed actors, one seldom hears of the unemployed in baseball. The latter has an almost miraculous way of absorbing its talent. Every city, every town, every village, almost every crossroads, has its one or more baseball teams. Think of the thousands of boys and men to whom this gives not only recreation but employment. Think, too, what a wonderfully free outlet it affords for baseball talent, great and small. From his earliest years, in any part of the country, the boy with a liking for baseball has a chance to try himself out and, if he makes good and cares to become a professional player, he can pass, by a natural process of growth, to the best league in the nation. If not, he contentedly finds his place in the business world. Compared to this magnificent system of discovering and utilizing all the talent of the nation, how utterly inadequate and out of date is the present theater! Is it any wonder that the former has a way of renewing itself, and of never falling from its high standard? And is it any wonder, on the other hand, that every now and then the cry goes up that we have no actors?

THERE is, of course, in baseball, no part corresponding to that taken by the playwright in the theater system. But once a national theater is built along the lines of our national game, the playwright will fall naturally into his place and find room for his talent, just as the actor will find room for his. All the dramatic talent of a town would come at once to the surface, and all those plays which now lie composted in New York would have their chance to be tried out in the home town. And just as the actor, who proves himself, would pass on to larger towns and cities, so with the play. It, too, would pass to larger places and would probably be taken up by traveling companies. The present system of allowing a few readers, crusted with professionalism and grown stale in the business, to pass upon the entire output of the nation's plays is, to say the least, hardly in keeping with the spirit of the times. Imagine our architects, or our doctors or our business men, tolerating such a system! But with a national theater, democratic as baseball is democratic, and with an organization modeled broadly after that of our national game, it is inconceivable that an American drama should not come forth comparable in every way to the greatest of our achievements in other lines.

And now how would such a national theater affect the general public?

It would at once give that interest in the theater which a feeling of ownership always gives to a people—such a feeling, for instance, as the American people now have in their government as compared to that of people living under an aristocratic system. Or, to bring it back to the game again, it would arouse the same enthusiasm in the drama as we now see in baseball. The shouts that go up from the bleachers all over the country, great and small, spring from the instinctive feeling that the game is the people's own. Likewise, the apathy of the public toward the theater is due

very largely to the conviction, equally well founded, that the theater is not the people's own. We cannot expect the public to shout over a private enterprise. To intimate that this lack of interest in the theater is due to a dying out of the dramatic instinct, which is almost as old as life itself, is too absurd to merit consideration. There is a wide, unbridged chasm between the player on the stage and the man in the seats, a chasm which does not exist between the baseball player and the man on the bleachers. The reason, of course, is that the men who fill the bleachers have themselves played the game and know it from top to bottom, whereas in the other case the audience is at the disadvantage of being unfamiliar with the game. For it is a game they have never played. We hear a great deal about the stupidity of the theater-goer and the hopelessness of the masses who never go. But what of the stupidity of a system that goes on building theaters and takes care that they shall be up to date in every respect and yet does not take the trouble to see that the only way to secure a permanent and increasing public for the theater is to give the public a part in the theater—an intimate acquaintance with all its details? There is not the least doubt, with the opportunity which the theater has in America, that such a public could be secured. But it is utterly folly to suppose that this can be done by the outworn trick of "booming" plays. There comes a time when words cease to have any meaning. That "you can do anything by advertising" is in a sense true. But it is equally true that you cannot go on doing it forever, as our present theater managers seem to think. Probably a new era will have to come before it will be seen that the only way in which a permanent and ever-growing public for the theater can be absolutely assured is by allowing and encouraging a free and wide growth of the dramatic instinct, not only by providing plays for the people to see but by getting the people to write, produce, and take part in their own plays.

RESTING, as our national theater should rest, upon the broad foundation of education, it is in our public schools that the first stones of this institution should be laid. The dramatic education of the people should be begun as early as their baseball education is begun. Every school in the land should have its dramatic department, and no quality that the child possesses should be more carefully nurtured than the dramatic impulse; for through this, if properly directed, the whole intellectual and moral nature may be unfolded. There is hardly a branch of study that could not be utilized and made more practical in this way. History, composition, art, music, manual training—is there anything for which the play could not be made the clearing-house? It is of infinitely more importance, to the children and to the community at large, that this opportunity for self-expression should be open to the children, than that their minds should be overlaid and smothered, as they so often now are, with masses of useless information. Every grade should have its little dramas. The taking of parts, even the writing of little plays, should be begun with the earliest instruction in composition. Talents would soon show themselves, and the selective process would soon be at work. There

would grow up naturally at the top a group of young actors, and we may be sure that no school would be without its playwright. Then, just as the ball-team of one school now competes with the team of a neighboring school, that rivalry which is the very life-spirit of our baseball system would burst forth in dramatic contests. The interests thus fostered would be carried on into the colleges and universities where the same inter-collegiate and inter-university contests might be expected.

GIVEN one generation of such training, and a new age for the theater will have been ushered in for America. Not only would our educational institutions flower out in dramatic expression, but the drama would become a civic thing as well. High school and college graduates would bring with them into their business life that same intense and personal interest in the theater as they now have in baseball. The result would inevitably be that there would spring up in each town a municipal playhouse. This would happen as surely as that each town now has its town baseball diamond. And the local talent for drama—acting and writing—would find expression in that municipal playhouse, just as the talent for baseball now finds its expression on the town diamond. And no fear need be had that these local dramatic companies would lack for financial support. For even though the local government should not furnish this, business men, with this new and pervading interest in the drama abroad, would soon find it quite as profitable to back the local dramatic company in its contests with the companies from neighboring towns as it now is to back the local nine in its contests with other nines. And, of course, out of all this, traveling companies would arise which would go on circuits more or less wide according to the degree of talent of the actors or the merit of the play.

And incidentally, is it not clear that an institution of this sort solves at once the problem of the unemployed actors and of the playwrights who have had no chance? Is there any reason why these men and women, with the knowledge they have of their respective arts and with years of valuable experience behind them, should not become instructors of the American youth? It is nothing less than a crime that we have not, as a country, availed ourselves of the services of these men and women. What a system it is that makes it necessary to establish Homes for indigent actors when the whole country is literally running wild with talent that needs training! No better evidence can be found that the Middle Ages have not relaxed their hold upon American universities than the fact that, whereas they have departments of the written drama headed by eminent professors, they have no departments of the acted drama headed by eminent actors.

But America should not wait in this matter till her universities have taken action. Our national theater must arise out of the people, and its foundations should be laid in the people's public schools. The people have no part in the present system, and reforming it will not give them a part. What we want is a great national theater of the people, and we should be satisfied with nothing less.

COLONEL HOUSE

COLONEL E. M. House, before he became so well known during the last year for his influential statesmanship on a national scale, was for many years, as a leading citizen of Texas, acquiring that knowledge of men and of measures which, combined with his native wisdom and unusual tact, have enabled him, while holding no office, to exert a strong influence on the trend of events. Nothing is better for a country than to possess a large number of able men who take an active part in public life, instead of leaving it all to the office-holders.

A Large Man

THE man who made the Ford Motor Car succeeded because he had profound ideas. He found out how to make a good car for little money, he began to make it, and he refused steadily to be led away from his object. Therefore he became very rich, with money made out of an actual contribution to interests, convenience, and health, not out of cornering anything, nor combining anything. The man who had brains and character enough to run his business in so creative a manner on the manufacturing side is the man to take a dramatic step ahead in his relation to his employees. The most significant element in his splendid scheme is the regularization of employment. Mr. Ford recalls to our mind the story of William H. McElwain, of Boston, who died in 1908, at the age of forty-one. He started with little and left a fortune, earned without patent or trade mark. His sales grew from \$75,957 in 1895 to \$8,691,274 in 1908. In his thirteen years in business, he made so many advances in methods and practices in the shoe industry that intelligent observers have said he revolutionized shoe manufacturing. One thing he attacked was that worst of all industrial evils, irregularity of employment, and before he died every one of his many thousand employees could find work three hundred and five days in the year. Mr. Ford is of that type. He belongs among the really great business men who have genius for organizing, manufacturing, and selling, and who (like members of any other high profession) wish to use their genius for the general benefit. His determination to have his wealth go after his death to men who have helped him earn it is as inspiring as an example to other rich men today as it will be as a source of independence and a source of pride to the son who undoubtedly will inherit his father's resourcefulness and his father's freedom of thought, which are much better things to inherit than a fortune made by another man.

Freedom for Cities

THE Progressives in Illinois include a large proportion of the first citizens of the state, and they have in Raymond Robins a leader of vision and courage. They showed the reality of their progressiveness when they bound themselves to work for the passage of a bill to permit cities by referendum to determine that all candidates for municipal offices should be elected on a purely non-partisan basis, and similar legislation for counties and sanitary districts. Such a bill was defeated last year, but we prophesy it will win the next time it is brought to the front.

Danger Ahead

APERIL inevitable to any successful party is that all those elements that gain from politics tend to rush into that party. Progressive Democrats must be on the lookout against the reactionaries who put on the mask of progressiveness and try to get into councils and into office. In certain parts of the country not only are the reactionaries of all parties lining up under the Democratic banner, but even some progressive Democrats are showing a tendency to compromise with the reactionaries in the hope of winning next year's elections through the popularity of the national administration. The President himself is an absolute believer in efficiency and progressiveness as requirements for office, but some of his advisers believe in rewarding those who have been faithful to the party for many years, without splitting hairs about qualifications. Such advisers are dangerous to the success of his administration.

Roger's Ambition

ROGER SULLIVAN, who, like other bosses, as they get along into their later years, wishes the dignity of a senatorship, was once talking to Lincoln Steffens. Steffens said: "Look here, Sullivan, I want to belong to some party, and I can't find one that suits me. Why don't you get out of the Democratic Party so that I can get in." Sullivan looked at him without any amusement. To think of such a proposition about his party! His! A party he had owned almost as long as he could remember! He beckoned some of his friends who were within sight and cried: "Say! What do you think this guy wants? He wants me to get out of the Democratic Party, so he can get in. Now what do you know about that?"

Another Democratic leader of the Sullivan type was watching a convention where the delegates were really expressing their own opinions, and at one point he exclaimed, with tears in his voice: "Just look at all those fellows, and nobody to run 'em."

A Cheerful but Cynical Remark

AN experienced, clever and pleasantly ironical observer of the way of the world, after commenting on the amount of commotion Mr. Brandeis's new ideas make in the community, observed, "If I were President, I would put him either in jail or in office." Very generally office holding prevents a man from fearless thinking and action.

Interlocking Directorates

NOW that the example has been set by the Morgan firm of withdrawing from some interlocking directorates, the question arises of what further steps are logical. In this connection, attention may be called to the proposals last April in the *Harvard Law Review*, of Max Pam, whose opinions are entitled to study. As counsel, he has been prominently identified with the organization of trusts and has had for years full opportunity of seeing the advantages and disadvantages of big business. He reached the conclusion that interlocking directorates were a menace to the public and demanded drastic legislation. Much can be said in support of the specific measures he proposes. He urges the government to come to the aid of minority stockholders. The president of every corporation should be required to report annually to the stockholders and to the State and Federal officials every contract made by the company in which any director is interested. The Attorney-General of the United States or of the State should investigate all such contracts and take proper proceedings to set them aside and recover damages, or else without setting the contract aside recover the profits from the interested directors. State and National Bank Examiners, State Superintendents of Insurance and Interstate Commerce Commissions should be directed to examine the records of every bank, insurance company, railroad company and other corporation engaged in Interstate Commerce. The proposal is fundamental and comprehensive; sometimes it is the man who knows the inside best who is most fundamental in the remedies he advises.

The Ideas of Loft

WITH varying success the people have fought for the past decade to force sixteen ounces into pound packages. In some States, such as Idaho, where a conspicuously efficient pure food inspector is employed, the dealer would be rash indeed who should attempt to market pasteboard wrappers at the price of butter, chocolate, or ham. In New York the law is less definite, and those who consider it good business may still sell containers at the price of the product inclosed. Huyler's candy stores, to cite one example, prefer to run a little ahead of the strict requirements of the law, and each pound of their candy weighs a full sixteen ounces plus the weight of the wrappings. Another big candy manufacturer, George W. Loft, prefers to meet the requirements of the law as indicated by this notice:

This package weighs one pound. This specified weight includes the container.

Of course Mr. Loft does not emphasize the word "includes" except by making the amount of "container" very abundant. When Mr. Loft was elected by Tammany to take the place of Big Tim Sullivan in Congress one of his first acts was to reestablish the Sullivan habit of coaxing votes with free shoes on the Bowery and free dinners to Bowery hangers-on. May we hope that in his public service he yields at least as much as 15 ounces to the pound of real endeavor?

An American Censorship

IF Anthony Comstock, working on ill-informed policemen and ill-informed lower magistrates, is going to decide whether books or plays should be presented to the American public, it would be far better to have an official censorship like the English at once and be done with it. A series of novels like "The House of Bondage" and "Hagar Revelly" have been published lately, which help young girls, who have to go out from their homes to work alone in the world, to know what temptations they will meet, and against what plots they will have to protect themselves. The girls who read these novels will be in a better position to know what certain attentions from men mean. They will meet the world with a little better chance. They will not walk so innocent-eyed into situations that destroy them. These novels, being serious, are attacked, where thinly veiled libidinousness goes unchallenged. If these questions can be brought before a jury, they will usually be settled right, although a jury would deal with it better if it were composed of women. In most of our states it is composed of men, swayed by their ancient illicit privileges and warped way of looking at sex matters, unable to comprehend intimately and graphically the situation in which hundreds of thousands of young working girls find themselves. Anthony Comstock has sex mania in one of its most displeasing forms.

An Everlasting Puzzle

SEARCH your minds to the bottom, and your psychology may be subtle enough to find out why the great defenders of decency are those who are the great upholders of public special privilege. In New York City, for instance, political and economic special privilege has never had any other servant so faithful year in and year out and on every subject as "The Sun," nor is there any other paper which more delights in printing a story in which an excuse exists for sex exploitations. A famous editor of the *Sun* used to say whenever the circulation began to decline, "Smut her up! Smut her up!" It has been a consistent policy of the *Sun*, whenever an indecent play was put on, to give elaborate extracts to show just how indecent it was. If, however, any attempt is made to give serious consideration to the problems and standards of sex, the *Sun* will always raise a scream that morals are being undermined and propriety outraged. For a long, long time, mankind has been dealing with one of the oldest and one of the greatest moral evils in the world, and it has now reached the conclusion that it is possible almost entirely to remove it. Segregation and other cynical devices have proved to be failures; the hope now is in knowledge, and that light seldom fails. A few good men, and a great many good women, are endeavoring to see that the terrible facts about the sacrifice of youth, usually poor and ignorant youth, are understood, so that little boys may be brought up to see low sex morality as the unworthy and cruel thing it is. Against such a movement special privilege newspapers can absolutely be counted on to take the leadership. These are the facts; our readers may work out the puzzle in psychology.

Texas Again

AFTER the Galveston flood, Texas set an example which has been followed by cities all over the United States. Texas is now at least one of the leaders in another experiment which, if it also succeeds, will affect the whole population. A half dozen cities in Texas have already adopted, with slight modifications, the Houston plan of taxation. J. J. Pastoriza, of the Board of Commissioners of Houston, under whose leadership the plan was put into operation in that city, is now working for an amendment to the Constitution to give to cities entire home rule in matters of taxation. Advertisements are being put in the papers, and leaflets are being sent around to business men, declaring that in the first six months of 1912 there were two hundred and nineteen more buildings erected in Houston than in the first six months of 1911; that the value of these buildings amounted to three times the value of the buildings erected in 1911; that the new system increased the number of land sales without lowering the price of land; that cash, evidences of debt, furniture and other household effects are totally exempt; that, in short, Houston offers to manufacturers and merchants a perpetual bonus. When Henry George first put his ability behind the recommendation of this idea, the world laughed. It laughs no longer.

Luxury, Private and Public

THE Romans spent much money on public buildings, on art, on squares and parks, when Rome was at her greatest, as the Greeks had done before them. The cathedrals of the middle ages were built at vast expense, and even apart from their religious significance they have been a noble and unflinching resource to all the people. When the Union Station was built in Washington and the Pennsylvania Station in New York, many rejoiced in them as public monuments, but some criticized them because the cost would some time have to be paid by travelers and shippers. The question has now come up in an interesting form in Chicago, following an application of the Pennsylvania and other tenants of the present Union Depot for permission to build a new passenger and freight terminal. A number of the citizens, including many of the men who are always foremost in civic affairs in that City, employed D. J. Arnold as engineer and Walter Fisher as counsel to contest the application. The plan called for \$40,000,000. The critics contend that \$20,000,000 will be enough. The Illinois Central handles the largest suburban traffic in Chicago. It has by practical experience found that no more elaborate station is necessary for suburban service than an ordinary subway or elevated station, and they have separated their suburban service from their through service. The contention of those who object to the application is that this idea should be applied generally. The Chicago movement, if successful, means bringing suburban service into line with local service and treating it as an extension of the local service. It means also that public monuments are to be made frankly out of the public funds, not by private institutions in a way that has ultimately to be paid for by the public.

Monhegan

CAPTAIN JOHN SMITH visited the island of Monhegan in the course of a long cruise from Jamestown in 1614. Its small acreage harbors only a few individuals of the horde who find an ideal playground in Maine; but in the paintings of Robert Henri, Rockwell Kent, Randall Davey, Homer Boss and other contemporary artists, rock-girt Monhegan has attained a fame that an earlier generation of painters conferred upon Champlain's *isle des monts deserts*. The Maine Historical Society is arranging to celebrate in 1914 the tercentenary of Smith's visit just as it has celebrated in years gone by the anniversaries of St. Croix Island, St. George, Popham, and Castine. By honoring our past we are in a fair way to become the prouder of our present.

Anti-Vivisection Morals

IT makes no difference to an anti-vivisectionist how hard a blow she receives from the facts. She comes up smiling just the same. Dr. Keen, the famous Philadelphia surgeon, exposed recently a number of the latest lies, and Mrs. Henderson, vice-president of the American Anti-Vivisection Society, came back with the most cheerful and unmoved assertion of her own opinion and interpretation against overwhelming evidence. Then comes along Dr. Crile. Mrs. Henderson had quoted Dr. Crile's book on "Surgical Shock," saying that it "repeatedly describes experiments followed by the words 'no anesthesia.'" Dr. Crile has studied his own book faithfully, and cannot discover any such words. We have not yet noticed Mrs. Henderson's answer to Dr. Crile, but feel sure that it will be just as cheerful as her answer to Dr. Keen.

Why Women Should Vote

THE Anti-suffragists are harder put to it every month. Lately, they have shown a tendency to harp upon the assertion that women are mentally different from men. They over-emphasize the difference vastly, but as far as it is true it is an argument not for them but against them. *American Medicine* acutely says, "This difference is the main reason why women should vote." It points out that in the beginning of social life voting was done with the battle axe, and women were therefore inevitably disfranchised. As the battle axe was displaced by peaceable argument, it began to appear that laws devised by one-half the population for another half were unsuitable, and especially unsuitable if there was a fundamental difference in point of view. If man's mind, evolved in a struggle of a million years to bring safety to the social organization, does differ from woman's mind, evolved to save the family, what follows? The Anti-suffragists have put themselves into much trouble in arguing against public interests for women in an age when all the traditional concerns of women have been largely taken out of the home and conducted in public. They will have an even worse task, in logic, in showing that women should give up their traditional concerns and interests to men, because men's minds are so different from theirs!

THIS MAN PAYS \$18,000 A YEAR FOR MUSIC

By GUY PÈNE DU BOIS

Woman in a New World

By ELLEN KEY

MADAME KEY is probably the most distinguished feminist in the world. She is wise enough to be both the most radical and the most conservative, picking out the best from either side. In this series she has given her views of the way women have met the changed conditions with which they are confronted and especially the points at which the feminists have fired up to their promises and where they have failed. In the present article she describes the old fashioned woman, her origin, her virtues and defects and the reason for her peace and happiness.

WHEN we speak of women and morals we must consider the subject in two ways—the morality which originated from the fact that woman was the property of father, husband and family, and the morality which arose and is yet growing because this condition is being gradually abolished.

Rousseau has said: "It is for women to discover what might be called experimental morality, and for us to reduce it to a system. Woman has greater intuition and more greater genius. Woman observes and man reasons, and from this collaboration we get the clearest light and most complete science of which the human mind is capable; in other words the surest knowledge of one's self and of others which it is possible for humanity to have." This truth all great women have confirmed through their lives and by what they have said. Women's strength is not that of creative genius. Their contribution to moral growth has been their wisdom in the realm of experience, quick sympathy for individual cases rather than understanding of the theory of ethics. The word morals is here used to mean the stored-up experience which we have gained through pain and joy and the actions which make for the greater enhancement of life for ourselves as well as for others. Whatever increases the life of the body and soul is good; whatever retards it is evil.

WOMEN have not been founders of religions (if we except the modern Theosophic and Christian Science movements), nor have they formed systems of the philosophy of ethics. Had they had a chance to be lawmakers they probably should not have written great works of law. But when it comes to applying to life the laws and morals which do exist, woman, because of her receptiveness and her adaptability combined with her stubbornness, has exerted an immeasurable influence for good. On the other hand, woman, in encouraging the non-morality of men, both in private and public life, has sometimes held back the growth of morals and sometimes led it astray. In the legends of Iceland we hear of a day when men began to allow manslaughter in a family feud to be redeemed with fines, while the women, with tears and scorn, spurred them on to blood revenge. In our own day the British women approved of the stand taken by their own country in the Boer War.

I have heard it said that men have created the code of laws, women the code of convention, the unwritten laws which are stronger than the written ones. We need only recall man's idea of a "debt of honor"—a gambling debt, for instance, compared with his feeling toward the debt he owes the woman he has betrayed, or how sensitive is his honor that prompts him to duels compared with his care for the illegitimate children he has brought into the world. Knightly honor and warrior pride, business integrity and artist's conscience are a few of the unwritten laws which go to show that man in his sphere as much as woman in hers, has been a maker of conventions, objectionable and otherwise. It is in the home and society that woman has fashioned the customs, both as to what we ought to do and what we ought not to do, from table manners to the behavior that expresses presence or absence of love. The unceasing surge of her feelings has rounded our sharp-edged moral commandments. Woman's stubborn tenacity is one with her best traits, tenderness, faithfulness and piety. But it is one of her weakest points in her dislike of the serious mental work involved in thinking out new ideas, her indifference to the quest for truth, and her lack of desire for objective knowledge. These weak-

nesses, while they are being modified by the growth of culture, have for a long time made woman a fanatic defender of blind prejudices and outgrown moral laws. But this same conservatism has done much in times of transition toward keeping what was good in the old ways from being swept away by the spring flood of new ideas.

EACH individual must draw the hair-splitting line between self-assertion that is a virtue and that which is selfishness. Women have always asserted their human nature on the side of altruism and sympathy. The noblest women in life or literature are those who have reached the peace and harmony possible only when a spiritual balance has been realized in their lives. That harmony is more easily obtained when the balance has been long established and observed. That is why the old fashioned woman offers the loveliest picture which we have yet seen. To these women the duty of self-sacrifice has become happiness. They were at peace with their own conscience as well as with the patriarchal family and the Christian religion. From the conflict between duty to himself and duty to the world with which the man's conscience was so often torn, the woman has been spared. If the conflict were a religious one she has had only to make a choice between one authority and another. If she has rebelled within herself against the patriarchal family right, the rebellion has reached only her mind, not her conscience. For women were not allowed to change the authority of religion or of the family, nor did they question their own inability to do so, and conscience is the recognition of the gulf between what life ought to be and what it is. But more than all, women have been at peace and happy because they knew that motherhood, which was their greatest joy, was also their most important duty. In other words, the most important work of a woman's world had nothing whatever to do with changes which called for new needs, aims or efforts. Her home was a closed circle, touched only faintly by the world's evolution. To protect the young and tend the old, to cherish and comfort, guide and restore, to teach and love, to give pleasure and to help, remained the one undisputed necessity through all the world's changes in government, religion and economics. Thus in a woman's life theory and practice were the same and what she ought to do was also what she wanted to do.

ALL theories of the origin and development of morals agree on one point, that the family is the root out of which sympathy and the social virtues have grown, however religion and social laws may have varied. What is right in married life is like that which is right in the larger life of society. What the strong find useful becomes a duty to the weak. Although some morals have had a religious beginning, the morals that have sprung from life and its needs are the ones which have endured. Religious codes of morals have only remained important when they have adapted themselves to social life in its changing forms.

Family life has naturally resulted in a division of labor. It is the man's duty to defend and support the family and the woman's to care for the children. This has developed two sets of virtues: the many virtues involve duty to ourselves, the womanly, duty to others. The lower the morality of the people, the greater is the gulf between these two spheres of duty. The whole spiritual history of man is a record of the struggle to combine these two fundamental human needs. In many ways the so-called

weaker sex has had the easier task. The fear of punishment when the woman did wrong or displeased her master, very swiftly and effectively developed the woman's sense of duty. When new economic conditions and new religions changed men's ideas of right and wrong, all woman had to do was to obey the new code instead of the old. She did not have to make decisions for herself. In the age of cannibalism women considered it right to be used as food, in savagery as a beast of burden, in barbarism as a slave. Step by step the treatment of women, like the treatment of male prisoners of war, has changed. In both cases because of the owners' new ideas as to the most profitable use of his possession. Marriage was brought about first through spoil, then by purchase, finally through gift. Because the wife was the man's property, unfaithfulness was looked upon as theft. Men were at liberty to sell or lend their wives to other men. It was not the sharing of the wife to others which outraged the husband but sharing her without any profit to him.

AS a rule, the chastity of women has not been due to woman's nature as such, but to the mortal fear which adultery brought in its trail. In many savage tribes unmarried women live loosely while wives remain faithful to their husbands. Moreover, married as well as unmarried women have lacked all continence when men have not expected it of them. But in one sphere the ethics of women have developed naturally without any pressure from without. The helplessness and sweetness of the child has brought out a tenderness and sympathy in the mother which created the first beginning of a social order. Through motherliness, woman has made her great contribution to civilization. Through the children also have men's morals developed. The great forward step in his growth has been the desire to protect the wife and children dependent upon him. Among primitive peoples woman has seldom been as barbarously treated as most people think. The woman carries the pack because the man has to be prepared at all times for armed battle and not because he is selfish.

Through her motherhood woman's sexual nature becomes gradually purer than man's. The child becomes more and more the center of her thoughts and her deeds. The strength of her passions diminishes, the depth of her tenderness for her children and their father grows. Out of this tenderness and out of the admiration for the many qualities which the father shows in defence of herself and her children, gradually arises an erotic feeling for this man alone. Thus in early days love began.

Blind forces have been at work for centuries in improving marriage, but it was not until the last century that woman has entered directly the great battle for better morals. Her part before had been through the indirect influence of her desirableness and her opinion as mother and wife, daughter and sister. The influence of Christianity had also been at work. Heathendom glorifies the masculine virtues, Christianity the feminine ones. The worship of the Madonna has increased the

reverence for woman, especially the mother. But what the Church gave with one hand, it took back with the other. The ancient world looked on marriage as a duty to the race and to the nation. Pauline Christianity allows it, but only as a necessary resource against temptation. Like other Oriental religions Christianity considers sexual life as impure and only celibacy absolutely without taint. When even the marriage sanctified by the Church was looked upon as a lower state it stands to reason that when woman outside of marriage tempted man to unchastity she was looked upon as "the gate of the devil," to use the expression of an apostolic father. The Church has encouraged monogamy but this benefit has been offset by the heavy debt which the Church owes to illegitimate children and to unhappily married couples held together against their will. The Church has much to answer for, besides this sacrifice of the innocents in the entire false view of sex which grew out of the ecclesiastical attitude.

A woman's virtue came to mean her virginity before marriage and her faithfulness afterward. To be sure, a woman's sins against property and character were punished like a man's and her strength and courage were praised, but she was seldom obliged to show these virtues or to resort to crime for self-preservation, as the man protected her. But man's virtue consisted in courage, energy, pride, honor and business ability, while his sexual morality had nothing to do with his "honor" and "virtue."

then under her husband's care, a woman got everything she wanted by being docile and flattering. The average woman could hardly escape hypocrisy. Self control forced on a human being from without may make good habits but it may also make pretended ones. Woman became a coward because she was not allowed to act on her own responsibility or to take her own risks. Whether freedom will cure these woman vices remains to be seen, but the women of the present give a fair promise that it will. Self indulgence, luxury, gossip and scandal are neither womanly nor manly. They spring in either sex from a low degree of culture. With the advance of culture women are learning the love of truth, intellectual honesty and unselfish perseverance. These same ideas are carried over into their private lives. The most flagrant example of woman's immorality in the present is the countless women among the rich, who, released from all work, are parasites upon the father or husband, satisfying their craving for pleasure or luxury, without accomplishing anything to pay back what they receive from society. Because of their parasitic state sex has become the whole content of life to these women. In many women erotic life is over-developed because of the centuries of their sex slavery and we still possess a class of women whose love-life is only a desire

for sensual gratification. When women have reached this stage, sex hatred is very near. There are no more dangerous enemies to the feminist than these parasites.

IF, as some men think, the faults we have been discussing were the only results of the sex slavery of the past, we might well hasten from the past to future, but there has been good as well as evil. In the first place, motherhood has developed a whole set of virtues which man has seldom even noticed because they seem to him just as natural as the milk which flowed from the mother's breast to the lips of the child. Kant's definition of virtue is that which is difficult. Because woman's sex virtue was difficult, it was looked upon as her only virtue. Her other attainments—patience, gentleness, thrift—were taken for granted and like the air we breathe, were only noticed when absent. All the qualities developed in the care of children, and in farming, housework and craft were no more inborn than the vices produced by sex slavery.

During all the time of this one-sided moral training the sexual self-mastery which once she disliked was becoming at last her happiness. She realized that if the man's children were certainly his own, he loved them more and was more faithful to her. She knew that illegal motherhood deprived her children of their father's protection, so that the outward demand for faithfulness met with her inner approval.

The close relationship, physical and mental, which exists between the mother and child is the innermost reason why chastity is second nature with women, but this chastity was also made easy because women's emotional life was scattered over family life and household duties. And the cooler they grew erotically the more sensitive did they become in regard to their sexual integrity. Thus out of animal sex instinct has grown human love and the soul and senses of one person dedicated entirely to another. In her love for her husband, as earlier than in the love of her child, were focused all the noblest virtues of woman. Thus, in a woman's life the demands from without and the desire from within, nature and conscience, the needs of society and her own needs were the same. When this is true, morals are unnecessary, for it is impossible to break the law. Because woman knew that her morality was more important to the race than that of man she allowed the double standard to exist. Men still judged women and women judged each other, according to sex morality. The fallen woman was not she who lied or betrayed, hated or plotted, or she who made her home a hell for its inmates, not even she who stole and murdered, but the woman, who, outside of marriage, allowed herself the natural expression of one side of her life, even if the most soulful love caused her so-called fall. This point of view has lowered man's respect for the woman he has seduced or for the woman who has freely given herself to him. If his conscience has remained asleep, for neither public opinion nor his mistress have awakened it. Female criminals are every where less

numerous than male, partly because their position is more protected than the man's, but especially because where a man, unable or unwilling to work, becomes a thief, a woman becomes a prostitute.

ANOTHER result of the double standard is that woman's ideas of right and honor in ordinary social questions are just as dull as man's in regard to sexual questions. The offhand way in which women secretly break the law has often struck man with amazement. He ought instead to be surprised that women's social morals are not worse. It is much more amazing to find women, citizens in many important matters, absolutely without rights in others. On the great occasions in the life of many nations, woman has shown herself fully equal to man in the sense of duty and the willingness of self-sacrifice. Many mothers have sent their sons to battle for their country, many women have become martyrs for the

truth. In our day the working women among Socialists have developed a sacrificing spirit and a solidarity which shows that they understand progress as well as the men. But the soul of the average person obeys the law of least resistance, even in the case of woman's morals. These have been focused on her family because her sense of duty never has had a chance to develop in any other way. The greatest heights that men have reached, sacrifices for unselfish aims, fearless search for truth, burning desire for justice, have once in a while been achieved by woman, but few women have attained these heights, because few women have had the chance. In times of distress woman has been called upon to make sacrifices for her country, but in every-day life her duty has never been too wide to be embraced within her arms. The

Strand. The home of Ellen Key

idea for which the struggles of the present age are raging, the greatest happiness for the greatest number, woman has always been able to accomplish in her little world. What her conscience has demanded her heart has wanted; her reason has harmonized with her desire.

The strong democratic movement born in the English Civil War and the French Revolution which took hold of people and commonwealth included freedom for women. The struggles which have followed have brought about much moral confusion, but confusion is feared only by him who does not know that growth awakens needs and desires which in their turn lead toward better conditions than the old ones. In looking back over a transition period we often find values which we had thought lost forever, merely changed in form. Ever since freedom for women came upon the world's stage women have begun to share deliberately in the changing of morals. For a century women have labored with increasing energy for the improvement of the relation between the sexes. At the same time, their new position as wage earners has indirectly changed many old ideas and customs. No gain is ever made without loss of some old good. Lamentations over the new times are justified only when it can be proved that a better organized and richer life has not grown out of the confusion.

In the next article Madame Key will tell of the moral life of woman as it has been changed to meet new conditions. Where it is better and where worse than before and what women should do about it.

Single Tax in Western Canada

By JOHN T. McROY

WIDESPREAD interest has recently developed concerning the application of single tax in Western Canada. Its success is one of the bases of a concerted effort to untax industry in New York. It has inspired many a single tax prediction in electoral campaigns last year in Missouri and Oregon. Wherever the initiative is in force the United States has had single tax or quasi-single tax campaigns. It would not be too much to say that Canadian experience is the source from which these hopes have come. A knowledge of its workings should be possessed by every citizen, for he may have to act on similar proposals at no very distant date.

NOW, this aversion of the average man to a study of taxation is because its working does not affect him as directly as his grocery bill. The less concrete, the less visible an economic action, the less vividly it is realized by those who are affected by it. It may hurt them immeasurably, yet they will yawn over any attempt to discuss its operation. Particularly is this so when it affects them negatively. For instance, should it create combinations that imperil civil freedom, or should it diminish opportunities, which by limiting labor and capital press down wages—should it have these effects, a discussion of it will be postponed as technical. Western Canada seems to show that taxation may become a subject of hope and absorbing interest to the mass of men. It demonstrates truths to the practical man who despises "theory" and "hypotheses."

Since the only thinking done on taxation is usually in catch phrases at election time such as "low taxes, low rents," a methodical study of taxation in some given region that will be appreciated by the ordinary citizen is both desirable and imperative.

HITHERTO attention has been called to Western Canadian taxation mainly on account of the sensational development of the country. Its growth has had all that glazing rapidity that goes to make a successful newspaper contribution. Towns growing into cities in a year; factories rising as if out of an Aladdin's Lamp, go to make a good "write-up." The play and interplay of economic conditions and the interactions of various other social phenomena are left out in the brilliant accounts of its development. The annual emigration of 150,000 farmer folk from the United States into this section has been a startling and suggestive fact. While no hasty inferences can be drawn from such a consideration, yet one thing is clearly evident—that Northwest Canada possesses some attractions which the United States does not. The contention which is constantly made, that this progress has mainly as its cause the taxation of land values and non-taxation of improvements, is the conception that we are now to analyze.

The country is mainly agricultural, save in British Columbia where lumber, mining and fisheries predominate. However, there is fruit growing in the Fraser River Basin. In view of the insistent assertions of Taussig and other orthodox economists that the single tax would

work better in towns than in the country, it is interesting that a rural community has been the first largely to apply Henry George's teachings.

The production of grain is the greatest industry of the Canadian Northwest. Wheat, oats, barley, rye, well-nigh exhaust the slim list of their products. There is, however, a considerable amount of cattle-raising.

The railways are rapidly covering the country with branch lines. Despite this, there is a dearth of box-cars, and shipping facilities are far from good. There are three channels of traffic—The Canadian Pacific, the Canadian and Northern, and the Grand Trunk Pacific. These railroads have been the recipients of large grants of land and money from the Dominion government. They have largely contributed to develop the section with a view, of course, to increase the traffic on their lines. Distances between towns are large, and the farm life is of that lonely American type which will no doubt make for individualism of the most pronounced type.

BESIDES insufficient traffic facilities, there is the inevitable difficulty of the non-adaptability of the farmer to his new conditions. However, matters are being speedily adjusted, improvements are being made on the farms, machinery and implements are up-to-date.

A great disadvantage in farming is the shortness of the season. The farmer is "worked to death" for a few months, and spends the rest of the time in dreary monotony. It also necessitates seasonal labor and thus tends to create a "bobo" and floating class of laborers. The same defect also clogs building and contract work in the cities. The type of men who enter the Northwest are mainly intelligent farmers, hard workers, thrifty, stable, and suspicious of large monopolies or corporations. They seem to have an outlook similar to that of the old English freeholders and yeomanry. They are organized into the Grain Growers' Company and co-operatively find a market for their produce. The Grain Growers' Guide, their official organ, is a champion of radical democracy and of single tax.

That the country has been growing too fast, there seems but little doubt. That the cities have over-developed will be denied only by those who do not understand how evanescent booms are. We can, therefore, reasonably expect a slackening of development, though not a cessation of development.

The industry of the region is conditioned by the nature of its products, which, being staples, form a basis that will last for all time.

That the region is developed abnormally is due largely to the alluring appeals of the railroads and land speculators. On account of this, there is an agitation for pure single tax in order to eliminate land speculation and let Northwest Canada grow according to its true capabilities.

Taxation in Western Canada is more largely under the control of cities and towns than in any state of the American Union. By demonstrating the merit of a certain system, a town becomes the center of a host of nearby imitators. These in turn tend to spread their work-

able policy over the province. By exempting improvements, for instance, a town encouraged industry and commerce which was an advantage, and other towns were forced to adopt the same policy.

In British Columbia, for local purposes all of the large cities and towns such as Vancouver, Victoria and Prince Rupert, tax land values only. Improvements of any and all kinds are excluded from taxation. The provincial taxes, whether personal property, income or poll, still exist.

The value of land is taxed more heavily in proportion as it is kept out of use. A lot held for speculation is discriminated against by a higher rate. In Alberta and Saskatchewan land-value taxation is compulsory throughout the provinces. Neither improvements nor personal property is in any way taxed. Provincial taxes in small degree remain. In Manitoba, land is practically the basis of agricultural taxation. Stock, implements, etc., are not taxed. In Winnipeg the assessment of buildings is only two-thirds that of the land.

THERE can be no doubt that this policy has immensely increased the quantity and quality of improvements. Building in the towns and country is out of all proportion to the growth of population. Medicine Hat had a 400 per cent. increase in 1912. Edmonton adopted the pure land value tax in 1912. The figures for buildings were \$10,250,562 for 1912 against \$2,197,990 for 1911. Towns of 30,000 inhabitants show as much progress in buildings and improvements as American cities of 300,000 population. The exemption from taxation of business has resulted in industries equipping and improving their plants to the highest degree. Stores are not afraid of being penalized for erecting commodious buildings. It has also reduced the cost of doing business, thus affording an improved service for the same money to the consumer. While the towns will have to slacken this rate of growth, one fact seems to be indisputable. It is that unwise taxation has been shown to have more effect in checking building, farm improvements, and business than is commonly supposed. And Western Canada has proven that by not penalizing industry, it can the better develop and the more effectually serve the people. The poor man who buys a lot in the United States and improves, finds himself confronted by an increased tax. In Western Canada this amount every year is saved.

A single case will serve to show the meritorious effect of exempting stock and personal property in that section. A man owning 20,000 head of cattle in Canada told a questioner that he would have been taxed one dollar a head or \$20,000 in an American state. That a saving is effected to the consumer by untaxing business stock is clear. The situation almost tempts one to say that the beneficence of exemption of industry has been proved. Perhaps its success may not be so marked in older and more staid communities, but no one can any longer afford to neglect a proposition that has beyond all question "made good" in the region where it has been tried. No party and no body of men in Canada has agitated for a return to the old system.

PEN AND INKLINGS

By OLIVER HERFORD

Chesterfield Stuff

UP STAGE STUFF

If you have not a face that goes
With opera hat and evening clothes,
Affect a blank and vacant stare,
'Twill get you almost anywhere.

HIRSUTE STUFF

Always get up and give your sent
To all old tops with wigs, you meet.
One might turn out to be John D.
And make you his sole legatee.

WATCH-YO-U-R-GRUB STUFF

The guest who hesitates, to pick
The proper fork, had best be quick
And keep, while he debates the matter,
A vine-like clutch upou his platter.

Musings of Hafiz

(The Persian Kitten)

I BELONG to the leisure class. I may say I am the leisure class; for with the exception of the long-haired members of my immediate family, every creature, from the smallest flea to the largest elephant, that has anything to do with the human people is trained to work or play in exchange for a living.

There is, I am told, but one case on record of a domestic cat-person who performed acrobatic feats. Needless to say he was a short-haired cat and only did it because he needed the mice, being practically mouseless when he joined the theatrical profession.

THE most extraordinary instance of human tyranny in this respect comes from Germany. I should never have believed it if I had not actually seen an account of the occurrence printed in a paper I found in the big desk in the study.

There was a picture, too, which proved the truth of the story, as they say, beyond a purr adventure. I have had the picture reprinted so that the readers of "Musings" may see for themselves the pickled herrings in the very act of jumping through the hoop and standing on their heads to make a German holiday.

There is no question but that the herrings were pickled (no sober herring would ever think of jumping through a hoop), but the article gives no hint of the nature of the stimulant under whose influence a herring, in its normal state the most quiet not to say bashful of fish, can be induced to make such an exhibition of himself.

I WONDER if any of my readers have ever met a cat that looks like this picture. It is a faithful likeness of one sent to my chrimmouse tree by three particular friends of mine: Eunice, Langston and Mary Cleveland Moffett.

It is my great privilege to know these most delightful young people personally, but you who have not that good fortune may read about them in a wonderful little book called "The Mouse Colored Road" written by Mr. Vance Thomson, the father of the fascinating white angora Gloria Thomson.

Charming as it is, I must confess the book has one very disappointing thing about it. There is not one single mouse in it from beginning to end, except on the title page.

The following letter mews for itself:

Kansas City, Mo., Dec. 13.

Dear Hafiz:

We have long followed with admiration your books of poetry. But the thing that stirred us to write to you was your article on short and long hairs in *HERFORD'S WEEKLY*. We feel very strongly on the subject.

When we came last spring as very young kittens to keep house for the Hawksells, we found Uncle Peter, a two-year-old-short-hair, already in charge. Far be it from us to say that Uncle Peter is not good looking, as short hairs go. He has fine sea-green eyes, a pink nose that we envy, and a stunning white cravat. But of course he really isn't in it with an angora. Any unprejudiced person will admit that. Both of us have magnificent white waistcoats, ruffs that Queen Elizabeth might have worn, hair so long we really ought to do it up in curl papers, and fine boots. Besides, Uncle Peter was haughty toward us at first and wouldn't be polite. He snit at us when we tried to make up to him. But we just wouldn't have it that way and he has come around pretty well.

But what we started to say was that when any visitors come in and look us over, they seem to think Uncle Peter's nose is out of joint and they say, "Poor Peter, after all I should believe Peter is prettier than the twins." Isn't that impolite? It makes us spitting mad.

Yours for the long hairs,

AM BARA and SIBRAD
HAWKELL

HAWKELL

"Her voice was strong, her eye steady and the revolver well aimed"

The Burtons' Burglar

By NEITH BOYCE

Illustrations by Herb Roth

MRS. BURTON pushed open the door and at the same moment pressed the knob beside it that lit all the electric lights in the room. She was holding her revolver pointed straight before her, and the man who whirled round blinking found it leveled at his breast. His hand dropped toward his coat-pocket. Mrs. Burton said sharply: "Put your hands up or I'll shoot!"

Her voice was strong, her eye steady and the revolver well aimed. The man stood blinking and staring at her.

"Hands up or I'll shoot!" she repeated, and advanced a step.

The man held up his hands. Behind him on the floor was a writhing figure in pink pajamas. Mrs. Burton knew it was her husband, but she did not dare take her eyes off the intruder's.

"Theodore, are you hurt? For heaven's sake, get up if you can," she cried.

Mr. Burton struggled to his feet, and with his arm—his hands were tied together—managed to free himself from the half-fastened gag.

"By Jove!" he cried. "Edith, hold him a minute longer, if you can, till I get my hands loose!"

"Of course I'll hold him," she replied calmly. "Put your hands up higher, please!"

This was addressed to the hurglar, and he obeyed. His mouth was half open, he panted uneasily.

"Theodore," said Mrs. Burton, "go to Miss Hayden's room and call her quietly and get her to untie your hands. Be careful not to wake Grenadine."

"And leave you alone with this fellow? I can't, Edith!"

"Yes, you can. He can't move. And you can't do any good with your hands tied, can you? Hurry up. And tell Miss

Hayden to ring up Michael. And bring something to tie this man with—there's some rope in the trunk-closet."

When he had run down the hall, Mrs. Burton fancied she detected a wavering in the hurglar's attitude.

"Keep your hands up!" she said.

"I am keeping them up," replied the burglar sulkily. "Don't get nervous, now, lady, and shoot me."

"Nervous! I think you are much more nervous than I am," said Mrs. Burton, her knees trembling slightly.

"Well, I've got a right to be nervous," said the hurglar. "How do I know that that thing won't go off by accident?"

His small watery blue eyes watched her hand and her face with alarm. Short and wiry, with a red face, a braked nose and a small thin-tipped mouth, he reminded Mrs. Burton of some shy rodent. She dared not take her eyes from his face; but she perceived the window behind him open on the balcony, where he had doubtless entered.

She heard Miss Hayden's voice and another scream in the hall; then Mr. Burton came running back with his hands free and a length of rope.

"Now, then!" he cried. "How shall I tie him?"

"Tie him to a chair. Put a chair behind him. Now, you, please sit down—but don't lower your hands!" The hurglar sat down. "Now, Theodore, feed in his coat-pocket—the right hand one. . . . I thought so!"

Mr. Burton had extracted a revolver from the pocket, and now he held it gingerly.

"Now, Theodore, put that down, over there on the table, and then tie his hands behind him to the back of the chair—cross your hands behind you, please—and

then you'd better put a length around his ankles and tie them too."

When this process was completed to Mrs. Burton's satisfaction, she sat down herself and laid her weapon on her knee, keeping careful hold of it however.

"Well!" she said.

Her bright hazel eyes and Mr. Burton's large blue eyes stared at the hurglar, who blinked in return with a crestfallen expression.

"I could have shot you easy enough through my pocket," he said suddenly to Mrs. Burton, "before you got the drop on me."

"Why didn't you, then?" she asked.

"Well—I ain't never shot anybody yet, to kill—and I didn't want to begin with a woman. . . . I guess my nerve is gone all right," he ended hopelessly, his head drooping.

"Gone? Not a bit of it," said Mr. Burton. "You've got as fine an article of nerve as I ever saw."

MEANTIME the house seemed to be waking up. Miss Hayden, the English governess, spoke agitatedly from a window. Michael the coachman pounded on the door below. There were shrieks from the top floor where the cook and waitress slept.

"Theodore," said Mrs. Burton, "Michael can't get in and they're all afraid to go downstairs. You'll have to let him in. Turn on the lights as you go down, and take that pistol with you. Look first and see if it's loaded. Mercy! don't look into the end of the barrel! I don't believe there's anyone else in the house, but be careful!"

Mr. Burton went downstairs and let in the coachman. Then they both came upstairs and looked at the hurglar. Miss

Hayden peeped at him from the hall, her high-colored face expressing horror.

"Now I think you ought to search the house," said Mrs. Burton. "Make sure that there's nobody in hiding."

"You needn't take the trouble," said the burglar with an air of bravado. "There's nobody but me. I always work alone."

"Ye do, do ye? And d'ye think we'll take your word for it?" inquired Michael truculently. "Come now, how did ye get in? Climbed the porch, hey?"

"None of your business, my man," said the burglar nonchalantly.

"What's Miss Hayden doing?" said Mrs. Burton sharply. "Here, she's at the telephone—stop her, Theodore!"

Miss Hayden was stopped, and explained: "I was just calling up the Elmwood police station."

"Well, when we get ready to call the police Mr. Burton will attend to it," said the mistress of the house calmly. "Now, Theodore, you and Michael just look through the house, to make sure. I think, though, that this man is telling the truth, for no one could get in downstairs without setting off the alarm."

THE search was made, then Michael was told to wait in the hall, and Mr. Burton came into his room and shut the door. He and his wife contemplated the burglar and then looked at each other.

"Well, the question is now, What shall we do with him?" said Mr. Burton.

"Exactly," said his wife.

"I suppose you'll send for the police and hand me over," said the burglar with an air of indifference.

"That would be the obvious thing to do," said Mr. Burton. "What would happen to you then?"

"Oh, I'd go back to Sing Sing."

"Back? You've been there before, then?"

"Sure. Twice. I'll get a good long bit this time."

"How long were you in before?"

"Two years the first time, and four years the second—about."

"How old are you?"

"Twenty-seven."

Mr. Burton's mild face plainly expressed consternation. The burglar was evidently interested in this look and in the questions. Mrs. Burton's appearance was more enigmatic. Mr. Burton looked around and found a cigarette, lit it and sat down near his wife.

"Put on your dressing gown and slippers, Theodore," she said. "And you'd better shut that window."

He obeyed.

"You see," said Mrs. Burton, finally, "we don't believe in sending people to prison. We are Anarchists."

"Gee, is that so?" said the burglar. "You don't look it."

His watery eyes fixed themselves on Mrs. Burton with a look keen, incredulous, and hopeful.

"Don't look what?" inquired Mrs. Burton. "How can you possibly tell what political opinions a person holds by his or her looks?"

"I've seen Anarchists before, in jail," said the burglar. "They didn't look anything like you."

"Ah, they were poor people," said Mrs. Burton, "and were imprisoned not because of their opinions but because of their poverty. We are well-to-do, you see, and no one would think of putting us in jail, no matter what our ideas are."

"Hell, that's true enough," said the burglar. "But those people were juggled because they ran around in the street with red flags and wanted the President killed. You don't do that, I suppose?"

He seemed really interested. He looked now less like a rodent, and more like a human being. There was intelligence in his eyes.

"We don't exactly do that," said Mrs. Burton absently. "But we express our opinions. We don't believe in Government."

SHE frowned as the revolver lying on her knee caught her eye, and she looked at the bound hands and feet of the burglar. He was shoeless, and his hosiery was by no means above reproach. Otherwise he was fairly well dressed.

"Don't you?" he said skeptically.

"No," said Mr. Burton, taking a hand in the conversation. "We agree with your friends in jail that government ought to be abolished. We think that society is all wrong. We don't believe in capitalism or private property."

The burglar glanced round the room, which was comfortable and even luxurious. Then his eye rested on Mr. Burton's countenance, which had lost its embarrassed look and was beginning to glow.

"We don't," proceeded Mr. Burton, "blame you, for instance, for trying to acquire by force a share of what should rightfully belong to you. We bear you no grudge for breaking into our house and trying to take our watches and plate, for we realize that we are no more actually entitled to those things than you are."

The burglar stared critically.

"Of course," Mr. Burton went on, "no man likes to be waked out of a sound sleep

and choked. One naturally resists that sort of thing."

"I didn't want to wake you, nor choke you neither," said the burglar with some return of his former sullen and defensive manner.

"No, I know you didn't, if you could get what you wanted without doing so. But I suppose you would have shot me, if necessary in the course of business. . . . Understand, I'm not blaming you. I consider you a poor victim of society."

"I don't think I'd have shot you. My nerve's not what it was when I was younger," said the burglar rather mournfully. "Doing time—and then the hospital—they take it out of a feller. I'm afraid I'm a dead one." His head sunk again. "Only two months out," he murmured. "And then to fall like this—a woman and a gun that probably ain't even loaded!"

"Oh, it's loaded," Mrs. Burton assured him. "And I think I would have shot you too, if you had attacked us again, or even if you had tried to get away. . . . Yet that is irrational, for we have no intention of giving you up to the police."

"You won't?" The burglar stared again. "What will you do then?"

"Well, that's just it. I don't see what we can do with you."

THE burglar looked down at his bound feet and twitched in his chair.

"Well, why am I tied up like this, then, if you don't want to give me up?" he muttered.

"That was done on the spur of the moment. We never had a burglar in our house before. It is instinct, I suppose, to protect one's life and property and secure the intruder—atavistic instinct, no doubt. In a proper state of society, of course, you would not be breaking into our house after plate, for you would have enough of your own."

"Maybe," said the burglar.

"Ah, of course you don't believe that a proper state of society is possible," said Mr. Burton. "I don't blame you. But it's sure to come."

"If it's all the same to you, I'd rather go this way, down the post," said the burglar. "I left my shoes and hat down there."

"You mean that the people that have got the goods will divvy up with them that haven't got any?" said the burglar. "Ah, g'was!"

"They will. Many of them are willing and even anxious to do it now, and the others will be obliged to sooner or later."

The burglar smiled warily at this.

"Don't you believe it," he said. "You're talking through your hat—or you may be a little baghouse on that question. . . . Say, do you think you could untie this rope? It hurts my wrists. I won't try to get away or anything, honest."

Mr. Burton looked at his wife.

"Yes," she said, "untie his arms, Theodore."

Mr. Burton did so, and then after a slight hesitation offered the burglar a cigarette and a match, which were accepted with thanks.

"That is, if you don't object, ma'am," said the burglar politely.

"Not in the least," Mrs. Burton replied.

"By Jove, some whiskey would taste good—I'm afraid I've caught cold," said Mr. Burton suddenly.

"Yes, do get some, Theodore," his wife anxiously advised. "You know you mustn't take a chill."

MR. BURTON went downstairs and resupplied, after an impatient colloquy with Michael and Miss Hayden in the hall, with the decanter and two glasses. He got the water jug from his stand, and handed one glass to the burglar.

"Say when," he observed, pouring the whiskey.

The burglar took a stiff drink, nest, and when he had got it down he sighed, sat up in his chair, and lifted his head almost jauntily.

"That feels good—I'm obliged to you," he said. "Now do you think you could untie my feet? They're going to sleep. I won't get up—I'll stay here as long as you want me, that is if I'll let me go before daylight, if you're going to let me go."

"You think we are going to let you go, don't you?" asked Mr. Burton.

"Well, I don't see what else you can do, if you don't send for the cops—unless you want to take me to board," remarked the burglar. "I suppose you'll want me to sign some kind of a pledge first—that I'll be good and never steal no more."

"Hardly. I don't see what else you can do," said Mr. Burton. "It isn't a question of reforming you, but of reforming Society. Society, at present, would probably not permit you to stop stealing if you wanted to—except on the alternative of starving. Of course you can always starve if you like."

Mr. Burton, having finished untying the burglar, had taken a comfortable chair; and with a glass of whiskey-and-water in one hand and a cigarette in the other he was thoroughly enjoying himself. He had a great many ideas and some oratorical ambition, but he had always been too nervous to speak from a platform. Now he felt that he was expressing himself with pith and point, and that he had made a decided impression on his audience—that is to say, on the burglar. Mrs. Burton also looked interested. Unobtrusively she laid aside her revolver, and continued to observe the stranger. He looked decidedly human now, but his eye was wary as ever. It expressed suspicion, mitigated, but not lulled to sleep. He was alert, too, for the slightest noise in the house. He was on his guard. Still, the atmosphere had suddenly taken

on a social tinge. A smile—though constrained and rather wry—illuminated the burglar's face at Mr. Burton's last speech. "That's about what it comes to," he said, "but I wouldn't expect you to know it."

"You think, I suppose, that intelligence is confined to people like you," said Mr. Burton, "and that I, for instance, am a fool, don't you?"

"I don't know," said the burglar, frankly. "I never saw anything like you before."

"Well, there are plenty like me—with my ideas, anyhow—plenty of people who believe that there should be no prisons, no police, and that those who produce wealth, the working people, should share in it. You think that the few reformers who are well-to-do couldn't force the ruling class to divide, but don't you see that the mass of poor people, if led by the educated few, can force the rich minority? That is what is going to happen, my friend."

"It's a fine pipe-dream, anyhow," said the burglar patronizingly. "I reckon it'll come along about the day of judgment. Why, look here now, you wouldn't whack up, would you—with me, for instance?"

"My friend, have you ever heard the story of Rothschild and the Socialists?" inquired Mr. Burton. "They suggested to him that he should 'whack up,' and he proved to them that if he did, the share of each person in his fortune would amount to five shillings. He then offered to give that amount to anyone who applied for it. Now if I should divide equitably my modest property, your share, for instance, would by no means amount to ten dollars. However, I shall take pleasure in presenting you with that sum."

MR. BURTON was as good as his word. He extracted a ten dollar bill from his vest and handed it to the burglar.

"What's this for?" asked the latter sheepishly.

"Just as no evidence of good faith. I can't divide my property with you, because I consider that I do better to use it in propagating Anarchism. But when the day of division comes I shall be ready—and may you be there to get your share!"

"And meantime what is he going to do?" inquired Mrs. Burton crisply.

"Why, he will steal, I suppose," answered Mr. Burton. "I would offer to help him to get a so-called respectable job if I saw any use in it—or if he does. Do you?" he asked the burglar.

That person shook his head.

"I never worked," he said cautiously.

"I don't blame you," said Mr. Burton. "You're quite right not to work, in the present state of Society. Only you don't seem to me to be much of a success at stealing. You spend too much time in prison."

The burglar for the first time looked Mr. Burton in the eye and spoke spontaneously.

"You're right. I ain't a success," he said bitterly. "I made a good thing as a dip—a pickpocket—for years. I made sometimes fifty dollars a week. But I got too ambitious. I tried the second-story business, and I ain't got the nerve to make a go of it, that's the truth!"

"Well, take my advice and go back to pickpocketing," said Mr. Burton philosophically. "At least," he added, "I'll have to get you to promise one thing—that you won't try burgling again in our

suburb. You see," he explained, "it's a small place, and if I let you go tonight the whole community is going to know about it. Then if any other house is robbed here they'll blame it on me."

"Sure, I'll promise," said the burglar with emphasis. "If you want me to swear it on the Bible, I will."

"No, I'll take your word. I suppose," said Mr. Burton, "that you think I'm illogical in simply barring you out of this suburb, and leaving you free to burgle anywhere else?"

The burglar had glanced at the window somewhat nervously. . . . But Mr. Burton was very reluctant to lose his audience. He felt himself just getting into trim for a true burst of eloquence. He hurried on:

"But I admit I'm illogical. With my ideas it's inconsistent for me to put burglar-alarm into my house and keep a loaded revolver. I know it. But I hope the day is coming when I shan't need those things. I honestly believe that with the last policeman will go the last thief. They go together—"

"They do, sometimes," said the burglar, fidgeting in his chair.

"And they are equally deplorable effects of our false social system, which has been going further and further wrong for thousands of years, building up a pyramid of tyranny, crushing the many to uplift the few, until now, sir, now, I say to you, the only thing left us is to destroy it utterly, to sweep away rulers, judges, priests, the army, capital, in one vast—"

"Theodore! I really think this man ought to be going," interrupted Mrs. Burton. "It must be near daylight—"

The burglar fairly burst from his chair.

"Thank you, ma'am," he cried, "I think I do see light out there!"

"Light, pish, it won't be light for an hour yet," said Mr. Burton peevishly. "But come along, I'll let you out the front door."

"If it's all the same to you, I'd rather go this way, down the post," said the burglar. "I left my shoes and hat down there—"

"Well, go ahead," said Mr. Burton.

HE went over and raised the window. The burglar hesitated a moment and just glanced at the table where his revolver lay. But, as he had said himself, he was lacking in "nerve"; he did not ask for it. He looked at Mrs. Burton and said again:

"Thank you, ma'am."

"Don't mention it," said the lady. "I hope you won't get into prison again. I went through a prison once—" she shivered slightly.

"Look here, are you hungry?" asked Mr. Burton suddenly. "If you are, I'll go down and get you some stuff before you—"

"No, no, I'm not hungry—I'll just go now. Good night, and—"

The burglar had stepped across the window-sill, and he turned and paused for an instant, listening for sounds below, but all was silent. He looked back into the room, and seemed to want to say something more, but thinking better of it, turned away and with a single quick motion was over the edge of the veranda. They heard a thud as he landed, then a rustling in the shrubbery—he was gone. . . .

Mr. Burton closed and locked his window. A knock sounded on the door. The Burtons looked at each other. Then Mrs. Burton opened the door, and they faced outraged society in the persons of the middle-class Miss Hayden and the servants.

During the Luncheon Hour

By TUDOR JENKS

Illustrated by W. J. Glacken

WHEN about to take a boat or a train, the writer, like his fellow sinners, is sure to look about him wildly at the last minute for "something to read."

It is part of the penalty we pay for being surrounded by the distractions of modern life that we come to have an unconscious abhorrence of being free from an outward stimulus to thinking. We do not trust life to supply the mental food that is around us everywhere as the whale's food is around him in the sea. Only when by a fortunate accident we are relieved of the obsession of eternal reading, do we learn that the common round of life can be read with at least as much benefit as the printed page, and often with the greater profit that we are viewing realities direct instead of through the darkened glass of realism.

The lunch-hour came, and I went to a very ordinary restaurant, such a one as is patronized by those to whom every copper coin is a countable asset. It was not at all an unpleasant place, though a little crowded, and more than a little noisy because of the nearness of the kitchen with its never ceasing clatter of metal and china.

Yet this eternal clatter soon lost its power to annoy and became an undertone accompaniment to the life of the place.

And, as I waited for my order, gazing at the men and women about, there came to me once more the proof of the change that has come over the population of this marvelous town of Manhattan—in the type of the rank and file of the crowd.

HERE again and again were seen the faces that in youth we associated with the deserts of Arabia—the piercing but impenetrable eyes, the hawk-nose with strong high bridge and nostrils thin and sensitive, the prominent cheek-bones, olive skin and dusky hair. In the young girls the type often produces a look of beauty and pride that is unrecognized by many of us only because it is seen on Broadway and Sixth Avenue, rather than in the Orient.

These girls are clerks and cashiers and stenographers, steady ambitious workers who are fighting the battle of life at fearful odds—a public-school education for a weapon and even worse beasts than the wolf of Poverty for their foes. Nor do they allow the battle to deprive them of hope, ambition and romance. They

dress well, for the most part, and with good taste that is astonishing, when we remember their limitations. As to their behavior, it is above reproach. When alone, their dignity is unshaking; when with one or two friends, there is a genial good-fellowship delightful to see.

At a neighboring table sat a young man who, captured as he was, might have served to wear in an advertisement the newest brand of shirt or collar. And his bearing was worthy of his get-up. It was as if Alcibiades had deigned to lunch at a wayside tavern. There were three other seats at his table, and soon a trio of girls who wished to lunch together took these chairs, and solved that most difficult of problems—to retain their affable composure toward one another, while neither including nor uncourtously excluding their chance table-companions. They chatted freely, and yet never in any way allowed the slightest self-consciousness in the presence of Alcibiades.

I wondered how many young ladies of greater social pretensions could have come so well through the little test of good-breeding.

AT length I too had a table companion, a young man who must have been familiar with the resources of the establishment, for he was able to order a most ample and satisfying lunch without allowing the management a profit worth mentioning. His attitude seemed hostile at the first view; but when I had obligingly moved the tomato sauce into his own territory for the convenience of the newcomer, the olive-branch was accepted and we talked about the weather, and risked a few remarks on the probability of rain and the quality of the pie, or something else as important, which the writer is ashamed to say he has forgotten.

If the man interfered with the flow of thought, he more than made amends when he came to his post-lunch cigar. The deliberate and calculated enjoyment of this luxury was a sight to make a wandering Sybarite homesick. No basty puffs wasted the acrid joy, but each was appreciated like a line from a favorite author.

But, speaking not as a snob, but with judicial calmness and detachment, the fellow (compared to his feminine counterparts) vulgar. He ate with too much conscious enjoyment, and smoked sensually. He lacked that detachment

from the material which scarcely all the women knew how at least to assume. He had no personal dignity, but was plainly what the English call an absolute cad.

Possibly the young women would have shown similar lack of breeding in their talk; but to the eye they bore themselves in a seemly style and with fitting self-respect.

Where did they learn behavior? From the moving-pictures, from the fashion papers, from chance study of lady visitors to the shops? It is hard to acquire the niceties of demeanor save through the eye; yet these girls in their teens had at least the elements of it, and it is safe to say that their children will be many steps further along the road to the "manners" than "makyth men."

SO the writer was made more hopeful of the future of our republic as he recalled for the hundredth time that charming hit from the writings of Mrs. Ewing the Great, where the erring small brother begs pardon for his wrong, at the same time snuffing love:

"Do's first, feels afterwards. I'd like to punch his head!"

And even if the manners are no more than paste jewels, they are an imitation well worth the wearing in the absence of the reality. By all means, let us encourage the education in manners in the hope that the imitation of right doing may grow into right feeling. Perhaps the little brother will come to ask pardon without the desire to punch the wronged one's head!

If the moving-pictures will teach the lesson of better behavior at ten cents a session, they will deserve well of the nation. And never before has the demeanor of Princes and Powers and Potentates been brought so clearly and so powerfully and so convincingly before the eyes of all the world and his wife and children as by the device that lets us all "assist" in the French sense at most of the earth's most notable happenings.

That this thought came by way of a cheap restaurant is natural enough when you realize that the table is, after all, the great test of good manners.

View for yourself the customers at these places, and perhaps you, too, will see reason to believe that the material out of which the nation is to be moulded is amenable and capable of kneading into better stuff than you may have believed.

With self-respect all things are possible.

Criminals I Have Known

By T. P. O'CONNOR

Illustrated by William M. Berger

VI. Henry Wainwright

IT was many years after my first hanging that I saw my second. In the interval I had gone through many strange experiences. Coming to London with four sovereigns in my pocket as my entire fortune, and determined never to leave it again, I had to face either success or starvation. I had the unfortunate experience of attaining a little of both. For three long years I found it impossible to get regular work; though I should add that this dread interval came not in my first three years in London, when I had good situations. These years of privation, of constant and corroding disappointment, of despair sometimes, and always of anxiety, had made their mark on me; even today the wounds have never healed. My outlook on life, even my opinions, reflect the experience of those days of suffering and privation. If I have learned to have a passionate desire to improve the human lot, which now abides with me as the purpose and the passion that have burned up all other desires and passions; if I have an infinite

indulgence and sympathy for human failings, it is to these years I owe it.

Let that pass, however, except in so far as it is relevant to the story I am now telling.

AT last the tide had turned, and I had got regular employment as the chief sub-editor of a morning edition of the old *Echo*, which had then been started. The hours were long, I rarely got to bed before three or four o'clock in the morning, and my duties were responsible and difficult. And one day I was asked, after the conclusion of my work as sub-editor, to go and describe the execution of Henry Wainwright. I did not get to bed until three, and to be sure of being in time I had to rise at six o'clock; I was told by those who saw me that I looked ghastly—as indeed I might well do.

I had followed the story of this murder with great interest, for Henry Wainwright was an interesting and an unusual criminal. He was a brush manufacturer in a fairly good way, in the East End of London. One day, going for an outing

to Broxbourne, he met a handsome young girl named Harriet Lane, and an intrigue followed. She had two or three children by him, and meantime he had at home a wife by whom also he had had several children. The demands on his purse in keeping up these two homes had proved more than he could bear without getting into endless pecuniary difficulties. It may be, too, that the unfortunate woman, in that state of despair which such false positions usually produce, had proved exacting and ill-tempered. What transpired to bring about the final tragedy nobody ever knew, but what happened was that Wainwright invited Harriet Lane to come and see him at night in his warehouse in the East End; that he then and there killed her, and buried her body under the floor. As so often happens with even the most cunning murderers, Wainwright made the mistake of covering the body with the line that preserves instead of that which destroys the human remains.

ONE day it became certain that detection would follow unless he was able to remove the body from his warehouse. He dug it up, put it in a loosely-corded packet, and then employed one of his men to carry it to a cab. This man, his suspicions aroused, followed the cab and traced him to the City churchyard. A few hours afterwards the body was traced by the police and Wainwright was arrested. And then came the trial. Popular interest in the murder was very great, partly because of its horrible surroundings and partly because of the personality of the murderer. For Wainwright was a personality—handsome, daring, fairly well-to-do, excellently educated, and a popular figure at literary entertainments. He was one of the small celebrities of the East End. If I remember rightly, he used to send occasional contributions to newspapers, including *Punch*; he was an excellent amateur actor, and he had often figured as an effective reciter at penny readings. Added to all this was the instinct that somewhere, deep down in his nature, there was that grim resoluteness of character that made him capable of desperate deeds. All the witnesses who knew him laid stress on his determination of character; and it will be seen that he was the kind of man to impress a powerful and fascinating personality on all with whom he came in contact, and especially on women, who have a primordial and indestructible instinct to subject themselves to the kind of man they recognize as the master that can conquer, even though they may feel that he can also destroy them.

The trial, then, took place amid every circumstance of popular interest. When Wainwright took his place in the dock, his appearance answered immediately to the impression that had been formed of him. Of middle height, of well knit and robust frame, with a fine beard and a large mustache, with a certain air of dignity, composure and self-confidence, he seemed the fitting figure to occupy the central place in a great tragedy. He dis-

"It became certain that detection would follow unless he was able to remove the body from his warehouse"

played, too, some of the qualities one would expect in one who was at once a man of business and, in a degree, a man of letters. His sight had become impaired during his imprisonment, and the audience saw accordingly a man in the dock carefully taking notes, wearing *pece-ars*, which, somehow or other, increased the sense of looking at a man who was tranquil, well educated, and methodical. George Manville Fenn, the well-known novelist, was sent by the *Eek* to report the trial, and I remember still the eloquent passage in which he drew a contrast between this quiet figure in the dock carefully and composedly taking notes and the hands of the clock gradually but surely numbering and decreasing the hours that lay between him and horrible death.

The evidence, of course, was purely circumstantial. Nobody had witnessed that dreadful interview in the dark hours of the night and in the silence of the deserted warehouse, during which these two people, that had once loved each other and had exchanged all the delirium of guilty passion, ended with one a corpse and the other a murderer.

The case for the prosecution was in the admirable keeping of Sir John Holker, the Attorney-General of the period—himself a remarkable personality with a life not without its strange ups and downs, nor also without a curious romance. A burly, broad-shouldered, robust man with a sleepy look, perhaps half-consciously exaggerated, an easy going and detached manner, a certain grim humor, and a somewhat affected manner, Sir John Holker was just the kind of deadly advocate that was wide-awake when he seemed asleep. And, of course, there came the only possible verdict. Wainwright was convicted and it was my business to record the story of his hanging.

I SAW the hanging in Tullamore jail with nerves apparently of iron that nothing could disturb, and I went through the terrible ordeal without any obvious disturbance. But I remember that, what with the late hours and the short sleep and somewhat damaged health, I was painfully nervous when I had to see this second execution. The scene in the grim yard of Newgate was remarkable and indeed somewhat scandalous. The sheriff at the time was Sir John Bennett, the great clockmaker. He was a strange being—exuberant, gay, greedy for notoriety and popularity; and was proud when, with his splendid head of silver-white and curly hair and old fashioned dress, he was always received with tumultuous cheers by the democracy at Lord Mayor's shows. It was partly owing to his strange personality that admission to the execution was given freely, and when the unfortunate Wainwright appeared on the scaffold—horribly like, in its construction, to a butcher's shambles—he found himself confronted by more than seventy pairs of curious and horrified eyes. I can recall still the curious curl that came to his lips under the long, graceful mustache as he surveyed this big crowd of sight-seers. It was his final defiance to the world—the last and greatest evidence of the daring self-confidence and scorn of his powerful personality.

Meantime I was reduced to a state of extreme nervousness. I found my hands shaking—a very unusual experience to me—and I did not know how to keep myself from a nervous breakdown. And as I looked around at this long array of spectators, all leaning against the big wooden

"Sir John Holker was just the kind of deadly advocate that was wide-awake when he seemed asleep"

bar which stretched along the yard, and every face showing in some form or other the universal feeling of horror, my own nervousness went on increasing. Fortunately the calls of professional duty were there and had to be obeyed. As it was known that I was to be present, several journals had asked me to write an account, and this account had to be ready almost immediately after the execution so as to get into the early editions of the evening papers, both in London and the provinces. Those familiar with newspaper work will know that journalists, when they have to supply the same article to several newspapers, are able to write several copies at the same time by the simple expedient of putting carbonized paper between the sheets, which reproduce on several pages what is written on the first. And the way I was able to escape from my nervousness was to keep on writing on my manifold, as it is called, which I had to hold in the palm of my hand, and upon which I had to press hard so that copy might get through to the pages underneath the first. And this I continued to do while I kept looking at the ghastly preparations for the execution in front of me. I should add that I had heard that Wainwright died with the same steady nerve as he had shown at the trial. I believe the doctor who felt his pulse immediately before the execution found that it was normal.

AND now let me conclude this narrative by noting the difference between my sensations not only during but after these two executions occurring within a few years of each other. I have already told how I found myself at a theater the very night of the first execution. I was surprised myself by the cool-

ness with which I had gone through the whole terrible business. And the morning after I woke cheerful and active, and went through my day's work in the usual way. Then I came home to the poor lodging in which I lived with my brother and sisters and sat down on the sofa. Suddenly, without any notice, I became conscious of something descending upon me like some thick cloud of black and sudden night. I was seized in the iron grip of a fierce attack of melancholia—almost like one of those attacks from which George Borrow used to suffer. The whole world became black and hopeless to me. This then was human life, I kept saying to myself—this transient, miserable thing that on a summer morning could suddenly be destroyed, so had been done in the case of those two poor wretches whose execution I had seen the day before. It was an instance of a tendency which I think is common to men of some temperaments—mainly to men of imagination—who feel things much more in retrospect than while they are actually going on.

The very opposite happened to me after my second execution. I was nervous before and during the execution; I threw off all its horrors immediately afterwards. By this time I had plumbed the depths and the abysses of life; it no longer appeared to me so sacred and so beautiful a thing for anybody to be so concerned about its ending. "Death," I repeated to myself in the words of the Epistle to the Corinthians, "was swallowed up in victory." Or, to put it in another way, and in the words of even a greater writer, "After life's fitful fever he sleeps well."

Today I do not think I was right in either the one case or the other, but I am narrating, not philosophizing.

Senator Miles Poindexter

My Conscience and My Vote

By

MILES POINDEXTER

WHEN I was in the House of Representatives I heard someone translate in quite a unique and happy idiom Louis XIV's famous dictum in these words, "The State, I am It." So I might say as to my party at the present moment in the senate—I am It; at least so far as the official party designation is concerned. There are, however, in the senate some twelve or fifteen real Progressives in the Republican Party and an equal or perhaps larger number in the Democratic Party; and the profound political query contained in the title of this article is how long it will be until all these Progressives shall be free from the whip of the party caucuses, and vote together for the common principles in which they all agree.

The above title is used only to point out the principle, and what I shall say has little or no reference to any particular action of mine, and is applicable to all political parties alike. The question, as I conceive it, really involves the whole proposition of popular representative government. As applied to a member of congress, the question is whether he himself shall control his own vote and cast it according to his convictions and his own sense of the proprieties of the occasion, or whether the political party with which he is affiliated in its organized formal capacity shall control his vote and direct on which side it shall be cast.

The question is as to which is of more concern, his own freedom of soul and action as represented by his vote, or his allegiance and subservience to the formal orders and dictates of his party organization. This is as it concerns him individually; but as a public man there is that larger concern of the community and the welfare of the people as it is affected by one or the other of these propositions.

As to them the question is whether, in each of their several districts, states, or other political divisions, in the making of laws, which involves the decision of

questions of vital importance to them in every phase of their lives, their quota of votes in the law-making body shall be cast in accordance with their interests, their wishes, their decision as indicated by an election, their judgment as ascertained through the investigation of their own chosen representative and the conclusions which he reaches; or whether their quota of votes shall be cast upon the instruction of some small caucus majority, or still smaller committee majority, or still smaller majority of a majority of a caucus, or majority of a majority of a committee—the majority of the majority controlling the majority, the majority controlling the committee, the committee controlling the majority of the caucus, the majority of the caucus controlling the caucus, the caucus controlling the party, and the party, if it be in power, of course, controlling the legislative branch of the government—this small controlling factor being chosen in other political subdivisions in which they had no voice and whose material and spiritual values, interests, concerns, and political problems may be entirely different from their own.

OF course, the ideal popular representative government is where the people of each political subdivision—each congressional district—so far as the House of Representatives is concerned, we will say for illustration—either by express instructions, or acting through the judgment of their delegated representative—is cast with absolute freedom and independence in the interest of that particular district, on the question which is involved.

Of course, in determining what is in their interest, the people themselves in each district, in weighing all the elements that should be considered in arriving at a just conclusion, will give due weight, as one element in the equation, to the importance and value, whatever it may be, of the success of the party in whose general doctrines

and principles they believe; and will weigh, one against the other, the comparative benefits, where they are in conflict with each other, of a vote for their preference in the particular question in hand, or against their preference on the particular question, for the party success as a whole.

The evils of surrendering their representation, or of a member of congress surrendering his vote to the dictates of the party organization, also vary in degree with the varying degrees of merit of the party organization and the methods and rules upon which it is founded and conducted.

The question is also affected necessarily by the general political situation and the importance, or lack of importance, at any particular time, of party unanimity and harmony; by the virtue, or lack of it, of the principles upon which the party is founded, and the importance of the issues which for the time being it is promoting. All of these, however, as stated above, are elements which in an ideal condition of really independent representation can properly be taken into consideration both by the people of the political subdivisions themselves and by their representative or senator in determining whether he should yield his own judgment or they should yield their own interests, in the particular question involved, to the adverse decision of the party organization.

IN considering, as an ethical and also as a practical governmental proposition, the degree of control which a political party should exercise over its members we naturally inquire what right or reason has the party itself to exist. There is nothing whatever in the Constitution, either of the United States, nor, until recently, in the Constitution of any of the states, providing for political parties or the government of the same. They are purely voluntary organizations, and in fact there was, at the time of the adoption of the Constitution, and has been at all times since, a large force of public

opinion which regards political parties and government by political parties as injurious and unnecessary. At the time of the organization of the government there were no political parties in the sense in which we now understand them; and some of the wisest men and most profound thinkers of that era looked upon party spirit and party subservency as one of the most insidious dangers that the experiment of free government, which they were engaged in establishing, would have to confront. For many years, however, in both this country and in other constitutional governments, conspicuously Great Britain, a system of government by party has prevailed. Under a system of party government free government necessarily involves, as an essential condition, a free party.

IF the government is by party and the party in its turn is controlled by caucus or by ring, which inevitably if persisted in leads to the domination of a single individual, with his power either absolute or modified by varying conditions of the influence and ability of his chief lieutenants and agents,—then it is perfectly obvious that free government has disappeared and is impossible under any such system. It inevitably leads to the conditions described by Washington: "The alternate domination of one faction over another, sharpened by the spirit of revenge natural to party dissension, which in different ages and countries had perpetrated the most horrid enormities, is itself a frightful despotism. But this leads at length to a more formal and permanent despotism. The disorders and miseries which result, gradually incline the minds of men to seek security and repose in the absolute power of an individual; and, sooner or later, the chief of some prevailing faction, more able or more fortunate than his competitors, turns this disposition to the purpose of his own elevation on the ruins of public liberty;" and it was against such excesses of party tyranny and intrigue rather than against a wholesome party spirit based upon a unity of belief and held together by general agreement upon issues affecting the public welfare that Washington advised: "Without looking forward to an extremity of this kind, (which nevertheless ought not to be entirely out of sight) the common and continual mischiefs of the spirit of party are sufficient to make it the interest and duty of a wise people to discourage and restrain it.

"It serves always to distract the public councils, and enfeeble the public administration. It agitates the community with ill-founded jealousies and false alarms; kindles the animosity of one party against another; foment occasional riot and insurrection. It opens the door to foreign influence and corruption, which finds a facilitated access to the government itself through the channels of party passions. Thus the policy and the will of one country are subjected to the policy and will of another.

"There is an opinion that parties in free countries are useful checks upon the administration of the government, and serve to keep alive the spirit of liberty. This within certain limits is probably true; and in governments of a monarchical cast, patriotism may look with indulgence, if not with favor, upon the spirit of party. But in those of the popular character, in governments purely elective, it is a spirit not to be encouraged. From their natural tendency, it is certain there will always be enough of that spirit for every

salutary purpose. And there being constant danger of excess, the effort ought to be, by force of public opinion, to mitigate and assuage it. A fire not to be quenched, it demands a uniform vigilance to prevent it bursting into a flame, lest instead of warming, it should consume."

All through the political history of our country it will be noted that, as the tyranny of the party government increased, the standard of statesmanship decreased. Making all due allowance for the magnified importance of the men and events who laid the foundations and put the government in motion, an impartial comparison of the leaders of public opinion in the great creative days of Settlement, Founding, Constitution-making, and the subsequent great era of Construction, when there was no such political institution as the party boss or the party machine, or ring, or formal secret caucus, shows that there were giants in those days. Party tyranny dwarfs the individual; party tyranny means governmental tyranny.

The ideal representative government would be that where the people in each of their several political subdivisions should decide in the great forum of general elections the issues which most vitally concern them. The evolution of free government has tended more and more to enlarge the functions of the direct franchise and to increase the responsiveness of government. Gradually issues came to be sharply defined, and the election of candidates aligned on the several sides was equivalent, in many cases, to a decision of the principle involved. There were many contingencies of uncertainty, however. Officials were not always faithful to their campaign pledges; there was opportunity for debate and disagreement as to what the issue actually was and what the election decided. Furthermore, it was impossible always to determine details in the elections, or to foresee the constant recurring needs of legislation or administration growing out of a living and changing body politic. Something had to be left to the loyalty, the intelligence, the judgment, the imagination of the representative, whether in legislative or executive office.

THE control of the people over the government in recent years has been enlarged by new agencies giving the people more direct power through changes in state and federal constitutions, as for instance, the Seventeenth amendment providing for the direct election of Senators of the United States; and the various forms of so-called initiative, referendum, and recall. These latter constructive measures are not in themselves new creations, but in one form or another, both in England, in Canada, in Scandinavia, and elsewhere, have been in more or less frequent use and application. With our national conservatism we regarded them a few years ago as extremely radical and perhaps dangerous. Through experience of the more progressive of our states their perfect practicability and efficacy has been demonstrated and there is now more or less general acceptance of the principle involved.

These measures and developments tend toward the destruction of party tyranny, and we are in the midst of an era of party independence, or independence of party.

Party rule by self-perpetuating committees, conventions of delegates appointed by the party authorities or selected under arbitrary party methods,

and by so-called leaders or machine bosses, is a recent growth in this country and is unknown in any other country—free or otherwise—in the world. From 1789 until 1832 no conventions and no party platforms preceded the nomination and election of Presidents. During all of this period there were political parties and during a portion of it there was much party bitterness. They were held together, however, not so much by party machinery as by the cohesion of a common belief upon general policies, although, of course, not upon the specific details of government. Political parties in those days were schools of political thought and belief.

In recent years they have degenerated into gangs of spoilsmen operating under banners with absolute political power. In 1789, 1792, and 1796 there were no Presidential nominations; and yet the great political divisions of Federalists and Republicans, or anti-Federalists, were able to elect, particularly in 1800, their typical leaders, and to cast their votes for Adams and Jefferson, respectively, indirectly, it is true, through the electoral college, by the use of the governmental machinery provided in the constitution and without the aid of the party machinery of more recent years. Washington, of course, rose above all party, and without the semblance of any party organization, by mere force of public opinion, was chosen by an overwhelming vote of the electoral college for his first term in 1789.

IN 1792 party organization was in an embryonic state, without convention, platform, or nomination, but both of the great parties agreed upon Washington for reelection. Federalists and anti-Federalists—or Democratic-Republicans, as the Liberal Party was promiscuously designated,—represented, in the conditions and issues of that day, the universal principle, which inevitably governs the formation of parties in all times, namely, the Many against the Few; the General Mass against a Few selected individuals; the combination of the Many Weak against the Few Strong; Privilege and Property against Universal Personal rights and opportunities; Aristocracy against Democracy; the Conservative against the Liberal; the Tory against the Whig.

From 1796 no such thing as a nomination in any form by a political party of its candidate for President was known until 1800, and from that time until 1820 the respective parties selected their candidates through formal or informal caucuses or conference of the party members of Congress. In 1812 De Witt Clinton was nominated at an informal meeting or convention of Federalists held in September in New York City. The Federalists as a party were rapidly disappearing; so that in 1820 even the caucus nominations disappeared and James Monroe had practically no opposition for reelection in 1824. There were no party organizations and, as in 1789, a representative leader was chosen President through the machinery of the Constitution alone, and without the aid of party rules. In 1832 began the system of the modern party national convention out of which has grown, coming to an acute form in 1900, the domination of the government by an unregulated and, in our sense, lawless voluntary association, setting up its own methods and rules for the selection of Presidents of the United States and other great officers of government.

OUT of this system grew that injurious and venomous party spirit, manifested in greater or lesser degree in different campaigns, which Washington warned against, and which in its worst manifestations is a mere unscrupulous political war for the legitimate and illegitimate spoils of office. Under this system party regularity, party subservience, party servility, party prosperity were the cardinal virtues and prime object. Any indication of political independence was discountenanced, and any disobedience of the rule or order of the self-constituted party authorities was a political crime. It was an era of loot and political brigandage in municipal, state, and, on a somewhat higher plain, also in national affairs. The superlative position in this state of affairs was reached by the Republican Party, which, through the contingencies of Civil War, and Reconstruction, and the economic conditions following thereafter, had, with very brief interruptions, supreme and unlimited control of the government for half a century.

By reason of the system of party government, adverted to above, this party was a law unto itself. It, and not the people, chose the officers of state, from President and Supreme Court Judges down to Justices of the Peace. Such a system inevitably led to corruption and political degeneracy, and this corruption and degeneracy extended by example and contact from political to social and economic affairs. It grew into an era of money-madness. Human beings were ruthlessly sacrificed to avarice. The people and the people's welfare were a jest, and independent political thought was anathema. The taxing power of the government, through the tariff especially, was scandalously applied to building up great private interests at the expense of the general welfare, and a sound and just principle of reasonable protection of American industries was seized upon as a lure and specious pretense to keep unscrupulous interests in control of the taxing power. It was perverted from a policy of general welfare into the means of private aggrandizement. Under this same system of party tyranny, and as one of its natural evolutions, grew up monarchical rule in the House of Representatives. Under the excuse of parliamentary efficiency in the transaction of business, a system of rules was developed by the party in power which placed in the hands of one man absolute control over legislation; so that powerful interests, which had been founded upon conditions, described above, and grown great, virtually controlled the legislation of the United States by controlling the congressional district of the Speaker.

MONEY was used directly and indirectly in political campaigns with this end in view. Millions were spent to elect or defeat Representatives by private organizations concerned in legislation. General political corruption in many counties was illustrated by the arrest of large numbers of voters, and their convictions for selling their votes. Recent lobby investigations have indicated the vast sums of money invested in politics. The ramifications and innumerable lines of influence of the System, reaching from the great centers of finance in New York City into the most remote New Territories where railroads or other public utilities were seeking public franchises, did not prevent complete harmonious control of the whole through the magic word of party

regularity. Out of this System grew the most unique of modern political institutions,—peculiar to America and characteristic of these conditions,—namely, the political "boss." The political boss ruled with a power more absolute than many a King upon a European throne. In some instances his principality was a great state; again it was a mighty city; or, at another time, a village, or country town. The System became so powerful that it extended outside of the limits of the party in power and, while preserving in its strictest form party regularity, had its hipartisan agents and emissaries in the Democratic Party; and, in many jurisdictions of the Nation, the latter party wielded the power in city or state which the Republican Party exercised in the Federal Government. In New York City or at Albany, in Pennsylvania or in Washington City, under Democratic Party government or Republican Party government, the System was the same.

There was great plunder to be had—the vast continent of natural resources belonging to the people—lands, forests, coal; the governments and property of the state; city franchises; public works and building contracts; all paid their gigantic toll to the System. Senatorships were bought, paid for, and delivered.

A PART of the success of the System was due to the preoccupation of the people in the great material work, incident to a new country, of settling the land and making homes, and in the primary occupation of earning a livelihood. The people had little time for politics; and it was not until population,—increasing at some sixteen millions in a Census decade,—coincident with the diminishing natural resources and the limitation—by the waves of the Pacific—of the westward migration, began to make the struggle for existence and for opportunity more severe, that the people turned in earnest first to inquire and then to act in the matter of their government. The excesses, mentioned above, sooner or later would inevitable have brought about in any event the destruction of the sinister cult of party priesthood, party orthodoxy, and the political proscription under which they had thrived. But the American people when aroused, although they are slow to wrath and conservative by nature, act speedily and with decision. The one man rule in the House of Representatives and in the Senate of the United States, the so-called "bellwether" system of making a tariff bill under the leadership of Senator Aldrich of Rhode Island, and the appointment of all Committees and control of the House of Representatives by the Speaker, were completely overthrown, partially by the spirit of revolt in the House of Representatives itself in 1909, reflecting the political revolution which was taking place among the people; and wholly, by the people themselves, in the elections of 1910 and 1912 in which the fortress of party tyranny as it then existed was destroyed and fifty years of Republican rule were brought to a permanent and eternal end with the pitiful showing of eight electoral votes.

OUT of this war and turmoil, the Democratic Party emerged with a majority and the control of all branches of the government. That party itself is divided between Liberals and Conservatives, Progressives and Stand-patters and it remains to be seen which element will direct its councils and its actions. It remains to be seen what use it will

make of this power so suddenly thrust upon it out of the fortuitous circumstances of the war of the people against the System. It remains to be seen whether it will follow the unfortunate example which its representatives in the Senate set in the making of the present tariff act, of wielding the party whip, and suppressing the conscience and judgment of its members by the law of the party caucus.

Its tenure of power will depend to a large extent upon its attitude on this question. The people are not wedded to the Democratic Party, nor to any other party. They are wedded to principle and regard party only as an agency for giving effect to the principles of government in which they believe. If majority rule is destroyed by caucus rule, the Democratic Party must pay the penalty which comes to every enemy of free representative government. A general agreement upon the great fundamental doctrines of government, as applied to measures which arise from time to time, is a sufficient force to hold together any political party. The more acute and important the issue, the more cohesion will the party have. The greater concern of the country in the establishment of a principle, the more will Senators and Representatives sacrifice difference of opinion in detail in order to obtain party harmony upon the principle involved. Party tyranny whether through caucus, committee, Speaker, bellwether, boss, or other functionary, while it may enforce unity of action for a time, inevitably leads to dissatisfaction and rebellion in the party and to its eventual repudiation by the people themselves.

WHERE there is not sufficient virility of public opinion to bring about this repudiation of the political machine, the people are exploited through all the agencies of government. Under the cry of party regularity, the ring capitalizes the patriotism of the people. For campaign purposes it voices some principle to which the people are attached and uses it to gain and retain power. In New York City the boss is Democratic, because that is the overwhelming sentiment of the people. In Philadelphia a similar boss is—or was until his abuse of power led to his repudiation—Republican. Both are actuated by the same political principles and are in politics for the same purpose. The same interests contribute campaign funds to the Democratic machine in Virginia and to the Republican machine in Pennsylvania. Under the cry of party regularity, party "solidarity" and obedience to the "titular" head of the party, the effort is made to suppress all free political action and to paralyze individual judgment. Under such a régime, the machine is supreme. The possibility of interference with their plans being thus precluded, the press in many instances being owned or subsidized by the ring and their allies, and the public conscience denuded, the avenues of graft and special privilege are open and safe.

The remedy and the antidote is the doctrine of the new Progressive movement; that there shall be party organization, but no party slavery; party loyalty, but individual freedom; party harmony, but a harmony based on a common political belief. It is this revolt from the tyranny of the ring, and this alone, working in both of the old political parties, that has overthrown the Southern Pacific Railroad domination in California, and has broken the apparently invincible power of the close corporations of politics in so many states and cities.

By JAMES MONTGOMERY FLAGG

The Changeling Book Agents

By HORATIO WINSLOW

Illustrated by Ernest Fuhr

As he settled down at the restaurant table the book-agent nodded to the other diner.

"Soft town, neighbor, ain't it?" he chuckled, after finishing an order for the whole table d'hôte meal from noodle soup to layer ice-cream.

The melancholy man across looked up from his bread and milk with a grunt. He did not smile. It dawned on the book-agent that bread and milk was the cheapest dish on the bill of fare and that the melancholy expression opposite was not the melancholy of a dyspeptic but the deep blue gloom of a hungry man gone broke.

"Pardon me," said the book-agent, "but didn't I see you selling a set on Wilson Street this morning?"

The other stared moodily from his plectra bread and milk to the radishes which marked the beginning of the fifty-cent dinner.

"No, you didn't," he snapped. "You never saw me selling anything on Wilson Street or any other street of this bum town." With a weary gesture he laid a crumpled circular between the salt cellar and the vinegar cruet. "Here's what I was trying to sell—'Billing's Monumental History of the United States.' But I'm through—done—finished. Good night, my love, good night."

Mr. Hansen picked up the circular. "You mean to tell me," he asked incredulously, "that you can't sell a history of the United States here in the United States when you are a—United Statesman? Listen. My name is Ole Bull Hansen. I'm a Norwegian born, and yet right here in the United States I sell Magnusson's 'History of the People of Norway; Their Literature and Life' on Our Celebrated Easy Payment Plan. My friend, what is the greatest poetry in the world? The Norwegian. Who discovered America? The Norwegians. Who—"

A scrape of chair legs on the floor shut him off.

"Oh sure, that's all right, too. You believe it, and if you believe it you can make the books believe it. If you didn't believe it—take it from me you'd never sell a set."

"But the United States is a great country," suggested Hansen. "Now if I wasn't no Norwegian—"

THE melancholy man rose to his feet. "So you think I'm a Yank, do you. Look here, I'd rather register from Timbuctoo than from any place in this back-yard ashpile they call 'The States.' The States! Huh! I'm a Canadian—a Canuck—a god-blamed Canuck and proud of it. Lemme tell you this, too: just as soon as the good Lord'll let me, and that's tonight, I'm going back to God's country and tickled to death about it, too. The States—yah!"

Ten-cent check in hand, the Canadian stalked to the cashier's desk while Hansen, looking after him, experienced a feeling of resentment.

"But he's right," he admitted. "You got to believe in it, or you can't talk it and sell it. Maybe if I wasn't such a red-hot Norsk I couldn't sell Magnusson's History. But his funeral ain't my funeral."

He drew from his pocket the letter he had been handed at the general delivery

window of the post-office a few minutes before. The envelope held a sheet of blue-ruled note-paper.

"Dear Ole" (ran the painful handwriting) "We how are you all we here come home soon. You got to be 81 years old now and we got some news to break. Maybe you been Ole Bull Hansen and maybe not. your father Lass Hansen."

THE free-lance book-agent may come and go as he pleases. Ole had planned to run up to his father's home at New Christiansia the following week. Instead he went the next afternoon. The mysterious letter worried him and seemed to gum up his usually ready praise of Magnusson's History of the People of Norway.

Mother and father met him solemnly at the train. But not until the children had been packed away to bed did he learn any part of the dreadful secret. Once they were out of hearing, three parlor chairs were set at the points of an equilateral triangle while Ole was encouraged to bear up under the Worst.

"But I'm sure it ain't true," the mother sobbed, before the elder Hansen could begin the tale. "Why Ole, you got blue eyes just like a y aunt Marie, and hair kind of reddish like my father, and a nose like Grandpa Olsen himself."

The book-agent squirmed desperately. "For goodness sake, Ma, what do you mean? Why ain't I sure enough Ole Hansen, Pa?"

"It's like this," began Pa. "You was born in the Old Country and you was a month old when we got to that hotel in Min'ap'lis."

Tears rolled down Mrs. Hansen's cheeks. "Oh, my poor little Ole! I shouldn't never have let you out of my eye."

"But Ole, she couldn't help it. She was sick yet from the trip over, and I had to do most for my mother."

And then with many pauses and urgings the story came out. The hotel is Min'ap'lis. The bath in the washroom with Pa as nurse. The presence in the washroom of another little boy baby just Ole's size and red and mewling just like Ole. The alarm of fire. Confusion—smoke—yells. The arrival of the firemen in identical black coats and moustaches. Their hasty exit, one with Ole and the second with the other baby followed by Pa and by the girl who had been bathing the other infant.

"So," concluded Pa, "we was all saved. Your mother, she got saved too. Out in the street I got one baby give back to me. But I didn't know if it becu you or not. How could I tell? You see you was little and red-haired and just like all babies and I couldn't find no one to ask. The other girl got her baby and she was gone, and your ma was so sick that it was five years before I told her about it."

"But the hotel register," suggested Ole. "Didn't you look up the register and—"

Mr. Hansen shook his head sadly. "No, Ole, that register book was burned too, and I don't even know what country that there girl was from."

He stared long at the boy before him,

while Mrs. Hansen sobbed into a handkerchief.

"Maybe," he said at last, "maybe you are Ole Bull Hansen and maybe you ain't. Just like I wrote you in the letter, I don't know."

BACK to Chilton sped the book-agent; Chilton, that "easy" town which he had only partially covered. Yet somehow, he had changed overnight. He came back dazed and terrified by what he had learned.

Perhaps he was really Ole Bull Hansen; perhaps—and he shuddered—perhaps the real Ole had perished in the flames. Worse still, perhaps the little chap with royal Norse blood in his veins was being brought up in some Norwegian-baiting, Scandinavian-hating household. All the book-agent's race loyalty boiled hot in anger—boiled hot until he realized that he himself might have sprung from some fatherland that had been ravished and laid waste a dozen times by the old Norse pirates.

It unnerved him. Day by day he brooded over and named the secret. From a hale, aggressive salesman he became timid and fearful with a deep hollow marking the spot where once had lodged his bump of self-confidence. No longer was he able to get conviction into his panegyrics. His profits dwindled steadily from the original thirty dollars a week to ten—to seven—to nothing at all.

It was on the Saturday evening of his nothing-at-all week while he was dining frugally on bread and milk that a red-checked, light-haired, blue-eyed youth sat down across the table from him and ordered the full fifty-cent meal. Deliberately Ole reluffed several friendly overtures toward conversation, but there was no halting the genial stranger.

"Well," demanded Hansen snapping down his spoon, "what d'yah want anyhow?" He glared belligerently at the well-fed youngster.

"What do I want? It's not what I want that matters—it's what you want. And I can see that you're a man of trained intellect, a man who wants only the best. 'For,' says James O'Donohue on page 97 of his History of the Struggle for Home Rule in Ireland—I'll read it to you later—you'll find it in Volume Five—there's seven in all: cloth, leather, half-morocco, as you prefer—'For,' says James O'Donohue—"

"Never mind James," interrupted Ole enviously. "I can see by the way you talk that you believe it."

"Believe it! Why, man, how could I help believe it and me born on the old soil. Born right in County Clare I was, though my folks came to this country early. For they knew that next to Ireland, as James O'Donohue says, 'the United States—'"

"Next to Norway," insisted Ole, without thinking.

"Next to Ireland. But we'll not quarrel about it. You'll be convinced soon enough yourself when I show you the book. It's convinced me for I was only a month old when I came to this country, and as James O'Donohue says in Volume Three page 640—"

A strange thrill stirred Ole. "What year was that you came here?"

"Year? 1880 it was, a year marked in the history of Erin by the following——"

Ole faced the book-agent squarely. He was shaking a little but he kept from his voice the anxiety and longing that strove within him. "Where did your folks go after they came over?"

"Montana. But they never got there for the reason that they were evicted by a hotel fire in Minneapolis—and speaking of evictions——"

Without ceremony Ole straightened out a long arm to grab the other's left shoulder. "What's your name?"

The other book-agent glared. "Take your hand off me coat for m' name's Robert Emmet Boyle and——"

Excitedly Ole took his finger across the mustard and the pepper canister. "Listen to me, Robert Emmet Boyle or Ole Bull Honsen, whichever you are. Do your folks live here in Chilton? They do! I can see it by your eyes. Well, then, take me to them at once—do you understand?—right away. And don't be thinking you can hand me a bunch of knuckles and get away with it. Maybe I'm Irish myself."

One half hour later the saga of Ole's babyhood was being recited to the Boyle's. By stages the Boyles were incredulous, indignant, aghast.

Mrs. Boyle denied vehemently ever allowing little Robert Emmet out of her arms at the hotel; denied it until Norah appeared. Norah it was who had bathed Robert Emmet on that fatal occasion.

"Of course I took him that morning," she said to Mrs. Boyle, "and why not? I your own sister, and wasn't you burnin'

up with the fever in your room while the hotel was gettin' ready to burn up with fire and flames? Didn't I put him into your arms after the fireman carried you out?" She turned to Ole. "But there was no mix-up about it all, at all. I'd never have taken my little nephew back if I hadn't been sure it was Robert Emmet himself. He was that smoochy nobody'd have recognized him, yes; but I knew him in a minute by the mole on his right elbow."

A pause of a moment and then Ole bared his arm. "I've got a mole on my right elbow too."

Mrs. Boyle broke the silence that followed, with a snap of her fingers. "There couldn't have been any mistake. You can see for yourself my Robert Emmet has got your Grandpa Connor's chin, and my Uncle Larry's fine eyes, and my own mother's hair."

"Yes," said Mr. Boyle, removing his pipe, "and this other lad here has the small ears like your Aunt Kitty, and eyebrows as light as my own and my father's before me, and it's your very own mouth that's on him."

THE changelings stared at each other speechless.

Then Mrs. Boyle, lost to capitulate, became the first to suggest a solution. She walked up to Ole, put her arms around him, and kissed him twice.

"We'll bother no more about it," she said decisively. "I'll take no chances with me own flesh and blood. If you weren't my boy before, I want you for my boy now as long as there's a rafter overhead or a crust on the table."

"We'll be needing the rafters and the crusts both," said Robert Emmet sadly. "I can't sell any more Home Rule when I don't know whether I'm an Irishman or a Norwegian."

"And I know I can't sell Magnusson," echoed Ole Bull. "I've tried it."

"Black shame on the both of you," cried Mrs. Boyle. "Why, back in the old countries you wouldn't have half the chance you have here. I've had my trials and my troubles in the United States of America but for all its faults it's the best country for livin' in I've found yet. The best."

Ole slapped his thigh with sudden delight.

"That's it—I've got the answer, Robert Emmet. The other fellow didn't belong but we do, and we can get away with it."

"Get away with what?" chorused the Boyles.

"Read for yourselves!" With a grand gesture Ole slapped down upon the table the dog-eared, pocket-worn circular of a certain, "Peerless Edition de Luxe, Consisting of Ten Mammoth Octavo Volumes—Five Styles—Wonderfully Illustrated—Magnificently Written—Easy Payments—An Education for Young and Old—Billing's Monumental History of the United States."

"Like hot cakes," he shouted, "it'll go like hot cakes: the history of the best country in the world!"

"Must be on every parlor table—on every parlor table," agreed Robert Emmet Boyle, an awed expression on his face.

"The history of the country you live in—the best country in the world," repeated Ole, "the best in the world."

"Maybe you are Ole Bull Honsen and maybe you ain't"

The Publication of Plays

By GEORGE MIDDLETON

A FEW years ago, Mr. Ramsay, a salesman in one of the largest book shops in Chicago, foreseeing a marked tendency on the part of the public, asked permission to have, in a conspicuous part of the store, a table that should be exclusively devoted to drama. From a small list he succeeded in building up one of the largest retail drama departments in the country—so great has become the demand for published plays. This increasing output on the part of all publishers without exception, is extremely significant and indicates a new force in the drama which must be reckoned with.

Play publication has been no novelty abroad. For many years it has been a natural outlet for the dramatist, no matter how great or how small has been the vogue of his play upon the stage. When one considers, too, the short runs that most plays enjoy abroad, it can be seen that the publication must have been stimulated by a demand for the play in printed form, since publishers, like the politicians, are not in business for their health. France and Germany have been the great field for this furrowing, partly because the drama makes, as a rule, more of a literary appeal than elsewhere, and also because the dramatist is accepted as a literary man. Production and publication are generally simultaneous. Within recent years England has taken its place as an encourager of the published drama, and this has very naturally influenced the American publisher, who is now boldly accepting the foreign successes and timidly encouraging the native dramatists.

Most plays thus bound between covers have felt the glare of the footlights. A play, generally speaking, must be written to be acted; we are not here concerned with those experiments in dialogue which are impractical and intended primarily for the study. Publication at best is merely the record of the dramatist's intention, since no printed version can possess the vitality of a presentation. But theatrical conditions and social conventions in this country are such that there is a host of plays, outside the universal successes, which can never find their way in our commercial theater with its necessity of group appeal. These are the plays, written by the foremost dramatists, which for want of a production here are translated for those who cannot otherwise keep in touch with the drama of the world.

STRINDBERG, for example—with the exception of sporadic performances of the "Father," "The Stronger," "Countess Julie," and one or two others—must be studied in a flood of translations rather than on the stage. An authorized translation of Hauptmann is approaching completion, though practically we American theater-goers know only the "Sunken Bell" and "Hannele." Two volumes of Sudermann's one-act plays—"Rosen" and "Moritur"—have been accessible for several years, but rarely produced.

His "Heimat" (Magda) of course, and the "Joy of Living," translated by Edith Wharton, are also in book form. Schnitzler is no longer a mere name; he, too, is rapidly being prepared for readers, mainly due to the vogue of "Anatol," chastened by Granville Barker. Much of those remains without American production and yet it has long been possible to study his genius in the library. Of the other Continental dramatists who are translated, one finds Björnson, whose "Beyond Human Power" we know upon the professional stage; Tchekoff; Giacosa; Weiskind, of "Spring's Awakening" fame; Hervieu; Rostand, Becque, the ironic; and Brieux, the most talked of dramatist of the day. The best of Lavedan, Donnay and even Victor De Curel, is also impending in print. And, of course, no superficial list would be complete without many of the obtainable but unproduced dramas of Maeterlinck.

To catalogue the published English dramatists would outrival Homer. Shaw, Pinero, Jones, Galsworthy, Barker, Besler, Houghton, as well as Lady Gregory, Hyde, Sygne, and Yates, are within reach of hand. Barrie alone of the prominent writers for the stage refuses to have his plays put in book form. So close has become the English and American stage, through managerial affiliation and the common tongue, that their plays are ours though with varying degrees of success. The American dramatist, too, is slowly gaining the added dignity of publication outside of acting editions intended for amateur and "stock" production. While the list intended for the reading public is as yet small, it is graced by such names as Thomas, Fitch, Bronson Howard, Percy Mackaye, Josephine Preston Peabody, Olive Durgan and Vaughan Moody.

IT is obvious that all this presupposes a growing interest in the drama. This acceleration is due mainly to the great number of lecturers and public readers who are specializing in this branch of creative expression. Added to this is the rapid development of drama courses in the colleges under such men as Professors Baker, Phelps, Henderson, Matthews, and Dickinson. Possibly the greatest single force, however, which has stimulated an interest in the published play has been the Drama League with its study clubs and educational courses all over the country. In this connection, it is pertinent to note that one prominent firm is bringing out a series of modern plays directly under the League's auspices, initiating the edition with Percy Mackaye's "A Thousand Years Ago," and Kenyon's "Kindling." Thus many removed from metropolitan centers may obtain some understanding of the plays they may never see.

Play publication has also raised the standards of amateur performances—and it is in these organizations, so frequently sneered at, that the taste of the future is being moulded. The Toy

Theater in Boston, The Plays and Players in Philadelphia, and The Dartmouth Dramatic Society, are among those that are trying to break from the flabby farces and sentimental mush in which it was formerly the custom for amateurs exclusively to indulge. The fact that Maeterlinck's "Sister Beatrice" was first produced in this country by amateurs is some indication of this tendency.

THE published play means much to the American playwright. There are many cases where a play is not ideally cast nor presented as written; cases, like "Chains," where the play has been damaged by ignorant butchery under managerial direction, resulting in failure. The printed word sets the dramatist right before his public. The fact that a play is also to be read is in itself an incentive for a better tone in phrase, which is possible without losing verisimilitude. Stage directions, too, under this spur, become vital and human. Subjectively then it is both a stimulus and a defence. Further, publication renders the author a small but durable public and he becomes accessible and known to many who, in the quiet of the study, may find hidden qualities which are often lost or hurried in the presentation. People are apt to forget that the theater is capricious and does not always offer its financial success to plays of greatest moment. The prophet or social interpreter may be ostracized by the public if he violates too radically the thought and convention of the moment. The published play affords him some audience and keeps his play alive, for it can be read creatively by sympathetic understanding.

Publication may often lead to production. This was the case with Bernard Shaw. All his earlier plays were in book form before they were tested by the footlights. This in itself means much to the dramatist, who may not be able to get his play produced through a variety of causes not within his power to control. The acid test of commercialism is not a criterion of merit. Percy Mackaye, one of the foremost advocates of publication before presentation, has had nearly all his plays presented to the public in this order. "The Scarecrow," for example, reached the stage three years after it had reached the reader.

SOME fear this may lead to piracy; but there is no way to prevent a script being stolen once the words are accessible to a stenographer. Others argue that to read a play before seeing it is to kill the surprise. No one of course need read a play, but if that objection is insisted upon one might answer that few play plots are unknown once the play is produced. Most English plays—like "Prunella," and "Hindle Wakes"—are already in book form before production here. Possibly if the play has some merit, it might be a kindness to give the critic the script before he sees the play; it might add more value to a judgment that must be hastily formulated to meet an edition.

Finance

By ALBERT W. ATWOOD

The Day of Municipal Bonds

SINCE the passage of the Federal Income Tax, municipal bonds have enjoyed something of a boom, which they probably deserve, but not solely from benefits conferred by this new law. Municipal bonds are the obligations of counties, cities, towns, villages, school districts, and other small political divisions. It is a fairly settled and comprehensible policy of government to facilitate its own financial operations in every practical way, and thus the exemption of all obligations of political bodies from income taxation is a natural step.

But far too much hue and cry has been made of this favoring clause. Unless one's income mounts far up, above \$80,000 at least, the amount to be gained by owning Federal Income Tax exempts is absurdly small. There are so very many deductions to be made before paying the Income Tax—\$3,000 for unmarried, \$4,000 for married citizens, business expenses, other taxes, bad debts, depreciation charges, stocks owned, notes which are obligations of individuals, and several thousand of bonds the tax upon which the issuing corporations have agreed to pay—that for the man of moderate income, this new Federal impost is ridiculously small. Suppose that after all these deductions are made the internal revenue collectors, with eyes in the back of their heads, do find that you have two bonds upon which you must pay. The total annual tax will amount to the huge sum of 80 cents upon two 4 per cent. bonds or 90 cents upon two 4½. Horrible! Confiscatory! Socialism!

Why Municipals Have Risen

FOR a number of years past, and culminating in the early and middle parts of 1913, the political sub-divisions of our states have found it increasingly difficult to sell bonds. At present there are probably about three billion dollars of these bonds out, and the amount grows by leaps and bounds. Prior to about 1840 no such bonds existed, but their production increases as people demand new types of public improvements, because of the rapid advance of civilization along humanitarian, sanitary and sociological lines.

In the last few years all manner of borrowers have found it extremely difficult to negotiate loans, a condition especially acute in the case of municipalities because of the general feeling among bankers and investors that a wave of municipal extravagance was sweeping over the country. At times last year great rich cities could not sell their bonds at all. In St. Paul, James J. Hill came to the rescue, and even the extraordinarily prosperous Detroit despaired of raising borrowed funds until one day Henry Ford walked to the city hall and calmly bought a couple of millions for his own account. Elsewhere newspapers and department stores conducted popular sales. A more grave investment situation has rarely been known.

BUT like all financial movements, this one went too far, and was certain to be checked. The incident that checked it

was the passage of the income tax law specifically exempting this class of bonds. The actual dollar value of this exemption was minute except to large investors, but the sentimental value was great. One does not have to even mention his holdings of municipals in making out income tax returns. Immediately investment bankers, grasping at a straw, advertised these facts extensively, offered all manner of municipals for sale, high yield and low yield, and all at once the entire financial world was, and still is, discussing this class of bond. As a result prices have rapidly advanced, a few nervously rich investors of the super-taxed variety have bought extensively to prevent the possibility of having their holdings of securities become public property, and the general run of persons wonder what all the excitement is about.

Why Municipals Appeal

OF all branches of finance, that dealing with public and especially municipal finance is perhaps the most complex. But a few essential facts will suffice for the present purpose. Municipal bonds are secured by the good faith and credit of an entire community, and in a sense are a lien against all taxable property. No real person or artificial person (corporation) can move a finger until he has paid his local taxes, and these taxes are what in the main pay the interest on municipal bonds. Of course it is possible for municipal bonds to be illegally issued, for laws are sometimes misconstrued. It is possible for the proceeds to be diverted, for public officials are sometimes grafters. It is possible for bonds to be unwisely issued, for sometimes the people are ignorant or careless, and so are their representatives.

Two years ago a lawyer made a careful estimate of all the municipal bonds that have been held void by the courts, a total of about two hundred million dollars. But the great bulk of this invalidity took place when towns and cities lent their credit to railroad enterprises, a cause no longer operative. And even then nearly all were thus damned before they reached the hands of bona fide investors, the total amount of municipals held void in the hands of investors being only \$6,516,000, an insignificant fraction of the billions issued.

No municipal bond, it is interesting to note, ever has been held void in New England. The truth is that these bonds as a class approach absolute safety more nearly than any other class of corporation or private investments. In practically all the states, savings banks, insurance companies and trustees are permitted to invest in them. In a period when capital is nervous such bonds are especially desirable.

IT is true that many cities and towns are extravagant or corrupt. It is bad finance to sell long term village bonds against highways which wear out in two or three years. But the well managed town throws part of these improvements into current budget, and part into short term loans for short-lived improvements. Surely the present generation must not pay

Educators Everywhere

are speaking out against the use of coffee and tea with growing children.

In the young, susceptibility to harmful drugs—such as "caffeine," in coffee and tea, is more marked than in persons of mature years.

And just as many adult coffee or tea drinkers suffer from nerve irritability, heart disorder, digestive disturbances and other ills, so the child with its far more sensitive make-up often suffers a hurt which may show in deficiency of learning ability or physical frailty—more noticeable to the teacher than to parents.

The thing for parents to do is to keep coffee and tea out of the reach of our little citizens. The most unkind thing a mother can do is to place a cup of coffee before her child.—Dr. E. A. Peterson, Medical Director Public Schools, Cleveland, O.

The symptoms produced by coffee-drinking can be observed in the arrested physical and mental development of children.—Dr. Otto Juettner, Sec. Cincinnati Polytechnic, Cincinnati, O.

In the light of such testimony the parent who gives a child coffee or tea is taking grave chances of ruining the child's health.

Mothers, quick to remedy wrong health conditions, yet reluctant to deny childish pleasure its hot breakfast cup, now use

POSTUM

—a pure food drink made of wheat. It is free from caffeine or any other drug, and children can drink it at every meal and grow strong and rosy.

"There's a Reason"

The Foundation of Many a Fortune

has been made through ability to classify properly the various types of good investments and select the best examples of each type with a definite aim in view. In addition, ability is always required to judge conditions so that the securities selected are purchased and sold or exchanged at the most opportune times.

We endeavor to provide a definite service for our customers, which will assist them to invest in the most profitable way possible.

We send to customers and to prospective customers, from time to time, letters on current affairs which affect high grade investment securities. Our latest suggestions are contained in Circular EV-66 which may be had on request.

for all the improvements that posterity will enjoy. Probably, too, extravagance does not increase as fast as efficient and scientific municipal management spreads. The commission form of government, a city manager for Dayton, and an expert, non-partisan financial management for New York City, are but symptoms. In Massachusetts a new law compels all political sub-divisions to adopt the serial form of repayment, a complete insurance of conservatism and safety.

YEAR by year state laws become more strict, gradually but surely narrowing the scope possessed by political sub-divisions that do not provide sinking funds or serial maturities for their bonds. In the few cases where there are no constitutional or charter provisions, the better class of investment banking houses do not bid for the bonds, or only at prices well out of line with the better securities. Then too it must be emphasized that many municipal improvements such as water works, subways, docks, harbor and port facilities are self sustaining. Fifteen years ago there were practically no such city improvements.

How to Choose

FORMERLY it was held that city bonds were not good unless the net debt was about 5 per cent. or less of the assessed value of taxable property. This rule of thumb no longer holds, partly because of the increase of self sustaining debt. And it becomes increasingly important to consider in such case the general financial and industrial conditions of any particular city.

Fifteen years ago only the bonds of large cities enjoyed a good market. This is no longer true. Not only do many small towns issue wholly safe bonds but there is a demand for them from savings banks, insurance companies and other institutional investors, as well as a growing demand from individuals. Many of our strongest banking firms specialize and constantly trade in these bonds, and the investor should consult a good banking house before making a purchase. Such consultation is not so necessary when the bonds of large cities such as Boston and New York City bonds are the only ones listed on the Stock Exchange, and there is always a big, broad market for them.

NATURALLY, no sensible person will buy the bond of a town so small that its population may walk away over night. One small town to escape paying its debts moved from one side of a creek to the other. Nor would any sensible person buy the bond of a one-industry town, particularly a small mining town, where the mine may give out and the prospectors go away. Towns in agricultural territories,

or in which there are many diverse manufacturing industries, are naturally best.

Few Eastern municipalities yield more than 4½ per cent. since the recent upward movement. In the West good bonds may be had to yield 4½ per cent., although even there such cities as Denver, Colorado, and Portland, Oregon, yield less. On the other hand, San Francisco bonds return about 5 per cent., as do most of the western Canadian towns and cities. Naturally investors prefer the bonds of a stable, settled community. Boom towns may fail just as boom industries do. Then, too, the population of a new place enjoys fewer elements of stability and responsibility than does that of an older settlement. However, bond experts say that the elements of stability and moral responsibility are far more evident today in the West and South than formerly.

Why municipals sometimes sell at very low yields is clear enough. Take the Essex County, New Jersey, 4½s which yield only 4.30 per cent.; or the Scranton, Pennsylvania, 4½s yielding 4.25 per cent. In the one case, debt is only 17.8 per cent. of assessed valuation, and in the other but 1.9 per cent. Essex County includes the city of Newark where industry is wonderfully diversified. The possibility of property in Newark not being able to pay taxes is too remote for conception. But such possibilities are not too remote in a mushroom town with one suddenly acquired source of prosperity.

IN conclusion it is highly important to observe that municipal bonds are most suitable to persons upon whom state and local taxation is a burden. In New York and New Jersey all bonds of sub-divisions of these states are non-taxable to residents. In California, Michigan, Indiana, Iowa, Minnesota and Wisconsin, as well as in several smaller states, all the bonds issued in the last few years and all future bonds are exempt. Among the states where certain specified issues are exempt are New Hampshire, Kansas, Maryland, Pennsylvania and Connecticut. In these states investors must be sure in each case whether they are buying taxables or non-taxables. Among the states whose municipal bonds are not free from taxation to residents are Illinois, Missouri, Nebraska, Texas and Virginia.

Often local taxes amount to almost 2 per cent. The widow who has just inherited a small competence is sure to be taxed, because the appraisal of her husband's estate has supplied the authorities with information. And of course the completely honest man is taxed, while innumerable persons less delicate escape. What is wiser therefore than to buy securities which the state in its wisdom specifically exempts from taxation, granted that one does live in a state which has so decreed?

The Squaw

By MARION ETHEL HAMILTON

HE trade me off, for saddle-clint,
An' tell me, "Fur!"—"Vamoose!"
As' all he leav' for 'ink heem of,
Is leetle, damna papoose.

Last squaw-man, I don' lak heem nigh!
(In dry arroyo's bed,
He lie all bleed, in willow brush)
I kill! Maybe, soon dead,

What They Think of Us

Oscar E. Riley, *The Globe Democrat*, St. Louis (Mo.)

I resolve to read every paragraph of HARPER'S WEEKLY in 1914, that my interest may become all embracing.

Senator Robert M. La Follette

HARPER'S WEEKLY is running a series of articles by Louis D. Brandeis entitled "Breaking the Money Trust." I will say to the readers of "La Follette" without reservation that these articles by this great publicist will constitute an enlightening treatise of present-day conditions that will materially aid in making public sentiment and shaping legislation in the settlement of the greatest problem of our time.

Angela (Cal.) Tribune

It is with surprise that so fine a journal as the *Chicago Evening Post* is observed trying to belittle Editor Haggood of HARPER'S WEEKLY. It says, in part:

"Mr. Norman Haggood seems to have abandoned temporarily his self-assumed function as voice of the feminist movement, and to have taken up the task of working out our national salvation from an economic standpoint."

Follow a few flings at Louis Brandeis, who is contributing to HARPER'S a series of eye-opening and vital papers, exposing the iniquity of the leagued money powers, and suggesting methods by which their brutal clutch may be loosed from the throat of the looted public.

Is not the salvation of a nation a worthy task?

Why should it not be undertaken? And why not by such men as Haggood and Brandeis?

The *Post* hardly goes so far as to say that either is dreaming: that there are not wrongs to be corrected; that there is not possibility of finding a remedy.

When the fact can be demonstrated (as it can, and is being), that greed has devised a system whereby the people are helpless in the hands of a few who are avaricious, money-mad, conscienceless, thus dead to all appeal on the moral side, the making of the demonstration is to be commended.

The Philadelphia (Pa.) North American

The *North American* urges its readers to an attentive study of a series of articles now appearing in HARPER'S WEEKLY. The recommendation is unusual, but there is an unusually strong reason for it.

The articles concern the Money Trust, which embodies the most important public question that has confronted this generation. And they are written by Louis D. Brandeis, who is better equipped than any other American to clear up the complexities of the problem and present the facts with convincing force.

Before spending a single penny on new clothes, before even planning your Spring wardrobe, consult Vogue's five great Spring Fashion numbers! Beginning with the

Forecast of Spring Fashions

they follow now one right after the other! In the next few months—the very period in which these numbers appear—you will be selecting your entire Spring wardrobe and paying out hundreds of dollars for the things you select.

The gown you buy and never wear is the really expensive gown! Gloves, boots, hats, that just miss being exactly what you want, are the ones that cost more than you can afford!

Why take chances again this year when by simply sending in the card, and at your convenience paying \$2—a tiny fraction of the loss on a single ill-chosen hat or gown—you can insure the correctness of your whole Spring and Summer wardrobe?

\$2 INVESTED IN VOGUE MAY SAVE YOU \$200

For \$2.00—a tiny fraction of your loss on a single ill-chosen hat or gown—you may have before you at this important buying season all five of these special Spring Fashion numbers. Not only that, but all through the Summer, the other numbers that follow them.

Here are the twelve numbers of Vogue you will receive:

Spring Patterns March 1	Summer Fashions June 1
Working models for one's whole Spring and Summer wardrobe.	The final showing of the Summer modes that will be.
Spring Millinery March 15	European and Travel June 15
The newest models in smart hats, veils and coiffures.	Where to go, how to go, what to wear and how to wear it.
Spring Fashions April 1	Hot Weather Fashions July 1
The last word on Spring gowns, waists, lingerie and accessories.	The correct wardrobe and equipment for all outdoor sports.
Smart Fashions for Limited Income April 15	Hedonism July 15
First aid to her who must dress smartly on a moderate income.	The fine art of entertaining, indoors and out.
Interior Decorations of Summer Homes May 1	London and Paris Seasons August 1
A journey "thru" pleasures and palaces," in Newport and elsewhere.	What is going on in the beau monde abroad.
Brides May 15	Children's Fashions August 15
Late Spring fashions and special bridal interests.	Outfits for the infant and the school boy or girl.

The very earliest of the fashion numbers—the Spring Dress Materials—is already on the newstands. You can, of course, get it and all the others from your newsdealer. But you will have to act quickly—the demand always clears the stands in a few days! If no newsdealer is near by, or if you have any trouble getting Vogue, make sure of your copies now by sending in this coupon. All you have to do is to write your name and address, tear off the coupon and mail to Vogue. If you wish to enclose the \$2.00 and save us bookkeeping, we will show our appreciation by sending you at once, with our compliments, the Spring Materials Number just out, making thirteen numbers instead of twelve. If more convenient, send coupon without money. Your subscription will then start with the Forecast Number and continue through the next eleven numbers. Bill will be sent you on March 1st.

Please send me twelve numbers of Vogue, with my \$2.00, or bill me later. Name _____ Address _____ City _____ State _____

Will you pay \$2.00 in advance? Yes _____ No _____

Do you wish to receive the Spring Dress Materials Number? Yes _____ No _____

Do you wish to receive the Spring Dress Materials Number? Yes _____ No _____

HUDSON Six-40

Now a Light-Weight Six

Lighter than equal-powered cars—Lower operative cost—
With a streamline body of the most distinguished type—And
sold for \$1,750—Opening the way for legions to own Sixes.

NOW comes the best news that was ever announced by Hudson engineers:
A high-grade Six, with all the latest equipment, brought down to \$1,750.

A six-passenger Six which weighs 2,980 pounds—400 pounds less than the Hudson "37," which was a five-passenger Four.

A Six which is larger, both in power and capacity, than the Hudson "37." Yet the operative cost is one-fourth less.

For \$1,750 you can now obtain a Six which costs less to operate, which weighs less, and which undersells cars of any type of the same size, class and power. Think what it means to obtain a Six that offers the advantages which are exclusive with Sixes, and at a price below that at which comparable cars are sold.

In all our comparisons, no equal-

powered car has shown anywhere near so low a fuel consumption.

And, with all this, a beautiful car—a streamline body—the very latest equipment. Up to six months ago, no car at any price offered so many attractions.

In this new Six-40, with its matchless economy, Howard E. Coffin has solved the last question on Sixes.

There were only three points which deterred men from Sixes—weight, price and operative cost.

Here now is a weight which marks a new record for cars of this size and power. Here is a price below comparable cars of any type. And here is operative cost which fairly compares with even four-cylinder "Forties."

This brings to the Six, with all its unquestioned superiorities, the only three advantages it lacked.

This car will extend the reign of Sixes over an enormous new section of Motordom.

In the high-priced field Sixes long have held sway. Last year—with the advent of the Hudson Six-54—Sixes captured the field down to \$2,450.

Now comes a Six for men who wish to pay \$2,000 or under for a quality car. Men who want light weight, modest size and power. Men who want low upkeep and low operative cost. And who wish to minimize depreciation.

Every year, tens of thousands of men buy cars of this class. And Sixes heretofore have been barred to them.

HUDSON Six-40—\$1,750

(F. O. B. Detroit)

Wheelbase, 123 inches.

Seats from 4 to 7 passengers.

Weight, 2,980 lbs.

Cylinders, 3½-in. bore, 5-in. stroke.

Tires 34 in. x 4 in. Demountable rims with extra rim. Will equip with wire wheels, with extra wheel, for \$75 extra.

Left-side drive.

Delco patented system of electric lighting and starting.

Gasoline tank in cowl dash, all instruments and gauges within reach of driver.

Extra ties carried on running-board, ahead of the front door.

Entrance to front seat from either side.

"One-Man" top of genuine Pantasote. A girl can easily raise and lower the top without stepping out of the car.

Quick-adjustable side curtains, enveloped in the top. Passengers can adjust them in a moment from their seats.

Two disappearing tonneau seats—attached—which fold into back of the front seat.

11-in. electric parabolic headlights with special dimming attachment.

Electric tail light, dash light and portable inspection light.

Integral windshield, rain-vision and ventilating.

Speedometer sunk in cowl apron, driven by noiseless concealed gears within the wheel spindle.

Electric horn.

License carriers. Tire or wheel holders.

Hand-buffed leather upholstery.

Trunk Rack.

All tools complete.

Price, \$1,750 F. O. B. Detroit.

HUDSON Six-40

A Quality Six at \$1750

No longer need Sixes be considered too costly. We consider this Hudson Six-40 surpasses in richness of finish and mechanical detail any car of similar size or price.

THIS Hudson Six-40 is the latest achievement of Howard E. Coffin and his able engineers. It marks a new era in Sixes. And in just the same way as Mr. Coffin, years ago, marked a new era in Fours.

It was he who built the first high-grade Four to sell under \$3,000. That was when buyers of modest-priced cars had to be content with two cylinders.

Later he built the first high-grade Four to sell under \$2,000. That car—at \$1,500—marked the end of two cylinders.

Four years after he built the Hudson Six-54—the first quality Six to sell under \$3,000. And now he offers the first Hudson-grade Six to be sold under \$2,000.

So this is the climax of many steps toward lower price and lower upkeep cost. And toward bringing the best in type and class within the reach of the many.

How He Did It

There have, up to now, been some drawbacks in Sixes. In some ways they were costly. So this luxury of motion was confined to men who could afford it.

Mr. Coffin, in part, has followed the latest European practice. He employs the small bore and long stroke. There are several reasons why this results in great economy of power.

He has accomplished lightness without sacrificing strength, so the power has less weight to carry. He has ended vibration at any speed, and vibration means wasted power.

The smooth-running Six has always cut down upkeep. It has lessened depreciation. Its continuous power has minimized the tire cost.

Now comes a saving in weight and a saving in fuel, to give to the Six an unquestioned economy.

Even in Europe, where fuel economy is the paramount question, this new-type Six is this year acclaimed as the coming type of car. Its record in the last Grand Prix race, with a fuel limit, brought this change about.

New Ideas in Beauty

To all this we have added a beautiful car, with the same streamline body as came out this season in the Hudson Six-54. And these cars, we think, must be regarded as the handsomest in America.

Like all the best European makers, we have done away with that awkward, inartistic angle at the dash.

The Six-40 is better finished and better equipped than any previous Hudson, save our new Six-54. Every detail, small and large, accords with the costly-car standards.

Note the specifications, the entirely-new features. The "One-Man" top, the quick-adjustable side curtains. The disappearing tonneau seats. All hinges are concealed.

Note the new weight distribution. The gasoline tank is in the dash. Extra tires are carried ahead of the front door, yet the door swings wide.

All these things typify accepted world-standards, carried out to their final perfection.

Also the New HUDSON Six-54

We have also brought out for this season a new Hudson Six-54. A seven-passenger car with 135-inch wheel base—with tires 36 x 4 1/2.

In body design, equipment, etc., the car is quite similar to this Six-40. It is for men who want a big, powerful car.

Last year, the Hudson Six-54 was the most popular Six on the market. It proved that the utmost in a Six could be sold at a moderate price.

This year there are many improvements, including this streamline body. Yet the price is reduced to \$2,250.

Thus we now meet, in a masterly way, every idea in a Six. The Hudson Six-40 for the man who wants lightness, economy, and modest size and power. The Hudson Six-54 for the man who wants more of size and room and power. And both offer you a new ideal of a distinguished car. We consider them, by long odds, the handsomest cars of the year.

Then the car is right in size and weight and power. It marks the fruition of a long-time trend toward moderation, ease of control and economy.

Go Ride in It

Perhaps there are some who, despite these economies, are not yet converted to Sixes.

We ask that such people go ride in this car. Our local dealer will take you.

Note the smoothness of continuous power and overlapping strokes. Note the flexibility, the quick acceleration. Note the total lack of vibration. Note how slowly you can go, how quickly pick up, and what grades you can climb without changing from high gear.

Then think that this car costs less, weighs less, uses less fuel and costs less for upkeep than many a car which lacks these advantages.

One ride will convert you. No man or woman can ride in this car without wanting to own a Six.

Then you will realize what Mr. Coffin has done in making the Six economical.

Hudson dealers everywhere now have this Six-40 on show. Ask us for Howard E. Coffin's book, reviewing all the 1914 motor car improvements.

The Cabriolet—a New-Type Roadster on the Six-40 Chassis. A sheltered car for winter or summer—completely enclosed. Better than a coupé, because the top can be quickly put down, thus becoming an open roadster. Price \$1,950.

A Standard Roadster of the most attractive type, \$1,750.

HUDSON MOTOR CAR COMPANY, 7770 JEFFERSON AVENUE, DETROIT, MICHIGAN

**Are they coming to
some commonplace break-
fast? Or are they coming down
to this —**

Greet Them Tomorrow

With Puffed Wheat or Puffed Rice.

Because these are the only cereal foods which have every food granule exploded.

Because in this way—Prof. Anderson's way—whole grains are made wholly digestible.

Because these grains are crisp and porous—eight times normal size. And the taste is like toasted nuts.

There are no other breakfasts like these. And no other suppers like Puffed Grains in milk.

Serve them because they are scientific foods. Or serve them for sheer enjoyment.

**Puffed Wheat-10¢
Puffed Rice-15¢**

Except in Extreme West

These grains—in huge guns—are revolved for one hour in a heat of 550 degrees. Thus every granule is toasted. Then each grain is steam exploded. Inside of each grain there occur a hundred million explosions.

Thus come these airy bubbles with thin toasted walls.

Serve with cream and sugar, mix with fruit, or serve like crackers in a bowl of milk. You will serve them for a thousand meals when you find them out.

Sole Makers

Chicago (Ill.) Tribune

A Chicago couple are disappointed because their new baby is a boy, not a girl as they had hoped and followed eugenic formulae to insure. Usually disappointment goes the other way. But times are changing. Norman Hapgood will please note the progress of Feminism hereabouts.

John C. Wright, "Poet of the Lakes," Harbor Springs (Mich.)

Allow me to add my testimony to the many others already published, to the effect that HARPER'S WEEKLY under its new editorial management has made such a marked improvement that it may now truly be called "America's foremost weekly."

Sacramento (Calif.) Bee

HARPER'S WEEKLY strongly objects to Mrs. Pankhurst being treated as though she "belonged to the criminal classes."

Well, doesn't she?

From the News, Macon (Ga.)

The News hopes that at the next meeting of the Macon Woman Suffrage Association page seven of HARPER'S WEEKLY for December 27 will be submitted for the inspection of the well meaning but misguided ladies who are members of the organization.

The News believes that when the ladies apprehend the significance drawn from the comparative illustrations on page seven there will be fewer suffragettes in Macon.

Would that HARPER'S WEEKLY had a universal household circulation. There would be an immediate thinning of the ranks of the women who say they want the right to vote.

On page seven there are two pictures that might be entitled "Before and After." They are reproductions of photographs of Miss Christabel Pankhurst, daughter of the militant martyr, Mrs. Emily Pankhurst—one taken before she, the daughter, espoused the "cause" three years ago, and the other made only recently.

For the purpose of making anti-suffragettes these pictures are more effective than reason, more powerful than fact, more convincing than argument.

Let any married woman under fifty, or any woman under fifty who wants to be married, devote one minute's study to those two pictures, reasoning *a priori* all the while, and it's a sure thing that she will unhesitatingly disclaim any suffragette inclinations.

Oh, the pity of it! If you are a man of chivalric nature, you have an irresistible impulse to grit your teeth, clench your fists and breathe anathemas against the whole tribe of suffragettes.

Surely it was in an unguarded moment that HARPER'S WEEKLY, the self-elected champion of "votes for women," published these pictures of startling contrasts. Editor Hapgood—busied with advising Congress, directing the political affairs of New York city, regulating the trusts, criticising the drama, unearthing half-baked artists, and making after-dinner speeches—evidently did not have time to consider the vital question of a woman's vanity.

Pulpit preachments, editorial admonitions, the advice and pleadings of parents and husbands, even the experience of women vested with the ballot—all combined lack the potency possessed by page seven of the latest issue of HARPER'S WEEKLY for keeping women in the path which nature has designed for them.

Vol. LVIII]
No. 2999

Week ending Saturday, January 31, 1914

[10 Cents a Copy
\$3.00 a Year]

Illinois and Roger

THE Democratic Party, until its better element won the victory at Baltimore, has been long disgraced by the domination of three grafting bosses, who were able to control not only their own neighborhoods but to a large extent national conventions. They were Murphy of New York, Taggart of Indiana, and Sullivan of Illinois. Sullivan is now trying to induce the imperial state that he honors with his residence to pay him the tribute of a senatorship. Such a step would be very decorative for Roger, but what would it do to the prestige of Illinois? Or can it be that Roger is only pretending to be a candidate to hold his men together for some stalking horse of his?

And, by the way, how is Roger's money invested, since his political ambitions led him to get rid of gas?

A Wise Young Man

THE attitude of the richest youth in the country must be important, because the relation between great wealth and the public makes one of the most essential problems now before us. Mr. Vincent Astor is only twenty-three, but his study of social and business conditions is serious and industrious. His recent public letter defining his position on socialism, altho interesting on that particular subject, was more interesting for the side lights it threw on his synpathetic relations to labor leaders and on his strong feeling that "there are great wrongs to be righted" and that "it is the duty of every man who has the interest of his country at heart to do what he properly can to establish and maintain industrial and social righteousness." Mr. Astor states, with becoming modesty, that his experience is necessarily limited, before he goes on with the conviction that those Socialists who say that the mass of men are becoming poorer have no justification. HARPER'S WEEKLY has recently discussed this matter editorially, and published Mr. Ghent's reply, which was one of many communications from the Socialists. Only a few declared that the laboring classes were becoming absolutely poorer. Most of them went no further than to maintain that they were not getting their proper share of the advantage in production resulting from the use of steam and mechanical inventions. Great wealth almost always makes toward an unreasonable conservatism, but Mr. Astor gives every promise of using his power, with open-mindedness and tolerance, toward carrying out the ideals of the time without hostility or undue commotion.

Klaw and Erlanger

WORD has been sent out by the great theatrical firm of Klaw & Erlanger to all their managers. They are to have nothing to do with us. We are not even to be permitted to obtain photographs to illustrate articles on Klaw & Erlanger plays or, as they would prefer to have it, "shows." This information has just reached us, although the order was given out many months ago, and it is based upon the whole past record of the editor in his treatment of drama. The firm of Klaw & Erlanger was the most oppressive element in the old theatrical syndicate and the objections made by the present editor of HARPER'S WEEKLY constitute ample ground for this remaining bitterness. The breaking away from the syndicate of the Shuberts had, through the healthy influence of competition, a very liberalizing effect on the American drama. What the result will be of the new arrangement between the Shuberts and the syndicate it is a little too early to tell, but very likely we shall be able to go into that subject adequately in a few months. Probably Klaw & Erlanger are too intelligent to suppose they can do HARPER'S WEEKLY and its editor any harm. All they can do is to express their own convictions about the theater and their own abhorrence of what HARPER'S WEEKLY stands for. They are, in other words, merely acting upon principle.

Enterprise

ON Sunday, January 11, 1914, the New York Sun published an interview with Mr. John D. Rockefeller, in which the reporter pictured himself as asking Mr. Rockefeller to give his advice to young men,—what message he had for them on the New Year, and what they should do in 1914 to make the New Year successful and happy. Mr. Rockefeller replied to the effect that the young men were to go straight and make a success and keep happy and comfortable those who depended on them. "If you make mistakes," he added, "remember that it is human to err, but try again and try harder. Above all things, be honest with yourself and with those with whom you deal." In the New York Journal of December 31, 1906, a reporter asked Mr. Rockefeller precisely the same question and he made precisely the same reply. Not precisely after all. In the Journal, he said "this" New Year, and in the Sun "a" New Year. In the Journal, he said depend "upon" you and in the Sun he said depend "on" you. In the Journal, he said remember "that" it is human to err and in the Sun he left out "that."

The Duties of Directors

THE firm of J. P. Morgan & Co. (as we have said before) in diminishing the number of its interlocking directorates set a good example that ought to be carried farther. They gave as one of their reasons for resigning that "the necessity of attending many board meetings has been so serious a burden upon our time that we have long wished to withdraw from the directorates of many corporations." It may be observed that a director can scarcely know enough of a corporation to fulfil his duties by merely attending a directors' meeting. The duty of one who directs,—one who guides, superintends, governs and manages,—cannot be performed by an occasional hour listening to a report from the officers.

More Distribution

THE Baltimore & Ohio is to be commended for distributing its assets. Perhaps it would have been better to have sold the Baltimore & Ohio stock instead of distributing it among its stockholders and with the cash raised by the sale to have retired the bonds of the Union Pacific or its auxiliary line. Whatever the very best plan, however, the good work goes on, and each step makes the next more inevitable.

The New Haven Settlement

THE agreement of the New Haven railroad to the basis demanded by the Attorney General, if carefully carried out to preserve public rights, will have admirable results, and such a carrying out is to be expected in view of the thorough knowledge of the situation possessed by the special assistant to the Attorney General, T. W. Gregory, and by Assistant Attorney General Jesse C. Adkins. If this is done as it promises to be done, the administration will have achieved a complete victory. President Taft and Mr. Wickersham withdrew the suit started by President Roosevelt, a suit meant to accomplish substantially the same results now reached by agreement.

Wise Financing

THE Supreme Judicial Court of Massachusetts has set aside the order of the Public Service Commission approving the New Haven \$67,000,000 six per cent convertible bond issue. Financial plans are thwarted and bankers will lose \$1,680,000 in underwriting commissions: but the stockholders are to be congratulated. The decision may compel the company to sell unnecessary security-holdings and pay its debts; instead of further increasing its liabilities by new security issues. The New Haven's troubles are largely due to buying at exorbitant prices properties it did not need. Needless buying is a waste which is apt to make want. There is no cure for a bad purchase; but the loss can usually be minimized by a quick sale. We might almost lay down this rule as a "first aid" to the financially injured: "Help them let go." By the way, we hope that Mr. Brandeis, while cross-examining President Willard before the Interstate Commerce Commission on

the proposed advance in freight rates, will ask this question: "Why doesn't the Baltimore and Ohio raise money by selling its Reading stock?" The Baltimore and Ohio has held, for years, \$30,392,500 par value Reading preferred and common. It is at market values, even now, about \$35,000,000. And yet President Willard's company with banker-directors, raises its new money by the issue of short-term notes and convertible bonds. Why?

Williams for Comptroller

THE savage fight against John Skelton Williams for Comptroller needs more of an explanation than the flimsy case made against him, because he lent \$1,000,000 to avoid a panic. The fact is that Milton E. Ailes, former Assistant-Secretary of the Treasury, now Vice-President of the Riggs National Bank of Washington was concerned in the newspaper attack. The National City Bank of New York has connections with the Riggs National, and Mr. Ailes is one of the connecting links. Frank A. Vanderlip is another connecting link. When Mr. Williams took office, soon after the administration of Woodrow Wilson began, it was discovered that a desk in the Comptroller's department was occupied by a woman employed by the above mentioned National Banks of Washington and New York. Mr. Ailes had also seemed to possess extraordinary knowledge, for an outsider, of the affairs of the Treasury Department. Both connections with the Treasury were promptly broken. But long before that time, John Skelton Williams was fighting for the independence of the Seaboard Air Line system, of which he was the President and organizer, and for the prevention of its control by Thomas F. Ryan. When Mr. Wilson was nominated and elected Mr. Williams, Ryan's ancient foe, was made Assistant Secretary of the Treasury. Then it was announced that Williams would be promoted to Comptroller of the Treasury.

The Millennium Still Absent

BOSTON has a rational ballot which excludes party columns. The election for Mayor on January 13th brought in no party question. Indeed both candidates were Democrats. A thorough political demagogue won over a man independent and fit. The demagogue had served part of his time in jail, and had been the moving factor in the foundation of a political club which he took pleasure in calling The Tammany Club in order that there might be no mistake about its political principles. He won because he knew the game of politics and his opponent did not. For example, some of the distinguished citizens of Boston, who have in various ways done good service for the town, such as Major Higginson, supported the fit candidate in this election, and their support was turned by the demagogue to his own advantage by dramatically pointing out the part they had had in the conduct of the New Haven Railway and charging that his opponent if elected would be a New Haven tool. Cheer up! The campaign for political improvement in this country is progressing even if the victories cannot be all on one side.

How Much Did Omar Drink?

THE ill-fated play "Omar the Tentmaker" naturally reflects that view of the Persian poet, philosopher and man of science, which has been made familiar to the western world by Edward Fitzgerald. It is not a point of view which is accepted by the majority of scholarly Persians. The occidental world finds it difficult to realize the degree to which metaphor enters into the oriental mind. If an American speaks of the sun rising or setting, he is scarcely aware at the moment that he is using a figure of speech. Anybody reading the Koran or oriental literature in general must come to feel that the Persian goes much further in imagery as a part of his everyday expression. The use of wine as a symbol for the actual pleasures of life is wide-spread in the East, and it is extremely improbable that the man who reformed the calendar, who thought with clearness and depth in philosophy, and who produced high-class poetry was a drunkard, any more than Goethe and Keats were drunkards because they expressed the love of pleasure in the form of drinking songs.

Two Plays About Women

J. M. BARRIE is never like anybody else. In "The Legend of Leonora" he has written an extravaganza, fascinating (except for the perfunctory last act) in daring, originality and buoyancy. He loves to celebrate women, and the more old-fashioned they are the better he seems to like them. He seems to be afraid that if they expand and give up the pretty, childish charms of ignorance, they will not have those instinctive and primitive qualities which he loves. Rachel Crothers in "Young Wisdom" also is a little hard on the new woman. Hers is a broad farce, amusing in dialogue, situation and plot, and the victim is a theoretical young woman just out of college, reaching after freedom. Miss Crothers contrasts her with her old-fashioned mother, who has much more actual book learning even on the subject of modern ideas than her young daughter, and yet remains conservative. Miss Crothers has been an able and bold preacher herself, as shown by "A Man's World" and "Ourselves," but she is opposed to criticism of marriage along the lines made familiar by Ellen Key, George Meredith and George Bernard Shaw. It is the business of comedy to exaggerate those things at which it laughs. Molière was not fair to doctors or to the studious ladies of his time. Mr. Barrie and Miss Crothers have not painted the mass of serious women of the Ellen Key type who are undertaking to get a hearing for their views, but even for those of us who most believe in the so-called Feminist Movement it is a pleasure to see the other side presented with such art, such intelligence, and such good humor as these authors show in their latest plays.

Is Drama an Art?

THE Institute of Technology of Pittsburgh would answer this question in the affirmative. It has just founded a department of drama, open to men and women, planned to give a general knowledge of technique, literature and history and a severe training in practical producing

and acting. The course leads to a degree of Bachelor of Arts in Drama. The theater founded in connection with the course, will, it is hoped, be opened on Shakespeare's birthday, April 23rd, with a Shakespearean production. By first year students short plays will be acted. Second year students will appear in classic plays; third year students in modern plays, and in the fourth year there will be specialization according to the talent of the individual. Thus drama is put on the same honorable plane as painting, architecture and music, and studied as a part of literature and as a live art.

Southern Opportunity

MEMPHIS has been celebrating herself with a prosperity dinner, and she has sufficient reason. According to the map prepared by the Chamber of Commerce of the United States, the most prosperous portion of the whole country is that of which Memphis is the center. In Tennessee, Mississippi, Northern Louisiana, Northern Alabama, Southern Kentucky, Eastern Arkansas, there has been an extraordinarily good cotton crop and a fine corn crop. The lumber business has been good. West of Memphis is what is known as the St. Francis Basin. The soil is rich because of the limestone from the rock regions above that has dropped there for numberless centuries. The country was almost a waste except in a few high regions until a levee was thrown in front of it a few years ago. It is now about one quarter clear and every acre of it can be tilled. The timber in the uncleared part is enormously valuable. Below is the Yazoo Delta, another alluvial region in front of which there is now a levee and that country is only one third open. Memphis is putting the second double track railway bridge across the Mississippi. Yes, the city has reason for her prosperity dinner.

Science and Mercy

THE Anti-vivisectionists have been putting out a circular in Philadelphia, with the statement that Dr. George W. Crile made experiments on one hundred and forty-eight dogs "in an endeavor to learn the extent of the agony that can be inflicted on a living animal." Do the kind-hearted women who are backing this movement believe that Dr. Crile did anything of the sort? When they leave out all mention of anesthesia, do they do it by accident? If not by accident, why do they do it? Surgeons until recently thought that when a patient was unconscious they could tear loose adhesions and manipulate tissues roughly without doing mischief. Crile's experiments were to determine whether this view was correct. He found that it was not; that serious injury could be caused by shock even when there was no consciousness. Realizing the difference between psychic shock, which is prevented by anesthesia, and traumatic shock, which is not prevented by anesthesia, is an important step ahead, which has already resulted in a lower death rate and a shorter time for recovery. Crile, like other men of science who are called monsters of cruelty by these kind but ignorant sentimentalists, is the apostle of gentleness.

"I accuse you of this crime"

The Mystery of the Hated Man

By JAMES MONTGOMERY FLAGG

AT five and twenty minutes after nine on the evening of Boxing Day, Policeman X7890 entered the front door of No. 13 Mobbsley Mansions, Queen's Gate, under a strong suspicion that something was wrong. The house was unlighted, as he discovered by the aid of his hullo's-eye lantern. For some reason, unknown to himself, he walked directly to the library of the house. He found the body of an old gentleman stretched at full length on the floor. The old gentleman was not in his body. Policeman X7890 ascertained this by knocking several times on the old gentleman's forehead and asking him in a loud voice if he was in.

The old gentleman was certainly not in. He had gone for good. The officer was quite nervous by now and slowly waved his light around the room. There was apparently nothing out of place. While it was almost certain that murder had been done there was no sign of a conflict—no overturned chair or lamp. The large handsome Turkey carpet was unruined. There was no stain on the varnished mustard-colored wall paper. A thorough search revealed no weapon.

A close scrutiny of the dead man's face gave the officer no clue. It was as serene as though the man were sleeping.

What puzzled Policeman X7890 was the fact that to his certain knowledge no one had been in No. 13 Mobbsley Mansions for over four years. It was the property of an old spinster who had moved to Putney and had resolutely refused to rent it to anyone. She had left her furniture and belongings. Everything but

her mongoose. (The mongoose is put in to sound like a clew. It isn't, believe me!)

Who this old gentleman was and how he had entered and why he had been murdered were the questions that the officer scratched his head about.

"Ah, woy didn' Oi think o' thet befawt!" X7890 felt in the old man's pocket and found a card case. He flashed his hullo's-eye on a card. It read, "Mr. Septimus Smelly." No address.

X7890 pulled the corners of his mouth down, which revealed two enormous teeth, like a pair of pale green dominoes hanging on a line. This lent his face an unsuspected look of intelligence. He tapped the little card knowingly with his forefinger. He nodded his head like a mandarin. "Oho! So thet's it, is it! Septimus Smelly! No bloomin' wonder 'e was done for. It's only stryng an' mirakillis 'e weren't done for long afore this, Oi says!" He looked down at the dead man, tapping him playfully on the chest with the card de visite, and murmured, "It's a aht-an'-aht mirakil they let yer live t' he wote 'aired, it is fer a feet!"

With the light of returning confidence in his eye Officer X7890 went out to a telephone and called up the "Yard." Within twenty minutes Conway Sprowch, the cleverest detective in the service, alighted from his limousine at No. 13 and entered directly, shaking hands silently with the policeman, who immediately washed his hands and led the famous sleuth to the library in which a single light had been turned on by

the policeman. The two men were not a little startled to see an old grey rat stagger away from the corpse, hesitate and look up at them with his dust covered eyes, and hobble off under the lounge.

The two officers shivered. Sprowch swallowed a tennis ball that happened to be in his throat and asked, "Who is it?"

"Septimus Smelly!"

"My God!" He wheeled around at the policeman and hissed, "I accuse you of this crime!" Policeman X7890, not to be outdone in courtesy, retorted:

"I accuse you, Mr. Sprowch!"

Our thirty-two million readers are of course wondering why the name of Septimus Smelly should cause such peculiar, to say the least, actions on the parts of these gentlemen.

If you were a Londoner it would be unnecessary to explain who Smelly was. He was known and loathed to a point of hydrophobia by every man, woman and child in the United Kingdom!

The horror and hatred inspired by any foreigner in the breast of an Englishman would be almost an affectionate regard compared with the feeling that Smelly invoked. "Why, how could that be?" you ask, nervously twitching about in your chair!

Listen! Smelly was an Englishman. So far so good. But he did things no Englishman could forgive. He did unspeakable things! First of all he openly entertained visiting Americans and showed his liking for them in public places. Although he was of gentle birth he did not insist upon Esq. on envelopes addressed to him. He never refused a light from his perfect to Germans. He disliked tea and said so. He openly admired and smiled at pretty, attractive kiddies in omnibuses. He went to the theater in a lounge suit. He thought the Royal Academy was preposterous. He would not pronounce "Liqueur," "Lickure."

And if all these things weren't enough, he had never mentioned the word "Mater" in connection with his father's wife!

You can readily understand now why he was hated as no other Englishman was hated.

We will now return to the two men who glared at each other suspiciously in that gloomy library with its noble and lofty ceiling.

"Well, well," said Sprowch, generously dividing a cigar with his companion.

"I shall begin by suspecting myself and going over my past thoroughly—I shall have to weed myself out at once in the interests of the Crown—you can see that, officer, can't you?"

"I saw that, sir, before you spoke!"

"I knew you were one of the most intelligent men in the service!"

"Yes, sir, and then wot ahaht me?"

"Ah, what about you? I am sorry to have to say so, but as you discovered the crime you are perhaps the most suspected person anywhere in the four mile radius!"

"As Julian Street would s'y, Oi knew you were govin' to s'y that, sir!"

"But, as I was about to add, as you are the most suspected person it naturally follows that you couldn't have been the criminal. You ought to know that!"

"Thank you, sir, Oi expected that, too! So Oi shall not sigh with relief."

"No, certainly not. Now that we are practically eliminated, we shall have to start somewhere. As every one else is the possible murderer we may as well begin suspecting His Majesty."

"Aah, Oi s'y, sir! 'Int thet blasphemous in a manner o' torkin'?"

"Possibly. But it can't be helped. Everyone includes the King."

The sleuth then examined the body minutely with a large reading glass. He was about to give up his search for any suspicious marks when he suddenly gave a cry, stood up and whipped out his note-book.

"Wot is it, sir?" Asked X7890.

"Oh, nothing much, perhaps," replied Sprowch modestly; "most people would have let it pass

"These men were discussing the murder"

unnoticed—but everything has a meaning, no matter how seemingly unimportant. You of course wouldn't have remarked it, but there are three bullet holes in the left temple! They may mean nothing and yet they may, on the other hand, be a real clew!"

AS the two men left the house a swarm of reporters lit on them.

"What is it, Mr. Sprowch?" they clamored, notebooks in hand.

"I refuse to say anything for publication. Septimus Smelly has been murdered!"

Cries of delight arose.

"Be careful, boys," continued the sleuth, "any funny noises you make now will be used against you at the trial!"

THE papers next morning greeted the overjoyed Kingdom with the news of the murder of Septimus Smelly. An extra Bank Holiday was declared.

Excursion rates were announced by the railroads and millions of happy and curious people were poured into London to be taken by Tube, Underground, bus, taxi, tram and barrow to Queen's Gate to gaze on the Hated Man. Mothers brought children to look on the features of the man who had defied English customs. They took the opportunity to point endless morals for the guidance of their offspring. The whole affair was way ahead of Mme. Tussaud's!

The nation's joy was turned to consternation the following day when it read an open letter in the press from Detective Sprowch, in which he stated that as the murderer was unknown at the present time and that as Mr. Smelly was cordially hated by everybody alike the length and breadth of England, that it was his shockingly painful duty to suspect everyone in the Empire of the crime—with the exception of himself and perhaps Officer X7890.

But—he did hold out one ray of hope! There was a chance that a certain party, whom he had been shadowing, might be the guilty man.

AT this very moment Sprowch was seated in the private room of the Pink Boar at Hampstead, disguised as the Emperor William so as not to attract attention. From behind a copy of the Winning Post he watched an old gentleman who was talking to a friend in the corner over two pints of bitter.

These men were discussing the murder. Sprowch had difficulty in suppressing his excitement as the old gentleman, unconscious of a listener or that he was getting himself into a devilish mess, openly declared his horror at the crime and his liking for the late Smelly, Esq. His companion could with difficulty keep his twitching hands off his older companion, such was

his disgust at the words of praise bestowed upon the murdered man.

The sleuth felt that hesitation was no longer needed, and yanking off his mustache he hissed in the old chap's ear, "You're wanted, my man!" and snapped the bracelets on his wrists.

IT was the day of the trial. The court room was crowded to suffocation and asthma. People were standing on each other's shoulders and hips, as the case happened to be. Fresh air was quoted at twenty-one guineas per cubic inch.

Sprowch, the peerless Sleuth, was on the witness stand.

Q. C. Now, Mr. Sprowch, tell us in your own words—

Mr. Sprowch. I intend to, m'Lud. As I was about to say, I first saw the prisoner rolling down hill at Hampstead Heath in a suspicious manner—

His Lordship. What do you mean by suspicious manner?

Sprowch. Well, he had no expression on his face!

His Lordship. That was not suspicious—that was English—but proceed!

Sprowch. I waited for him to reach me, and I approached him, and in order to put him at his ease I said, "Why did you murder Smelly?" He merely looked at me and started to roll up hill again—

Counsel for Defense. I object, m'Lud, on the grounds that it is iridescent, non-corrosive and slightly perfumed—

His Lordship. (To court officer) Remove G. K. Chesterton! Proceed, Mr. Sprowch!

Sprowch. I followed the scoundrel to the "Pink Boar." Here he threw caution to the winds and confessed his liking for the deceased. (Consternation and flutter in court room. Several emotional actresses faint.)

His Lordship. Yes, yes. What other evidence have you?

Sprowch. Other evidence, m'Lud? You do but jest!

His Lordship. Of course I do. Do you not know me?

I am the jesting Judge! As you have no further evidence to offer I shall instruct the jury to find the prisoner guilty, and they may do so without leaving their seats. (To jury) You find this wretch guilty, do you not?

Jury. Jolly guilty, m'Lud!

His Lordship. Ah, I thought so! Prisoner, stand up! O! you are standing up—then sit down! You have nothing to say as to why this court should not pass sentence upon you! I sentence you to be hanged by the neck till you are strangely annoyed! We can't have delays in this sort of thing! The American public expects every English prisoner to be hanged within twenty minutes of his arrest! And, by Jove, we're eight minutes late!

"You're wanted, my man"

Ellen Key at the
age of seven

Woman in a New World

By ELLEN KEY

*What Women Have Done for Morals
and What They Have Yet to Do*

MADAME KEY in her previous article showed that the old-fashioned woman was the happiest that the world has yet seen because her duties harmonized with her desires. The world has changed and woman has had to change with it, to meet the new conditions. How she has done this in the moral field and what she has yet to do is the subject of this article.

THE most obvious of the sad results of present economic conditions is an ever increasing number of women who, though well fitted to be mothers, are, through no fault of their own, dry branches on the tree of life. This has a very bad effect on morals, since stifled longing for love and motherhood causes many abnormal situations and mental conditions. We also find many married women who might be mothers, failing to be so on account of overwork or of a frivolous desire for pleasure. In the last hundred years the severe labor conditions for women have wrecked many mothers as well as children. It will take another century of hard work to overcome all this mental and physical degeneracy. This is what a world governed entirely by men has done for women.

Besides these purely statistical facts showing that growth and progress are not always the same, there are other more subtle evidences of the same thing. Woman's soul culture has not developed as fast as her desire for freedom. This is particularly true in the realm of sexual ethics. George Eliot in the last century was the ideal of womanly conservatism in the sphere of morality. Another woman, George Sand, was the fiery prophet of woman's right to freedom in the same field. She voices an eternal truth when she says that marriage without love is immoral, but true love even without marriage is moral. If we believe this truth, it follows that marriage as an institution with its sex slavery is immoral even when the two individuals stand higher than the institution. Marriage is only moral when it grows from an inner necessity and not from outward pressure. Only a free gift under perfect equality can make such a relationship right. Unfortunately, George Sand with her long string of misadventures showed clearly that the great problem is to find and keep the only true love. She herself became an argument against her own creed, raising the question, "Is a succession of unions all expressing different phases of true love of higher value to the individual soul and to

the life of the race than one unbroken although loveless marriage?" Even if we answer yes from the point of view of the individual, are the children better served by successive marriages or free unions than by a home where parents are held together, even though not by love, by a sense of duty for their children? Since these questions have not yet been worked out, they can only be decided in each individual case. In spite of all the confusion and error which the new sex morals have brought in their own train, it is upon these morals that women must build in order to gain a higher morality for the future. But in so doing we must not lose that which was good in the old sex morality. In other words, the old love with its ideal faithfulness and permanence must be kept and to it added the conviction that chastity is harmony between the soul and the senses and does not exist without such harmony. The next great task with which women are confronted is to combine these two principles and make them practical.

SO far, women have failed in doing this.

This is partly because their erotic life has been injured by centuries of sacrifice and resignation and partly because today's rebellion against the old order has been so violent. The demand for the right love, like the demand for freedom and justice, is only valuable when it promotes actions that not only enrich the life of the individual but benefit the life of the whole. Because love between two persons may cause other persons to suffer, as the demands for liberty and justice often do, does not prove that these feelings are in themselves wrong. The road of all progress is marked by the sufferings of individuals, of classes or even of whole nations. The question is, will a given action which brings pain to others be an advance to the race or a retrogression? Unfortunately, this question has been shirked by many who lead the struggle against sex slavery.

With the new emancipation of sex, we

have come to see that the sex morality beaten into women for so long is neither as general nor as deep-rooted as we have been led to expect. Very few women who have taken advantage of the new moral freedom and have given themselves to a man have had the right to plead in the words of Schiller, "A man who loves passes beyond the bounds of all other ordinances and stands beneath the laws of love alone." There is an exalted state in which many other duties, many other moral standards no longer are binding upon him. In many cases the feelings of these women have been far from an exalted state. Their love has not been the great love which kindles the soul and the senses and increases the value of life and the soul possibilities of the lover. With most soul mates of the present day, the right to happiness has turned out to be a trivial desire for fresh stimulation. The right to live one's own life has resulted in vulgar gratification of silly desire. The great passion has never grazed these people with its wings, much less has the great love ever entered their dreams.

Last, idleness, the excitement of flirtation and sport cause the too hasty divorces, loose relations, and repeated marriages easily distinguished by a growing loss of spiritual questions and an increase of coarseness. Many wives, among whom are mothers, who in their children have the greatest possible stimulus to a richer life, and many family girls with splendid possibilities more or less lead the life of a courtesan. The only difference is that these women are not paid. They often themselves have to pay in the form of loans to those invertebrates to whom alcohol, tobacco, silk linings and automobiles are necessities of life. These "comrades" frequently belong to the literary and artistic Bohemia where men have the leisure to court women in the social world here referred to. They try to make up for their lack of creative genius by all kinds of pleasures, particularly the enjoyment of women. Add to these qualities the feminine need of

luxury and pleasure and you have a class of modern women who are a counterpart of these men.

WE had hoped that woman's companionship with man would teach her better manners and this is true in coeducational schools, but in proportion as social intercourse between the sexes loses in modesty and the erotic life sinks to a lower plane, the manners of girls lose their delicacy and attractiveness. This is an incidental but a very disconcerting fact of modern standards.

Of course, where love is lacking, people do not want children and motherhood is avoided or prevented. Sometimes it is the man who does not want them. In such a case it is his own fault if his wife tries to fill her empty life with love adventures. All this is frequently called the newer morality of our day, but it has always occurred during transitional periods. I only speak of it because many of these modern courtisans, both male and female, call their mode of life the new morality instead of its real name, unchastity. They thereby bring about a confusion of ideas through which the lives of many worthy men and women are ruined. No wonder many people feel a violent reaction toward the old morality.

One of the good results of the revision of this old morality is the change in our point of view toward the so-called fallen woman. In the early fifties, Mrs. Gaskell in her novel "Ruth" and Hawthorne in "The Scarlet Letter" made a first attempt to change the judgment on unmarried mothers; a change that has been going on ever since. Unmarried mothers and their children are now beginning to get the care long refused them by society. But even here we have been at fault in using too much sentimentality and too little sense. We call motherhood holy, no matter how miserable are the children whom mothers, married and unmarried, cast upon society. As we change the standing of unmarried mothers we must become more severe in our judgment of these others. Otherwise protection of all mothers will result in a diminished sense of responsibility. The old by-gone custom of putting undesirable children to death was really more moral from the point of view of society than our custom of asking the strong and healthy members to burden themselves with heavy taxes to support the vicious and defective class which is allowed to propagate its kind.

WE have also changed our attitude toward the prostitute. Lennep's book, "Klaasje Levenster," first told the

virtuous woman that there were many innocent women among the prostitutes, both those deliberately trapped into the traffic, the so-called white slaves, and those who are the indirect victims of starvation wages. Dumas and Tolstoi and others have shown us that the harlot may be possessed of real love and humanity. On the other hand, we have a great many books that are unwisely sentimental upon this subject, books that would make us believe that a brothel is a leaden casket containing nothing but pearls. All this confusion only goes to prove that women, bewildered by sudden freedom after centuries of slavery, have been unable to lead with a firm purpose. Many have been too hasty in condemning the monogamous marriage, the achievement of ages which, with all its mistakes, impresses on the

those first apostles of feminism had suspected all this they would no more have kept silent than Jesus would have been silenced had he been told of the inquisition and auto-da-fe that would follow in the name of Christianity. The greatest faith has strength to endure the worst of all disappointments, the shortcomings of the disciples. Neither the worst disciples of women's freedom nor the worst errors of the new morality can change the truth that only woman's perfect equality with man in education for work, opportunity to work, wages for work and duty to work is a fundamental condition for the final victory over sexual morality, legal or illegal.

EVERY transition period has brought a confusion of ideas and laxity in morals. The race cannot form a new

morality without first loosening the bands which formed the old. At present we are living in a chaos where old and low instincts fertilized with new and high ideas have given birth to many monstrous forms of life. Only when these ideas have become feelings and the feelings have become instincts which supplant the old, will the new morality be strong and solid.

There are two lines along which morality is growing,—the individual's right to his own love life and society's right to limit this life for the welfare of the race. The first demand is based on the growing knowledge that people are not alike in the life of their souls and particularly of their erotic needs. The second demand grows out of a new ethical principle, eugenics. By the swiftens with which this idea is gaining ground, we can see that a morality which is organically part of life has a power of growth aside from

"The old womanliness may remain typical of the daughters of the future"

husband and father a sense of his solemn responsibilities. Too many have underemphasized faithfulness and self-control. Women have not shown themselves as capable of a wise moral development, as we hoped thirty or forty years ago. The early feminists thought that love in its highest form would be immediately secured by the freedom of women. They thought that self-support for women would prevent all marriages except love matches, that their equality with men would bring about purer morals, a more developed human life and a more perfect motherhood. They did not suspect that for many women self-support was so hard a task that any marriage was a deliverance, that woman's purity frequently would have no effect on men, that great love would be degraded into erotic adventures and that motherhood would be looked upon as an unwelcome interference in work or pleasure. But even if

any help by laws or customs. There are certain ethical crimes which, breaking out here and there, show the existence of a new moral condition of mind. Such crimes are now being committed yearly in the name of eugenics, and they will continue to be repeated until they give rise to a new idea of right and to new laws. A crime of this sort is the one which the mother commits when she puts to death a child who is in every way unfit for life. Another is the deliberate motherhood of unmarried women who are self-supporting. Another is race suicide when the mother knows that the child will suffer for the father's iniquities, and lastly the revolt of some women against the unreasonable waste of energy, personal and social, in bringing more children to life than can be cared for. Woman's new demand for her human right to self-preservation and for her duty to cultivate her own spiritual and physical

energies is perfectly compatible with the good of the race, when it is used to produce a better not a larger race. That some of these actions of the most immoral women look like the actions of the most immoral ones ought not to seem inconsistent to the very people who advocate capital punishment for single murder, and at the same time glorify wholesale murder in war. They say that the motive determines the ethics. Why not consider the motives in connection with these crimes of women?

But in spite of all these passionate conflicts, we are on the whole quietly and steadily advancing. Better care of children has resulted in the decrease of infant deaths. Men and women will now break an engagement or even a marriage when they find that either is suffering from an hereditary disease. More and more numerous are the men and women who will not enter into any sex relation when they know themselves to be victims of such heredity. A great mass of people are still ignorant or careless of the commands of eugenics, but public opinion is growing and in time conventions will arise which in turn will become laws. In time eugenics will become as deep rooted in the instinct as the duty to defend the home country against invaders. Anyone not blinded by the present ideas of international war, colonization or industrial politics, who can still put his mind on the culture of humanity, must realize that the race can only be improved through selective breeding. A lower birth rate is not a national evil. What is dangerous and immoral is that the worst element has no check upon the number of its children while the best women are frequently either unable or unwilling to fill the high office of motherhood. Some women who have children even begin to preach a mother's duty not to bring up her own children, but to leave it to the community to train and educate them collectively.

The third and last article will give Madame Key's opinions about woman's work and what her sphere will be when she lives up to her promise. She will tell where women have done their new work well and where they have not made good.

New England Conscience in the South

By A. J. McKELWAY

CHILD Labor has always been the curse of the cotton mill. But for a century in England, and for a half century in New England, and for a decade in the South, humane men and women have been protesting against the system. Among the New England states, Massachusetts has led the advance in child labor reform, although because of the importance of the textile industry it has only lately reached the standards of protection for the child workers that have been adopted by other progressive states.

The lowest standards in the country are those of the four cotton manufacturing states of the South—Alabama, Georgia, and the two Carolinas. In Alabama to a large extent and in Georgia in smaller measure, Massachusetts capital has been invested in cotton mills. These Massachusetts manufacturers discovered that an Alabama statute forbade the employment of children for a longer period than eight hours a day. This law was repealed upon their representation that otherwise capital would not be invested. Then came a fight for reform, led by Edgar Gardner Murphy, then a clergyman of Montgomery, and another child labor law was enacted in 1903. Mr. Murphy, recognizing that child labor was a national and not a sectional evil, sug-

THIS question of motherhood is the most important of all woman questions. The answer which women can give will determine whether they are to continue to be the standard bearers of a new morality or whether their morals will become more manly in evil as well as good. Only he who believes that moral laws are divine and unchangeable can doubt that woman's self-assertion will on the whole be good for humanity. But the very one who hopes this, will also hope that the ancient womanly virtues of motherly sacrifice and wifely faithfulness will never be outgrown. These virtues will be all the more needed when love is made the standard for marriage because this relation is governed by a law, as inflexible as the necessity for the presence of both oxygen and nitrogen in the air, that love implies a mutual desire for an eternal relation brought about by faithfulness between husband and wife during their life and into the future through children. No freedom ought to make women indifferent to self-control and motherly devotion since from these qualities some of the highest values in life have sprung. The best qualities of the sailor are still needed by the aviator though the latter has a wider space in which to sail. Unless we realize this truth through our imaginations, we shall soon learn it from the number of victims sacrificed.

WE cannot understand the modern woman's moral uncertainty by talking of religious disbelief and the evil of the times. The fact is that woman never has been and is not now fully free. The fact that for thousands of years they have bought all those things which enhance life through their sex value and that they are therefore overtaxed has more to do with their confusion. Therefore it is unreasonable to speak of the pres-

ent state of woman's morals as the new morality. Not until women have enjoyed liberty over a long period of time and have had for some centuries ethical and social culture on a par with man's, a legal and economic equality which does not exhaust either body or soul, will it be known whether women have a new nature or if the old womanliness will remain typical even of the daughters of the future.

But we must not forget that in the next hundred years we shall see another change which will have an enormous influence on woman's nature. I mean our new ideas of the relations of property and labor. It is most encouraging that woman's liberation coincides with this democratic revolution and plays a part in the increasingly socialized theory of evolution. We are beginning to know that the struggle for existence is balanced by mutual helpfulness and that the right of the strong need not rob the weak of his rights. Woman has a good chance of escaping the demoralization of honor and riches, unchecked competition and unbridled enterprise, for these are passing. At the same time women are coming into the industrial field and gaining the self-confidence that comes from knowing that they are productive members of society. When we compare the wives who still do heavy daily labor in the homes without being paid, except through the husband's gifts, with their self-supporting sisters, we can realize what an economic independence means. When woman no longer needs to use her cunning or beauty to cajole a man into giving her what she needs, the whole woman sex will rise to a higher plane of morality. To the extent that exotic pets and beasts of burden in the shape of idle and worn out women vanish, sex morality will be rid of its worst taint, the commercial value of the woman body.

gested and promoted the organization of the National Child Labor Committee in 1904.

In 1907 the same manufacturers' lobby opposed the raising of the low standards of the former act and did force a compromise that made the enforcement of the later act impossible. Again in 1911 they succeeded in defeating the amendments necessary to render the law effective.

IN Georgia, the history of child labor reform is singularly like that of Alabama. An old Georgia statute forbade the employment of minor children except between the hours of sunrise and sunset. This law was amended so as to exempt the employees of cotton and woolen mills. The agent of a Massachusetts corporation located in Georgia signed his name to an appeal to the people against the enactment of the child labor bill proposed in 1905. The same agent was prominent in the manufacturers' lobby which succeeded in defeating the bill proposed that year. Later he opposed the enactment of the ten-hour bill for Georgia and the creation of the Department of Labor, charged with the enforcement of the child labor law.

Today Massachusetts has a fourteen-year age-limit for the employment of

children in factories, a sixteen-year age-limit for illiterate children, prescribes an eight-hour day for the children between fourteen and sixteen, forbids night work, and possesses effective machinery for the enforcement of these statutes. Alabama and Georgia have a twelve-year age-limit, a fourteen-year age-limit for night work, allow an eleven-hour day, and with laws rendered purposely ineffective, permit the wholesale violation of these low-standard measures, the Massachusetts corporations in these states being admittedly parties to the violation. Georgia allows children of ten to be employed, if they happen to be orphans or the children of dependent parents.

THE agents of these corporations claim that they at least observe the letter of the law by accepting the affidavits of the parents, but in Massachusetts such a proof is disregarded and documentary proof required. Certainly if these manufacturers were anxious to observe the law, they could ascertain the real ages of the children from the family Bible, the school records, or the child-insurance papers. The Massachusetts corporations are doing in the South what would not be tolerated in Massachusetts either by public opinion or by law.

PEN AND INKLINGS

By OLIVER HERFORD

A Metrical Skyscraper

AS Hafiz says it's a poor fur that won't rub both ways. Nowadays when the mountain labors and brings forth a Ridiculous mouse we yawn politely behind our gibus, or look the other way. But this is quite another story. The mouse has labored and brought forth a Ridiculous mountain and we sit up and take notice. The scene of the accouchement is California and the maternal rodent we trust is doing well.

If under the famous psychological third degree test we were given the word California and bidden to express instantly the first suggested thought we should hesitate—between *Big Tree* and *Luther Burbank*—These represent the two poles of thought reaction on the human mind of the word *California*. The big tree makes man feel like a little insect—Luther Burbank makes him feel like a little creator.

We hate the big tree, it reminds us of the days when we were giants in the land—and still more do we hate the carriage load of tourists that ever since the dawn of photography has been stalled in the aperture at the base of the big tree, like an irrevocable nickel in the slot of an "out-of-order" weighing machine.

But Luther Burbank, who creates vegetables, is greater than Bernard Shaw who only kills and devours them, even as Corot père who created ladies' hats was greater than his son who painted early mornings—which Parisians, who had never seen an early morning, accepted as exquisite fantasies.

And now Luther Burbank must take a back seat; his inclined squash must give way to the discovery, by a California publisher, of a Blank versatile Architect.

To quote the publisher's circular, *He is an architect; fellow of the American Institute of Architects; Member of the National Institute of Arts and Letters; Associate of the National Academy of Design (Elected); Member of the Society of Beaux-Arts Architects; Member of the Architectural League of New York and the Pacific Coast; Supervising Architect, Professor of Architecture and Director of the School of Architecture, University of California, etc.*

It is from this melon of architecture that (reversing the Burbankian process) has been evolved the perfect squash of blank verse.

"One of the greatest critics of our time—" says the circular—(we dare him to give his name) writes of this book of blankitestructal verse, "It epitomizes an epoch . . . the diction wonderfully forcible—without ceasing to be poetic—it nowhere seems to sag—or the author's energy to flag."

Another famous author (also nameless) writes "The *verse en acme* is concrete and vivid . . . no one who has reflected upon the business of being an architect can fail to be stirred by the power and substance and beauty of the formative idea."

Like Mr. Tree's Hamlet Brunelleschi (that is the name of the book) is funny without being vulgar. What could be more refined than this:

*Awake, Andrea! For today once more
After these bedrid aeons, would my feet
The skybound platform of my Dome
achieve
Press cheerily.*

or this

*. more fully drawn
The gropy damask from the pouring rays
Until its glistening dragons drown in dregs
And these used eyes, antiqued with Roman
wood,
Joy in divine proportion.*

Press cheerily, only one more flight—

*. beneath the frameless vault
Of circumbient enswathing skies—
As now thro' orched oblongs exquisite.*

IF architecture as some one (was it Martin Tupper, or was it Townsend Martin) has said is "Frozen Music," then surely this is a thawed out skyscraper—something between the Flatiron and the Woolworth Building—say.

We wish we could afford to read more, but (alas, the high price of laughing) what with its "Etruria hand-made paper from Italy" and its "blue Ancona boards with a uniform slip case"—the cost of the book is six dollars.

There ought to be a society for the prevention of cruelty to hand-made paper.

"The young man had an attack of visions completely surrounded by orders"

Sales and Local Color

By AMOS STOTE

Illustrated by William Oberhardt

MR. STOTE'S previous articles brought out so much favorable comment from people interested in selling methods and the export trade that we have persuaded him to do two more. In this article he tells of the method by which the foreign prejudice against America can be overcome

A YOUNG man from Virginia was sent over to London in the interest of an American manufacturing company that has a factory in one of the industrial towns of that country and its own office building not far from St. Paul's Cathedral. Before assuming control of a department he was given a three months roving commission in which to "take on atmosphere."

Along toward the end of this furlough, having acquired what he thought was a fair idea of the working of the English mind, he decided to have a go at the selling problems the country presented. This decision was really a result of ignorance, not conceit.

None of the salesmen had been able to make the least impression on a prominent concern that should logically be in line for a number of their particular kind of office machines. The Virginian hardly expected to bring back an order, but he decided to go after this house in a way that would make it possible for him to report exhaustively on their attitude and objections, something on which the salesmen might work. He decided to interview the managing director, and he did—but it took three days of diplomacy and a tip. Believing the man at the top should have as much ability to appreciate as to purchase, the young American put his whole soul into the argument. Conviction and proof struggled in every word, and the managing

director listened without interruption. At the conclusion of this full-blooded plea, a respectful moment was laid away in silence before the Englishman spoke. The young man had an attack of visions completely surrounded by orders. When the time for reflection had passed the managing director remarked, in the exceedingly subdued tone of his kind: "You people of the States do most remarkable things, most remarkable; but we—it was only three years ago that we adopted the use of steel pens in our clerical departments, in place of the quill."

28—Count 'em—28

SOME years ago another of our manufacturing houses, none other than the champion heavyweight in selling—that voiced modest claim to hold the trophy against all comers with its hands tied—picked twenty-eight strong men and true and sent them to instruct England in the art and science of sales. It was an all-star cast, the flower of our selling army, quite the Old Guard of trade. Not one had ever before visited the land of the Britisher, but so well were they trained that before landing the country was divided so that each man might carry a section of the island in his left hand coat pocket. The man with Buckingham Palace in his territory wagered the one with Windsor Castle that he would be the first to place their product in the hands of royalty.

Month after month these men went at the job furiously. One of them nearly made a sale to a greengrocer; but tea-time came while he was wrestling to express dollars in pounds and pence.

Their results are best likened to those obtained by the Light Brigade in its well-known charge. Twenty-eight perfectly good American salesmen rode, with much vocal demonstration, into that commodious and accessible Valley of Failure. Instead of stirring England to its depths and carrying off the top soil of trade, that nation merely glanced over the top of its spectacles—and wondered at so much waste of energy.

They all came back to us. Their expenses had been guaranteed. Fortunately the employers of these twenty-eight men were able to withstand the loss, and are now doing a business in England that is profitably engaging the services of hundreds of people; but you could go through this branch business with a fine-tooth comb, and where the English public has to be met, you will not find a man who was born in the States, though the head of every department has received his business education on our side.

Yet another one of our producers, doing business in England for thirty years, one who has, during this period, tried more than fifty of our salesmen over there, says that it is not so much the question of failure but rather that the man himself is never satisfied. He makes

more money at home. This is really one of the principal reasons why our salesmen do not stay abroad, even when they chance to secure a measure of success.

Until our commerce has developed a cosmopolitan type of salesman, one who can literally be all things to all people, the only way we may hope to get the best results from our foreign efforts is to put the native to work in each country, and to this extent make American salesmen of them. At the last convention of salesmen a New England manufacturing company held in its London offices in the interests of export trade, about twenty nationalities were represented. Among those present were Chinese, Japanese, Danes, Norwegian, German, French, Dutch and Scandinavian—not to mention a Jew who covered the White Chapel Ghetto district of London. And all of them are American salesmen.

The languages of many countries have done much to save us in spite of ourselves; though you will find Americans all over the world trying to introduce their wares with the aid of an interpreter, or limiting the business they do in a country to those who are able to speak some words of English.

The Man with the Lonesome Job

ON one of the trans-continental expresses I met an American bound for Berlin. He represents an Illinois company that is trying to hold its own in a competitive market where a heavy tariff is against it. This man speaks French, Spanish and Italian; but can get no further than a hill-of-fare in German. His territory is practically everywhere except the two Americas. With headquarters in London, he is able to visit most of his agents on the Continent twice or three times a year; but Africa and a few other portions of the world have to stand in line if they hope to see him annually. Germany, which should be one of his greatest markets, must be in the hands of some one who can speak English; and so helpless is the American that any work of investigation he wishes to carry on must be done with the constant aid of the man whose methods he is trying to investigate.

For more than ten years the man from Illinois has been traveling over this territory, and I gathered from what he said that he is having trouble in keeping his sales up to the mark they reached quite early in his career. In the meantime, competitors have been very busy. The man with the lonesome job has been able to make money for his firm; and the latter, being over-conservative, has not attempted to gain a more secure footing. With the position the company now has it would be possible to organize efficient sales forces in each country through the medium of a resident representative, an American who is able to speak the language and so have an intelligent grasp of all conditions that influence trade, enabling him to direct the efforts of the native salesmen. Under present conditions reasonable growth is impossible and it is only a question of time before the competitors on the ground will carry off the market.

The American in Germany, while he should be at the head of the branch house, should strive to keep himself in the background just as the most successful of them do in England. His work should be limited to directing the efforts of the local men who are hired to meet

their fellow countrymen. For years one of our great engineering corporations spent hundreds of thousands of dollars maintaining a German branch. Their sole idea of business was the American way. They seemed to make no attempt to meet German methods and their organization was so lacking in the necessary Teutonic element that its members could not understand why it failed to secure the work for which it had every expert qualification.

At one time they received a request to bid on a small municipal job. As the invitation came from an obscure town in a distant part of the Empire they carried the matter no further than the securing of a superficial report on its position, size and prospects for growth. The greatest profit they could hope for would net them less than a thousand dollars; so they refused to bid, feeling their position had been rather belittled by having so trifling a proposition put up to them.

Debit Experience—\$1,000,000

A GERMAN competitor went to the trouble, not only to prepare a bid on the work, but to send an engineer to look over the job and consult with the municipal authorities. Of course they received the contract, and the town became so proud of this improvement and so much favorable comment was aroused during the work of construction, that a million-dollar job grew from this small beginning.

It may be interesting to the reader to know that the American house, after buying a few million dollars' worth of experience, which it neglected to use, has at length abandoned the German field.

The acorn or germ variety of order is very common all over the Continent. The people over there are not apt to place large orders through persuasion or impulse. There is likely to be a pressing need when any of them comes across with what an American salesman would consider a regular order. In many lines the most profitable business is made up of small orders that come with little argument or delay, and so reduce the cost of getting business.

This condition forms one of the stumbling blocks that not only make the American salesman more to be pitied than blamed when turned loose on the Continent in quest of orders, but which are past the understanding of his boss.

One day the president of an American company engaged in the manufacture of valves made a trip to Europe and looked over the shoulder of his German representative at a bunch of orders that the latter was about to send to the stock room to be filled. The president had good eyes and he noticed the majority of the sheets called for from one to three valves.

"Why don't you use those for packing?" the president asked, "we are not running a street corner stand. The profit on such business can hardly carry its proportion of expense, let alone leave us anything this side of the vanishing point."

But the agent informed him that ninety per cent. of their orders were of just this kind—and both of them knew the Continental branch of the business was paying a good return.

The head of that house came home with a knowledge of foreign trade that surprised everyone, including himself. He had learned two fundamental rules of export selling. If the small order is

ignored the big one does not come; and unless you respect the little business, the length of your purse registers the date you will kiss this branch of the business on the back of the neck. He also learned that when done according to Continental rules, especially with American brains back of them, not only is selling expense so small there is a profit in practically any order, but that the entire expense of operation, from office boy to rent and from salesman to shipping clerk, is so much less than at home that the despised small orders of the European branch net a larger proportionate profit than the so-called man's sized orders of the home market.

In most of the countries over there our business comes easy if we only know how. In Germany, the appreciation of the American business man (aside from his competitors) is such that could he master the commercial language of the country, which is as unlike the usual social conversation as is our own, he would at the same time acquire enough knowledge of the workings of the Teutonic brain to understand their methods of business approach, and so make it possible for him to personally enter into the selling end of the business. Thinking in German and as the Germans, however, is wonderfully and commercially different from merely being able to speak the usual Anglo-German dialect.

There is a newspaper man in Berlin, who has lived there for years, whose wife is German, who belonged to a German singing society in Brooklyn—a fellow who swears he speaks English with a German accent. He surrounds himself with the Gothic architecture of a German suit of clothes. Yet hardly a day passes but that some Berliner humbles him by answering his excellent German with very shattered English. He is a foreigner, and that is enough to make the loyal German feel there is something lacking; even while that same patriot would not stop to take breath if opportunity offered to land him on our shores. We, who are made up of all the nations of the earth, find it hard to realize the feeling in which we are held by any compact and kindred people. We are not offensive, but we are very, very strange.

The French Limit

THIS brand of national feeling is more pronounced in France than it is in Germany. The Frenchman, though a heavy buyer of thousands of our commodities, is firmly convinced that if the men of his country would bestir themselves to the task of making any of these wares, they could excel in the work as well as in the finished product. For an American to try to sell goods of our manufacture in France, I mean personally to make the sales, is just as reasonable as driving a motor car with the brakes on. The possibility of such an undertaking has nothing to do with the practicability of it; and the fact that some Americans are actually making sales over there only goes to prove the wonderful market the country offers.

This attitude is strongly supported by the government, and if certain bills now being considered by the Chamber of Deputies are passed, it will be vastly more than a question of employing French salesmen to secure the patronage of any departments of State. These bills demand that the government do all its shopping at home. This sounds reasonable and patriotic, until conditions are more fully understood.

For years the French government has been a heavy buyer of American-made wares, especially office appliances and machines. In most of these lines the French are not in a position to offer competition; yet the bills demand that the government shall not purchase any foreign goods if anything even pretending to accomplish the same work is produced at home.

AN American manufacturer, to come in on the favorable side of this law, must produce in that country every part of the product it offers the government. Its labor must be ninety per cent. French, six-sevenths of its office force and management must be French, and ninety per cent. of the capital owned by Frenchmen. If any department finds it absolutely necessary to purchase articles not coming within these requirements, it

laws, is promoting a series of changes in its organization, solely for the purpose of holding the government business. They have increased their capital stock from twenty-five thousand francs to two hundred and fifty thousand francs and have distributed in small quantities, the shares among Frenchmen, so as to secure as many supporters as possible. They have taken new quarters in the finest office building in Paris, at double their present rent, three years before their present lease expires, solely to indicate to the government their prosperous condition and determination to remain.

A friendly government official even advised the management of the American branch company to equip a room with machines and tools and to have parts of their own machines scattered about, so as to give the impression of producing at

seems to acquire the French feeling for sales. The manager is an American who can hardly write a letter in French; yet he conducts the correspondence with the implement agents in the farming districts. Under him are fifteen or twenty American mechanics, who know still less of the language and ways of the country, who are sent throughout the farming districts to instruct purchasers in the use of machines. That they are paid three times the wage French mechanics command is an incidental item when compared with the wonderful opportunity their employment destroys. The men performing this work should constitute a most valuable advance guard in educating the people in the use of their machines, and in spreading the good word in new quarters.

Imagine a Frenchman in Kansas, tell-

"A Frenchman in Kansas, telling the farmers how to operate some new-fangled implement, and trying to sing its praises in Franco-Kansas"

is the duty of that department to reduce such needs to a minimum, even though its accomplishment necessitates complete reorganization.

There is a law already in existence requiring all foreign concerns selling the government to have offices in France; and there is nothing flexible about this ruling. When the War Department wanted to purchase submarine telegraph and telephone equipment from an English house, it advised the latter to open an office in France and put a Frenchman in charge. As the business was worth the expense, the Englishmen organized a French company and made an old French naval captain chief stockholder and nominal director; in other words made his position of sufficient importance to allow the French officials to treat with him.

The business of the French government is valuable; it is worth many concessions to obtain. At the present time an American concern, with a subsidiary company incorporated under the French

least a portion of their product in France. To the men who know, all these arrangements are considered so important that the European general manager, whose headquarters are in London, has made eighteen trips to Paris solely in connection with this work. And, bear in mind, all this expense and preparation is not to meet a condition that actually exists, but only to prepare for a bill that may become a law, and which, even if passed, relates only to government contracts.

AFTER all, these steps have been taken not so much for fear of the passing of this drastic measure, for the French are making nothing in competition, but chiefly to hold the friendly feeling now prevailing.

In painful contrast with the wide attitude of this concern, with its exceedingly French appearance and conduct, is that of an American house making farm implements. Though paying a tuition to experience of thousands of francs a year, the latter company never

ing the farmers how to operate some new-fangled implement, and trying to sing its praises in Franco-Kansas. Do you think that man could sell machines? Do you even suppose he would escape without bodily injury? And the French farmer is not without his patriotism and instinctive doubt concerning the ability and honesty of foreigners. Even if it were possible to persuade the individual, he would still retain the impression of a foreign product sold by strangers. It would be far easier to teach French mechanics the operation of the machines than to give an American mechanic a mind trained to meet and understand the mental operations of the French farmer, and the personality to be one with him.

The American is the man to organize and manage his business abroad, but let him stay behind a foreground of the best grade of local color, against which is only visible his French sales and office force, or his German, or his English, as the case and the country may be.

A Protest

By ALICE HUBBARD

THE President of the United States gives his time to work for the people. George Washington was quite properly called the Father of his Country, for he gave consuming interest to the welfare of the American people.

We pay the President of the United States \$75,000 a year. Each member of his Cabinet—called the President's family—receives \$12,000 a year as a compensation for his time, although it is said that the compensation is inadequate—and I do not question that it is.

Every official in the National Capital receives a compensation for his services. The money paid for these services is derived from the people at large.

The Governor of the State of New York receives—as long as he can hold his office—\$10,000 a year. State Senators, Members of the Assembly, all state officials, receive a compensation for service rendered to the state. All county officials and almost all town officials receive compensation for their service for their fellow citizens. And the money received by the public servants is derived from the people. The people do not object, although sometimes they say the taxes are very high, and try to reduce the number of "public servants" and improve the quality of the service.

In each state there is a public servant known as State Superintendent of Education. In New York he receives \$12,000 annually for his work. There are also County Superintendents, and in each city and town there is a Superintendent of Schools. Each school is presided over by a Principal. The work in each school-room is carefully supervised by a teacher.

This great teaching body receives compensation for service rendered. This money is derived too, from the people, raised either by direct or indirect taxation.

Soldiers on the battlefield, or soldiers inactive—the army and the navy—all receive compensation for service, and the source of this compensation is by taxes derived from the people.

WE speak of the compensation received by these people as their salaries. The word "salary" has a dignity. It is never used except where a business transaction has occurred. There is implied an agreement between the earner and the person or people to whom the service is rendered.

The servant of the people is never compelled to serve. His service is voluntary. We congratulate our friends when they secure the opportunity so to serve, so well do the People pay their servants.

The word salary is never used with regard to a tip, a gratuity, a bribe, hush money, or money received by politicians which they dare not acknowledge.

A salary is legitimate compensation paid to people in good standing, who are working regularly and distinctively for an organized Government, corporation, or individual employer. It suggests that the parties concerned are free people. The one rendering the service is not in bonds.

Robbers do not have salaries, nor do gamblers, nor people playing the games of chance.

Neither do old soldiers receive salaries. What the Government pays them is termed a "pension."

Pension implies a gratuity. The service rendered is past. There is no note of gener-

osity in the tone of those who give pensions.

A pensioner is not in a desirable position. He is supposed to be either maimed, disabled, or sick; therefore only half a person. He is out of the game of life, a dependent, a past participant belonging to the past.

The pension is always a little disheartening, and is collected with the tremulous step full on.

People feel charitable, that is to say, superior, when they pay out a pension fund. A pensioner is in the same position as one who is receiving something for nothing. He is practically receiving a gratuity. The pensioner is a poor relative, akin to the beggar. When he dies the tax-payer gives a sigh of relief and thanks Heaven that it is over.

There is an unpleasant association with the terms "pensioner" and "pension."

Intelligent societies are discussing the subject of State Pensions for mothers. This has an unpleasant significance, as though mothers did no legitimate work or were in senile occupation.

THEREFORE, mothers object strenuously to having the term pension applied to the fund given to strong, noble, faithful women in the prime of life, who are working for the state, who are on duty for three shifts in a day of eight hours each; who risk life, every ambition, opportunity for development of brain, who give to their children the time which, if spent in developing a talent, would give them a salary that would put them out of the reach of pensions.

Intelligent societies should be discussing the subject of State Salaries for mothers.

The school, the church, organized government, and the business world, are said by wise men of old and now to have but one fundamental purpose,—namely,—to maintain the home. The home is the center of interest of school, church, government and business.

The purpose of the home is that there may be shelter, food, clothing and opportunity for the development of children.

The center of interest in the home is the child.

If this is true, then business, school, church and government are adjuncts to the home.

Service rendered in the process of carrying on the work of the government and school is recognized as belonging to the state. The state maintains them. Business that renders to the world a service is being claimed as belonging to the state, and the state taxes all business, all accumulated property, for the maintenance of public service.

It is universally recognized that the service which a mother renders to her children is indispensable, but we have not yet recognized that the mother's service holds the same relation to the state that the teacher's service, or the governor's, does.

The great majority of homes today are unorganized. They are places owned or rented by a man whose vital interests are elsewhere.

The home is the mother's place of business. She alone can organize the home. The home by every right should belong to the mother. She cannot organize it unless she is educated to its responsibilities, and such learning is not possible except by doing.

Without economic independence a woman cannot carry on her business of home-making, home-keeping. Without wages for her work she cannot be economically independent.

If a woman spends her time in simply making a home for one man, then this one man should pay her for her service rendered.

If she spends most of her time in the work of developing citizens for the state, she should receive a compensation from the state as do teachers, government officials, or any other public servant.

Mothers who are giving to the care of children their interests, which they might use in occupations which the world recognizes as valuable, are devoting the best of their lives to giving to the world citizens.

We are not serious when we say we are afraid of race suicide. We are not serious when we say that good men are the best products that any state can have. We do not mean this.

The market price for service in anything else is greater than for the service rendered that there may be men. We pay in honors and money for production, for the building of railroads and cities, tunneling mountains, building bridges, canals, locks and boats, raising cattle and poultry, preserving the forests, buying, selling, manipulating those representations of wealth called money, scheming, planning, advertising—everything. But for the development of children in the homes, for whom all these activities are said to exist, we give charity doles. The average stable-man, who cares for the horses and cows, has more than is the average wage of the mother.

THE most perfect condition that could have been devised by the cleverest brain for discouraging woman to give her service to the state by becoming a mother could not have surpassed this present condition.

The world as it is operated today is planned for grown people, not for children. Starting with the fundamental industry of production, the great work of production is not for children, does not have that end in view. Transportation—that is not for children. Building of cities—neither is that for children.

We feel charitable when we give over a few acres in a city for breathing spaces for men, women and children. But even the parks are not for babies exclusively.

The amusements of the world are not for mothers and children. The pay-rolls of the world are not for mothers and children. Everything that can be done we have done to take the interest away from the nursery and from the home, whose first purpose was to give shelter, food and clothing to the child, and protection where he might best be made a citizen.

Mothers object to pensions, except where they have been reduced to the plane of the dependence of beggars.

Children should object to being the recipients of all the time and service of a mother's labor and love, and yet feel that they owe their chance in the world, their opportunity of making a living, to money, which only their father can give.

Mothers and children object to pensions! Justice demands that mothers be paid salaries by the state to whom they give the best work of their lives.

An Adventure in Democracy

By BRAND WHITLOCK

Minister to Belgium

Illustrated by Herb Roth

THIS is election day, and I have just come from the polling booth where I vote. Last night the campaign closed; another cannot begin until to-morrow morning, and while I am on this little island of safety, as it were between the two roaring streams of the traffic of politics, that behind me and that just before, in this one little instant of the whole year when one may express himself on political subjects without being charged with insincerity or a base selfish interest, and accused of trying to wreck the structure of the republic, I am going to describe a remarkable adventure I have just had and to relieve my mind of its disquieting impressions.

This is what they call an off year; nothing especially important in the political way is on hand just now. We elect today municipal officials; not national officials, not state officials, not even county officials, but municipal officials, choosing the men who for the next two years are to direct our affairs right here at home. And yet I had to vote on eight ballots and make a mark with my pencil nearly forty times. It is not the physical effort of which I complain; one may be called upon to waste himself, even to give his life for his country. It is the strain upon the mind, upon the memory, upon the patriotic intelligence that I grumble about. There were in this election eight ballots, as I have said. One was for the municipal officials, another for a commission to draw a new charter for the city (a thing in itself unusual of course, one that should have been attended to at a special election, but there is always some such thing). Another ballot was for the school board, another for judge of the city court, another for a bond issue for new school-houses, another for an increased tax levy to build roads, another for a referendum on a bill the prohibitionists initiated, and the rest for various amendments to the constitution of the state.

Now I think it entirely proper that we vote on all these subjects. We have to amend the Constitution again, because we must undo this year the mischief we created when a year ago we last voted to amend the Constitution. And all those questions about tax levies, and schoolhouses, and good roads, and shipping beer to the nogs who live in dry territory, should be referred to the people. They have the right to be consulted on these matters and to direct their representatives what to do about them. And far and away beyond this consideration, I think it an undoubted education for people to be forced by this contrivance to concentrate their minds on abstract problems, and to study out, if they can, which of these things should be done, and why and how. In these days of the plebiscite the people in the evolution of democracy will more and more have to do this. Democracy requires intelligence, else it ceases to be democracy, and people cannot grow in intelligence unless they compel their minds to think, and these exercises in the referendum should increase their capacity in this respect. The result should be a more intelligent electorate.

IT is not, therefore, the Constitutional amendments, or the other impersonal questions we were called on to decide today, that I wish to talk about. One is always glad to vote on amendments to the Constitution, and usually to vote "yes." It is this voting for a score or more of specialists, technicians, clerks, errand boys, little whipper-snappers of all official sorts, this staff of under officials to be picked out, by some sort of divination, from the hundreds of names on the ballot, that I am complaining about.

I voted for a mayor, knowing fairly well what I was about, understanding more or less what I would have to expect if he were elected. I knew this much because for two months we have had a

municipal campaign in which the several candidates for mayor, or their representatives and newspaper organs, have been abusing and vilifying, ridiculing and challenging one another, and filling the air with charges, so that we all seem to know the worst about them, and can therefore vote intelligently.

And then I voted for a member of the city council from my ward. I knew him; he is a neighbor of mine, has served faithfully in the council already, and if elected will continue to do so. I knew perfectly well what I was doing when I voted for him.

NOW I contend that when I had voted on all those abstract propositions that had been referred to the people, and had expressed my choice for mayor and councilman, I had in that relation done my full duty as a citizen. I contend that, especially as I have to vote on tax levies and bond issues and constitutional amendments and laws relating to moral and ethical problems, I should not be expected to select all the underlings for the mayor and council. I cannot, obviously, represent the wishes of the mayor and councilmen in that respect, and I cannot even express my own, for I know nothing about these fellows, and cannot tell whether they will make good underlings or not. For the most part, though I have been a politician myself, I never heard of them before. They were put on the several tickets, or got themselves on some way, and during the campaign nobody ever said anything about them, or made any illuminating charges against them, so that there is no human way to tell how bad they are. Everybody has been talking or shouting or whispering about the candidates for mayor, the campaign has raged and swirled about their personalities, and in the fog and the furor these obscure phantoms slip into office to become, later on, very material entities for whom no one is responsible.

"I had to choose four constables. This was carrying the joke too far"

There were on the ballot, for instance, a lot of names proposed for councilmen at large; vote for three, was the mandate. Perhaps I should explain that in my state we elect councilmen by wards, and in addition have an appendix of three entirely supernumerary councilmen at large, the result of which is that three wards in the city have two councilmen each, while all the others have but one.

THEN I had to vote for a city solicitor, whose business it will be to advise the mayor on the law, and a city treasurer, and a city auditor, and a president of the council, to name no more. Just why the mayor should not select his own legal adviser I have not the least notion. Where he gets his legal advice is his affair, not mine, any more than it is my affair what physician he consults, or what architect, or what other spiritual or temporal adviser. I will deal with him, to speak in the menacing note of democracy, on the results of these various advices, when he comes up for reelection. Nor can I see any valid reason why he should not pick out an auditor to audit the accounts, or in these days of indemnifying bond companies, a treasurer to handle the funds. In this business of administering the affairs of the community I see no reason why we should not concentrate our attention on the selection of a capable man to manage the matter, and let him select his assistants and work out the details according to his own temperament, as we do in the case of a President for instance. I should as soon think of attempting to interfere in his choice of a private secretary, or of a wife, as in that of his legal adviser. And if the council is capable of deliberating at all, I should think it would at least be capable of selecting from its own numbers a man to preside over its deliberations and a clerk to record its transactions, and not expect me to do that for it.

But that is not all; we haven't come to the worst of it yet. I had to vote for four members of the school board, three

of them for long terms, and one of them for a short term; and if I confused the long with the short I know not what disaster, if the warning on the ballot meant anything at all, is to befall the cause of education. Outside the polling place at the little red flags that mark the one hundred-foot limit, within which, happily, importunity must cease at last, were groups of shivering men and women with blue noses urging us to vote for this group or combination, handing us little slips of paper whereon were printed the names of those who alone, of all the candidates, could save the school system from ruin and decay. Now I knew little of any of these candidates, at least so far as their views on education were concerned.

But that is not the point. Whatever their understanding of pedagogies, or their theories of education or school management, it is, the superintendent who conducts the schools, of course, as everybody knows, and in most instances, especially in the cities, he conducts them very well, even when he is the inert compromise resulting from the various pressures exerted on him. Why then a board at all, especially since, on all boards, there is invariably one controlling spirit who dominates the rest? Why not vote for the superintendent at once and have done with it, or better still have some executive, the mayor for instance, appoint him?

BUT having selected a school board as nearly to my taste as I could, I discovered that I had to select a clerk of the police court. I know of no reason why I should eudgel my brains over this problem. No principle was involved, no public policy, no question of expediency even. The clerk of the police court merely writes in a book the amount of the fine which the judge of the police court guesses to be fit retribution for a night's debauch or the theft of a second-hand overcoat on the first cold day. And if

the judge of the police court isn't fit to select a man to keep his records, then he isn't fit to make the record at all—that is, he isn't fit to be a judge.

And there was a ballot called the judicial ballot, from which I learned that I must now proceed to the selection of a judge of the City Court as we began to call our justices of the peace when we became ashamed of them. I had been in politics, and I had practiced law for a good many years, and having a retentive memory I happened to recall one of the candidates proposed for this high office; that is I recalled his face, and I voted for him, or for his face, not because it was a strong or beautiful or refined or scholarly face, but simply because it was a face, while the countenances that might light up with intelligence at the mention of the other names on the poll, were to me by the mysterious accidents of fate the vaguest blurs. Any mayor, out of his numerous acquaintances, or even from among his henchmen, could have selected a city court magistrate with the same unerring instinct for probity and legal acumen, and in that case I could have had the satisfaction of blaming him for any mistakes the magistrate would make, though I believe there are three or four higher courts charged with that duty.

I FELT that surely this must be the end, that this absurdity could be pushed no further. But no, the end was not by any means met; the hardest task of all was before me; I had to choose four constables. Now I submit that this was too much. This was carrying the joke too far. The professional politicians were rushing it in. For of course it is the professional politicians who have devised this labyrinth, this maze, amid laughter no doubt that echoes demoniacally in the nether element they inhabit. A long time ago they told the people that this was a glorious democracy in which they were living, that they must protect their rights, assert themselves as sovereigns, take

government into their own hands, and, casting off the trammels of kingcraft, arise and choose their own constables.

Now it happens that I have never given any thought to this recondite question of constables; my tastes have run in other lines. You might with perfect propriety say that I have never been interested in constables in the least, and so have no means of making a choice among them, no rule by which to indicate my preference. Somehow to my untrained eye constables all look precisely alike; they have the same disheveled, degenerate, abandoned and hopeless aspect they must always have worn since they came as an institution into this world, the same forlorn aspect they must always exhibit so long as they exist and perform their negligible functions.

BUT it seemed that as a good, law-abiding citizen, I was now called upon suddenly to stand up, to come out and declare myself, to tell exactly where I stood on the issue of constables. I think I may say without presumption that I am a man of some intelligence, I have lived in my town a good many years, have had a broad acquaintance, and have ventured into public discussions, and yet ardently as I longed to be given, if but for a moment, the inner light that enables one to pick out constables, I could not, though my life had been at stake, recall one of the illustrious names ranged on that ballot under that important heading. I looked at them, studied them, there in my dark little stall, conscious of the impatient electors waiting outside, meeting no doubt at my flustering ineptitude and slow understanding, peering from one ticket to another, searching under the rooster, the eagle, the hulk moose, the arm and torch, the rose, and all the other symbols of enlightenment and progress, for one lone constable I could call a friend. In vain. Not one of them did I know.

And yet, after awhile, there was a name, one out of all the others, which seemed to have some mystic meaning for me; it wore a friendly aspect, there seemed in it to be somehow an elusive association, a suggestion, however faint, of familiarity. I looked at it with fond hope, and yes, it brought back to my memory a man I once had known, long years before; and presently I recalled the man as a constable, one of the insubstantial spirits arising from the past, out of my early days at the bar. Evidently he was a perfectly incorrigible constable, and must have been running for that office years and years, all unknown to me. Possibly I myself had voted for him innumerable times. Or was it that there had been an interim during which he had been out of office? Had his policies proved unpopular, not suited to the temper of our progressive times? Somewhere in his career had he faltered, and yielding to soft luxury, become a reactionary and failed to brandish the torch of liberty? At any rate, I felt that I could greet him and vote for him as an old friend. I recalled him somehow, as Bill; that had been the diminutive of affection to which he had been responsive. And so I took my pencil, poised it before his name, and was about to make my sovereign and electoral mark, when I saw that the given name was not Bill, or even William, but James; so that after all he could not be the constable I once had known. I was at a loss to account for the discrepancy, but I reassured myself with the thought that if this James was not Bill, he must be another of the same constabulary family, and so put my cross before the name.

I WAS too exhausted by the strain and anxiety to seek further; I was indeed growing quite reckless, and voting at random for three other names. I took my eight ballots out to the clerk; and as he

looked at me severely and demanded to know if I had voted all the ballots, and I assured him that I had, I wondered how long it would be before we would select the judges and clerks of election at the polls as well. That would add to the ballot not more than eight or nine hundred names to each ticket and . . .

BUT my wife was waiting for me outside the booth. She is permitted to vote only for members of the board of education, her endowment, in the eye of the law, not being sufficient to enable her to select constables and clerks of police court and justices of the peace, and so she had voted more promptly than I. I was glad that the work was done for another year. Next autumn we shall be called upon to choose a Governor, a Lieutenant Governor, a Secretary of State, an Auditor of State, an Attorney General, and trustees and commissioners without number, whose titles I forget, beside all the county officials, sheriff, clerk, treasurer, coroner, commissioners, auditors, prosecuting attorney, not to overlook a county surveyor, and district officials, and many judges and clerks of court, to say nothing of voting on initiated and referred bills, amendments to the Constitution, tax levies, bond issues, and no one knows what else. I thought of this as we walked along in silence, and wondered why it was that a state which has such an excellent Governor as Ohio has, should not permit him to choose the judges and the ministerial officers and let them select their own clerks and porters. My wife waited a while, and then, assuming no doubt that the solemn emotions evoked by the discharge of the great democratic function had somewhat subsided, she asked:

"How did you vote?"

I looked at her in amazement.

"How should I know?" I demanded.

"Laughter, no doubt, echoes demoniacally in the nether element they inhabit"

Wilson His Own Stenographer

By

ROBERT HALSEY PATCHIN

*The first step in making the message to Congress on the currency.
The stenographic outline written by the President's own hand*

WHEN President Wilson writes a message to Congress he tries to fill the public eye with a picture of the issue—a moving picture. His screen is the press. The film that catches swift thought and lucid argument from his brain is the shorthand he learned as a sixteen-year-old boy.

How much the habit of composing in shorthand and then plugging out the transcription on the typewriter that stands in the private study of the White House, far from the Executive Offices, contributes that which reporters call the "punch" in the President's state papers, can only be guessed. Mr. Wilson never wrote any other way. His predecessors used goosequills, steel pens, or dictated their thoughts to stenographers. Their messages were usually long; President Wilson's are short and always vivid.

President Wilson combines with the well adjusted mental mechanism of the trained thinker a ranging imagination and in words a swift felicity of choice. His shorthand is rapid enough to catch and chain to paper, subtleties of thought that otherwise might be deadened in the sound of dictation or drowned in ink. Even with fair speed on the typewriter, the President finds the machine a less valuable aid to original composition than stenography. Pausing for a word, he is conscious that the rattle of the keys has ceased, and the staccato resumption is a shock to the sharp refinements of expression with which both his speeches and his conversation abound.

Shorthand is almost an unconscious process, silently following the sinuities of the President's thought, and accurately recording the niceties of judgment that

contribute strength and positiveness to his conclusions.

CLARITY is the note of the clean Graham characters and of the neat typewritten copy. The President scratches out but little; his discourse marches evenly onward. Such improvements as suggest themselves are made between the stenographic outline and the stenographic text, during transcription on the typewriter, and sometimes—but sparingly—by interlineation afterward. This applies to single-subject messages, such as that on tariff and currency. The more general message delivered at the opening of the regular session of Congress in December consisted of topics which had been so thoroughly discussed in the campaign of 1914, or at the Cabinet table, that the President was able to dictate all that he wished to say directly to his personal stenographer, Mr. Swen, one of the fastest in the country.

Through the President's courtesy it is possible in the accompanying photographs of his stenographic notes and edited typewritten "copy" to look to the bottom and earliest physical beginnings of what is probably the most important communication he has yet sent to Congress—the message urging immediate reform of the banking and currency laws. The precision of the script and stenographic characters in the preliminary outline foretell the firmness of the President's management of this difficult policy, for which the party had no such direct mandate as on the tariff issue, and concerning which no such unanimity of sentiment existed. One need not be a stenographer to fancy in these illustrations the chief characteristics of the Wilson process—firmness and preparedness.

Johnny Doe, His Mother and the State

By SOPHIE IRENE LOEB

(Member of N. Y. State Commission for Relief of Widowed Mothers)

EVERY normal child has, at birth, five senses: seeing, hearing, tasting, touching and smelling. All knowledge is obtained through them. These five senses are physical.

New York State has a compulsory education law. This law says to the parent or guardian of a child, "I demand your offspring to come to me for education from the time he is seven until he is fourteen years of age and until sixteen, if he hasn't a job. He must get knowledge from me through his five senses.

"I have mapped out a program for him to take through these five senses. I pay a teacher to carry out that program. It consists of reading, spelling, writing, arithmetic, English language and geography."

Johnny Doe, the son of Mrs. Doe, washerwoman, sits side by side with Clarence Van Aster, son of a prosperous merchant, to take the knowledge that the State has prepared for them. Just as it should be. Free country, equal rights and all that.

Little Johnny Doe had some tea and dry bread for his breakfast. Clarence had—well, never mind. He looks it.

"C-A-T spells cat," says the State to Johnny Doe.

"But I'm hungry," sighs Johnny.

"Never mind," answers the State,

"C-A-T spells cat. Get that?"

"Eight times nine equals seventy-two,"

says the State.

"I'm shivering, my underwear isn't

very warm," pants Johnny.

"I'm not concerned about that," re-

turns the State; "eight times nine equals

seventy-two. Don't forget that."

"Balboa discovered the Pacific Ocean,"

says the State.

"If I only had some good soup," wails

Johnny Doe.

"This is your geography lesson," cries

the State, "Balboa discovered the Pacific

Ocean. Remember that."

"An adjective is a word used to qualify

a noun," says the State to Johnny Doe.

"But my two brothers sleep in the same

bed with me and my back aches," he

wails.

"I can't help that," says the State.

"You must know what an adjective is."

THROUGH nine years of Johnny Doe's

life he must take what the State has to

give him through his five physical senses,

unless he can show a certificate that some

of his senses won't work.

Further, the State in its own language

says this: Failure on the part of a person

in parental relation to a child to cause

such child to attend school is a misde-

meanor, and punishable by fine or im-

prisonment.

Question before New York State by the

people:

Have you a right to compel Johnny

Doe to take your knowledge through his

five physical senses without seeing that

Johnny Doe's five physical senses are fit

to take that knowledge?

If Johnny Doe's senses are impaired

because Mrs. Doe has failed to make them

physically fit for your knowledge, are you

fair in giving your knowledge to physically

fit Clarence Van Aster and not give Johnny

Doe the same chance?

In other words, can you impose a burden on a back without fitting the back to bear the burden?

You insist that Johnny Doe shall take the same knowledge as Clarence Van Aster. Why? Because you are a public institution.

Thus, being a public institution, if Mrs. Doe is unable to see that Johnny is fit for you to teach, are you as a public institution going to leave it to private charity to see that Johnny is made ready for your knowledge?

"Yes," the State has answered to all of this, until a few months ago, when a slumbering conscience was awakened by a cry that would not down—the cry of the greatest congested section in the world, New York.

THERE was one among them in the very heart of the East Side, where the children of mothers grow like weeds, who sounded the first tocsin in the slow-moving machinery of the legislature. This man, a judge of Municipal Court at thirty-two, fathered the bill creating a commission with a view to having the State mother her children through their own flesh-and-blood mothers.

So important was this question finally deemed, that \$15,000 was appropriated for investigating purposes. We have conducted investigations, heard the heads of all the most important charity organizations of the State, and have had volumes of testimony taken.

Each and all of our members are trying their level best to keep an "open mind" on this question until the end of our research. However, whatever our forthcoming recommendations may determine, I want to say that in all the hundreds of cases of relief for dependent mothers with children, I have yet to hear of one where any charitable organization has adequately met the common, ordinary, everyday, living needs of a common, ordinary, everyday, average family.

And this, my observation, is not surprising in view of the statement of Robert W. Hebbard, secretary of the State Board of Charities, former Commissioner of Charities of New York City, who says: "Looking back over an experience of more than thirty years I have not yet seen a single case in which adequate assistance, whether from public or from private sources, has been given to the widow and her children."

WITH these facts staring into the face, has the great State of New York left, either wisely or well, the fate of Johnny Doe's nine years of physical warfare to private or public charity, to make him fit for the knowledge it has to give him in the creating of citizen stuff? For that is what the compulsory education law is for.

Thus the paramount consideration is, How is the State of New York going to conserve the energies of the child, Johnny Doe, that he may have the fighting chance for citizenship that is accorded Clarence Van Aster? This is an age of conservation with its forces directing toward the ounce of prevention rather than the pound of cure.

The Charity Trusts have presented many arguments against the advisability of the State giving the mother direct

money to see that Johnny Doe is properly prepared in bodily comfort before he takes the educational meal that is placed before him.

They have yet to present a plan by which they ever have or ever could conserve Johnny Doe's energies; unless it be that if the State gives them the money, that they can do it. For they say, "If New York State puts such a law in actual practice, the moneys that have come to us by kindly disposed folks, will be withheld."

IF the child is the ward of the State by a compulsory education law until he is sixteen years of age, is the State not, at least, his educational father? Then why delegate "in loco parentis" to any society whose past inability to cope with this tremendous problem is painfully evident?

Every day the State pays a charitable institution a certain sum for taking care of a child. That institution may, in turn, board the child out with a foster mother; yet that self-same State has at present no law by which it pays the money direct to the real mother. It has so way of giving her the money for the same service rendered. The State has been moving in a circle.

Twenty-five per cent. of the charity applicants are mothers with dependent children who now cannot go direct to the State.

Don't mistake my meaning. There is great work done by the charitable institutions, but it is not in the direction of keeping the mother and children together in their own home.

SOCIETY at large in its beneficent moods has been tried and found wanting. The dependent mother, in her last desperate struggle on half the pay that her husband earned, proceeds to the child-caring institution or orphan asylum, and in one last agonized cry leaves to others the clinging arms that are a part of her.

The State takes the burden from her shoulders by financing the institution, in place of the great evil of "pauperizing" her.

That is the real sum and substance of the opposition against Johnny Doe's being given enough money and mother-love to keep body and soul together during nine years of his life while the State claims him for its very own.

Whatever will be the final summing up of the Commission on Relief for Widowed Mothers in the coming legislature, a few facts are evident:

No charity institution has ever adequately met the average needs of a widow and her children during their school-going period.

The Charity organizations have had great problems to solve, and their usefulness will go on, regardless of any action taken in behalf of the widow and her children.

There will always be private individuals philanthropically inclined to come to the aid of well-meaning charitable bodies.

The question to be solved is:

"How shall the State best conserve the child so that he becomes an asset rather than a liability to the community?"

The Fuller Sisters

DOROTHY, Rosalind and Cynthia Fuller of Dorset, England, who form our frontpiece this week, are now singing in the United States, English and Scottish folk-songs. A very picturesque group they are, in early Victorian costume, accompanied on the Irish harp. They form our frontpiece because their art represents something interesting, lovely and unusual. They have sung to many cultivated audiences, including those at Harvard, Bryn Mawr, Columbia, Smith, Radcliffe and the New England Conservatory of Music, and where taste is highest they are most appreciated. Listen to what Andrew Lang said about Folk-songs:

"Folk-songs sprang from the very heart of the people, and fit from age to age, from lip to lip of shepherds, peasants, nurses, of all classes that continue nearest to the state of natural man. They make music with the splash of the fisherman's oar, and the hum of the spinning wheel, and keep time with the step of the ploughman as he drives his team. Indeed, the pastimes and the labours of the husbandman and the shepherd were long ago a kind of natural opera. Each task had its old song,—ploughing, seedtime, harvest, marriage, burial, all had their appropriate ballads or dirges. The country seems to have aided man in the making of these songs, the bird's note rings in them, the tree has lent her whispers, the stream its murmur, the village bell its tunes. The whole soul of the peasant class breathes in their burdens as the great sea resounds in the shells cast up on the shores. Folk-songs are a voice from secret places, from silent people, and old times dead, and as such they stir us in a strangely intimate fashion."

THE beautiful songs of England are dying rapidly. Some of those sung by the Fullers have barely been rescued, and sometimes only one old peasant could be found who remembered the

words. Mrs. Fuller, in her little English village, sang them and brought up her daughters to sing them. These girls are natural artists. Their methods fit their songs entirely. They sing as simply as the peasants sing. Their enunciation has a clearness and purity that in America is startling. They have youth, freshness and joy in their work. They come to America at a time when everybody is seeking stress and marked sensation, and they bring an art of entire purity, gentle, historical significance and quaint, inviting charm.

A well equipped American critic says:

"Self-consciousness was entirely lacking in the earliest singers of folk-songs. Hence the feeling of the rhythm would be kept as exact as the singer's musical sense could make it. But there are nowadays few trained singers who dare risk a folk-song in its natural state, without emotionalization or 'expression.' The fact that the Misses Fuller dared to do it proves their faith in their songs, and this faith becomes contagious. It must be added, too, that most of the English songs lie emotionally rather than on the surface, observing and relating facts but not expressing the deeper feelings. One must go across the border or across the Irish Channel to find the latter. And even Scotch or Irish songs, being musically self-sufficient, rarely demand much 'expression' in the singing. At any rate, the songs of Saturday afternoon expressed high spirits or whimsicality or a canny sense of littleness, and the less intensity given to the singing of them the better. Our first artistic debt to the Misses Fuller is that they have had the courage and artistic insight to sing their songs in the most simple and literal manner, without the slightest concession to 'artistic taste.' By so doing, they have made themselves the authoritative interpreters of folk-songs in the genuine manner."

To them may justly be applied the words of one of their own songs:

*"In Brisham town so rare
For singing sweet and fair,
Few can with us compare,
We bear away the bell.
Extolled up and down
By men of high renown,
We go from town to town;
And none can us excel."*

As these young girls express the spontaneous singing of the peasants of by-gone generations, they make us feel the truth of what was said by the Vicar of Haverbridge:

"INDEED a folk-song cannot really grow old or fail in its charm. It can touch and stir the heart of the twentieth-century man, if he will but yield to it, just as deeply as it did in the far away days of its birth. Scientific music shifts and changes like other scientific accomplishments, but the native melodies of England can charm the children as they charmed the fathers. They can perhaps do more. They can turn the hearts of the children back to the fathers and knit past and present together in great and unaffected sympathy."

Until lately, it has been generally assumed that the English peasants had no folk-songs of their own and that "the English peasant was the only one of his class in all Europe who was unable to express himself in terms of dance and song." Recent research, truly scientific, has put an end to that strange misconception. Genuine folk-songs of high quality have been gathered by the hundred, and still, in spite of the loving search that has been made, the larger part of rural England has not yet been explored with thoroughness. The men and women who are carrying on this work do not edit and change, like the eighteenth century collectors. Their object is historical, and they remain strictly true. The best treatise on the subject thus far printed is a volume called "English Folk-Song," by Cecil J. Sharp, and the best embodiment of these songs to the eye and ear is that of Dorothy, Rosalind and Cynthia Fuller.

The Creative Fire

By CAROLINE DUDLEY

IF I cannot make out of words
Verses eternal, enduring all death;
If I cannot blend out of color
Tones to live in the eyes,
To quicken the heart
With their various contrasts;
If I cannot carve out of marble
Beautiful breathing bodies;

God give me the power
To mould in my womb
Women and men.
May beauty be born of my
breath,
Whether to live like a star,
Whether to die like a flower—
Some beautiful breathing form.

Dinner in camp

Honoré Willsie

By N. H.

AS will be guessed by the pictures accompanying this article, Honoré Willsie has not led a secluded life. She was born in Autamora, Iowa, and educated, as they say, at the University of Wisconsin, although she is such a constant reader and observer that the word "educated" ought not to be confined in her case to the years she spent at college. She has been very often in the far West and all her trips together there would aggregate nearly three years, all of this time out in the open, and nine months at one stretch without a roof over her head. Six months at one stretch she was in a region where she never saw a woman, up in the mining district called the Desert Mountains of Arizona. Her favorite travel has been in large open spaces in America. Her recently published novel, "The Heart of the Desert," shows how deeply and intimately she loves the West. To that intercourse with nature, she has added a wholly unusual intimacy with the best literature. Although in her twenties, it would be difficult to find many persons in the United States who have as wide an acquaintance with the best books as she has. She has a memory which keeps vividly present to her the good things she has read, and this intimacy with great literature is felt in the style which expresses her. When she was about seven years of age her father said to her, "Don't get so many books out of the library." Therefore she went to the bookcases in the

house and began to read at the upper left hand corner and read right along to the lower right hand corner; it made no difference whether it was Shakespeare, Alice in Wonderland, *Pride and Prejudice*, a complete Dickens, or a book on

minor surgery. They were all good in one way or another for her purposes.

NOW, at a certain period in my existence, not many years ago, I had never heard of Mrs. Willsie, because I am

A snapshot by Mr. Willsie near the close of a long day

not a magazine reader and not a reader of current novels. I was at that time in a very general way responsible for the policy of a publication for women, although I took little part in the practical conduct of it. The man who was conducting it asked me one day if I thought it well to run a series on Divorce. I said, "Yes, provided it is written by exactly the right person," and I asked him if he had anybody in mind. He said he would like to have a woman come to see me on the subject. A few days after, she called. She was tall and unusual looking, as you will see by the pictures, and apparently a little shy. I asked her how much she knew about the subject and she said, "Very little." I asked her if she had any convictions about the right way to solve our divorce problem and she said, "No." Those answers helped me to believe she was the right person to go into the subject, where dogmatism would have been uninteresting and what was wanted was an open mind. She did that series so well that since then I have been following her career with exceptional interest, and have become so impressed with her ability to get at the essentials of a big question, and put it in simple and human terms, that I am continually worrying her to take up more topics than she really has time, in justice to her fiction, to undertake.

MRS. WILLISIE'S work is already well known to the readers of HARPER'S WEEKLY through the accounts she has given of the plans of Mr. Lane and Dr. Als-

Mrs. Willisie talking to some old friends

Mrs. Willisie on the edge of the Grand Cañon

berg, and also through one very charming piece of fiction. Of her writing in the WEEKLY, Mr. Lincoln Steffens said: "We are getting the new-fashioned news which the old-fashioned journalism never saw or heard of—I mean the news you can't see with the eye and picture with a pencil: the news in ideas. HARPER'S WEEKLY has been 'running' a good example of it in Honoré Willisie's articles on 'Mr. Lane and the Public Domain.' She knows how the new Secretary of the Interior is working in the new spirit of this new administration. And it is so simple, so 'undignified,' so human and so democratic, that it shocks the old spirit which is the gist of all that we all are fighting in this country." We are about to print a good deal more of her news, dealing with large, progressive, serviceable steps being taken in Washington. If in the forthcoming articles, she gives the main plans and point of view of the Department of Agriculture as well as she has already interpreted the Department of the Interior and Bureau of Chemistry, she will fully earn her wages.

William Winter's "Wallet of Time"

By MONTROSE J. MOSES

IN the preface to his drama "Merope," Matthew Arnold wrote: "The laws of Greek tragic art are not exclusive; they are for Greek dramatic art itself, but they do not pronounce other modes of dramatic art unlawful. . . . 'Tragedy,' says Aristotle, is a remarkable passage, 'after going through many changes, got the nature which suited it, and then it stopped. Whether or no the kinds of tragedy are yet exhausted,' he presently adds, 'tragedy being considered either in itself or in respect to the stage, I shall not now inquire.' Travelling in a certain path, the spirit of man arrived at Greek tragedy; travelling in other paths, it may arrive at other kinds of tragedy."

I quote this passage as illustrative of an open mind well steeped in classic training, yet willing to acknowledge that the spirit of man, never static, might at some future time need other standards by which to measure the perfectness of its art expression. It is because Mr. William Winter, in his massive volumes called "The Wallet of Time,"* fails to recognize this change in the spirit of man, that I regard his work as so much dead matter, and place it among books of reference.

Mr. Winter has served half a century in the cause of the theater. During that time he has had a wide range of play-going, has made rich friendships, and has witnessed the old order giving place to new. He has not realized the truth of Emerson's saying that time changes not, 'tis we who change in time. He has not kept his mind plastic or his vision clear. He has stood still and let the tide of life flow by.

"The Wallet of Time" contains a mass of fact about actors and actresses of the past; it contains equally as generous an amount about players of the present. The future student of the drama will turn to William Winter for plots of plays and for analyses of the individual actor's accomplishment. It is a long and full record of the American stage, in which he defends American acting in comparison with acting abroad and in which he shows an undoubted love for the theater. It repeats what has elsewhere been served up as "Shadows of the Stage." His former volume, "Other Days," is much lighter in narrative, and leaves a clearer impression. Mr. Winter's personal recollections would have been as entertaining as Jefferson's famous autobiography, had he possessed the flexible spirit or the sense of humor to forsake the austerity of the confirmed critic.

THE design is the same as that used in all of his books. First he gives biographical data; then under separate plays he reproduces his criticisms written probably at the time of seeing them. Even in *The Tribune* I have known Mr. Winter to use the same criticism over again whenever a play was revived, making changes only with the change of actor. Once Mr. Winter has approached a play, there is no new approach for him. "The Wallet of Time" is an uninspired

volume. Covering over thirteen hundred pages, I can safely say that it does not hite deep into the memory, it does not invigorate the mind, it does not offer one brilliant portrait though it paints so many.

Mr. Winter's style—designated Early Victorian—has always been ponderous and colorless, despite its sedateness and its well rounded sentences. It is usually marked with a wide choice of adjectives, with a minute care for analysis, with a conscientious bestowal of judgment along conservative lines. It has no humor. There are no apt phrases to flash across the page.

My grievance against Mr. Winter, however, is of a much deeper character. It is against Mr. Winter's type of mind—a mind that crystallized during the days of Niblo's Gardens, and has advanced no further than the era of "Sweet Lavender." I will grant him a considerable sensitiveness to poetic beauty; he has shown ample evidences of love for Shakespeare; and simple sentiment has ever found him a cordial advocate. But he has been totally blind to changing conditions, totally deaf to modern demands, and totally unresponsive, unsympathetic to those large questionings which have broadened the spirit of man in all relationships. He has been thoroughly consistent in his stand—an obstinate stand, if it is not one which is due to the limitations of mental grasp.

COULD he, in one moment, be handed the art universe to control, he would blot out much of Greek tragedy—he intimates this in his review of Mrs. Campbell's Germanized version of "Electra" played in New York some years ago; he would eliminate certain distinctive aspects of Molière's habit of mind; he would sacrifice Shakespeare's "Measure for Measure," which he calls obnoxious, despite its grandeur, and he justifies himself by applying an ethical test which he decides must be the standard for the theater. Since Mr. Winter holds such set opinions regarding morals and ethics, he condemns Ibsen, Shaw, Pinero, Maeterlinck, and Sudermann. He denies the right of the spirit of man to make new demands, to seek new adjustments, to question old institutions. Since change is the very soul of the modern movement, "The Wallet of Time" is largely a brief against the expression of the modern spirit.

Were Mr. Winter's eliminations to take effect, little of the modern drama would remain. He is as determined against the problem play, the thesis play, the unconventional type, as Shaw is his refreshing "Dramatic Opinions" is against the romanticism and sentiment which the veteran critic champions. His adjectives of condemnation are piled thick against "The Second Mrs. Tanqueray," "The Notorious Mrs. Elphinstone," "The Gay Lord Quex," "Magda," "Hedda Gabler," "The Joy of Living," "Iris," and "The Three Daughters of M. Dupont"; he cannot see the social meaning or the technical excellence in them. Because he is not in sympathy with her repertory, he is unable to give proper estimate of Mrs. Patrick Campbell or to measure wholly the individual force of Modjeska, who first

introduced Ibsen into this country. Dialing Brieux on moral grounds, he condemns the intellectual sincerity of Laurence Irving.

His zealotry to prove our modern drama one large cesspool of ignoble thinking and sensual action has made him take unfair advantage of chance remarks uttered by actors themselves intellectually alert and in sympathy with the modern movement. He has, in several instances, made Mrs. Fiske and Mansfield half-hearted in their appreciation of the realistic school. The former has always clearly realized the new forces at work; the latter forsook "Candida" for no other reason than that the character of Marchbanks did not suit his personality; and if he went grudgingly to work on "Peer Gynt," it was because of ill-health rather than lack of sympathy.

What Mr. Winter does not appreciate he either denounces in opprobrious terms or ridicules. "John the Baptist" and "The Sunken Bell" are beneath his contempt; he is bitter against "A Doll's House," "Ghosts" and "Rosmersholm." And when he quotes a passage wherein Maeterlinck gives his interpretation of Ibsen's "Master Builder" he undertakes to be sedately bilious. He sneers at Miss Mary Shaw's efforts at the time of "Mrs. Warren's Profession"—the subject matter of which he deems unfit for the stage. He slays Walter's "The Easiest Way" and Sheldon's "Salvation Nell." He recognizes no spiritual value in Kennedy's "The Servant in the House" because it touches on social regeneration. Plays to him are had when they do not accord with his code of morals or ethics, or when they are identified with an actress who associates herself with the delineation of unconventional rôles.

MR. WINTER is more generous in the bestowal of praise upon the modern player than on the modern play. Marlowe, Sothorn, the late Frank Worthing, Blanche Bates, Mrs. Fiske, and Mrs. Carter, come in for praise; and even among minor players he realizes traditions of the past being upheld. He is lavish when he bestows praise; his appreciation of Worthing is as tender as that of Barrett; his designation of Ada Rehan as eloquent and as discerning as that of Charlotte Cushman. Not in "The Wallet of Time," but in a special biography, he prophesies the increasing greatness of Tyrone Power. Why does he omit mention of the work of James A. Herne, why ignore the invigorating example of Heinrich Conried's policy at the Irving Place Theater? He forestalls such criticism by saying that he is writing another volume.

We need a live intellect to catch the spirit of the modern drama—an intellect invigorating, refreshing. Mario Bono is an Italian journalist who went to London for a few months to study the theater. He saw things as a whole. He saw them brilliantly in the light of social, artistic, and economic activity. He wrote an enlightening book on the English drama. Mr. Winter has been a critic of the theater for nearly half a century and he has seen no further than his prejudices.

*The Wallet of Time: Containing Personal, Biographical, and Critical Reminiscences of the American Theater. By WILLIAM WINTER. Two volumes. Moffat, Yard & Co., New York, 1915.

Finance

By ALBERT W. ATWOOD

Inquiries will be answered as soon as possible, but considerable time is often required to secure reliable information. This magazine does not have the facilities to assist in raising capital for even worthy enterprises.

Bank Stocks in a New Light

TWO great discussions of the day have served to thrust the institution of banking into new prominence. For several years we have heard much of the "Money Trust," which necessitates bankers, and now we have a complete, new Federal system of banks, which alters in radical fashion the status of this business and the relations of banking units one to another.

It cannot be said fairly that any economic question of the day creates more discussion than banking. In theory and practice its every feature is examined with microscopic minuteness. So fascinating a subject is it alike to student and man of affairs that Carter Glass, chairman of the House Committee on Banking and Currency from whose midst sprang the original Owen-Glass bill, has asserted that only two or three men have really qualified as experts on these subjects and still remained sane. Mr. Glass hastened to deny any claim to being an expert. In obviously fantastic and exaggerated language he served to indicate the importance of banking in modern life.

BUT it is curious enough in one sense how little attention has been given to bank stocks from an investment viewpoint. Investment in railroad and several other classes of securities literally has become a business apart from the industries themselves. Investment in these securities has a science and nomenclature all its own. But while every citizen airs his views on banks and the "Money Trust" it is rare to hear the stocks of these concerns mentioned from the investor's point of view as distinct from that of the depositor, borrower and public.

Of Necessity Local

BANK stocks have not declined as much relatively as many other securities in the last few years. But they have fallen not a little, and show higher income yields than formerly. Are they attractive securities to buy in view of this fact, or does the new Federal Reserve Act detract from their worth? These are practical investment questions to be answered as accurately as space allows.

The first fact to insist upon is that a bank must necessarily be judged as a local institution. There are a few monstrosities in New York and Chicago with national influence, but their number is insignificant. There are perhaps thirty thousand banking institutions in this country as compared with a few score in Canada and a few hundred in European countries. Our system is obviously different from others. The new Federal Reserve Act will not change it much except to strengthen it. In buying bank stocks the average investor should usually confine himself to those of institutions local to his own habitation.

Success in banking is more personal perhaps than success in any other business.

Millions of Loving Hands

This morning served Quaker Oats to children. And for 25 years other mothers have done it because of this matchless flavor.

Countless oat foods, in that time, have sought for the children's favor.

But Quaker Oats, all the world around, has won the lovers of oat-meal.

Just because it is made—and has always been made—of the choicest one-third of choice oats.

Made of rich, plump grains, and those only. Made into big, luscious flakes. And made by a process which keeps the full flavor intact.

Puny grains may have equal food value. But never a flavor like Quaker. And oat-meal, to win children, must be delicious.

That's why Quaker Oats won. It has created in millions the love of oats. This energy food, this vim producer, is the most delightful food they know.

Quaker Oats

In a hundred nations Quaker Oats is the choicest oat food known. From all the world over lovers of oats send over the seas to get it.

Here in America, this rare, rich flavor has won millions and millions to Quaker. And soon or late it is bound to win you and yours.

Your grocer always has it.

ness undertaking. J. P. Morgan, the elder, told the Pujo Money Trust committee that character counts most in making loans. This statement has met with derision, but while capable of modification contains an essential truth. The successful banker must make loans to persons who he is sure will repay. This means that the successful banker must first of all be honest, secondly have excellent judgment and common sense coupled with conservatism, and thirdly possess considerable experience. It is all very well to say that banks should aid in upbuilding industry, but while the banker must be broad-minded enough to realize that continued success depends largely upon a liberal attitude toward business enterprises, his first consideration is and always must be, the safety of the money which he lends out and which belongs to his depositors and stockholders. No system of examination can ever make up for personal integrity and judgment on the banker's part. He must possess at least a modicum of the hard-headed, cold-blooded shrewdness of the old-fashioned Yankee horse trader. If he does not, he will be imposed upon by every crank, fool, grifter and spendthrift.

If you know that your local banker comes up to these qualifications then the stock of his institution is likely to be a good investment. A banker serves a given, and generally a pretty small, locality. Therefore he must know its people and its needs. This phase of American money lending has kept bank stocks from being footballs of speculation. A national bank cannot loan on its own stock, and even in large cities bank stocks are often difficult to sell. Country bank stocks have no market at all in large cities. All of which is highly fortunate and desirable. The shares of fiduciary institutions should not be speculative, or the market for them capable of being rigged. They are to be bought solely for investment, not for speculation.

Wherein There Is Safety

SHARES of national and state banks and trust companies differ radically from those of railroads, public utility and industrial companies. To enjoy any confidence whatever, and therefore success, a bank must have a real, tangible, liquid surplus. Good-will, overvalued plant, "water," do not appear in its assets from the very nature of the case. In order to build up a surplus at all a bank cannot pay out its entire earnings in dividends. In 1913 the average earnings of all national banks on combined capital and surplus was 9.06 per cent. whereas dividends were 6.75 per cent. Somewhat similar figures hold for every year since the system was formed.

Bank resources must be invested in cash, readily negotiable securities or loans payable at stipulated intervals. The resources of nearly all other business enterprises are invested in permanent plant, rarely convertible into anything except junk. Thus the value of a share of bank stock is readily determined by the amount of surplus and undivided profits, for the surplus is an ascertainable quantity, which is not generally the case with other forms of business enterprise. Thus bank stock is measured by "book" value, that is, the sum total of capital, if intact, surplus and undivided profits, divided by the number of shares. The true worth of bank stock is consequently more easily and accurately got at than other securities.

A wealth of suggestive and picturesque illustration of these principles is available. From 1829 to 1890 the Chemical Bank of New York built up a surplus of \$6,000,000 beginning with \$4,000. This was done without greatly increasing its capital stock. No wonder the stock sold at \$4,000 a share. The Fifth Avenue Bank of New York has a capital stock of \$100,000, upon which it pays more than 200 per cent. dividends, but its surplus is more than \$2,000,000.

Why Banking Is Profitable

BANKING is a profitable business because in a way it employs other people's money. Defending itself and other New York City institutions against the charge of being too profitable, the National City Bank gathered figures to prove that 24 local banks over a period of five years had made only 1.10 per cent. on their deposits after allowing 3 per cent. interest on the capital, surplus and undivided profits. Although intended to do just the opposite, these figures prove how profitable is the banking business. To earn 5 per cent. on one's own capital and on all the accumulated savings from these earnings, and then one and one quarter per cent. on other people's money is not to be sneered at. It may not be too much, but it is enough to be most inviting.

Last year there were 7,514 national banks, and they made an average of 11.4 per cent. on their capital, which is about the way bank profits have run for many years. Of course there is plenty of competition, but not in all localities. No sound, well-established and aggressive bank was ever killed by competition. Not only do banks make profits from other people's money but they profit largely when many other industries suffer. High labor costs do not affect them, nor does the high cost of raw materials. High living costs make for high interest rates, from which on the whole banks profit. If the cost of living and doing business became so high that men could not live or do business at all, to put the case rather absurdly, then banks would suffer, but any ordinary rise in interest rates means larger bank profits. On the other hand, bank earnings are fairly stable, more so than most industries, the national banks as a whole never having earned less than 6.7 per cent. in half a century.

Bank stocks rarely give large returns on the money of a new investor. Frequently 5 or 4 per cent. is about all they yield. At present, a few of the great, strong New York trust companies return 5 and even 6 per cent. on the investment. But this is an unusual condition. Rich men like to own bank stocks much as they do real estate, not so much for the immediate return but because of the solidity of the investment and the chance of future advance in price. As already explained successful banks add yearly to their surplus, and thus the price of the stock, or the dividends paid upon it, are automatically forced up year by year. This only emphasizes the fact already brought out, that these stocks should be held for a considerable period, never bought for quick speculation or immediate high income yield.

Real Drawbacks

THERE are two serious, theoretical, and sometimes practical, disadvantages incident to bank ownership. There

are 432,920 owners of national bank shares, and every one of them is liable in case of failure to pay over to the receivers the full amount of the par value of their holdings. That is, owners of this class of stock, unlike nearly all others, are doubly liable and can be assessed for 100 per cent. of their holdings. This is also true of many state banks, and will be true of members of the new Federal Reserve system. A small bank in western New York was locked, and innocent old men, widows and whole families were forced to pay a 100 per cent. assessment. Such cases are common enough to make them a warning.

Then, too, no business offers such opportunities for theft or misapplication of funds as banking. "There are few banks in the United States which have not suffered some loss from the dishonesty of an officer or clerk," says Edward Preston Money, former expert bank examiner for the Department of Justice. Most of these losses were small, but now and then a whole community is paralyzed by a big loss. There would be no defalcations if directors always directed. But theft outright is a small factor as compared with unwise or dishonorable banking. The principal cause of this trouble is thus described by William Barrett Ridgely, former Controller of the Currency:

"The practically universal rule is that all failures are due to excess loans to one interest or group of interests, generally owned or controlled by the officers of the bank itself."

THE safe bank of course is the one that loans to many diverse enterprises, and whose directors and officers do not use it merely to further their own outside propositions. Since the national banking system began in 1865, 506 of the 10,457 banks started have gone into receivers' hands. Total assessments upon stockholders up to October 31, 1912, have been \$42,065,290, although stockholders were able to pay only \$20,041,001, or 47.8 per cent. On the average, they were assessed 38.5 per cent. of their holdings. Dividend records are published only since 1870. The total paid up to October 31, 1912, was \$4,577,116,551, and there was earned \$3,250,242,044. The ratio of assessments to dividends and earnings is thus very small.

Except in panic years bank failures are exceedingly few, and if there were no panics the loss through ownership of bank shares would be so small, relatively speaking, as to be negligible. Under the Federal Reserve system panic failures in a large measure should be prevented. A few of the great New York City banks may be slightly less profitable under the new law, although on this point there is only guesswork. Other banks will lose nothing, and for an investment, extremely small in itself, will receive protection heretofore unknown in this country.

Not only are bank shares relatively cheap at this time, but they promise to be much safer in the future than in the past. The new law cannot prevent dishonesty or dishonest. Even with its protection no man or woman should buy a single share of bank stock unless convinced that the managers of the concern are men of unimpeachable integrity, and ordinary common sense, experience and judgment. It takes dishonest and foolish railroad directors and officers a number of years to wreck a railroad, and even then they leave all the road bed behind. Few bank managers leave nothing behind, and it takes them often only a year to do it.

What They Think of Us

Baton Rouge (La.) State Times

A notable series of articles is now running in HARPER'S WEEKLY from the pen of Louis D. Brandeis, the Boston attorney and economist. . . . The articles have been interesting and timely, and have been an important contributing factor in the popular approval which the currency legislation has received. It may be remarked in passing that the new HARPER'S, under Norman Hapgood, is one of the most forceful, sanely progressive of American publications.

San Antonio (Texas) Light

Hark! Do you hear that murmur from the East, like the echo of a vast roaring? That is Louis Brandeis, Sam Untermyer, Old Doctor Bryan, Norman Hapgood and the only Tom-tom Lawson, each explaining why he only is responsible for the Morgan partners withdrawing from 47 directorates, and hailing the incident as proof positive that he has broken up the "money trust."

Fl. Worth (Texas) Telegram

HARPER'S WEEKLY, under Norman Hapgood, pants continually for the public weal and spits fire at the money trust in every issue.

To guard against further deplorable blunders on the part of the supreme court, the government should make some arrangement under which the public printer would print and place before the judges all the decisions of Brandeis as fast as he releases them. As an extraordinary precaution against accidents and civic disasters, perhaps the government should also employ a dependable mind-reader to follow Brandeis around and record such throbs and spurts of compelling wisdom as must be always churning around in his brain, but which he neglects or refuses to make public.

Fl. Worth (Texas) Telegram

Elbert Hubbard is something of a chimera chaser himself, and he knows a real wilfipus-wallopus the moment he sees one. Some time ago, in a little journey to homes of great humbugs, Elbert turned his distinguished consideration on "Briny Louie Brandeis," the Boston Wonder, and drew one of his most slashing pictures of a most slashing subject. Louie is now trying to live up to the Cubist pen-picture by Hubbard and the great expectations of Norman Hapgood, another famous conservator of civilizations and scape-pipe of condensed civic righteousness. To fill this very difficult and highly skill-luggerish rôle, Louie must fairly set the money-trust woods afire and chase out a given number of adult chimeras, or miss his regular morning wallow in magazine glory and maybe his pay envelope, also—and he knows it. Therefore, as the Pike County, Missouri, poet said of the winter winds in bleak Kansas, Louie is "Humping of himself, a-tryin' for to blow." But even a Bostonian of the largest intellectual caliber—a man of brain so large and ponderous that a derrick is required to lift his head when he wishes to rise in the morning—may let his zeal overreach his discretion when he throws his genius in high gear and slaps on the uttermost unit of propulsive energy.

Reverend Mitchell Bronk, Pastor Second Baptist Church, Troy, N. Y.

I think that HARPER'S WEEKLY under your direction has been giving us a whole

lot of fine things, but Lincoln Steffens' dissection of the up-to-date American college in last week's issue seems to me particularly, outstandingly good.

C. P. J. Mooney, Managing Editor, The Memphis (Tenn.) Commercial Appeal
Your magazine is furnishing plenty of ideas for busy editorial writers.

The Tampa (Fla.) Morning Tribune

"Just before I commit suicide," is a favorite of Mrs. Harry Floyd, the lady destined to be the first woman governor of Florida. (I will be the power behind the throne, I think—but you know!)

If Mrs. Harry commits hara-kiri, I will feel rather depressed for a few days. I am sure. . . . I am much reconciled to the idea of Mrs. Harry's hara-kiri by two thoughts: 1. Emerson's quotation that when the half-gods go, the gods arrive; and 2. The new Norman Hapgood HARPER'S WEEKLY. . . . I have been reading the old HARPER'S WEEKLY for fifteen years and when Hapgood bought it, I wept and would not be consoled. Something precious had passed away! Something priceless was dead! —But the half-gods have gone and the gods have arrived! The new HARPER'S is better than the old, suggesting the old tragical question that has occurred to all of us—did we not marry too young?

Edward A. Platt, Marine Barracks, Navy Yard, Norfolk (Va.)

As a reader of HARPER'S publications for forty years, I, with many other old readers who have expressed similar opinions, had about given up hope as to the future of the WEEKLY. HARPER'S WEEKLY under the editorial régime of George William Curtis was a mighty force for good. . . . Again we have a clean-cut, modern, progressive thinker in the chair, who, while not a master of so facile a pen as Curtis, is, nevertheless, an efficient exponent of the best thought and principles of the times.

Concord (N. H.) Monitor

Norman Hapgood more than maintains the quality of his HARPER'S WEEKLY contributors, the last number of the old year listing on its title page Louis Brandeis, T. P. O'Connor, Elizabeth Robins, Sydney Brooks, Wallace Irwin, Keith Boyce, Oliver Herford, Berton Brasley, James Montgomery Flagg, John Sloan, Everett Shinn and Wallace Morgan, among others.

Montgomery (Ala.) Advertiser

The new HARPER'S WEEKLY is about a congenial task and in an appropriate rôle, in justifying criminal libel and defending libellers. If the WEEKLY were held down to the truth in muckraking men and institutions, its activities would be painfully circumscribed. A chief of the muckrakers, it is grieved, when whose characters have been assailed by other muckrakers, appeal to the law for redress for assaults made upon their good name.

Chicago (Ill.) News

HARPER'S WEEKLY commends the Vrooman candidacy and asks Roger C. Sullivan where he got his gas stock, to whom he sold it and where his money now is.

Dr. J. B. Crawford, Literary Editor, Texas Christian Advocate, Dallas, Texas

You have done much for HARPER'S WEEKLY in an editorial and literary way, but you have horrified me and I doubt not multitudes of your friends and readers with the atrocious illustrations you carry in the WEEKLY from week to week. The climax was reached with the caricature of President Wilson in your issue of this date, which has just come to my desk. I wonder if there is any way for your readers to be protected from this aboriginal and aboriginal art. Nothing like it, I think, has ever appeared in any high-class weekly publication. It is grotesque, uncanny, untrue, inartistic and murderous. I would like to continue reading your publication, but I do not think that I can unless in some way you can veil these flags and other libelous artistic productions. Can you help me?

John C. Wright, "Poet of the Lakes," Harbor Springs (Mich.)

Allow me to add my testimony to the many others already published, to the effect that HARPER'S WEEKLY under its new editorial management has made such a marked improvement that it may now truly be called "America's foremost weekly."

Mary Johnston, Warm Springs (Va.)

May I say how valuable to the whole Woman Movement are the papers you are publishing in HARPER'S WEEKLY?

James McCarthy, Hudson Falls (N. Y.)

When I first read your courageous and outspoken editorials in behalf of the industrious producers of real wealth of the nation, and in bold defiance of the money power, I said: "I wonder if he is aware that he will be punished."

After having seen so many brave men driven from the battlefield, I can earnestly hope and pray that your financial support will be such that, although the money power may persuade the advertisers to withdraw from your pages, and otherwise attempt to drive you back from the battlefield where you are struggling, they will be doomed to defeat.

David Churchill, Northampton (Mass.)

My brother brought home your paper today with the remark: "I'm going to buy HARPER'S WEEKLY every week for the rest of my life, if I can afford it."

His hatred of current magazines is such an admitted thing in the family that we were amazed.

"Anything special?" I asked him.
"It's all good," he said, "but this article of Yeats on John Sloan is perhaps the most unusual."

[Alfred Vance Churchill is a painter, and instructor in art at Smith College. Ed. HARPER'S WEEKLY.]

W. G. Eggleston, Oakland (Cal.)

It is very fine for the WEEKLY to publish the really constructive news articles of Honor Willis. The article on Dr. Alsberg is especially good, not only because it introduces an unusually efficient man to the public, but also because it emphasizes without shop-talk the importance of the public health functions of our government. The article is timely, too, because of the vast amount of misinformation now radiating from the Medical Freed-on Association, or whatever it is called.

ONE OF THE GREATEST BUSINESS MEN IN LITERATURE

HARPER'S WEEKLY

Advocate of Civilization

Edited by NORMAN HAPGOOD

Vol. LVIII
No. 691

Week ending Saturday, February 7, 1914

[10 Cents a Copy
\$5.00 a Year]

A Leader

THE reception given to Woodrow Wilson's trust policy by the business world is one of the most significant and interesting developments of recent history. A business friend of ours was talking about public affairs the other day. He had voted for Mr. Taft and had been generally distrustful of Mr. Wilson. "He makes a noise like a real man," he said. "I think he will stand among our presidents next to Washington and Lincoln."

As the business world has made up its mind to follow him, so has Congress. When he first threw away precedent and read his own message, he was received with a cold and hostile silence. The second time he appeared, there was scattered applause. The third time he was received with enthusiasm. He had won, partly because his ideas were right and partly because he had shown the ability to gain victories. The public likes a winner, and the President who is able to do things inspires the same loyalty in Representatives and Senators and the rest of us that victorious generals or champion baseball players inspire. Happily Mr. Wilson gives every proof of deserving the immense power that is now lodged in his hands. He is not only the real leader in Washington; he is the one essential leader. If he should be taken away tomorrow, and succeeded by the well-meaning Vice-President, progress in legislation for the present would be at an end.

It is a masterful gift to combine courtesy and a reassuring manner with firmness and a drastic programme, as the President did in his Trust message. He is a radical; conservatives have often called him an extreme radical; and yet the time has come when he frightens nobody. The time has come when those ideas which we all feel to be right can be put into practice without being regarded by the business world as so much dynamite. Rapid indeed has been the progress since the Fourth of March: the tariff system initiated, that we have been confronting with fear for a generation; our old currency system overthrown and a more democratic one introduced; the whole nature of private monopoly facing a change, and almost no one found to doubt that the President's outline of this change will be carried through. Through these rapid steps ahead, much glory must come to the man who holds the most responsible office. Of course, the underlying causes can be traced far back. They can be traced to the insurgent Republicans, to Roosevelt, to La Follette, to Bryan, to the Populists. They can be traced across the ocean to successful experiments in many different lands. They can be traced back to the invention of the

printing press and the harnessing of steam. But, however much we may believe that progress is inevitable, we must realize also that it is greater or less in degree according to the leadership of the moment, and that those who have properly gain many and many an unjust victory over those who have not. Therefore, when those who sympathize with the movement toward fairness of spirit, brotherhood, justice, the essentials of the Christian religion, find themselves with the advantage of so competent a leader, new energy is given to the effort to do good, and new hope is given to those who struggle against many obstacles.

The Sherman Law

"UNSCRAMBLING" proceeds apace. Each week brings news that another important merger is to be dissolved, and the work of a decade undone. First it was the Telephone-Western Union; then the New Haven-Boston & Maine with numerous steamship and trolley subsidiaries; then the Atlantic Coast Line-Louisville & Nashville; meanwhile J. P. Morgan & Co. declare Interlocking Directorates "things inconvenient." An attorney-general determined to enforce the Sherman Law is a mighty "discourager of hesitancy." When it is strengthened and supplemented as the President recommends, the disintegration of the Money Trust will be in sight.

Naturally

THE New York *Sun* opposes the President's policy on Trusts. Why not? It opposed Grover Cleveland and supported Tammany Hall. There must be one newspaper in every great metropolis supported by illicit money.

Machinery

IN a few short years the bigger forms of music have been put into millions of homes by a mechanical invention, making almost as vast a human difference in that field as the invention of the printing press made in literature. "But," you say, "long before the talking machine, or even the piano, was invented, the people had their popular songs and other forms of simple music." Yes, and also before the printing press they had their oral legends and their oral ballads, but the printing press brought the great field of thought in words to the millions, and likewise the great fields of thinking in music have been brought to the masses by the triumphs of the last few years. Whomever else you may criticise, take off your hat, O you Believer in Progress, to the inventor and to the man of science.

Action

THE nations are a series of short experiments.

A nation may disintegrate inside of a century. It may flower inside of thirty years. It would be possible that a Middle-Western town like Cedar Rapids should tomorrow begin to put forth a group of heroes, who should overrun the earth with the charm and vigor of their ideas. A sudden quickening, mind catching flame from mind, and once again you would have the miracle of Plato's Athens, of Elizabeth's London.

If now and again some man had not decided to stop drifting and take hold of things and re-shape them, there would have been no discovery, no invention, no art. He might have said, as many like to say:—"Why not let my big idea rest quietly? There is time enough in the long future. Why be in a hurry? Why so hot, little man? There is quiet sleep in the churchyard for the men that have gone before, and soon I too will be there." But, prevailing, he said:—

"Now is the time, and the place is here, to bring my idea to action. I insist on being heard. Here is the plan. We will not postpone it till next century. We will try it now."

It is our business to make our ideas prevail. We are not to go silent, nor to retire from activity, believing that our nation is long-lived, and that our thought has an eternity in which to come to pass. We must speak up. We must strike early and strike hard. The time is short. It is right to wish to get something done in our own life-time.

Why Is It?

SOMETIMES it seems as if every person who was lacking in initiative, special ability or industry desired to be either a writer, an actor or an artist. The most agreeable way for a lazy person to make a living is to express his own opinions, emotions, and impressions.

The Stenographer

A WOMAN of much quiet charm and culture, who earns her living by swift and accurate stenography, has sent us a letter in which she points out the frivolous treatment of the stenographer in popular literature. As to her appearance, see O. Henry's "The Romance of a Busy Broker."

"A high rolled fringe of golden hair under a nodding canopy of velvet and ostrich tips, an imitation sealskin sack and a string of beads as large as hickory nuts, ending near the floor with a silver heart."

As to her mentality, consult "Short Story Writing" by Professor Pitkin of Columbia University:

"The gum-chewing stenographer, who devours the literary offspring of Mr. Robert Chambers, may have her difficulties with this."

Her conversation is described in a story in *Red Book* for November:

"Believe me, when it comes to the real thing, the blown-in-the-bottle kind, our Bill's got the best of 'em heat to a fade-away."

Her equipment may be found described in any of the alleged comic papers:

"Have you done anything for spelling reform? Yes, I fired my blonde stenographer."

Why is she so treated? We all know the facts. Among those earning their living in this way happen to be George Washington's great-grandniece, a granddaughter of a Governor of South Carolina, a great-granddaughter of Laurens of the first Continental Congress, and thousands of others of cultivated ancestry. Many are college graduates. The truth is, the world loves familiar jokes and familiar effects, and if one stereotyped trick gets started and proves amusing to the average mind, it is hard to stop.

The Subjection of Man

THERE is a charming bit on Feminism in Spenser's "Faery Queen." Sir Artegal fights with the Amazon and becomes subject to her power. She clothes him in women's attire, and confines him with other defeated knights.

Such is the craftie of womenkynd,
When they have shaken off the shamefast band,
With which wise nature did them strongly bynd
To obey the beests of man's well-ruling hand,
That then all rule and reason they withstand
To purchase a licentious libertie;
But vertuous women wisely understand
That they were borne to base humilitie,
Unless the heavens them lift to lawfull sovraintie.

She humbles him,

Aod in his haod a distaffe to him gave,
That he thereon should spin both flax and tow;
A sordid office for a mind so brave:
So hard it is to be a woman's slave!

Britomart, victorious queen of women, comes along, conquers the Amazon, and frees the knights. Then Britomart

Changing all that form of common weale,
The liberty of women did repeale,
Which they had long usurpt; and them restoring
To men's subjection, did true justice deale:
That they all, as a goddesse her adoring,
Her wisdom did admire, and harkened to her loring.

The word-music and word-pictures of Spenser have such charm that we willingly run what risk there is of setting the Feminist Movement back by putting these arguments into the hands of the Antis. They are free to use them, without credit, with whatever intelligence they may possess.

Newspapers and the Bible

WHEN some of our editorial friends around the country were gunning for us, they spoke scornfully because the editor of this erudite WEEKLY said "you are a man who do" instead of "a man who does," we came back at them with quotations from Carlisle, Longfellow and Macaulay. As some have not been satisfied with these writers, we now offer them 11 Chronicles xx-7:

"Art thou not our God, who didst drive out the inhabitants of this land before thy people Israel, and gavest it to the seed of Abraham thy friend forever?"

Probably most of them will admit that the King James version of the Bible is written in fairly good English. The *Brooklyn Eagle* calls our construction "Damaged Goods in English." It observes that the third person is closer to the pronoun and hence the jar to the ear when the verb comes along in the second person. However, it admits that the personal pronoun has in this instance for antecedent a choice of subjects, one in the second and one in the third person. It seems that we are free to use our own ear and find out whether it is jarred or not. As a matter of fact, it is not a matter of ear so much as of visual imagination that caused us to choose the form that raises the image of the person spoken to instead of the indistinct image of a man in general, and when it comes to ear and visual imagination the Bible, Carlyle, Macaulay and Longfellow can probably stagger along.

Mobile and Tampa

THE rivalry of the Gulf ports is becoming acute, for the benefits to be derived from the opening of the Panama Canal. A protest has been received by us from the Tampa Board of Trade against a recent statement which said of Mobile, "It is also nearest the Canal among the more important ports of the Gulf." The protest goes on to state that Mobile is 1,358 miles from the Panama Canal, Pensacola 1,340, and Tampa 1,216. Tampa is undoubtedly one of the most thriving cities of the Gulf, as well as one of the most beautiful. It is the center of a tremendous cigar industry with thousands of native Cubans and latterly of American workers in a high-wage industry. Still our language describing Mobile was exact. The more important ports of the Gulf with reference to the Panama Canal are New Orleans, Galveston and Mobile. The next in importance, would be Tampa, Pensacola and Key West, all Florida cities.

The correspondent from Tampa shows that the duties collected at the Port of Tampa amounted to more than one million dollars for the fiscal year ending June 30, 1913, Tampa standing eleventh in the list of eighteen ports in which more than one million dollars were collected, Mobile not being mentioned. The greater part of the imports into Mobile are free imports, while the greater part of the imports into Tampa are dutiable, mainly because of its large importation of Havana tobacco for its cigar industry. The exports from Mobile are more than six times as great as those of Tampa. Doubtless all the Ports of the Gulf will receive a great increase in commerce from the opening of new markets through the Panama Canal route. Mobile, with its direct connection by water and rail with the Birmingham steel and coal district, will be in a position to make a specially rapid advance. What any port will do, however, depends much upon the spirit of thrift and enterprise among its people. Jacksonville, on the Atlantic side of Florida, has recently begun preparations for the opening of the Canal with the voting of a large bond issue for the construction of docks under municipal control. The same spirit of enterprise and of outlook toward the future is conspicuous among the people of Tampa.

Race Mixtures

DR. ELIOT, of Harvard, spoke recently of the changes immigration has caused. In his youth Dr. Eliot's community was homogeneous. His father's servants, the men who worked his farm, the mechanics, all the servants at Harvard, were Americans, descended from pilgrim stock. But those puritans, let us remember, were themselves not at all pure ethnically. There has probably never been since Homer, nor for many thousands of years before him, a pure race of men. The English who supplanted the aboriginal Indians were by no means a pure type; nor were the Dutch, nor the French, nor the Spaniards. Take the Frenchman of to-day. In the North are the descendants of the Belgae, the Walloons and other Kymri; in the East those of Germans and Burgundians; in the West Normans; in the center Celts, who in the epoch when their name arose consisted of foreigners of various origins and of the aborigines; in the South, ancient Aquitanians and Basques: Professor Boas of Columbia has found that where the ratio of race-intermingling is as one to nine there will be, among the more numerous population, only eighteen per thousand in the fourth generation of pure blood; and where two types intermarry with equal freedom, less than one person in ten thousand will be of pure descent—that is, within a century the process of intermixture should be complete.

Erlanger

IN the old days before the Shuberts broke away from the syndicate, Klaw & Erlanger, and principally Abe Erlanger, used to hold the power of life and death over nearly all plays and actors in America. Since the competition between them and the Shuberts, which had so healthy an effect on the American drama, has been diminished or ended, there is much danger of a return to the old oppression. The firm which has the power to route plays has the power to destroy them. Even the difference between taking an interest in giving the play a favorable routing and not caring anything about it one way or the other is a difference that may well be vital. The way that Klaw & Erlanger have been treating the Shakespearean performances this year is a good example of indifference, if not of hostility. They had Faversham and his two new Shakespearean productions, Margaret Anglin, with her four Shakespearean productions, and Benson, with his various Shakespearean productions, all playing in Toronto and neighboring Canadian cities at the same time, so that the market was killed, where they might all have been successful if they had been spread along as they would have been if Klaw & Erlanger had had any money in them. The same thing happened to them when they began to come down to New York State. Syracuse, for instance, a small city, would get these three in rapid succession, and of course no one of them would do well. Sothorn and Marlowe and Robert Mantell in the West have had a less drastic but somewhat similar experience. The only way to have a chance, under the present system, is to put out a play that is pleasing to Mr. Erlanger, and then give him a pecuniary interest in it.

Colonel Roosevelt and party at Nova Galicia Colony

What the South Americans Think of Roosevelt

By TRAVIS B. WELLS

Buenos Aires, Argentine Republic

December 10, 1913

THEODORE ROOSEVELT is now well on his way into the interior of Brazil. The last official escort will, in a few days turn back and leave him free to his own thoughts, to act without having to first consider whether he is dressed properly for the occasion, to speak unshackled by the restraint of propriety, and to sustain life without endangering digestion.

After two months of Lucullan feasting, being whirled from course to course, on the exhaustive and exhausting menu in crack warships, speedy trains de luxe, high-gear automobiles and thoroughbred horses, being allowed occasionally to speak publicly on the Monroe Doctrine, and from time to time having to pause and listen to a few eulogistic and personal remarks, always hemmed about by officiousness, he is now deposited with his scientific and hunting kit and followers on the watershed that separates the civilization of South America from the semi-barbarous, half-known regions where khaki and canned goods are good form.

HE will emerge from the Brazilian forests near Mañaos on the Amazon river next March and reach the United States a few weeks later. If the tropical bronze color and the full beard which most explorers into uncivilized countries acquire, were sufficient disguise to insure his travelling incognito, it would be interesting for Colonel Roosevelt to return over the route he has just traversed and find out for himself what he has accomplished by his visit to Brazil, the Argentine and Chili.

The people of each of these three republics have openly expressed a desire to know, after they had speeded him on to the next, what their royally entertained guest really thought about them. Not once during the weeks that he has been the recipient of the hospitality of these nations, has a word of criticism slipped from his lips either in his public utterances or in private conversations with those designated by the governments and societies to do the honors.

The Brazilians and Argentines and Chilians are too broad-minded and too well versed in the history and present status of other nations not to realize that they have much to learn, to mend and to improve upon. They know that at least some of their imperfections must have come to the attention of their guest, although because of the constant round of inspections from Boy Scouts to fat cattle, of presentations from huts to hooded horses, and of breakfasts, banquets and other forms of gaudy hospitality, he had much less time than the ordinary tourist has, to study the actual conditions of the people he was invited to show new and better paths to greater national achievement.

There is a feeling of disappointment, then, as Colonel Roosevelt disappears into the little trodden wilds of the

heart of South America that the man whose personality appealed to them so strongly, and whose political astuteness and administrative genius is acknowledged to be so great in his own country, should not have taken advantage of the opportunity to apply his powers of political discernment and exposition to the questions that are of moment to the great republics of the Southern Hemisphere.

IT is fairly reasonable to assume that Colonel Roosevelt has made a deeper impression on the people of South America than have any of the "gringos" who have preceded him. Some of the reasons for this are obvious, others probably quite different than would be given by the ex-president himself, and not a few depend on what he may do, either in his writings or by other methods, upon his return to the United States.

When the people of Rio de Janeiro, Buenos Aires and Santiago, and of all the broad, beautiful, productive lands that these capitals represent, refer to their reception of Colonel Roosevelt, they proudly declare that they outdid themselves in comparison with the entertainment that was accorded to William Jennings Bryan, Elihu Root, Robert Bacon, or any of the lesser lights of the American firmament who have been their guests. It is flattering to the latest tourist, if they found new and more extravagant ways in which to show their appreciation of the honor they conceived their visitors conferred on them.

ALL accounts agree that Bryan and Root and Bacon have cause to remember for the rest of their lives the overwhelming hospitality of their hosts, which, notwithstanding its opulence and unsparing persistence, is always sincere and flawless. From the time Colonel Roosevelt first stepped on Brazilian soil at Bahia, 4,000 miles away from New York, throughout the entire journey of 2,000 miles in Brazil and a similar amount in the Argentine, with 500 miles in Chili and smaller trips in Uruguay and Paraguay, he was accorded official and social acclaim, and whenever the undecorated and unlisted citizens were given an opportunity, they disclosed a rather intimate and appreciative knowledge of the more strenuous characteristics of their guest, and acted much after the manner of the Bull Moose's following in the States.

THEY are still telling a story here illustrating the impression which Mr. Bryan made when he journeyed to the Land of Great Opportunities.

A member of the reception committee had heard wonderful accounts of the career of the Peerless One, from Cross of Gold days down. His duties kept him at the side of the distinguished visitor at receptions, reviews, breakfasts or banquets, and he watched ceaselessly for the words of wisdom, the scintillating aphorisms and

Roosevelt at Nova Galicia Townsite, showing church and colonist house

statesmanlike utterances that he had been led to expect. Toward the end of the program was scheduled an inspection of the Fat Stock Show.

"Now," said the curious one, "I shall certainly find out whether Mr. Bryan's claims to greatness are well-founded. He says he knows all about farming among other things. If he does, he will prove it while we are looking at the cattle."

Short horns, Herefords and Polled Angus of pure breed and perfect conformation were led slowly past the Sage of Lincoln, but not a word of praise escaped his lips. At last, near the end of the procession, stalked past a steer that resembled the Texas brand.

"What a magnificent pair of horns!" was the perfervid utterance of the visitor. That settled Mr. Bryan's standing in a country in which the chief source of prosperity is the cattle industry and where nine out of ten calves are dehorned before they get a chance to do injury to the meat or hide on their fellows' flanks.

THEODORE ROOSEVELT chose to make the Monroe Doctrine the theme of his discourses to the people of South America. He began to interpret its meaning at the informal reception tendered him by the Government of Bahia where he first stepped on Brazilian soil, and it was the subject of his last formal address before he departed into the wilderness of central South America. Most of Colonel Roosevelt's speeches were written before he left the United States, translations of them made into Portuguese and Spanish, and copies printed for distribution to his audiences and the newspapers. In these prepared addresses Colonel Roosevelt laid the foundation of his arguments on the new Monroe Doctrine, and the text of this took up the larger part of each.

But the Brazilians, Argentines and Chileans do not want the Monroe Doctrine at all. They even do not care to listen to a continuous course of lectures on it.

"Why does he repeat here the speeches he made in the Argentine and Brazil?" was the comment of one of the foremost men of Chili. "Root gave us a

variety of topics and much food for thought in a scholarly way, but Roosevelt seems to think we never heard of such things as Magna Charta and the Bill of Rights. We might listen attentively to a learned disquisition on the Monroe Doctrine but the reiteration that it has been modified, or even that it exists at all, is not what we want."

This attitude of the people of the three chief republics of South America may, perhaps, be better understood by referring to the long hatched project of what is popularly called the "A. B. C." alliance, between Argentine, Brazil and Chili, for purposes of mutual protection and commercial achievement. This proposed compact might easily long ago have become an accomplished fact, if it had not been for the ever present feeling of distrust and envy which dominates all international affairs between these nations. Collectively and separately they regard the United States as they do each other. The feeling towards us is akin to that of the youth who has been through school, started in business, is moderately successful, and cocksure of himself, and who no longer wants any parental oversight or exercise of authority.

To give another illustration of this. In one of his speeches, Colonel Roosevelt said with great earnestness:

"It is just as necessary for nations to act according to the dictates of righteousness as it is for an individual; otherwise those nations, like the individual, will be lost in this world and the next!"

One of his hearers remarked:

"Well, if nations are going to heaven, too, it seems that according to Mr. Roosevelt we must have a Monroe Doctrine in the next world as well as this."

Fortunate circumstances, governmental control and the natural politeness of the Latins toward a guest prevented serious disturbances upon the entrance of Colonel Roosevelt into the Argentine and Chili by the "student bodies" of these two republics, as a protest against his attempt to make a like issue out of the Monroe Doctrine.

How then did Colonel Roosevelt, preaching an unpopular doctrine, get

such a hold on the people of the governing and

A little talk on colonization by the Brazil Railway Company colonization representatives

Roosevelt inspecting the farm lands at Nova Galicia

subservient classes, and what do they expect will result from his visit?

"Why did you give Colonel Roosevelt such a 'hully' time?" a leading Brazilian banker was asked.

"Well, you see we are so far away from the rest of the world," he replied, "that we are glad to have any distinguished man visit us—and then," he added, with the Latin-American's appreciation of the strenuous life, "you see Teddy was the Colonel of the Rough Riders."

"T. R.'s" active personality caught the fancy of the tremendous crowd which greeted him at the Y. M. C. A. reception at Rio de Janeiro. It was the hero of San Juan hill, who packed Florida, the street in Buenos Aires that is at once the Fifth Avenue and Nassau street of the Argentine capital, from end to end with a dense mass of cheering humanity on Roosevelt's arrival. It was the Colonel of the Rough Riders who was greeted vociferously by the martial Chilians.

THE most spectacular demonstration of all was in the beautiful Colon Opera House in Buenos Aires when, at the banquet in his honor, Colonel Roosevelt strode down to the center of the immense banquet hall made by throwing the stage and auditorium into one, and jumped up on a table in the midst of the diners so that he might be heard by all. The enjoyment of this act was greatly enhanced for the delighted Argentines because a persistent admirer of Roosevelt's had thrown his arms about the Colonel just as he was about to leap upon the table, and it took a well directed "shove" of "T. R.'s" fist to free him from his too-well meaning friend. The display of teeth that emphasized the thrust endeared Roosevelt to everybody present. They had seen what had so often been pictured to them.

It was in this same opera house on the occasion of Colonel Roosevelt's first address, when the three tiers of boxes, as well as the seats on the main floor, were filled with the most representative men and the most beautiful women of the Argentine, that Roosevelt, the man, was given another instance of the appreciation of his strenuous character.

In his address he said:

"My ideal of a government is a strong government with a strong man to administer it, and a strong people to make the strong man go as they wish him to go. You don't get effective work for the nation unless you get a strong man for the strong nation, but the nation has to keep absolute control so as to see that the work done is done for the people and not against them."

Delivered with all the emphasis of his nature, this sentence made the biggest hit of anything Roosevelt said during his entire trip through South America.

The Latin-Americans whom Roosevelt has visited and come to know would be the last to demand a return of any kind for the hospitality they have extended

in such a lavish way to him. But they hope that as the result of his tour through the most important of the South American republics the people of the United States will, through his writings and by any other means he may adopt, become better acquainted with their character, their resources and their achievements. The benefits derived from his visit by the people here will be worked out in the United States, and they will be of the commercial and diplomatic order rather than political. There will be no political upheavals here as the result of Colonel Roosevelt's appearance. He gave to those who are not enfranchised, who are living under conditions that are harder and unlike any existing in the United States, no basis for a demand for a betterment of themselves and their dependents. He did not come in contact with the strata below that of the official and educated ones, and even if he had what he said would not have been understood by them.

Manhood suffrage does not exist in these countries, but the franchise is limited by property and educational qualifications. From the standpoint of an American citizen there is much to be desired, but there will be no upheavals due to Colonel Roosevelt. The days of revolution in the three great republics of South America are over. The governments are stable and strong and the leading men of these countries are wise and broad-minded. They know that the time will come when they will have to extend the rights of citizenship, and they will do so without question when it is proved that those who now have no part in the government are qualified for it.

What is hoped for is that Mr. Roosevelt will tell the people of the United States that the Brazilians, the Argentines and the Chilians are friendly to them.

Roosevelt in front of the Administration House

THE Latin-Americans want the people of the United States to treat them with the equality in which they are held by the English and Germans and French. They do not understand why the Americans discriminate against them in business. They would like to have Colonel Roosevelt carry back to his countrymen a rosene view of their characters, resources and activities. They recognized in him a great molder of public opinion and they trust that his inspection of them has proved to him the soundness of their claims to constructive statesmanship of a high order, to commercial ability and rectitude, and to educational, artistic and racial qualities, entitling them to equal standing with the other great nations of the world.

The jealousy of the United States that has existed heretofore and which has resulted in more or less friction between the northern republic and its three big southern neighbors has its foundation in the failure of Americans to recognize what Europeans have long ago conceded. If Colonel Roosevelt can effectively bring about a better understanding between his countrymen and the Brazilians, Argentines and Chilians, he will accomplish the laudable purpose for which he was invited to visit them.

STREET ARAB. (The Persian Kitten)

I WAS painfully misquoted on this page last week. I did not say "It is a poor fur that won't rub both ways—" What I did say was "It's a poor fur that will rub both ways."

All Furbearing people are aware how unpleasant it is to be rubbed against the nap.

I once overheard a relative of the playwright Ibsen (Ibsen was said to resemble me in a hirsute way) say that the great man was apt to be excessively cross when rubbed the wrong way. To look at the late Mr. Ibsen's picture one would find it hard to decide which was the right way to rub his fur.

I don't believe he knew himself.

Perhaps there wasn't any right way. That would account for Mr. Ibsen's plays, which I am told belong to the Angora school. That is to say they are plays written by long-haired people about long-haired people for long-haired people.

ONE cannot be too careful what one says about actors—especially actresses. Everybody knows the proverb, "Actresses will happen in the best regulated families." The truth of this epigram has been brought home to me in an unexpected way.

Only a few weeks ago I stated in this paper that none of my family had ever

been on the stage. Imagine my surprise and mortification to hear the very next day that a Persian relative of mine was being starred in a New York production.

The play had a special interest for me as it was about a Persian named Omar who wrote a human version of my Rubaiyat of a Persian Kitten.

The Angora Kitten (who had quite the best part in the piece) was the only real Persian in a company who, according to the program, were all natives of Persia. [these Poor Humans—how easily they are imposed upon!] I am told that my relative's performance was beyond criticism and her voice, which had been trained in the latest method of the New School of acting, was perfectly inaudible.

I wonder why the critics (who all agreed that the scenic production, by Mr. Wilfred Buckland, was the most perfect thing that has been done since Mr. Buckland left Belasco) failed to mention my relative, though a very amateurish "equine wonder" who never really came on the stage at all (practically a super), was not only mentioned in all the papers but had a line all to herself among the lingerie announcements and shoe advertisements in the program, stating that she was a genuine Arab; street Arabs would be nearer the truth!

And now when I am getting used to having a relative on the stage and beginning to believe (from hearing it so often) that a kitten may lend just as many perfectly pure lives on the stage as she does off, I received a letter from our family legal adviser that revives all my forebodings.

Here is the letter:

January fifteenth

My dear Hafiz:

If your Kitten relative now playing in Omar the Tentmaker is under age you may invoke the aid of the Gerry Society. If not, your only hope is to bring a criminal action for disorderly conduct.

According to the present law of New York State all actors are disorderly persons. See Title VII of the Code of Criminal Procedure, under the head of "Proceedings Respecting Disorderly Persons."

Section 899, who are Disorderly Persons?

The following are disorderly persons. Jugglers, common showmen and mountebanks, who exhibit or perform for profit, paid shows, wire or rope dancers or other idle shows, acts or feats.

Sincerely yours,
GEORGE EDWIN JOSEPH.

A Progressive at Large

By NEITH BOYCE

THIS is a study of George Lansbury, friend of all kinds of people, champion of all progressive causes, forming with his efficient methods of publicity and his loyal following a most effective flying battalion which he uses in the interests of any liberal cause that needs his help

LANSBURY unites two qualities which are not often found together. He is a practical philosopher—a man of action and also of vision—a fighting idealist and—O marvel!—a tolerant one. It is perhaps this rare combination that makes his personality and his mind so deeply pleasing. A radical with humor—an idealist with common sense—a revolutionist who is not a fanatic, who has not an infallible panacea which is to cure all the ills of society if only firmly applied—a man who runs straight without hindlers—a man who has spent his life on the firing-line and yet has a broad grasp of essential principle—truly this is no common spectacle.

Lansbury is essentially English, traditionally English. He is a man of middle age or beyond it, with that alertness, vigor and vitality that we generally associate merely with youth.

HIS aspect is typical; he wears "mutton-chop" whiskers, his face is rather square and, when he is not tired by a long day's work, ruddy and almost unlined; his eyes are kindly and keen; he looks genial. Now—we must repeat it, for it is essential—a genial revolutionist is the rarest of rare birds. This warm human quality implies a strength that is not easily exhausted. Lansbury somehow suggests those picturesque old phrases which correspond to a deep quality of the English nature—"hearts of oak" and all the rest of them, and even "Britons never, never will be slaves!" He has that dogged, indomitable fighting-quality which is traditionally and really English. He has that staying-power which makes the Englishman, by as much as he is diffi-

cult to rouse, very difficult indeed to suppress when he is once roused. Heart of oak is tough wood, not easily kindled, nor does it burn out quickly. It is for this reason that radical movements are more serious in England than they are with us. When they have progressed far enough to find a voice, they generally find action too. The social readjustment which has so many prophets nowadays may, many people think, be first effective in England. If so, it will probably not be a flash in the pan.

WE call Lansbury a "labor-leader," but he corresponds to nothing that we know in America as such. He is not bound to any one organization, to any definite platform or program. He is not definitely a socialist, nor a syndicalist, nor anything else that is committed to a hard-and-fast dogma, though he is affiliated with all these organizations. He believes this: That the industrial revolution will come; that it will come from and through the working-class, not imposed upon them from without; that the program which is to carry it into effect has not yet been formulated and cannot be, but must be felt and worked out step by step; that the just and main thing is to rouse the people—once roused, they'll take care of themselves. To this end he is working with all the means at his command—his newspaper, *The London Daily Herald*, the League which has formed about it, and his own personal influence and example. Lansbury, his League and his newspaper, may be likened to a flying battalion, fighting under one general banner but not attached to any regimental colors; now in one part of the field, now in another, throwing their strength behind

one phase after another of the forward movement—a strike, a socialist or single-tax or syndicalist demonstration, a labor-agitator unjustly imprisoned, or the rising of the militant women. Free lances of a new and picturesque kind—fighting in the abstract name of liberty with weapons of a specific and effective sort. Witness the case of Larkin, the labor-leader, whose release was forced by threats and partial execution of a General Strike, for which Lansbury and his associates made energetic propaganda; the amendment to the Insurance Act, for which Lansbury fought in Parliament; and his active support of the suffragists.

Lansbury will probably be returned again by the Labor Party to the seat which he recently resigned. This action of his—leaving Parliament because the Labor Party, after supporting Woman Suffrage outside, refused to vote to include it in the Franchise Bill—is a striking illustration of the quality which has caused him to be called "the most honest man in England"; of what he himself means by "no compromise"; of what able critics name as his most salient characteristic, his "loyalty." One impersonal admirer adds: "He's the only leader of labor who never would sell them out." This last is an extreme statement of the feeling that one has about Lansbury: that material rewards of place or power mean nothing to him—that his work is luxury to him, and that he wants no other.

NOT less strikingly, the resignation of his seat illustrates the greater weight and importance of English radicalism. Is it possible to imagine an American member of Congress resigning for

any reason connected with woman suffrage? The difference of the English party system from ours does not explain away this difference. Woman suffrage is a political issue in England. With us, so far, it is an amusement or an occupation. And woman suffrage is in England a radical movement by virtue, not so much of the action of the militants, as of feelings and meanings represented by such women as Mrs. Despard—that amazing old lady, now something like eighty years of age, who, as our admiring Englishman put it, "has been in every row for a generation or two." These Englishwomen have the blood and spirit of the men. For many generations kept subordinate, except where individuals could assert their individual power, they are now, with a principle to fight for, showing their heritage of fire and determination.

"I go to prison" he says, "as a definite protest against differentiation of treatment as between myself and Mr. Bonar Law, the Duke of Abercorn, and Sir Edward Carson. These three men have not only incited but have caused riots and loss of life in Ulster. At this moment they are seditiously inciting officers of the British Army to turn traitor to King and Parliament. They are doing this openly and unashamedly, boasting of their power. Neither Mr. Asquith, nor Mr. McKenna, nor the tied Parliament, moves in this matter—and I am sent to prison for a speech."

And, by the way, good Americans will be astonished to hear that even after this experience Lansbury declares England to be a freer country than America!

On his release Lansbury published in the *Daily Herald* a statement of his intention to carry on his campaign as before, and he has done so ever since. He is now to become the editor of the paper, in place of a gentleman who writes an instructive though indignant letter to the *New Age* on his retirement. This gentleman was, according to his own statement, ousted by Mr. Lansbury's friends because of his preaching "the gospel of hatred." The paper, he was told, would continue to stand for the class war, but it would not preach class hatred. And the angry ex-editor quotes Lansbury as saying: "*Hate conditions, not men.*" This utterance, of course, appeared to the other perfectly unreasonable. So it will to nearly all revolutionists. It is the one man in a thousand who can feel and speak, like Lansbury, without bitterness, with fire and sweetness, too.

HE is a true radical and aims to strike at the root of social injustice and not to patch up its exterior appearance; he

has the charity. In a speech on "Poverty and Legislation in England" he mentioned the Charities Organization Society as "the society which had so organized charity that there was none left over." And he said: "This business of relieving the poor is like putting up a ladder and throwing your money at it—what stops on the rungs of the ladder the poor get, and the rest goes to well-fed officials and contractors. Sometimes I think that if we walk away and leave the poor alone—and get off their backs—the poor will be able to look out for themselves."

Syndicalism pure and simple, he says, is losing ground in England. The idea that any group of workers can run their own industry for their own benefit without accounting to any one, he thinks impracticable. But neither is he a Socialist, believing in absolute control by the state. What he suggests is that the various great industries—the railroads, for instance, the mines, the factories, should be run under a contract from the state.

"The management must be responsible to the community, the people. But every member of its working force must be an integral part of the scheme, having his share of the duties and his inviolable right to the benefits."

And he advises the working-men: "Begin now to make yourselves competent to run every department of your business. Master all the details of its management. Then when the time comes say to the Government: 'Here! this is our business. We are going to run it on a contract with the state.'"

LANSBURY is distinguished again from most champions of the working-class by his charity—if he will forgive the word—toward the present capitalist

"His most salient characteristic is his loyalty"

class. He does not want the workers to rebel against the capitalist personally and sweep him bodily from the face of the earth. He wants both worker and capitalist to rebel against the present system in favor of one more equitable and more pleasant really for both sides. He realizes that the path of the present-day matters is by no means strewn entirely with roses. He even feels that this class may contribute something valuable to the new civilization; whereas our American leaders of labor are practically unanimous in affirming that the capitalist and the bourgeois are mere cumberers of the earth and had better at once be swept into the scrap-heap, together with all their culture, arts, and other fripperies. Lansbury's theory of the leisure class is more merciful. He would like merely to distribute leisure equally, and all other benefits, so that there should be neither waste nor want, in the industrial democracy to which he looks forward.

"We call Lansbury a labor leader, but he corresponds to nothing we know in America as such"

"Each time the office of the president has had windows toward the sea"

Making Money in Strange Lands

By

AMOS STOTE

NOT far above the twentieth floor of the Woolworth Building, in a distant corner, where windows face to the south and west, there frequently sits a man looking out to sea. Three times in the last eight years business has required of this man the taking on of enlarged offices. Three times the manifold problems involved in the housing of a clerical army have been worked out. Each time the office of the president has had windows toward the sea—and the Hudson, with its broad commercial back that gains in substance what it lacks in beauty in its lower waters.

"No marine view, no president," that official has laughingly told his office manager when the leasing of new quarters has been up for discussion. History teaches us that battling business seldom confesses to any sentimental inclinations, hardly admits the reliability of inspiration; yet this man is suspected of harboring thoughts concerning each of these attributes. The clinging to a southwest outlook is enough to convict him of export inspirations.

Many years ago, when a reporter on a Hackensack newspaper, the man with the corner office determined to deny sentiment and build a business that would encircle the globe. He gave over the gleaming of news and turned to industry. Long after, when he had reached that stage where the mechanics of operation require only the oil of supervision to keep a big business machine from getting a hot box, he looked back on his work—and found it full of sentiment. He had held fast an enduring passion for achievement, he had become enamored of the ocean-going Hudson. For years he has found peculiar delight in certain reports that come to his desk every morning, from Moscow, and Peking, Rome, and Cape Town, also from Hackensack.

By noon of every working day he knows the extent of business the world did with his organization up to the hours of closing on the previous day. Cable, telegram and letter bring in the records. The Hindu salesman who lingers over-long with his prayer rug is aware that before the setting of a second sun the "all powerful" in far-off America will know of the falling off in his sales. And while the Hindu sleeps, the manager of the Hackensack office is spurring his men to

greater efforts in the hope that they may stand well in the report for that day.

THERE is a great lump of sentimentalism—leaven—it might be termed ambition—in the foreign efforts of the man with the corner office. He has wooed and won success in international trade because he has given personal attention to its requirements. Each year a long journey is made to many of the capital cities of the world. He finds it a wonderful inspiration, to see the goods he has caused to grow from raw wood and steel to a finished product, in the hands of people who are strange in their dress and speech and habits, in an unfamiliar land where even the money with which his wares are bought may have a fantastic appearance, almost unreal.

On these trips the local managers everywhere have the opportunity to point out the peculiar conditions influencing their efforts: to take their boss by the hand and lead him up to problems they must meet and which are so difficult of explanation in writing.

The understanding good that results from the brief visit of an observing man is beyond all computing.

Most export errors come either from neglect to supply proper goods or ignorance of selling conditions. While without the right goods the best selling organization in the world can make little progress; yet market ignorance really seems more distressing, and is surely more demoralizing. It not only prevents the manufacturer from offering that practical encouragement so essential to the men abroad; but the latter are always aware of the fact that their efforts cannot be understood, and so live in momentary dread of hampering dictations from the home office.

JUST last summer an American manufacturer sailed for Paris with so large and violent a temper, the boat people wanted to charge him excess baggage on it, and make him turn it over to the butcher for safe keeping. All the way over, he rehearsed the awful imprecations he would hurl at the American who, because of an ability to chatter French, had worked the company into the establishment of a Paris branch. For weeks prior to sailing, the sight of a letterhead with the Paris

address on it, the few words that so impressed him when they first appeared, brought on an attack of grouch.

The manufacturer laughed a cruel laugh when he spoke of how the French agent had tried to keep the home company keyed up to sending over money by using the old jokes about good prospects, time required to make a start, orders promised for future dates, tide would certainly turn before very long. He knew a reasonable amount of time was required to start a business anywhere; but this office had been running a year and had taken in hardly enough to pay postage expenses. Now he was going to find out about that turning-tide business, and why those future dates never matured.

Of all the thoughts that rankled, the one most active had to do with the fact that they had taken this man away from another American house because he had built the latter a fine business in France, and was supposed to know all about trade conditions over there. To avoid accusations of underhand methods the misguided merchant had written of his coming, but gave no date. He intended to give the French manager a chance to hang himself before starting the picturesque condemnation.

NATURALLY, the chief value of this incident is its anti-climax. The French manager did not strangle on contradictory statements and the manufacturer did not open his veins of wrath. When the latter arrived he found a detailed report awaiting him which he was not allowed to read, but which was read to him. Each paragraph was sandwiched between explanatory remarks, extracts from salesmen's reports, correspondence, and specific statements relating to each condition mentioned.

You will now find this manufacturer an enthusiast over French business, because he knows something of how it is done. When the agent stated that his office estimated a delay of six months in the closing of each deal after satisfactory demonstration, the manufacturer was at first inclined to be skeptical, but the agent stalled it by taking a card from the pile of evidence on his desk.

"This sales report card," the representative remarked, "has to do with a

public-service corporation that probably has more ready cash than any similar concern in the States. Today is July 19. The third week in May our best salesman concluded demonstrations before two important officials. He was told the machine was satisfactory and that purchase would be made in October. I will wager my contract with you against a trip to the home plant that, if these men are alive and in office during October, we will have their signed order before the first day of November."

The first part of this story had been told me by the agent, in Paris; but the manufacturer rendered a more detailed account when I called at his office in New York on October 16. A few days before, a cable had come from Paris telling that the public-service corporation had already signed the order.

TO give the foreign representative intelligent sympathy and support, it is necessary that some of the men in authority at home be personally familiar with conditions in the country where the agent is at work. While the most thorough information will not eliminate all mistakes a fair, working knowledge should reduce their number and prevent a repetition of the same error. Even when the powers at home lack foreign experience they should give the men abroad, on whom they have thrust the

responsibility of success, the comfort of confidence, and belief in the reasonableness of their requests.

If our manufacturers would only get over the idea that the men on the other side are making unnecessary demands when they ask for things outside the American routine, our export trade would take a long and profitable step forward. Only those who have been through the mill are able to understand how the foreign representative hates himself every time he has to make an unusual request, and how he feels blue for three weeks, or until the mail brings the regular home office complaint.

Many of our houses have lost good men to other companies, not because the former have howled at expenses or complained of results; but just for the fact that every time the agent asked for something his market required, that was not understood at home, he had to carry a burden of criticism and discouraging delays while waiting for the factory to meet his demands. At such times, when another concern comes along that seems to know what it wants to do, the harassed agent is likely to chuck the trouble and go where he will be appreciated, or at least where his efforts will be understood.

SOME years ago, when the phonograph stood at the top of the industrial wonder list one of our com-

panies producing these machines built a thriving business in France. The novelty of the thing brought customers with a rush. They bought the machine and the half-dozen records a salesman had played in proving the genuineness of the marvel, and gave no thought to the future. Later, when these customers returned to purchase other records, they discovered that unless they wanted American songs nothing remained but instrumental pieces of the brass band type. When the factory was appealed to, the answer came that home orders were too heavy to spend time getting out French records, and that, besides, the big profit came from the sale of machines.

Even in the face of this limitation the machines continued to sell. One model was especially popular and the French office sent repeated orders for this type; but if the factory was over-stocked with other models the latter would be shipped. If the foreign manager insisted on having the popular model the factory would write to the effect that their records showed the agency to have a varied assortment of other models on hand, giving a list of them in detail, and suggesting that it would be better to push these before new shipments were made.

And there were actual times when the great Paris department stores, as well as the company's own salesrooms, for months on end, did not have enough stock

"Even the money with which his wares are bought has a fantastic appearance"

to make a decent display. This was the opportunity on which a French manufacturer grew from a small one-room machine shop to a chain of factories.

SOME of the troubles American manufacturers force on their branch houses abroad are the result of carelessness or failure to appreciate the importance of certain instructions. One constantly recurring difficulty in France is in the matter of customs. The papers to be made out in connection with the shipping of goods into that country are sufficiently detailed in themselves to insure against trouble, if correctly and truthfully filled in.

A Detroit shipping clerk looked after these documents for a machine his factory was sending to its French company. To simplify records the factory has numbered the various types of machines it produces. When the clerk made out the papers he filled in the description of a machine of the wrong number. No one discovered the mistake until the shipment came under the searching eye of the French customs. Then all the good behavior of the past was lost. It had taken the American agency two years to prove to the French customs officials its right to have their shipments accepted on the strength of their declarations.

Like our own government employees in this work, the men on that side are suspicious of any so-called "errors" in declarations. So the French agency was not only fined five hundred francs in excess of the full duty for the machine, but, for months after, all shipments were opened, and the machines, wrappings and packings each subjected to separate weighing tests and examinations. The net result was endless delay and confusion, frequent breakage, and an embarrassing skepticism concerning any remarks on declarations. Another mistake of this kind might put the American corporation on the black list and forever prevent its wares entering the country until each shipment had been dissected to the last strand of excelsior.

THE work this company is doing in foreign countries is in the majority of cases very successful, and I refer to its mistakes to emphasize the need that exists for exceeding great care, foresight and understanding in the conduct of well-established branch houses. The fol-

lowing contrasting piece of work in another branch of this concern gives further illumination to the text:

Its German agency was for a long time permitted to carry \$640,000 worth of stock on consignment; but when it asked to have a slight change made in the motor equipment that goes with some of their machines the factory paid no attention to the matter. As their product is a costly affair that concerns must test before purchasing, it is necessary that all their sales offices, especially in countries not extensively educated to its uses, have a number of them available for putting out on trial. The cheapest model sells for several

The strange part of this situation is that the home company would permit the stagnation of so much capital, allow such a condition to come into existence, would take so over-generous an attitude and yet fail to respond to the German agency's urgent request for a comparatively incidental alteration in motor construction. It seems to be a characteristic of the Teuton to give his mechanical devices very severe service. The machine in question stood up under the strain to everybody's satisfaction, but the motor was inclined to breed trouble in the course of time. After repeated attempts to have the factory in Detroit remedy the

weakness, the agency was forced to place its motor orders through the London offices, and have them sent from Detroit to the company's factory in England. Here it was necessary to undo much that had been done before the required change could be effected. After which the motors had to be repacked, rebilled and reshipped to Germany.

One of the strangest cases on record of an American manufacturer blocking the game of his foreign business occurred in England a few years ago. Instead of refusing to give the British agency his entire cooperation he almost succeeded in killing it with too much attention.

He made so many trips to England a friend suggested that he apply to some steamship company for a commutation ticket. He gave personal supervision to the decoration and furnishing of the London offices; and of course made them so American that every Britisher who entered felt strange and uncomfortable. He heard of the rigid class distinction that exists in Eng-

land, so raised the salaries of all department heads and insisted that they spend the money in living like gentlemen. In an effort to boom sales he arbitrarily cut the price of the commodity; and offended all old customers.

Nothing less than the unquestioned excellence of the American product could have saved the English branch from utter failure; that and the long purse of the man who made a pet of it.

It has been some time since this manufacturer learned the difference between "buttering in" and real cooperation. After this lesson was learned the British agency began to make money, and has been doing so ever since.

"The boat people wanted to charge him excess baggage on his temper"

lowing contrasting piece of work in another branch of this concern gives further illumination to the text:

Its German agency is not under the direct control of the home office, so that immediate supervision of its operations has not always been feasible. About twelve months ago a general investigation was made. Then it was discovered that of more than half a million dollars tied up in consignment machines, not more than fifty per cent. of them were ever in use at one time on trial exhibitions. The balance was stored in the back rooms of various offices and under indifferent conditions.

The Attorney-General for the United States

By MCGREGOR

THE Supreme Court of the United States is in session and the celebrated Tobacco Trust case is being argued. Learned lawyers, such as only great wealth can employ, present their views of the law and the facts in behalf of their powerful client. Then a younger man arises, tall, vigorous, smooth-shaven, with forehead wide and high, nose and mouth and chin eloquent of forcefulness, and dominates that distinguished assemblage with the brood of his lion voice. One instinctively goes back to Carlyle's description of Mirabeau for a fitting comparison, another Aristocrat who was Attorney for the People. "In all countries, in all times," said Mirabeau, on being expelled from the Provence Assembly, "the Aristocrats have implacably persecuted every friend of the People, and with tenfold implacability, if such a one were himself born of the Aristocracy." Here also, now standing before the Highest Court of the land, is a man "who will glare fiercely on any object; and see through it and conquer it; for he has intellect, he has will, he has force beyond other men. A man not with logic-spectacles, but with an eye."

The Justices pay him marked attention, for here is one who knows more about the case before them than any other man could be hired to learn. Said Justice Brewer: "He has made a greater reputation with the Court than any man in twenty years. His briefs help the Court in the preparation of its decisions." For two hours he sums up the results of three years of investigation and study, and closes with this challenge: "There are some of us who have hoped for a peaceful solution of this great question under the law as declared by the Courts. But if in the light of the facts here presented, this Court shall decide that this defendant has not violated the law, then our hopes are a dream." The assemblage gasps. Here, in the presence of the Court, was a threat of Revolution as the alternative to peaceful solution under the law.

THE man was James C. McReynolds, special assistant to Attorney-General Wickersham, now Attorney-General himself. That speech was never published. There was a difference of opinion between him and his Chief in the method of handling the case, and the speech was omitted from the brief for the Government. The Supreme Court decision was that the Tobacco Trust should be dissolved. The carrying out of the decree was committed to the Circuit Court in New York where the case originated. When its decree was declared, McReynolds publicly denounced it and demanded an appeal again to the Supreme Court for correction. But Wickersham the next day announced that he was satisfied, and McReynolds offered his resignation, which was declined. Later, Woodrow Wilson thought McReynolds would be a good successor to Wickersham.

Few perhaps recognize the importance to the country of the office of the Attorney-General and the work of the Department of Justice. The other nine Departments of Government refer to him for final decision on questions of law,

fifty-three such questions having been so referred during the year, at the request of the heads of Departments. Respecting title to lands acquired by the United States, 251 opinions were delivered last year, while 346 cases were begun and 543 cases terminated in the Public Lands Division. There are also Solicitors, or Assistant Attorneys-General, serving the other Departments under the direction of the Department of Justice. Think of a law office, employing more than three hundred officers, attorneys and clerks, directing eighty-five district attorneys in all parts of the United States, and supervising some fifteen hundred other officers and employees. In the United States District Courts, there are pending 5,310 civil cases to which the United States was a party, 9,083 criminal prosecutions by the United States, 5,802 Admiralty cases, with 35,403 Bankruptcy petitions, and for the proper hearing and conduct of all these cases, the Attorney-General's office is responsible, through its selection and appointment of district attorneys and through advice continually asked and given. All cases coming before the Supreme Court in which the Government has interest are directly under the Attorney-General's care, there being 143 such cases last year; cases instituted by the Interstate Commerce Commission are under his direction and control, 40 such cases having been instituted during the year and 65 concluded, to say nothing of customs cases, violations of the banking laws, white slave traffic cases, etc. He also has charge of the Federal Penitentiaries, and controls the issuing of pardons. There have been 633 convictions under the White Slave Act, more than half of which were obtained during the past year.

What manner of man is now holding this office? In the words of the Constitution, "There shall be appointed a meet person, learned in the law, to act as Attorney-General for the United States."

JAMES CLARK McREYNOLDS was born in Elkton, Todd County, Kentucky, February 3, 1862. His father, John Oliver McReynolds, was a country physician, with a big plantation of his own, who dominated the county by the sheer force of his character. His mother was a Reeves, of an equally notable and forceful family.

Young McReynolds was brought up on the Kentucky plantation amid such surroundings of refinement and culture as Thomas Nelson Page has depicted for Virginia society of ante-bellum times. In his later years he went to Vanderbilt University, at Nashville, Tennessee, and immediately became the acknowledged leader of the student body, was prominent in the literary societies as orator and debater, set high standards of clean speech and blameless life, was able to help, with his fuller purse, students struggling to secure an education, and graduated with many honors and medals, at the age of twenty. He studied law at the University of Virginia, graduating at the head of his class, and then settled down to practice law in Nashville. His success in practice, (he was never unprepared when his case was called,) won him the

position of professor in the Law Department of his University, then he became Dean of the Department. He was a born teacher, his only fault being his impatience with dullards, whom he tried to discourage in what he considered a foolish ambition for them. During this period he was continually guilty of left-hand ignorance of right-hand benevolence, helping the unfortunate while shrinking from their gratitude. While in Nashville he led a successful fight for civic righteousness against the gang of gamblers and toughs who controlled the city, being associated with Dr. Manning, now of Trinity Church, New York, in the battle for decent government.

When Philander Knox was Attorney-General he asked Don Dickinson, afterwards Secretary of War, where he could find a twenty-five thousand dollar man for five thousand dollars. Dickinson, without hesitation, named McReynolds. So he gave up his teaching and came to Washington as Assistant Attorney-General during Roosevelt's second term. And those were rather busy days for the Department of Justice. He resigned just before that Administration went out and became a partner in a New York City law firm. But private practice had lost its attraction for him. He was thinking of going back to his Kentucky farm and starting a private law school of his own, when he was asked to become special assistant to the Attorney-General in the enforcement of the Anti-Trust law, and accepted.

SINCE he became Attorney-General he has striven in the administration of the Department to make the spirit of the service what it ought to be. As the district attorneys resign, and some resignations are hastened, he puts in their places men known to be devoted to the public welfare, fully in sympathy with the present Administration and free from former entangling alliances with unlawful or oppressive corporations. To say that he, himself, is a glutton for work, does not meet the requirements of the situation in the eyes of his subordinates. They say he is a "hog for work." And no one familiar with the Department can fail to see the improvement in the spirit of the service, its loyalty to the Government, the new idea that is taken of the honor of serving the Government by having the people of the United States for one's client. He is a swift and accurate judge of men. The whole Congressional delegation of one Southern State united in recommending the selection of a district attorney. McReynolds mentioned his knowledge of the man's former affiliations with interests he might be called upon to prosecute, and declined to make the appointment. If he doesn't like a man's looks, he will not appoint him. He has the task of recommending the Federal Judges to be appointed and he has suggested that judges of seventy years of age, while they cannot be retired, if they will not resign, be subordinated to new judges appointed to sit with the older men.

"A man stout of heart; whose popularity is not of the populace; whom no clamor of unscrupled mobs without doors, or of wretched mobs within, can scare from his way."

ATHLETIC CLUB

LOW'S

Scene from Act V in "Antony and Cleopatra"

A Brilliant Shakespearean Repertory

By HAROLD STEARNS

FOR Shakespeare on the stage, America is dependent on the whims of its own stars and the chance tours of foreign artists. We have no theater devoted to the production of Shakespearean and other classic plays. In fact, since the New Theater project was abandoned, we have no theater with even a definite tradition. A full season might conceivably go by without a single

play of Shakespeare's being given on the "regular," i. e., the two-dollar houses. Therefore we have reason to be grateful to those actors and actresses who, year after year, keep hammering at the classics—to Southern and Marlowe, William Faversham, Annie Russell and all the others. Let us now be grateful to Margaret Anglin. In a season that is notable for its Shakespearean productions, Miss Anglin's productions of "Twelfth Night," "As You Like It," "The Taming of the Shrew," and "Antony and Cleopatra" stand forth brilliantly.

MISS ANGLIN is a cultivated gentlewoman; she lacks that quality of the histrionic temperament which makes

the possessor eager to hide everybody's light except his own, under a bushel; she has imagination. The plays she puts on are correct from the academic point of view; that is, they reveal no anachronisms and they take no liberties with the lines. The company is an all-round company of capable actors, not an ill-balanced aggregation of one or two stars

surrounded by mediocre satellites. The plays are mounted with scenery that has beauty and illusion; and they are stage managed with a sympathetic understanding which keeps faithfully to the play's meaning and spirit.

Classic seems to signify to her, something vital. She has approached these plays reverently, but without that peculiar fear and trembling which is the earmark of a superficial culture when confronted with a world masterpiece. Her whole effort has been to make them clear and humanly understandable. Above all, she has made them swift-moving. In her version "Antony and Cleopatra" has five acts and fourteen scenes, and there are four ten-minute intermissions between the acts. Yet the play is over within three hours. No wait between the different scenes is longer than fifty seconds.

stage is framed like a picture, with stiff side curtains and a low hanging drop curtain. Directly behind the side curtains, sloping inward, toward the center of the stage, are two solid doors. Between these doors hang rich tapestries. Behind and above these doors hang other curtains at the same angle, similar in design to the front side curtains, which are lateral to the stage. This arrangement serves for a simple interior. By lifting the tapestries between the doors, the scene is changed. At the end of the scene the characters walk through the solid doors and into the next scene through a side entrance farther back on the stage. There is no wait whatsoever.

SHAKESPEARE has been produced with scenery that has a poetry of its own and does not shame its text. Livingstone Platt, who has already introduced modern German ideas of stagecraft to Boston, designed Miss Anglin's scenery and gave her a few suggestions. Most of what is practicable—as well as fine—in Gordon Craig's theories she has also turned to account. Against a huge cyclorama at the very back of the stage are thrown trees or towers, resting solidly on the floor of the stage and ceding halfway up to the bottom of the front drop curtain, giving an astonishing illusion of space. There is much overhead illumination, and direct lights from the wings play over the leading characters, bathing them, it often seems, in the veritable light of the sun.

Most of the colors on the canvases are painted in a stipple of primary colors, which in white light would appear gray, but properly illuminated by overhead or side lights take on simple tints, glowing as if the light came from within the canvases themselves. Soft, glowing blocks of color, large solid masses, space illusion, curtains framing the whole picture (no unsightly overhead strips), and suggestive shadows—these things give the key to the unique stage settings. The decorations are simple without being austere. In "Twelfth Night," every touch is, so to speak,

Miss Anglin as Katharina in "Taming of the Shrew"

joyously Oriental; in "The Taming of the Shrew," sixteenth century Italian; in "As You Like It," pastoral and romantic; in "Antony and Cleopatra," dignified and massive. I have seen nothing more wonderful on the stage than the scene on the roof of Cleopatra's palace. Yet the means of gaining the effect were almost absurdly simple; the cyclorama far in back, a pale light playing upon it, to the front a raised parapet extending across the stage with broad steps leading up, and on each side high and solid rectangular masses which cast real shadows. Cleopatra sat on the parapet, looking far away into the distance, as if to catch a glimpse of Antony in Rome itself. The illusion of vast height and space was perfect.

YET after all, the swiftness of scene shifting—as even the beauty of scene setting—is a secondary thing. The scenic setting for a play always has been and always will be, I believe, the relatively unimportant part. Drama is an art dealing first of all with human character and human speech. We may talk of a dozen "arts of the new theater," but plays will live because of what is said and done in them by the characters, not by what is done to them by electricians and scene painters. Miss Anglin's productions had beauty and charm, yet they never were obtrusive.

IN her treatment of spoken verse, Miss Anglin shows that strict metrical accuracy may often be sacrificed to clearness. It is really a case of sacrifice, or judgment of what is better, not a case of ignorance, as is so often true of Shakespearean actors. For example, in that marvelous speech of passionate defiance by Cleopatra, which is always worth quoting:

"———know, sir, that I
Will not wait pinion'd at your master's
court;
Nor once be chastis'd with the sober eye
Of dull Octavia. Shall they hoist me up

And show to the shouting
varletry
Of censur-
ing Rome?
Rather adish
in Egypt,

Be gentle grave unto me! Rather on V'las'
wad
Lay me stark nak'd, and let the water-fires
Flow me into obherring!"

Miss Anglin makes "nak'd" a monosyllable, which is the only way to keep the movement of this verse. But in "Twelfth Night" I noticed three examples of (academically) incorrect scanning. In a speech of Valentine's:

"——— all this to reason
A brother's dead love, which she would
keep fresh
And lasting in her sad remembrance."

"Remembrance" should be quadrisyllabic. It was given three syllables. Again in the speech of the Duke's, immediately following:

"Her sweet perfections——"

"Perfections" should be quadrisyllabic, and it also was given three syllables. Once more, in the sea-coast scene, with which Miss Anglin begins her version of the play, Viola says to the captain:

"Know'st thou this country?"

Country should be, strictly, country, with three syllables, but Miss Anglin pronounced it as we do commonly. In all these and other cases, the hiatus in the feet of the line was compensated for by a gesture or by a pause. There was no loss in metrical value, and the gain in clearness in unaffected pronunciation was notable.

IN the casting of parts and the directing of how they should be played, Miss Anglin has done most to give us good entertainment. The clowns in Shakespeare are always exacting rôles, and the comic rôles are uniformly well done by her cast. Sidney Greenstreet, who plays Sir Toby in "Twelfth Night," Bonadella in "The Taming of the Shrew" and Touchstone in "As You Like It," has unctious. Humor comes from him, and he is fat and funny enough to make us want to see Henry IV on the stage again, just to watch how he would play Falstaff. Fuller Mellich gives a performance of the dignifiedly conceited Malvolio, which

would stir Lamb to write another essay were he alive today. His Jacques, in "As You Like It," is perfect. Max Montesole plays Grumio in "The Taming of the Shrew" and the clown in "Twelfth Night" as if to the manner born. Eric Blind does Petruchio rapidly, free from the conventional boisterous swagger. Nearly all of the cast have had previous Shakespearean training.

Miss Anglin interested me less in "Twelfth Night" and "As You Like It," than in the other two plays. As Katharina she proved unexpectedly piquant. She played the part in high spirits, yet with just a suggestion of sly waggishness, which kept the play in a key of fantasy. To be thoroughly realistic in "The Taming of the Shrew" is, I think, to make it unendurable.

Malvolio and Viola in "Twelfth Night"

"ANTONY and Cleopatra" is a different story. Here is one of the world's great tragedies—greatly produced and greatly acted, not alone by Miss Anglin herself as Cleopatra, but by Sidney Greenstreet, as Enobarbus, Macdonald, as Antony, and Ruth Boucicault as Charmian.

In Cleopatra herself, Shakespeare in a sense gives a psychological recapitulation of all his feelings and ideas about women. She has at times the fresh charm of Viola. She has the intellectual passion of Lady Macbeth—her ambition, too, in a way. She has the wit of Beatrice. She has all the cruelty of Gertrude or Regan. She has the shrewdness of Katharina, and the softness of the early Juliet. For all her variety, she is an individual woman.

Miss Anglin makes her in the first two acts a woman in whom the passions of the body and flesh have spent themselves. She holds Antony by her mind, by the spiritual fire of her emotions. I do not hesitate to say "spiritual," for the Cleopatra of Shakespeare's play is not a wanton. She is a woman of middle age, desperately trying to keep her hold on the one whom she really loved. We can, as Miss Anglin plays her, see Cleopatra trying every artifice and trick to keep Antony. It is a bitterly ironic tragedy, for in Antony the vague mood of pagan fleshiness is constantly being disturbed by the calls of a still vaguer duty. In that astonishing death scene of the last act—the only place where Shakespeare permits a woman to die on the stage—what is more pathetic than those wonderful lines to Charmian:

"Peace, peace!
Dost thou not see my baby at my breast,
That sucks the nurse asleep?"

I have seen nothing on the stage more moving and impressive than this final scene of "Antony and Cleopatra," as Miss Anglin produces and plays it.

The interior of one of the first sleeping-cars ever in actual use.
The picture above shows the exterior

Sleeping-Cars and Microbes

You surely can remember the sleeping-car of a generation ago? They called it a "palace-car" then. While it was recognized as an essential in our long-reaching railroad routes, it had reached a veritable apotheosis of bad taste. Architectural knick-knacks disfigured it. There were cumbersome, dust-catching, head-bumping, headless moldings

ever known but the company that he founded today operates more than ninety-five per cent. of the sleeping-car service within the United States. A few roads have operated their own sleeping-cars for many years, but the general tendency has been the other way.

There is a reason for this. The average railroad company gives the Pullman company all of the revenues from its cars but actually pays mileage for their operation, not so much because it wishes to be relieved of the responsibility, but rather because of the flexibility of the Pullman service. In addition to the cars set aside for its regular service that company possesses many hundreds of spare cars. These spare cars go north in summer and south in winter to meet the exigencies of heavy tourist travel; they move in battalions upon great national conventions, college football games and the like. Last summer 430 of them were drafted to form special accommodations to the Knights Templar conclave at Denver.

Of course no one single railroad could have supplied 430 sleeping-cars for such a purpose—fifty reserve cars would have represented more capital than it should have had tied up in extra equipment of this sort. The Pullman organization is big enough and flexible enough to meet just such situations as this.

THIS, however, is not the story of the Pullman company, but rather of the efforts that are being made to make the American sleeping-car safe and clean and comfortable. The Pullman company is a large organization. It is generally what it chooses to be, itself. It is a transportation company; at other times it prefers to regard itself as a hotel organization. At all times it is alive to the necessities of a situation. So it has come to improve both its cars and the operating conditions upon them—sometimes under compulsion and more times, voluntarily.

In its function of lodging itinerant America the Pullman organization has a hotel problem that is worth attention. It is today operating a little over 5,000 sleeping-cars upon regular routes. The average business done by each of these cars is fifteen passengers a night, so it is safe to say that nightly 75,000 persons sleep in its cars. When one comes to add to this total the passengers of the two or three railroads that operate their own sleeping-car services he sees the population of such a goodly town as Utica or Hartford moving by night in these hosts of prearranging hotels.

A real hotel can, and generally does

YOU may or may not know how the sleeping-car came into its being.

The railroad itself was less than a quarter of a century old before a crude form of a night-car with beds was being operated over the Cumberland Valley road. Other early lines made experiments with cars of this sort—all of them more or less crude. It was not until the close of the Civil War and railroading in the United States was thirty-six years old that the first practical sleeping-car made its appearance. It was called the *Pioneer* and it was the work of a carpenter who had made his way out to Chicago from western New York. His name was George M. Pullman. And the car which was to blaze a new path in American comfort had a melancholy dedication, for it carried the body of Abraham Lincoln to its last resting-place. The son of Abraham Lincoln is today, and for many years has been, the executive head of the Pullman company.

The *Pioneer* was longer, higher, wider—even gayer—than any railroad car that had ever been built before, and it attracted a great deal of attention. But to keen railroad students the most unusual thing about it was a double row of berths suspended from the roof, berths that by day closed up and held the bedding for the entire car. No longer was it necessary for the porter and the passengers to drag the bedding out from the ends of the car. Indeed the *Pioneer* embodied the essentials of every sleeping-car that followed it. Its builder designated it in his records as "A." He did not dream of having more than twenty-six cars at one time. Today the company that he founded operates more than six thousand sleeping-cars in regular and special services.

here and there and everywhere, "grilles," silly little mirrors, thick draperies with tassels and fringes. It was an orgy of over-decoration and the laughing-stock of all cultivated folk. It became the prize asset of the school of American humor founded by George Ade and his fellows. Bitterness and sarcasm were leveled at it from every corner of its habitat. People forgot the real value of the sleeping-car—what long-distance travel would again become if it were to be taken away.

Some of these shafts must have struck into the heart of the Pullman company. Of a sudden, a little more than ten years ago, it decided that architecture was all very well in its own way but not as a part of car-building. It divorced the two. It began to throw out the useless draperies, the braids, the tassels and the fringes. It simplified the moldings and the senseless decorations. It made a start in the right direction. Some things had already been accomplished. From out of the noisy claims of many inventors the modern car-ventilator had been developed; there were lesser things to the credit of the Pullman car. One of them was the abolition of the old-fashioned awkward pumping devices in the wash-rooms, and the substitution there of metal-lined for marble-topped wash-stands. A negro porter was decapitated in a railroad wreck some years ago by the loosening of one of these heavy marble slabs. The Pullman company then took steps to remove such dangerous devices from its cars.

PULLMAN is the name that we must use when we come to consider the sleeping-car problem of America. For not only did Pullman develop the first practical sleeping-car that the world had

By

EDWARD HUNGERFORD

discriminate between its guests. It demands certain standards of health and cleanliness. The sleeping-car must accept any person who offers the price of its berth. It cannot discriminate. And while the housekeeper of a real hotel has only to fight her battles against ordinary conditions of dirt, what would she do if her tavern were to be placed on wheels and whirled throughout the night at thirty miles an hour, the smoke and cinders rolling down upon it from above, the road-bed dust up from below?

Yet these are conditions that the sleeping-car must and does meet. To meet them successfully demands vigilance that is nothing if not eternal and something more—well-organized systems. Almost at the beginning of its campaign to make a simpler, a cleaner and a generally better car the Pullman company found the need of expert advice. It attached to its staff some eight years ago, Dr. Thomas R. Crowder, of Chicago. Dr. Crowder is making the ventilation and the sanitation of the railroad-car—the two go closely hand-in-hand—his life-work. He was the first man to take up such a work and he has had to blaze his own pathways.

THE two great problems of the clean and healthful sleeping-car are those of the toilets and of ventilation. Neither of them is easy of solution. The toilets, save in flushing methods, have made practically no advance upon the earliest types that opened directly upon the track. Efforts have been made to devise a holding vessel under the car that would operate through the extremes of hot and cold without freezing or becoming foul but as yet nothing has come of these. It is not sanitary to empty toilets upon a railroad right-of-way; it is absolutely dangerous in cases where the railroad crosses running streams by unfloored bridges and these streams lead to the water-supply of nearby towns. The man who can work out this problem in an efficient and sanitary fashion will probably find his own reward. In the meantime there seems to be no good reason why railroads should not be required to floor their bridges over streams that become even a remote source of water supply.

The problem of ventilating sleeping-cars is hardly less important, or less difficult. Except in warm climates or in warm seasons of the year, it is generally impracticable to use most of its windows for this purpose—with the human freight resting so close to them. The "monitor" or clear-story along the roof, which was originally designed for this purpose with a double row of long narrow windows has

been draughty and never entirely satisfactory. Recently in the newest types of sleeping-cars the general use of this part of the car for ventilation has been abandoned.

A plan has been substituted by which the foul air, which rises to the top of the car, is drawn out by a mechanical exhaust, automatic in operation while the train is in motion. Tests have been

taken of the air conditions in the old cars, under actual operation, ventilated by so-called "natural" methods and by the "exhaust" that speak so distinctly in favor of this last that it will become standard in the newest cars. And plans are under way to give it electrical equipment so that it will perform its services while the car is not in motion.

In the trail of these two very important problems in the construction of the modern sleeping-car come a host of others. The Pullman company, in common with a great many of the railroads over which it operates, has committed itself definitely to the steel car. It has already converted more than half of its equipment either to all-steel or steel underframe construction and the process of reconstruction will go forward until all of its sleeping and parlor-cars have been brought to this high modern standard. It has taken advantage of this general reconstruction to simplify still more its general type of car. You remember how, a decade or more ago, it divorced the architect from the car-builder and set out to simplify its vehicles. Recently it has done more. It has banished even the simplest of the moldings and all the hangings that are not absolutely necessary to the operation of the car. It has produced a vehicle, rigidly severe, which, without sacrificing comfort, is capable of very great cleanliness—perhaps the most efficient railroad-car ever built. Not only the big things that make for cleanliness have been adopted, but many of the lesser things. A few years ago the dental inventory was a novelty in a sleeping-car. A good many travelers laughed at it. Nowadays people do not cleanse their teeth in the wash-basin and a cleanly habit has come into its own.

The latest thing in sleeping-cars; great attention is given to convenience and cleanliness

It is a long step forward from the roll-towel that used to hang in the wash-room of old-time sleeping-cars. America is becoming a more cleanly nation. More and more men prefer to shave themselves each morning. Saturday night as a bathing institution is obsolete. Folk prefer individual baths and a cold plunge of a morning. Men manicure. Hygiene is not looked upon as a *fad* any more but as an essential of good living. No wonder that the public drinking-glass had to go—out in the west they are beginning to wage a guerrilla warfare upon the finger-bowl. Before long the public hair-brush and comb in the wash-rooms of the sleeping-cars will meet a like fate. Some states are already crying out against them.

THE definite movement against these old-time institutions generally begins in individual states. Until the Interstate Commerce Commission decides to step in—as it did in the case of the public drinking-glasses—the transportation companies have a rather hard time of it. A single instance will show how. Arkansas has ordered that the doors and windows of all passenger-cars must be screened, as a protection against flies. Oklahoma has ruled, with equal force, that the doors and windows of such cars must not be screened. It is today literally impossible for a train to cross the line between these two sovereign commonwealths without fracturing statute law. In such cases the operating heads of interstate carriers can only tide along as best they can and hope for Washington to act.

So much for the cleanly construction of the car and its equipment. Now consider for an instant what is being done

to take sanitary care of it while it is under way. The Pullman company exercises a remarkable discipline over its negro porters. Part of that discipline strictly prohibits the use of feather dusters or of dry sweeping while the car is under way. A charmois skin or bit of cloth must be used for dusting, the floor must be moistened for any occasional sweeping, while the porter is always provided with a disinfectant against emergencies.

SANITARY care continues throughout the entire operation of the car under way. Those that run to resorts favored by persons suffering from tuberculosis are kept under special scrutiny. Every Pullman conductor is under strict instruction never to re-sell a berth which has been occupied, for even a small part of the journey, by a consumptive. And in the cases of the discovery of an infectious or contagious disease on a sleeping-car it is at once taken out of service and given over to the hands of the nearest public-health officer until such time as he can release it with a clean bill.

Even the matter of ice-water comes under attention. Sleeping-car employees are prohibited from handling the ice with their hands. And it is worth noting that in the newest Pullmans the ice-water tanks are so designed that the ice does not come in actual contact with the water.

Some of the sleeping-car runs are extensive. There are cars that run from St. Louis to Portland, Ore., and take more than three days and three nights for the journey. But the railroad schedules provide for a long enough stop at Denver so that the sleeping-cars may be emptied for a short time and sent to the special yards for a thorough freshening and cleaning. Even the tourist-car which runs from Washington through New Orleans to San Francisco—the longest of all Pullman runs,—for it only lacks twelve hours of taking just a week—is kept reasonably clean for the entire trip.

AT the end of each run the sleeping-car comes under thorough attention of the cleaners. After the linen is removed and despatched to the laundries, windows and doors are opened and the car is thoroughly aired until it becomes neces-

sary to prepare it for the return journey. Much is done in this interval. Its carpets are removed to slatted platforms some distance away, where they are thoroughly dusted with compressed-air. Seats and backs are taken to racks outside of the car and similarly treated. The bedding (including mattresses, blankets, pillows and the berth curtains) is also taken out where it is exposed to the air and to sunlight—as long as possible under weather conditions—and thoroughly cleaned by means of compressed-air or the vacuum process. While this work is being done outside, the interior of the lare car is thoroughly swept and dusted and cleaned. The compressed-air and vacuum methods are used at almost all

minimum of three hours. It is then widely opened for airing and then put through the cleaning process. After that fresh linen arrives from the laundry and it is quickly stocked and made ready for its next trip.

Is the sleeping-car immodest? Our foreign friends, who are not exactly praiseworthy about either their bathing-beaches or their dramas seem to feel that it is. They inveigh rather bitterly about our open-berth methods and then demand why we do not run compartment-cars as they have them overseas.

WE do run compartment-cars on our railroads. But the number of them does not increase year by year; in fact it rather decreases in proportion to our still growing railroad mileage. We run nightly between New York and Boston, New York and Chicago and between Chicago and Minneapolis, cars made up solidly of compartments that are the hand-somest vehicles of their kind in the world. Some more of them run to the smartest of our resorts, to Florida and to California; but these cars have been withdrawn from other runs. It is only within the past few months that the Pennsylvania railroad has ceased to run through all-compartment cars between New York and Washington.

There is an economic rule for this, of course. The railroads have long protested against the increasing weight

The interior of a modern sleeping-car prepared for fumigation at the end of a run

terminals nowadays for the interiors of the cars as well as for their bedding.

Periodically the sleeping-cars are submitted to fumigation. These fumigations are never more than thirty days apart and the cars running up into the Adirondacks, the North Carolina mountains, Colorado, Arizona and other tubercular resorts, are fumigated at the end of each trip. This work is carried forth before the regular cleaning process is started. The berths are opened, and the mattresses, blankets, pillows and berth curtains are loosely spread about, so that the greatest possible surface exposure is made. The carpets are left in place. The car is tightly closed and a disinfecting gas is developed from a solution of formaldehyde by means of permanganate of potassium. After the gas has been generated the car is left closed for a

of their cars—steel equipment has been almost the last idiom to them in this way. In a well-filled day coach the railroad hauls 2,500 pounds dead-weight to a passenger; in a compartment car it hauls 17,000 pounds; in an ordinary sleeping car 10,000.

With such economic argument against it, the compartment-car, with all of its luxurious privacy, is not apt to make great headway in the United States. Even the economic necessity of the upper berth remains firmly fixed. As a matter of fact we have made our cars too large, and consequently too heavy. On the other side of the Atlantic no such dead-weight must be carried for each passenger and it is possible to experiment with frills in travel—although the European traveler is apt to pay rather dearly for each of them.

Woman in a New World

By ELLEN KEY

MADAME KEY has already treated, in previous articles, the subject of the old-fashioned woman and the equanimity and peace which was hers because her duties harmonized with her desires. She has described the change in moral standards that has been brought about by woman's new demand for freedom, and warned women not to lose the old virtues while gaining the new. In this article she tells what women must do to be ready for the place they wish to take in economic life

SINCE women have begun to work for money outside the home, as they have been forced to do by economic conditions, the problems of morals have multiplied and women's conception of ethics has broadened. First came the demand for the right to work, then a realization of the duty to work, and out of that a conception of the honor of labor and the joy of social helpfulness. The more women have developed their common human virtues, the more just has become their demand that their morality have other measures besides that of sex and that man's sex morality shall be taken into account in judging his character as a whole. In this way the modern woman has tried to widen the sphere of her moral duty and to narrow man's moral liberty. Woman is no longer content to cultivate solely the sympathetic feelings and sex virtue. She wants to express her whole self in her life. She wishes to be guided at times by altruism, at other times by egoism, with the right to decide when it shall be one and when the other. She has thus been led into a conflict of her own between individual rights and social duties.

We are most familiar with these conflicts as drawn by Ibsen, but they have previously appeared in literature whenever it has been truly great, mirroring the life of the times. Some of these moral battles have taken place in national life as in the case of the Russian women and the political revolution, and the English suffragettes and their mode of warfare. In passing, I may say that the comparison favors the Russian women as they have tried through their nihilistic attempts on life to expose great wrongs to all, wrongs which could not be known except through deeds of violence. The English women have set out with the idea that because men in times of political despair have used violence, women should do the same in cold blood, as a political measure. They do not act rashly but with great foresight, believing that they cannot win the political right to help in making a better world unless they use the lowest weapon which has been employed by men. History shows that the fruits of a successful revolution are easily lost because when people who have long been without rights take them by storm they are seldom able to keep them, much less use them wisely. Unless the social reconstruction brought about by woman suffrage is based on a higher morality than man has shown in the past, it will be like a wall of loose bricks without cement

to hold them together. But there are many present-day women who have fought for their sexual rights with the same burning enthusiasm for self-sacrifice but with wholly clean weapons. They ought to atone in the eye of men for their sister's Jesuit morality.

For more than a hundred years women even under stigma of being unwomanly have worked hard to change social con-

ditions from the authority of the ecclesiastical church; and women's native common sense has prevented them from carrying their love for humanity to such an extreme that it is incompatible with real life, as did Tolstoi. They have demonstrated that sympathy, love and pity become, when used, not only a matter of conscience but a source of happiness. But even these women have had their hands tied in many ways. If ever a right has been demanded for unselfish reasons, it is a woman's right to suffrage and a married woman's right to herself and her property.

Although women have extended their motherliness over a wider range, it does not follow that in the home itself their responsibility has been sufficient. Although women have for a long time shown a great and joyful capacity for work in the field of domestic manufacture and although they have gradually improved the arts of cooking, dressing and other household craft, it is still true that all the most ingenious devices for the household have been invented by men and that the average level of woman's skill in her age-old occupation has been low. Even today the majority of housewives are still bunglers. The same thing is true in education; not only are there very few women of genius in the educational field, but most women teachers have not the slightest inkling of the meaning of true education. Though it is perfectly true that many men do not do their very best in their own work, there is a great difference between the business pride which men and women show. One reason is that a man's work is appraised by customers and employers while woman's work is uncontrolled and irresponsible, only depending upon one man's comfort or discontent. Also women are without money, and without money it is hard to be inventive. But the most important reason is that woman's natural conservatism has found the old customs good enough and has felt satisfied to follow the advice of mother and grandmother.

THE results of woman's lack of experience in handling money are everywhere noticeable. Women do not know how to spend money, how to discriminate between essentials and non-essentials, between permanent and temporary needs, when to save and when to spend. Women still sin in these matters through thoughtlessness, ignorance and laziness. The physical and spiritual well-being of those nearest to them is the most important point at which they can lose their

ditions. They have worked in the care of the sick and prisoners, in combating alcoholism and prostitution, in improving labor conditions, housing and sanitation, for the protection of motherhood and childhood, for education and healthy recreation; they have cared for the poor and the aged, they are a power for peace. This work proves that they have a right to citizenship which is not founded on theory alone. It has developed their sense of social responsibility and through them that of men, who have never cared so much for these things as women. It is partly through women's participation in such affairs that we have the awakening of the social conscience, which has been greater in the last century than before in a thousand years. This social motherliness has added beauty to women's struggle for liberty. As they have become eager to follow the commands of Christian love into society they have freed themselves

neighbor. And these faults are no more numerous among the poor than among those who have plenty of money to provide for the health and comfort of the family. When women began to enter the field of paid labor they carried these faults with them. Women used to hard manual labor soon learned to do satisfactory work, because they had to, but women of the upper classes, widows and daughters of men who had died or lost their money and were thus forced to earn their living, were not prepared to do so. When they had to get work their first thought was "how easy is it," not "what can I do best," and when they did work they expected the same privileges as the home worker. Lack of promptness, undue time taken out for rest, waste and unreliability were their faults. Especially was it hard for them to get rid of the idea that paid work could be carried on with the same carelessness as home work. But as necessity has forced more women into the economic field they have begun to lose these bad habits and, with professional training, their labor efficiency has increased.

Some wives and daughters from the well-to-do classes who know nothing of the hard conditions of life because a man has always protected them, who have never learned the value of money, which only earning it can teach, and who have never had any money except gifts, have learned in an amazingly short time to work well. There was a time when women used to conceal their thirst for knowledge or work and for their own money, because such desires were thought unwomanly. Women learned instinctively to hide all that she thought might detract from her in men's eyes, even her best qualities, if she imagined they might incur man's ridicule or displeasure. But economic necessity has in our generation developed enterprise, courage and self-competence as well as ability. Women no longer say, "I want to do such and such a thing, but I cannot." They more and more say what was once so unwomanly, "What I want to do I can do." One would

think that women would naturally co-operate, yet they have failed to do this voluntarily, only by experience have they learned that it is wise to work together for the improvement of domestic as well as social work. And they have found that forethought, thrift, managing ability and the sense of beauty which has come down to them from their grandmothers unite very well with methodicalness, promptness and discipline learned in the outside world. And these women have also retained their devotion and self-sacrifice as one can best see in those who support their families outside the home with as much tenderness as they used to work for them within its four walls.

THERE is another duty which women have to learn, whether working in public or in private life—it is the art of living. They must learn not to overwork to the point of nervousness which

breaks down self-control, not to throw themselves into social activities until the home life suffers, not to allow wrangling, nagging and fault-finding to mar the family happiness, not to try to force their point of view when no important value is to be gained, not to miss the sense of proportion between labor and rest. The art of life is sadly undeveloped in modern women as in modern men. Women must stand by the good old phrase, "Charity begins at home." One immoral consequence of the patriarchal family ideal is that family ties have been considered unbreakable and therefore have needed no care. Even people who would not fall short of the duty of loving their neighbors are frequently not lovable at home. Unless women will take as much care to develop the delicate virtues and joys of family life as they do to grow the flowers

what is good in the new. Women must consider it a moral duty to consult both in themselves and in others not only the temptation to shirk work but to hustle in work. And they must look upon as sins any habits which disturb the normal healthy proportions in life. They must cooperate to satisfy with the least waste all the needs of daily living, and not least of these the need of rest and of joy. The women who stand highest have already learned this truth, but for most women their duty in this respect is confused by the Christian doctrine of self-sacrifice on the one hand and the zeal for social work on the other.

PUBLIC life is a powerful stimulant. More powerful than the home. Ambition is a passion which drives women as well as men to great work and small deeds. Women used to be competitors in the race for men; they are now competitors for social tasks and distinctions. Among the younger women personal morality has not developed as fast as the social conscience. The older generation still looks upon it as a duty to overcome temptation, anger and vengeance, arrogance and vanity, temper and self-deception. The younger generation sees this duty in knowledge, work and social activity, having little time for daily self-examination in the small things that lead toward character. Sweden's great saint, Birgitta, used to take a bitter herb in her mouth to punish herself every time she was angry. Women of today do not have time to so much as bite their tongues on such occasions. Very few people today, either men or women, have time for the personal culture which makes the soul more serene and tolerant, gentle and wise, through freedom from externals. And yet there is nothing we need more today in this strenuous age than moral culture. Our lack of self-control is given a medical, not a moral, name and is called nervousness or hysteria and given sanitarium treatment, but that is not the only thing needed to restore the balance of an age suffering from mental St. Vitus's dance. The successes of Christian Science and similar movements depend on their tracking of the duty of careful self-examination and self-control. We must learn an art of living by which the soul can grow in strength and truth, in tolerance and wrath, in height and depth; and women should be the first to learn. And we must consider this culture of these resources of our souls a moral duty, and, in order to do it, we must have mental insight, determination, peace and time. Ask an active club woman if she has drawn deeply once a year from some well of wisdom in her library, or if Sunday is a day of rest to body and soul, or if once a week she draws the inspiration from nature or music that comes from an inner repose which allows the impressions to flood into the soul. If women's new social morality is to lift us another step out of our misery, toward greater spiritual

From a photograph by A. Speranza, Stockholm

Ellen Key at the age of thirty-six

in their gardens, they cannot expect children or servants to feel happy in the homes they have made. Home life must not only be righteous, it must be beautiful. The breaking up of the patriarchal family customs has added levity to the feeling which many of us have for home ties. No doubt new ideals will gradually crystallize out of this formlessness, but so far self-denial and self-control, which often helped to make family life beautiful in the past, are sadly lacking now. Everywhere one hears pleading for a renascence of the home.

A more deeply felt personal responsibility for the great private decisions of life and a more uniform social morality common to all classes, ages and sexes in public life is what women should try to reach. If they really want to save home and society as they sometimes say they do, they must guard what is best in the old conditions as well as develop

store the balance of an age suffering from mental St. Vitus's dance. The successes of Christian Science and similar movements depend on their tracking of the duty of careful self-examination and self-control. We must learn an art of living by which the soul can grow in strength and truth, in tolerance and wrath, in height and depth; and women should be the first to learn. And we must consider this culture of these resources of our souls a moral duty, and, in order to do it, we must have mental insight, determination, peace and time. Ask an active club woman if she has drawn deeply once a year from some well of wisdom in her library, or if Sunday is a day of rest to body and soul, or if once a week she draws the inspiration from nature or music that comes from an inner repose which allows the impressions to flood into the soul. If women's new social morality is to lift us another step out of our misery, toward greater spiritual

wealth, their own souls must reach heights not yet dreamed of by most of our excellent women today.

BUT the greatest danger to feminism and to humanity is that so many of the best women do not realize that the duty of motherhood is the most valuable to the nation, the race, and humanity, and that it is all important to reach again on a higher plane the union of self-assertion and self-sacrifice which only motherhood can bring. The present conflicts are sharp between the rights of the individual and the rights of society, between woman's demands for her own life and the demands made upon her by the family. The easiest stage of woman's fight for freedom, the struggle for rights, is passed. That which follows is the struggle for production, for the simultaneous creation of men and works, two creative impulses, neither of which can be wholly satisfied together, nor entirely segregated into different periods of a woman's life. Many women have become morally vacillating because of this dilemma and some have tried to get out of it by treating love and motherhood as incidents. But if the race is to rise, women must re-

member to take love and parental duty as the most important thing in life and men must learn of them to take it less as an episode. Nothing will more certainly destroy everything in the way of manly sex morality which past ages have built up than that women themselves shall take motherhood lightly.

Only by improving the quality of the human race by a more and more careful, enlightened and loving parenthood shall we gain a more beautiful future. All that women promise themselves and humanity of a new order of life in which purity and responsibility shall mark the relationship of the sexes, and love and justice the life of the people, will not become facts, even though all the women in the world were enfranchised, if the majority of men and women stand on a low plane physically, morally and intellectually, because they have not been well born. Only improved social conditions can eliminate want and crime. All we dream of for the future may yet be realized, and realized through the women, if the mothers of the next thousand years will consider it their highest happiness to promote through their children the evolution of the race toward a higher humanity.

Motherhood, which is the fountain head of unselfish ethics and which is woman's special field of action, must become her highest responsibility in thinking, feeling and acting. This is meant not only in a direct sense. When women in youth and early middle age have fulfilled their highest moral duty, to bear and rear the new race, and when in this work they have used all the culture which their new freedom has given them, then the time for spiritual motherhood arrives and occupies their later years. In the words of Frederick Van Eeden, "In the age when woman, according to the old customs, was worn out and done with, she may now possess a new and great mission to increase the common fund of human knowledge by contributing her own stored treasures of intuitive wisdom." It is woman's wisdom which the ancients worshipped. It is this wisdom which must be again respected and followed, in order that humanity may rise to the moral and spiritual height to which it has already risen materially, intellectually and scientifically. Men have gathered together the materials for building a more beautiful and moral world. It can only be built by men and women working together.

Next week will begin a series by Mary Austin on the various phases of the marriage problem. Mrs. Austin's knowledge of the subtleties of women's souls and her wisdom in dealing with these delicate questions is not surpassed in modern feminist literature. Her present contribution to the discussion of love is a defence of monogamy, one of the most convincing ever published.

Slewed Music

By LEO RICH LEWIS

IT has somewhere been said that an element in the enjoyment of smoking is the sense of continuous triumph over slight nausea. Whether the statement be true or false, it may, by suggestion, serve as an informal and speedy introduction to some comments on the product of up-to-the-minute composers like Debussy and Schönberg.

There is no doubt that the music of these men is, aesthetically speaking, nauseating to the average cultivated listener. There is good reason to believe that it is intensely enjoyable to a discriminating—or undiscriminating—few. Let us metaphorically classify the auditors as non-smokers and smokers, and hasten to get nearer our subject.

Musical did not begin to be a language until it began to blend dissonant voices. We have had, up to 1900, six centuries of music connected more or less with words, followed by three centuries of music disconnected more or less from words. Such is one kind of a summary of the development of our music. But throughout both periods dissonance has been a feature of prime artistic importance. Of course, then, the "average cultivated listener's" nausea is not caused by dissonance. He is quite used to that.

DURING the three-century period Bach and his contemporaries made harmony organic. That is, they recognized certain associations of chords and keys as desirable, and fixed in practice the principles of such associations. But Richard Wagner revised the world's notions on that subject. What might be called the systematic expectancy of the classic period was wholly annulled. Our listener, then, does not object to music because it is harmonically inorganic. He is quite used to framelessness.

Bach and Company also fixed the scales and modes as we know them, major and minor. Tunality (the quality

of being in a key) became cogently and definitely a principle of music. Indeed, scales became fewer, and keys more individual. And when, about 1890, composers showed unmistakable tendencies to blur scales and keys, serious trouble began for the average cultivated listener. Neither he nor any of his ancestors had ever felt the pangs of chronic musical astigmatism.

It would be possible, in perhaps two hundred pages of text and musical examples, to show that Bach himself suggested "impressionistic" effects, and that all the great composers (including, by the way, Mozart, and perhaps excepting Schubert) occasionally "reached for" them. But we must, as we are dealing in lines and not in pages, waive everything except reference to the fact. Yet we must not fail to observe that a liberal percentage of blur—or shall we call it torsional strain?—of scales and keys is found in Franck, d'Indy, and Richard Strauss, not to mention Wagner. In Debussy and Schönberg, however, we discover a new feature, the slew. Debussy has slewed Melody and Schönberg has slewed Harmony. As Rhythm was already infinitely slewed, there was nothing left to be done in that domain.

Debussy's cult-fosterers talk of the "whole-tone scale" which he uses. They seem to be in error. At any rate, the nauseating stylistic feature of Debussy's music is quite simple: he persistently slews his melody by the employment of perhaps twenty-five per cent of next-tones, above or below the expected tone. That is, about a quarter of the time, when one might reasonably expect the tone G, one hears G-sharp or G-flat. By unslewing his melodies we get rather agreeable and sometimes even significant music, as might be expected from one who has good things to his credit in "regular" style.

Schönberg's slew is embodied in the

harmony: but it is also on the next-tone principle, and the percentage of presence approaches 100. If the upper register is in the key of G, the lower will be in the key of G-sharp or G-flat. Just to clinch the slew, as it were, a few miscellaneous tones appear which "kill" both the keys which are struggling to prevail. Apply the unslewing process to Schönberg, and the resultant is comparatively less interesting than Debussy's.

NOW, bi-tonality or multi-tonality may be destined to enter into the music of the future; but one may safely opine that these things must await cleverer—and, especially, more versatile—exponents than Debussy and Schönberg. The *raison d'être* of the procedure of these composers is easily defined: like their predecessors, little and big, they are striving to produce something novel; a praiseworthy and probably spontaneous effort. We cannot at once know whether these innovations will be durable—or endurable. One may almost take for granted that congenitally distorted creations will be welcomed only in side-shows, where freak meets freak. Of course, in all the arts, the side-show has occasionally put the regular show out of business. But, in facing the future of music, we are still comforted by the occasional appearance of a fresh work which, by its thoroughgoing modernity, its technical mastery, its rich manifestations of melodic and harmonic inventiveness, increases our confidence that the evolution of music is still independent of hectic and inept experimentation.

And, by the way, a really valuable innovation always contains germs of development and elaboration. Shall we dare to attribute exceptional sagacity to the commentator who remarked: "Ah, yes! 'Pelléas et Mélisande.' Really, I am immensely interested in—M. Debussy's next opera!"

"None of us has ever asked Morris about it, and his grief has been as reticent as our own"

A Little Ghost in the Garden

By RICHARD LE GALLIENNE

Illustrated by Peter Newell

I DON'T know in what corner of the garden his busy little life now takes its everlasting rest. None of us had the courage to stand by, that summer morning, when Morris, our old negro man, buried him, and we felt sympathetic for Morris that the sad job should fall upon him, for Morris loved him just as we did. Perhaps if we had loved him less, more sentimentally than deeply, we should have indulged in some sort of appropriate ceremonial, and marked his grave with a little stone. But, as I have said, his grave, like that of the great prophet, is a secret to this day. None of us has ever asked Morris about it, and his grief has been as reticent as our own. I wondered the other night, as I walked the garden in a veiled moonlight, whether it was near the lotus-banks he was lying—for I remembered how he would stand there, almost by the hour, watching the goldfish that we had engaged to protect us against mosquitoes, moving mysteriously under the shadows of the great flat leaves. In his short life he grew to understand much of this strange world, but he never got used to those goldfish; and often I have seen him, after a long wistful contemplation of them, turn away with a sort of half-frightened puzzled hark, as though to say that he gave it up. Or, does he lie, I wonder, somewhere among the long grass of the salt-marsh that borders our garden, and in perigee tides widens out into a lake. There indeed would be his appropriate country, for there was the happy hunting ground through which in life he was never tired of roaming, in the inextinguishable hope of mink, and with the occasional certainty of a water-rat.

He had come to us almost as mysteriously as he went away; a fox-terrier puppy wandered out of the Infinite to the neighbourhood of our ice-box, one November morning, and now wandered back again. Technically, he was just graduating out of puppyhood, though, like the most charming human beings, he never really grew up, and remained, in behaviour and imagination, a puppy to the end. He was a dog of good breed, and good manners, evidently with gentlemanly antecedents canine and human. There were those more learned in canine aristocracy than ourselves who said that his large leaf-like, but very becoming, ears meant a bar sinister somewhere in his pedigree, but to our eyes those only made him better-looking; and, for the rest of him, he was race—race nervous, sensitive, refined, and courageous—from the point of his all-searching nose to the end of his stub of a tail, which the conventional docking had seemed but to make the more expressive. We had already one dog in the family when he arrived, and two Maltese cats. With the cats he was never able to make friends, in spite of persistent well-intentioned efforts. It was evident to us that his advances were all made in the spirit of play, and from a desire of comradeship, the two crowning needs of his lithe sociable spirit. But the cats received them in an attitude of invincible distrust, of which his poor nose frequently bore the sorry signature. Yet they had become friendly enough with the other dog, an elderly setter, by name Teddy, whose calm, lordly, slow-moving ways were due to a combination of natural dignity, vast experience of life, and some rheumatism. As Teddy would sit

philosophising by the hearth of an evening, immovable and plunged in memories, yet alert on the instant to a foot-fall a quarter of a mile away, they would rub their sinuous smoke-grey bodies to and fro beneath his jaws, just as though he were a piece of furniture; and he would take as little notice of them as though he were the leg of the piano; though sometimes he would wag his tail gently to and fro, or rap it softly on the floor, as though appreciating the delicate attention.

OF Teddy's reception of the newcomer we had at first some slight misgiving, for, amiable as we have just seen him with his Maltese companions, and indeed as he is generally by nature, his is the amiability that comes of conscious power, and is his, so to say, by right of conquest; for of all neighbouring dogs he is the acknowledged King. The reverse of quarrelsome, the peace of his declining years has been won by much historical fighting, and his reputation among the dogs of his acquaintance is such that it is seldom necessary for him to assert his position. It is only some hapless stranger ignorant of his standing that will occasionally provoke him to a display of those fighting qualities he grows more and more reluctant to employ. Even with such he is comparatively merciful, stern, but never brutal. Usually all that is necessary is for him to look at them steadfastly for a few moments in a peculiar way. This seems to convince them that, after all, discretion is the better part, and slowly and sadly they turn around in a curious cowed way, and walk off, apparently too scared to run, with Teddy, like Fate,

grimly at their heels, steadily "pointing" them off the premises. We were a little anxious, therefore, as to how Teddy would take our little terrier, with his fussy, youthful self-importance, and eternal restless poking into other folks' affairs. But Teddy, as we might have told ourselves, had had a long and varied experience of terriers, and had nothing to learn from us. Yet I have no doubt that, with his instinctive courtesy, he divined the wishes of the family in regard to the newcomer, and was, therefore, predisposed in his favour. This, however, did not save the evidently much overawed youngster from a stern and searching examination, the most trying part of which seemed to be that long, silent, hypnotising contemplation of him, which is Teddy's way of asserting his dignity. The little dog visibly trembled beneath the great one's gaze, his tongue hanging out of his mouth, and his eyes wandering helplessly from side to side; and he seemed to be saying, in his dog way: "O yes! I know you are a very great and important personage—and I am only a poor little puppy of no importance. Only please let me go on living—and you will see how well I will behave." Teddy seemed to be satisfied that some such recognition and submission had been tendered him; so presently he wagged his tail, that had up till then been rigid as a ramrod, and not only the little terrier, but all of us, breathed again. Yet it was some time before Teddy would admit him into anything like what one might call intimacy, and premature attempts at gamesome familiarity were checked by the gathering thunder of a lazy growl that unmistakably bade the youngster keep his place. But real friendship eventually grew between them, on Teddy's side a sort of big-brother affectionate tutelage and guardianship, and on Puppy's—fur, though we tried many, we never found any other satisfactory name for him but "Puppy"—a reverent admiration and watchful worshipping imitation. No great man was ever more anxiously copied by some slavish flatterer than that old sleepy carelessly-groomed setter by that eager, ambitious little terrier. The occasions when to bark and when not to bark, for example. One could actually see Puppy studying the old dog's face on doubtful occasions of the kind. Boiling over, as he visibly was, with the desire to bark his soul out, yet he could be seen unmistakably restraining himself, till Teddy, after some preliminary soliloquising in deep undertones, had made up his mind that the suspicious shuffling-hy of probably some inoffensive Italian workman de-

"They stood in a circle around Puppy, for all the world as if they were holding a court-martial or a hazing-party."

manded investigation, and lumberingly risen to his feet and made for the door. Then, like a bunch of firecrackers, Puppy was at the heels, all officious assistance, and the two would disappear like an old and a young thunderbolt into the resounding distance.

TEDDY's friendship had seemed to be definitely won on an occasion which brought home to one the quaint resemblance between the codes and ways of dogs and those of schoolboys. When the winter came on, a rather severe one, it soon became evident that the little short-haired fellow suffered considerably from the cold. Out on walks, he was visibly shivering, though he made no fuss about it. So one of the angels in the house knitted for him a sort of woollen sweater buttoned down his neck and under his belly, and trimmed it with some white fur that gave it an exceedingly smart appearance. Teddy did not happen to be there when it was first tried on, and, for the moment, Puppy had to be content with our admiration, and his own vast sense of importance. Certainly, a more self-satisfied terrier never was than he who presently sped out to air his new finery before an astonished neighbourhood. But alas! you should have seen him a few minutes afterwards. We had had the curiosity to stroll out to see how he had got on, and presently, in a bit of rocky woodland near by, we came upon a curious scene. In the midst of a clump of red cedars, three great dogs, our Teddy, a wicked old black retriever, and a husling be-wigged and be-furred collie, stood in a circle round Puppy, seated on his haunches, trembling with fear, tongue lolling and eyes wandering, for all the world as though they were holding a court-martial, or, at all events, a hazing-party. The offence evidently lay with that dandified new sweater. One and another of the dogs smelt at it, then tugged at it in evident disgust; and, as each time, Puppy made a move to get away, all girt him round with guttural thunder of disapproval, as

much as to say: "Do you call that a thing for a manly dog to go around in? You ought to be ashamed of yourself, you miserable dandy."

We couldn't help reflecting that it was all very well for those great comfortable long-haired dogs to talk, naturally protected as they were from the cold. Yet that evidently cut no figure with them, and they went on sniffing and tugging and growling, till we thought our poor Puppy's eyes and tongue would drop out with fear. Yet, all the time, they seemed to be enjoying his plight, seemed to be smiling grimly together, wicked old experienced brutes as they were.

Presently the idea of the thing seemed to occur to Puppy, or out of his extremity a new soul was born within him; for suddenly an infinite disgust of his new foppiness seemed to take possession of him too, and, regaining his courage, he turned savagely upon it, ripping it this way and that, and struggling with might and main to rid himself of the accursed thing. Presently he stood free, and barks of approval at once went up from his judges. He had come through his ordeal, and was once more a dog among dogs. Great was the rejoicing among his friends, and the occasion having been duly celebrated by joint destruction and contumely of the offending garment, Teddy and he returned home, friends for life.

IT is to be feared that that friendship, deep and tender as it grew to be on both sides, perhaps particularly on Teddy's, was the indirect cause of Puppy's death. I have referred to Teddy's bark, and how he is not wont to waste it on trivial occasions, or without due thought. On the other hand, he is proud of it, and loves to practice it—just for its own sake, particularly on early mornings, when, however fine a bark it is, most of our neighbours would rather continue sleeping than wake up to listen to it. There is no doubt at all, for those who understand him, that it is a purely artistic bark. He means no harm to anyone by it. When the milkman, his private enemy, comes at seven, the bark is quite different. This barking of Teddy's seems to be literally at nothing. Around five o'clock

on summer mornings, he plants himself on a knob of rock overlooking the salt marsh and barks, possibly in honour of the rising sun, but with no other perceptible purpose. So have I heard men rise in the dawn to practice the cornet—but they were men, so they ran no risk of their lives. Teddy's practicing, however, has now been carried on for several years in the teeth of no little peril; and, had it not been for much human influence employed on his behalf, he would long since have antedated his little friend in Paradise. When that little friend, however, came to assist and emulate him in those morning recitals, adding to his bark an occasional,—I am convinced purely playful—bite, I am inclined to think that a sentiment grew in the neighbourhood that one dog at a time was enough. At all events, Teddy still barks at dawn as of old, but our little Puppy barks no more.

Before the final quietus came to him, there were several occasions on which the Black dog, called Death, had almost caught him in his jaws. One there was in especial. He had, I believe, no hatred for any living thing save Italian workmen and automobiles. I have seen an Italian workman throw his pick-axe at him and then take to his heels in grotesque flight. But the pick-axe missed him, as did many another clumsily hurled missile.

AN automobile, however, on one occasion, came nearer its mark. Like every other dog that ever barked, particularly terriers, Puppy delighted to harass the feet of fast trotting horses, mockingly running ahead of them, barking with affected savagery, and by a miracle evading their on-coming hoofs—which, to him, tiny thing as he was, must have seemed like trip-hammers pounding down from the sky. But horses understand such gaiety in terriers. They understand that it is only their foolish fun. Automobiles are different. They have no souls. They see nothing engaging in having their tires snapped at as they whirl swiftly by; and, one day, after Puppy had flung himself in a fine fury at the tires of one of these soulless things, he gave a sharp yelp—"aot

cowardly!"—and lay a moment on the roadside. But, only a moment; then he went limping off on his three sound legs, and hid himself away from all sympathy, in some unknown spot. It was in vain we called and sought him; and only after two days was he discovered, in the remotest corner of a great rocky cellar, determined apparently to die alone in an almost inaccessible privacy of wood and coal. Yet, when at last we persuaded him that life was still sweet and carried him upstairs into the great living-room, and the beautiful grandmother who knows the sorrows of animals almost as the old Roman ever knew the languages of beasts and birds, had taken him in charge and made a cosy nest of comforters for him by the fire, and tempted his languid appetite—to which the very thought of bones was, of course, an offense—with warm, savory-smelling soup; then, he who had certainly been no coward—for his thigh was a cruel lump of pain which no human being would have kept so patiently to himself—became suddenly, like many human invalids, a perfect glutton of self-pity; and when we smoothed and patted him and told him how sorry we were, it was laughable, and almost uncanny, how he suddenly set up a sort of moaning talk to us, as much as to say that he certainly had had a pretty bad time, was really something of a hero, and deserved all the sympathy we would give him. So far as one can be sure about anything so mysterious as animals, I am sure that from then on he luxuriated in his little hospital by the fireside, and played upon the feelings of his beautiful nurse, and of his various solicitous visitors, with all the histrionic skill of the spoiled and petted convalescent. Suddenly, however, one day, he forgot his part. He heard some inspiring barking going on nearby—and, in a flash, his comforters were thrust aside, and he was off and away to join the fun. Then, of course, we knew that he was well again; though he still went brisky about his various business on three legs for several days.

His manner was quite different, however, the afternoon he had so evi-

dently come home to die. There was no pose about the little forlorn figure, which, after a mysterious absence of two days, suddenly appeared, as we were taking tea on the veranda, already the very ghost of himself. Wearily he sought the cave of the beautiful grandmother's skirts, where, whenever he had had a scolding, he was wont always to take refuge—barking, fiercely, as from an inaccessible fortress, at his enemies.

BUT, this afternoon, there was evidently no bark in him, poor little fellow; everything about him said that he had just managed to crawl home to die. His brisk white coat seemed dank with cold dew, and there was something shadowy about him and strangely quiet. His eyes, always so alert, were strangely heavy and indifferent, yet questioning and somehow accusing. He seemed to be asking us why a little dog should suffer so, and what was going to happen to him, and what did it all mean. Alas! We could not tell him; and some of us dare say to each other that our little comrade in the mystery of life was going to die. But a silence fell over us all, and the beautiful grandmother took him into her care, and so well did her great and wise heart nurse him through the night that next morning it almost seemed as though we had been wrong; for a flash of his old spirit was in him again, and, though his little legs shook under him, it was plain that he wanted to try and be up at his day's work on the veranda, warning off the passer-by, or in the garden carrying on his eternal investigations, or farther afield in the councils and expeditions of his fellows. So we let him have his way, and for awhile he seemed happier and stronger for the sunshine, and the old familiar scents and sounds. But the one little tired husky bark he gave at his old enemy, the Italian workman, passing by, would have broken your heart; and the effort he made with a bone, as he visited the well-remembered neighbourhood of the ice-box for the last time, was pitious beyond telling. Those sharp, strong teeth that once could bite and grind through anything could do nothing with it now. To lick it sally with tired lips,

"After two days he was discovered in the remotest corner of a great rocky cellar"

in a sort of hopeless way, was all that was left; and there was really a look in his face as though he accepted this mortal defeat, as he lay down, evidently exhausted with his exertions, on a bank nearby. But once more his spirit seemed to revive, and he scrambled to his legs again and wearily crawled to the back of the house where the beautiful grandmother loves to sit and look over the glittering salt-marsh in the summer afternoons.

OF course, he knew that she was there. She had been his best friend in this strange world. His last effort was naturally to be near her again. Almost he reached that kind cave of her skirts. Only another yard or two and he had been there. But the energy that had seemed irrepressible and everlasting had come to its end, and the little body had to give in at last, and lie down wearily once more, with no life left but the love in its fading eyes.

There are some, I suppose, who may wonder how one can write about the death of a mere dog like this; and cannot understand how the death of a little terrier can make the world seem a lonelier place. But there are others, I know, who will scarce need telling, men and women with little ghosts of their own haunting their moonlit gardens; strange, appealing, faithful companions, kind little friendly beings that journeyed with them awhile the pilgrimage of the soul.

I often wonder if Teddy misses his little lassy playfellow and disciple as we do; if, perhaps, as he harks over the marsh of a morning, he is sending him a message. He goes about the place with nonchalant greatness as of old, and the Maltese cats still rub their sinuous smoke-grey bodies to and fro beneath his jaws at evening. There is no sign of sorrow upon him. But he is old and very wise, and keeps strange knowledge to himself. So, who can say?

Gleams

By EDWIN BJÖRKMAN

POETRY is for all, but all have not a place in poetry.

We have at last learned to realize that what makes a character worthy of poetical treatment is neither birth nor position, but certain inner discrepancies and struggles that may occur in any human being, however lowly his station.

The main product of culture is modesty based on a recognition of ignorance.

Do what you must, but do it decently and without getting drunk on the virtue of submitting to the inevitable.

Obviousness and obscurity are the Scylla and Charybdis not only of art but of all human expression.

Nothing is really worth while but the unattainable.

When a man despises reason, it is not likely that he has much of it.

So far man has tried to interpret life in the light of his own desires. As he grows wiser, he may try to interpret his desires in the light of life—and perhaps disappointment may then prove a less frequent visitor.

PRIMITIVE man cannot strive for a distant result unless he can give his effort the form of play. Civilized man has progressed from this point chiefly by means of his cleverness in inventing new games.

The Story of the Kodak Album

The friendships of school days, the very atmosphere of the home, every phase of life that makes for companionship—in all of these is an intimate picture story—a story that glows with human interest, grows in value with every passing year.

Let Kodak keep the story for you.

Ask your dealer, or write us, for "At Home with the Kodak," a delightfully illustrated little book that tells about home pictures—flashlights, groups, home portraits and the like—and how to make them. It's mailed without charge.

By ALBERT W. ATWOOD

Protecting the Stockholder. Part I. Arousing Him

THIS is the first of a series of articles on the protection of investors.

In the title mention is made of the stockholder and not the bondholder because if the former is safeguarded, the latter, in his more secure position, is certain to be. The article next week will discuss the rights and duties of stockholders, and follow up the somewhat general nature of this one with specific and practical suggestions; in other words, it will tell what the individual owner of securities needs to know to protect his position. Later articles will deal with protection from the outside instead of the inside, as it were, and show what governmental and other agencies can accomplish.

This department has only one purpose, to be of practical help to the investor. It does not concern itself with policies or theories, except as they directly affect the owner of securities, and it is the writer's belief that the less he takes sides, the more helpful will his articles prove.

IN view of this determination I will not undertake to decide for which of two possible reasons the investor stands in most need of protection. On the one hand, it is contended that business interests are being unjustly attacked by politicians, agitators and light-brained reformers. On the other hand, it is certain that large and small corporations alike have developed no little rottenness, and the investor needs protection from the officers and directors presumably chosen to represent him. Whether the attacks upon business of unprincipled and reckless demagogues or the unethical practices of corporation officers and directors are the worse I do not know. The average investor is in need of being shielded from both.

What Is at Stake?

PROFESSOR JOHN R. COMMONS

In a recent book urges the abolition of the geographically representative form of government, and the adoption of a frankly admitted class system. In Denmark, Belgium and England the same reform is being urged, only there the proposal is spoken of as a "vocational" system. Professor Commons points out that the average legislator represents no class in the community well, being a compromise person who has offended no class seriously and is acceptable to the local political boss. Why, he asks, should not our legislatures be composed of men who really represent large or important bodies of citizens, such men as Morgans, Rockefeller and Carnegie on the one hand, and Mitchell, Gompers and possibly Heywood on the other.

Perhaps the many recent proposals to organize and unite investors has unconsciously sprung from a similar tendency of thought. It may be objected that business interests have far too fully participated in government already, and that the late Republican overthrow reflected an awakened realization of that fact. But the trouble is that in too many instances the power of capital and corporations in public affairs has faded

to fairly represent the many small owners of stocks and bonds or even has actually betrayed them.

A RECENT compilation showed that 865 large corporations have 1,025,376 stockholders. There are about 300,000 corporations in the country. Then, too, there are 35,000,000 owners of policies in legal reserve insurance companies and 10,000,000 in assessment companies and other orders. Insurance companies invest a large part of their resources in stocks and bonds. The same is true of the savings banks, which have eleven million depositors, and much the same is true of educational and charitable institutions and friendly and fraternal societies and fire insurance companies. Summarized it may be said that conditions affecting securities cut into the very bottom of society. Our present social system would fall apart if investment securities became worthless. Allowing for duplications there are probably as many investors, direct and indirect, as there are laboring men and women. An investors' union would represent as large an element as all the labor unions combined, although a large proportion of the members of one group would of necessity be members of the other.

Where the Investor Is to Blame

MOST investors, even those who directly own securities, are careless, indifferent, apathetic, indolent. To their supineness many of the evils of corporate mismanagement and unjust political attack are due. In the year 1911 only 41 policyholders out of a total of one million in the New York Life Insurance Company took the trouble to cast a vote at the annual meeting, although the policyholders in theory own the company. The writer admits to having been one of the careless million.

NOW it is obviously impossible for more than a minute fraction of a million policyholders or one hundred thousand stockholders, as in the case of the United States Steel Corporation, to attend an annual meeting. Moreover, to quote from Mr. Fairfax Harrison, the new president of the Southern Railway, the stockholder does not feel that the game is worth the candle, for he knows or believes there is a compact group of men who name the management and its policies.

Annual meetings have long been a farce. In 1911 and 1912 not a single shareholder except officers and directors attended the annual shareholders' meeting of the Rock Island Company although that company has \$140,000,000 of stock. Usually only four or five go to the annual New York Central meeting. The annual meeting of the Southern Pacific Company, a monester being that dominates sovereign states and has 63,000 owners, takes place at the hamlet of Beechmont, Kentucky, and is attended by one assistant secretary with a dress suit case full of prearranged votes. Of course there is a majority of stock represented at all these meetings, but only by proxy, that is, by delegated, substituted authority.

The Awakening

BUT stockholders are waking up. At this year's annual meeting of the New Haven Railroad one hundred persons tried to crowd into a room designed for seventy-five, and a score more stood in the corridors. President Elliott promised that next year a larger room would be provided. Protesting stockholders were voted down as usual by the proxies of the management, but the protests had a powerful subsequent moral and legal influence upon the directors. The management of the American Locomotive Company voted down protests at a recent meeting of stockholders, but subsequently acted favorably upon them. It is amazing how much respect the management will have for a man with only five shares but who has the courage to speak out. The five share man who makes his "kick" and is then voted down by 1,287,563 shares of proxy stock to his five shares may feel humbled and cheap, but in three days of uneasy beds for directors his protests are usually effective.

IN England and Canada shareholders' meetings are almost social functions. In London there is a room with a 1500 seating capacity used for this purpose. The noble chairman reads an elaborate report, many questions are asked and politely answered, and the meetings almost always end with a better understanding all around. Distances are not as great in England, but geography is not the only reason for the Britisher's more active interest in his company. He has the feeling that he is a part of it, a sensation undeveloped here. Of late, American shareholders have taken an increased interest. Not only at the New Haven and American Locomotive meetings but at recent gatherings of such companies as the International Steam Pump, International Motors, Federal Mining & Smelting, American Cotton Oil and Brooklyn Union Gas, minority owners have made vigorous and effective demands.

THE feasible, constructive and desirable step for the small, individual stockholder to take is to combine with like persons in his own town or locality, and appoint a delegate to attend annual and special meetings. A committee of a dozen or score of shareholders, even when the total amount of stock represented is small, is pretty certain to have more effect upon the management than will any one stockholder. Managements somehow are always afraid of committees of shareholders. There is something threateningly suggestive of remedy at law about a committee, no matter how small its units or aggregate.

Mr. Herbert A. Scheffel, a New York broker, recently asked the Chamber of Commerce to appoint a committee of five to "consider the advisability of sending a letter to every corporation in the country in order to get an expression of opinion as to the feasibility of forming an organization of stockholders for the protection of the business interests of the country." Mr. Scheffel has been deluged with letters, both from individuals and companies

commending his plan. But while the times are ripe for some such action, I do not believe this is the way to go about it. If the corporations are the ones to be consulted, the investor will be little better off than before. No one should understand this more fully than Mr. Schrefel, because it was due to the admirable energy of his firm that a great industrial combination, whose directors had long taken an old-fashioned, arbitrary stand toward minority, or "outside," stockholders, as well as an absurdly generous view of their own abilities as expressed in the salaries they paid themselves, were at last compelled to treat the common stockholders with a little of this same generosity.

IF a stockholders' union is formed and dominated by the great inside corporate, "Money Trust" interests, it might as well be left unformed. Probably such a body would be so unwieldy that a few Wall Street bankers would control it, and the small stockholder remain as submissive as ever. That the interest of the small stockholder and the great banker and corporate manager lie in the same direction is squarely challenged by many facts. Flooding Congressmen with telegrams from bank depositors and complainant stockholders is not an unheard of device, or one unfamiliar to the Machiavellis of "High Finance." History may commend the work of Mark Hanna in organizing stockholders in the campaign of 1896, but the great financial leaders are not always to be trusted.

THE sensible way to get at the evils for which remedy is sought, is for local bodies of shareholders to get together. A nation wide union is perhaps pleasant to contemplate, but is too big and vague for the individual to take much part in, and is obviously open to abuse. What rights and duties appertain to even the small stockholder, and how he can exercise them, will be the subject of the next article.

The Magic Flight of Thought

AGES ago, Thor, the champion of the Scandinavian gods, invaded Jotunheim, the land of the giants, and was challenged to feats of skill by Loki, the king.

Thor matched Thialfi, the swiftest of mortals, against Hugi in a footrace. Thrice they swept over the course, but each time Thialfi was hopelessly defeated by Loki's runner.

Loki confessed to Thor afterwards that he had deceived the god by enchantments, saying, "Hugi was my thought, and what speed can ever equal his?"

But the flight of thought is no longer a magic power of mythical beings, for the Bell

Telephone has made it a common daily experience.

Over the telephone, the spoken thought is transmitted instantly, directly where we send it, outdistancing every other means, for the carrying of messages.

In the Bell System, the telephone lines reach throughout the country, and the thoughts of the people are carried with lightning speed in all directions, one mile, a hundred, or two thousand miles away.

And because the Bell System so adequately serves the practical needs of the people, the magic of thought's swift flight occurs 25,000,000 times every twenty-four hours.

What They Think of Us

From the *Conservator*, Lincoln (Neb.)

Have you seen the new HARPER'S WEEKLY under Norman Hapgood's management? You should read it. It is an outspoken exponent of the people's side of public questions. The *Conservator* welcomes it into the political arena. It has a great field before it.

Detroit (Mich.) News

"The worst dream I ever had," styles R. E. G., "was the other night. I dreamed that HARPER's was a daily."

Edward K. Graham, Acting President, University of North Carolina, Chapel Hill, (N. C.)

HARPER'S WEEKLY is the most stimulating of the many publications that come to my desk.

Schenectady (N. Y.) Star

The Union-Star prints today on this page an editorial from HARPER'S WEEKLY having to do with the looting of the 'Prisco railroad system and bearing,

It is the aim of the publishers of HARPER'S WEEKLY to render its readers who are interested in sound investments the greatest assistance possible.

Of necessity, in his editorial articles, Albert W. Atwood, the Editor of the Financial Department, deals with the broad principles that underlie legitimate investment, and with types of securities rather than specific securities.

Mr. Atwood, however, will gladly answer, by correspondence, any request for information regarding specific investment securities. Authoritative and disinterested information regarding the rating of securities, the history of investment issues, the earnings of properties and the standing of financial institutions and houses will be gladly furnished any reader of HARPER'S WEEKLY who requests it.

Mr. Atwood asks, however, that inquiries deal with matters pertaining to investment rather than to speculation. The Financial Department is edited for investors.

All communications should be addressed to Albert W. Atwood, Financial Editor, Harper's Weekly, McClure Building, New York City.

by direct influence, upon the condition of affairs revealed to be existing in the New Haven system, which on Wednesday passed its quarterly dividend and kept more than \$3,500,000 from the owners of the road's stock. The WEEKLY's editorial also has a direct bearing upon the news published yesterday to the effect that President Wilson's program of legislation to supplement existing anti-trust laws will provide for the application of the personal guilt principle to individual men in the directorates and among the officials of corporations, and will bear upon interlocking directorates, voting trusts, over-capitalization, etc.

Ryerson W. Jennings, Philadelphia

Better and better HARPER'S WEEKLY gets as it goes along in its new field of work. It is a forty-year-old friend and never more appreciated than at the present time.

Washington (D. C.) Post

HARPER'S WEEKLY says vaudeville circuits have let up on the feminist movement; if Norm Hapgood will only do likewise, it'll become unanimous.

Montgomery (Ala.) Advertiser

HARPER'S WEEKLY's new style of art has even seduced James Montgomery Flagg.

Brooklyn (N. Y.) Eagle

Under George William Curtis, HARPER'S WEEKLY gained international fame fighting for civil service reform. "No man and no paper who fears to be in the minority has the power to create a majority," said Curtis. As Secretary of State under our first woman president, Norman Hapgood may use these famous words with great effect in his Chattanooga lecture.

W. D. Armstrong, Y. M. C. A., Alton (Ill.)

The HARPER'S WEEKLY is one of the best papers that is on our tables. Keep up the good work. The article on "The Christian Association" in the issue of the 15th is timely and in keeping with the spirit of the movement.

A. W. Cleerman, Cornsall (Mich.)

You have made HARPER'S WEEKLY the best ever published.

Jos. H. Safford, Detroit (Mich.)

Have been a reader of the WEEKLY for fifteen years. The first Hapgood number almost took my breath away; it was as if some portly, highly respectable dame had suddenly blossomed in straight front, slit skirt, and all the trappings of giddy youth. Dad and I held quite a serious session whether he'd keep on talking, but with each succeeding number decided the old hadn't a thing on the new. All of which is doubtless of small import to the Company.

Albert H. Scherzer, President, The Scherzer Rolling Lift Bridge Co., Chicago (Ill.)

I have been very much interested, and appreciated the new and vigorous life exhibited by HARPER'S WEEKLY under your editorial management, and wish it every success in its mission of enlightenment as a "Journal of Civilization."

St. Louis (Mo.) Globe-Democrat

Norman Hapgood, that zealous advocate of the new freedom, morally speaking reproaches the hardness of Puritan standards as exemplified in Hawthorne's novel, "The Scarlet Letter." He favors

the Greek conception of sin, "missing the mark." He argues that by regarding any transgression as a defective aim, the sinner might keep on striving and eventually hit the bull's-eye. But would this prevent moral sharpshooters demanding that amateurs establish a record before attempting to associate with them?

San Diego (Cal.) Tribune

A curious study in topographical and civic nomenclature as revealed on the railroad maps and in the postal guides of this country is contained in an article by Charles Edward Russell in HARPER'S WEEKLY. . . .

The charge brought against the un-Americanism of Americans cannot be urged to the shame of California, nor, it may be truthfully said, in derogation of the local pride that has named the towns, mountains, lakes and rivers of any of the Pacific states.

California has carried over scores of names from the Spanish and Mexican régime, many of them redolent of the early history of the state; along the Camino Real, the vowels of these Spanish names ring like bells in the Mission towers, and the consonants are musical in combination as the thrumming of guitars in the revelry of the fiesta or the merry whirl of the fandango.

The mass of California nomenclature is closely interwoven with our history and tradition, as our native architecture is so appropriately a part of our natural environment.

The Columbia (S. C.) State

Senator Tillman's speech against woman suffrage has aroused HARPER'S WEEKLY but, never mind, Norman, the South Carolina suffragette party will attend to him when she gets a chance.

Grand Rapids (Mich.) Evening Press

It is a far cry from Colonel Harvey's combination of stateliness and sprightliness to Norman Hapgood's brilliant earnestness and dashing modernity. The change, however, has been accomplished, and the WEEKLY, it must be confessed, already seems the better for it.

Douglas H. Smith, Everett, (Washington)

Such a weekly will pull the best out of our artists and writers. I have taken *Jugend* and other foreign periodicals for years to get this combination. Your WEEKLY comes to me in the tall timber like a feast in a famine.

Wilmingon (N. C.) Star

Dr. Edward K. Graham, of the University of North Carolina, recently contributed to HARPER'S WEEKLY an interesting article on "Keeping Money at Home," and it was not so much a boost for the resources of North Carolina as it was designed to point out our failure to use them to the best advantage. Doubtless, it was the professor's purpose not to write about what North Carolina is doing but to mention some of the notable things that she is not doing to bring about the greater prosperity and ultimate independence of the State. In that respect a knock was a boost, for it makes known that the asset is here but that it is yet to be fully realized upon. It makes known the fact that opportunities are lying around loose to be seized by the newcomer.

The (New York) Evening Mail

Read HARPER'S WEEKLY, the greatest comic paper in America.

Lincoln and the Boys of 1914

HAPPY America, who, in five short weeks between the 17th of January and the 22nd of February can celebrate the birth of Franklin, Lincoln, Washington. Of these, the greatest was Washington. In genius, in personal brilliancy, the first place would go to Franklin, whose name is linked with the lightning, whose writings are classics, whose diplomacy was the most brilliant we have had, and who bore such a part in statesmanship that his contemporaries put him in a class alone with Washington. In charm of personality, in strength and color of humanity, Lincoln has no rival. What puts Washington first, is the amount he did. His will, his wisdom and his example held the little colonies united and determined through the long struggle, and his calm, objective, many-sided judgment started the young nation safely. Jefferson, Hamilton, Madison, Jay, Monroe and Knox were his servants, because they recognized in him a mind and character which deserved their service. It was his worth, realized by the whole country, that made him the master, and enabled him to use these great men according to their talents. He was one of the few who always serve the truth. His was a mind that, never brilliant, was also never wrong. His will was never selfish, and in the public service he knew no such thing as faltering. Perhaps next week we shall say something more about this monument of mankind, but today it is Lincoln whom we are recalling, since it is his birthday that is just now upon us.

About him, any new thing has interest, and it is no small pleasure to publish a hitherto unknown portrait, with quality enough to deserve the words from Idu M. Tarbell which are printed under it. An American poet, Edwin Robinson, has written of Lincoln:

"Sirend, hallowed, harassed, and among
The mysteries that are unfold,
The face we see was never young,
Nor could it ever have been old.

"For he, to whom we have applied
Our shopman's test of age and worth,
Was elemental when he died,
As he was ancient at his birth:
The subtlest among kings of earth,
Bowed with a galling crown, this man
Met rancor with a cryptic mirth,
Laconic—and Olympian."

Bitter laughter and the mystery of grief; familiarity and lofty pride; courage and humility; a gaze far distant on eternal destiny, and yet the ever-helping hand. Why indeed should he not be loved?

When sometimes we say that opportunity now is lessened, what is it we have in mind? Perhaps it is harder now than fifty years ago to gather together more money than any man should have. How much of his dreams by day and night did Washington give to wealth? And in even Franklin's frugal mind, how many interests and ambitions lived together as he struggled up from extreme poverty! "Every school boy knows" how Lincoln in his law practice refused fees where he might win on technical grounds against his sense of right. These men dreamed not of fortunes. They wished money enough to give education, to give freedom, to give service. How much easier is it now than it was then to gain that much from life! How few boys are there among us who cannot get more than the one year of schooling that was all Lincoln had! How many thousands and thousands of boys and girls have at hand, in the public schools and libraries and museums, an education better than any of these three men could have obtained without determined struggle! Never in history was opportunity open to so many. Never was there a time when millions, by industry, frugality and will, could be so sure of food, warmth, education,—of all that is needed to bring out greatness, if greatness happens to be in us, or if we are not of that limited few, all that is needed to help us to make a heaven of the common lot.

Courage

BBETTER the sorriest citizen thinking he can take hold of life, and that his faint spark of free-will can burn holes through the thicket, than a worldful of orderly persons of regular habit and contented mien. Rather wildness, than that men should find this a locked world, where all the returns are in.

Better absurd nites, strutting over large landscapes, than such a flatness of cheery slaves, taking orders from their betters. Better a petty race should strive vainly, than accept its own littleness. If it is doomed to futility, let it at least live as if all the roads to victory were open.

So when we face the push and thrust of life in each generation, let us be glad that youth is claiming its right to live. Let the young flourish and prosper. It is wiser to tear down the temples than to accept defeat. Effort is finer than resignation, and peril is safer than despair in routine. And by that high courage and fresh experiment, they defeat confusion and lift their heads above despond. So the world is full of homes. Obscure men deal manfully with their stint of work. Countless unknown women suffer and love. Order gains on chaos. A will is at work upon the welter.

Wilson's Shorthand

THERE appeared in our issue of January 31 an article showing Woodrow Wilson as his own stenographer. Commenting on that article, one reader said: "The President not only writes shorthand, he thinks shorthand." He certainly does. He observed once to a friend that if anyone wished to flatter him, he could best do it by assuming that when he heard a thing once he could understand it. Nothing bores him quite so much as the needless expense of energy required to listen to a person who insists upon reiterating and emphasizing everything he says.

Pinchot for the Senate

THE Senate of the United States ought to be a place dominated by those who best combine distinction, ability and independence. Pennsylvania now has the opportunity of sending to the Senate a man who brilliantly combines these requirements. Gifford Pinchot put imagination and fervor into our conservation policy and inspired Theodore Roosevelt to put behind that movement his immense energy and determination. Since he ceased to be Chief Forester, because of the reactionary attitude of the Taft administration, he has been carrying on similar work, helping ahead not only everything connected with the preservation and development of our natural resources, but also other progressive causes. Pennsylvania has no citizen more distinguished. If she chooses him, she will honor herself, the Senate and the country.

French Lick to the Front

TOM TAGGART, like Roger Sullivan, thinks this is the yellow dog year and that with Republican and Progressive tickets in the field anybody can win a Democratic Senatorial toga. He is minded to try conclusions with Senator Shively for the Democratic nomination. But nomination is not election this year in either Indiana or Illinois. It might hardly be worth while for a Progressive Democrat, not to say a decent one, to vote for Sherman rather than Sullivan, or for Fairbanks as an alternative to Taggart. But here is where the National Progressives are likely to come into their own. Bosses are being sent to the rear these days, not promoted to the United States Senate, and with the reactionary vote divided between Sullivan and Sherman, for example, or between Taggart and Fairbanks, it will be an easy matter to unite the progressive vote of all three parties. It is the prospect of such a coalition that will probably make it unnecessary. No party cares to risk defeat when the right course means probable victory. And a Boss who is beaten for the Senate is a beaten Boss. If Sullivan and Taggart, why not Murphy, to make it unanimous?

Chivalry

THE best known organ of predatory wealth is the *New York Sun*. Once upon a time, the present editor of HARPER'S WEEKLY spoke at Albany in favor of direct primaries. Asked

for an advance statement for the afternoon papers he gave one and repeated it at the hearing. It happened, however, that the Committee cross-examined him, which rather excited him, and led him to make much stronger statements about legislative corruption than those published in advance. The "news" account in the *Sun* said that he gave out a pugnacious statement ahead but became frightened at the hearing and was mild. It "colors" the news where it has a purpose to serve. An editorial a short time ago felt it necessary to quote the statement that the above-mentioned editor was neither "A knave nor a fool." The statement was made by the Reverend C. F. Aked, but the *Sun* thought it would be more effective to credit it to a Film Company and so did it. It happened that the opinion which the *Sun* was attacking was being supported by Mrs. O. H. P. Belmont and Mrs. Inez Hillolland Boissevain, but the *Sun*, fearing those names might have some following, referred to them contemptuously as "two women." The haughty sheet then spoke of "the virile or quasi virile element which prompts the ego to assert itself in masculine fashion, to participate in the affairs of men, to seem to do noble and manly things and to wear trousers." This is prettily complacent of the male editor, and the *Sun* goes on to connect with the feminine nature the element which "impels the unhappy person to lie about his neighbors, to resent benevolent wishes, to take pride in unmanliness, to revel in the filth of the borderlands of life, art and literature, and, if he happens to get control of a newspaper, to 'smut her up,' to use his own elegant phrase, as much in the fashion of Christabel Pankhurst as his involuntary respect for Anthony Comstock permits."

Most of the men who represent the basest aspects of our civilization praise themselves for being manly and are fond of selecting the noblest activities of progressive women and treating them as something far below their own lofty standards. Naturally this kind of evil complacency would show itself in the regular organ of illicit money and of Tammany Hall.

Uses of Adversity

FOR generations, Massachusetts was pre-eminently the teacher of Americans. Recent experience has made her again a learner, and she is quick to resume her old rôle. Witness the recent admonition of her Public Service Commission:

"The public will no longer tolerate the spectacle of directors of our railroads trading with themselves, whether the transaction involves banker's commissions for underwriting or marketing securities, or whether it involves a sale of railroads, trolleys, or hotels. Our railroads will neither have, nor be entitled to have public confidence until the directorates, without exception, recognize that it always takes two to make a bargain. Positions upon the directorates of our great railroad corporations must be regarded as positions of onerous responsibility. Men looking merely for places of easy honor and emolument or to cast votes for the benefit of express companies, car-building companies, or for the sake of granting special transportation

privileges to some manufacturing interests, have no proper place on these directorates."

And the Commission said to the stockholders: "No regulating commission, however broad its powers, however able, fearless and diligent its members, can perform the functions of general manager and board of directors of a railroad system, or supply the incentive and the eagerness to please the public which results from the necessities of competition. Investors in the stock of our railroads will neither have, nor be entitled to have, safe and generous returns upon their investments, unless they so exercise their franchise as stockholders as to provide competent, efficient and progressive management."

The wrecking of the New Haven and of the Boston & Maine was a heavy tuition fee to pay, but if these lessons are learned, it was worth while.

An Evil Not "Necessary" at the Capital

THE passage of the Kenyon "Red Light Bill" through the House without a dissenting vote is an index of the new conscience. It follows the lines of the Iowa law, later adopted by eight other states, and reaches the pocket nerves of the owners of disorderly houses. When such a house is declared a nuisance, the furniture is confiscated and the house sealed for a year to any sort of occupation. The effective closing of the houses is a result that nobody cares to dispute, though the *Washington Post* (heaven rest its soul!) uttered a threnody on the amount of income lost in rent to the property owners.

The enactment of such a law by Congress would have been an impossibility ten years ago, not primarily because of the higher moral standards now prevailing, but because, through the alliance between big business and vice in our cities, and business and politics in the nation, men were sent to Congress who cared nothing for the suppression of vice, or were lazily content with the shelf-worn platitude that morality cannot be legislated into people. There was an echo of this view in the speech of Representative J. Hampton Moore of Pennsylvania: "This law will not be an effective law in the moral sense, because it proposes to suppress something which has existed since God made the light and will continue to the end of time." This harking back to destiny and the inevitable does not work as well as it did when Mark Hanna was at the height of his power. And the President's view about the need of furnishing employment for the unhappy women is also a reflection of the world's advancing thought. It runs every day less to punishment and more to solution.

Progress in Advertising

FOLLOWING an exposure of the quack doctors, the City Council of Chicago has passed an ordinance intended to prevent false and misleading advertising. It follows closely the Printer's Ink Bill, which, with some modifications, has been enacted into law in sixteen states. Chicago certainly puts it strongly, for it forbids the publication of "any advertising which contains assertions, representations, or statements which are untrue, deceptive or misleading."

What Did Barrie Mean?

TWO weeks ago, we printed our impressions of the "Legend of Leonora." Having seen the play again, we have now changed our opinion in a number of important respects. Such is criticism. The last act which, in the particular mood in which we happened first to see it, seemed perfunctory, now seems full of charm. The purpose of celebrating the old-fashioned woman, which on the first visit seemed clear, now looks doubtful. Mr. Barrie is subtle, more subtle than almost anybody. The picture of all the characters acting foolishly because of the attractions of an old-fashioned, appealing, unreasonable, instinctive woman might well be intended by Mr. Barrie as an exposure—gentle and sympathetic and artistic but still an exposure. Even the beautiful and eloquent tribute of the judge, at the end of the third act, to the kind of women our mothers used to be, is consistent with the intention of Mr. Barrie to depict a figure who, with all her fascination, ought to pass. Anyone who knows Barrie's work well, will not take the position that he means nothing when he treats such subjects. He nearly always has an intention in his plays, but very, very intricate under his seeming naïveté he often is. All criticism is a shifty business, influenced by passing elements, and the drama is the most difficult of the arts to criticise, as it is seen so rapidly, and as the personalities of the actors enter into the complicated equation. Among dramatists, it is doubtful if anyone now writing strikes one so differently on different days as Mr. Barrie does. Such an experience at least helps one a little way on the road to intellectual modesty.

Winter on Paper

WHAT is the best treatment of winter? Various Elizabethan lyrics give the cheery side of it. Well known is the beginning of Keats' "The Eve of St. Agnes." The cold half of "Sir Launfal" has some fine scenes. For a description of the old-fashioned New England winter Whittier's "Snow Bound" ranks high, with its picture of the joyous side of winter, and the calm pleasures of the family group. We confess to a weakness for Leigh Hunt's little-known description of a cold day. Vividly he takes you from sun-up to bed-time. Here is a bit of life outside:

"Now riders look sharp, and horses seem brittle in the legs, and old gentlemen feel so; and coachmen, cabmen, and others stand swinging their arms across at their sides to warm themselves."

And here is an indoor picture:

"Now play-goers get cold feet; and invalids stop up every crevice in their rooms, and make themselves worse; and the streets are comparatively silent; and the wind rises and falls in moanings; and the fire burns blue and crackles, and an easy-chair, with your feet by it on a stool, the lamp or candles a little behind you, and an interesting book just opened where you left off, is a bit of heaven upon earth."

All very obvious, you may say, and simple rather than brilliant. Yes, but only those who have not scorned the obvious have been able to write descriptions that live.

"Valda is one of those women with an insatiable appetite for goodness and no very clear notion of what it consists in"

Mate-Love and Monogamy

By MARY AUSTIN

Illustrated by H. T. Dean

I. The Meaning of Mate-Love

MRS. AUSTIN has written a series on the love between man and woman, which is one of the finest defences of monogamy ever written. Her knowledge of the psychology of women and of the many emotional phases of love is unsurpassed among writers on this subject. She advocates changes in moral customs in order that love may be more permanent. Her first article deals with the nature of mate-love, and how real love may be distinguished from its imitations

"If somebody would only write a book about it!" said Valda McNath, "a believable book!"

We were sitting on the porch in front of Valda's hungalow in the clear obscure of twilight, watching the flat welter of the water far out on the Sound, and a blundering moth came and stirred the sweet white spikes of the phlox. Valda had been crying.

"The trouble with books about it," she said, "is that they are too scientific, or tales made out to fit a special case. It wants just a human book; true and human," Valda sighed. She hadn't found anything in the books to fit the special case she had made out of her life, and the chief reason why I happened to be sitting there at that moment was to see her through the most unbearable of its bitteresses.

Valda is one of those women with an insatiable sort of appetite for goodness and no very clear notion of what it consists in; few men understand what that hunger is in women . . . like the opium-eater's for his drug. To her youth she had accepted the criterion of her church and made her marriage on a basis of non-smoking, church-going habits as a surface index of godliness, with a young man who turned out to have fallen into these commendable behaviors chiefly for the want of spring and vitality to become anything else. After a dozen years or so Valda had left him somewhere at the back of beyond, simply because she couldn't stand him, and had come up to the city sick with the hunger for what still shaped to her mind as righteousness. And she was so right, too; so sincere in her effort to square her life with what might

conceivably be the purpose of the Powers, that she couldn't just accept the leading of her appetites, but had to take her satisfactions cribbed and crammed into the frame of what for the time being bore the name of goodness on its face. She read the publications of the Fabian Society and fell in love with a Social Reactionist.

He was a man with a mission to encourage the higher civic obligations, and wholly without a sense of humor. He and Valda made between them a high ground which somehow carried them sheer over the heads of Valda's husband and some ties of the Reactionist's, on which they heathened for a time, at least Valda heathened, rarefied, heavenly airs. But she had no sooner established herself there with all her baggage of passions and affections, and poor Valda carried an excess of that kind of baggage, when the Reactionist discovered that he had made a mistake in the nature of his intention. What had begun as a self-justifying passion had died down to friendliness and of course a really profound respect. The Reactionist told me himself how profound it was. It appeared he would have done anything for Valda except refrain from telling her—a little the most dastardly admission a man can make to a woman—that he had pillaged her most sacred treasury in the interest of a cheap, transient indulgence. If he had involved Valda's capital of dollars to that extent, he wouldn't have thought of anything but holding on to the situation until she could have got out of it with credit; in the event of a total loss he would probably have made it up to her without saying anything. But it never occurred to him that the same obligation held him to an

investment of passions and affections. He wasn't a bad man, he was just—mannish. What I suspected was that Valda's disposition to sink the personal issue in the interest of the passion that had sprung up between them, charged, electric, wonderful, had rather damped his male propensity for wanting to see himself always as the mover of the game.

He would have had their love spun out from his dextrous handling, a glimmering, gossamer entanglement; but it was a child to Valda that in the intervals when they were apart, nursed at her imagination, grew beyond recognition. The Reactionist had retired before it into a wobbly little pinnacle of a situation that since he no longer loved Valda, he couldn't do her the disrespect to pretend that he had any obligation to anything beyond his own susceptibilities; and I had plucked Valda away in time, I hoped, to keep her from seeing the pit of cold egotism into which he immediately toppled.

"If there could only be a true book about it!" Valda insisted. "Not one that would enable people to talk learnedly about love, but would help us not to make such a muddle of our loving. Women want such a book, and the men need it. I know," she added hastily, "we get into a way of thinking that because men have easier access to sex experience, they necessarily know more about it. But I tell you—when they come to the vital things about it . . . they just . . . grope."

The difficulty is that too many people have got into a way of thinking that to speak of sex experience is to mean something illicit. It is in fact the most precious part of our human equipment. It derives its importance in our lives from this quality of its preciousness and not from any effect of disturbing any other set of behaviors we may have agreed upon as moral.

It is not uncommon to find women, cutting themselves off from the highest manifestations of sex life by destroying its root in the interest of those same preferred aspects which are not recognized as sex at all.

It is important to remember in this connection that it isn't necessary, in order to be contributory, for a sex encounter to be dramatic. It is not so much its range as the content and continuity with other frames of behavior, that constitute its value. There is probably not much difference between the temperament of the courtesan and any woman of wide sympathies; it is largely a matter of taking one's sex contacts in incident or understanding; and it is often possible to make more of a small fixed income than an irregular large one. It is even equally a sex experience not to have had any.

WE have to begin, then, with love as a matter of fact and not altogether of opinion, as a force immensely and variously operative in the individual, but tracing a definite pattern on the field of human history. What love has been we can reasonably know; the guessing begins when we try to figure out where it means to land us. Where it hasn't is on the once-entertained proposition that love-life exists solely for and by its reproductive values. It is in fact a modern notion, as modern as Christianity, that sex is bailed out of the limbo of indecency by being computed in terms of children.

I know of no way to deal with mate-love except as a force by itself, which, perhaps, demands mind for its displaying ground; which seizes on mind as the electric fluid seizes on its machine. It produces in us such results as our mechanism admits of, and nature is served by them as much as by the nine months belated offspring. As such a force it may be studied, its directions noted, its reactions collated, its values measured. I doubt, indeed, if it be truth to say we love at all. Loving goes on in us.

Beyond this point, to the source and end of loving, the guessing begins. It is inextricably bound up with and affected by the procreant act. What nobody attempts to deny, however, is that the initial impulse was from the outside. Desire came upon the earth with its turning to the sun. An irreproachable materialistic definition of love is that it is the psychic accompaniment of an act, dictated by surcharged organs, whose rhythm is fixed by the alternation of season, occasioned by the revolution of planets about the sun which is itself determined by a

movement toward the constellation Hercules. Such an explanation reminds one of the old story about the earth which rested on the back of a turtle which rested on a rock which was supported by another rock . . . rock all the way down. The most the materialist can do for you is to get you to the farthest fixed star, which is really much nearer than we are to the reason why we love. Perhaps the Force, on its way to what unknowable end, seizes merely on the mechanisms of sex, too, to turn them to its use. At any rate there is no set of organs in the human frame more susceptible to the influences of what we agree to call mind.

It needs be said, however, and emphasized, that the psychic reactions of mate-love are by no means substitutes for physical passion, but the very root and stock of it. There is a great deal passing about faith and chivalry and service as though they were a supernatural sort of wares and the poets had invented them. One needs only to have seen the wild stallion trumpet up his mares out of the wet gullies, or the she-wolf leave the prey, trotting nose to flank of her rapturous lord, to realize that they are exactly as supernatural as the branch is to the trunk.

THE effort of early Christianity to eradicate passion by degrading its pertinence to life, has got as into much difficulty on this point. But not so much as comes of the dissociation of root and branch through the asexual circumstance of the remoteness of the physical reaction in woman and its immediacy in man.

The tradition of love as a more spiritualized product of femininity, arises largely in the fact of woman's first becoming aware of it through the psychic reactions it sets up, unconnected with any physical intimation which she has been taught to recognize. I know of no misunderstanding so mischievous as this dissociation of source and reaction which induces women to deny the existence of passion when they have only deferred its crisis. It leads to the neglect of a most important element in the choosing of a mate, and an affected disinclination to the act by which the divine inundation may come.

But the loss is always to the woman. It is not uncommon to hear wives complain of a want of spiritual rapport with their husbands when all that is required is to have the machinery of sex set in order.

There is such a deal of thinking about love and deciding beforehand how it should conduct itself—milling it over with the help of current fiction and the preferred ethical convention. What is imperative is to find out what love really is. It probably isn't a mystery. The human animal is the only one who affects profoundly not to understand the female of his species. Having begun with the unargued assumption that she is an inferior being, he probably doesn't; but in fact the most of such mystification which is not produced for the trade, is generally due to a difference in the choice of fashions in which to be loved.

If you court me in the style of the stone age and I have a fancy for fourteenth-century Italian, we shall come to grief between us unless we can learn that all love manners are but preferred modes of expression for a reality. But, if you can accept as the distinguishing mark of right passion the disposition to achieve, we shall get on nicely even though I could wish to see you leading a forlorn hope against a bayonet-hisling hill, while the circumstances of your life prompt you to put up a little corner in the Street.

THIS demand on the part of the young for a highly dramatized love-making mode, is legitimate and should receive some attention. It raises the key of right passion which is turn has undoubtedly its effect on the vitality of the offspring. What the young undertake to bring to pass in their courtships is the deep-seated racial evidence of rightness. It is shaped to absurdity only by the unlovely processes of modern life. They come to the surface voluntarily, these age-long racial certainties when, in great crises, all our manners are stilled. The mistake we make is to impute them to our superior civilization. "Women and children first" is by no means the exquisite flower of modern chivalry but the working of that natural law by

which the dog will not chase the vixen nor the wolf improve his mate at certain seasons of the year. It proves in the tribes that observe it, not how far they have come along the highroad, but how freshly flows in them still the vital human sap. Nations in which, in the face of violent catastrophes, the males save themselves first, are the nations that drop behind in the scale of civilization.

The truth is that there is no more modern love than there is modern digestion. There are only modern disorders of it.

WE were sitting still; the sky was all the color of oh-sidian and the friendly dark stood off by the hay-berry bushes waiting for the withdrawing of the lump. A little wisp of warmth lost from the day came and snuggled down beside us; it had scents about it of the dusty country roadside.

"Love is not the same for men and women," insisted Valda. She was thinking of the Reactionist.

"It depends," said I, "on how far you have got with it. He had never caught up with you." I thought it kinder not to say that I thought he never would have been able to; he hadn't Valda's stride. Valda wanted to be loved by the Superman, and his style was early Victorian.

THE opening movement of love is a sense of extraordinary well-being. It is a matter, if you like, of secretions, of increased temperatures, of accelerated vibrations. Love is a quickening. It knows itself from other intoxications only by the conviction that its wellspring is the person of the Beloved.

Life marshaled by the humming blood falls into order and meaning. The whole personality sings to a higher key.

Twain flower of this same stalk is the attribution of every excellence to the Beloved; the illusion of the Best.

Life proceeds greatly by these values which we hestow on one another. "You can make anything you like of me," protests the lover to his lady; which is probably an exaggeration. This stage of passion is hypnoidal, amenable to suggestion in line with its characteristic tendency, which is toward the dramatization of the personality in terms of behavior.

It is by this capacity for releasing unsuspected forms of energy that passion justifies itself even though no children come of it. It is a natural automatic method of raising men to their highest plane of activity; and it is worthy of note that deliberate celibates have commonly to resort to deliberate means of prayer, asceticism, or artificially stimulated enthusiasms to keep themselves at the norm of human efficiency. For chief among the uses of passion is the raising of the percentage of values in those who entertain it.

We have a way of urging on people deprived of their lawful occasions, that they "make themselves happy"; that is to say, set up in themselves by taking pains, that sense of well-being, of accelerated energy which flows naturally and inevitably from a healthy, reciprocated human passion.

More important even in its effect on our mating custom, is the reaction of right mates voluntarily to withdraw from all other solicitous attention. This is a disposition so rooted in our love-life that not even the most sophisticated society succeeds in quite breaking it down. It is older than our life; more imperative.

Undoubtedly many of our reluctantly resigned marriage customs have arisen in the effort to externalize reactions of the mating period, felt to be so right as to merit permanence. It is not unlikely that the idea of property in women acquired a certain sanction from the subconscious perception of naturalness in the abnegation of all other male interests, a naturalness which has made it easy for society to fasten on women the artificial compulsions that attempt to recognize the rightness of seclusion by making it an institution. Women suffered it, sensing no tyranny in a restriction so agreeable to their

natural instincts. But women have paid for it in the weakening of character by forcible restraint. Loyalty of the mate is a psychic reaction and in normal conditions is competent to maintain itself in the presence of great personal freedoms.

Here then is the spoor of right passion all across our history; but nature will have a surer mark. For mate-love is distinguishable from all the cross-bred, ring-streaked and striped hybrids got by Convention on Society, all the pale stalks come up in unsunned cellars of fortuitous celibacy, by three high signs. It manifests as a desire for permanent, public and exclusive relations.

I say *desire* for. I no more profess that mate-love fulfills itself in modern society than that the undeveloped, overfed, slack-shouldered, bow-legged bodies that go up and down our streets represent the physical fulfillment of men. Let us go slowly here and perhaps we shall go together.

You will hardly deny me the element of publicity. It is the unfulfilling characteristic. Right love rejoices not only in calling society to witness, but in inviting the attention of whatever gods may be.

For right love is its own justification; it breaks down the barriers of discretion; it demands publicity even at the price of scorn. And the faith on which it dares so much is faith in its own permanence.

It is the distinguishing mark of mate-love to deem itself undying. That it is not always so is beside the mark. Constancy in love is very much a matter of character in him who entertains it; good steel subject to the electric current remains a permanent magnet; soft iron returns to the condition of soft iron. We cannot require more of man or metal than that they witness to the true magnetic fluid. Mate-love is also liable to the disintegrating influence of all the other exigencies which we have tied up with it, though with no more generic claim than the can to the dog's tail. Passion engendered in an unstable temperament or in the soil of immaturity, subjected to our modern strain, may easily fail of the condition of permanence, but no laughter should attend upon its profession. It is the stroke which ushers marriage on the scene. Marriage means stable conditions, and that means the improvement of the race.

"It's true enough," Valda admitted, "but there are other things to be taken into consideration."

"What things?" I knew perfectly, but I wished Valda to state them for herself.

"Well—there's unloving——"

"I'm coming to that. And what others?"

"What they are always telling us, you know, that man is naturally and actually polygamous."

"Yes—if by naturally you mean that under certain conditions he takes to it as easily as, in the absence of proper flesh food, he takes to cannibalism,—but no, if you mean that promiscuity is to be taken as a species mark as you take the disposition to be commutative and predatory. But in any case you wouldn't have us hark back to those naturalistic tendencies."

VALDA was shocked. As a rule there is nothing your avowed free-lover insists on so much as that all the passions of greed, ambition, love of power, mere unrestrained love of doing even, when it leads man to advance himself in the possession of goods, should be checked and bridled. But the argument that all men should be openly promiscuous because many of them are secretly so, is only valid when you go far enough to say that all men should rob because a few privately peculate, and freely kill because they freely hate. It is not the thing that man is found doing at any particular time that establishes the law, but his general direction. All that we turn back the pages of Life for, is to find out what Life is about. The point at which love begins concerns us only as a means of finding out where it is going.

For love is by no means an end in itself; it must get forward, it travels toward a mark.

In the next issue Mrs. Austin will take up the ideal of monogamy, its physical and spiritual origin, its side products, including jealousy, and the deviations from it like polygamy and prostitution which have been tried out from time to time. She tells why this ideal is the only possible one for human life.

PEN AND INKLINGS

By OLIVER HERFORD

A Valentine

LITTLE girl I've watched your eyes
Droop and close like wings that tire,
And I read between your sighs
And I guessed your heart's desire.

WITH the magic of my hush
I have conjured you to sleep,
I can break the spell, but hush!
We the Fairy Law must keep.

AND the Fairy Law is this
That your Prince shall waken you—
See he comes! And, with his kiss,
You shall find your dream come true.

I THINK it is a beautiful thing myself, quite a different look in the eye from what I remember in any Lincoln photograph. The gentleness of the mouth is marked, too. It is quite remarkable what a variety of expressions there are in the Lincoln photographs. I know of none with a gentler humor in eyes and mouth than this. I congratulate you on getting hold of it.

IDA TARBELL

A New Lincoln Portrait Discovered

By E. S. MEANY

Professor of History in the State University of Washington

THE finding of a new and hitherto unpublished photograph of Abraham Lincoln in the relatively new city of North Yakima, State of Washington, will prove a surprise to the many collectors of Lincolniana and to countless others who read all they can find about that great American.

Joseph Hill celebrated his ninetieth birthday at his present home in that far western city on September 23, 1913. In his earlier manhood he was an unofficial member of the staff of Knox College, in Galesburg, Illinois. When prominent men lectured there, they were always invited to Mr. Hill's gallery to sit for a photograph. He has a clear memory of many of those men.

As soon as Lincoln was nominated for the presidency, Mr. Hill took his camera from Galesburg to Springfield and secured four negatives of the candidate. Some years afterward the photographer experienced a fire in which he lost his entire stock of negatives and nearly all of his prints as well. Fortunately some discarded prints stacked in the wood-shed escaped the fire. Among them was a

print from one of the four Lincoln negatives. Mr. Hill cherished that old print, and now in his advanced old age he has caused the faded and discolored background to be blocked in, leaving every line and shadow of the original portrait untouched. The result is a splendid photograph, different from the Hesler, the Brady and the others taken in 1860; yet it is Lincoln through and through.

This achievement has brought two joys to the nonagenarian photographer. It has permitted him to add his own kind of a monument to the man whom he counts the greatest American; and he has also found that the sale of the photographs is to help him to support himself long after his work as an active photographer has ceased.

Mr. Hill tells the following interesting story of one of his Lincoln negatives:

"I wanted to get one picture of the entire figure, so I asked him to sit in a chair. I shall never forget how he looked. He had on white trousers, a sort of figured silk vest, and a long, black coat that hung down about the chair in irregular folds.

He crossed his legs, and as I was adjusting the camera I could see the knee of the left leg projecting beyond that of the right leg crossed on top of it. That certainly showed me that he had long, lean legs. Some of his opponents had declared in derision that Lincoln wore eighteen-inch boots. His friends thought that big feet would not hurt him as a candidate, and I was delighted to see in my camera that his feet showed up large. The picture would be true to life for both sides in the campaign. I was evidently taking too much time in getting ready. Mr. Lincoln turned to see what was the matter. I asked him to hold that position just a moment—my picture was done.

"That negative was used during the campaign in this way: I arranged it in a window so the sun's rays would throw the picture on a large cloth. Then a man with a brush painted in the lines. Appropriate lettering was put on the cloth and the finished article was hung in front of the meeting place as an illustrated poster. I helped to make such posters for several of the Lincoln meetings in 1860."

Lincoln

By WITTER BYNNER

LINCOLN?—

Well, I was in the old Second Maine,
The first regiment in Washington from the Pine Tree State.

Of course I didn't get the butt of the clip;

We was there for guardin' Washington,—

We was all green.

I ain't never ben to but one theater in my life,—

I didn't know how to behave;

I ain't never ben since.

I can see as plain as my hat the box where he sat in

When he was shot.

There was quite a panic

When we found our President was in the shape he was in;

Never saw a soldier in the world but what liked him.

Yes, sir. His looks was kind o' hard to forget.—

He was a spare man,

An old farmer.

Everything was all right, you know,

But he wan't a smooth-appearin' man at all,—

Not in no ways;

Thin-faced, long-necked,

And a swellin' kind of a thick lip like,—

A neighbourin' farmer.—

And he was a jolly old fellow,—always cheerful;

He wan't so high but the boys could talk to him their own ways.

While I was servin' at the Hospital

He'd come in and say, "You look nice in here,"—

Praise us up, you know.

And he'd bend over and talk to the boys—

And he'd talk so good to 'em—so close—

That's why I call him a farmer.

I don't mean that everything about him wan't all right, you understand,

It's jes'—well, I was a farmer—

And he was jes' everybody's neighbour.—

I guess even you young folks would 'a' liked him.

Laying the cotton to be measured on the scale beside the government stand, and taken from the sealed package.

Secretary Houston, Cotton and Corn

How the Department of Agriculture Now Coöperates with the Farmer

By HONORÉ WILLISIE

THERE are evidences," says Mr. Houston, Secretary of Agriculture, "that Providence is exercising its protective supervision of fools and Americans. It has been assumed that we have had a natural monopoly in agriculture, that it would take care of itself; and for the most part we have cheerfully left it to do so.

"The story that comes from every section is practically the same. It is a story of increasing tenancy and absentee ownership; of soils depleted and exploited; of inadequate business methods; of chaotic marketing and distribution; of inferior roads; of lack of supervision of public health and sanitation; of isolated and ill-organized social activities and inferior intellectual provisions in our rural communities."

Yet in spite of these remarks, the new Secretary of Agriculture is not a pessimist but an optimist of pronounced form. He merely believes that in order to hope to some purpose, we must know actual facts. And his Department is very busy gathering facts.

Given conditions in rural America such as he describes above, Mr. Houston's main problem is not one of politics nor of efficiency, though these are with him constantly. His big problem is to evolve a policy that shall coordinate the work of his Department with the broad economic needs of the nation. It is still essential for the Department to stick to facts, as it always has done. It must remain a gigantic group of laboratories that dig out facts about farming, for the farmer. But with the increase of rural discontent and of inadequate farming, this work of the Department is not enough.

TWO types of administrative work must be fully developed by the Department. First, there must be a broad economic interpretation made of the agricultural facts produced by the laboratories. Second, there must be evolved a highly efficient method by which these facts can be got to the farmer, made use

of by him, and through him made to react on the nation as a fundamental contribution to its material and social welfare.

It is valuable when the Bureau of Plant Industry discovers the best way for cotton growers to produce the largest yield of long staple cotton per acre. But this is not enough. The cotton planters, even after the facts are sent them, do not improve the quality of cotton as they should. What is the reason for the planter's standing in his own light? This is the point where the economic conditions that surround the grower must be studied. And after they are interpreted, the important task of changing the economic conditions, or of adjusting the facts to them, must be undertaken.

It is valuable when the Department helps to organize corn clubs and helps children to raise better and more corn per acre than their fathers raise. But when

"Nothing less than concerted action will suffice," he says. "Coöperation is absolutely necessary. The same business sense and the same organizing genius which have placed this nation in the front ranks in industry must be invoked for agriculture. We need men fitted to interpret agricultural facts in terms of nation wide economy."

BUT such men are extremely difficult to find. There is a tremendous opening in this new field of rural economics for young men of vision, with the training that is given in our best agricultural schools. But the man with the vision in America takes to business and not to the study of economics. And after he has been in business for any length of time his vision usually becomes warped. Mr. Houston mourns this fact and spoke of it in connection with a visitor he had one morning who was a pleasant exception to the rule. This visitor had the view-point for which the Secretary is diligently searching among young agricultural students.

A small man, with an unimposing manner came into the office of the Secretary very quietly. The Secretary did not catch his name. The caller sat down in the chair facing Mr. Houston.

"I am a delegate from the Louisville Board of Trade to the Hearing tomorrow on the matter of Corn Grades, Mr. Secretary. It may not be proper under those circumstances for me to come to you. If so, I will withdraw."

"I should say that the propriety depended on your purpose in coming," replied the Secretary.

The unimportant man braced himself in his chair as if what he was about to say took some courage.

"Mr. Secretary," he said, very earnestly, indeed, "the government standardization of corn is economically right. It may cause some temporary and local disturbances, but it is fundamentally right. I hope that you will insist on its enforcement exactly as it stands. There will be

The cotton seed with the fiber pulled out like a butterfly.

inferior and badly cared-for corn continues to flood the market, something is wrong with the economic conditions that surround the farmer, or he would not insist on a bad product. What is to be done?

Mr. Houston answers that, under existing conditions, farmers acting alone are helpless.

a good many different kinds of protests. One of them will accuse the government of paternalism. Mr. Secretary, there can be no government correction without paternalism."

THE small man rose to go. The Secretary rose too and eyed the unimportant man intently. A Corn Exchange man eager for the economic welfare of the country is an interesting phenomenon.

"Isn't your name Brandeis?" asked the Secretary.

"Yes, Mr. Secretary," answered the visitor.

"Cousin of Mr. Louis Brandeis?" asked Mr. Houston.

"Yes, Mr. Secretary!"

Mr. Houston smiled and held out his hand. "I recognise a strong family earmark that is not altogether in personal appearance. I am very glad indeed that you called. Thank you, Mr. Brandeis."

The unimportant man departed and the Secretary said, "A remarkable family. He came in merely to tell me his opinion of the economic value of the corn standard! You see, the producer of any product is entitled to receive an exact price for the specific product which he offers and the consumer is entitled to receive just the commodity he thinks he is paying for. In farming, a failure in either direction involves clear injustice and greatly hampers production and crop improvement. The Department is fighting this battle in regard to two vitally important crops, cotton and corn."

"Several different standards of cotton classification are in use now. Liverpool has one set of grades, New York another. Atlanta has its own and so has Augusta. At the present time the same grade-name is applied to two qualities that differ in market value as much as \$2.50 a bale. The local buyer knows the market cotton grades. The farmer does not. Often the buyer buys cotton at one flat grade rate, regrades it and sells it as high grade. If we had uniform standards throughout the cotton belt, which farmers and buyers alike understood, it would do away with many of the evils complained of by the producer and the consumer. Practically the same results would follow if the standard grades of corn were universally used."

"It is such grading of cotton and corn that the Department is formulating. Do you know anything about cotton?"

The layman confessed to abysmal ignorance. The Secretary looked out the window reminiscently. "I've plowed for cotton," he said, "and I've planted it and I've hoed it and I've picked it. I've sold it as a farmer and I've bought it as a merchant. I think I know cotton. The Department has a man who knows cotton. I think if you went over to see him you might learn something interesting."

THE man who knows cotton has his working quarters on the upper floor of a government building, but cotton greets one from great bales of it on the main floor, to fluffs of it in the elevator and lint of it like snow in the halls. In a long room, assistants park samples of cotton in large flat boxes. The samples range from a speckled creamy cotton to a speckless fluff of purest white. These are the government's standard grades of cotton which are for sale at cost for the use of cotton exchanges or of whomsoever buys or sells cotton.

In the smaller room beyond the sample room is the man who knows cotton. It is difficult, besides being a boor, for the expert to explain his work to the uninitiated.

The old rail crib showing poorly husked corn exposed to ruin and snow. Under ordinary weather conditions corn from a crib of this kind is usually not in very sound condition when marketed

Showing poorly husked corn piled on the ground and fully exposed to ruin and snow. Corn handled in this way is scarcely ever entitled to a grade better than "sample grade" when it reaches the market

A very serviceable and inexpensive type of farm crib for corn having a good roof and well projecting eaves

But after a while the cotton man got down to A B C facts.

"Suppose," he said, "that you are a farmer with some bales of cotton to sell. You drive with it into your market town. A buyer comes up, pulls a sample of cotton out of a bale, pulls it and pulls it till he considers that he has a sample of average length fiber. He lays this on the dark surface of his sleeve and estimates its length. On this estimate he bases his price to you.

"**H**E may estimate that yours is short staple. You believe it to be long staple. There is a great demand for long staple. It is used in the manufacture of hosiery and automobile tires and anywhere that great strength is needed. Now, a difference in a fraction of an inch in estimating the length of the fiber may make a good many dollars difference in the price of a bale. But you as a farmer are helpless. You must take the buyer's estimate or lose your chance to sell. He is so apt to grade your cotton low, that you have no incentive to place a good product on the market. No one but the middleman gains by this bad system of grading, not you, or the manufacturer or the consumer.

"Really, a farmer is penalized for growing long staple cotton. It grows less to the acre than short, and under the present system of buying he gets no money for it.

"Now, if the buyers and the farmers could be gotten to discriminate, it would raise the standard of cotton. The problem is, how to get an exact measure of cotton. Just suppose that for the price of two cents any farmer could buy this."

The cotton man picked up a small manila envelope that was sealed with two great government seals. On the face was this legend:

"I hereby certify that the cotton as originally placed in this box represents the official grade of ONE INCH MIDLINO. (Signed) Secretary of Agriculture."

He broke the seal and took out a fluff of cotton that he pulled carefully with thumb and forefinger and laid a bit of fiber on the dark surface of his sleeve.

"Measure it," he said.

Sure enough, the fibers averaged an inch in length.

"Now," went on the cotton man, "if you as a farmer had a set of these envelopes and Mr. Buyer says you have seven-eighths cotton and you want to prove that it is one inch, you can lay your cotton beside the government measure. For we have actually measured the average fiber of the bale this cotton came from.

"The process of getting these little certified fluffs of cotton is a long one. We begin by getting a seed that is not mixed so that we shall not have different varieties in our product. Then we throw out the extremely good and the extremely bad. We use land that is uniform. We choose our bales for three lengths, seven-eighths, one inch and one and one-eighth inches. When the bale reaches here we sample it in numerous places, and this is what we do to the samples."

The cotton man led the way to a dark room where an assistant worked before a huge ground glass that reflected the only light in the room. On close inspection one could see a number of long hairs reflected on the glass. The assistant was measuring these hairs with a map meas-

ure that for accuracy had been set with jewel bearings. It would measure to the four-hundredth part of an inch.

"These hairs are cotton fibers, magnified," said the cotton man. "When all the fibers of a sample have been measured an adding machine sets down the result and we strike an average. We have then a really accurate measure of the average fibers in a bale. From this bale we make up our samples. If we have sufficient demand we can sell these for two cents. We think the farmers will use them. It will not be so easy with the buyer. They don't all mean to be dishonest. Some of them really believe their eyes will measure accurately to the smallest part of an inch. Some of them don't trust their eyes. I know buyers that wear checked suits. They measure the checks and that is a great help when it comes to laying the cotton on the sleeve."

THE cotton man picked up a hard, white oval and began to pull at it. "Here is a cotton seed. When a farmer judges a seed, he pulls out the fiber till it looks like a butterfly, so. Then he estimates the length of the fiber. We measure this with our new device and then we know what that seed can do. The device I've perfected can be used for measuring wool, too."

The cotton man with his extraordinary facility for working with details and with his extraordinary patience with both cotton and laymen, paused.

"How will you get this to the farmer and the buyer?" asked the layman.

"Oh, they'll get it," answered the cotton man. "The main problem is to get the basic fact for them to work with."

Even to the lay mind it was plain that in the story of cotton was the object lesson the Secretary sought to teach regarding his problems of administration.

The cotton man's device for applying exact measurement to the fluff and down of cotton is a remarkable piece of work. It opens up a new world, a whole new field of possibilities both for the farmer and for the men who are to interpret this new kind of exactness. The idea of actual measurement of a product is fundamentally right. It gives an absolute base on which to place values. It will be hard on the middleman who fights its adoption. It will be good for the farmer and the ultimate consumer for it will be the immediate incentive for improvement of quality.

Nor is the method that the Department has evolved for testing corn any less valuable. And the corn man is as patient as the cotton man. He has given years of study to corn quality. He evolves broad truths from details too trivial for the ordinary mind to observe. A field of corn or a corn crib, speaks in large terms to him. A heap of corn in the rain or snow tells him not only of careless farming but of hopeless farming, the result of wrong marketing conditions. Poorly constructed corn cribs, badly managed grain elevators tell him not only of ignorance in the farmer and dishonesty in the grain dealer but that quality is not paid for in that neighborhood.

To meet these conditions, the corn man has devised a machine for measuring the moisture content of corn and a rapid method for testing the acidity of corn. The sweetness and keeping capacity of corn depends on the per cent. content of these two factors. These devices make possible an exact grading of corn for

definite values. The government has perfected such a system of grades and it was regarding these grades that Mr. Brandeis had spoken to the Secretary.

Under a definite system of grading and the elimination of such general terms as "reasonably dry" and "reasonably clean," which heretofore have been used, the farmer as well as the grain dealer will be able to know and fully understand the requirements of the different grades. With a knowledge of exact grades and a method of testing his own corn for grades, the farmer who markets dry corn of good quality will be in a position to demand a premium for such corn. He will have some encouragement to exercise greater care in the harvesting, storing and marketing of his corn. He can ascertain the grade of his corn while it is in the crib and not market it until it is sufficiently dry to meet the requirements of a high grade. With an exact grading, uniformly maintained, the country dealer will be in a position to pay a premium for good corn, for he, in turn, will have the assurance of the same definite system of grading regardless of the market to which he ships.

The Department's handling of cotton and corn typifies the whole new tendency of the government toward cooperation as the clearing-house for its investigations. The cooperation will not be easy to get on all sides. The middleman has had a free hand too long to submit happily to government interference in his methods. The hearing to which Mr. Brandeis was a delegate showed this.

THE National Association of Corn

Dealers wanted to protest on certain points in the government corn grading. In just this manner had the Cotton Exchanges protested against the grades of cotton. The delegates were polite but firm on several points. They did not want the enforcement of the grades put under the Pure Food Law, which fact must be interpreted as a compliment to the men who enforce that law. They did not approve of the government's giving numbers to all of the grades, doing away with some of the old nomenclature.

"Mr. Secretary," said a man from the Middle West, after the meeting had shown considerable heat on this point, "we don't like this using a number for the old word Standard. You will change the value of the corn if you do that."

An unimportant looking man on a front seat rose and shook his finger.

"Mr. Secretary," he said earnestly, "that's an economic falsehood. You can't really change a thing's value by changing its name. What will happen if you respond to this request will be that the farmer will sell his corn under the old name not realizing that its value has been lowered. I speak for every honest dealer in the country when I say, keep the grades as your experts have made them, and enforce their use!"

The Secretary said nothing nor did he commit himself at the Hearing. But early in January, the tentative corn grades of the Department were issued as the required standard for the country. This act completed the cycle. First, the hunt for facts, then the application of fact to the economic need, and finally the cooperation of the Department with the dealer and the farmer, whether they would or no, to give the farmer a square deal.

The Music of Francis Grierson

By EDWIN BJÖRKMAN

MR. GRIERSON, who is now sixty-five, has never studied music in the ordinary sense. He has no piano in his home. He never practices. He plays only when he has listeners. All his playing is improvised. He has never put a note on ruled paper, either before or after a performance. He cannot repeat his own music. Once heard, it is lost and gone forever.

His hands are large and very long, with an enormous reach. In a measure they account for certain peculiarities of his playing, as they enable him to strike chords quite unattainable to other pianists.

WHAT I saw and heard and felt was at a recital in a private residence.

Although the audience had hushed in advance, I think it took most of those present several seconds to realize that the performance had begun. My own impression was one of intense surprise, as if the music had caught me unawares, as I said I knew not whence. It opened with a procession of chords—haunting, monotonous, primitive. It was as if the

horns and drums of some African village had become civilized without losing their original weirdness—as if their uncouth noises had become miraculously transformed into genuine harmonies while still echoing the strife of primeval passions. Something more than sound issued from that piano; it was a mood—"uncanny," yet pleasing, exalting, luring.

As the audience resumed its low murmuring once more, I remember wondering at the player's ability to sustain certain notes. He seemed to keep them suspended in the air for minutes. Now and then he would make a shining vessel out of such a chord, and then he would begin to drip little drops of melody into it, until the Grail seemed to rise before your vision, luminous with blood-red rubies. Other causes of marvel were the certainty of the man's touch, the rich quality of his notes, even when his playing was subdued and caressing, and, finally, the complete absence of threadbare spots like those found in the works of almost every composer, no matter how great his fame.

"This is an ancient Egyptian improvisation—" Apparently Mr. Grierson had spoken, and his words were passed around in whispers. Again a complete change of atmosphere followed. The form of the previous pieces had been comparatively vague; now the design of the composition was sharply outlined—and as it revealed itself, the perfection of that design became increasingly evident. The music was quaint, but not Oriental in any accepted sense. Its opening passages were characterized by harmonies that I can only describe as "brilliant," and that suggested the violin rather than the piano. Then the music swelled and became strangely urgent—I felt there was an image that wanted to break through—a consciousness of some mighty presence—and all at once it was there: "The Nile!" And with it rose a memory—the memory of a passage in Mr. Grierson's "The Valley of Shadows," where he describes the Mississippi gliding by silently.

NO title announced the fourth improvisation. The first part of it brought the climax of the evening's performance. For a few moments the beauty of the music was so poignant that it touched on pain and became nearly unendurable. From those unearthly pinnacles it receded at last, but without falling. Then I became aware of the presence in the music of certain strange figures like nothing else I have ever heard. It was as if each tone had been followed by a fitting echo of itself. And I know enough about piano playing to realize what an unusual degree of muscular control must be needed for the production of such an effect.

AGAIN Mr. Grierson spoke: "A fantasy on the destruction of Pompeii." Immediately I was carried into the serene beauty of the southern night, with its sky of unfathomable blue and its burning stars. Then, without the least preparation, and yet with no sense of any break or leap, the massive, crystalline chords of the first movement changed into a dance measure of irresistible charm. The sudden transition was as daring as it was natural. The tripping rhythm that set my heart bounding with exhilaration, seemed the very embodiment of the revelry and thoughtless merriment of the doomed city. Gradually, however, it took on a note of anguish, which in its turn was lost in thunder and lightning. At last the piano roared with the power of a hundred bass drums, but in that storm of sounds that assailed my ears there was not one discordant note. It was the supreme rage of the elements rendered supremely beautiful.

Three qualities seem inseparable from Mr. Grierson's music: exquisite beauty, striking originality, and a spiritual fullness that induces emotions of distinctly religious character. His music lives. And with one exception, all the moods known to man find expression in it. From one human note it is consistently free—that of sensuality. Love is present, but it has become etherealized; of that morbid passion which feeds insatiably on itself not a trace is to be found.

The circumstances under which this music is produced should always remain a secondary consideration. And to talk of it as mere improvisation—that is, as a difficult but not quite respectable trick—shows a misconception of the creative processes underlying all artistic production. For, at bottom, all art is based on improvisation.

The Senate of 1915

By McGREGOR

Its Political Complexion and Its Probable Personnel

THIRTY-TWO Senators must go out on March 4, 1915, or be re-elected on November 3, 1914. Three Senators of the class of 1915 are filling

unexpired terms. Brady succeeding Heyburn, Glass appointed to succeed Johnston of Alabama, and Sherman succeeding Lorimer, expelled.

but Kentucky is now Democratic. If the Democrats carry the twelve Southern States first mentioned in this list, they will have a majority of two in the Senate, even though the Opposition carries the

ington and California, which Roosevelt carried by a plurality vote, dividing the electoral vote in California with Wilson, with a popular majority of only

163. Moreover, New Hampshire, New York, Ohio, Illinois, and Kansas, have recently elected Democratic Senators. It is readily seen, therefore, that if the three

parties are to nominate candidates for the Senate in all these States, the Democrats have a fighting chance to elect in every one of them and are more than likely to increase their present majority in the Senate of 1915.

Not is there aught here but coldest comfort for the Republicans. With the last election returns as a basis of calculation, they stand to lose fifteen of the seventeen Republican Senators of the class of 1915.

The Progressives are in much better fighting trim. It is true that in the four States that Roosevelt carried they must face the fact that Roosevelt won more votes for himself than can be won by any of his followers. But the Progressive Party has put itself, through its votes in Congress on the Tariff and the Currency, in the position of asking popular support for its candidates on the ground that they have stood by Wilson; and in

Cummins
Iowa

There are to be no more elections of Senators by State Legislatures, with the proverbial deadlocks and the scandals. Senatorial candidates must henceforth submit their claims to the whole body of voters, and most of the candidates must be nominated in their party primaries. These primaries begin in the spring and summer and end in the early fall of 1914.

a sufficient time before the November elections. Incidentally, all the Representatives as well as one-third of the Senators are to be elected

opposition to an unworthy Democratic candidate, the appeal may be successful in other states than the four which Roosevelt carried.

Democratic insurgents can be counted on the fingers of one hand. The Senators know that their most effective plea for a re-nomination is the fact that they have stood by President Wilson. And the Democratic nominees will put the Opposition on the defensive from the start of the campaign because the Opposition was opposed to Wilson.

Smith
South Carolina

Heney (Progressive) for Senator, and for Kent for the House.

Taking up the twelve Southern States, considered surely Democratic, note first the situation in Maryland. Senator John Walter Smith is a fine example of the effect of the Wilson treatment upon a Democratic reactionary. Before taking, he voted for Lorimer and Lumber and was known as one of the Aldrich Democrats, convenient to have on hand when the vote was close; after taking, he has voted in the Senate, in committee and in caucus just

Perkins
California

as he has thought the President would like to have him vote. After election for a six years' term he may be less tractable. Oscar L. Straus, of Baltimore, former attorney-general of the State and sponsor for a good deal of progressive legislation, is a probable opponent for the nomination. The overwhelming victory of Blair Lee in primary and election indicates that another bona

fide progressive should win the nomination over Smith.

In North Carolina, Senator Lee Overman has succeeded in securing federal positions for two prospective rivals, E. J. Justice and ex-Governor R. B. Glenn; or, as they say in North Carolina, "has hit them in the belly with a pone of bread." The right candidate, who would take the right end of the railroad question recently become acute in North Carolina, could beat Overman yet for the nomination, which would be equivalent to election.

In South Carolina it is a toss-up between Senator Ellison D. Smith and Governor Cole Blease, of whom the less said the better. Every public mention of Blease, however unfavorable, is pointed to with pride by his adherents as indicating the wide notice he is attracting. It will be interesting, if Blease is elected, to see him take the oath of office to support the Constitution, when on other occasions he is wont to observe, "To hell with the Constitution."

In Georgia, Senator Heike Smith will be re-nominated, and re-elected, probably without opposition.

In Alabama, Underwood has strengthened his lines against Hobson's organization, which was built up, however, against the candidacy of the late Senator Johnston. Hobson's main issue is that of National Prohibition, through an amendment to the Constitution, but thus far he has not caused a single hair of Underwood's head to lie out of its appointed place.

In Florida, Senator Fletcher with his votes for Lorimer and Lumber as well as his former connection with the East Coast Railway, as its lobbyist at Tallahassee, is opposed for re-nomination by Stockton, of Jacksonville. Stockton is known as the original and most persistent progressive in the Florida Democracy, and the prohibition issue ought to help him also. But he has had had luck in submitting his claims for office to the electorate, Gilchrist having defeated him for Governor and Bryan for Senator. It looks like the return of Fletcher, who just now is as progressive as can be.

Louisiana has already elected, in the Legislature which met before the constitutional amendment for popular elections was passed, Representative Broussard, to succeed Senator Thornton.

In Kentucky, Bradley (Republican) will be succeeded by the Democratic nominee, who will be either Representative A. O. Stanley, or former Governor Beckham. Beckham lost the election in the Legislature to Bradley through the treachery of certain saloon Democratic Legislators, and there would be something of poetic justice in his election by the people.

In Arkansas, Senator James F. Clarke, now President pro tem. of the Senate, is contending in the primaries against Justice William F. Kirby, of the Supreme Court of that State. Clarke has been one of the genuine progressives of the Democratic side of the chamber, is recognized as one of the best lawyers of the Senate, was a fearless advocate of the Roosevelt policies, and did especially valiant service in advocating the passage of the amendment for the popular election of Senators, his independent course in that contest giving the only chance for the adoption of the amendment. He is a clear-headed thinker

Gore

the Jeff Davis following and is endeavoring to capitalize his devotion to his dead leader. His principal issue is that Clarke did not return to the Government a balance from the \$125,000 allowed Senators for stationery, this being regarded as a senatorial perquisite, whether expended in full or not.

In Missouri, Senator Stone is up for re-election, with no visible opposition as yet in his own party. The nick-name,

Burton
Ohio

Overman
North Carolina

Smith
Georgia

Chamberlain
Oregon

Jones
Washington

Thomas
Colorado

"Gunshot Bill" has stuck to him. He was Governor of Missouri during its most corrupt period, preceding the revelations and prosecutions under Folk. His having acted as Attorney for the Baking Powder people was damaging to his reputation. It is only fair to say, however, that he earned the enmity of the Railroad Machine in Missouri by calling an extra session of the Legislature to repeal the fellow-servants' act, and the saying that has been often quoted

"Stone sucked as many eggs as anybody but he hid the shells," was first uttered by a Railroad Lobbyist. Ex-Governor Hadley has been spoken of as the Republican

candidate, but his recent employment by the Missouri Railroad to represent them before the Valuation Commission has probably taken him out of the race.

Senator Gore of Oklahoma will probably be returned to the Senate. Two men are considering the chance of opposing him successfully, Chief Justice

Samuel W. Hayes, somewhat famous for his anti-labor and pro-railroad decisions, and Governor Lee Cruce, also deemed reactionary.

In Arizona, Sena-

tor Mark Smith has made a good record, and there is no unopposed opposition to his re-nomination.

Indiana has a Democratic Governor, and a solid Democratic delegation in the House. The vote for Roosevelt, moreover, was larger than the vote for Taft. It has been suggested that Ex-Senator Beveridge might lead the Progressive forces, and that his dear enemy,

Ex-Vice-President Fairbanks, might be persuaded to lead the Republican forlorn hope. Senator Shively's record has been a good one, in both House and Senate.

Thomas of Colorado, all things considered, made the hardest fight of any Senator for genuine tariff revision in the Underwood-Simmons Bill. He is a progressive on many other lines, and has made a fine record considering the length of his service. He will be opposed for re-nomination and re-election by the powerful beet sugar and copper and coal mining interests of his State, which he has defied, but the prospects for his return to the Senate are excellent.

IN Nevada, there has been a long continued custom for the State to be represented by one Senator in each party. The brilliant young Senator, Key Pittman, broke up this custom in 1913, by having a Democratic Legislature to elect him in the Republican year. Senator Newlands comes up for re-election, and there is no opposition to him as yet in his own party. He has always been wobbly on the Tariff, but he finally voted for the bill, though Pittman made the leading fight for free wool in the Senate. Whether there will be the usual close race in Nevada this year depends upon the fight the Progressives will make. The Republican Party was third in the Presidential election.

Chamberlain of Oregon will be recalled as the man elected by a Republican Legislature because he had carried the popular primary election. He is universally beloved by the people of his State. Senator Bourne is spoken of as his opponent, but whether on the Republican ticket, which received 34,000 votes in 1912, or on the Progressive ticket, with 37,000 votes, has not yet been determined.

Let us turn to the sixteen States in which a Republican Senator comes up for re-election.

New Hampshire presents an interesting situation. It is believed now that Senator Gallinger will follow the example of Aldrich, Crane, and Hale, and hide himself. The Democratic candidate is Raymond B. Stevens, appointed to the Public Service Commission by Governor Bass, his appointment being rejected by the Railroad representatives in the Governor's Council. He has since been Counsel for the State before the Public Service

Commission. He was elected to the State Senate by a combination of Democrats and Progressives.

Vermont will probably return Dillingham (Republican) an inoffensive Senator.

The election of a Democratic Senator from Connecticut has hitherto been impossible, because of the rotten borough system of electing a legislature. With the popular election of Senators, there is a good chance for a Democrat. Governor

Baldwin is the proposed opponent of Senator Brandegee, and he received a plurality of 10,700 in the last election. To be a tariff reformer is to be progressive enough in Connecticut. Brandegee would be missed in the Senate for one thing, his ability to put a bill in proper shape by clarifying amendments just before its passage.

New York has too recently recovered from a political campaign to be thinking much about the Senatorial contest next fall. Senator Root would be the Republican nominee before a convention and elected by a Republican legisla-

ture. In his recent reply to his critics in the Senate as to his Presidential ambition he said: "My political career and my public career are drawing to a close."

In Pennsylvania, it will be Penrose on the Republican ticket, Pinchot on the Progressive, and a yet unknown candidate on the Democratic, with the chances favoring Pinchot.

In Ohio, the announced Democratic candidate is Timothy S. Hogan, who served as Attorney-General during Harmon's Administration. His friends in

Sherman
Illinois

Brady
Idaho

the State and nation hope that Mayor Newton Baker, of Cleveland, will enter the race. Senator Barton does not seem to have much chance. Arthur L. Garford has announced himself a candidate on the Progressive nomination.

In Illinois, Roger Sullivan hopes to have himself or a dummy nominated by the Democrats under a temporary aberration of mind. Carl Vrooman, of Bloomington, is the most promising Democrat. Sherman has been a disappointment, but will get the Regular Republican nomination. The Progressives have not yet chosen their course.

In Wisconsin, La Follette still holds the reins of power and his candidate, on the Progressive Republican ticket, which is also the Regular Republican ticket, is Thomas Morris, the Lieutenant-Governor, a member of the State Senate for eight years. Governor McGovern has announced his candidacy, and there will be no Progressive opposition to him. Poor, rich, old Senator Stevenson will not attempt to succeed himself. The Democratic candidate is not yet announced.

THE three parties were pretty evenly divided in the Presidential race in North Dakota. Wilson receiving 49,000 votes, Roosevelt, 25,000, Taft, 23,000. Senator Gronna is a Progressive Republican, but the least able of that group in the Senate. With a Progressive in the field it is nobody's fight.

South Dakota is one of the States Roosevelt carried. Crawford, Progressive Republican, is an able and honest man. Like Gronna and Cummins and Bristow he will have to say whether he is a Progressive Republican or a National Progressive, and in either event the contest between him and the Democratic nominee will be close.

IN Kansas, Bristow was at last elected to run as a Republican, and Victor Murdock is to be the Progressive nomi-

nee. Representative Neely is spoken of for the Democratic nomination. Wilson carried Kansas by a majority of two to one over Taft and by a majority of 25,000 over Roosevelt, but Murdock is personally very strong.

In Iowa there is sadness in the case of Senator Cummins. He supported Roosevelt for the Presidency on the ground that the Chicago Convention made a nomination that was tainted with fraud. At the same time, he has refused to become a member of the Progressive Party. He has lost any opportunity he ever had of

Smoot
Utah

securing Democratic support, because of his opposition to the Tariff and the Currency bills. He will not secure Progressive support, because his more recent course has alienated the members of that party. He must look to Republicans alone. But the Old Line Republicans regard Cummins as the one mainly responsible for the present plight of the Republican Party, with his Iowa idea for the revision of the Tariff and his speeches and votes against the Payne-Aldrich bill. Republicans, of the Hepburn type, have their knives on the whetstones now, in preparation for Senator Cummins' campaign, and they are long knives. In Iowa, in 1912, Wilson received 185,000 votes; Roosevelt, 102,000; Taft, 119,000. Claude

R. Porter is a probable Democratic candidate.

In Utah, with a Mormon Democrat, Judge William Henry King, running against Apostle Smoot, and the Progressive vote cutting any considerable figure, Smoot may be retired. Utah has a habit, also, of trying to stand in with the Administration, whether it be Republican or Democratic.

In Idaho, Senator Brady will have a hard fight for the nomination against Ex-Governor Gooding, with the chances that Congressman French may step in between and carry off the prize. Wilson's plurality in Idaho was only 1,100. Idaho will probably send a Republican to the Senate, unless a popular Progressive gets as large a vote as Roosevelt did in 1912, when a Democrat will win.

In California, the race will probably be between Francis J. Heney, Progressive, and ex-Mayor Phelan, Democrat, of San Francisco. Senator Perkins is not a candidate for re-election. Owing to the capture of the Republican organization by the Progressives, the Taft vote in California was negligible last year.

WASHINGTON is the one State with a National Progressive in the Senate. It went for Roosevelt by a large plurality. Senator Jones, who has the distinction of voting against Lorimer first and for him last, has been trying to pose as a Progressive Republican lately, and he even voted for the Currency Bill; but the Progressives expect to elect their candidate. The race lies between Representatives Bryan and Falconer, with the chances in favor of Falconer. On the Democratic side, Mayor Cutler, of Seattle, is the leading candidate.

Keep your eye on these gentlemen. HARPER'S WEEKLY will have much to say of some of them before the elections.

Ready for the Cannery

By BERTON BRALEY

I'M weary of phrases chuck full of the praises
Of Broadway and Longacre Square.
I'm sick of the splendors who talk of the splendors
Of Lobster Place people and fare;
I wish they'd stop blattin' of "Dear Old Manhattan"
That sort of thing gives me a pain;
And so when I travel I lightly unravel
A song with this tender refrain:

ANY old town but New York,
Any old country or scene,
Brooklyn, the home of the stork,
Boston, the home of the bean;
Sing about Kalamazoo
Sing of Chicago—and pork,
Sing of Milwaukee—the home of the brew,
Oshkosh and Keokuk, Kokomo too,
Sing of whatever town's dearest to you,
Any old town but New York!

WARBLE of Phillie—of Sentle, hilly,
Schenectady, Utica, Rome;
Of swift towns or slow ones, but NOT of George-Cohn's,
Of cities from Key West to Nome!
I'll hark while you "uttah" n bit of Calcutta,
Of Shanghai, Pekin or Bombay,
And I've no abhorrence for Moscow or Florence
But kindly and firmly I say:

ANY old town but New York,
Cruel as much as you will,
All of your anker uncork,
Thrill me with many a thrill,
Get out your notes that are clear,
Dig up your old tuning fork,
Sing of St. Louis—I'm willing to hear,
Paris and London and cities more near,
Sing of the city you love and revere
Any old town but New York!

BANG the pinna for Nashville, Savannah,
Atlanta and Natchez as well,
Rave of your feeling for Charleston and Wheeling,
Sing of the wny they excel;
Blow in basso your love for El Paso,
For Hamburg or Stockholm or Cork;
But prithee take pity, and don't sing a ditty
Concerning the town of New York!

Shoula Rayfield

By EDWARD LUCAS WHITE

Illustrated by May Wilson Preston

I KNEW the Rayfields intimately, on a sort of first-cousin-by-courtesy footing, and I liked them all. They made no pretensions to social position or even to "being in society." In fact, they made no pretensions to anything, being temperamentally incapable of any pretensions of any kind whatever.

Daddy Rayfield's income more than sufficed for all their needs and wants, the more easily as their wants were entirely the reverse of self-conscious. All through their steadily increasing prosperity they had been learning to pay other people to do for them what they had formerly done for themselves. Yet a great deal which they might easily have had others do for them they continued to do for themselves partly from instinct, because they had never happened to think of all of that particular feature of their daily life, partly from a sort of inertia of energy, because they spontaneously did things for themselves, for their own satisfaction or for pastime. Caring nothing for and hardly knowing anything of conventional diversions, they found amusement in all sorts of household chores, as they called them. Daddy Rayfield had almost forgotten that he had ever, as a young householder, carried out of the house the ashes

from the kitchen and furnace, so many years had elapsed since it became one of the duties of the man who swept the front pavement and back yard and attended to other such matters; but Daddy Rayfield still stoked his furnace, shook its grate, and threw on coal, except insofar as his older sons had one by one come to share that responsibility and privilege. They preferred it that way—not so much that it saved coal, though that was a consideration, too—but more that it insured the best possible results in all sorts of conditions, the nearest possible approach to perfection of comfort, no matter what the outdoor temperature. Similarly, though the family plumber and gasfitter were called in frequently and their bills paid without objection or afterthought, one or other of the Rayfield boys was apt to repack a squirting faucet, readjust an incandescent gas burner, or tighten a leaky robin, just because it came natural to set right immediately any household appliance that got out of order, and the act was done before there was time to think about it.

As with the sons, so with the daughters: they habitually washed and ironed for themselves their finer, more expensive and more fragile articles of wear. Not

that laundry bills made any difference to them or to their parents; but partly because they felt better-dressed and knew that they looked better-attended when their possessions were deftly and perfectly laundried, and partly because they enjoyed their own household skill.

Not one of the girls but was a competent housekeeper in all respects and knew how to do everything necessary to keep each part of a house comfortable and agreeable. They preferred to dust their own bedrooms, and each had her specialties in plain and fancy cooking.

BUT the Rayfields, if they worked, worked from choice and not from necessity. And if they were unostentatious and economical by nature, they lived in a roomy and comfortable house, they wore their choice of clothes in great variety, and they sat down to a table abundantly and even lavishly provided with nourishing and appetizing food. Not one of them had ever been worried or exhausted or hungry, not one of them had ever had to skimp on any of the comforts of life, still less on an actual necessity.

Shoula was the handsomest of the daughters, a tall, well-muscled, plump,

May Wilson Preston 1918

"There is only one thing to do and that's to get married at once"

young woman, active and energetic, full of high spirits and gaiety, overflowing with life and vigor. She laughed a great deal, and while she did not laugh loudly or uproariously her laughter was healthfully hearty. She walked with a swing and put her whole heart into everything she did. Her hair was abundant, glossy and very black, her eyes dark brown, her red cheeks very brilliant when she was excited or interested. For her size, her feet and hands were small, but then she was a large girl. Body and mind, heart and soul, there was plenty of Shoula.

HER two elder sisters had married well. Prosperous as Daddy Rayfield was, his sons-in-law were decidedly better off. And his daughter-in-law was even affluent in her own right. Naturally, with three children flourishingly married, the family expected Shoula, whom they all regarded as a beauty, to feather her nest notably. So they were all disgusted when she announced her engagement to Guy Williams.

Guy was a reporter on the *Evening News* at a salary of six dollars a week.

Daddy Rayfield consented to the match. But then, neither he nor any other human being could rebuff or oppose Shoula when she set out to have her way. Shoula was a determined and a persuasive creature. Her Daddy in particular could not refuse her. He agreed that whenever Guy was earning a salary of twenty-three dollars a week Shoula should marry him. This was not much of a concession, for at that time no reporter in Baltimore earned more than twenty dollars a week and Guy had not the remotest chance of early promotion. He was a sort of hanger-on at the *News* office. Also he had no qualities that were likely to make him successful at getting a job of any other kind.

But all the Rayfields liked Guy. They could not help it. He was a cheery being, an inch shorter than Shoula and twenty pounds lighter, with his merry gray eyes, close together and small, twinkling on either side of his parrot-bank nose. He dined at the Rayfields' every Sunday and spent nearly every evening there with Shoula, unless he took her to a theater or to some evening jollity. Moving pictures had not been invented in those days. He and Shoula were very happy and very hopeful. They talked of being married within three years and were perpetually planning ways and means on a basis of twenty-three dollars a week. For Daddy Rayfield had promised Shoula a comprehensive trousseau and an allowance of ten dollars a week.

Then came, all in three weeks, the meeting of Shoula's younger sister Aila with a particularly attractive and wealthy youth, their whirlwind courtship and their prompt marriage.

That event altered very much the outlook of the Rayfields.

Within six months from Aila's wedding I received a note from Shoula asking me to call. I went. She came straight to the point.

"Aila's good luck," she said, "has been bad luck for me. The whole family has turned completely round. They have broken their word and are now doing all they can to make me give up Guy. At first I thought that would make no difference, and that I could stick it out and wait as patiently as before, if not as comfortably. But I see I was mistaken.

Their opposition is wearing me out. If things go on this way they'll separate us. There's only one thing to do and that's to get married at once."

"On six dollars a week?" I exclaimed. Guy was not a cent better off than a year before.

"Yes, on six dollars a week," she replied, calmly. "You see, Will, it's this way. Most girls can fall in love and get over it. I'm the other kind. I never loved anybody but Guy and I never shall. If I lose Guy, my whole life will be spoiled. I've only one life. I might just as well kill myself trying to live on six dollars a week with Guy as die ten deaths trying to live without him. Anyhow, my mind is made up, and you know what that means. It means I'm going to do what I intend. I have told Guy so."

"What did he say?" I asked. "Just what you said, or implied," she answered. "He said we could not live on six dollars a week. I asked him did he mean to tell me that, if I was not afraid to marry him on that little, he was afraid to marry me on that much. He agreed to get married whenever I am ready."

"When will you be ready?" I asked. "Tomorrow, if I can manage it," Shoula declared. "If not tomorrow, then the day after. Anyhow, the first minute after I am prepared."

"What do you need to do to be prepared?" I queried.

"Rent a house," she said, "furnish it, get a license, pack my things, and arrange for an expressman to call for them. That's all, I think."

SHE spoke as if she had unlimited cash with which to rent and furnish a house. I reflected that she might have some hundreds of dollars in a savings bank, so I ignored these points.

"Do you think you can get your things out of the house?" I asked.

"You bet I can. They all can talk and they all can be horrid, they can threaten, they can say they'll never speak to me again, they can vow that if I go out of the house I go forever, that I can never come back, that they'll cut me off, that I'll never get a cent of cash or a finger-dip of help from any of them, they can keep their word; but there is not one of them that can look me in the face and stop me from having my trunk and bundles carried out of the house; yes, and my bedroom furniture, too. Every ounce that is in my room is mine, all my own."

"Where do I come in?" I asked.

"Why, you see," she explained, "Guy is busy from early morning until the sporting and financial edition goes to press; that is often nearly five o'clock. Almost everything I have to do must be done in business hours. Guy can't attend to anything for me, and most of what I have to do will go better with a man to help. You are free as you please, and any time you choose. Get a power of attorney from Guy so you can rent the house for him in his name, and meet me as soon as you have got it."

When we met she said: "The first thing is the house."

I am ashamed to put down the name of the two streets that cross where we got out of the trolley car. The neighborhood was and is perfectly respectable, but when I contemplated what would be thought by Daddy Rayfield, by Ma Rayfield, by Aila, by Aila's husband, I shuddered.

I shuddered incomparably more when she led me to the middle of one of the blocks and turned up the alley.

"Shoula!" I cried, "Niggers live in this alley."

"Well," she said, "I'd rather live next door to niggers with Guy, than in a palace without him. And I won't have to live next door to niggers, at least not yet, for the houses on either side of the one I'm going to take are occupied by white people, and pretty decent-looking white people, even if they are so poor that they have to live next door to niggers."

In fact I found that three of the houses near the middle of one row had been lately repaired and painted and that the middle one was vacant.

"How did you hit on this?" I asked.

"Saw it in the papers," Shoula explained. "Of course these houses were rented the instant they were done up and by better tenants than most of these alley cats. The folks in the house had some trouble with the police and were turned out. I paid Leslie Bentinck a month's rent in advance to hold the house for me. I said I knew some good tenants that wanted it."

"Leslie Bentinck!" I cried. The picture of Shoula and I renting for Guy and Shoula this alley house from that most polished of real estate men, most conventional of hachelors, most correct of club dandies, Leslie Bentinck, overwhelmed me.

"Yes, he's the agent," said Shoula.

THE house was red brick, with green shutters. The front steps were wood, painted white. The front door opened into a room about twelve feet square. It had one window next the front door. The wall-paper was new, bunches of carnations on a cream-colored ground. In the middle of the long wall the light from the window glittered on a circular tin cover closing a hole for a stovepipe. The floor was new.

The rear room was like the front room, except that the walls were kalsomined a glaring light blue. The floor was patched under the stovepipe-hole as far as the door in the corner, which led down into an earth-floored cellar lighted by two windows barely a foot high, level with the joists.

Between the front room and the kitchen was a boxed-in stair, narrow and steep.

The second floor consisted of two white-washed rooms, each with two windows. The floors were old and grimed with the filth of years. Each room had a tiny closet filling the space over the passage between the front and back rooms downstairs. There was no way of heating the upper rooms. There was no plumbing whatever in the house, only a sort of stable-hydrant in the bricked back yard.

"And you mean to live here?" I exclaimed.

"I do. You can help if you choose; but you couldn't hinder me, however much you tried."

"I shan't try," I exclaimed, "I mean to help. I'd never have the sand for such a game, but it will be a sporty game to watch."

"I was hanking on you," said Shoula.

When the year's lease was executed Shoula led me to various auction rooms and second-hand stores. She considered every article she needed in every place she could find. She chaffered, she beat down prices, she made every cent go as far as she could.

She bought a small cook-stove and a smaller kerosene cook-stove.

"I'll spend most of my time cooking and washing," said Shoula. "and I don't

meant to fry in summer or freeze in winter. But no gasoline stoves for me."

She bought wash-tubs, a kitchen table, eight kitchen chairs; a loop-legged, smelly food-safe, with perforated tin panels in its doors and sides; pails, pokers and shovels and three coal-beds, bedroom and table crockery, a pine bedstead, bureau and washstand and a walnut wardrobe; also a hunk mattress.

These, when they reached the house, she had placed in the second-story back room.

"You're puzzled," she remarked to me. "Thank you so much for not asking questions. I'll enjoy explaining the whole scheme when we're settled."

She also bought a ton of pea coal and saw it put in the cellar. We had some fun and more bother trying ourselves so as to be at the house when her purchases were delivered; kitchen and table utensils she bought at five-and-ten-cent stores; also a great many small articles.

Her eight kitchen chairs cost twenty-five cents apiece, second-hand ("tenth-hand, I suspect," Shoula observed).

She bought a pair of blankets, and a pair of sheets and two pillow-cases.

"Awful extravagance, buying pillow-cases and sheets," she commented, "but I've no time now to buy unleached sheeting and make sheets and pillow-cases. I'll do that before wash day comes 'round for these." She was cheery on pillows; "daren't economize on pillows," she explained. "Pillows are sleep, and sleep's life, when you work all the time you are awake."

She bought two cheap kerosene lamps, new, and carried them with her. When they were placed, one in the kitchen and one in the bedroom, she looked over her new possessions and announced that the next thing was the license.

"You don't mean," I cried, "that you are going to sleep in this house before it is scrubbed?"

"You bet I'll sleep," she said. "But I'll be hard at work scrubbing a half-hour after sunrise, and when I get through there won't be a cleaner house in Maryland."

They were married by the minister of her church in the parlor of his parsonage.

"If you won't marry us," she had said to him. "I'll find some one else who will. You can tell that to the folks, and they'll know it's true. They can't blame you."

As they left the parsonage she said to me: "Much obliged, Billy. We don't need you any more. I don't want you in the row, if there is one, when I get my stuff from the house. I'll get it. We are going to Moschoud's now, and I'll make him drive round and wait with two wagons, I'll clean out my room in a jiffy. Everything is packed. Remember, you dine with us Sunday afternoon at six."

"At six?" I exclaimed.

"Yes, at six," Shoula repeated. "When I explain, you'll understand."

"God bless you, Billy," said Guy, "and be sure to come."

"I'll come," I said, "and God bless you both."

II

I FOUND in Shoula's front room the rug, table, sofa, armchair, and rocking-chair and two smaller chairs which had been part of the furniture of her big bedroom at her home. Five of her pictures hung on the walls. Her reading lamp stood on the table. The room looked cheerful. The weather did not

call for a fire in the egg-stove, but that useful appointment was in place, on a square of sheet-tin, and the stove and its piping were as glossy black as polish and energy could make them.

Guy opened the door for me and accepted a cigarette. As we were lighting up Shoula came in from the kitchen, her sleeves rolled up and her dress hidden under a blue and white checked gingham apron. She looked as happy as possible.

"Kiss the bride," said she and gave me a hearty smack on the lips, the first and last time Shoula ever kissed me.

"Isn't she a wonder?" Guy exclaimed, admiringly.

"The next move," Shoula said, "is to present you to our boarders."

She climbed the stairs and returned with Dorsey Brown and his wife, Dorsey was the reporter who had got Guy his job with the *News*. He had been married about three months. His wife was one of those skinny, limp, little blondes, who are pretty enough when well, but who are almost always ailing. They had been living in one of the cheapest boarding houses in Baltimore and had been very uncomfortable and terribly pinched for cash. I realized the expediency of Shoula's arrangement and saw how much it benefited all four.

SHOULA showed me the upstairs rooms.

Her mahogany bedstead, bureau, washstand and wardrobe almost filled the front room. A small rocking-chair and one of her twenty-five cent kitchen chairs completed its furniture. Five more of her pictures adorned the walls.

"I think Mamie isn't hopelessly uncomfortable here," she said.

The back room looked less bare since three of her smaller pictures had been hung up there. Nothing had been added since I had seen it before except two kitchen chairs.

"Trunks down cellar," said Shoula.

In the kitchen I found hanging Shoula's three favorite pictures.

"I shall be here most all of every day," she said, "and I might as well have something pleasant to look at."

We dined off the bare pine kitchen table. We had soup, the thick satisfying soup for which Shoula's mother was famous; boiled potatoes, creamed cabbage and Shoula's own special meat-cakes with tomato gravy; we finished off with an apple tapioca pudding and coffee. It was a good dinner, and a jolly dinner. I had brought a big bag of bananas and a big box of good confectionery. We all felt well-fed and contented.

"One dinner a week," said Shoula, "is going to be our rule. Our next dinner will come 'round next Sunday."

I dined there on not a few Sundays and was always edified at the cheapness, abundance and savor of Shoula's dinners. Gradually I learnt the details of her house-keeping.

The rent of the house was two dollars a week, the usual rent for such convenienceless alley houses. The Browns paid eight dollars a week for their room, food and washing and for Shoula's care of Mamie, who was ill more than half the time. Shoula did all the marketing, cooking and washing for the four of them. Also, she scrubbed the front steps, swept the pavement and kept the house and back yard clean; and she kept them clean.

On Sundays the four slept late and had an abundant breakfast and their weekly banquet at six o'clock. On week days Shoula and Mamie had a

good late breakfast and a sustaining afternoon dinner. Shoula said she never ate between meals; if Mamie felt weak she gave her a cup of scalding tea and a sandwich, or a biscuit or slice of bread. The two men never had a meal in the house except on Sundays. On week day mornings Shoula waked Guy at the last moment and he and Dorsey each had a big cup of Rio coffee and a roll, and went about their business. It was in the good old days of unlimited hot free lunch at saloons. Dorsey and Guy knew all the saloons in Baltimore, being reporters. They knew which made only a show of setting out free lunch, and which were lavish; they knew just where the free lunch was unappetizing, just where it was filling, satisfying and digestible. They arranged so that they never ate at the same saloon often than once in two weeks. In this way they provided themselves with two hearty, satisfying, nourishing meals each day at a daily expense of precisely ten cents each for two glasses of beer apiece.

This left Dorsey and Mamie six dollars and forty cents a week for all their other expenses, and Guy and Shoula three dollars and forty cents.

"Sometimes," Guy confessed, "I save a nickel by gobbling a free lunch without buying a beer; but that is not good business unless somebody treats me to a strain. I might lose out a good place from my lunch route."

Shoula likewise confided to me that she saved something each week out of the Browns' board.

"I can keep the house going on just about a dollar a day," she said.

Considering coal, kerosene and coffee, I could not see how she did it; but she said what worried her was the cost of soap.

"I use such a lot of soap," she mourned.

EVERY moment of daylight left free from heavier housework, she put on mending or sewing. She desecrated on her theories of needlework.

"Mending first, to the last patch and the last darn," she said, "then plain sewing. I can make Guy a shirt for half what he can buy one, even at a department store marked down sale. Then, all the time left, on embroidery. Embroidery pays, but it does not pay to put embroidery ahead of keeping up with the real needs of one's clothes."

Dorsey's wife sewed listlessly, but with an attempt at diligence, whenever she was well enough, and managed to do all her own darning and mending and some embroidery.

Shoula confided to me that between them, they took in more than two dollars a week, clear, for their embroidery.

"And every cent counts," she said, "and needs to be counted."

At least three evenings a week they went to the theater. In those days newspaper offices always had more free tickets to theaters than they knew what to do with. If by any chance neither Guy nor Dorsey could get four dead-head tickets, the two women would use the tickets and their husbands would walk in unchallenged as well-known reporters.

In the summer they often went down the bay on an excursion steamer. Free tickets for excursions were almost as easy for reporters to get in those days as were theater tickets.

Shoula was always well and never seemed weary, but I could see, after a time, that Guy was increasingly anxious. I puzzled a good bit, myself, as to what she meant to do and how she kept so sanguine.

"Her daddy in particular could not refuse her"

One Tuesday morning I found in my mail a letter from one of Shoula's girl friends. She had married a San Francisco man. She said she hated to trouble me, but as she did not know Shoula's address, the only way she could think of to get a letter to her was to enclose it to me; would I please deliver it as quickly as possible. I had nothing of importance to do, so I caught the next car for Shoula's part of town. She opened her door for me; she had her hat on.

"Glad to see you," she said, ignoring the letter. "You always come in the nick of time. A minute later I'd have been gone. I finished my washing early yesterday and some of my ironing. I have just ironed the last piece. I meant to go to the Maternity Hospital this evening, but I think it would be imprudent for me to wait for Guy to come home. I'm going now. Will you walk round with me?"

"Walk!" I cried. "I'll get you a hansom."

"I'll bet you won't!" she snapped. "But I thank you for the offer. I can walk and walking will do me good. I can take my time. Will you go with me?"

THE situation was, to me, very startling and totally unforeseen. But there was no resisting Shoula's unembarrassed candor.

I went.

Shoula was wearing a gray cloth dress and strode along springily, head in air, as buoyant as possible.

"I'll be in the hospital," she said serenely, "next Sunday and Sunday week. I'll be home tomorrow two weeks. You come to dinner Sunday two weeks."

She shook hands at the entrance of the hospital, smiling and gay, no hint of a flush or blush about her, but with a fine, healthy color in her cheeks.

I went to dinner as bidden. Her baby was as fat as a chestnut worm and pink as a pink-carnation. Shoula seemed strong and vigorous; she walked, moved and stood as if she had reserve energy in plenty.

AFTER that their life went on as before, Shoula maintained that, although she gave her baby all the attention he needed, she seemed to have just as much time for housework as formerly.

"Every mother thinks her baby the greatest thing that ever happened, of course, but I've got more reason to say so than most." She glowed. "Just think, that kid hasn't shown a symptom of colic yet, and he's past the colicky age, already. And he hasn't waked us at night yet, not once. I have to wake him to feed him. He's greedy as a pig, but he never seems hungry between meals. The matter with him is that he's as healthy as his mother."

Shoula's second baby was three months old before Guy got his first raise in salary, and that was only to thirteen dollars a week.

"But it makes all the difference in the world," Shoula declared. "I feel safe now,

and I've been more scared than the English language can express. What saved us was the free theaters and free excursions on the water. An all-day excursion, for nothing, is just salvation for a young city baby in summer. Reporting is a badly-paid profession, but it has its compensations."

She mailed her mother a picture of herself with her two children. This time Ma Rayfield gave in. There was a general family reconciliation. Shoula declined, however, to accept a cent of help. She had already moved into a three-dollar-a-week house, in a street instead of an alley and in a square inhabited by white people only. To that home she clung, as well as to Dorsey and Mamie. She said they had stuck by her and she wasn't going back on them. But family harmony made her days incomparably happier and easier.

AFTER that there was nothing remarkable about her life. The last time I saw them they were living in a flat somewhere in Harlem and enjoying New York completely. Guy was advance agent for a popular comedian at a salary of fourteen hundred a year. He was fat and complacent. Their three children were as healthy as possible.

"But I shouldn't advise any other woman to try it," Shoula summed up, after many reminiscences. "I won out on free theater tickets and free water excursions and on my temperament. Few other women have such a temperament."

Kolnityatsch

By MAX BEERBOHM

BOTH with pencil and pen, Max Beerbohm is gifted in delicate and happy satire. In this sketch, he amuses himself with some of the absurdities of literary exploitation as it exists today. The quality of satire is to be as much like the fact as possible and just enough different to be funny

NONE of us who keep an eye on the heavens of European literature can forget the thrill that shook us when, but a few years since, the red star of Kolnityatsch swam into our ken. As nobody can prove that I wasn't, I claim now that I was the first to gauge the magnitude of this star and to predict the ascendant course which it has in fact triumphantly taken. That was in the days when Kolnityatsch was still alive. His recent death gives the cue for the boom. Out of that boom I, for one, will not be left. I rush to scrawl my name, large, on the tombstone of Kolnityatsch.

These foreign fellows always are especially to be commended. By the mere mention of their names you evoke in reader or hearer a vague sense of your superiority and his. Thank Heaven, we are no longer insular. I don't say we have no native talent. We have heaps of it, pyramids of it, all around (see publishers' advertisements). But where, for the genuine thrill, would England be but for her good fortune in being able to draw on a seemingly inexhaustible supply of anguished souls from the Continent—infaust, wide-eyed Slaves, Titan Teutons, greatly blighted Scandinavians, all of them different, but all of them raving in one common darkness and with one common gesture plucking out their vitals for exportation? There is no doubt that our continuous receipt of this commodity has had a bracing effect on our national character. We used to be rather phlegmatic, used we not? But nowadays it cannot appear that one of our lady-novelists in Early-Victorian days wrote to her old schoolmaster, asking him to write to her, without the whole of Fleet Street rising as one man to admit that she has ennobled her sex, purified our public life, and made wiser for all time the scope of human emotion.

OF Kolnityatsch, as of all authentic master-spirits in literature, it is true that he must be judged rather by what he wrote than by what he was. But the quality of his genius, albeit nothing if not national and also universal, is at the same time so deeply personal that we cannot afford to close our eyes on his life—a life happily not void of those sensational details which are what we all really care about. "If you have tears, prepare to shed them now," Kolnityatsch was born, last of a long line of rag-pickers, in 1886. At the age of nine he had already acquired that passionate alcoholism which was to have so great an influence in the moulding of his character and on the trend of his thought. Otherwise he does not seem to have shown in childhood any exceptional promise. It was not before his eighteenth birthday that he murdered his grandmother and was sent to that asylum

in which he wrote the poems and plays belonging to what we now call his earlier manner. In 1907 he escaped from his sanetum, or chukete (cell), as heardonically called it, and, having acquired some money by an act of violence, gave, by sailing for America, early proof that his genius was of the kind that crosses frontiers and seas. Unfortunately it was not of the kind that passes Ellis Island. America, to her lasting shame, turned him back. Early in 1908 we find him once more in his old quarters, working at those novels and confessions on which, in the opinion of some, his fame will ultimately rest. Alas, we don't find him there now. It will be a fortnight ago tomorrow that Luntie Kolnityatsch passed peacefully away, in the twenty-eighth year of his age. He would have been the last to wish us to indulge in sickly sentimentality. "Nothing is here for tears, nothing but well and fair, and what may quiet us in a death so noble."

WAS Kolnityatsch mad? It depends on what we mean by that word. If we mean, as the bureaucrats of Ellis Island and, to their lasting shame, his friends and relations presumably meant, that he did not share our own snug and timid philosophy of life, then indeed was Kolnityatsch not sane. Granting for sake of argument that he was mad in a wider sense than that, we do but oppose an insuperable stumbling-block to the Eugenis. Imagine what Europe would be today, had Kolnityatsch not been! As Mr. W. L. Courtney says, "It is hardly too much to say that a time may be not far distant, and may indeed be nearer than many of us suppose, when Luntie Kolnityatsch will, rightly or wrongly, be reckoned by some of us as not the least of those writers who are especially symptomatic of the early twentieth century; and are possibly 'for all time' or for a more or less certainly not inconsiderable period of time." That is finely said. But I myself go somewhat further. I say that Kolnityatsch's message has drowned all previous messages and will drown any that may be uttered in the remotest future. You ask me what, precisely, that message was? Well, it is too elemental, too near to the very heart of naked Nature, for exact definition. Can you describe the message of an angry python more satisfactorily than as *Sssssss*? Or that of an infuriated bull better than as *Moo*? That of Kolnityatsch lies somewhere between these two. Indeed, at whatever point we take him, we find him hard to fit into any single category. Was he a realist or a romantic? He was neither, and he was both. By more than one critic he has been called a pessimist, and it is true that a part of his achievement may be gauged by the lengths to which he carried pessimism—railing and

raging, not, in the manner of his tame forerunners, merely at things in general, or at women, or at himself, but lavishing an equally fierce scorn and hatred on children, on trees and flowers and the moon, and indeed on everything that the sentimentalists have endeavored to force into favor. On the other hand, his burning faith in a personal devil, his freak delight in earthquakes and pestilences, and his belief that every one but himself will be brought back to life in time to be frozen to death in the next glacial epoch, seem rather to stamp him as an optimist. By birth and training a man of the people, he was yet an aristocrat to the finger-tips, and Byron would have called him brother, though one trembles to think what he would have called Byron. First and last, he was an artist, and it is by reason of his technical mastery that he most of all outstands. Whether in prose or verse, he compasses a broken rhythm that is as the very rhythm of life itself, and a cadence that catches you by the throat, as a terrier catches a rat, and wrings from you the last drop of pity and awe. His skill in avoiding "the inevitable word" is simply miraculous. He is the despair of the translator. Far be it from me to belittle the devoted labors of Mr. and Mrs. Pegaway, whose monumental translation of the master's complete works is now drawing to its splendid close. Their promised biography of the murdered grandmother is awaited eagerly by all who take—and which of us does not take?—a breathless interest in Kolnityatschiana. But Mr. and Mrs. Pegaway would be the first to admit that their renderings of the prose and verse they love so well are a wretched substitute for the real thing. I wanted to get the job myself, but they nipped in and got it before me. Thank heaven, they cannot deprive me of the power to read Kolnityatsch in the original Giliach and to crow over you who can't.

OF the man himself—for on several occasions I had the privilege and the permit to visit him—I have the pleasantest, most sacred memories. His was a wonderfully vivid and intense personality. The head was magnificent, perfectly conic in form. The eyes were like two revolving lamps, set very close together. The smile was haunting. There was a touch of old-fashioned courtesy in the repression of the evident impulse to spring at one's throat. The voice had notes that recalled M. Mounet-Sully's in the later and more important passages of "Oedipe Roi." I remember that he always spoke with the greatest contempt of Mr. and Mrs. Pegaway's translations. He likened them to—huh! enough! His boom is not yet at the full. A few weeks hence I shall be able to command an even higher price than I can now for my "Talks with Kolnityatsch."

Dorothy Donnelly and Lou-Tellegen in "Maria Rosa"

Some Uncommonly Good Acting

IT is the commonplace of complaint directed against our American theatrical criticism, both the *visa rose* and the newspaper kind, that it seems almost wholly concerned with the really somewhat rudimentary question of whether it has seen "a good show," as the phrase is, or not. In New York, especially in print, it interests itself passionately in prophesying the probable length of a "show's" stay in the metropolis; the main object of writing about the stage apparently being to avoid "getting in wrong"—to employ the vernacular, in this matter of "hits" and "runs."

NOW it is probably as well that the great public, which is hoped to be simple and good-hearted and is known to be rich, should take its theaters naturally and not too critically. But there is undoubtedly an increasing number of playgoers who honestly want to learn something more about the great institution which the stage is, people who would like to see the wheels go round, and to learn to distinguish in a more sophisticated fashion the contributions which play-writing, play-acting, production and personality make to a "good show." Anything, therefore, which definitely focuses public attention upon any of these points is especially welcome. And "Maria Rosa," in which Miss Dorothy

Donnelly is supported by Mr. Lou-Tellegen, puts what one might call the sheer art of acting more brilliantly into the limelight than any other event of the present theatrical season here.

It is not that Angel Guimera's play of Catalan peasant life will not pass, nor that the production is not good. It just happens, however, that all the circumstances combine to make the acting the thing. Serious students of the theater are recommended, for example, to consider from a scientific and purely technical point of view the star's entrance in Act I and her first scene. There is really no scene to set, only a considerable stretch of narrative with almost no situation behind it, the kind of thing usually intolerably dull. But Miss Donnelly, bringing at once to it that mysterious "technique," which the public has heard of so often and so vaguely but can now plainly recognize, makes the scene seem a scene, almost surcharged with interest, passion and the sense of beauty. Later there are scenes which are really scenes, and they get played; but as exhibitions of pure virtuosity they cannot eclipse this first, though of course they stir the audience more.

IF Miss Donnelly were not an indigenous product, we should undoubtedly fuss more about the quality of her art:—try pronouncing her name in the Italian

fashion and you will at once feel that Donelli is able to challenge comparison with the emotional transatlantic actresses who have at various times trod the boards in Manhattan.

Mr. Lou-Tellegen, who has been seen here before with Madame Bernhardt, also keeps the limelight upon the acting, and he in addition might give to our supposed serious students of the drama in the stalls an excellent opportunity of considering the different styles of acting which may exist. He is very definitely, to put it in the coarsest and easiest way for the American playgoer, of the Bernhardt as opposed to the Duse school. He is fairly obvious and he is by intention, theatrical; that is, most profoundly and most cunningly of the theater. But the result is pyrotechnically brilliant; nothing so good of its kind has come to us for a long time. Mr. Tellegen's acting—to become technical again—would probably not convince you that a falsely written scene was real, but it might quite conceivably make you not care which it was, so delighted would you be with his rendering of it. He adds to such gifts, in Spanish costume at least, very authentic beauty.

Lovers of acting, to put it briefly, cannot afford to miss "Maria Rosa." It is what musicians would call a *bravura* passage in the winter theatrical season.

"A Preface to Politics"

By FLOYD DELL

WE Americans are accustomed to take politics for granted, and only think about the details and incidents of it. We are likely to resent being asked to think about Politics itself: what it is and why it is, and if it is really any use!

Yet some thousands of Americans have at critical times considered seriously, even desperately, the question upon which Mr. Lippmann in this book seeks to throw the light of twentieth century thought.

In Chicago, for instance, in the early '80's, a workmen's party which had started out with a living faith in politics, electing representatives to the city council and the state legislature, and believing fully in the power of the ballot to achieve their ends—this party, disillusioned by the flagrant theft of a few elections, and discouraged by the mordant cynicism of John Most, ceased to believe in politics, and for two years talked Dynamite.

Of that lack of faith the Haymarket bomb was one of the results. It signified that there were questions concerning the validity of politics which needed to be cleared up.

The need still exists, as may be seen from the case of the Socialists today. Belief in politics is one of their three cardinal principles. In order to join the Socialist party one has to affirm solemnly one's belief in the method of politics. And yet, only a few months ago, after long debates in every "local" in the country, one of the chief figures in the party was expelled from membership for his notorious and contagious disbelief in the ballot. At the very height of Socialist success in elections, the Syndicalist cynicism in regard to politics had so far undermined the Socialist principle as to cause actual fear of a split in the party. Disbelief in politics is one of the tendencies of the time.

ALL this, to be sure, has occurred within a small idealistic group. But it is not confined to these groups. Radical parties are a kind of seismograph. If you would know what obscure tremors agitate the great middle class, it is well to look at such radical groups. Their violent actions and reactions are a portent of what is happening or about to happen in the larger world.

"The most incisive comment on politics today," writes Mr. Lippmann—and he means in this large world—"is indifference." Where the disillusioned workman turns to sabotage, the disillusioned business man may simply stay away from the polls on election day. But his action is significant.

It is a peculiar situation, into which Mr. Lippmann's book comes as the first serious attempt at explanation. On the one hand there is a constant extension of reform activities, based on a belief in the effectiveness of political method. The organization of the Progressive party was a striking act of faith—of faith in politics. The anti-political philosophy of *laissez-faire* has broken down, and experiments in municipal ownership and government control are confidently proceeding. There

is an increasing number of laws assuming a direction of the activities and even the morality of the individual. The sphere of politics seems never to have been so large as it is today.

ON the other hand, there is, in the industrial world, Syndicalism, with its program of "direct action" and its utter contempt for politics. The sentiment of "anti-parliamentarism" is growing all over the world. In England recently, Hilaire Belloc resigned from parliament to write a book attacking "The Party System." And he and Cecil Chesterton, successive editors of the *New Witness*, have by means of sensational exposures almost brought about the downfall of a ministry which more than any other in English history has extended the activities of government and enlarged the domain of politics.

This latest phase of radicalism is likely to seem to us bewildering and topsy-turvy. Indeed, there is a sense in which radicals have turned upon themselves. After advocating measures like workmen's insurance for a generation, they are attacking the one just put in force as an arrangement made for the benefit of the employers and tending to break down the labor unions. In this country, the Socialists at the present time do not know whether they believe in government ownership or not. Charles Edward Russell, who wrote a book a few years ago praising in the highest terms such experiments in New Zealand and Australia, now denounces them as "reactionary!"

The change from the theoretical to the practical field is one which especially arouses a doubt of the validity of politics. The Socialists, after working hard to secure the election of officials in various towns, have often been compelled to go to work and throw 'em out again. So well known is this difficulty that it is a rule for the man who accepts a nomination from this party to hand in to the "central committee" a signed, undated resignation!

THESE are a few of the difficulties which politics now present—an indication of the muddlement in which the most confident of us are likely to feel ourselves implicated. More striking, perhaps, is the protest raised everywhere against the increasing control by the government of the individual. The bureaucratic tyrannies of the post-offices, the laws against "indecent" literature, stringent divorce legislation, and the drastic provisions of the "Mann Act," according to which a man who indulges in a "Hindle Wakes" escapade may be sentenced to a term of years in prison as a "white-slaver"—in resentment of these cruel absurdities, the radicals are aligning themselves under the *ci-devant* banner of Individualism. It is, indeed, a pretty muddle!

Into this situation comes Mr. Lippmann with the suggestion that we consider politics anew. "Perhaps," he says pointedly, "uncriticised assumptions have been made about the real uses of politics." Such assumptions he proceeds to criticize

at length in the course of his comprehensive and incisive book.

"There are, I believe," says Mr. Lippmann, "blunders in our political thinking which confuse political activity with genuine achievement."

One of the blunders which he points out—and the one which is perhaps the source of most of the doubt that has arisen as to the validity of politics—is that conception of statecraft which seeks to provide "a mechanically constructed contrivance within which the nation's life is contained and compelled to approximate some abstract idea of justice or liberty."

He sets down at the outset as a limitation of politics the impossibility of securing perfection by perfect laws. Politics, in his view, is simply an opportunity to give the momentum of popular approval to forces and personalities which the people trust.

HE would have us understand what politics can and can not effectively be. It can be the means of "the invention of new political forms, the provision of social wants, and the preparation for new economic growths." It can not be a medium for the expression of moral enthusiasm or moral indignation. It can not continue to use "the method of the taboo"—that device which our legislators have been so prone to employ.

Confronted with an evil, they did not try to see how it might be obviated or turned into good by the creation of new social forces. No—they forbade the existence of evil by law. They made it anathema. They pronounced it damnable. They threatened to club it. They issued a legislative curse, and called on the district attorney to do the rest." And of course the evil went on as before, and in the hopeless conflict more and more people became sick of politics.

The field of political action is thus apparently restricted—but only to be magnificently enlarged in his further discussion. For politics, as he indicates, has its twofold aspect. Voting and making laws are not the beginning and the end of politics. Just as the assassination of a ruler is a political act, so is the effective promulgation of ideas. In a sense, the conversion of HARPER'S WEEKLY to the Feminist cause is as truly a political act as the gaining of the ballot by the women of Illinois. All those acts which give force and direction to existing tendencies are part of the greater politics. And on this matter Mr. Lippmann has much that is valuable to say to us.

Adopting from H. G. Wells the term "mental hinterland," he makes plain to us the importance of all that preliminary thought which precedes and gives significance to legislative action. It does us good to capture a man's vote in behalf of a new program, if his mind is full of antiquated notions which contradict and nullify that program.

You must capture his mind, too. You must fill his mental hinterland with new conceptions. You must create new minds before you can have a new world. And this, in the view of Mr. Lippmann, is the great task of the real politics of the future.

Finance

By ALBERT W. ATWOOD

Protecting the Stockholder—His Duties

BEFORE going into any detail as to how the investor, and more especially the stockholder, may secure protection through his own efforts, and those of others, it may be well to point out his duties and obligations, moral as well as legal. This is neither a theoretical nor a Quixotic subject. It is one dictated by ordinary caution. For who can tell when an aroused public conscience will make the ethics of today the laws of tomorrow?

Rights and privileges usually carry with them duties and obligations. Those of a legal nature which appertain to stocks are fairly well known and require only a brief summary. Purchasers of stocks are liable to creditors of the company for unpaid installments on shares which were only part paid to begin with. They also are liable to the creditors for dividends paid out of capital rather than out of earnings. If a corporation fails and its creditors can prove that stock was issued for property or services at excessive or fictitious values, they can sometimes hold the stockholders, provided the latter were the original subscribers to the stock.

In New York, Pennsylvania, Indiana, Tennessee and North and South Dakota employees of a company can in many cases hold stockholders directly for their wages if the company refuses to pay. Stockholders in national banks and in nearly all state banks are liable to creditors for double the amount of the face value of their stock, and in two states, California and Minnesota, this same rule applies to certain other classes of corporations.

Are There Moral Responsibilities?

THESE are the only important liabilities, or accountableness, of a legal nature, which accrue to stock ownership. Now how about the moral, or shall we say the social, liability? Are they as fully understood?

It is a well-known fact that a new code of business ethics is in the making. One only has to follow the many dissolutions of trusts, Supreme Court decisions on monopoly matters and debates in Congress to realize this fact. But as stated by Mr. Arthur B. Kuhn in his admirable comparative study of the law of corporations with particular reference to the protection of creditors and stockholders, the so-called "anti-trust" problem has absorbed the attention of statesmen and publicists, and I might add, that of business men, to the neglect of the organic functioning of the corporation itself.

Professor John W. Burgess has pointed out that if the internal affairs of corporations are not properly attended to, "the few may despoil the many, and thus weaken the basis of popular government, if not of all forms of government."

This is a strong statement, but it goes to the very foundations of our present-day troubles. The moral, or social, obligations of the individual employer are already admitted. If a clothing manufacturer does not maintain sanitary conditions for his laborers or does not provide enough fire exits, he is fined. His case is plain. The application of similar principles to the stock-

holder in a large company, that is, to the more complicated forms of property, seems only a matter of time. It is in accordance with the country's growing regard for human welfare. In the abstract the school-teacher in Vermont who owns ten shares of United States Steel preferred is just as responsible for the injury to an immigrant workman in the Homestead mills as were the two sweatshop proprietors whose girl employes were killed in the Triangle fire.

The relation between the Vermont school-teacher and the Slavish workman may possibly be considered the looest of conceivable relations. Stocks and bonds are an intangible form of property. Relatively they were the invention only of yesterday. Old obligations long associated with more primitive forms of property have not yet adhered to these disguised instruments. The owner of a dog that bites pedestrians is held liable directly enough. But how about the petty investor whose mammoth machines have crippled a workman? There is no real difference in kind. It is only one of degree.

But What Can I Do?

THE desire for profits is being tempered by vague uneasiness and compunctions as to the social conditions underlying these profits. People are actually writing to such magazines as the *Surrey* to discover if there is a "white list" of stocks, to find out which are the least unfair corporations. People are asking if stocks which pay good dividends represent enterprise, and superior patents and processes, or a minimum of these assets and a maximum of child labor law evasion, killing speed, underpay, and lack of accident protection. No investment banker's prospectus enlightens one with respect to these subjects. Only when corporate greed becomes a public scandal does Wall Street awake to the fact, and rarely even then.

Of course state labor boards investigate these conditions, but that is not the point. An enlightened social conscience demands that the owners themselves look after them. At first sight the difficulties seem insurmountable. They seem so great that the stockholder is baffled by their mere contemplation. There may be scores of thousands of other shareholders, a scattered, heterogeneous body. The managers are regarded as unapproachable, and scornful of the small owner. As a rule the small stockholder has neither time nor ability to study these questions. He feels that the business will go on whether he remains a stockholder or not, and the easiest way, if he does not like the business, is to sell out. Probably he does so, and takes up some other worthy cause, such as distant missions, for which he is not anything like as responsible.

What Can Be Done

THE difficulties are not as great as they seem. The most soulless corporations are really made up of men. If a stockholder places facts clearly before the management with a certain insistence and persistence, he will get results. At

J. Hathaway Pope & Co.

50 Broad Street, New York City

first he will be told to sell his stock if he does not like conditions. But if he refuses to sell and shows that he means business, he will generally get results.

Charles M. Cabot, of Boston, a relatively small stockholder in the United States Steel Corporation, by persistence and resort to publicity, single-handed induced that greatest of all corporate monstrosities to make radical alterations in its treatment of labor. Indeed Elbert H. Gary, chairman of the company, met Mr. Cabot more than half way.

But the most striking example of what one stockholder can do is afforded by the accomplishment of Mrs. Joseph T. Bowen, of Chicago. A state investigation had disclosed the existence of much needless disease from dust and fumes among the workers in the Pullman Company shops. Goodness knows, this company had no excuse for not caring for its workers in the most scientific and humane way. Since 1875 the company has paid an annual dividend of less than 8 per cent. only once, and that was following a year in which an extra cash dividend of 30 per cent. was distributed. Since 1898 the company has paid stock dividends of 100 per cent. A man who owned 100 shares of this stock in 1898 and received \$800 a year dividends would now be the owner

of 240 shares, and would be getting \$1920 a year in dividends without having invested a single additional penny.

More than one-half of the company's \$100,000,000 of stock, upon all of which 8 per cent. is paid, is a dividend itself. In other words this company is exactly like the express companies in that its huge capital stock as well as its huge dividends largely represents not invested funds but profits. Moreover this concern nobly underpaid its porters for years, expecting the travelling public to make up the pay of these hard-working men in tips, and hoggishly charged as much for uncomfortable upper as for desired lower berths, until the efforts of Congressman Jim Mahan, whom so many of his smog fellow citizens in Minneapolis regard as an anarchist, put a stop to these practices.

Perhaps Mrs. Bowen felt the same way about it. At least she sent a personal investigator to the Pullman works, who reported, according to the *Survey*, that there were 800 accidents a month, that the company employed only one surgeon for part of his time, without a nurse or assistant and without the use of a company hospital. Moreover there was constant poisoning in the paint shops. Mrs. Bowen had a rather large hock of stock but even at that the officers were at

first rather skeptical. But when she firmly presented the facts the management showed a hearty willingness to improve conditions, and its chemist recommended a different form of lead paint which is much less injurious. Indeed the management began to show a great solicitude for its men, and their working conditions have grown steadily better.

POSSIBLY few investors have the time to take up such subjects, and few possess Mrs. Bowen's interest in charitable work. But there are none that cannot at least protest to the management if conditions warrant, or that cannot write to newspapers and magazines. Indeed there are few who cannot take the trouble to form local committees, demand information, and send a representative to annual meetings. One thing is sure, the handwriting is on the wall that society is sure in time to put a stop to careless absentee landlordism in corporate ownership. Investors will do well to forestall a demand from society that they assume responsibility for their property. Such a demand may come suddenly and violently, and a peaceful adjustment to changing conditions would be wiser.

The next two articles will deal with the different methods of securing to the stockholder his rights and privileges.

The Fifteen-Minute Newspaper

By GEORGE F. INGERSOLL

A PRINCETON graduate, now studying at Harvard, accused me of reading the newspapers too much. He says that professors at both universities have advised him to give no more than fifteen minutes each day to any newspaper. He does not read the Sunday editions now because he found that they took too much of his time.

"How much time do you spend reading newspapers?" he asked when he came out to visit my farm.

"Not less than an hour," I said. He held up his hands in horror, imitating, no doubt, the mannerisms of his favorite professor.

"Why not?" said I. "Remember, I am a farmer. The least of newspapers is to me a neighborly gossip bringing fresh tidings. A good newspaper is a genial companion, with an amazing fund of information, ill digested, perhaps, but available, and with a sense of humor not offensively broad. The better newspapers are friends one is glad to have in the house. They inform and stimulate; is it not so?"

"Yes, I suppose so," agreed the post-graduate student, hesitantly.

"Suppose! You know very well that you would not dismiss some newspapers in fifteen minutes. Frequently you can not do justice to one of them in less than an hour. To throw it aside in fifteen minutes would be to lock the front door in the face of a friend who was ringing the bell."

"That is what I used to think," said he.

"Used to think! Are you not aware," said I severely, "that Emerson described the *London Times* as a living index of the colonial British power? He discerned that 'no power in England is more felt, more feared, or more obeyed.' Isn't that sufficient indication of what a newspaper may be?"

"May be, yes; but such arrogance as the *London Times* assumed as the representative of the governing classes, would not be tolerated in this country."

"Then answer this question; it is a little subtle, but I expect you to see the point: Would you say that no one should spend more than fifteen minutes in a school or in a church?"

"Why, no! hardly!"

"Well, then, consider what Wordsworth said to Emerson: 'In America I wish to know not how many churches or schools, but what newspapers.'"

THE post-graduate student's eyes brightened. "That is very, very interesting!" he said; "but I don't regard that as the final word on the subject. What newspapers! might be an expression of contempt. At best it indicates the potential power of American newspapers and not their actual achievement. As Dudley said, 'it is a question whether gossip or the printin'-press has done more to illvate th' human race.'"

"That was a joke," I protested.

"So be it. Take this in your pipe and smoke it: Tolstoy never read newspapers, and considered them useless, and when they contain false news, even harmful. His attitude toward journalists was rather scornful, and he was indignant when any one claimed them even with third-rate authors. He considered that it is a misuse of the printing press to publish so much that is unnecessary, uninteresting, and worst of all inartistic."

I SCRATCHED my head. This was a tremendous indictment of newspapers and of me as a newspaper-reader. "Of course," said I, parrying, "I don't know much about Russian newspapers. But I do know that Tolstoy found fault with everything in the course of a long life. He was as ready to hang himself as he was

to hang a journalist. And I think it safe to say that this country would 'Go hang,' if it were not for the newspapers; just as it may go hang because of them."

"You are playing with words," cried the post-graduate student in philology.

"I am not! I want you to understand that you know nothing whatever about newspapers." I was getting angry. "You are prejudiced because you think newspapers are destroying the purity of English speech. Reporters, you say, misuse every other word in the dictionary. That may be true, it is true. But that is only a passing phase; the newspapers will find a remedy for their slovenly use of English. The big question is: Does the newspaper give expression to the best traits of its community? And I say that here and there it does."

"Here and there," agreed the post-graduate.

"More than that! The best newspaper in a community aims to represent and to serve that community."

"In so far as is compatible with the maximum amount of advertising?"

"In the advertising you will find the same honorable standards that you find in the news columns. People are coming to see that the newspaper selling adulterated editorial opinions will sell them adulterated merchandise. The label that brands the newspaper, brands its advertisements."

"Then it is a policy of enlightened selfishness that is changing the fifteen-minute newspaper into something better?"

"It is more than that, I believe, as you will see if you recall President Wilson's appeal to the newspapers of the country. Their response shows that they recognize their responsibilities, and responsibility sobers man and his institution."

What They Think of Us

Houston (Texas) Chronicle

All those who have been clamoring for war with Mexico, and have been indulging in severe criticism of the President of the United States because he has not sent the army into Mexico, ought to examine and ponder over a cartoon which can be found in a recent issue of HARPER'S WEEKLY.

The word "cartoon" does not very happily convey the idea sought to be expressed, because it usually suggests the idea of fun and humor, while in the picture suggested there is no suggestion of either.

On the contrary, it is profoundly solemn and impressive, and makes, in a most effective and expressive way, a forecast of what would have been, had the President yielded to the pressure of the interests and intervened in Mexico with the American army, and what will be if intervention ever comes about.

Savannah (Ga.) Press

HARPER'S WEEKLY is not content to let the back-biting and carping which goes on among those who accept Mr. Henry Lane Wilson's Mexican policy—instead of President Wilson's—go without a sharp rebuke now and again.

HARPER'S concludes that Major Gillette's and Mr. Henry Lane Wilson's lectures are doing much to increase the number who believe that President Wilson's refusal to acknowledge Huerta's title was a wise decision. This is so, we are convinced and we are doubly thankful for this reason that HARPER'S should see fit to advertise these two lectures by noticing their silly talk.

St. Paul (Minn.) Dispatch

Joe Cannon is ill and under the care of a trained nurse. The relapse is doubtless due to some unkind thing Norman Hapgood said about him in HARPER'S WEEKLY.

The Chicago Tribune

Within the cloistered precincts of HARPER'S WEEKLY, Mr. Norman Hapgood, resting the frontate shell of a many-cragged and cold-swept intellect upon an embattled desk, grantly slept and was at peace. Error crouched in a corner and licked its wounds, whipped for the day and thankful for the armistice granted while intellect dozed.

At such a moment the devout members of the staff saw and grasped an opportunity for the performance of a sacred duty. While Mr. Hapgood dozed they went respectfully but stealthily, like the Pirates of Penzance, with catlike tread into the composing-room, and with much whispered urgency, to make speed silently, had set and placed in the forms of the WEEKLY an article entitled "New Wine in Old Bottles"—an interview with "an elderly countrywoman living in the South," written by Corra Harris.

When Mr. Hapgood awoke he first scowled at Error, as is his habit, and Error whined and licked its wounds, fearing others. . . .

When the devout members of the staff returned from ten they found the editor lambasting Error with the barrel stave of eternal truth, and the howls of the wretched creature were as music to their ears.

NABISCO

Sugar Wafers

make an irresistible appeal to the palate. These bewitching desert confections are made for the joyful occasion, the social gathering, the feast.

ADORA—Another desert confection invariably popular with the hostess. These little wafers are pleasing to look upon, entrancing to the taste, whether served with desserts or eaten as a confection.

FESTINO—Their resemblance to an actual almond is most attractive. FESTINO conceals beneath the most delicate of shells an enticing sweetened, almond-flavored filling.

CHOCOLATE TOKENS—A desert confection. An unusually pleasing chocolate-covered sweet with a filling of creamy goodness.

The Postal Life
Employs no Agents

You Deal Directly
with the Company

Publicity

WE write the word in large letters as facts the good that publicity can do in insuring the advantages and benefits of the great institution of life insurance.

Most life-companies however, instead of doing the direct—of publicity, prefer to sit back and send out agents to represent them.

Some of these agents (representatives) they do almost anything in any business, for their commission, while concealing the business, disavow responsibility for what such agents say.

The policyholder, therefore, and the world of it, and pays the agent's commission, which would not happen if the company would estimate the agent and court the public through advertising.

The one American company that does require new policyholders wholly through publicity and that gives them the benefit of the agent's commission is the

Postal Life
Insurance
Company

POSTAL LIFE BUILDING
35 Nassau St., New York

No agent will be sent to visit you! The Postal Life does not employ them; by dealing direct, you get the benefit of the agent's commission!

Postal Life Insurance Company
WM. R. MALONE, President
35 NASSAU STREET NEW YORK

THE first year policyholders receive a guaranteed commission—dividend corresponding to what other companies pay their agents, less a moderate advertising charge.

This dividend ranges up to 40% of the premium on whole-life policies

In subsequent years policyholders receive a guaranteed commission of 7½%, and an office expense rebate of 2½%, making up the

Annual Dividend of 9½%
Guaranteed in the Policy

And in addition, the Postal pays, every year after the first, outstanding dividends that are earned by the Policy.

Write and find out the exact sum the Company will save you on any standard form of contract—Whole Life, Limited-Payment, Joint-Life or on a Monthly-Income Policy. Call at the office or write for full official information. Simply say: "Mail me insurance particulars as per advertisement in HARPER'S WEEKLY February 14."

In your letter be sure to give:

1. Your full name.
2. Your occupation.
3. The exact date of your birth.

FURTHERMORE, the Postal Life offers other substantial benefits that other companies do not, or can not give.

Among these are the right to deposit premiums, money and the policies of the life insurance company in the bank each year, if desired, to check incipient diseases.

The Company's Health Bureau also distributes by mail periodical bulletins containing timely information on health conservation.

This publicity for the company is in addition to the Company's advertisement in the leading magazines, some of which have been carried more or less exclusively for the Postal Life. During this period it has been demonstrated that publicity based on its agents' reports is devoid of value for policyholders.

Postal Life announcements go wherever the mails go. Their advertising reaches all parts of the United States to secure

Sound Protection at Low Net Cost

Strong Postal Points

First: Standard policy, \$10,000,000, paid monthly \$10,000,000. Second: \$10,000,000 paid monthly \$10,000,000. Third: Standard policy, \$10,000,000, paid monthly \$10,000,000. Fourth: Standard policy, \$10,000,000, paid monthly \$10,000,000. Fifth: Standard policy, \$10,000,000, paid monthly \$10,000,000. Sixth: Standard policy, \$10,000,000, paid monthly \$10,000,000. Seventh: Standard policy, \$10,000,000, paid monthly \$10,000,000. Eighth: Standard policy, \$10,000,000, paid monthly \$10,000,000. Ninth: Standard policy, \$10,000,000, paid monthly \$10,000,000. Tenth: Standard policy, \$10,000,000, paid monthly \$10,000,000.

Search! Opportunity under every age, interest and degree of education. Make good! Satisfaction. Fifth: High standard of service in the selection of risks.

Sixth: Policyholder's right to see, question and receive full explanation each year, if desired.

Gleams

By EDWIN BJÖRKMAN

WHETHER it will or no, the present is fated to act as an intermediary between the past and the future—which means that the future can not be wholly unlike the past.

The art of the moment grows commonly out of a more distant past by reaction against the past lying just behind.

We know by sad experience that the novel with a purpose is an abomination mostly, and as often a failure. We have learned, too, that the novel without a purpose is rarely worth the second reading which is supposed to constitute the test of good literature. It is now up to us to bring these seemingly incompatible facts into some sort of harmony.

To be at its best, poetry should imitate life's refusal to explain itself.

The poet of the future will have to win his laurels by bringing out the symbolic significance of common words.

Over the main entrance of the Royal Theater at Copenhagen these words are graven: "Not for amusement only." It means that poetry, to earn its title, must give something above and beyond the thoughtless pleasure of the passing moment. But this something is not instruction in the narrower sense, as has so often been mistakenly asserted. No, it is something still higher and richer and more far-reaching—something that we can only designate as *inspiration*.

The poet often becomes a prophet because his fancy dares to proclaim as true what the thinker must regard as merely possible.

The "morality" of an artist's work depends largely on his recognition of it as his individual contribution to the sum of mankind's common store of culture—a contribution which the race exacts from all its members, high or humble, in one form or another, at the penalty of extinction and oblivion.

AMONG many things that condition the greatness of an artist, two seem fundamental: first, that his art be a true expression of his own spiritual experience; and secondly, that his experience be typical of what has befallen, or may befall, some vast human group. If the former condition be not fulfilled, an artist's work is likely to be lacking in validity; in the absence of the second condition, its validity, though unquestioned, will be of no special importance.

In our efforts to decide whether the appeal of poets and artists and thinkers should be to the many or to the few, we should remember that the greatest man will always be he who makes the highest possible truth clear to the greatest possible number.

If you are looking for a safe investment, turn not to things, but to life itself: to the very act of living. Things will perish, but experience will not. You own nothing but what has actually become a part of yourself. Not even time itself has any power over it as long as you remain yourself.

From the lips of life this lesson is heard in never-ceasing iteration: "Mind the next step!" Its corollary is that plans are not made, but grow.

THE NEGRO has scarcely been touched as a subject for art, hardly ever with truth as we see him; but in this little New York newsboy, a full-blooded black, son of a Virginia slave woman, Mr. Henri found the type that reflects our problem. Mr. Henri's portraits are well known, of remarkable range and invigorating individualism. He has long been classed a leader in the group of our American "moderns." Next week we will publish one of his Irish studies.

George Washington

CELEBRATING the heroic cheers and strengths. The man who, in the last ocean tragedy, took off his life belt, gave it to a woman, and cheerfully sank with the ship, has done more for mankind than almost any thousand men will do alive.

All over the United States we are about to recall a man whose memory inspires the boys and girls of his country, and the men and women also. Did Byrnes exaggerate when he put Washington first among the great? Did Thackeray exaggerate when he spoke of the resignation of Washington as the most splendid spectacle ever witnessed?—the resignation of "yonder hero who sheathes his sword after a life of spotless honor, a purity unapproached, a courage indomitable, and a consummate victory." Thackeray was a satirist sometimes, and sometimes a sentimentalist, but when he described the life and character of Washington, he was neither:—"to have lofty aims, to lead a pure life, to keep your honor virgin; to have the esteem of your fellow citizens, and the love of your fireside; to bear good fortune meekly; to suffer evil with constancy; and through evil and good to maintain truth always."

Washington is not loved as Lincoln is loved. He was impersonal and aloof; he had no humor and little imagination. To love him deeply, we must rise above the standards of ordinary fellowship. We must be capable of loving moral magnificence. Of course the warrior is attractive; the youth of twenty-one, going on diplomatic mission to the Indians through the trackless wilderness; the young fighter at Braddock's defeat with two horses shot under him and four bullets through his coat; the indignant leader swearing at the Battle of Monmouth and riding out alone toward the enemy's lines. All that is drama, but to show such courage fortunately there are many. Washington, of whom there is but one, is the man whose integrity was on so high a plane that thirteen jealous little nations trusted him; reconciled their differences around him; cheered their hearts in dark days with him; followed him to victory against the power of a nation whose drum beat was heard around the world; were enabled by him, when conflicting doctrines were being fought out, to reach an understanding and to found a government; followed him through eight years of creative, initial politics; looked to him for counsel after his retirement; and, grown into one big nation, have ever since drawn guidance and encouragement from his example. He was not a brilliant general or a brilliant statesman. He is the most magnificent character to which, in the long list of statesmen, the pride

of any country can point. And happily he is ours. The traditional Washington has nothing of the soil about him, but, as Woodrow Wilson has put it, "the real Washington was as thoroughly an American as Jackson or Lincoln."

War and Freedom

HIS intense admiration of Washington was a natural part of Byron's nature, which understood liberty and revered it everywhere, whether ancient or modern:

"Leonidas and Washington

Whose every battle-field is holy ground,

Which breathes of nations saved, not worlds undone."

Byron hated the mere conqueror. He hated the habit the human race has of paying homage to mere bloodshed. Another of our Americans drew from him admiration second only to that he bestowed upon Washington:

"While Franklin's quiet memory climbs to heaven,

Calming the lightning which he thence hath riven,

Or drawing from the no less kindled earth

Freedom and peace to that which boasts his birth."

Byron fought for liberty himself, and he never admired strength which was not combined with honesty and humanity. To warriors of the type of William the Conqueror, Leonidas and Washington he paid tribute, as to other good men, and had he lived in Lincoln's day, he would have put him among the few; but the usual aggressive type of conqueror cast no glamour on a mind that thought brilliantly and without reference to the superstitions of the community.

Needless Alarm

MANY critics are troubled by the trust bills now before Congress on the ground that if you define what is illegal you raise the assumption that acts not so forbidden are permissible. This is surely looking for trouble where none need exist. The common law deals with negligence. If a statute in a particular state says that it is the duty of every person crossing a railroad track at certain points to "Stop, Look and Listen," he is still liable for negligence if, for example, he drives a horse on the wrong side of the road.

A Practical Remark

A CERTAIN American, after laying down general psychological principles, said: "But all that is philosophy and has no practical use except to a very practical mind." Does that sound too subtle to be of much use? Well, it was said by an extremely successful business man whose originality has been a part of his success.

Torreon

THIS Mexican city will probably become famous as the most notable battle-ground of the Mexican Revolution. It was held by a Federal garrison until Villa stormed and captured it, thus cutting off Chihuahua City from its communication with Mexico City and the Federal government. Villa made a feint against Chihuahua and then marched suddenly northward and captured Juarez. Before he could march again to Chihuahua City the Federal army hiked across the desert, northeast to Ojinaga, most of it escaping across the border. With Villa occupied with Ojinaga, Torreon was recaptured by the Federals, and all the reinforcements Huerta could spare have been sent thither. The third capture of Torreon will mark the beginning of the end of the Huerta régime. The defeat of the defending army will strip the capital city of its defences. The lifting of the embargo on arms, so that the revolutionists can get possession of the cannon and machine guns already purchased and stored on the American side, will hasten the collapse of the Huerta government. Mexico is a big country and military operations are slowly conducted, but it was less than a year ago that Madero was deposed and murdered and the third phase of the Revolution under Carranza began. Carranza himself has finished establishing the civil government in the state of Sinaloa and will make Chihuahua his capital, while Villa pushes southward, toward Mexico City. There seems to be no truth in the surmise that Villa is disloyal to Carranza or that he has ambitions for the presidency. His invariable habit of victory has given a terror to his name that can only be compared with the psychological effect that the name of Stonewall Jackson produced in our Civil War. It ought not to be long after the anniversary of Madero's death that the tyranny of Huerta will have crumbled.

Please Take it Easy

IN good-humored sorrow, the Chicago *Evening Post* cries out against our statement that Omar was not a drunkard. Proclaiming its interest in temperance, it protests, nevertheless, that reform can be carried too far back. It narrates our explanation that oriental imagery is misleading to the Western mind and adds:

"We must save some illusions. Banish the Omar of the wine-cup and what assurance have we that your reforming instinct will be satisfied?"

It regrets the insatiate zeal that would rob its fond memories of rollicking old worthies consuming endless brews in convivial competition; it defies the scholars we cited, and calls them busy-bodies. Our sympathy for the *Post* in its sadness is sincere, but we have a simpler remedy. If it will read what Fitzgerald himself wrote about the meaning of the poem, it may be slightly cheered. There are three views of Omar. One, that wine in his vocabulary represented morality, or as the critics of this school are bold enough to put it, wine stood for God, much as the Song of Solomon is interpreted. With this view Fitzgerald makes short work. We are left then with two other views, neither of which is prohibition.

One is that Omar was an absolute drunkard, as indicated to some literal Western minds by some of his metaphors, and as expressed in "Omar the Tentmaker;" and the other, that he liked gayety and the present world, and took wine as he did other pleasures, although taking them in such measure as enabled him to shine in science and philosophy. Could not the *Post* remain cheerful with gayety and only moderate drinking? Its words seem to indicate that a great man must get under the table in order to satisfy that genial newspaper's notions of relaxation. But times change and also legend exaggerates. If Omar had been a real drunkard, he would scarcely have associated, as he does in the most famous of Fitzgerald's stanzas, the jug of wine with simple food and love expressed in song.

One View of Wealth

OUR readers may recall that our old friend Seneca (Roman philosopher, not the Iroquois chief) was somewhat criticized in his time for being rich. In Book VII of his minor essays occurs a letter to Gallio in answer to these criticisms. "No matter how much wealth one may have," he argues, "it will still be an honorable possession on certain conditions. He will have something to boast of if he throws his house open, lets all his countrymen come among his property and says: 'If anyone recognizes here anything belonging to him, let him take it.' What a great man, how excellently rich he will be if after this speech he possesses as much as he had before." This test made by a Roman who was a contemporary of Christ is susceptible of application today.

Who Is the Modern Hero?

OUR age is hungry for heroes. For a couple of decades we have had the financial magnate, the captain of industry, the directive brain who works combinations. Any other sort of person was always measured by him. He could buy up most of them and put them to work on a salary. If they wrote good prose, he bids them in and sets them to building advertisements. If they have a knack with the rhymes, he tethers them and then turns them loose with Sunny Jim, Phoebe Snow, and Spotless Town. If they have unction, and that ruddy gift known as good-fellowship, and a friendly feeling for all the neighbors, which once made a man a successful evangelist, or congressman, they are now sent out into all the world to sell goods or to obtain advertising space for magazines.

Our preachers are still sincere and hard-working and in individual service are ministering comfort and benefit to their communities. But they haven't the tone of authority. They do not seem to come any longer with something so excellent that it charms indifferent men, and something so passionate, out of an encompassing presence, that it breaks down guilt. Their conviction is still with them, but it is given to a world that is more or less indifferent. The same conviction cannot be maintained indefinitely under an effect that is diminishing.

Those big merchants themselves who hire almost all the rest of us, are realizing that

heretofore they have not safeguarded the life and happiness of their clerks quite well enough; that they have littered the community with invalids from their shops and mills; that their product has not always been good enough to warrant trust; that their trains have collided too often. Even Mr. Ryan praises Woodrow Wilson. The people will follow the men who know where they are going; whether they be men of science, clergymen, business men or politicians.

On Reading Dostoieffsky

HE is not the voice of the all-of-life. There are sun-warmed stretches which he has never seen. There is a quiet comfort of the middle class, a sober decent endurance of the not-too-poor. Already, many live in comfort. And the sorry ones live in less discomfort than in former times. Slowly, very slowly, the light of misery is lifting.

But he recalls us to certain aspects of life which we like to evade. He is a voice, perhaps the greatest voice in recent literature, of the tortured. His world is horrid, but it is the world of many wretched thousands in every great community. To that tune their life must go. Trapped by their own weakness, they can find no way out till they die.

With all our long coming, this is as far as we have come—that we have left very many behind. We can become complacent about our progress only by shutting out from our sight the kitchen drudge and the crippled janitor, and the girl-child who walks our streets by night. It is possible to escape Dostoieffsky by saying life isn't all like that. But to those submerged it is like that.

City Boys

FOR adults, the city is likely to be a development. It stimulates and feeds the mind, it brings out our possibilities. For the young, it probably is nearly always a disadvantage. The young need to be thrown on their own resources; to get into their own natures; to work out the problems of life from within. In the city, children are fed on sights and sounds all the time. Nobody is strong who depends on externals. There is a general idea, although we know no statistics, that usually great men are born in the country and developed in the city.

Rhode Island Grammar

A PERSON named Young, running a department in the *Journal* of Providence, R. I., attacks an editorial in HARPER'S WEEKLY, and most solemnly alleges that there is no grammatical resemblance whatever between the construction "You are a man who do" used by us, and the construction "You are the sybd wbo do" used by Macaulay, and other constructions like that of Macaulay used by Carlyle and Longfellow. Would the proprietor of the Providence *Journal* be willing to reveal the name of the grammar which he keeps in the office for the guidance of his literary critics? Would he even go further and reveal the places in which he discovers his critics, and the qualifications he demands of them?

The Law's Delay

HAMLET, who put the law's delay among the worst evils he could think of in human life, can scarcely have had experience comparable in actual time elapsed to what we see now every day, although it must be admitted that in his time in Denmark or in Shakespeare's time in England, the result did not as often end in justice. Some people think that Wilbur Wright was worried into his final sickness by the endless chain of litigation. Orville Wright has just had his patent claims finally vindicated after being fought all the way up to the Circuit Court of Appeals. It is hard enough that anybody should have his life interfered with by a needlessly obstructive legal procedure, but when that happens to one of the truly great men of the time it becomes all the clearer that the whole machinery of law needs reform.

An Address to Mabel

LET us talk the matter over, Miss Taliaferro. You are an extremely attractive young woman, and in this country and in England attractive young women are so much in demand for the stage that they are rapidly turned into stars. Your young sister Edith is also lovely to look upon. Probably your fame helped her to become a star sooner than she could have done otherwise, even with her beauty. She of course knows little about the difficult art of expression. After starring separately, you two girls have been fortunate enough to obtain a comedy in which there are two excellent parts and a popular and sympathetic theme. It seems, therefore, an appropriate moment to lecture you, since it will make little if any difference in your success.

The first principle of acting is that whatever art you use you conceal. Use all the artifice required to make your effect, but *seem* natural. You remember, of course, that scene in "Tom Jones," in which Partridge thinks poorly of David Garrick in Hamlet because he acted as anyone would act who had seen a ghost. There are many Partridges, but lasting fame is not to be gained from them. There are two schools of acting, and reputation may be acquired in either. The one of which Elleanor Duse is the most distinguished member may be called the *Drah* School. The one in which Sarah Bernhardt and Salvini are at the top is the Flamboyant. But in whichever school she plays, the great actress must be capable of speaking with ease, of seeming to drop a word in a low tone and yet have it reach the top-most gallery. You and your sister, keenly as we feel your charm, conduct yourselves as if it were a difficult thing to speak words upon the stage, and had to be done as a horse gathers himself to get over a high fence. There is in your company a man named Richard Sterling who speaks with ease and naturalness; he makes his words pleasant things to listen to, but he projects them clearly to the back of the house. Now your training is not your fault. Proper training is difficult to acquire in this country. Nevertheless, that training you ought to acquire by any possible means while you are still young. Read over again the advice of Hamlet to the players, and see how much of his advice you are carrying out.

"If any rule, it is wrong to put up to the cop and his club, questions we won't or can't answer ourselves"

Police! Police!

By LINCOLN STEFFENS

Illustrated by Herb Roth

WHILE the brand-new Mayor of old New York was looking around for a police commissioner, I amused myself asking everybody I met a couple of foolish questions about it.

"Why doesn't anybody want that job?"

This I asked at a moment when it was reported that Mayor Mitchell couldn't get anybody to take it, and the amazing, encouraging answer was:

"Oh, it's an impossible job."

And then, again, when we all heard that there was a raft of candidates, some of them good strong men, I asked:

"Why does everybody want that job?"

And the answer good strong men made was, as before:

"Because it's an impossible job."

THE police job is indeed impossible, and one of the most hopeful signs visible in New York of progress in public intelligence is the recognition of that solid rock fact. It's a step toward making the job possible. For it's a step toward reform from the outside. And that's where police reform must begin: in public opinion; in the citizen; in us. We—you and I, have to rid ourselves of the silly superstition that there is some form of organization or some one good, strong man that will give us an honest, efficient police department. We shall never have that until our requirements of the police are made possible. They are not possible now.

"Come on up to City Hall and hear me commit perjury," said a cynical man who was about to be sworn in as chief of police. And when I laughed, he explained, very soberly:

"That's right," he said. "I'm a competent man. I know the business. So I know when I take a solemn oath to enforce the laws and ordinances,—I know that I

can't do it. The laws I'm bound to enforce are not enforceable."

I'm not a New Yorker, but I am not writing of New York alone. I learned the police business in New York, so I know it is true there. I assisted in the exposures which brought on the Lexow investigation; I was at police headquarters all through the convulsions of that mountain; and I watched from that vantage-point the Roosevelt Board's honest, able effort to enforce the law, saw it anger public opinion, defeat the whole reform administration of Mayor Strong and cankle the reelection of Tammany Hall. But since then I have studied seventeen cities. And standing upon the firm foundation of this experience I make this firm assertion: All police departments, like all cities, are essentially alike. Perjury is required in them all and not only from the chief, but from every member of every uniformed force. Honesty is difficult, dangerous, unprofitable and almost impossible. And the fault lies in public opinion. We require evil-doing.

Public morals demand police immorality.

The prerequisite for an honest, efficient police department, therefore, is that "honest, intelligent people" shall become honest and intelligent.

THIS may sound hopeless, but it is not. What the men in the street said about the impossibility of the job shows that it is not; it shows it both ways. It shows that we are facing the truth—we, the people; and it shows that the truth draws courage. Petty souls are all wrong about the truth. They call it "pessimism"; "destructive criticism"; "discouraging." Pessimism may discourage the weak; yes, but it challenges, it attracts the strong. I believe that a complete, detailed description of the dangers and difficulties of the police function would bring to Mr. Mitchell or any other earnest

mayor half-a-dozen of the ablest men in this country. Big men aren't looking for easy jobs; they are out for hard jobs. There's a divinity in them which seeks miracles to perform.

But miracles don't happen. And Mr. Mitchell's strong men would have to go at the police job from the outside in some such rational, roundabout way, as I am going to indicate. If they should tackle it from the inside, relying upon their own main strength and courage, they couldn't manage it. They would, by their very integrity and nerve, injure themselves and defeat the Mayor at the polls. Hypocrisy and educated ignorance won't stand for an honest, efficient police force. That has been proven many, many times in many, many cities. Hence I say:

The police problem is the problem of hypocrisy and cultivated ignorance.

"THERE ought to be a law against that!" Ever hear anybody say that? Ever say it yourself? It's the beginning of the trouble. I heard a man say it in a Western town a year or so ago. He had just been stabbed with a hat-pin—accidentally, of course—and the lady (so to speak) apologized. But he was no lady's man; he was a power in the land of his fathers, and he "had a law passed" against the ladies' hat-pins. He couldn't deal with it; his sex couldn't, and he knew no way to get women to deal with it; so he and his men-kind put up to the police the problem involved in the fine point of this passing fashion!

It's too much faith in the law that brings the law into contempt.

There is too much faith in force. You see that in Labor. The good citizen is horrified during strikes at the scenes he sees of flying brickbats, beating up of scabs and violence in general. He doesn't stop to think that a police force is force, and that when he calls in the police to arrest the growth of strikes or hat-pins, he is acting upon the very same impulse that prompts strikers to throw bricks, plant a stick of dynamite or picket an unfair mill. Labor has no police force at its beck and call, and capital has. That's all that makes the difference there. Everybody believes in force, and the police force is merely the nicest, cleanest force to use. So the cleanest, nicest people use the police whenever they feel like clothing somebody or something, like the lady and the hat-pin or the striker and his strike.

The police couldn't enforce the ordinance against the hat-pins—except while public opinion was sharp on that point; and it's had police work to club strikers until public opinion has been got back of the club. And that's my point.

There's another, better force at hand than the police force: the power of public opinion.

The police are asked to do a thousand things which could be better done by the newspapers, by the pulpits, by ourselves, by right thinking and talking, by custom. When Theodore Roosevelt set out honestly to "enforce the laws because they were the laws," his critics threw up to him every day laws and ordinances as absurd as the hat-pin ordinance. "Enforce those," they said, and they made that policy ridiculous. Also, however, they made "the law" ridiculous, by showing how that sacred institution has an attic stuffed full of old, forgotten, idiotic relics of man's faith in the force of law. For the kind of laws I refer to now are, like the ordinance against hat-pins, legislation which was alive at a moment in the past when they expressed a public opinion the police could have enforced, because public opinion backed them. But having served their time, these laws are not repealed. They remain on the books, and from chief of police to patrolman, every member of the department is solemnly sworn to enforce them today. No wonder the police come to have a contempt for laws and—for an oath. And they have.

A policeman is believable, except when under oath.

I wish the courts knew that as well as we police reporters know it, but I'd rather have the public know it—and deal with the causes. And one of the causes

of police perjury, corruption and general inefficiency is the existence of dead and impossible laws. There ought to be "a law passed" to repeal such laws, to fight the enactment of more of them, and more generally to resist and torn backward the strange but human tendency to legislate, legislate, legislate. Which is what I'd have the new police commissioner of New York do.

A Reform Chief of Police should become a lobbyist.

FIRST, of course, he should organize his department, and he should do it so completely that he can leave it. While he is doing this, he should talk. That's against the rules, I know. It is regarded as political suicide to take the public into your confidence and tell the truth about police matters. But that's a rule of the old, corrupt and (consequent) reform days. It wouldn't have been wise of Big Chief Devery to tell the people what he was doing. Nor was it good politics for Roosevelt to be so honest as he was when he openly and volubly enforced the liquor laws. Mayor Gaynor was a wise man, and he may have been wise when he decided not to tell us that his Police Commissioner was ordered not to attempt to enforce certain laws. But now—now that the public is beginning to say that the police job is impossible,—it may be wise now to meet this honest public opinion half-way; accept it, trust it and cultivate it. It may not, of course. I'm really thinking more of the public than I am of the new police chief. That goes on forever, and the new chief of police is only one man. What's one in 90,000,000? His political death would be only a small, temporary loss. At any rate I would bravely suggest to him the interesting experiment of telling the people the truth.

Let him say right out plain that his job is impossible, that the books are all cluttered up with unenforceable laws. Show it in detail, and list those laws. Then, when he thinks the public see it so, go to Albany and, in the lobby there, with this ripe and ready public opinion behind him, let him labor diligently (though honestly) to repeal, repeal, repeal. It would be tremendously interesting to the rest of us to see how honest we, the public, are. And maybe it would work.

Maybe honesty is the best police policy.

But I'd go farther. I mean I'd have some other man go farther. If this policy of repending head and petty laws got any moral response, the police hero should take up the more salient, positively immoral laws that express our morality. Take, as an example, the most difficult of all to deal with: the law (or laws) against prostitution.

Prostitution is absolutely forbidden in all American cities.

THINK of it! Why not forbid tuberculosis? They're both diseases; and except in individual cases taken early and treated with light and fresh air, both are incurable. But both are preventable. They are social diseases, traceable to economic and social conditions for which society is responsible. And by society I mean you and me. Why not treat the conditions which produce the evil of prostitution? Well, I know why. We don't know how. By "we" I mean, this time, you and the other fellow. I think I know how to prevent both tuberculosis and prostitution, but I'll not tell, because that is constructive criticism—and it is the custom of the race to kill or ridicule or ignore constructive critics. But it would be interesting to have Mayor Mitchell's police commissioner try it. The public might kill him, but only politically—and that is the natural end for a police commissioner. So I would suggest that this (or some other) brave, able and honest chief of police tell the people that the laws against prostitution are unenforceable; that they, the people, must first abolish poverty and easy money; but that meanwhile they should change the laws upon the subject so as to save him and his force from perjury, remove the irresistible temptation to be dishonest—and make the laws enforceable. I don't say this would work, but it would be an education for the educated and a moral bath for the moral; and—and it would prepare the way for constructive criticism.

It would compel the public mind to look at the facts and consider what it really wishes its police to do.

BUT let's take an easier reform: the liquor business. The Raines law stands on the New York Law Books now, a monument to hypocrisy and educated ignorance. There's a piece of legislation which was one of the mice born out of the convulsions of the Lexow mountain. It charges a high fee for a license, and so tempts or compels liquor dealers to offer cheap, bad stuff to drink. And it requires, in return for certain profitable privileges, that saloons shall run as adjuncts "hotels" with at least ten rooms. So most of our saloons have hotel rooms on the side, which they are sorely tempted to let out for purposes of prostitution; and, despite their well-known virtue, some saloon-keepers yield to the temptation.

Why do we make vice pay so well, and virtue so unprofitable?

I think it's because we all believe, like the McNamarras, is dynamite, in force—in the police force. It's because, like the I. W. W.'s, we are all for "direct action." The proper way to deal with the liquor problem is to look around us scientifically and see who drink too much and who don't. It might appear then that the excessively rich and the excessively poor and the excessively bored drink too much, and that well-to-do people who are busily interested in their day's work don't. That might suggest to a very superficial mind that the cure for the drink evil is, like the diseases of prostitution and tuberculosis, is some sense economic. But I'll not go down that path. The truth might appear at the end of it—and the truth puts a reporter in a hole. I'll do what the dear public does. I'll go at it by direct action—logically, with common sense. It's an evil, isn't it? No doubt of that. What is the thing to do to an evil? Hit it on the head or get the police to. I'll put the liquor problem up to the police.

Let the new police chief of New York go to Albany with a club and get that Raines law repealed, demanding instead

a law that can be enforced without enforcing prostitution, bribery and political action by the liquor interest.

This isn't easy; no, but I didn't say it was. I said it was impossible—this, and the rest. But I am pleading, not for "morality," but for morality; not for law and order, but for public education, especially of the "educated"; and not by me, but by a brave and able and honest chief of police. Taking his life in my hands, I urge him to tell the public, already prepared for it, the truth about police corruption.

The police everywhere are corrupted by the privilege they enjoy of selling the privilege to break the law.

AND they have to let some laws be broken because some laws can't be enforced anyhow. All laws are unenforceable which express, not the settled, general, living will of the people, but only the good impulse of the few "better people." The people's representatives are afraid not to pass such laws, and the people don't know or mind; they think they are good, too. But when those laws are enforced, the people won't stand it. Even the better people are disgusted. So some had people—some liquor dealers, some gamblers, some prostitutes—are to be exempt from the enforcement of the law. Which ones? The police have to decide. They have to discriminate. On what basis will they discriminate? The money basis, of course. And I say "of course," because I know that human nature can't resist for long the amount of money the masters and mistresses of vice offer in cash for the privilege of breaking the law.

The police power of discrimination is the reasonable enforcement of unnatural, immoral laws in New York City, is worth more than five millions of dollars a year.

The "impossibility" of the police problem lies in that sentence, and so the possibility of it is in this one:

The people, not the police—public opinion, not force—must decide what to do about our social evils.

At any rate, it is wrong to put up to the cop and his club questions we won't or can't answer ourselves.

"There ought to be a law against that"

One Love

By MARY AUSTIN

Second in the Series on Mate-Love and Monogamy

Illustrated by H. T. Dunn

IN the previous article, Mrs. Austin treated the subject of mate-love, distinguishing real love from false by the desire on the part of the lover for permanence, publicity and exclusiveness. In this article she deals with monogamy as the natural expression of love

THE first inducement to the monogamous mating habit is the persistent struggle of nature to maintain the balance of population. For every man a woman. So that for the patriarch to have segregated two or more wives, implies in the long run an artificial decimation of males by war or the accidents of the chase. Nature, when she makes a species, fixes its mating habit; it comes ready made with the species mark and the range of variation within the species is not wide enough to enable man, by artificial restraints, very greatly to override it. Breeders, in all the centuries, have not been able to make doves except in pairs, and elephants resist the effort to force their inclination with what, among humans, amounts to herosim. One anticipates that the mating habit of man, augmented by imagination and the aesthetic consciousness, will show a greater range of adaptation; but if, as the balance of sexes seems to indicate, the original impulse is by pairs, there must easily be a point beyond which the variation can not be pushed without proving hurtful to the species. It is not a question whether some form of promiscuity may not be present in society as persistently as the trace of iron in spring water; the real test is, when some form of it is entertained in a determining degree, what does it do to the host? Fortunately the facts by which such damage may be demonstrated lie too close to the surface to make it necessary to recount them.

What polygamy, which all nations seem to have picked up in the course of their wars, does to the nations that have not yet discarded it, may be learned at the high school. What the polygamous habit, persisting long after the theory of it is discredited by society, has to do with existing evils, has yet to be discussed. I but pause here to turn back its earliest pages to protest against the efforts to stifle the secret word love whispers to the soul, by deductions from the mating habits of far called tribes, torn shreds of nations, feeble and few, degenerate or arrested in development by the very habits adduced.

AS well undertake to prescribe the training of the healthy human child by the behavior of the forty year old idiot.

More striking and dramatic even than the evidences of struggle toward its ultimate mark, are the public and immediate reactions which mate-love sets up against any infringement of its involuntariness. I refer to sex jealousy and that movement which drives apart the participants in a relation which has no sanction other than mere bodily appetite; the impulse which turns a man's hand upon the poor puppet of his desires, that makes, long before Church and State were there to take a hand in it, an avoidance and a derision of the prostitute.

Jealousy is the psychic reaction by

which the naturalness of the exclusive relation makes itself evident in any breach. It is the subconscious conviction of the extra-participation of both members of a pair in the union which the mating act implies; the unpremeditated, unexperienced, immediate witness to the bond which by that act comes into being. It is as impetuous as the impulse of the man attacked to strike back, and probably as self-protective. It arises naturally, without any consideration of the ultimate gain in our Brother the Beast. Mixed with the grief of loss and the bitterness of betrayal, it becomes the most rending of our human tragedies, and informs even the behavior of those who seek to deny it by substituting withdrawal for the ancient, instinctive movement of reprisal.

Under all our social repression it is still a great motive force shaping our marriage institutions.

A growing modern dislike for the forms under which jealousy has expressed itself, is partly responsible for our neglect of it as a true symptom of mate-love. We shrink from the torment of this most instinctive of natural protests. Few dare trust themselves to the rack of such a reality to learn, as through its revelations one must, love's final word.

It is probable that some of the present-day complaisance over violations of marital obligations, arises out of the realization that infidelity is so frequently not infidelity to a true marriage bond, but to an arrangement in which the item of "support" has shifted the ground from passion to property.

NOT to have experienced jealousy is not necessarily to have risen superior to it. It is sometimes due to never having truly mated.

Of that other internal test of the right relation, I mean the reaction of disgust, of cruelty even, no proper study can be made from the outside as I must make it. Traces of the disposition of man to hold cheap the woman who has met him outside the tribal ban, lie deep in all our literature; it is testified to by many who have no notion what it proves of them. It is the root of much of the ignominy heaped against the prostitute, against whom, even among tribes that show definite symptoms of degeneracy, it is possible still to find the ribald jest and the deriding finger. One needs only to read the confessions of men great enough to confess freely, to know that there are relations going on among us, of which the immediate reaction is revolt. What we have here is probably the advice of Life subconsciously aware of what is not good for it, such a health preserving movement as leads to the rejection of food with which eye and intelligence find no fault. The pity of it is that the point should be so persistently missed, that the social mark should be set not so much against the act as against the victim of it.

It has been pointed out that the habit of remaining together had made its appearance among the mating pairs some time before the reproductive sequence had established itself as a part of common knowledge. But even in the face of that certainty, there arose very early the need of justifying human passion superiorly to itself. It can be found among peoples where you can not find to lay with it a scrap of metal or a post-herd; everywhere—Greek, Bantu, Bushman—they turn to religion for the sanction of their love, for the occasion and extenuation of their excesses, drawing a veil of mystic rites over their unspeakable performances. And everywhere across the tribes sounds the high note of deliberate continence in the interests of spiritual achievement; the effort to attain the super-human by denying the act which is its overt sign.

Before men fully clothed themselves they had arrived at the use of abstinence as a means of raising the plane of personal power.

"But in spite of it all," Valda insisted, "all the evidence which Nature seems to produce in favor of guaranteed relations as the best means of accomplishing her purpose, there are still—other things."

"Polygamy and the social evil," I countered.

"All kinds of irregular relations; there must be reasons for them, too."

"Perfectly sound ones; most of them deriving from the unavoidable tendency of social ventures not in harmony with the original intention to turn out to the lowering of the social plane. You can fool God some of the time, but not for everlasting. The chief reason why polygamy has been dropped by the dominant races, is that it does not 'work.'"

From the point in which it becomes fixed in the national consciousness, that nation goes forward lamely, like a man with one side paralyzed. For polygamy is not the least vicious of the daughters of the dragon's teeth. It followed naturally on the decimations of war, and had the original sanction of necessity. It was bolstered by the primitive obligation of women to bear and rear and to keep on bearing though they died of it. Nature, who never meant that the mother-instrument should go dishonored, so arranged the rhythm of the mating impulse that the function rose to the demand upon it; for Nature is both exigent and expedient. It served its term, but even now, as the last word on polygamy as an institution is being said by the dominant races to the sons of the harem, the polygamous habit, relegated to a not too intrusive privacy, still hampers our sexual evolution.

Valda caught at that,—"If we admitted that it was still going on, though aside and in corners, wouldn't it be on the whole more honest to bring it out into the light and live with it openly? To which I might have replied that it was

merely our careless human habit, first to banish the incumbering propensity below stairs, and then to the back door of the social establishment where it lingered too long, no doubt, breeding pestilence, before it was finally dumped with the waste of civilization. That I didn't so figure our public disapprobation was due to the pains I was at to define for her the difference between irregularities which are the reflexes of incompetent methods of mating, and those which are reduced, under pressure, to an exchange of commodities. I meant completely to show her where she stood, free from any stone-throwing of mine, as one to whom mate-love had happened outside the legal bond, as it so pitifully can happen among our well-meant misadjustments.

JUST as the nations have dropped off polygamy, so they are in the process of eliminating prostitution, not because it interferes with any religious or traditional taboo, but on the plain ground that it is hurtful to our social health. The trouble with all vice investigations is that we are a Business People. The selling point is for most of us the point of moral departure. We feel that we have measured the enormity of the situation when we know how many dollars are turned over in the trade in a particular precinct.

But the truth is that almost anybody will sell if the pinch be hard enough and the price at hand. And always there is somebody in the condition of having to sell whether or no.

It is the buyers who proceed solely from their own initiative.

What then, over and above the momentary gratification, do they buy? What is the consideration which leads them, when the number of willing and necessitous sellers fails, to seduce and drug and abduct in order that there may be more of such forced sales on the market? Undoubtedly the great number of women who go down into the Pit find their occasion in poverty, in definite relievable needs of knowledge and comfort and entertainment; but the fact that violence must be resorted to in order to keep up the supply even in cities, where the pinch of poverty is most severe, puts economic pressure out of the question as the primary cause of prostitution. It is a major factor merely in determining which women shall be prostitutes: the lonely, the overworked, the starved of beauty and affection, the ignorant and the too tenderly trusting, they fall or are dragged into the trap of the ever-gaping demand. And this demand is very simple, I think, the demand for sex relations unaccompanied by moral responsibility.

"But love," Valda insisted in the shibboleths of the Reactionist, "should be free."

If it is Nature didn't make it so. Automatically the act of loving ties up with it those who love and the unborn.

No sooner do we begin upon it than we enter upon certainties of affecting the happiness of the one who loves with us and the potential third. It is so little free that we can neither go out of it nor into it on the mere invitation, nor abate, by saying so, one of the widening circles of its disaster. Whether for better or worse, love is irrevocably tied to its consequences.

The proof of this universal conscious hindering up of moral responsibility with an act, is to be found in the universal practice of paying something to get rid of it. The price of love that is sold is a money indemnity for the loyalty, tenderness

and care which by that payment are acknowledged to belong naturally with loving.

But in spite of all that men can do about it, the money paid does not pay; it merely scatters and shifts the accounting.

Two classes chiefly resort to the streets where love is sold: the young and unmarried, and those in whom marriage has failed to satisfy a demand felt to be rational. There are also some preternaturally vicious who shall be left where they belong, with the pathologist.

The difficulty of the young is an honest one, arising as it does in the circumstance that the mating propensity develops some years in advance of the time when it is thought wise or desirable to assume the complex responsibilities of marriage.

It is an ancient problem this, appearing as a matter of tribal consideration as early as the period of chipped flint. But for its persistence we have largely to thank the extraordinary lumpiness and inchoateness of modern education.

With the best intention in the world, we have no better plan than for youth to take all its book-learning in a lump, and then marriage and the rearing of a family lumped by itself, and, particularly in the case of women, fenced off from all other forms of experience.

Finally, only in middle life do the original pair, more or less warped and subdued by their long dislocation in the interest of special functions, become proper members of society. Thus the normal use of marriage is overbalanced by its being made to assume the aspect of a state, an occasion. Any readjustment which would make life and education of one continuous warp and woof, would greatly lessen the strain at this point. It is not marriage alone, but all the primary human processes, which suffer from our ranking of Trade and School and Empire as enterprises to live for rather than to live by.

THE remedy is one that society must move determinedly to seek not only in educative processes, but in readjustments of the industrial system.

"Yes?" said Valda McNath.

I recognized the rising infection as one that marked her as a member of that group called, and perhaps calling themselves, "The Intellectuals," who out of sessions of vast, inchoate talk, draw somehow the assurance that anything said of the industrial system is said on their side. It is an infection with nuances such as greet the introduction into the conversation of a choice scandal, though I don't know for what reason except that the present industrial situation is, in view of our moral pretensions, highly scandalous. My business, however, is with the personal conduct of male and female. I can tell where the economic pressure impinges on the private relation, at what point the struggle for existence disturbs the balance of sex, and how the intention of the Soul Maker is thwarted by atony accretions of industrial injustice. In so far as the demand for cheap, temporary substitutes for marriage is the result of industrial insufficiency, it is only to be cured by the resolution of the whole social disorder. But it is not necessary here to determine anything of the method by which industrial reorganization is to be effected, except that it is a mistake to tie up marriage with it.

The right to mate is a primary human right. It encloses in its resistant possibilities, not only the seed of the race

but the spark of Divinity, beauty, art, altruism, the knowledge of the fatherliness of God and the immanence of Power. The family is a more vital human arrangement than the factory. The industrial system, under whatever name, must reshape itself plastically about the right to love and to multiply.

The immediate predicament of society is that it is unable to provide opportunity for right marriage to vast hordes of men in standing armies. The adventurous trades, mining, bridging, building, are roaring full of the Free Companies of Industry, homeless, titleless. All the ways of work are clogged with shoals of mateless women. All the prows of progress are manned by fine souls too bent upon errands of the gods to stay for the wearing complications of the usual. Marriage, attempting to stretch itself from point to point of this disorder, parts upon occasions which begin to show too soon the edges of decay. Many of the phases of the Social Evil are but so many witnesses to inefficient industrial organization, and are due to disappear in a more intelligent readjustment.

BUT when all is said and done for those who buy light love because society takes no pains to afford them the one better thing, we have still to deal with those who demand from love the things it was never meant love should be called upon to pay.

Chief among its inducements is the opportunity the street provides for aptitudes held over from the time when combat was the major process of living: male vanity, suborned to the industrial routine; the dominant attitude, the spirit of the chase.

Over in the red light district man is the Hunter, the Mover of the Game. There he reenters the hereditary tract, releases his cramped and unexercised barbarisms, re-lives his little day. And for a long time he has fondly believed that the price he pays guarantees that nothing shall come out of it to trouble his soberer occupations. Nothing so disconcerts him as the light of modern research thrown on the things that, in spite of him, do come out of it and spread foul traces round his home.

It is not what society is going to find out about his favorite pastime that renders publicity objectionable, but what he isn't going to be able to avoid finding out about it himself. It is for us all to face, and force into the social consciousness, the recognition of the Spirit of the Chase as a prime factor in much that menaces the love-life of the community.

The element of contest, in modern mating, is a concession to the idea of struggle which became so early fixed in the man mind by the clash of the dominant males. In the hairy period of his evolution, winning a bride "off the old man" must have been the great adventure. Man continuing to demand the strategic encounter, the sweat of combat, the swelling of victory, demands them of woman in default of male relatives who would rather she'd marry than not.

In those dark ages of womanhood, women in order to win a little of their proper inheritance of security and cure, de-feminized themselves, made in the modern, and so opprobrious, term "men of themselves"—hunters and gamblers.

The red light district, in the last stand of the bunted woman. Here they supply on such compulsions as the industrial stupidity of the period metes out to them, the unsatisfying satisfaction of an

"She had found, I knew, the answer to all her questionings, the secret woe of all abandoned women"

statistic appetite. And this is what youth looks on in the process that is euphemistically referred to as "seeing life," bright with the dolphin colors of decay. For the business of women is not conquest nor pursuit, but reproduction and conservation.

PROBABLY the number of those who buy love because they can imagine nothing better for themselves is not so great as the number of those who could get nothing better in any case. What gives us the right to interfere is the final outcome to society.

It is against these two classes,—those who for social or industrial reasons are unable to mate properly and those who, mated or not, must still indulge a vestigial propensity,—that any proposition for the cure of the social evil must be directed. It will be a great gain to know that no woman must sell for bare sustenance, but it is important to remember that so long as the demand exists there will be some kind of a price found at which somebody will surrender. That society will, in time, dispose of the buying and selling of love just as it has rid itself of chattel slavery, I see no reason to doubt. It will have the more leisure then to deal with a growing class who take love without paying anything.

Within the last quarter-century we have come clearly to recognize and define a type of industrial parasite who taps the veins of profit without accounting or return, as the Money Grafters. More vicious and insidious even is the as yet untamed love-pirate, the grafter in the precious stuff of personality. There is a tendency always in the more sophisticated states to make of the finer phases of human intercourse an achievement and an end, and this is the beginning of desuetude.

But when we go further and make of love a mere enhancement of the passing

time, there ensues a condition compared to which the paid traffic of the street is an obvious and remediable evil. For this sort of love goes masquerading in the most endearing of the lighter phases, the chiffois, one might say, of grand passion. It assumes the bearing of a superior freedom. Its technique is admirable. And it does not pay anything.

TO the Love Grafters, money is as offensive a price as children or loyalty or long-suffering. Love—what is called love—for them exists at its perfectness only when most detached from all possible occasions for affecting anything; the more sterile the more desirable. Love for love's sake is the euphemism by which they hint the unassailable fact that love was not invented for love's sake but for Life's. They—*one* must continue with the inclusive pronoun because pirating of this sort is as likely to be an offense of one sex as the other—count that venture most successful which achieves the most complete inutilty. This, by the very nature of love, being a doubtful performance, the love-pirate preys usually on the wives of his neighbors or upon the young, on anybody not in a position to enforce against him the compulsion of self-abnegation. So doing, he arrives at the effect of there being no consequences by ignoring them.

THIS kind of grafting is beyond the jurisdiction of the police, but it marks the quality of the practitioner as descriptively as a rating in Bradstreet's. For when not actually the evidence of arrested development, this refined sort of promiscuity is the result of poverty of the imagination and spiritual indolence. Such as these love Love so long as it is easy; in short, they are of the stripe of the lovers of "easy money." Their mating

is after the manner of those savages who can count to five, but for a larger number can only count to five again on the other set of fingers.

Having counted the opening moves of invitation, the chase and surrender, they begin again with a new set of pawns the same infantile progressions, never aware that the real value of mate-love, the determining experience, lies just beyond the point of arrested development. For the best love is not given away; it is the purchase of self-abnegation.

THE moon was going down behind the pines, cold and jewel-bright. In the deep shadow of the hill by which the house was engulfed I could hear Valda crying. She had found, I knew, the answer to all her questionings, the secret woe of all abandoned women, an answer so world-old that if men had but stopped to hear it . . . but that sort of men never stop, they find grief of such proportions indelicate.

"He never paid!" she said; the knowledge wriled up in her readily . . . he had never paid to her sincerity the tribute of loyalty or understanding. She had clung to him at first striving to draw him back for the one self-forgetting act which would have marked his knowledge of her love as a thing higher than his pleasure. And he had not come back.

She was torn now by realizing that light love is light because it has no such knowledge. For Valda is a good woman, and under whatever social misadventure, good women are distinguishable from bad by just this faculty for knowing that the proper end of loving is not personal but racial; it is the Soul-Maker's most precious commodity. What she cried for there in the summer dark was not the loss of her lover, but of that oblivion which should be paid to Love as on an altar.

The next article deals with marriage as a means towards attaining true monogamy. Mrs. Austin explains where our present mating customs make for true love and where they impair its course. She criticizes our present marriage while defending a true permanent mating.

Primitive transportation. Alaskan prospector and pack dogs on the Valdez-Fairbanks wagon road

A Land of Promise

What the Passing of the Alaska Bill Would Mean to Business

IT was predicted that the vote on the construction and operation of railroads in Alaska by the government would be a test of Democratic progressiveness, though the fact that this was an Administration measure partly accounted for the majority in the Senate of 46 to 16 in its favor, not counting the pairs. It was to have been expected that Bradley, Brandegee, Burton, Clark of Wyoming, Dillingham, du Pont, Gallinger, Lodge, McCumber, Nelson, Root, Smith of Michigan, Stephenson, Sutherland and Weeks, of the standpat group, would be against the measure, while it was equally certain that such Democratic reactionaries as Bacon, Bankhead and Thornton would oppose it. But it was a surprise to note Hoke Smith, Shields and John Sharp Williams lining up with this group. Hoke Smith offered to vote for an appropriation of \$15,000,000 instead of the \$40,000,000 the bill carries, with the idea of building one road as an experiment, with later appropriations if the resulting development justified the initial expenditure. Shields came to the Senate from the Supreme Court of Tennessee and doubtless had constitutional misgivings. John Sharp Williams was frankly and fervently against this excursion into "State Socialism." The Progressive Republicans all voted for the measure.

ALASKA is vastly rich. First it was fisheries, then gold; then copper began to promise even more than gold; and finally the value of the coal fields was recognized. Other wealth may be

discovered at any time, for the possibilities are far vaster than thus far known. Only an infinitesimal part of the whole territory has been surveyed, and of the surveyed land, excepting for but a very small part, we have only superficial knowledge.

THE wealth of Alaska, with but slight exceptions, remains the property of the people of the United States, thanks in part to the foresight of Roosevelt and Garfield and Pinchot, and the vigilance and persistence of Glavin, but mainly on account of its inaccessibility and the difficulties and the cost of necessary development. The wealth is so great and the temptation so great to secure it, that it is found impossible to protect it from depredations. It seems as fatal in its allurements as the Rajah Diamond. The last years have been filled with the tales of violence and corruption which have attended the efforts of the Morgan-Guggenheim syndicate to secure for themselves the huge wealth of the territory.

Up to this time no way to protect any part of it has been found, except by withdrawing it from use. The people clamor for the use and for the development which is essential to its use. The people of the United States are entitled to begin to get the benefit of a reduction in the cost of living which will come from the utilization of Alaska's treasures; and the few people who have gone to Alaska are entitled to exercise to the full the opportunities which their own courage and self-sacrifice

ought to open to them. All the wealth of Alaska is of no use without development, and the first step in the development is an adequate system of transportation. They need railroads; and they will need much else in the way of public utilities. The demand is so great for these facilities, and so well founded, that the people are willing to pay for them, even the heavy price which will attend the furnishing of such facilities by the capitalists, because those, like the Morgan-Guggenheims, who put their money into Alaska are not strictly making investments, but are engaging in speculation. If investment, it is the investment of the pawnbroker, demanding, because of the risk and because of the necessities of the borrower, a return of one hundred per cent. or more.

DEVELOPMENT of transportation and other facilities by the capitalists would, in a way, seriously impair development; because to give them a return which would seem to them adequate would mean rates which would be oppressive to the people of Alaska, and would, in themselves, tend to retard development and the opening up of opportunities to the sturdy, courageous men who are willing to take up their residence in the territory. To preserve the territory it is essential that the capital required to furnish the facilities for development—that is, capital to supply the public utilities—should be furnished by the people of the United States, whose property the territory is, and in whose interests its resources should be primarily conserved.

Grain field at the Agricultural Experiment Station at Fairbanks, Alaska

"Only an infinitesimal part of the whole territory has been surveyed, and of the surveyed land, excepting but for a very small part, we have only superficial knowledge"

Railway and wharf at Cordova, Alaska

"All the wealth of Alaska is of no use without development, and the first step in the development is an adequate system of transportation. They need railroads, and they will need much more in the way of public utilities"

The Honor of the Army

By CHARLES JOHNSON POST

This is not a sentimental story. It is a plain, unvarnished report

IN those British days when men were drawn and quartered, burnt alive, or hanged from gibbets along the public highways for the most trivial offenses the laws for the government of the army were evolved. They were evolved to meet the necessities of war, and have been cherished as the administrative standards in times of peace. The dead hands of four hundred years ago have hallowed abuses that are nothing but memories in other fields of human thought.

Then the gentleman and officer was as far removed from the common soldier as the human from the animal. From those days there has come down to the Army of today neither arms, standards of equipment, tactics, nor men of like condition; the only things that have been preserved are the customs and abuses as archaic as the feeble black powder and the stone cannon ball. Under these formulas that are cherished by the Army of today, men, young men, are tossed into prison degradation—sent for crimes, but for infractions of rules and discipline determined by a brutal age when the common soldiers of the Army were recruited riffraff and the products of the press-gang.

CONTRAST the American soldier of today with then, or even with the German or Russian conscript. Our Army Regulations prohibit the enlistment of a recruit unless he can read and write. In 1912, for example, by means of seductive literature and idyllic lithographs, nearly one hundred and fifty thousand young Americans applied for enlistment—and but twenty-six thousand were accepted. They were picked men.

Those picked recruits knew only of the blithesome lithographs of the recruiting service; but they did not know when they had taken the oath to "bear true faith and allegiance to the United States of America and to serve them honestly and faithfully" that they had stepped through a doorway into the past. Not a man knew that he had become the subject of a system that measures not one justice for him and another for the officer; an archaic

system under which favoritism and stupidity and viciousness and a fair intent all shuffle along in an indistinguishable mass protected by an ancient routine.

Offenses may be important or trivial at the unchecked whim of an officer; adolescent ignorance may persecute ability, unrestrained and unpunished; a single act may be—and is—split into its component parts and each part become a separately punishable offense; and soldiers can be—and are—convicted of synonyms and punished with prison sentences therefore.

THE discipline of our Army—and the very life of an army is its discipline—is operated under a rambling, shambling collection of laws and regulations that defy coherent analysis or logical operation, but which shield incompetence and abuse.

Minor infractions are dragged out into pompous proceedings; the high-priced time of officers is devoted to the solemn weighing of the niceties of the dancing class; persecution is protected and the victim punished; even to escape from the medical malpractice of an army surgeon is punished; while in the cases of desertion—a prodigious and interesting class in itself—the ordinary decencies of common sense and of humanity are continually outraged.

The general court-martial, which is the military machinery for the administration of Army law and its judicial processes, is a travesty on civilized justice which shelters favoritism and oppression. We will take up the instances shortly, and they can speak for themselves.

But first, for a moment, let us look at a few Army facts in their broadest aspects.

Alluring recruiting advertising gives, with apparent frankness, facts and figures that appeal to any working man. And no man attempts to escape from pleasant surroundings where fair dealing and justice prevail; never at least, when such an escape renders him liable to imprisonment as a felon. Here we are through we may be able to show why sane men

take this risk in order to escape from further service in the Army.

In the year 1911 the proportion of men who deserted compared to the number of men enlisted was seven per cent.

For the year of 1912 it was nine per cent.

And for the year 1913 it was over seventeen per cent.

In the four years from 1908, up to and including 1912, more than four thousand five hundred soldiers were recaptured and convicted as felons. They were dishonorably discharged, their American citizenship forfeited, prohibited thereby from ever holding a government office, condemned until the expiration of their term to shuffle round with a cropped head and prison clothes, and then, with their life ahead of them—for they are young men—to face or to live down the reputation of a convict.

In the five years ending with 1913, seventeen thousand men have taken the chance of capture and two years in a felon's cell, rather than serve longer in the United States Army.

The discipline of the Army is maintained by means of the court-martial. For minor infractions there is a summary court of one officer, or a garrison or regimental court-martial of three officers. They try trivial matters and are very limited in their function. But the general court-martial is the serious court. It is a court of original and final jurisdiction. No case can come to it as an appeal, nor can any of its decisions or sentences be appealed to a higher court. It is absolute, supreme and final.

IT can try any offense from a dirty rifle to murder. It is responsible to no one for its acts. The only relief from any verdict or any sentence is by an appeal to mercy. Whatever flagrant wrong may have been committed, it is an uncertain charity alone, not justice—which can reach it. A court-martial can, and does, condone crimes and outrages in officers that saves them from justice; it can, and does, keep open-seasons and even illegal sentences upon enlisted men from which only the accident of charity or mercy can save him.

This general court-martial consists of any number of officers from five to thirteen. They are judge and jury; a bare majority determines their verdict, and their sentence and their vote is pledged to perpetual secrecy. To inflict the death penalty, only a two-thirds majority is necessary.

IN addition to this court there is an officer, the judge-advocate, whose duty it is to direct the prosecution. And at the same time, this officer, under the Army system, is charged with the duty of guarding the rights of the prisoner—for the "accused is not of right entitled to counsel."

At a court-martial last September at Fort Porter, New York, a soldier was being tried for wasting ammunition on a skirmish run at target practice. He was liable to imprisonment as a felon; it is a serious offense. The soldier was explaining on the stand that so many orders were shouted at him that he became confused as to the firing orders and fumbled the cartridges in loading. "I got it all out of my head then," he explained.

"Got what out of your head, the cartridges?" retorted the officer who was acting as judge-advocate.

Of course standards of humor vary.

A soldier on trial before a court-martial has no right to counsel. Purely as a matter of courtesy and special privilege he is permitted to a free choice, nominally at least, of an officer to "defend" him. But the defending officer is carefully restricted. He is, according to the Army Regulations—and they have all the force of law—to "guard the interests of the prisoner by all honorable and legitimate means known to the law, so far as they are not inconsistent with military relations." The italics are mine.

Then the Army Regulations define what these military relations must be, thus: "...respect to superiors will not be confined to obedience on duty, but will be extended on all occasions"; and "deliberations or discussions among military men conveying praise or censure... are prohibited."

An officer, in other words, permitted only by suzerainty to act as counsel for an accused soldier, dares not touch on oppression, incompetence, abuse of power or wanton provocation; he

DO HEREBY ACKNOWLEDGE to have voluntarily enlisted this twentieth day of January, 1914, as a soldier in the Army of the United States of America, for the period of seven years, unless sooner discharged by proper authority, said enlistment to be in active service and in the Army Reserve for the periods and under the conditions prescribed by law; And do also agree to accept from the United States such bounty, pay, rations, and clothing as are or may be established by law. And I do solemnly swear (or affirm) that I will bear true faith and allegiance to the United States of America; that I will serve them honestly and faithfully against all their enemies whomsoever; and that I will obey the orders of the President of the United States, and the orders of the officers appointed over me, according to the Rules and Articles of War.

This is the Enlistment Contract of the Army

Nowhere does it indicate any special inducement or right to a man with a trade. All recruits enlist alike and sign this contract. No enlisted soldier with a trade is guaranteed in any "special inducement" set forth so alluringly in the Army handbill reproduced below.

dares not make a rational defense if it sullies, however justly, the holy Brahmin caste. Bear in mind that I am not speaking of merely minor breaches of Army rules, but of serious offenses for which a court-martial may, by a bare majority, send a man to a convict's cell in a federal prison for a term of years.

This may account for the many cases of even less than perfunctory defense, and the many in which there is not a whisper raised for the prisoner.

THIS is the court-martial, the instrument for administering justice in the Army. Yet it goes beyond mere justice and claims for itself even higher standards of conduct. This is what a brigadier-general, an authority in such Army matters, has to say of it:

"... it should also be borne in mind that they (courts-martial) are in a special sense courts of honor, whose object is the maintenance of a high standard of discipline in the Army; and "only courts composed of military officers can have that knowledge of the standard of discipline and honor in the Army which would enable them to weigh correctly acts impairing it, and courts-martial, in maintaining this standard, may properly be said to be courts of honor."

Now let us see it in the light of a few of its operations.

A private soldier "did wilfully appropriate and apply to his own use" the sum of \$27 Philippine currency—somewhere around \$14 of our money. The court-martial found him guilty, gave him a dishonorable discharge, forfeiting all pay and allowances due him, and ordered him to be confined in prison at hard labor

An Army Handbill

This is an absolute and deliberate misrepresentation. No "special inducements" are given to men with a trade. They sign exactly the same army enlistment contract as men without trades and have no additional rights by virtue of their trade. The Post-Office would issue a fraud order against any private corporation that lured employees under such false statements.

JAMES MONTGOMERY FLAGG

In Our Army

"... it is a conservative estimate that we pay per effective rifleman between two and five times as much as in a first-class power on the continent of Europe."

HENRY L. STIMSON—From the report of the Secretary of War, 1911.

THE ATTITUDE

By JAMES MO

THE OFFICER

HENRY FLAGG

In the French Army

"... in no other country where conscription is the basis of service can there be found the same degree of camaraderie as in this immense body of Republican soldiers. No army of France ever equaled in preparation, readiness and efficiency that of today."

GENERAL EDWARD F. WINDLOW.

Twelfth Infantry, United States Army

Out of a strength of 824 soldiers in this regiment during the past year 67 men deserted—about 1 man in every 12

for one year. Then another soldier who had already served two enlistments with a rating of "Excellent"—and those who are familiar with the Army know what a high record of service that means—was tempted and fell. He took \$160 in various amounts while stationed at Bedloe's Island, New York Bay. The court-martial found him guilty, forfeited his pay and allowances then due, dishonorably discharged him and ordered him to be confined in prison at hard labor for three years.

THESE were enlisted men. Now comes an officer.

Captain Augustus H. Bishop, First Infantry, was convicted by a court-martial of officers of embezzling and appropriating to his own use \$135.14. This was the "company fund," a trust fund of which he was the custodian for the benefit of the soldiers in his company.

And for this embezzlement and criminal breach of trust he was merely dismissed from the Army, by the brother officers of the court-martial. For the common soldier, prison; for the officer who robbed the humble trust fund of his own soldiers, the loss of his job!

Sometimes a court-martial is even ignorant of its own rules. One prominent rule is that a military convict who is tried and convicted again of some offense or breach of prison discipline can only be imprisoned for an additional sentence. He cannot be sentenced to solitary confinement or bread-and-water.

Adolph Durbeck was a deserter from the Coast Artillery who had surrendered himself to the Army authorities and received dishonorable discharge, forfeiture of pay and allowances due him, and one year in prison at hard labor. One year in prison was regarded as a lenient sentence; yet while in prison Durbeck refused to do his work—just plain prison insubor-

dination. He was haled before a court-martial and charged with "conduct to the prejudice of good order and military discipline." There is a fine irony in the fact that a soldier is tried by the same charges as a convict.

At any rate he was convicted and sentenced to imprisonment for one year more, "the first seven days of each month to be in solitary confinement and on bread-and-water diet." This is a direct violation of the military laws.

A Lieutenant in the Coast Artillery became very drunk in a public hotel and while in uniform. To this he pleaded guilty and was sentenced to be reprimanded. He was charged furthermore

scandalous invasion of private rights, is not conduct unbecoming an officer and a gentleman.

It would be interesting to know how far an officer and a gentleman may go when drunk—or sober, for that matter—before the Army would cease to regard him as a gentleman.

Let it be thought that this is mere "muckraking," and that out of ignorance I am charging windmills, let us see what some others, officers in the Army, have to say about these court-martials.

Captain Samuel W. Widdifield, 10th Infantry, was charged with conduct to the prejudice of good order and military discipline in that he retained \$30, the wages of a private soldier, for a long time, about ten months, without turning it in to the government—the man having been absent without leave, or deserted. This officer also was charged with having given a duplicate set of pay vouchers for his own pay to two different persons. The court-martial acquitted him.

And this is what the military reviewing authorities said of this court:

"In the foregoing case of Captain Samuel W. Widdifield, 10th Infantry, a careful study of the record fails to disclose the process of reasoning by which the court arrived at its verdict." The evidence is scathingly analyzed, and then comes this: "On the record as it stands the reviewing authority must express his emphatic disapproval of the apparent view of the court that the giving of a duplicate set of pay vouchers is not a violation of the 62nd Article of War." That is the Article which has to do with "conduct to the prejudice of good order and military discipline."

Private John Doe, a soldier in the 11th Cavalry, was accused of writing this queer, incoherent letter to his mother, in which he threatened his troop commander:

Some Desertions In the Army of the United States During the Past Year

From the:

3rd Infantry.....	8.16%
6th Infantry.....	9.09%
9th Infantry.....	10. %
4th Field Artillery.....	15.30%
81st Infantry.....	16.87%

with "conduct unbecoming an officer and a gentleman" in that while so drunk he had entered a private automobile and did fail to leave it when requested, thereby necessitating his forcible removal therefrom. To this he pleaded "Guilty."

And the court-martial found him "not guilty."

Therefore this court-martial—a "court of honor"—has solemnly declared that for an officer to be drunk in uniform in a public place, together with such a

Fifth United States Cavalry

This regiment had a roster of 774 enlisted men last year. Fifty-three of them deserted—about 1 in every 14

*The Corps of Engineers, United States Army
During the past year 108 men deserted from this organization out of its strength of 1649 men*

"...you been tell me all these months mother to poison them all and kill them and the way, I will do it too. I am going to ask the troop commander who is a ——— and I could kill him and you know mother that is what you told me to do for him. I got the poison stuff you sent to do it bid all right. Mother dont you squal to no body about the poison, burn this letter."

HE was tried not only for writing this trash but for then denying that he wrote it—two separate offenses. Ordinarily in civil life a man would be examined by an insanity expert if he had written such a document. He had counsel, nominal counsel, anyway; and he pleaded guilty. Thereupon he was sentenced by the court to be dishonorably discharged, forfeiting all pay and allowances due, and to be imprisoned at hard labor for two years.

And this court was reviewed in the following language:

"In the foregoing case, it is apparent from an examination of the letter in question that the threatening words alleged to have been written by the accused were written in a different ink, at a different time and by a different hand from those of the balance of the letter, and nearly all of the forged words were added to the bottom and top and back of the pages written by the accused. Leaving out the lines forming the base of the charges the letter is complete in itself, without one item upon which a finding of guilt could be warranted."

And then read over again that delightful phrase that "Only courts composed of military officers can have that knowledge of the standard of discipline and honor in the Army which would enable them to weigh correctly acts impugning it."

In sixty thousand post-offices Tom and

Dick and Harry and Bill are looking at the pleasant scenes in the recruiting lithographs. Each year in over one hundred thousand homes there is an American family debating whether Tommy or Dicky or Billy shall put on the uniform of Uncle Sam. So it is, at the very least, interesting to know what this "discipline" is to which he has volunteered. For once in, he cannot escape except at the risk of a felon's degradation.

The ordinary mind can conceive of no more serious military offense, or one fraught with greater consequences, than that of a sentinel being asleep on post, drunk when on guard, or quitting his

(Continued)

From the:	
12th Cavalry.....	10. 6%
28th Infantry.....	10. 6%
6th Field Artillery.....	11. 3%
2nd Cavalry.....	16. 43%
20th Infantry.....	18. 74%

Of these the 12th Cavalry and the 28th Infantry appeared conspicuously in 1912 as furnishing two troops and two companies, respectively, that had among the highest percentage of desertions in all the Army.

post without being properly relieved. The fate of nations may hang on the vigilance of a sentinel. The Articles of War so recognize sleeping on sentry, and it may be punished with death. Drunkenness on guard or quitting it are regarded more leniently, for some strange reason. For such the military law has limited the punishment to a maximum of six months at hard labor as a gari-

son prisoner and in addition a fine of \$60. This, then, is the very maximum of punishment for the most serious breach of military efficiency and discipline.

Case after case has come before courts-martial of sleeping sentinels and the punishment comes with unvarying regularity: Six months' hard labor and sixty dollars fine. It is a proper severity—there can be, in the nature of the offense, no possible reason for the modification of the sentence, that is if you believe in fines. It is only by some interesting comparisons that this sentence becomes illuminating as to Army discipline.

And that same military law prescribes that behaving himself with disrespect to his commanding officer—at any time and under any circumstances, be either or both of them drunk or sober—is also punishable with six months' hard labor and a \$60 fine. To be snippy to an officer is quite as heinous as sleeping on post or deserting one's guard.

Private James H ——— of Battery E, 6th Field Artillery, was convicted by a court-martial of having been absent one evening from the 11 o'clock inspection in barracks. Also, eighteen months before, in order that he could enlist without having his parents' consent, he had stated that he was over 21 years of age. For these two acts he was dishonorably discharged (by that act his American citizenship was forfeited) all pay and allowances due him were forfeited, and he was imprisoned for six months at hard labor.

FOR these acts, trivial in themselves, he was punished with greater severity than if he had been drunk as a sentry with a garrison under his care.

Our Army is continually demanding of the people of the United States more money and more men. In the next instalment Mr. Post continues in this analysis of an undemocratic attitude that is still cherished from the feudal days of baron and serf. He presents illustrations drawn from official Army records of abuse of power and injustice to enlisted soldiers from which there is no appeal.

Thirtieth United States Cavalry

Out of 865 of the 13th Cavalry last year 54 of them deserted. The year before Troop F of this organization had one of the highest records for desertion in the Army, 10.81%; and in troop E 9.84% men deserted

Ann Seaburne

Musical Comedy Today

THE literary output of prima donnas has of late become so prolific that one hesitates to add anything to it. Romantic love and personal beauty, suffrage and socialism, philosophy, art, and literature have all been so thoroughly covered by the stars of the American stage that it seems presumption on my part to attempt to add anything to this delightful literature. My only excuse for breaking into print at the present time is to call attention to the legitimacy of an art that has, perhaps not unjustly, been neglected and scorned for a long time by the intelligent American theater-goer.

I mean the art of musical comedy—call it operetta, comic opera, light opera or whatever you choose. In the American theater it has degenerated into the "musical show." For one, I am firmly convinced that the renaissance of musical comedy is at hand. The *Comic Spirit* to which George Meredith paid so glowing a tribute expresses itself in music quite as brilliantly as in the other arts. This is a truth that is but little recognized. It has become the general belief that popular or light music must mean bad music. Yet one may point out innumerable and spontaneous expressions of the *Comic Spirit* in music, many of which are to be found in the field of light opera.

THE satire in the recent compositions of Erik Satie have directed attention to what has perhaps fallaciously been called the "new decadence" in music. These musical jokes have also recalled to some of the more discerning critics

the ironic and witty piano compositions created more than half a century ago by Rossini. In his "Album pour les enfants adolescents," Rossini was wittyest from the musical point of view. He also composed another album for "shrewd children" which was filled with delightful fun and sardonic humor. One of the waltzes even bore the title "Castor Oil."

BUT one need not go back even to Rossini to find glorious expressions of the *Comic Spirit* in terms of music. One thinks almost immediately of Liza Lehmann's "Nonsense Songs from 'Alice in Wonderland'" and her delightful "Precautionary Tales for Children," in which we find expressed in a subtle manner the bizarre humor of Hilaire Belloc's verse. "The Vicar of Wakefield," her attempt into the field of popular musical comedy, was not preeminently successful, but it was a step in the right direction. In the same field we should place some of the brilliant achievements of our American composer, John Carpenter, whose "Improving Songs for Anxious Children" are the embodiment out only of a whimsical humor but of a subtle understanding of child psychology as well.

To find the beginning of what I may call legitimate musical comedy, one should go back to the days of Molière. In its construction and appeal, surely "*Le Bourgeois Gentilhomme*" can be compared only to the modern musical comedy. The music for it, consisting for the most part of dances, was composed by Lully, perhaps the most distinguished composer of the Louis XIV period. Other early examples of musical comedy have come down to us as nothing less than classics, notably

Swinburne

Christie Macdonald

of course the imperishable "Barber of Seville."

AS for the expression of the Comic Spirit in the purest sense in the musical comedy of our own day, it is not necessary to hark back even to the operas of Gilbert and Sullivan to find a justification of this genre. Even if only as a sort of *jeu d'esprit*, the great composers of nearly every country have tried the composition of what we ought to call, to be logical and consistent, musical comedy. Even Puccini's "La Bohème" is in a certain sense musical comedy. Wolf-Ferrari's "Le Donne Curiose," "Il Segreto di Susanna," and "L'Amore Medico" are frankly so. Surely in the large sense, we must consider Strauss' "Rosenkavalier" as musical comedy. Even so gloomy and revolutionary a figure in music as the Russian composer Moussorgsky displayed a wonderful sense of humor in his unfinished musical comedy "Le Mariage," which was inspired by and based on one of Gogol's comedies. Among the French works which are in reality legitimate musical comedies is "Il était une bergère" by Marcel Lattès composed to the libretto of André Rivière.

BUT to come closer to the facts—to consider the truly popular musical comedy. Is it absolutely hopeless? Can we unhesitatingly indict it as without artistic possibilities for composer, producer, librettist, or singer? Perhaps I am a most prejudiced observer, but it seems to me that legitimate musical comedy is one of the most fruitful fields today for each of these specialists. W. S. Gilbert suggested the possibilities of the light opera for the social satirist. Men

like Arthur Wimperis, and others of the London Gaiety group, have lately been doing very creditable work along the same line. In the slightly known musical comedy, "Our Little Cinderella," there is a good deal of delightful satire on the British aristocracy, both in the book and in the music.

In America some comic operas and musical comedies have been produced that we ought in no way to be ashamed of. Both musically and lyrically we need not be ashamed of many of Victor Herbert's works, particularly musical comedies like "Babes in Toyland" and "Mlle. Modiste." Personally I believe that "The Madcap Duchess" marks a turning point toward a new art of musical comedy. The success of such a fantasy with music as "Prunella," the reaction from the blatantly realistic in every form of theatrical art, seems to indicate such a renaissance.

LET me add a word concerning the possibilities in musical comedy for the producer of the Reinhardt or Craig type. Musical comedy today is surely based on color and movement as well as upon music and comedy. Is there any other type of theatrical production that is so rich in possibilities for the judicious and artistic selection of colors, for the creation of amazing color schemes and costumes, or for the arrangement of beautiful and expressive movement? Surely the marvelous effect of the Russian ballet is based upon some such art as this. In our popular musical comedies such an art would become closer home; it would be less feverishly exotic, though no less alive or less lacking in variety.

TRAFFIC IN SOULS

Terbulo's life !!

Marianne the Superannuated

By EDITH ORR

Illustrated by May Wilson Preston

ON a crisp morning in November, that time of year when the life of the theater is strong, vigorous and full of confidence, Mr. Warner came into the box-office of one of his New York theaters to have a word or two with the ticket man. Warner himself was strong, vigorous and full of confidence, for things were going his way: he wore his high hat a bit to one side on his close-cropped gray hair; and he thoughtfully blew the smoke from an excellent cigar. A crease in his smooth brow betrayed some trifling dissatisfaction floating on the surface of a broad and general content.

The ticket man was distracted a moment from conference with his chief by a fragment of the impalpable world outside.

"Will you be kind enough to give me the present address of Marianne Fortescue?" asked a timid voice.

"Not playing here," returned the ticket man shortly.

"She's a famous actress," continued the voice.

"Never heard of her," snapped the ticket man.

"Mr. Warner used to be her manager," persisted the voice.

"What's that?" asked Warner of the ticket man.

"Country guy wants the address of a lady named Marianne Fortescue," translated the ticket man contemptuously out of the corner of his mouth.

"Madison Avenue," said Warner unexpectedly; and scribbled an address on one of his own cards. "Here, give him that."

The card passed from the hand of Warner to the hand of the ticket man and thence to a hand outside of the window. The voice muttered "Thank you," and another voice wanted two aisle seats in row E for Monday evening.

Warner tipped his hat a little further back, remembered that he had forgotten what he came in for, rubbed his brow, walked out of the box-office and took the lift for his own sanctum.

"Marianne Fortescue!" he kept repeating to himself.

There was a sorcery in that name. It carried Warner back to the days when his own hair was long, raven-black and stringy instead of close-cropped and gray, when the world stopped above Fourteenth Street, and the theaters on Broadway could be counted on one hand and part of the other; when there were Historic Luminaries and Queens of the Stage; when Marianne Fortescue, young, blithe and beautiful, had been serenaded outside the Palmer House in Chicago and had her carriage drawn home by gallant young bloods in Cincinnati—that was after a performance of "Meg Merrilies" when that bright and beautiful young creature had made herself into an ugly old witch to harrow the hearts of her adores.

"Hm!" said Warner. "Hm!"

HE did not say to himself that it was a strange world, but he felt that it was. Here was Marianne Fortescue, forgotten, living over on Madison Avenue, and here was he, in his prime, prosperous,—at the very height of his power.

Warner's reveries sat very oddly upon him; and in his office he was obliged to throw

it off altogether; for one of his most recent stars was there in waiting to interrupt him, a young lady of scant twenty-five, blonde, blooming and full of a grievance.

Miss Gordon pouted and frowned as she returned Warner's good morning. Her grievance was a certain Mrs. Barnes, who, as the star's younger sister in Warner's latest production, had been indiscreet enough to look younger and prettier than Miss Gordon herself. She had been reproved by being promoted to the rôle of the star's grandmother.

"How was Barnes last night?" asked Warner, divining the grievance.

Miss Gordon was not of the generation of Marianne Fortescue. Her answer was: "Rotten." She deplored further that Mrs. Barnes was no more like an old woman than she, Miss Gordon, herself was, that Mrs. Barnes remembered to limp for about one minute in each act, and that if Warner couldn't find some one who could really put it over, she was done.

"Hm!" said Warner thoughtfully, "Hm!" and absent-mindedly reached for the receiver, the sign to those that knew him that decision was already made and some change impending. He took the receiver from its hook, conveyed it half-way to his ear, then paused and put it back.

Warner, who had by no means taken to retrospection and self-analysis as he grew modern with the age, could not for his life have told why it was impossible for him to address Marianne Fortescue over the telephone. He never had been in the way of telephoning to Marianne; special messengers were the thing in her day. Perhaps he had a nervous fear of hearing her voice; perhaps he dreaded what she might say to him. Perhaps he felt a little shame that he had not laid eyes on her for so many years; perhaps he was subtle enough to feel a little shame for the perversities of circumstance. . . .

At any rate, he rang for his stenographer and dictated a plain, old-fashioned letter.

MARIANNE FORTESCUE in the flesh was sitting in her little drawing-room over near Madison Square. It seemed to her that she had been sitting there for two or three lifetimes.

It was a square, flat sort of inclosure, Marianne's drawing-room, and very crowded. Tables, glasses, desks and walnut chiffonniers splashed like waves against the unresisting walls and broke higher up into a fine spray of little mirrors, prints and photographs. Everywhere there were photographs. You never saw quite so many photographs in so small a space. They were all of celebrities, stage-people in chignons and hoop-skirts, in flowing beards and peg-top trousers, a bit dim of eye since paper will fade, but still erect and proud of bearing. The gentlemen stood with their left hands on backs of chairs, the ladies leaned with folded arms on vine-covered props, or trusted their opulent persons to the support of frail parasols. There were Romeos, Ophelias, Rosalinds, Lady Teasles, Eccleeses, Panglosses, Dundrearies, Ravenswoods, Topics and Pearls of Savoy, Hazel Kirks, Kit Carrsons, Melnottes, and Rielidias. Across their waists and knees, or above their heads, ran inscriptions to the effect that they were gifts to

their "dear pupil" or "dear friend" or dear something or other, Marianne Fortescue.

Marianne sat near one of the flat and unimaginative windows, just where she could get an uninterrupted view of the series of little backyards belonging to houses fronting on the next street. It was getting on toward four of an autumn afternoon, and the mass of houses without assisted in throwing a shadow on Miss Fortescue's face; but even under that kindly shade she looked rather more than middle-aged. Her hair was partly gray, and partly not, and somehow suggested either a former natural auburn or a dalliance with henna. She was dressed in black; not the black that the season dictated, but a characterless, nondescript black, that is black merely because it lacks the courage to be anything else. Her face, beautiful when the world knew it, was now a dull, unattractive waste, marked by a pair of startlingly heavy eyebrows and a look of petulance and settled discontent.

Marianne Fortescue, the ex-Queen of the American Stage, was engaged in darning her own stockings.

SHE did not have to darn her own stockings. The shrivelled little woman who sat on the other side of the mahogany table reminded Miss Fortescue that she did not. She said in a plaintive voice that "what was she there for but to darn stockings?" From the tone of her voice you would have imagined that the bread and butter was being taken out of her mouth by Miss Fortescue's obstinate attention to her own wardrobe; which was wholly misleading, for Miss Fortescue provided her cousin and companion with at least as much bread and butter as she enjoyed herself, regardless of stockings.

In answer Miss Fortescue replied shortly that she enjoyed doing it. There was little enough to kill time with, Heaven knew.

The shrivelled little woman, whose name was Mrs. Green, retreated rebuffed. She looked slyly at her companion, wrinkling her forehead and blinking her eyes as if to get courage to attack a new line of thought.

She began again. "Annie," said she, "do you remember what day this is?"

Annie didn't remember, nor care to remember.

"It was just thirty years ago today that you made your debut on Broadway in 'Broken Hearts.'"

"Did I?" Miss Fortescue viciously cut off an end of darning cotton.

"And just twelve years ago—it always seemed so strange to me, their happening the same day of the same month—Murray died."

The portrait of the man of genius who had "made" Miss Fortescue hung just above the level of Mrs. Green's sharp little eyes. It had been painted in the seventies, just after they were married, and, unlike the photographs, stared out into the room, still brilliant and commanding. Mrs. Green glanced up at it with a mixture of reverence and fascinated curiosity, and was impressively silent, thus giving Miss Fortescue time to go over in her discontented and turbu-

least mind, with appropriate bitterness, all that had come and gone since that portrait was painted. Mrs. Green was very clever at this sort of thing.

"Hadh't you even thought of it, Marianne?" Mrs. Green's plaintive tone accused poor Marianne of an incredible lack of sensibility.

Miss Fortescue staunchly refused to let her emotions be worked on. "No, I hadn't, and what's more I don't intend to begin. What good would it do an old woman like me to sit here moaning and sighing about the days when every one was crazy over her? Those things are all

confidence in these inner thoughts, knew very well when thoughts were going on.

"I'm dead and gone, and I mean to stay so," repeated Miss Fortescue with dull impressiveness. She brought it out as if it were a virtuous resolution that reflected great credit upon her.

Now Miss Fortescue and Mrs. Green were not assaulting each other with allusions and professions of faith apropos of life in general. That is not the feminine idea. Mrs. Green was groping along a dim passage that led into a plain discussion of a plain matter, and Marianne was blocking the way. Warner's letter had

"Don't you mean to answer it?"

"You needn't worry!"

Miss Fortescue's tone made it so evident what kind of answer Warner would receive, that Mrs. Green quite lost her head and plunged into a feeble argument having to do with incomes, investments, so much a year and the awful price of apartments and things this winter.

MISS FORTESCUE grimly rolled up five pairs of stockings, and silently refused to meet Mrs. Green on her own ground.

"And if Warner couldn't find someone who could really put it over—she was done"

dead and gone, and so far as the world goes I'm dead and gone—and I'm going to stay dead and gone."

AS an argument against wasting time in vain repining it was incontrovertible. But, like many other sensible and courageous sentiments flung out as a challenge to the world, there was behind it the weakness of a pitiful insincerity. As a matter of fact Miss Fortescue did spend many wretched hours in the futile occupation of rehearsing her former triumphs, and in grieving that they were no more. As she declared, it did her no good—but then she did not know how else to employ her time. Mrs. Green, though barred from

arrived by the noon mail. When Miss Fortescue spoke of being dead and gone, she was coincidentally exhibiting virtuous indignation. She had been asked by Warner to support a young woman star, whom she thought of in the language of the stage literature of her own day as a "chit."

Mrs. Green knew all about Warner's letter. Marianne earlier in the day had scornfully given it to her to read. So when Mrs. Green spoke of "it" Marianne knew without further definition what she meant.

"Have you answered it yet?" faltered Mrs. Green.

"No!" The reply was very, very short.

"Annie—Annie—I think you might accept!"

"I might. But I won't."

"Why not? Why not, Annie?"

"Because I won't play old women!" Again Miss Fortescue's voice was heavy with virtue. "I am one, but I'll never act one. I know where it leads. My name and my independence are something to me. And oblige me by never speaking another word in my presence in regard to this infamous proposition!"

SO Mrs. Green could only respond feebly that she thought it was time for tea. "Ring for it, then, and for goodness' sake turn on the lights!"

Mrs. Green pressed the two essential buttons. Miss Fortescue, arising to put away her stockings and venturing into the sphere of light, revealed large and melancholy eyes, deeply-shadowed, a down-drooping mouth, the heavy lines and wrinkles that come of one haunting mood. She was beyond a doubt the woman whose occupation is gone, whose light has flickered out, surrounded and absorbed by hateful littleness.

There was a knock at the door, and Miss Fortescue uttered "Come in!" in a deep and vibrant contralto, accompanied

It bore the unknown and undistinguished inscription: "Mr. Herbert S. Jackson."

"Tell the gentleman he may come up, Reginald," she said, "and we'll have a tea-tray with three cups."

Mr. Jackson was the country guy who had called that morning at Mr. Warner's theater. He had lunched in the meantime to fortify himself for the interview.

ALL unconscious of the trait he had thus laid, and of the weighty decisions he had thrust upon Miss For-

into his voice. "I hope you'll forgive me!"

"What for?" asked Miss Fortescue bluntly, her features relaxing in an unaccustomed smile.

"For this intrusion. For daring to force my way into your presence without an introduction. I know it's an outrage, but I had to do it. I had to."

Mrs. Green's face wrinkled in impish amusement. Miss Fortescue repeated:

"What for?"

"Why—to see you!"

"To see me?"

"Mr. Jackson came into the room pressing his hat in great embarrassment against his chest"

by a grandiose toss of the head that had once been much admired in her performance of Lady Macbeth.

The colored bell-boy who was destined to receive the order for tea, appeared on the threshold thrusting before him a tarnished silver tray. Upon it there was a card.

Miss Fortescue removed the bit of pasteboard with the air of one examining a curiosity. Time was, she reflected, when cards had to pass through a series of sentinels, with a good chance of finishing in the waste basket. But now—before she looked at the name she knew that this card would be honored.

tence, Mr. Jackson came into the room, pressing his hat in great embarrassment against his chest. He was a tall, bony youth, with a fair, pink skin, pulled-molasses-candy-hair, innocent blue eyes and a good many superfluous hands and feet. He stumbled over a rug on his way into the room, and seemed to have difficulty in raising his eyes to a human level, and in getting his voice to function.

"You are Marianna Fortescue?" he stammered out, picking out the right lady.

Miss Fortescue admitted it.

"You are Marianna Fortescue," he repeated, a very obvious note of awe coming

"Yes, to see you. To say I had seen you. To feel I had seen you. To remember I had heard you speak. Believe me, this will be a precious memory my whole life long."

His manner was reverential and profoundly serious. He raised his eyes and was hit in the face by a photograph of the great Murray playing croquet in an hour of ease; withdrawing his eyes, as from something too intimate and sacred, he was struck down from another direction by Edwin Booth as Hamlet and Miss Fortescue in ruffles and ringlets as herself.

Miss Fortescue by now had placed the young man. He was neither mad nor trying to make game of her. He simply believed that she was still a Queen. Marianne poured Mr. Jackson's tea, with an aloof and royal gesture and almost thought herself restored.

OVER his teacup, which he held with a trembling hand, Mr. Jackson explained himself further. He came from a little town in Iowa, and his visit to the city, his first, had been assured by two years of labor on the local newspaper. His whole life had been colored by a dream. He had been taken by his father to the Grand Opera House of a neighboring town at the age of ten to see Miss Fortescue in "The Lady of Lyons"—his first experience of the theater. Famine had fluttered his youthful heart and fired his imagination, which had gone roving ever since, but never away from its first ideal. The image of Miss Fortescue had been intimately bound up in his projected pilgrimage to New York. He seemed to have thought of her as a national institution, and to have expected to find her, like Trinity Church and Brooklyn Bridge, still going on.

"It was a terrible disappointment to me to find you weren't acting, this season."

"No, I—I haven't acted for some years."

"It must be a grief to you—this degradation of the modern stage, this worship of the trivial, this exploitation of the morbid," Mr. Jackson felt a sense of elation as he brought out just like ordinary conversation phrases hitherto familiar to him only in print.

Miss Fortescue would have liked being very haughty about the modern stage; but in spite of the necessary vanities of her profession she was at heart an honest woman. Sometimes she even doubted whether the theater had deteriorated since her palmy days. The one thing she was sure of was that it no longer had a place for her—and that she did resent. She sighed.

"You are too fine for the theater of today! Perhaps it's better you should be forever enshrined in the hearts of your admirers than exhibit to the public an art it is no longer worthy to see! . . . But I'm sorry. . . . I'd hoped all my life to see you as Juliet. The critics all say it was your most wonderful rôle. I've a photograph—I have it here—of you in the balcony scene."

Juliet! Miss Fortescue took the faded photograph from his trembling hand, hers trembling a little too.

Then she laughed—the kind of laugh the stage directions call for as "hitter."

"And you really want to see me—me—as Juliet?"

The young man looked at her, as she had expected, as she had invited him to do, looked full in her lined and wrinkled face, and then his eyes sought hers, bright and worshipping, without a shadow of disillusion.

"Yes," he said innocently. "That has been one of the dreams of my life!"

Miss Fortescue knew only too well what she really looked like. The emotion of the moment, the pleasure of adulation, a fortunate relation to the lights, might perhaps have brought some simulation of youthful bloom to her cheek; but if she really was enshrined and sainted she knew it to be because she was in the presence of an inviolable idealist, of one whose dream is so potent that he refuses to be awakened by the flitting image of mere flesh and blood.

Miss Fortescue expanded. She was adored. She was set for the moment beyond the accidents of time and change. She could not be absurd; and everything she did must be right, because she did it. She showed the young man pictures of herself at all stages of development, from six months on; in all of her favorite rôles, in all of her favorite poses. She explained the photographs and characters of her colleagues and contemporaries. She ran riot in egotism and self-appreciation, while the young man listened, his eyes blazing, his mouth wide open, confident that if he was not actually present at the making of history, he was the chosen vessel in which it was to be handed down to future ages.

It would be hard to tell which of the two had revelled deepest. The young man, still feverish with excitement, full of memories that were to glorify many an hour of reverie, and anecdotes that would spice many a conversation with the untraveled of Iowa, was suffered to depart. He bore with him a photograph of Miss Fortescue taken on the hither edge of her decline, inscribed in the lady's own sprawling hand: "To Mr. Jackson, with the best wishes of Marianne Fortescue," and a bit of the lace once worn by her in the first act of "Camille."

"Heaven forgive me!" thought Miss Fortescue, thinking chiefly of that lace, "what an old lumbering I am!"

Mr. Jackson was moved almost to tears as he put the lace and the photograph into his left waistcoat pocket. A convulsive and trembling movement went through him as he took Miss Fortescue's hand in final adieu, and if that hand had not responded in an honest and cordial shake, it is probable that it would have been kissed.

Miss Fortescue swept in to dinner that night with the queenly bearing for which she had once been famous. She ate her roast beef in an uplifted mood, and resisted an urgent invitation to play bridge, for the pleasure of dreaming away the evening in her own little drawing-room.

Mrs. Green felt obliged to comment on Marianne's indifference to social gaiety. "I don't know how to take you, Annie," she said. "Last night there was no living with you because we couldn't scare up anybody to play bridge!"

One of the fruits of Miss Fortescue's pleasant dreams was a mild and gentle manner toward the world without.

"I always was like that, dear," she returned. "Nobody ever knew how to take me. I never knew how to take myself. It's the artistic temperament. I never knew when I went to bed what I'd wake up the next morning."

"You don't now!" snapped Mrs. Green, with acid suggestiveness.

But Miss Fortescue was too taken up with the delightful potentialities of her own stormy nature to notice the fling. She had got on the trail of a thought that she liked and she meant to pursue it to its lair.

She had said she would never play old women. It had sounded rather fine, too; she had admired herself for saying it, for refusing, since she could not have the best, to put up with second-bests. But she had been putting up with second-bests, with third-bests, with fourth-bests, with a stupor, whining existence, full of idleness, boredom, quarreling, vain regrets and ill-nature. That was what refusing second-bests had brought her to.

There you were!—Which was of more

importance—Marianne Fortescue as she had been, or herself as she was? Why should she, a woman still in the prime of life, sacrifice herself hourly and daily to her own glorious past? For after all, pride apart, it would be incomparably more interesting to act an old woman than really to be one. Acting anything, if you came to that, was more interesting than being it. Because if you were it—why, you just were, and it was usually something very dull.

Supposing that she should yield to her temperament and change her mind? Suppose she should trend the boards boldly and frankly as an old woman, and suppose the public did sigh and shake its head at the contrast between what had been and what was! Could Marianne Fortescue, the Queen of the American Stage, be any deadlier than she was? The past was dead, everything was dead, the old public was dead. There was a new public to be pleased and won. And she—her real self—wasn't dead. They couldn't kill her. She felt it in the nervous strength that began to course through her as she thought. She wanted action, she must have action, she would have action. She would do something! Well, then, there was only one thing she could do—the thing that a few hours before she had thought of as more horrible than death, as a gulf into which she could not plunge.

As an intellectual effort Miss Fortescue's little argument with herself was nothing to brag of. Emotionally considered, it was exhausting even for a lady with a temperament.

She pounced out of her reverie upon Mrs. Green. "Where's that letter of Warner's?"

Mrs. Green had vainly imagined herself to be closely following her companion's mental processes, and quite jumped to find herself a thousand miles or so out of the way.

"Now, Annie!" she remonstrated, "don't go to answering letters tonight!"

MARIANNE leaped to her feet, and looked herself for the letter. She bore with patience an allusion to her being unduly excited by her conversation with young Jackson, and a prediction that at her time of life she was sure to pay for it with a headache in the morning.

"Sleep on it!" suggested Mrs. Green. "You know what your temperament is. You might do worse than accept Warner's offer."

"Might do worse!" cried Marianne. "I've decided I couldn't do better!"

As Mrs. Green had been about to propound an argument of her own in favor of so much a year and money laid by, and as her perverse nature now made her formulate an argument against money laid by and so much a year, she was for the moment rather bowled over.

"You're going to play an old woman!"

Miss Fortescue nodded with decision above the scratching of her pen.

"Are you sure you're not crazy?"

"No!"

"You may be sorry——"

"I am sorry. I may be anything. What I won't be is—nothing!"

"I believe," ventured Mrs. Green, "that young fool this afternoon turned your head!"

Marianne signed her name in an illegible scrawl, and smiled serenely up at Murray's portrait.

"I believe he did," she agreed. "Bless his silly heart!"

The Woman Who Pays the Highest Price

By LILLIAN BENNETT-THOMPSON

Illustrated by Wallace Morgan

"**A**L, but zis hat is different, Madame! It is ze newest zing from Paris. They only it unpacked neez morning. Zere ees not another like it in ze whole of ze city."

"I don't know that it is really becoming," says Mrs. Loftington, languidly surveying herself in the long pier glass. This royal purple make me look positively green."

"Oh, Madame, say not so!" Marie

herself is attending to the wants of this important customer. "You are regal—divine! I know of no one who wear zis wonderful color more perfect than you—not even Mrs. Van Astor. It is, you know" (with a very impressive air) "ze color of ze season. Every one in Paris ees crazy about it."

"There, there, that will do!" interrupts the customer. "I will take the hat. Send it up to my apartment. I suppose

I must have at least one purple hat." Not a word has been said about the price.

WITH that unfailing instinct, which, if not innate, is quickly acquired by these shrewd factors in the world of harter, Marie is figuring in her nimble brain just what sum she may venture to charge to the account of Mrs. Loftington. She holds the door open invitingly.

but the customer stops and inquires languidly:

"By the way, Marie, what is the price of that hat?"

"Oh, it is very reasonable, Madame. I have forgotten the exact price, but it is not more than \$150. Madame knows rates very cheap."

"Very well. Send it up. I shan't take it unless it is there by seven o'clock."

"Oui, Madame, it shall be there before six o'clock of the hour."

AND so the customer pays \$150 for a hat not worth a quarter of that sum. An exceptional case? Not at all. There are hundreds, thousands of apartment houses and hotels in the big cities, especially in New York, and thousands of women live in them. There is practically no housework—they are living in just this way to avoid it. If there are any children, they have been sent to boarding-schools. There may be bridge, the theater or other forms of entertainment to take up a portion of the time; and for these functions clothes are necessary. Clothes! To have smarter and newer costumes than their friends is the aim and end of the majority of these women. The means of procuring them is secondary; to have them is the essential thing. It matters not if extortionate prices are demanded.

It is not by any means always the women who have been accustomed to the use of money from birth who spend it so freely and carelessly. Some of the most extravagant have worked for the hundred cents that make the dollar, and yet, so curiously is human nature constituted, that they can spend many times the amount they could earn working eight hours a day for a week on a hat they do not require and probably will only wear two or three times. Others are mere butterflies in life, whose creed is "today we live; tomorrow we die. On with the dance." They know the bills will be paid in the end, so why not enjoy life while the sun is brightly shining? The sums charged up will, undoubtedly, call forth interviews during which many harsh truths will be dealt out by the husband, but the knowledge that this event is sure to come has no deterring effect on the shopper. She had probably learned the art of closing her ears during such distressing scenes, and accepting them as unpleasant, but necessary, adjuncts of married life.

ANOTHER woman who pays the highest price is the one who has sold herself for the privilege of being able to do it. She may have contracted marriage in order to procure for herself extravagant hats and gowns; she may have accepted the relationships without sanction of Church or State; but in either case the object was a man to pay the bills, and having secured one, she means to enjoy the perquisites. All her previous life she has been compelled to pass by the alluring hat or gown, the price of which ran far above the modest sum she could afford. She has had to bargain, to hector over prices, to stop and calculate. Does she continue to do this? No, she intends to stop at the utmost the satisfaction of entering into the prettily decorated pink and gilt saloon, before whose windows she had formerly stood and gazed longingly, and ordering the saleswoman to show her the newest and smartest imported gowns. She is very much im-

pressed with her own grandeur; she believes it necessary to convey the same impression to the saleswoman. She had always dreamed of the day when she would be able, like the princess in the fairy tale, to go into a shop and say, "I will take this hat, and that one too," with a haughty disregard of the cost.

Perhaps the saleswoman, clever reader of human nature, may suggest that the gown would be smarter with a touch of fur. "Ermine, you know," she will explain confidentially, "is very smart. It gives chic to the frock at once." Ermine is one of the most expensive furs, but the customer will not deign to inquire the price. If her former training does assert itself, a few well-chosen words from the saleswoman will reduce her at once to submission.

The wise man with a wife of this type permits her to contract no bills and gives her the allowance she may spend; but there are hosts of other men who believe that they can regulate their wives' expenditure better by the charge system. There are hundreds of women in New York City who have to beg for car-fare, who ride in taxis because they can charge the fare, so opposed are their husbands to giving them money. These are the women who resort to numerous schemes and tricks whereby they can procure a little ready money.

"I will take this coat and pay you \$500 for it, if there is a rebate for me," is not a strange statement for proprietors of certain well-known shops to hear. The price on the tag may be \$250; but nobody will be the wiser if the bill carries a charge of \$500 on it. "It will be paid," the shopman is told, "and then you can give me \$200. I shall only ask for \$200 so you will make \$300 by the transaction and I shall come again."

THE woman who is willing to pay for the privilege of being in society is another member of the high-price coterie. Her rivals are the women of wealth in society, and she aims in every way to emulate them. She has, perhaps, observed Mrs. Van Blank buy a hat, a gown, without asking the price and has immediately been impressed with the idea that this is the way to shop if one would be identified with the exclusive social sets. She does not stop to realize that Mrs. Van Blank is an old customer who, as the clerk knows, has a very keen understanding of the value of hat or gown and who, if an exorbitant price be charged, will immediately return the article with a request for credit, or a threat to take her account elsewhere.

At one of the exclusive shops, where perfumes and other luxurious accessories are sold, the owner actually makes a reduction in the regulation price to certain women who are powerful in the social world and who are likewise proud of their shrewd knowledge of values. Any loss is quickly made up on the purchases made by women who buy these perfumes because Mrs. Ostap uses them.

There are certain other women who sometimes unconsciously pay the highest price, and it is only just that they should. These women go to the country or to Europe and leave unpaid a bill which has been owing for six months, a year, two years or even five. If they are given credit again at this shop—and invariably they are, because the owner finds it pays to mention casually that Mrs. So-

and-So had just ordered a gown like the model ("she has bought her gowns here for years, you know")—the price demanded is large enough to cover the interest on the money tied up during the interval that the bill remains unsettled, and, possibly, the lawyer's charges in addition.

But there are some sensible women who realize that the shopkeeper must have ready money to carry on his business, that he can get credit for his materials from the wholesalers for a certain length of time only, and that there are discounts of which he desires to take advantage. As a rule these women pay cash for their purchases, and receive, therefore, a still lower price. Again they will select several hats or gowns at the same time, blandly asking the proprietor what discount he will make if they take all of them. There is an art in buying well, and its fundamentals, at least, have been mastered by these women. Although they may possess large incomes, their expenses are likewise heavy, and they can not throw away their money needlessly.

The spirit of barter which American women have acquired from shopping in foreign countries is responsible for some high prices. The American woman who has not traveled always expects to pay the price on the tag, or, if the price is not stated, the amount the clerk glibly announces. She does not know that across the seas there is always an asking price and a taking price. In the large shops in this country, the price is calculated to a nicety and the tag price is the taking price; but in many of the smaller shops the tag price is variable. The proprietors of these shops deal primarily with women who have acquired, consciously or unconsciously, this love of the so-called bargain. It is not unusual to hear "Don't you think Monsieur will sell this hat cheaper?" Or the saleswoman may suggest, "I think I could get this hat for you a little cheaper." Invariably she will disappear, bearing the hat proudly aloft, to return in a few minutes with the confidential information "as a great favor, because Madame is such a good customer, Monsieur will make the hat \$95 instead of \$100." The persistent customer will push the bargain still further. She will try on the hat again, inspect it from every angle, pinch it and pull it, and finally, with a beaming smile, announces that she will take it if Monsieur will let her have it for \$92.50. After much more discussion she will leave the shop, pluming herself that she acquired the hat at her price. Behind her Monsieur rubs his hands with an equal amount of glee. He could have sold the hat for \$50 and still have made a good profit. This customer may not have paid the highest price but she certainly did not get the lowest one.

THERE are, of course, hosts of women in all classes of life who will always pay the highest price, whether they are buying a piece of corned beef out of a salary of eight dollars a week, or purchasing a sable coat from an income of many thousands. It requires brains to understand values, and where brains are lacking or are an almost negligible quantity, it becomes a delightfully easy matter to buy any old thing at any old price. The path of least resistance is the one invariably trodden by the multitude.

Both At Once

A little cream and some Grape-Nuts in the spoon, both at once. Then one gets the delicious, nut-like flavour of the cereal, combined with the most digestible of all fats—cream.

The golden-brown granules are tender and crisp; and invite thorough chewing. That's one reason why

Grape-Nuts

FOOD

is of special value. There are many others.

Chewing brings down the saliva which is necessary to "taste," and also—more important—to begin digestion.

This act of chewing also causes, by a natural reflex action, the flow of digestive juices in the stomach, so that by the time the food reaches that organ, it is ready for further digestion.

In making Grape-Nuts whole wheat and malted barley are ground into flour, and the "vital" salts (phosphate of potash, etc.) are retained. These "cell-salts" are highly necessary to the daily repair of the tissue cells of body, brain and nerves.

Try a dish of Grape-Nuts and cream regularly for awhile, and notice the mental "glow" and physical "go"—how much better everything seems.

Finance

By ALBERT W. ATWOOD

Protecting the Stockholder. Part III. His Rights and Recourses

"Great as have been the abuses practiced upon the public by the manipulation of securities through the medium of the stock exchange, they do not in our judgment compare with the frauds that are practiced upon minority stockholders by the manipulation of properties by the holders of bare majorities through holding companies and in many other ways in which minorities may be oppressed under the system of excluding them from all representation." Page 148, report of Pujo Committee to investigate the "Money Trust."

"Is not the house in which over three-fourths of our industry is carried on infested with disease? In a democratic country hundreds of thousands of citizens in their democratic relations are living in an oligarchy. Corporations, for the most part, have ceased to be 'little republics,' in which the shareholder citizens govern through democratically elected representatives, and too often these shareholders are mere ignorant pawns in the game of high finance,—their shares the chips of a gigantic poker game." Page 353, *Business Organization and Combination*, Lewis H. Raney, Professor of Economics, University of Texas.

"The status of an administrator of group property is the most dangerous to society of any known to the law. Immense contact with the property of others gives him both the desire and the opportunity of appropriating it to his own use. No thief can steal so easily as an administrator; nor can any swindler so readily arrange and accomplish a fraud." Adapted by Dr. Arthur K. Kohn, page 153 of "A Comparative Study of the Law of Corporations with Particular Reference to the Protection of Creditors and Stockholders," from Vol. I, page 226, *Der Zwerch im Recht*, by R. von Ihering, Leipzig, 1877-1885.

THE first quotation with which this article opens may prove unacceptable to many business men, not because of the facts as stated, but owing to the hostile attitude of the business world toward the manner of the Pujo investigation. But the remaining quotations, one from a German scholar writing nearly thirty years ago, and the other from an American economist writing to-day, represent only too fairly the feeling of the majority of intelligent persons toward the exploitation of investors. Last week I emphasized the moral obligations which are coming to rest more and more heavily upon stockholders. It is only proper in return to inquire what rights the stockholder possesses and what redresses are his.

What the Law Provides

THE law books will tell you that stockholders as a body usually have these rights in the United States: (1) to amend the certificate of incorporation and the by-laws, (2) to elect directors, (3) to pass upon the mortgaging or sale of permanent assets, (4) to dissolve the corporation. In practice stockholders in large corporations have as little to do with these matters as they have with the orbit of the earth. The law books also will tell you that the individual stockholder has three important rights: (1) the right to vote at meetings, which means he must receive notices of meetings and has the right to attend and participate in them, (2) the right to inspect the corporate books, (3) and the right to dividends, additional stock issues and a share in the assets in case of dissolution.

Stockholders are never denied their right to vote at meetings, but the slight extent of its practical value was shown in the first article in this series. The prac-

tical thing to remember, however, is that the proxy is never irrevocable, no matter what it may state. In fact and in law a stockholder may revoke at will, countless times, the power of attorney, or delegated right to vote, which we call a proxy, and the surrender of which to the management enables a few men to dominate great corporations. In the fight for control of the Illinois Central Railroad between E. H. Harriman and Stayvesant Fish stockholders switched over time and again from one party to the other. Complainant and careless shareholders give their proxies too freely to the management in most large corporations, and the proxies usually run for too long a period, and for too general and unrestricted purposes. Shareholders should read these slips of paper and join with a few others to protest against their sweeping character.

WHEN it comes to the right to inspect the corporate books we enter upon a difficult subject. Originally this was an important right, but the courts soon began to restrict it. Indeed this original right at common law has been almost nullified by statute and court decision. In many jurisdictions a stockholder cannot see any books except those which pertain solely to a corporation, that is, the list of stockholders. This means that stockholders cannot get at a list of customers, contracts, and parties from whom supplies are purchased.

Even with respect to the stock list, legislation and decisions vary so that an owner must usually engage a lawyer to puzzle it out for him. While this right is much hedged about, usually by resort to law a stockholder can get a list of other owners, if he desires it for proper purposes.

It has been commonly held in this country that to give free access to the stock list books to owners of stock would stimulate "strike" suits, and give information to competitors who might buy one share of stock for that purpose. Of course there have been a few rare instances of needless obstructive tactics, and attempted extortion on the part of small stockholders.

Troubles of the Minority

BUT while small and professionally litigious stockholders may in some instances be animated by improper motives there is no necessity of recounting in detail the far greater number of cases where innocent investors have suffered because the "insiders," or the management, or a concentrated body of stock (all of these usually being one and the same) have carried things with a high hand. Corporations are governed by the majority in theory. In practice large corporations are governed commonly by the management, backed by the directors who sometimes own a small but concentrated body of stock and sometimes practically none at all but control a large body of stock through proxies. Cases of a large corporation being controlled by an insignificant minority of stock are frequent. For years the United States Express Company was controlled by the Platt family which owned only a few hundred shares.

When the acts of management are questioned, haste is always made to acquire enough proxies to vote a bare majority (51 percent.) of the stock. Then the minority, and this is the practical bearing of these remarks, has only the following recourse: the acts of the majority, and those of the directors, cannot be interfered with by the minority except in the case of unauthorized, fraudulent or illegal acts.

Put in another way the minority can prevent by law in this country actual or threatened abuse of power by directors, and fraudulent transactions to secure an unfair advantage to directors or other stockholders. Put in still another way minority stockholders may secure redress from a breach of trust on the part of directors, and it may be added that courts have decided over and over again that directors are trustees for the interests of the stockholders. To be a trustee is a grave responsibility, and business custom has long maintained the sacredness of trusteeship.

Thus it is clear that minority stockholders have recourse to justice under the American law, but there is a vagueness and indirectness about all this in striking contrast with the direct liability which the laws of Continental Europe create in behalf of an injured creditor or owner against an officer or director. In England and America the liability of a director is primarily to the corporation, and the theory is that action must be brought against directors in the name of the corporation. This means in practice that stockholders can usually bring actions only after demand has been made upon the board of directors to act, and after the courts have decided that the majority of the board of directors have improperly refused or neglected to sue. This general statement may be subject to modification in certain States, but in general it is safe to say that the trust relation between director and stockholder in this country is far too indirect to be effective.

BUT even so the trouble often is not so much with the inadequacy of the law as with the investor's ignorance of it. Often the injured party does not know his own rights. Stockholders should never hesitate to address the board of directors, or the management, for then when litigation arises the fact that they have gone on record is frequently of great avail. There are far too many instances of large railroads "freeing out" minority owners of smaller lines, in which an interest has been purchased. Usually a persistent appeal to the courts will bring relief.

The cumulative method of voting is perhaps the most important protection which minority shareholders have in this country. Originally the corporate practice was to give each share of stock one vote. Of course a minority could never get any representation on the board of directors in this way because the majority votes elected all the directors. Under the cumulative voting system each share of stock has as many votes as there are directors to be elected, and the owner can concentrate all his votes on one nominee. Thus a moderate sized minority can always be sure of electing one director at least. Dissatisfied stockholders should always cumulate their votes if the State laws admit of it.

There is a vast amount of utter rubbish emitted by corporation managers and investment bankers on the danger of government regulation, inequitable power of government commissions and the publicity to follow. In Germany the internal affairs of corporations have been regulated to an extent not even suggested as yet by the most radical members of our own Congress, and yet German industry has no rival. The next and last article of this series will show wherein the investor's position may be bettered by a closer governmental regulation of the internal affairs of corporations.

What They Think of Us

Oakland (Cal.) *Enquirer*

You see quoted, every now and then, the assertion, made by the late J. P. Morgan, to the Pujo Committee, when it was investigating the Money Trust, that "practically all the railroad and industrial development of the country has taken place initially through the medium of the great banking houses." But, as Mr. Brandeis has been saying and showing in HARPER'S WEEKLY, "that statement is entirely unfounded in fact." As a matter of fact, practically all the big enterprises of the country were "initiated" without the aid of the bankers, who grabbed them and "re-organizing" them, filled them chock-a-block full of water long after they were "initiated" and their success proven by others than the bankers.

The Globe (N. Y. City)

Nearly 800 of the leading street-railway men on the continent heard Guy E. Tripp, chairman of the board of directors of the Westinghouse Electric and Manufacturing Company, attack Louis D. Brandeis for statements the Boston lawyer had made in regard to his company and the General Electric Company.

The occasion was the luncheon and mid-year meeting of the American Electric Railway Association and the American Electric Railway Manufacturers' Association.

Mr. Tripp declared for a platform of principles to be enunciated by the electric railway industry, and warned his hearers that the people were a court of last resort with whom they must in the end rest their case.

"Public-service corporations now understand that regulation or coöperation are the only alternatives lying between unrestrained operation for private profit and governmental ownership," he said.

"By coöperation with the people I would not have you understand that I mean coöperation with those self-appointed advisers of the people who will fill our magazines with misstatements of facts and upon such premises build their attractive and popular arguments. For an example, the misstatement of Mr. Brandeis in HARPER'S WEEKLY that the Westinghouse Electric and Manufacturing Company and the General Electric Company are only alleged competitors. If all his facts are as false as that one, and I know that one to be false, his conclusions are worthless."

W. G. Perckman, St. Cloud (Florida)

Brandeis is nearly perfect. Tell him that he has forgotten this, however. In our railroad and bank stocks we suffer from the evils of primogeniture. Hereditary presidents are ruinous to stockholders. Witness the bank stocks that in the last ten years have fallen, say one hundred points, or just as much as the dividends.

Hamilton Craig, Coronation (Alberta, Canada)

Mr. Louis D. Brandeis' tirade against the inefficiency of the Oligarchs suggests the following queries:

1. Was timidity of public opinion responsible for the wreck of the New Haven road?

The First Taste

There is coming a time—if it hasn't come—when the folks at your table get their first taste of Puffed Grains.

Watch them. Note the wonder the delight with which they greet these foods.

They will see whole grains puffed by steam explosion to eight times normal size. They will find them crisp yet fragile, bubble-like and thin. And they'll taste like toasted nuts.

Note the surprise. Nobody has ever seen or tasted other cereal foods like these.

Let Them Do This

You will serve them first with cream and sugar. But let your people then enjoy them in other delightful ways.

Try mixing Puffed Grains with fruit. The nut-like taste gives a very inviting blend.

Try serving in bowls of milk. The grains will float. They are crisper than crackers and four times as porous as bread.

Then use like nut meats in frosting cake or as garnish to ice cream. Let the girls use the grains in candy. Let the boys eat Puffed Grains dry, like peanuts, when at play.

Use both as foods and confections.

Puffed Wheat-10¢
Puffed Rice-15¢

Except in Extreme West

Then remember this: Inside of each grain there occur in the making a hundred million steam explosions. So every food granule is blasted to pieces. Digestion can instantly act.

In no other way has this result ever been accomplished. Cooking and toasting break up part of the granules. But millions remain unbroken.

Prof. A. P. Anderson, by this steam explosion, has made whole grains wholly digestible.

The Perfect Costume

Do you want this Spring's costume to be the most attractive, stylish and becoming you have ever worn? Do you want it to follow fashion with a taste and discretion that will express your own personality exactly?

SMART STYLES

THE MAGAZINE OF INDIVIDUALITY

offers you a unique service of advance style presentation that is authoritative, and style adaptation that will exactly meet your personal requirements.

For "the perfect costume" this Spring and Summer, you want the help of SMART Styles—advanced, complete to the finest detail, correct, smart, personal. The price is 35 cents a copy. But for the privilege of becoming acquainted, we will gladly send you six issues for the price of four.

SIX MONTHS OF SMART STYLES FOR A DOLLAR BILL

March—The Spring Fashions

The lure of Spring openings in Paris and New York. The first authentic and complete portrayal of Spring styles.

April—The Millinery Modes

Milady's hats—her veils—her coiffures. All the millinery triumphs of Spring, contained in one issue of SMART STYLES.

May—Brides

For the June Bride—her gown, her gifts, her traveling equipment, her trousseau. Luxuries and necessities for the toilet table.

June—Summer Fashions and Traveling

The Summer's styles complete, for form and comfort both. Vacation hints, where and how to go, travel clothes and luggage.

July—Life in the Open

Sports and sporting garb. How to be correct and at ease for tennis, swimming, motoring, riding, golf and all outdoors.

August—The Younger Generation

With school days drawing near, juvenile desires and needs are uppermost. Clothes for school, younger society and Autumn sports.

Send the coupon today with a dollar bill, at our risk, for six splendid issues of SMART Styles, every one a revelation to women who care for dress distinction, every one a help to you in choosing "the perfect costume."

The Jno J. Mitchell Co.

Paris, London, Berlin, Vienna, New York
41-43 West 25th Street

(Canadian and Foreign \$1.50)

2. Was C. S. Mellen hired to squeeze the New Haven and the associate companies, and, if so, did he earn his salary?

3. Is one right to infer from Mr. Brandeis' remarks that men may be secured who will work gratis for cooperative associations?

4. May one also infer that the principle of credit-unionism ensures the absence of losses in loaning? If so, why?

5. In large affairs, which are more valuable officials: those who direct policies in a large way, or those who have the time and inclination to devote all their energy to detail work?

6. Why is it suggested, indirectly, that bankers, and more especially investment bankers, are men who lack a sense of moral responsibility, while the apologists of cooperation are unusually well endowed with usefulness and public spirit?

Mr. Brandeis would confer a favor on the reading public by a frank reply.

Minneapolis (Minn.) Bellman

While it is manifestly unfair to call HARPER'S WEEKLY in its new disguise even remotely representative of American thought, the publication is sufficiently conspicuous to make its faults a matter for regret as well as condemnation.

Pontiac (Mich.) Press

And you are still old enough to remember when HARPER'S WEEKLY was a really great publication.

Milwaukee (Wis.) Press

Senator Miles Poindexter writes entertainingly in HARPER'S WEEKLY on "My Conscience and My Vote," the vote referred to being the vote of a Congressman in Congress. . . .

Senator Poindexter, be it remembered, is one of the champion sepiotists in public life; the political almoner, as it were, of the Poindexter tribe, East and West.

Brothers William and Fielding hold fast federal jobs through their distinguished relative's influence, and our last advices were to the effect that brother Ernest was having wires successfully pulled in his behalf. Soa Gale has been neatly landed in West Point, Cousin Sam Graham owes his job in the Department of Justice to the Senator. More than that, the Virginia Poindexters—Jefferson, Eugene, Robert, Major and Anne, the wife of a second cousin, have all been helped to government snaps by their faithful relative.

We suggest to Editor Hapgood that an article on "My Conscience and My Family Job Fest" would make a splendid "following story" from the pen of Senator Poindexter.

Los Angeles (Cal.) Express

That HARPER'S WEEKLY should have joined in the crusade to belittle Bryan through caricature is as surprising as it is regrettable.

Havana (Neb.) Bee

The New York Sun, in walloping its friend, Norman Hapgood, for lambasting Anthony Comstock, reminds Norm that Mr. Comstock has given forty years to his work and become "one of the greatest forces in the world for cleanliness." Pooh! What is forty years by Anthony Comstock as compared with, say, forty days of effort by the man with a monopoly on wisdom and a corner on virtue?

Brooklyn (N. Y.) Eagle

The Progressive party leaders are complaining that too many men with crude ideas are flocking to its standard. Editors

Bryan, Barnes, Roosevelt, Hapgood are in charge of all our parties, and from any two points of this triangle the other point looks like a waste basket.

Shreveport (La.) Times

Albert W. Atwood, financial editor of HARPER'S WEEKLY, gives an opinion on the soundness of the Louisiana bonds, an opinion which coincides with the views of financiers generally. . . .

Why should Louisiana 4½ per cent. bonds amounting to only \$11,500,000, which represent the total indebtedness of the state, sell at a loss in December, while New York 4½ per cent. bonds amounting to \$51,000,000 and representing a part of that state's \$200,000,000 debt, sell at a handsome profit exactly thirty days thereafter?

The people of Louisiana who have this debt to pay and this loss to pay should insist on an answer to this question.

New York World

My ideal of a government is a strong government with a strong man to administer it, and a strong people to make the strong man go as they wish him to go.—From the Colonel's speech at Buenos Aires as reported in HARPER'S WEEKLY.

For example, a government by Theodore Roosevelt over a nation composed of "the great Morgan interests that have been so friendly to us."

Editor HARPER'S WEEKLY:

I do not think your parallel in your editorial of January 10 between a supposed Washington situation and the Mexican situation when Madero was killed is accurate.

You assume that General Huerta is a traitor; will you debate that with me in public before an audience of your own choosing? A church or Y. M. C. A. congregation would not be unfavorable to your side.

General Huerta did not decline to use his own artillery against Diaz. I have counted dozens of cannon-shot scars still remaining in the vicinity of the citadel months after the battle. The upper story of the Y. M. C. A. building, where Diaz had his machine guns, was wrecked by Huerta's cannon. The citadel is a low building surrounded by higher structures and hence hard to hit. The loyal Madero soldiers sent by Huerta against Diaz were not massacred; they tunneled through heavy-walled buildings to get at the enemy and comparatively few of them were killed. All uneducated soldiers fire high. I occupied a third-floor room this fall through the walls of which were nine bullet holes fired by General Angeles, whose loyalty to Madero no one has ever doubted.

Madero was arrested by Huerta only after the Madero Secretary of State and about forty Madero Senators, all that could be gotten together, had demanded he do so. Congress, after the battle, had no difficulty in assembling in full. They had all been elected with Madero; they were not surrounded by bayonets when they accepted Madero's resignation; they had lost faith in Madero who, beyond reasonable doubt, was mentally unbalanced. Huerta had absolutely nothing to do with the assassination of Madero.

Very truly yours,

[Signed] CANNIS E. GILLETTE.

Omaha (Neb.) Bee

"Feminism and the Facts" is the caption of an editorial in the New York Times. Thank you, if we want facts on feminism we will go to Mr. Hapgood for them.

[10 Cents a Copy
\$2.00 a Year]

Is Our Army System Sound?

IT was not without hesitation that we began Mr. Post's series exposing the fact that the United States Army system is not fit for a democracy, but rather an antique and feudal survival. The Army in our democracy cannot be what it ought to be until it is properly related to civil life. The number of desertions shows that it is not fitted to civil life. The series now running explains why men desert. Let us hope that before many years the Army will be a place so valuable to the enlisted man that he will seek service and not need to be dragooned into it; will not run away the first year; will come out a more efficient citizen than he enters. Here are some definitions of a certain species of man:

"Gentleman: a well-bred and honorable man; a man of education, high principle, courtesy and kindness; a man of honor." *Standard Dictionary.*

"Gentleman: a man of good breeding, courtesy and kindness; hence a man distinguished for a fine sense of honor, a strict regard for his obligations, and consideration for the rights and feelings of others." *Century Dictionary.*

There is but one trade in the United States where a man is a gentleman by act of Congress. Apparently Congress, in a brave moment, attempted to do by statute what Providence and the Almighty had failed to accomplish indiscriminately. This trade is the trade of arms—that is to say, strictly and only the upper crust in the trade of arms. An officer is not merely an officer, he is also a technical gentleman and can prove it any hour of the day or night with a law of Congress. But the importance of bottles lies not in their labels but in their contents. When Adam named the animals he performed a prodigious amount of useless labor; for we should have named the animals any way in the course of time, and each according to its kind. And no one cares today or even knows what Adam named them, and the animals have never been able to boast professionally of their appellations as given by him and claim a superior gentlemanliness thereby. But when Congress labels a man as a professional gentleman we have a natural curiosity to know what is inside. Major-General Wood, Chief of Staff, and the highest officer in the Army, has recently made public some recommendations for army officers that are interesting in the vivid suggestions they raise in the domain of that which they are intended to cure:

"It is believed," he states in his official admonition to the Army, "that much of the discontent in the service today is incident to the method of dealing with enlisted men. Many young officers intrusted with the command of men have not been sufficiently imbued with the tremendous

importance of the portion of their duties which concerns their relations with enlisted men.

"They often seem to feel it necessary to adopt a tone of voice or a manner in dealing with them which is quite different from that which they usually employ; and only too frequently they seek to accomplish through public rebuke what could be more efficiently accomplished through a private talk with the subordinate himself."

Yet any one familiar with army conditions knows the underlying causes back of Major-General Wood's urgings. They know that last year there were over seventeen per cent. of desertions compared to the number of men enlisted. They know that any department or any business where many men can only be held to their jobs by fear of punishment is inefficient and that remedies are needed, not reproofs.

If the publication of the facts set forth in Mr. Post's series, painful as they are, leads the citizens of this country really to grapple with and settle the question of what kind of army life, army discipline, army training is needed in our modern democracy, we shall be more than repaid for the altogether unwelcome task of offering a fundamental disapproval of one of our national institutions.

Unions and Prisons

LABOR UNIONS have done much for civilization. They have enabled the workingmen to deal intelligently and effectively with their employers; they have educated the men themselves; they have forced many righteous measures out of legislatures; but, like the capitalists, and like all other classes, including even journalists, they make their errors. The three heaviest charges against them are that they limit output, that they do not try to obtain the best work, and that they are instrumental in keeping alive one of the worst products of our civilization—the present prison system. What more stupid idea of harmful competition could there be than the one upheld by the unions, that many thousands of able-bodied men ought to be supported in prison in idleness, instead of laboring to increase the number of commodities furnished to the community? The prison system would have been improved long ago if it had not been for the political influence of the unions. HARPER'S WEEKLY is not too favorable to concentrated capital, as has been proved by our contribution to the dissolving of the Money Trust; but on the other hand, labor should be treated just as frankly and just as fearlessly as capital, and public opinion should insist on the largest possible product and on the best workmanship.

Representation

PROFIT SHARING will never alone solve the question of the relation of labor and capital. It will have to be supplemented by joint responsibility and joint control. Charles Sumner Bird, Progressive candidate for Governor of Massachusetts last autumn, in a speech during the campaign said that strikes of general public importance rarely occurred in any individually owned and managed plant. They occur where the stockholders do not come into contact with the workers, take no part in the settlement of wages and the regulation of hours, and are unfamiliar with the conditions of labor.

The stockholders are represented by a general manager who is expected to make profits. This is a typical case of absentee ownership and the basis of the most serious labor difficulties. If the stockholders in the big corporations understood conditions, they would devise remedies. Even the directors are usually ignorant of factory conditions and rarely get the workers' point of view:

"I would suggest that every Board of Directors should include some representatives of the workmen with authority to serve as fellow-directors. Such a representation would keep the Board informed as to prevailing conditions as to wages and hours of labor and thus the directors and stockholders would understand the perplexities and problems of the workmen, which, under present conditions, is impossible."

Most students of labor conditions are agreed on the truth of that statement about having workmen for directors, radical as it sounds. It gains its importance from the fact that Mr. Bird has employed so many men himself, has made money, and has remained on excellent terms with his employees.

A Stirring Candidate

KANSAS, which is usually wide awake, will be further energized during the next few months by the candidacy of Mrs. Eva Morley Murphy of Goodland, who is running for Congress on the Progressive Party ticket, subject to the action of the state primaries. She does not avoid issues. She says:

"I have chosen for my party the only one that

has in its platform pledged itself to the task of making this country a true democracy by securing equal suffrage to men and women alike."

She speaks up for a national constitutional prohibition of the liquor traffic, a declaration which will have at least the effect of intensifying both her friendships and her enmities. She has lived in her district for twenty-six years, and is very enthusiastic, without letting that enthusiasm run into sentimentality, about the cheerful, industrious and progressive people who have turned it from a barren plain into a well-ordered country of homes. She firmly, although modestly, thinks she knows their needs,—irrigation, cheaper trans-

portation, better school privileges. The last paragraph of her announcement will appeal to many women whose work at home is done:

"I sincerely believe the fact that I am a woman, wife and mother will aid me, and not hinder, in truly representing all the people of the Sixth District and helping to secure more equitable laws for all the people of our great country. Therefore, since my children are grown and my husband is willing that I shall give myself largely to this wider field of service to which many are calling me I have decided to enter the political fight for the ascendancy of the best party in the race."

As far as we can judge from Mrs. Murphy's announcement, and from what our friends in Kansas tell of her standing there, it would be hard to find anybody, man or woman, even in that state of evenly distributed wealth, gen-

eral education and progressive feeling, who would have equipment superior to hers.

Gifford Pinchot

AMONG the candidates who are now being considered for the United States Senate, we know none with better equipment in character, experience and intelligence than Gifford Pinchot. He has been an actor in some of the most important events of recent years. He has thought on most of the principal subjects of the day. He is absolutely independent and his whole life is guided by the desire to be of use to the community.

Perhaps you wonder how we happen to be able to illustrate these opinions with a little sketch by

Gifford Pinchot

Mr. Flagg. Facility and certainty of execution are among the best gifts that the gods have for artists. Mr. Pinehot sat at the editor's desk the other day for about five minutes discussing conservation, progressiveness, and a few other topics, and immediately after his departure the editor found the above sketch on his desk as a remembrance from Mr. Flagg. We don't yet know what Mr. Pinehot thinks of it, but to our mind it indicates in caricature not only his type of head, but his sunny smile and genial spirit.

Is It Risky?

ONE of the many charges against newspapers is that they suppress the names of stores and of store-owners whenever the news is unfavorable, as, for instance, when an elevator falls in a dry-goods store, or when the question is agitated of seats for the shop-girls. One of the hoariest and most innate newspaper traditions is that one publication will carefully refrain from advertising another. It was refreshing, therefore, to read the following:

Names should be used in all stories where their use adds to the news value. This applies to individuals, firms and corporations (including newspapers). There should be no discrimination against any one because he happens to be an advertiser, a possible advertiser or one who refuses to advertise in this paper. This order is to take effect at once.

Oscar M. Rein, Editor.

The *Tribune* under Mr. Reid has been actively showing signs of new life, and this particular move is one which most fully deserves success, for it is a move toward common sense and toward common truthfulness.

Wake Up, Virginia!

THERE is a bill now pending before the Virginia legislature founded on the notion that it is time for the State University to become democratic and to take part in the every-day life of the average man and woman. The movement to have a coördinate college for women at the University of Virginia has the support of President Alderman and of leading educators everywhere, and of the more progressive democratic elements in the state, and is opposed by standpatters of every species.

One of the favorite ways of delaying action in the legislature is to investigate when there is nothing to investigate. Opponents of the college are concentrating on the effort to appoint a legislative committee to study the question and to report two years later. It happens that such an investigation has already been made and the results are available. The faculty of the University of Virginia favor the bill by a vote of 42 to 5.

Apart from general Bourbonism, two special obstacles confront the movement. One is that considerable effort is being made to change one of the State Normal Schools into a weak college for women, and thus follow a line of development condemned in the Seventh Annual Report of the President of the Carnegie Foundation for the Advancement of Teaching. The other is that the local press has practically excluded even from the local news columns any mention of the progress the movement for the coördinate college is making, to such an extent that a committee of

prominent men organized to protest against this newspaper suppression. Richmond has two morning daily papers, one of which is controlled by certain alumni of the University of Virginia, who are personally opposed to the coördinate college, and the other is controlled by a man who is prominent as a state-wide prohibitionist and who, as a Methodist leader, is much interested in the Methodist college for women at Lynchburg, Va. Against these several specific obstacles and against standpatism in general, those who favor the college have nothing to rely upon except the general intelligence of the community.

Vaudeville and Art

ETHEL BARRYMORE is going back to vaudeville in Barrie's play, "The Twelve Pound Look," and Blanche Bates is already playing the same author's "Half an Hour." Being rather crowded with office business just now, we are not able to look over the vaudeville field to see how many features there are equal to these—two of the best plays of recent years. Art in vaudeville is especially important, for it reaches the class that most fully represents the nation.

Faversham's Iago

ONE of the qualities of Shakespeare's most famous characters is that they can be played in so many different ways without any of the ways being wrong. In that respect they are like real life, where any one of us is seen differently by our different friends and enemies, not because the facts are misstated, but because the emphasis is different. Edwin Booth's Iago is most vividly stamped upon the minds of Americans old enough to remember it. He played the part with that high imagination which was always his. Iago, in his hands, was a malign but superior spirit of evil, like the Satan of Milton. This interpretation enabled Booth to give with the beauty of organ music those outbursts of eloquent thought to which Iago is so much addicted. The latest actor to play this part is William Faversham, who, although he made his reputation in popular romance, has so much worthy ambition that he has been producing "Herod," "Julius Caesar," "Romeo and Juliet," and "Othello," as well as the class of comedies represented by "Every Man and His Wife" and "The Faun." His Iago emphasizes the bluff and spirited side of the character, the side that made him popular with the young blades of the time and gave the impression to Othello and others that he was primarily straightforward and blunt. Starting from this point of view, Mr. Faversham presents the part decidedly well. Possibly as he lives in it longer, he will, while keeping the emphasis on the strong spirits, yet bring out more the fact that Iago belongs to the race of great intellectual devils, not among the ordinarily commonplace evil doers. The production of the play with such good taste in its scenic effects and such an excellent company is one more triumph in the record of an actor-manager whose work in the last few years has brought him rapidly forward among the few who put into the American stage elements that can interest human beings of full adult mental stature.

I Cure a Headache

By HENRY WALLACE PHILLIPS

Illustrated by Herb Roth

"I finally reached my maximum—a moderate little pound bottle per diem"

THERE are two reasons why a man should write of himself: One, when he has accomplished or found something so novel and of such benefit to humanity that the knowledge of the character behind the achievement is as important as the event itself. The other, when he has done something so bad, and also novel, that a plain, straight, personal story may divert, in time, some other body from doing the same thing.

The word "bad" in this sense has an unfortunate importance. Really bad things are fool things. A virile crime is but a misdirected artistry. That is why we hear so little of the really bad.

I was raised in a country where the man who didn't stop from any business to kill a rattlesnake or to do his best to put out a prairie-fire was regarded, not as negligent, but as an active public enemy. So, while it is an unpleasant thing for a vain man to do, like Bottom, of old, I shall write me down an ass.

Good. Write me down an ass. The ass is a beast of burden, and I carried my pack.

Some things I shall extenuate and set down a few oughts in malice.

To me, cause and effect are these: I took Bromo-Seltzer for a headache. It cured the headache, as advertised. It cured many a headache, but at the end I did one year in a sanitarium and three and one-half years in a lunatic asylum.

I would not detract an atom from the value of this remedy. It absolutely cured sick headache—migraine, that most miserable of maladies. Most men who earn their bread and extras by the labor of, if not the sweat of, their brows, know this damnable affliction: to wake up in the morning poisoned, dizzy with nausea and pain, useless and utterly wretched; to have from one to three days of it, actively, and from one to three days passively, convalescing; and always, with fixed depravity, choosing those times when circumstances demand a man should be at his best.

Right living will not prevent migraine. What it is, no one knows. From Osler down it is a matter of conjecture in treatises on the practice of medicine. Some incline to the belief that it is a sort of epilepsy, some to the notion that it is psychic in origin. None who have tried, however, are in the least doubt as to the

results. Its etiology may be vague, but its presence is valid in the extreme.

What sweeter thing does life hold than the easement of extreme pain? The old darkey had a strong logic when he bumped his head against the post, because it felt so good when it stopped.

Bromo-Seltzer was the thing to slip under the armor of my conceit: to me, as to many, many others now, the lack of opprobrium and of immediate ridiculous or disgraceful performance in the use of this fizzy and absurd man-wrecker, robbed me of my judgment. I knew a great deal better than to use any drug. A chemist by profession, and fairly widely read in medicine, I knew that no man, however strong, could use any stimulant or analgetic indefinitely without footing a bill.

THAT was my judgment. Where is the man whose judgment is better than his conceit? Not here, at any rate. I was a strong man, physically, for weight and inches, few stronger; I prided myself on my will, and with facts to back it. I had maintained myself in the West under circumstances not unattended by danger and the necessity for decision and the domination of other men. I had made a living at three different professions which I had taught myself: and it requires will for a lazy man to learn the technique of a trade well enough to earn a living at it. I was no hally amateur at anything. I fancied myself exceedingly and am obliged to state, more in sorrow than in anger, perhaps do so still. After all, it is our conceit that whistles a hill.

However, mine got a rude bump. As nearly as I can remember, my introduction to this gay deceiver, Bromo-Seltzer (What an asinine title for the thing a man has to acknowledge as his baner!) took place in this fashion. We met by chance—the usual way.

I had to be in New York City on a certain chilly, rainy day, and I was sick to the soul with migraine. I wandered from one office to another, listening dully to the useless things that phantom people told me. That dirty pain banged and walloped at the back of my eyes and quaked after quail of nausea sprung my knees from under me. And I was cold and clammy with a cold that reached my spinal column.

I got done with the business and faced going home. I lived in Staten Island, and had one elevated train, one ferry, one railroad, and a mile walk before me. It looked like too damned much, plus.

I never felt like suicide, but I should have enjoyed aching that pain out of existence. Well, I toddled along, until a man hailed me. "You look sick," said he; "what's the matter?" I told him.

"I get 'em, too," said he. "Ever try,"—etc., etc., etc. You have doubtless been through it.

I had tried them all.

He pointed to a nearby saloon. "Come in and have a drink, anyhow," he said. "It will brace you up to get home."

I told him I had tried drinks to get home on before, and would not again if I never got home. A little alcohol to pump things up made my headaches something to wonder at.

"Well, come in and sit a minute, anyhow," said he. "You look all in."

Anything was better than trying to think, so in I went.

He had a whiskey and we sat at the table. The bartender asked me if I was not feeling well.

"No," answered my friend. "Headache—don't you know something good for a headache?"

"I sure do," replied the bartender, with the kindly smile of the Samaritan. "Something that knocks 'em every time. I've stood behind this bar passing out drinks when I couldn't 'n' told you what my name was, my nut ached so. But this gets 'em!" And, from the shelf he reached down a blue bottle—the twenty-five cent variety.

Skilfully he mixed it in a tall thin glass, and offered me the creaming, hissing Respite and Nepenthe.

I made a strong effort—my stomach was not receiving that afternoon—and gulped it. From the first it tasted good.

"There!" said the kind bartender. "That'll help what ails you! You'll feel like a fighting cock in an hour's time—or if you don't, one more swig'll fetch it, sure!"

Yes, I swallowed it—my first mileage ticket to Ward's Island-beside-itself-and-the-Sea!

Yet, O Bromo-Seltzer! You granulated betrayer! You effervescent destroyer of homes! You made good on that occasion—and on many another.

Soon the pain began to withdraw, like a cowardly tiger. I couldn't believe it, at first. My idea, from experience, was that remedies did undesirable things to you. They either promptly returned the way they came, or added a new ache of their own.

But the blissful slowness that came upon me was genuine. A sense of victory helped along.

The one thing I had never been able to master was migraine.

I had typhoid fever all by my lone in the Black Hills, and pulled through on a diet of baking powder biscuit and salt horse. This form of nutriment is highly temporary with typhoid convalescents.

TO return to our scapegoat, for lack of mutton. The pain receded, slowly and sullenly, still making occasional alarums and excursions, but whipped.

Lord! How my spirits rose! I felt almost hysterically happy. I could have written a resounding hymn to Analgesia.

From this time on I had a confidence which did much to prevent attacks of headache. If the matter could have rested here, the benefit derived from the use of Bromo-Seltzer would have been real and lasting.

But one must always reckon with the psychic effects of using any drug. It stands to reason you cannot alter any bodily condition without affecting the brain and nervous system. The most active ingredient of Bromo-Seltzer is Acetanilid. The whole matter of the action of this drug, like most drugs, is not understood, but it certainly has a large influence on the nervous system; possibly as a vaso-constrictor. Now this would influence the blood supply to the brain, and, therefore, it would also seem reasonable to suppose it would influence what a man thinks.

This I know. I at once became possessed of the idea that if Bromo-Seltzer would cure a headache by an occasional dose, a constant diet would be steadily beneficial. I admit this might be the natural foolery of the man and not the effect of the drug.

I tried it. I took a teaspoonful three times a day. For some time I felt a great stimulation. The truth probably is that, as with alcohol, Acetanilid stimulates by inhibiting certain processes or trains of thought. As time wore on the dosage was increased until I finally reached my maximum—a moderate little pound bottle per diem.

This last statement has been disputed. I have been told by physicians that I could not take a pound a day. The only answer I can submit is that I did. Not every day, to be sure, but at least three times in the week. If you will figure out the number of glasses contained in a pound bottle of Bromo-Seltzer, allowing one teaspoonful to the glass, you will readily see that the principal business of my life was bromo-seltzering. I would

"With the help of a kind and very able nurse, I started the art class on Ward's Island"

Copyright by the artist

get up at least a half dozen times in the night "to hit up" my special beverage.

There was not much outside sign of deterioration. As I said before, I was an uncommonly strong man, and the early open-air life on the prairies stood me in good stead. Even the blue lips, by which you may easily recognize most Aetnoidal drunkards, were absent. My family and friends, who became alarmed, induced me to consult a physician. I laughed at the idea, but consented. The physician could find nothing wrong with the heart action, except, strange to say, that it was a little rapid. Somewhere I had a dim feeling that things were not right, but this was not sufficiently near the surface to make me break off. I wish to state that, unlike morphine, the bromo-seltzerite does not usually attempt to conceal his vice. The particular psychical effect of this drug (in most cases) is to breed an arrogant and defiant attitude. I speak from the knowledge of many cases brought to my attention since it became known that I had cured myself of the habit. Until you fall a victim you have no idea how prevalent this form of intoxication is.

To get at once to the smash-up, I will drop a history of the intermediate decadence. Family troubles and financial troubles multiplied. In the worry and strain incident upon this, my drug began to lose its potency. I suddenly found myself in a most hideous state of nervous wreck with no "Balm in Gilead." At this point I made up my mind to quit. As I remember it, the conviction came to me in a flash, without previous reasoning.

ONE afternoon in the early winter I threw what was left of my stock of Bromo-Seltzer in the garbage pail and prepared to go through the ordeal I knew awaited me: To sit in a chair with my heart beating with such violence that the chair rocked to the pulsations; to have sudden shocks from the dilation of the arteries, when it seemed that the blood must burst from my body; to be done with sleep entirely and to have a misty following of enemies who soaked behind the head of my bed and whispered, so I just could hear them, "Now we've got him!—Come on! You go to that side, and I will knife him," etc. This band of Thugees were not rough rascals at all. They were a well-dressed, well-groomed crowd, although I seldom got a good look at them. They always hid behind the corners of my eyes. I also knew they were phantoms, and that if I came to believe in them I was a "gone gossamer." Yet, they were so real, and the imaging of them so artistic and complete, it was difficult not to believe in their reality. I knew better than to cast anxious glances behind me when out for a walk, but at times the temptation to look just once at the man who was about to stab me, was almost irresistible. I suffered various physical sensations, annoying, uncomfortable, or ghastly—such sensations as feeling oneself covered with molasses, and adhering to the bedclothes or to one's underclothes. To feel like a human pin-cushion, with thousands of pins trying to press their way from within, out through the skin. To feel your head vanish entirely, and amble along the city streets, wondering why people did not notice the loss. These physical sensations could be multiplied by the hundred. I only give examples. Two that annoyed me the most were, first the sensation of turning inside out, which I cannot, in the least, make clear to anybody, not even to myself now; and second, the sensation of having the abdomen filled with broken pieces of glass. These pieces of glass seemed to be triangular in shape. The pain from their presence was not extreme, but the annoyance was almost unbearable.

During this time, it is hardly necessary to say that I desired a glass of Bromo-Seltzer. If I passed by a drug-store and saw any one getting a glass of soda, the association of ideas would make the water stream from my mouth, and my stomach seem to throw a handspring. To hear anyone stirring something in a glass, brought on the pangs of abstinence. Really, the craving was something abominable. I had lost all interest in food, and what little I ate distressed me severely. Tobacco was a

hollow mockery: I refused to take whiskey or any other stimulant, and I slept possibly three or four hours a week. It was a gay life. However, I managed to keep on working. I still keep the record—an illegible scrawl—that I made of the sale of a story three days before I went to the sanitarium.

ONE day I blew up altogether. I neither did, nor attempted any violence to anyone, but just what happened I don't know. My lawyer rushed down to see me, and I at once agreed to go to a sanitarium. You must understand that there was a something or a somebody, which remained normal through all this performance. I think one of the most maddening features of the whole business was the calm attitude of this curious ego within me, who took note, apparently without the slightest interest or sympathy.

Above are mentioned only a few of the many symptoms of a violent nervous attack. Anyone who is interested in learning the bizarre horrors of extreme neurasthenia can look the matter up in a book on nervous diseases.

Here I wish to insert a few remarks concerning the difference between neurasthenia and insanity.

All these sensations that I felt were real sensations. Many a time I have taken off my shoe, because I felt that a number of little straws had gotten into the bottom, and pricked me when I walked. The taking off of the shoe revealed there was nothing there; but, you see, it makes no difference to the nerve whether some outside body makes it feel, or whether it feels "on its own hook." If the nerves wish to feel that some one is boring a cork-screw into your head, that is exactly the sensation you will get. The sane man, if afflicted with these troubles, recognizes them as delusions, and although he can't help being annoyed, or may even go to the length that I did to satisfy his mind that nothing exists, explains it to himself and endures; whereas the insane man is the dupe of his delusions. Most of the doctors on Ward's Island to whom I spoke about the matter, agreed that this is right: When a lunatic complains that someone is driving nails into his head, his disordered nerves give him exactly that sensation. The error he makes is to attribute it to outside influence, and not to a disorder of his own nervous system. While this explanation may strike you as very commonplace and obvious, yet the mistakes made on this very head are innumerable. If a neurasthenic says "I feel like the devil," he means that he is not enjoying life. If the lunatic says, "I feel like the devil," he means that he has become identified with his Satanic Majesty. A matter of so simple a phrase as this might get you into a mix-up in an insane asylum.

TO come back to the personal history: I landed in a sanitarium in Connecticut. In this place I remained a year. Here I first encountered the new school of medicine, that made light of the fact that I had taken one pound of Bromo-Seltzer per day, and attributed all my ills to certain wrong processes of thinking. Here they strongly advised plenty of exercise, fresh air, etc. Notwithstanding the bad shape I was in, physically, weighing at the time about 110 lbs., I took their advice and walked from fifteen to twenty miles a day, played tennis, etc. The result was that I used up what little reserve force I had. The culmination of this was an attack of insomnia that lasted from July fourth to September eighteenth. The racket of the fourth of July seemed to be the factor that ended sleep for me for that period. This time of nearly two and one-half months without sleep, and with all the distressing physical and mental conditions, still seems to me to be about the limit of human endurance. I do not care to enlarge upon it. I will only say that I did not have a headache.

It took first a change in doctors, and then large doses of hypnotics to start me sleeping again. I was on my back seven months on a milk diet. Under this "rest cure," which, I believe, was first formulated by Dr. Weir Mitchell, the first favorable symptom appeared. I gained in weight. When I reached about 140 lbs. I began to sleep naturally.

The awakening from the first sleeping is horrible. All the symptoms seem to recur with doubled violence. At the end of the year I went to Ward's Island as an alleged insane person.

The diagnosis in the psychopathic ward in Bellevue was dementia praecox, an incurable disease. On arrival at Ward's Island this diagnosis was changed to psychasthenia. These are two out of six diagnoses with which I can enrich the family history. Shortly after reaching Ward's Island I was able to walk around, but for two and one-half years there was nothing approaching the normal in my condition. When I spoke, it seemed as if my real ego was situated at least twenty feet behind me, and while I could hear myself discoursing rationally enough, the actual person who carried on the conversation seemed to have no connection with me whatsoever.

I was also greatly troubled with my eyes. The whole arterial system was "on the Fritz." As a consequence,

Finally I made up my mind to try for outdoors. I came to New York City and started to write. I have made a living. I am not well yet and don't know that I ever shall be, but what I am most thankful for, is to be as well as I am.

As for Bromo-Seltzer I wish to add that I have found in every walk of life victims of this drug. People take it as the most commonplace thing in the world. Those who would shudder at a dose of morphine, help themselves to three or four glasses a day.

While dictating this, my stenographer interrupted me. "Do you really think this is such a dangerous medicine, Mr. Phillips?" she asked. On inquiring why she asked, she said, "My brother has violent headaches and Bromo-Seltzer cures them for him at once. He likes to take it, because he says it makes him feel so good."

The only thing I have to say to her or to anybody else is, that probably it will not make you feel so good once you have established the habit.

"They were a well-dressed, well-groomed crowd"

the lenses of the eyes were distorted, and I had a number of indistinct images on the retina; besides, the eyes refused to coordinate. It was during this period and under these disadvantages that, with the help of a kind and very able nurse, I started the Art Class on Ward's Island.

BUT as these conceptions would be a little vague to my fellow patients, I stuck strictly to what I had known of art, before the advent of psychasthenia.

Finally this nightmare in hell began to abate. Things would straighten up, at first, but for a minute at a time, and then for longer terms. Then mine enemy would descend upon me apparently stronger than ever. This is the common history of nervous diseases.

I DID considerable work while in the hospital in the way of painting and drawing, but not a great deal of writing. Until the last, the only thing I did of any length in the way of literary composition was to write an account of the history and workings of the Art Class for the hospital report.

Ministers, lawyers, department store employees, drug clerks, women stenographers, policemen, bartenders, in fact, the whole United States apparently is absorbing Bromo-Seltzer. To my mind, darkened by a personal experience, it appears that they are on the fussy and effervescent road to ruin, but that may be merely prejudice. I should be very glad, if some one who takes the stuff, on reading this much abbreviated history of nearly five years of extreme misery, would do what I absolutely refused to do in time—Take heed; and if he must use a drug, substitute morphine, cocaine, or something comparatively innocuous.

While I was at the sanitarium, one man came back three times for treatment for the morphine habit. That is to say, he had been "off the stuff" twice in a year, while I was merely starting on the road to recovery from Bromo-Seltzer, for sale at all Drug Stores, 10c.-25c.-50c. to \$1.00 per bottle. But for me, while I do not wish to discredit or detract from a highly efficacious remedy, when I now have a headache, I do not take Bromo-Seltzer. Try it at your own risk.

A Troop of the Fourth Cavalry

Six hundred and fifteen men have deserted from this cavalry regiment in the past ten years—about one-half its average strength

The Honor of the Army

By CHARLES JOHNSON POST

IN the previous instalment Mr. Post described the court-martial system. In this article he tells of the way in which justice is meted out to enlisted men for drunkenness and other crimes

IN the Post Exchange down in Panama—the Post Exchange is the soldiers' club where they relax and are off duty, and where they have the library, the checkers and recreation rooms—a couple of soldiers were playing bottle-pool quietly. A corporal had attempted to join the game. He told one soldier to be careful or he, the soldier, might knock the leather pool-bottle over.

"There is no betting in this game by men outside the game," returned the soldier spoken to.

"Then," continued the corporal, testifying before the court-martial, "then he said, 'I don't allow an recruit corporal to interfere with any game I am in.' I said, 'Look out, Anderson, I may pay you under arrest.' He said, 'I am taking no orders from a recruit corporal.' I said, 'You are under arrest now, report to the first sergeant!'"

Here it was in the soldiers' club, the Post Exchange, off duty and two soldiers playing a quiet game, until interrupted.

"Why," the corporal went on, in his testimony before the court-martial, "it looks like it would be the duty of my rank to 'get' men who would talk back to a non-commissioned officer of the company!"

The game was broken up, the soldier arrested. Later the soldier attempted to

strike the corporal when he came into the squad-room.

An officer drew up charges and his ignorance both of common English and legal terms found expression in the charge that the soldier "did feloniously assault and strike with his fist." It is impossible in the present state of the language and the law to "feloniously" assault a person without a weapon.

AND the soldier who had been playing bottle-pool, off duty, and in the enlisted men's club, was sentenced by the court-martial to six months' hard labor and a fine of \$60.

So that talking back to a hysterical corporal in a club room is fully as serious an offense as being drunk as a sentry or sleeping on post.

Last summer a private soldier, William F. O—, 26th Company, Coast Artillery Corps, was ordered by a lieutenant to "go out and cut grass." He refused. Thereupon he was tried by a court-martial.

He was sentenced to be dishonorably discharged, forfeiting all pay and allowances due him, and to be imprisoned at hard labor for two years!

After he had refused "to go out and cut grass"—cutting grass is, probably, in some occult way a splendid and effective military drill, and perceptible only to

those having this superlative court-martial-sense-of-honor—it was discovered that when he had enlisted less than a year previous, he had a wife and infant child living. This he had not told the military authorities.

Thereupon he was again tried by the same court-martial charged with "fraudulent enlistment," and sentenced to six more months in prison at hard labor on that account.

The official record of that soldier's court-martial shows that he had an officer as counsel. Yet there was not a word spoken in his defense, neither question, statement nor plea—nothing but the plea of "Guilty."

A YOUNG American, Edward W. C—, enlisted in the Army. Nine months later, as a member of Troop D, Second Cavalry, he was out in the Philippines in the Island of Jolo. He was charged before a general court-martial with wasting twenty rounds of .45 calibre ammunition that had been issued to him.

He pleaded "guilty" formally, told the court that he did not desire counsel and that he would like to make a statement.

"Fistod ammunition was issued to me," he said briefly, "in the field about two or three days before we came in from the field. We came in at night and I took

Fourth Infantry at Fort Thomas, Kentucky

In the past ten years 455 men have deserted from this regiment. The strength has been generally around 900 men. In these ten years, it has turned out about fifty per cent of its employees who preferred to be fugitive criminals rather than remain in the service.

off my roll and put the pistol ammunition in my saddle bags. The next morning we turned in our pistol ammunition and I went to look for mine and I didn't have it. It was gone."

He was sentenced by the court-martial to be dishonorably discharged, forfeiting all pay and allowances due him and to be imprisoned at hard labor for one year.

Now listen to what the Major-General in command of the Philippines has to comment:

"In the foregoing case of Private Edward W. C—, Troop D, Second Cavalry, the accused, who was without counsel, after pleading guilty made a statement which, while vague, was at the same time so much at variance with his plea that the court should have directed the entering of a plea of not guilty and then have proceeded to hear evidence showing the circumstances under which the ammunition disappeared. While the foregoing is not necessarily sufficient to cause disapproval of the sentence, it is thought that there may not have been such full hearing in this case as the circumstances demanded. In order that this offender may not altogether escape punishment for the offense of which he has pleaded guilty, the sentence is approved, but extended to confinement at hard labor for six months and forfeiture for ten dollars per month for the same period."

The italics are mine.

AND this review itself is a curious document. The plea of the soldier was at variance with his statement; the court should have ordered a plea of not guilty and probed the simple facts; in other words he was not guilty as charged or as he had pleaded. And then, in the next breath, "in order that this offender may not altogether escape punishment for the offense of which he has pleaded guilty"—the very offense in which it had been just pointed out that it was more than doubtful if he was guilty!

A court-martial that met on Corregidor Island last summer seems to have combined in full measure both viciousness and ignorance of its own rules and regulations. A soldier in the Third Battalion of Engineers got tired of putting cinders on the picket line out in the rain. He refused to go on and was held, and properly, for punishment. Perhaps the cinders could have been put on the picket line the day before, or the day after, or when it was clear—it makes no difference; the order itself may have been stupid—there is no determining that. He would not go on shovelling cinders then.

The court-martial sentenced him to dishonorable discharge—losing him his American citizenship—forfeiture of all pay and allowances due him, and to imprisonment as a felon at hard labor for two years.

Another soldier from this same Battalion of Engineers was tried by this same court-martial. For the offenses named there is a maximum punishment prescribed by law—a law that was on the table at the elbow of every officer—and to exceed those limits is expressly prohibited. This soldier was absent at reveille: maximum punishment, forfeiture of \$1. He was absent from retreat: maximum punishment, forfeiture of \$1. Breach of arrest: maximum punishment, one month's confinement at hard labor and forfeiture of \$10. He had represented himself as a corporal outside the post; the penalty for boasting and bragging is unknown, you can adjust it to suit yourself, apparently.

This soldier could have, at the utmost, been punished with \$12, in forfeited pay, and one month's confinement. That court-martial, however, sentenced him to dishonorable discharge, forfeiting all pay and allowances due him and to be imprisoned at hard labor for two years!

Private William H. B— of the Coast Artillery was in the "third conduct grade." He was called into the captain's office and a collection of rules was, more or less, read to him; also he received what is commonly known as a "talking to"—a bit of a "wiggling," in fact. Later Private William H. B— decided he wanted to leave the post for a very short time, and after figuring up he decided that he would take the punishment for absence without leave—which it would necessarily be. This penalty runs from a fine of \$2 to \$10 and ten days in the guard house, depending on the length of the absence without leave.

So he went. He had served one previous enlistment with a character and record of "Very Good."

On the court-martial that tried him sat an officer who was present at the "wiggling." He was, in fact, functioning as a witness, a judge and a jurymen. As the case proceeded it became a matter of veracity between the soldier and the captain, not as to facts but as to the soldier's understanding of the purport, intent and meaning of what had been said and read to him.

Again was the soldier indicted, charged with perjury.

The highest authority on military law—the military standard, in fact—lays down this rule, a common-sense rule, that "if a man swears to what he believes or remembers, he is not in general guilty of perjury"; and the crux of this case was purely the understanding and memory of a private soldier as to the legal or serious purport of certain statements. That the soldier, in good faith, had understood as he testified was sworn to by two witnesses to whom he had repeated his understanding of the "wiggling." It focused on the statements of an officer as to a soldier's understanding, and the word of a soldier as to his own understanding plus the witnesses to whom he had repeated it.

The court-martial sentenced him to be dishonorably discharged, forfeiting all pay and allowances due him, and to be imprisoned at hard labor for three years.

Sergeant William P. L— of the Field Artillery was serving his fifth enlistment. He held four full and honorable discharges from the United States Army. In the first two his rating was "Good" and in the last two the highest that can be given, "Excellent"—over twelve years of faithful service. He was married.

The wife of the wagon-master at the post and his wife had a quarrel, the wagon-master being an employee of the Quartermaster's Department.

In a foolish moment the sergeant allowed himself to be badgered into becoming a partisan; his wife escorted him to

Major-General Leonard A. Wood. The highest officer of the United States Army and Chief of Staff. Major-General Wood received his commission on August 8, 1903—about ten years ago. It is interesting, with this as a basis of comparison, to compare some phases of the Army efficiency during that period. In that time 46,689 men have deserted—they would rather face the life of a convict than continue through the term of their enlistment in the Army. Forty-six thousand young men firing as Army-made criminals! And Major-General Wood is a strong upholder of a larger, more expensive and a more efficient Army.

the rear of the officers' row, where the other lady happened to be, downstairs, and they proceeded to slang her in free, flexible and flowing English, suitable to that grade of quarrel, and generally used freely by both parties thereto.

A major of the Second Cavalry came out and ordered him to go away. The sergeant went, and as he went the wagon-master rose up beside the path, both with rage. Some blows were passed and then, suddenly, the sergeant came to himself. He started to run, to get away. His fifth enlistment, his sergeant's chevrons, his family, everything flashed through his mind. The Major started after him, calling upon him to halt. The Major puffed valiantly after him, turned loose more soldiers, and in a tumult the sergeant was brought back. Then came a court-martial.

At the court-martial the wagonmaster swore to his own lamlike sweetness of disposition.

He charged the sergeant with threatening him with a loaded revolver—and the witness who picked up this gun testified that it was wrapped up in a newspaper with a string around it!

Anyway, this sergeant—twelve years' service for Uncle Sam and with high rating, married, too—was found guilty of everything they could think of to charge him, and sentenced to dishonorable discharge (with its loss of American citizenship), forfeiting all pay and allowances due him, and to be imprisoned at hard labor for three years.

While the soldier who had testified to finding the revolver wrapped up in newspaper and string—and who admittedly was the first to find it and lay hands on it—was promptly charged with "false swearing" in an effort to send him, too, to prison for two years. A different court-martial tried him and his testimony was upheld; he was acquitted.

THE court-martial can—and does—punish with a merciless severity; at times even beyond its own prescribed, military law limit. The order of President Taft limiting punishments specifically and stating:

This order prescribes the maximum limit of punishments for the offenses named, and this limit is intended for those cases in which the severest punishment should be awarded. In other cases the punishment should be graded down according to the extenuating circumstances—

is violated by the awarding of maximum sentences in an all but steady succession.

The articles still, in a democratic country under republican institutions, prattles officially of "an officer and a gentle-

man" and puffs over the characterization of a "court of honor" as of a superior flavor. Every court of justice is a court of honor, not as a matter of brag and boast but as a matter of course.

I HAVE shown some of the power of a court-martial to punish the ordinary soldier. I will show more of that power, fantastically used and abused, against the soldier, and same—and greater—offenses in officers gently silvered o'er.

have little to choose between drugs or drink; either one is fatal. In the business world even the occasional drunkard is crowded to the wall; he cannot climb the ladder, and is lucky if he can keep from starving. The thick, drink-clogged brain is a potential menace; we do not wait for its sluggish reflexes, we dare not.

Therefore it is not surprising to find that in the Articles of War—the Articles of War being laws enacted by Congress—the law that "any officer who is found

drunk on his guard, party or other duty, shall be dismissed from the service. [The italics are mine.] Any soldier who so offends shall suffer such punishment as a court-martial may direct." By the order of the Presidents, each for his term, the punishment for drunkenness in soldiers' grades down from the maximum of drunkenness on sentry duty, punished by six months at hard labor at the post and a fine of \$60, to "drunkenness at post or in quarters," punished by a fine of \$3. This is the military law and those punishments may not be exceeded, each in its class, by a special prohibition.

And the court-martial regards drunkenness in soldiers as a very serious matter. Rarely are they charged with merely drunkenness. The changes are rung on the component acts, each specified, and then the sentence given is in excess of the prescribed maximum. So that drunkenness—in a soldier—is not likely to escape easily.

Private Charles F. McC—, Company A, Fourth Infantry, was drunk while on guard over a prisoner. It was a properly serious offense.

He was charged with (1) being drunk while on post guard; (2) being drunk while on guard over a prisoner. This at Fort Crook, Nebraska.

IN passing it may be noted that both of these specifications were one and the same act—they were inseparable. Not that Private McC— is entitled to sym-

pathy, but that—it was not Emerson who said something to the effect that we dare not ignore the trampled rights of even the wrongdoer lest, presently, the innocent shall be violated? The maximum, legal punishment for this offense was not over six months' confinement at hard labor on the post and a fine of \$60.

The court-martial sentenced him to the six months at hard labor and to a forfeiture of all pay and allowances due him and to be dishonorably discharged, thereby forfeiting his American citizenship.

Another private, this time from the Sixth Infantry, was found drunk on guard. He

During the past ten years 14,637 men have deserted from the Coast Artillery and Field Artillery of the United States

*Coast Artillery at Drill with a 15-inch Gun
In the past six years 5,582 men have deserted from the Coast Artillery*

*Field Battery at Drill
In the past six years 8,121 men have deserted from the Field Artillery*

was charged with being drunk on guard in violation of the 38th Article of War and then "sleeping on post" in violation of the 39th Article of War. Both occurring at the same time and place—both being, in fact, the same act. He was convicted of both and sentenced to pay a \$12 fine for one, and six months at hard labor and a \$600 fine for the other.

Private Frank Szymko, of Battery D, Fourth Field Artillery, became drunk and violent while on duty at the battery stables; it turned out that he was a cocaine user as well. He was tried for drunkenness on duty, drunkenness in quarters, various minor acts and with abusive language to a sergeant, all while drunk. Later, as a prisoner, he tried to get cocaine, this being another charge, also occurring while he was drunk.

The court-martial sentenced him to be dishonorably discharged, forfeiting all pay and allowances due him, and to be imprisoned at hard labor for one year and a half.

PRIVATE ADAM BEY, of the Eighth Infantry, was charged with various forms of disrespect toward his commanding officer; also, having been told to remove his hat, he failed to do so, and after a second command from the first sergeant to take off his hat he did so only after deliberation and in a "sullen, surly manner."

At the court-martial the first sergeant testified to the fact that the soldier was too drunk to be fit for guard duty. The man was just drunk, in other words, when the above offenses occurred. The court-martial sentenced him to six months' garrison confinement at hard labor and to a fine of \$400.

Private William J—, of the Hospital Corps, was charged with drunkenness and various neglects arising from it on that occasion. Also there was in addition a queer hodge-podge of specifications of threatening language and disobedience of orders—given while he was drunk—and the suggestion that he had attempted to blackmail a sergeant while in that condition. That part, however, turned out to be a man's nest.

He was sentenced to be dishonorably discharged, forfeiting all pay and allowances due him, and to be imprisoned at hard labor for six months.

This was a soldier who had served nine years in the Army and who had two full term enlistments to his credit, each with a rating of "Very Good." By a little judicious manipulation, or provocation, a witless, drunken soldier could pile up

years of felonies—felonies from a military standpoint soldy—and with never a limit. Drunkenness is a sufficient military crime in itself—it can be no worse with the hat of the soldier on or off or by his drunkenly huddling curses at a sergeant. Therefore it is interesting to quote the only rational statement from an officer acting as prisoner's counsel and made in this case:

"It is a question whether or not a man should be given an order or given a duty

So it is obvious that the officers of the Army, who, from time to time, are detailed to serve on these courts-martial, fully realize the responsibilities of the military service on the part of the soldiers and promptly punish offenders with sentences of fine and imprisonment. These are only the enlisted men; if a non-commissioned officer, a corporal or a sergeant is found guilty of drunkenness he is reduced to the ranks in addition to the fine and confinement at hard labor.

Cavalry
8,492 soldiers deserted from this branch of the Army during the past ten years

Instructing a Section of New Recruits
These young men are of good character and temperate; out of every

five who applied last year but one was selected. And from such recruits in the past two years one out of every two desertions has come.

to perform when he is under the influence of liquor or otherwise incapacitated, which appears to be the case. A man in that case might not only disobey the order, because he would not realize in the first place that it was an order, but he might be defiant."

It is noteworthy to record this common sense, rational view as expressed by Captain Gwyn R. Hancock of the Coast Artillery Corps. The soldier had been found guilty of every component act of the drunkenness.

These are not picked cases; they are samples from many records.

execute promptly the lawful orders of their superiors." Therefore, apparently, there is no time—unless an officer be asleep, under medical care, or dead—that he does not possess the full duty and authority of his rank, and where the penalties for disobedience or defiance in an inferior would not apply. He is never without responsibility and authority.

WE have just seen how savagely the court-martial punishes drunkenness among the enlisted men, now let us look at its views on drunkenness as applied to officers.

THERE can be no fault found with these sentences. A drunken soldier in a useless menace in time of peace and in a campaign the possibilities of evil are infinite. It should be stamped out. The fine of \$400 imposed is, it would be fair to say, about the equivalent of three months' pay. A fine of three months' salary is not a light fine. And these punishments are for the enlisted men, the common soldiers in the ranks, who have none but responsibility for themselves, or, at the most, subordinate responsibilities as non-commissioned officers. It is their duty to give unquestioning, implicit obedience to the commissioned officers or to suffer the penalties of a felony, viz., imprisonment as a convict at hard labor for two years. The commissioned officers are those in authority, and, having at their command the most powerful pressure that may be brought to bear on those under them.

Therefore let us look once more at the 38th Article of War—a law of Congress, Section 1342 of the Revised Statutes—that states:

"Any officer who is found drunk on his guard, party, or other duty, shall be dismissed from the service."

Some light, perhaps, as to when an officer is on duty may be found in Paragraph 1 of the Army Regulations which states that "All persons in the military service are required to obey strictly and to

Gaiety

By JOHN HUNTER SEDGWICK

Illustrated by May Wilson Preston

GEORGE A. PUSENDORFER was reckoned a serious man in Pittsburgh. At a quarter to eight every week day he ate a serious and heavy breakfast and on Sundays he took the same sort of meal at nine o'clock. Soon after breakfast, which was shared by Mrs. Pusendorfer, it was his custom to give that excellent and accomplished woman several pudgy kisses and then to take the electric car for his office. Here he worked at his profession of attorney, drawing leases, wills, deeds of trust and all those delightful instruments that go so far to cheer our existence. At one o'clock he used to repair to the Turradoga Boot and Shoe Club where he ate a hearty but serious luncheon with other serious men. They indulged in grave pleantries, but everything was responsible. All spoke gravely of the Constitution, of Democracy, of Woman's Sphere in the Home, of Progress. They were serious, dynamic men that might overeat occasionally and did run to double chin, but they treated the Deaconlike like a hot plate. They might be merciless but they were not light-minded.

George A. Pusendorfer suffered unconsciously from what may be termed "suppressed leg," and used to read the more daring jests of the "Flutterings" column in his favorite paper, which was written by a caustic young boulevardier from Logansport, Indiana. From this column he derived an amusement that he did not always communicate to Mrs. Pusendorfer. You cannot be surprised, then, that when the Pittsburgh Salt and Smoked Provision Dealers' Association of which Pusendorfer in his capacity of serious man was a member, made preparation to take a European trip, George decided to leave Mrs. Pusendorfer for a few weeks.

On the run from Calais to Paris they

abated somewhat of their seriousness and Pusendorfer was even heard to say that "they set an elegant table on these French dining-cars." And Paris welcomed them, or said that it did, which is much the same thing.

JUST how George became separated from his companions will always remain a mystery, but he did and found himself alone on the boulevard about ten o'clock. Being a serious man and convinced of his own worth, he strolled along and watched the crowd: the *cuirassier* in his burnished helmet, the law student with his spade beard, Clochette de Jalmy as she was whirled by to sing a song at a *revue*, the green lights, the red lights, the pink lights, the steady lights and the lights that revolve like an alimentary canal over-taking itself. All these things George Pusendorfer saw, and many more. He meditated upon the superiority of democratic ideals in the land of great achievements, and also noted that light-tipped boots looked well on some feet. A light rain began to fall, a very little but enough to encourage the copious liquid mood of the Paris streets. The November air was sharp and the *cocolets* walked briskly as they cried the names of the newspapers. Pusendorfer sought shelter in a café and just as he had chosen a table a voice in good English but with a marked French accent said, "How do you do tonight?"

Startled, Pusendorfer turned and saw a very good-looking woman smiling gently at him.

"Will you pay for a drink, little one? My shoulder blades are chattering," and she motioned him to the chair beside her. It is a terrible thing for a serious, constructive man to be called a little one and it is still more terrible for him to find himself obeying the user of the term.

In Pittsburgh nobody would have called George a little one. Men would have called him a forceful, dynamic, progressive man, but never "little one." It is extremely painful to be denied a dignity one does not deserve, but Pusendorfer said, "Pleased to meet you," and he sat down.

"Order something," said George's new acquaintance as a waiter came to them and inclined his ear in hither patience. "Refreshments, not coarseries. Remember my shoulder blades. Later you may talk brilliantly, friend of my youth."

"*Deux cognacs, avec 'n peu de sucre*," said she. "Now then, M'sieu, to your good health and many thanks," and she pledged him. Dumbly, as in a dream, did the constructive, dynamic Pusendorfer do the same, inwardly raging thus to be directed.

"Tell me, what is your little name?" With helpless indignation Pusendorfer told her.

"George? *Mon Dieu, quel nom!* And Pusendorfer? Droll of a man, to-night you are Raoul. Tell me, Raoul, have you a wife?" and the woman leaned forward and brushed a rumph of sugar from the massive arm of Pusendorfer.

"Paris seems to be a very gay place," said George sulkily.

"My faith, yes," said George's friend, laughing. "You like gaiety, Raoul. You have that appearance. Yes, Paris is an extremely gay place—you see how pleasant the weather is. Your wife is in Paris with you, Raoul?"

BUT George was not to be shaken from his purpose of dynamically changing the subject of conversation far away from the abashed Mrs. Pusendorfer. "Yes," he said critically, "Paris is a very gay place and the cost of all these electric

Her fingers are saying, "*Deux cognacs, avec 'n peu de sucre*"

lights must be tremendous. Do you have the Edison system? We have it at Pitts—" he pulled himself up and looked carefully into the street at a man picking up a cigarette butt.

"I am not electrician," said the woman. "Are you of that trade? And what is Pitts?"

George A. Pusendorfer resented even this innocent and unintentional neglect of a beautiful city.

"Perhaps you didn't hear me. I refer to Pittsburgh, the leader in the steel industry and a good many other lines," said George firmly and in that patriotic tone that so much enhances any conversation.

"Ah, yes," said she. "And he is no doubt a friend of yours. But is he an old man?"

With an angry look in his small eyes, George said, "It's not a man."

"*Mais parfaitement.* A lady, then, and beyond doubt very rich," and the woman smiled indulgently. "Raoul, why do you wear such strange boots? But first, order me another cognac."

SHOCKED beyond description that his boots should be thus criticized, George A. Pusendorfer determined to show the heathen their blindness. "That," said he manfully, "that is the orthopaedic last. It gives the foot a chance to grow naturally, like the statues." To his surprise, the woman seemed very much pleased with the idea.

"Raoul," asked she, "are you the Winged Victory or just Apollo? It is a gratification to talk to you. And your feet still grow, *hein?* What is the hour, little one? Time flies when we converse about the feet of Pitts and the electricity. But you did not answer my question, Raoul, and that is not polite. Are you electrician? You make lights?"

"Oh, no," said George A. Pusendorfer gravely. "I am a member of the bar."

"Ah, *du barreau—très chic,*" she added after a moment's thought.

"Wee," said Pusendorfer neatly. "Why did you pretend that you could not talk French, you sly little man?" asked George's friend.

All dynamic men like to be accused of dynamism; it is a compliment to their dynamism.

"Oh, well," said Pusendorfer with a blush. "I've picked up a few words here and there. You talk fine English, *Mademoiselle.*"

"Yes," said the woman, looking some distance beyond her companion. "I learned. Would you tell me the time?"

With some alarm Pusendorfer discovered that it was past one o'clock, and noticed that the sidewalk stream had thinned.

"Only one o'clock? We must have something to eat. Yes? Pay for our drinks, and then we can go to a restaurant."

She superintended the payment and firmly prevented the waiter from abstracting more than his constitutional ten per cent, and then said, "The restaurant is not two hundred metres away. Give me your arm, talk vivaciously and we will march together, little one, to a place that gives me food such as the good Pitts never dreamed of."

SO arm-in-arm they marched, she remarking on the harmony of the weather, he wondering what his serious clients would think. The restaurant was all that she had said of it; there were plenty of people and plenty of lights; no music and a cookery that was at once bland and moderate.

"Brrr-h," said the woman. "Don't you hate to be cold and hungry? Don't you, Raoul?"

"But you ain't," said Pusendorfer unsensitively. She turned in her chair and gazed at him until he thought that her eyes were two points of green fire floating in a pool of white. She looked at him and her hard mockery, her dreadful cheerfulness went away. The livery of the life that is death was absent for a moment; she had plainly never smiled, and there was nothing but the pitiable mutely asking, against pride and hope, for pity. If Pusendorfer could see it, it must have been there. She shook her head as she pulled down the finger of a rather worn glove and laughed a little, not ill-naturedly, but as a patient elder sister would laugh.

"Ah, well, perhaps not quite so cold, but still hungry, you know. Now let us order some supper," and she proceeded to do so. When she ordered some coffee, he said,

"Isn't it late for coffee?"

"Little one, little one, we are going to sit here as the sun comes up, and as it goes down, and on and on for days."

"What!" exclaimed the replete but startled Pusendorfer.

"But certainly, Raoul. Have you any cigarettes? No? Then get me some, please."

IN Pusendorferian circles Woman is permitted dyspepsia, gossip, idleness, chewing-gum, extravagance, crass ignorance and a pretentious self-consciousness, but cigarettes she must not touch. So, when the imperious demand was made upon Raoul A. Pusendorfer, his feelings were such as only a dynamic man can harbor in his constructive bosom. He determined to strike a blow for what he thought were his altar and his fire, and with a faltering majesty of port and a double chin that deflated itself like the pouch of a bashful pelican, he said,

"That's the limit. Smoking is not womanly—I won't stand for it," and he looked about to see whether any were offending in this respect. It has never been made plain whether the woman understood the first part of the newborn Raoul's remarks. She was not versed in American dialects and might easily have failed to understand, but the last words were plain enough. She stared at Pusendorfer and, fascinated, he stared back. As he stared, the figures and the tables and the walls receded into a whiteness. Presently the fleecy whiteness rippled slightly and out of it there poured upon that dynamic head a laughter that drenched him in ridicule and that he felt must even now be filling the streets of Pittsburgh. It poured upon him and rippled up to his double chin.

"I told you to get me some cigarettes," said the woman, "But you seemed to meditate for a moment. Now please get them."

"Raoul," said she, as she struck a match. "Raoul, you are not without interest—yes, you are extremely funny, but not, my little one, of intention. Tell me—do you know anything?"

"Whadser mean?" asked the surprised Pusendorfer. "I haven't been to college," he added, more resentful than became a dynamic man.

"No, not that," said she. "Everybody goes to school, but do you know anything? Say No and save trouble. Well, I will tell you something that will begin your store of knowledge. Disturb yourself no more about the woman-

liness of woman. Study electricity, study Pitts, study cooking and the feet of statues, but relieve your mind from anxiety about the behavior of woman. Have you ever been unhappy? Have you ever been scorned? Do you know what it is that comes to one and says 'Now there is no place for you. Go away'—and there is no place to go? And my child is—"

"Have you a child?" asked Pusendorfer.

"Why not? Yes, a daughter. Have you?"

"We had," said Pusendorfer.

She glanced for a moment at him, as she said,

"Mine is less fortunate. She lives in Rouen with her aunt, a very worthy woman who has taken her in. I send her what money I can and I hear that the child is happy. It is good to be happy, is it not, *M'sieu?*"

"Why, yes," said Pusendorfer brightening. "It's a first-rate thing to be happy. What does your daughter look like?"

"She resembles me—blue eyes and black hair and is good-natured. Poor little mookie, she thinks that I am working in a milliner's shop—making fifteen franc hats for American ladies to buy for two hundred. And yours, Raoul?"

Pusendorfer had a little hoarseness in his throat as he said eagerly,

"She had blue eyes too, and dark hair. We named her Helen, after her—"

"Her mother, *n'est ce pas?* *Hélène* is a very pretty name and happens to be mine, as well. *Hélène* and Paris, you know," said she, with a little laugh that was confidential and not unkind. Pusendorfer laughed, too. He did not quite understand the allusion but he comprehended the laugh.

"How old was she, Raoul?" asked the woman.

"Six—" said Pusendorfer.

"And six happy years, Raoul!" said she and, turning about, patted him on the knee.

"Yes, very!" said he earnestly. "Thank you," he added.

SHE looked at him with much amusement.

"Ah, ça," she said. "It appears not to be far from the *boulevard* to the *crêpe*, and the little promenade has not been had." As she said this, the woman rose from her chair and began to put on her gloves.

"Are you going?" asked Pusendorfer.

"Ciel, Raoul, it's nearly four o'clock, and time for us to be going our several ways. Many thanks for the supper—I was hungry. I am not the *Crédit Lyonnais* and there is my rent tomorrow. Give me a hundred francs and put me into a taxi."

Pusendorfer with good grace pushed some notes into her hand and called a passing taxi. As he put her into it, she said,

"*Adieu.* My love to Pitts."

"Good-bye," said Pusendorfer.

It puzzled him somewhat that he should have had such a conversation with such a companion, and he resented the thought that he had been treated as a parent and out as a constructive and dynamic man. Yet, as he walked to his hotel and the feverish November dawn began to cast a little light on the upper stories of the houses, he could not but admit that there seemed to be no strict monopoly of what he had been accustomed to call "the home ties."

He did not go to bed; instead, he packed his bags and as soon as he could, sent a cable to Pittsburgh. Pusendorfer had had enough gaiety.

Two Million Miles of Road

By HONORÉ WILLISIE

How the Department of Agriculture Will Develop These for the Farmer

ALTHOUGH the average expenditure in the United States on the improvement of roads exceeds a million dollars a day, a large part of the money is wasted.

There are several causes for this. There is dishonest local use of funds. There is failure to build a good road or a road of the right type for local requirements. There is failure to provide for the continued maintenance of the improvements.

Scientific maintenance will be one of the chief works of the Office of Public Roads in the Department of Agriculture during the present year. This work of the Department is important, yet it is only a small part of the problem that confronts it in regard to public roads. There are about two and a quarter million miles of publicly owned roads in the nation. Half of these are used for post roads. Less than ten per cent. of the total can be said to be improved.

To the town or city dweller the matter of rural roads seems an unimportant detail until he owns an automobile. Then good roads become a necessary adjunct to his pleasure-seeking. But the Department is discovering that to the city dweller as well as to the farmer the matter of rural roads is important in its direct relation to the cost of living. It has done some interesting investigating along this line.

In Missouri, for example, two farmers living in separate counties but at an equal distance from the cotton market learned by telephone that cotton had gone up in price a dollar a bale. One farmer lived on a very bad road. He could haul just one bale of cotton. The other farmer, living on an improved road, hauled four bales. The rise in price gained the first farmer one dollar, and the second farmer four dollars.

A farmer in Sullivan county, Tenn., a few miles from Bristol, had one hundred bushels of potatoes which he intended to market during the winter. But the roads were so bad that he was unable to do any hauling whatever and the potatoes rotted in his cellar. In the meantime the price of potatoes in Bristol went up to \$1.40 a bushel. During the winter ten carloads of farm produce, including wheat and potatoes, were shipped into Bristol daily to feed not only it but the surrounding territory. In this case not only the farmer but the town dwellers as well as interested in rural roads.

There are counties all over the union, rich in soil and producing possibilities, so handicapped by bad roads that the annual income shipments of food and farm stuff exceed the outgoing shipments, four to one. These counties should be, not only self-supporting, but should be shipping produce to the great markets.

Not only does production and shipping increase, but land values themselves go up with road improvement, usually to such an extent that the increase equals the cost of improvement.

In Lee county, Virginia, a farmer owned one hundred acres between Ben Hur and

hauling produce to the market or shipping-point. The Department is struggling to teach the farmer to look on his farm as a business plant. Any reduction in farm profits through unnecessarily heavy costs for hauling on bad roads must be considered as reducing their capitalization values. With reduced costs for hauling, profits are increased, with the result that the farm plant shows satisfactory earning on a higher capital value.

FACTS such as these the Department is earnestly endeavoring to impress on the minds of the public. Yet only ten

A dirt road near Maitland, Missouri, before and after improvement

Jonesville which he offered to sell for \$1800. In 1908 the road past his farm was improved and the farmer fought the improvement. Yet he has since refused \$3000 for his farm! In Jackson county, Alabama, the people voted a bond issue of \$250,000 for road improvement and improved twenty-four per cent. of the roads. Within ten years the census shows that land in Jackson county had doubled in value.

As the roads in no way affect the quality of the farm, these advances in value must be due directly to the increase in case in

per cent. of the roads of the country are improved! And the Department's campaign for the public education does not stop with the matter of increase of farm values. It is attacking the educational side from every angle. It is now making a great effort to teach that the expenditure of large sums of money on the wrong type of road is almost total waste. A road of materials that would be ideal in one place may be useless in another. The Office of Public Roads will test road materials for any community, and report on

their usefulness according to the type of traffic that will pass over the proposed road. Millions of dollars have been wasted in the past because of the lack of the scientific knowledge that is being obtained now. There is no longer any excuse for any community building a bad type of road.

The Department's assistance is not all made from Washington. If any locality wants the service of the Office of Public Roads, on application expert engineers will go to the place, make surveys, estimates and specifications for the proposed road and supervise its construction. The locality must pay for machinery, materials and labor.

All over the United States, in a quiet, unobtrusive way, the Department is building object-lesson roads; showing the community how to build a scientifically correct road from the local materials. These roads are of every type: brick, con-

crete, macadam, asphalt, slag, oil, coralline, gravel, clay, or earth. Near Monroe, N. C., is a half-mile object-lesson road of macadam. At Jonesboro, Arkansas, is two-thirds of a mile of gravel road. Near Columbus, Miss., a brick cinder road and, in Brooksville, Fla., a sand-clay road, each half a mile long. Pearsall, Tex., has about a mile of sand-clay road built this year by the Department experts. Columbus, Neb., has a sand-gumbo road, a d near Madison, S. D., is a government-built dirt road over a mile long.

These Department experts are proving to the various states, when the states call on them for assistance, that road-building is an art, based on a science, and that trained and experienced men are essential for securing the best results. Yet if it is difficult for the Department to educate the communities who ask for help, it has been almost impossible to teach any lessons on road-building to the vast number of farming districts where not the slightest interest in good roads is shown. In attempting to reach such localities the Department is carrying on an experiment that will be of enormous value in its coming work of rural organization. Farmers are not easy to teach. Children are always pliable. The Department is teaching boys to grow better corn than their fathers. It is teaching girls how to can and cook better than their mothers. Such teaching reaches the parents as no other kind could. Now the Department

when both are dry. Study the ruts and holes and uneven places in the road to see whether they make it easier or harder for the wheels of a loaded wagon to go along. Study the kind of footing that the two roads give the horses.

"Now, study the same two stretches of road after a rainstorm. You will see that one road holds small pools of water that keep the road soft and so allow it to be cut up by the wheels of the wagons and the hoofs of the horses. How do road builders keep water from gathering on the traveled way of a road? How much higher should the center of a road be than the outside edges? When a ditch along a road holds water or collects it into pools, how does this injure the road?"

"Have you ever seen a home-made road drag? It is made by splitting in two a log six or eight inches in thickness and six or eight feet long. The two halves of the log are set three feet apart with their smooth faces forward and upright. They are fastened together with braces. A pair of horses are hitched to the front half of the log. Should these logs be dragged straight down the road or should they be dragged at a slant so that the loose earth will slide toward the center of the road? Should the dragging be started next to the ditch or to the center of the road? Should you drag the whole road in one way or drag each half of it in an opposite direction? Should the dragging be done when the road is dry or after it has rained? A good strong pair of horses with a well-built drag can drag about three or four miles in a day. What would it cost a farmer to drag four miles of road? How would he be repaid for the cost of his labor?"

THERE are about two million miles of dirt road in the country. The split log drag has a wonderful effect on wet dirt. If used after every rain it will gradually evolve a road surface like hard, hurst clay. But it must be used continuously. The Department has shown real cunning in its suggestions to the children.

Every form of instruction and every means of circulating information that the Department can devise, it is using to im-

prove the condition of the public roads of the nation. And yet there remains the disquieting fact that only a tenth of the vast road system of the country is improved.

It is gradually dawning on the Department that some sort of cooperation and concentration of effort larger than has yet been used is necessary. There should be a single direction of effort that reaches from the federal government down to the most unimportant township. In their jealousy for local control and growth, the small units lose time and money.

A school-house on a bad road near Borden, Indiana, and one on a good road in Knox County, Tennessee

crete, macadam, asphalt, slag, oil, coralline, gravel, clay, or earth. Near Monroe, N. C., is a half-mile object-lesson road of macadam. At Jonesboro, Arkansas, is two-thirds of a mile of gravel road. Near Columbus, Miss., a brick cinder road and, in Brooksville, Fla., a sand-clay road, each half a mile long. Pearsall, Tex., has about a mile of sand-clay road built this year by the Department experts. Columbus, Neb., has a sand-gumbo road, a d near Madison, S. D., is a government-built dirt road over a mile long.

is preparing to teach children something about road-building.

On March 14, 1914, the Office of Public Roads closes a contest for children. It offers a gold and a silver medal to children between ten and fifteen years of age who will write the best essays on how to build and maintain a dirt road. The instructions that the Office sends the children are simple and interesting and cannot fail to pique the parents' interest.

"Use your eyes," says the Department. "Look at a piece of bad road and of good

Europe, generally speaking, is ahead of the United States in the matter of road improvement. But Great Britain in this particular is struggling with a problem similar to the one that confronts this country. In England, Scotland, and Wales, there are no fewer than 1140 separate authorities who among them administer over 175,000 miles of road, or an average of about 80 miles apiece. In Scotland, apart from the big cities, there are over 900 burghs, one-half of them having but ten miles of road apiece to maintain. Needless to say, such a minute mileage is too small to keep the road plant employed all the year round. The employment of a skilled road engineer is impossible with economy. The only remedy is a careful centralizing of control and plan that shall give efficiency without destroying local independence.

In this country, the greatest progress in road-building has been made in the states which contribute from the state treasuries toward the construction of state-aided or trunk-line roads. In 1904 there were thirteen states that contributed out of the general fund nearly three million dollars. But in 1913 there were thirty-five states that contributed nearly forty-four million dollars. The states that made the largest expenditures for such roads were New York, with twenty-three million dollars, Pennsylvania, four million, Maryland three, and Connecticut, three million.

IN the light of all these facts the pressure that is being brought to bear on Congress for Federal aid to states in the expense of road-building assumes a large importance with regard to the economic future of the country. In this matter as well as in so many others, the present Administration will have to decide just how far Federal cooperation may go.

Federal appropriations for road-building open vast possibilities in the pork-barrel line unless an automatic check is used such as has already been found useful, as for example requiring the states to double the amount appropriated by the government.

The government must refuse to deal in appropriations with units smaller than the states, thus doing away with much of the problem of last million; yet the idea of local self-help must be encouraged and not stifled. Where the roads shall run, whether post-roads alone shall be considered, and how the appropriations shall be apportioned among the states all are questions that Congress must consider in giving Federal aid.

Congress has appointed a Committee to inquire into the subject of giving Federal aid to post-roads. It has provided half a million of dollars to be used cooperatively with the states in the

proportion of one to two for this matter. It has requested the Secretary of Agriculture and the Postmaster General to report to Congress the results of this expenditure "together with such recommendations as shall seem wise for providing a general plan of national aid for the improvement of post-roads in cooperation with the states and counties and to bring about as nearly as possible such cooperation among the various states as will ensure uniform and equitable interstate highway regulations."

NEVER in the history of the country has such nation-wide interest been shown in good roads as has been manifested in the past few months. There is a great movement on foot for the building of a national transcontinental road. There is something about the suggestion of such a road that appeals mightily to the imagination. The Secretary of Agriculture admits this. "And yet," he said, "what would such a road do for the farmer? The essential thing in the matter of roads is to provide facilities for the farmer to get to and from markets and to give him increased social and educational opportunities. How many farmers would make use of a transcontinental road?"

Secretary Houston has his eyes firmly fixed on the main chance for the farmers of the nation. He has a very simple method of testing and checking-up the different schemes and proposals that are brought to his attention. Day after day, men file in and out of his office with requests for favors, and advice on how to run the Department of Agriculture. Mr. Houston listens to them all silently then he says:

"This is interesting. Perhaps now you will tell me what it will do for the farmers of the country."

The man who wants to retain the old cotton grades, the man who wants Democratic meat inspectors appointed, the man who wants a highway for automobiles, the man who has invented a new fertilizer, all must make their eloquence stand Mr. Houston's arid test:

"What will it do for the farmer?"

It is a very simple test, but a very efficient one for helping the Secretary of Agriculture in carrying out the work he was appointed to do.

The Secretary is going to lay emphasis on other than the marketing possibilities of good roads for the farmer. He is a schoolman of wide experience as well as a farmer and he sees great educational possibilities for the farmers' children in road improvement. He is very earnest and very firm in his convictions on this side of the road question.

"Consider," he said, "the position of a child in any one of the more remote sections of the rural districts in America

today. Ask yourself what his opportunities are for training and development and efficiency as compared with those of a similarly endowed boy in an urban community.

"The latter lives in a house supplied with running water, the purity of which is protected. He walks on sidewalks free from dust and mud. He drives along adequate roads, has access to many of the things that minister to the legitimate pleasures of living, has at hand the best trained physicians and surgeons, publicly-maintained hospitals, well-planned schools of every grade from kindergarten to the professional school or college. And most of these things he secures at a minimum expense through a relatively low rate of taxation.

"The other picture is easily drawn. Considering the schools alone, outside of New England which has solved the rural school problem largely by eliminating the rural population, all that the average country boy has access to is an ungraded school usually taught in one room by a girl with less training than a high-school graduate, receiving \$40 or \$50 a month for seven or eight months in the year, teaching in all thirty or more classes a day.

"If by any chance a boy survive this and desires to go further it is necessary for his father to put him on board a train, send him to a town, pay his board and tuition and lose his services during the session and probably lose him permanently from country life.

"I have said it before—and I am not afraid to say it again—that I do not quite see how a father and a mother who are ambitious for their children can gain their own consent to continue to live in remote rural districts under existing conditions."

AND it is these conditions of rural education that the Secretary hopes to change profoundly through the extension of good roads. He will make every effort in his rural organization to establish central graded schools to which school omnibuses may deliver the children daily over roads whose improvement makes such a school possible. Nothing is worse for a community than a school set in wretched roads. It is a sure index to the poverty and shiftlessness of the neighborhood. No method is more fundamentally right than that which makes a school-house the center of a fine system of roads that tap the whole rural community.

The fight for good roads that the Department of Agriculture is waging is, after all, in its ultimate sense a fight for the betterment of us all, from the soil up. The greatest undeveloped resource of any community, the Secretary says, is the people.

The Orchard Gate

(A Song of Suffrage)

By WITTER BYNNER

LED her to the orchard gate
And there I wished my love to wait
While I went in among the trees
To bring her these.

But O my love, she would not wait,
She followed on to the orchard gate
And looked, and saw, many fruits were strewn,
To find in them.

And now she's brought the kind to me
I wanted most but could not see;
Likewise the kind her lips prefer
I bring to her.

How I Found My Iago

By WILLIAM FAVERSHAM

ONE day last October at the Cort Theater in San Francisco I held my first rehearsal of "Othello," and at its conclusion I walked forth from the stage with spirits enlivened to the point where climbing the steep, cable-ribbed streets nearby was actually refreshing. When I stood at the summit, and looked out upon the gleaming blue waters, and the far-distant misty hills shimmering in the sunshine, my heart throbbed with a joy that was more than a natural response to the keen-winded panorama. For that first rehearsal had convinced me that my conception of the character of Iago—nurtured through years of eager longing and constant planning—was a plausible one. Those few hours of rough interchange of half-mastered dialogue with the members of my company had rung sufficiently true, had awakened more than enough responsive qualities in their own interpretations to assure me that my Iago,—Iago as I had imagined him and pictured him through years of study—was legitimate.

It was a revelation that brought a tremendous sense of relief. All my professional life I had wanted to play Iago, yet always I had known that my Iago could not be the traditional heavy-browed sledge-hammer villain. Right or wrong, Iago's very success in villainy rested, in my opinion, upon his excess of wirthful aptitudes and cheering enthusiasm. Would this idea stand the test of actual performance? Was it not a conception too far at variance from accepted conventional notions? If masked in a cloak of

laughter, would the dominating evil of the man's nature receive sufficient impetus to make plausible his death-bearing crimes? Yet the very first rehearsal—on a dimly-lighted, bare stage, the sole apology for an audience being several chorwomen busy at their tasks among the empty seats,—had justified for me my course.

AS I stood there in the breeze, absently noting, first a white-sailed sloop beating out towards the Golden Gate, then a launch pointing from a gray-clad warship straight to the ferry-dock far below, I began revolving in my mind the different phases of Iago's nature that could be illumined by spur-tracks running from the initial center of merriment. Of course I must emphasize the hypocrisy of Iago. Perhaps only one other character in all literature can match his gross hypocrisy—and that is Molière's Tartuffe. Surely the brisk ring of laughter would splendidly connote Iago's hypocrisy.

In the midst of my revery I recalled a half-forgotten story by Poe, that I had not read in twenty years. I remembered the courtly, jovial attitude of the central character, who inveigles his arch-enemy into his wine cellars only to trap him in a closet, and proceed to entomb him alive with the aid of bricks and cement. What an engaging manner must have been the host's,—what a confident smile! Surely Iago could have done just such a trick! Iago of the constant smile, the quipping jest, the ribald snatch of song!

Iago must possess the graceful ease

and the effervescent self-confidence of the world-traveler. He must be equally at home in low tavern or princely court. Yet he can be no roistering vagabond, like Villon,—who wasted immortal verse upon kitchen-wench, and indecently insulted monarchs. Iago must maintain the bearing of aristocracy, yet unbend sincerely enough to win to his purpose the humblest of his fellows. He must swagger, and orate of wine-bibbing in Denmark and Germany and Holland and England. Always he must be of the vast world, mirthful, engaging, persuasive.

THESE and a thousand other similar speculations traversed my thoughts. Already the sun was dipping low towards the Pacific, and long shadows from the hills were darkening across the bay. I was on the point of leaving, when of a sudden Edward Knoblauch's "Faun" took possession of my mind. Somehow I found myself repeating speeches from the play that I had used for two seasons. The Faun was a frank expression of healthy animalism, joyous, vigorous, scheming, sensuous. He was the ardent of life in terms of physical optimism and pleasure. Take the Faun, poison his nature, corrupt his animalism, warp his frankness, direct his every impulse to deepest evil, and you have—Iago. It was a startling discovery. It fastened upon me, it fascinated me, it convinced.

I was very late for dinner when I reached my hotel that evening, but I had definitely settled upon the manner of man my Iago was to be.

Wiser Marriages

By MARY AUSTIN

Illustrated by H. T. Dunn

Third in the Series on Mate-Love and Monogamy

IN her previous articles Mrs. Austin has given the reasons why monogamy is the natural and desirable expression of mate-love. She has refuted the arguments for polygamy in any form. In this essay she takes up marriage as the expression of love, discussing the weak points and the strong points of our present system.

It was not until two or three days later that we came to the question of marriage,—one of those full-leaved summer afternoons so crowded with green growth that there was no room in it even for Valda's pain. We had come down from the house to Millford bridge and sat watching the water slip by us as mindlessly as the flight of time. On every side the leaves of the rock-maples lapped over smoothly like plumage on a breast, and the lispid creek took on green reflections between the leopard-colored stones. We had talked during the morning altogether of other things, for which reason it seemed inevitable that in the first full pause we should revert to the matter which lay closest to our minds, without other introduction.

"Why is it," Valda wished to know, "when there are so many evidences in favor of marriage as we practice it, so many marriages fall short of just the purpose they seem meant to serve?"

It was necessary for me to remind her that I hadn't said that the evidence was in favor of marriage altogether as we practice it.

All I had claimed was the sanction of the Soul-Maker for permanent, exclusive matings; which is not saying that the purpose of marriage might not be thwarted by the decorations and conventions which we attach to the condition of being married. I would even go so far as to premise that the initial mistake about marriage is in regarding it as a condition, a state, when it is primarily a relation. Stripped to its essentials, marriage is an agreement between any pair to practice mate-love toward one another, with intention. A vast amount of our modern marriage custom is as extraneous to this as is that temple in India to the hair of the prophet's beard which it enshrines.

WE shall get nowhere with the discussion of marriage without a clear distinction between the things inherent in the relation, and those which from time to time have proved convenient to it. It might even pay to overdo the matter of distinction, if it would save either member of a married pair from foisting personal preferences on the other in the name of the eternal verities.

"But marriage is so personal," Valda began to say—

About as personal as getting a living or an education. Love, quite as much after marriage as before it, has its own way with us. It is no more possible to be married all to oneself than it is to go to school that way. At every turn we are overshadowed by the racial experience. And since love does not always sing in the ecstatic key, it is important in moments of dryness and doubt to be able to turn with certainty to the profoundest moods and interpretations which such experience has revealed to us. The attempt to derive the authority for marriage mores from revealed religion has

blinded the general intelligence to their natural derivation from experimentation.

Under all the stupidities of civilization, there is still operative in man an instinct as self-preserved as the movement of the natural animal to reject unsuitable food. By study, all forms and modes of marriage are seen to resolve themselves into the working of this instinct to prevent the too early withering of mate-love before its purpose is accomplished. The impulse which rejects the word "obey" from the marriage service is one with the impulse which retains "honor and cherish." What it means is simply that we have discovered that obedience has nothing to do with the permanence of love, but that no set of experiments has revealed a way to keep it alive and alight without honor and cherishing. Whether its ultimate purpose be to rear children or to enrich the race by raising the plane of personal achievement, so long as there remains anything of that purpose unaccomplished, the primary obligation of lovers is to love. It is around this working necessity that the duties and proprieties of marriage are centered; from it they take their sole extension or compulsion. To love and to keep on loving. This is the one way of making marriage do its work in the world. Any call for reorganization of the fashion of living together, such as arise from time to time in our changing social environment, must conform itself to this necessity. It must derive its authority not from any pre-existing code of ethics or religion, but from its capacity to nourish the eternal need of each for the other.

CONFRONTED with any of the surprises of the modern feminist movement, it has been a perfectly legitimate question to ask whether or not, under heretofore unexperienced conditions, men and women will continue to love one another. It is so important that they should go on doing so, that we may be forgiven for failing to see on all occasions that it is also important that they should do so without capitulation.

The natural result of a highly spiritualized ideal of mate-love is an attempt to make it do too much for us, to answer for too many things. Women are the worst offenders in this. Passion must be not only pure air and fire to them, but bread and meat; it must be enforced to do the work of religion in raising the spiritual plane, and manifest itself in all the many-faceted culture of the time. There are women who think themselves unsuitably minded if the note to which they are raised by a picture or an opera does not tune with the dominant key of their relation to their husbands, and they blame not themselves nor the picture, but the husband.

If one wanted conviction on this point one has only to examine the so-called "ladies' journals, for the quality of advice, instruction and consolation offered to the married, to realize that however-

much they, as a class, may have laid hold of individually, there is little current among them which could withstand for a day the assaults of reality. In spite of a few notable instances where the life of the lover has been keyed to the very highest pitch of personal passion, there is no evidence that the attempt to color the whole of existence with the consummating movement of right love results in anything but spreading it thinner.

IT is not only the fallibility of women to attempt to make love fill out the whole round of life for them, but they go further and undertake, not without excuse under the social compulsion which robs them of other forms of activity, to make of marriage a career. They try to find in it a substitute for Something To Do, for all the varied possibilities to which they, in common with their brothers, are born, which smoulder and ache in them and breed dizzying vapors. All doors but marriage being closed to them for attaining eminence, social position, fortune, human contacts, they demand it all of marriage, and by the evidence of the divorce court marriage is breaking down under the strain.

Now that housewifery, with all its more important functions performed outside the home in factories and food shops, leaves the intelligence so largely disengaged, the discovery of the insufficiency of marriage as a determining condition has rushed upon us. Unions in which the relation has proved entirely competent for the primary purpose of loving and rearing children, fail miserably before the necessity of satisfying all the hungry human demands of women. Comes now the steady moment when we begin to wonder if it were not wiser to relieve the strain upon marriage than so lightly to dissolve it. The necessity which the Industrial System finds itself under, of taking account of the women-needs of female workers has reacted upon our attitude toward the human needs of women. We begin to perceive that marriage has to do chiefly with sex, and that sex is only one of the departments of life and not—no, not even for women—the whole of it.

"But the question of maintenance," Valda began—

Is primarily a problem of economics rather than of sex. It derives from the industrial situation rather than from anything inherent in the relations of men and women. "Maintenance" is a term very loosely used to imply the right of a woman to demand that her husband should perform all labors outside the home which are involved in the business of raising a family. It by no means indicates that she is to be relieved of indoor labors, no matter how arduous they may be. It does not carry with it the right to be maintained in the event of the husband's failure or death, nor does it even imply any standard. Interpretations of the term are local and periodic; they are

even narrower, and become the mere shibboleth of a class.

The idea of maintenance takes validity from the potential maternity of the wife, for only when incapacitated by the bearing or rearing of children, is the wife logically entitled to be "supported." The advisability of extending this support over the whole of the woman's life rests on its ultimate effect on her childbearing capacity, a point upon which students of economics disagree. The only circumstance which would render maintenance a marriage "right" would be the existence of a social system which made self-supporting work by women improper or impossibly difficult. In so far as men have committed themselves to these two absurdities, they are bound to accept as legitimate the demand of women to be kept in idleness. The recent movement toward state aid for penniless mothers is evidence of a growing public conviction that maintenance is not so much a right as a compensation for services performed. But the fact is that the number of women who are exclusively "maintained," without the necessity of hard and exacting work of some kind, is inconsiderable. Here in America it has always been an ideal rather than an accomplished state of things. For the preferred mode of marriage still shapes itself about the old, feudal ideal of the Lord of the House and the Lady Châtelaine—the armored, valiant male going forth to the daily battle of trade, and returning with his spoils to refresh himself in the presence of the Mother-Priestess who performs in his absence the daily miracle of looking well to her household and still preserving herself in a state of smugness and charm.

IT is the ideal of a numerically small but important group, important enough to have put it into poetry and picture and song, where it remains still in all its false and alluring perspectives. For the one thing that the picture fails to present to us is the fact that never could the ideal have so much as shaped itself in the racial imagination, except under conditions which precluded the possibility of its being attainable by more than the few who showed it forth. The ideal of the mistress-wife and mother-priestess is indissolubly associated with the idea of a serving class. Never at any time in the world's history has this ideal existed except upon a background of retainers, slaves, serfs, servants, concubines, captives or other dependencies who by the condition of such service were forever precluded from enjoying on their own account the state which they existed to maintain. The very word family was originally a descriptive term to include not only those born in the household but bound into it by hire or purchase.

Never since man emerged from the tribal state has the whole work of feeding and comforting and rearing the children been done by the House Mother in the better conditioned families. What we mean in fact by better conditioned and "best" families is just those families in which all the work has not to be done by the Châtelaine. The struggle of every man in a democracy to obtain these conditions for his own wife and children has resulted in the work which was formerly done by dependents within the household being now done by specialists outside it. During the last three centuries the model history of marriage has been the history of the gradual emergence of the serving class into the class of householders. Yet here in America,

come up from varied parentage, with clashing traditions, by systems of education waveringly aimed at the ascending scale of living, we are still stupidly trying to pour all this unlikely material into a mold which met its determining circumstance long before the rise of democracy. Everywhere we see married pairs trying to organize a home about some tattered remnant of the old ideal, and sending one another because they fail at it.

THE things that marriage can be legitimately asked to do for us are, first of all, to satisfy the hunger of the body for its natural mate. This is indispensable. In this is the seed of its own permanence and the only legitimate ground for the satisfaction of that other great human demand, the desire for offspring. And finally it must satisfy the need of companionship on the intimate and personal side of life. Undoubtedly the happiest marriages are those which carry the sense of companionship into the farthest, finest ramifications of thought and endeavor, but there can, in the nature of things, be no compulsion beyond the personal interest. To be proud and pleased with each other, to be concerned for each other's health, considerate of each other's interests, active in comfort and care, is much more important than a common taste for Italian poetry or a mutual detestation of Wagnerian opera. It is possible for a married pair to survive being bored with one another's opinions or pleasures, but it is indispensable that they should not be bored with one another.

What must be insisted upon for the improvement of marriage before it is entered upon is the clarification of our ideas about it. We must see its naked power upon us for what good and what generic ill. Stripped of all the ragtag of adolescent modes, all the bright, tasteless tinsel of sentiment by which its vital functions are obscured, we must accept it, first and last, as a sex relation, striking its proper note in the chord of human endeavor, and, seeing it thus uncomplicated by problems of food and shelter, learn to ask no more for it than that it fulfill itself as the great adventure of sexual life.

If I have been plain on this point, I mean to be plainer. To the neglect of this primary requirement of right mating, based upon we know not what correspondences of vital impulses, what rhythms, vibrations, elusive, subtle bodily sympathies, are traceable most of those evils which invest society under the particular name of "immorality." It is not wealth, not luxury, not the industrial system nor the hardening of class lines which produce those outbreaks of lasciviousness, of loose reading of responsibility, of veiled promiscuity which from time to time have characterized periods of national history. It is the substitution, which all these conditions foster, of other considerations of money-lust, social ambition, proprietary pride, of culture, of religion even, for the natural mating-impulse. Spiritual qualities are the result of right mating and not the occasion of it, just as material success, a good home, social poise, ought to be the outcome of the matching of talent and endeavor in man and woman rather than the excuse for their living together. It is immensely more important that a mating pair should resist kissing than that they both should be Presbyterians, and a better guarantee for their attaining the super-union which is the Soul-Maker's mark.

And yet how little, how extraordinarily little, is afforded the young as a basis for selection. So far, instruction has been largely in the opinions of society; what is required is knowledge of the facts. The epocistic method of the past, in which truth was imparted or withheld according to the parental notion of need or propriety, has resulted in bringing too many to the Great Adventure in complete ignorance of it.

Probably, if the obscuring mysteries were laid by facts made commonplace, instinct would wake again along the unfathomed outer border of the mating-consciousness. In the absence of instinct, we need knowledge and more knowledge.

And if it did so awake, instinct might be easily frustrated by our narrow social contacts. Among the two or three marrying opportunities offered any one of us, it is frequently the case that not one of them provides the necessary correlation of personal interests, the common objective. The first thing to go about for the betterment of marriage conditions in general is a deliberate provision for increased social contact. Even Heaven must have room to work in.

"BUT their homes—their mothers—" Vada was thinking in terms of her class, a very small class in which parents are able to live along with their generation so successfully that their advice to their children is really worth something. They must be materially able, moreover, to provide an adequate social range without the assistance of the municipality. But the generality of parents can no more do this than they can educate their children without the public schools.

As a matter of fact, the average home is one of the worst possible places for young people to court in—which is perhaps why so much courting gets done on the street, in the college, at the dance-hall. The average home with its one living-room, its weary and self-absorbed adults, its clamorous younger children, the immanence of the parental viewpoint, the self-consciousness of youth finding itself—this is the least propitious environment for the self-explication which must come then if ever, to the mating pair.

Here in America, perhaps everywhere in this pushing age, the matter is complicated by the wide divergence of social ideals between parents and children. Few daughters expect or would accept the régime of their mothers; if the young people are to understand each other on this point, come together on the new ground of an advancing generation, they must be able to clear themselves of all the implications of parental environment.

The unconscious recognition of this need of standing for their own future to one another drives them apart and aside. They seek out a dangerous and misleading privacy—dangerous because often secret, and misleading because two young people left absolutely to themselves can seem anything they like to each other. What is required is that they should make the tentative moves in a state of free association with their own generation. Against a background of their fellows, those with whom they must later neighbor or compete, they display relative values that do not come to light in adult company. This is probably the reason why coeducational marriages show such a high percentage of successes. There are few things a young couple may not get to know about each other during four years in college.

There is another reason why the pro-

establishment of social centers for the purpose of providing free association of the young should become the serious business of our educational leaders. That is that young people, of whatever social derivation, are intrinsically entitled, in their mating adventures, to the best advice that their generation affords.

We do not think of trusting the teaching of arithmetic to the inexpert parent; medical inspection is in the hands of specialists. But mating-advice is left to be plucked from whatever unlikely bush. Theoretically, parents should be able to furnish their children with the best thought of the period, for any given moment of it. Actually, few have the gift for education, or the time; some have not even the inclination—a state of affairs which does not make the young any less entitled to it than to the best thought about cube roots and vaccination.

nothing but active sexual sympathy will support it without disintegration.

It is a phase of married life which until recently has not received much consideration. For men who discovered this disparity in their wives there has been, according as they take it, the consolation of the admitted inferiority of women, or the reproach of "not keeping up"; and for wives who discover it in their husbands there has been the cry of *blasphème*. Had not our educators been more concerned with crediting students with percentages in fractions and geography than with determining the index of personal efficiency, we might now be in possession of some means of matching the future with the present, to prevent the most flagrant disasters. What renders most mating advice unacceptable is its purely hypothetical character. Young passion may flout sage waggings of the

riage the knowledge of the ancestral baggage which they carry into the new venture. To do this properly, something more must be shown besides the mere wish to marry.

For there are other considerations besides children, considerations which must still be met after it may be concluded that the particular pair have no contribution to make to racial continuance. Of these the eugenicists not only know nothing, but may even find themselves in the serious predicament (supposing they could determine what traits are best to breed for the improvement of the species) of discovering that they are not at all those which are contributory toward living together domestically. Bear in mind that I find this of prime importance. Racial improvement, if it means anything, means the accretion of mentality, of personal power, the accelerated pace which

"But marriage is so personal," Valda began to say."

IT is possible that such increased facility for free selective activities, would of itself do much to obviate one of the most obscure sources of unsatisfactory and impermanent marriages. I mean the natural differences in human capacity. It is important for any particular marriage that the parties to it retain the same ratio of development, of intellectual coordinations. It would seem that the intellect, like the organism, struggles to attain the limit of its type; once the limit is reached, it cannot, by taking pains, add anything to that. A man whose mind closes on him at thirty remains thirty for the rest of his three-score years; if he be married to a woman capable of ten or fifteen years more expansion, it is hardly possible or desirable that the original bond should hold under the strain of that partition. Nothing is more heart-breaking than the mutual recognition of such disparity; it is at once so hopeless and so unblamable. Youth and charm will compensate in a degree, wealth and position obscure its most rending phases;

head when so many heads have wagged mistakenly. But even the young are prevented by exact knowledge.

The seven-leagued strides that have been taken in the study of personal efficiency in the interests of trade and manufacture make it not too unlikely to say that we shall soon be able to know as much about the people we marry, and expose our children to the chances of marrying, as about those we hire.

"And then," Valda threw in hopefully, "there are the 'Eugenicists.'"

THE eugenicists have at once too much to say and too little. They can deal with certainty only with futures, and though it is important to the race to know the probable physical character of its grandchildren, it is not yet proved that that has anything to do with married felicity in the present generation.

In order to protect the unborn, it is obligatory upon society to keep records and to force upon those contemplating mar-

any two can gain while they are otherwise occupied than multiplying. Indeed, if man is to be distinguished from the fish, the flower, the beast of the field, the existence of such general gain would seem the only excuse for propagating at all. Whatever pair has contrived to add something to what their parents were, adds it to the race as well without offspring as with them. We are all of us inheritors of the genius of great men more directly than the children of their loins; it matters nothing that they leave us no descendants of their name.

Marriage then should be for the increment of social worth, and all our thought about it should be to make it serve this primal use. If the union, in the light of the most we know about it, prove suitable for children, let them count themselves twice blessed. But if marrying be simply to breed, why, *Pithecanthropus* skipping on a hill can do as well for us. We are made men and women chiefly by what we can do for one another.

The next instalment discusses the place that children occupy in the development of mate-love and the various forms taken by the nest-building instinct.

The Russian Cathedral Choir

By ISABEL HAPGOOD

LAST winter I took one of the most famous organists and choir-masters of the country to the Christmas service at the Russian Cathedral of St. Nicholas in New York. I wished to show him why I regard all other Church music as operatic, trivial, lacking in vitality—even that of my own Church, the Episcopal; and why, except in the Russian Church, the music is a real endurance-test for me. My friend is a man of few—but forcible—words. He said: "This is the interpretation of sacred music which I have long been in search of. . . . I have to thank you for the greatest inspiration that has ever come to me in all my musical life."—Glowing warmth of emotion within strictly legitimate bounds, without a trace of sentimentality or sensuousness, he declares, the essential characteristic of the interpretation.

PEOPLE who have heard this extraordinary music and its equally extraordinary rendition in the great Russian cathedrals—or at the Winter Palace by the Imperial Choir, if they have the good fortune to have access to services there—will understand. To the munificence of an American we, in this country, owe the inestimable privilege of receiving spiritual refreshment and inspiration through this choir.

IN comparison with the great choirs in Russia,—choirs numbering from fifty to one hundred—this choir is small. It consists of twenty-one boys, born here (with one Russian-born exception) of Russian parents; and eight men, all brought from Russia, all trained singers. One of the four basses is an "oktavist," who sings a whole octave below the ordinary deep basso, reaching A: and the choir is very soon to possess one of the four great oktavists of Russia, who descends two full tones lower, to F, and balances a choir of one hundred and fifty, if required. At the head of the choir is Ivan T. Gorokhoff, formerly choir-master for the Archbishop in the Cathedral of Kursk, and

later at the Moscow branch, or town house of the famous Sergievo-Troitsky Monastery. Mr. Gorokhoff possesses the finest traditions of interpretation: he is a pupil of the late Director Orloffs, and of the present Director of the Holy Synod Choir of Moscow, Kastalsky the famous composer of church music, who have made that choir famous all over Europe by concerts in the various capitals, as well as by their work at home. Arriving in New York less than two years ago with six of the men (two more came last November), he has brought the St. Nicholas Choir to such perfection of training that, as musical experts have expressed it to me, it is the most wonderful organization every heard in New York. The conductor of the New York choir best knows for its exquisite art in a *capella* singing declared, on hearing the Russian choir in concert for the second time: "My choir sings no more Russian music. They simply cannot do it." And one of the most authoritative musical critics in the country emphatically assures me that no American choir ought to dare to attempt this Russian ecclesiastical music. American choirs have not the voices, and the spirit which vitalizes the rendition until the impression is ineffaceable while life lasts, is utterly lacking.

THE appeal is direct. No instrument of any kind is permitted in the Orthodox Catholic Church of the East. Song is prayer, and nothing must be allowed to come between the supplicating or praising soul and its Creator. I have a profoundly musical friend who is an agnostic—or an infidel: I forget just what he calls himself. I invited him to the Russian Cathedral merely as a musical treat. He said: "If there be a God—then, that is his music."

The extraordinary point about it is, that it appeals not only to the musically sensitive but also, in equal measure, apparently, to those who make no pretensions to an ability to distinguish one air from another. More than one person has

entreated me at public concerts (in my quality of Secretary) to prohibit applause: they felt it to be a sort of sacrilege, and that that music should be listened to on one's knees.

WITH the interpretation of this angelic Russian music beyond the reach of our American choirs, through the lack of the inborn spirit and the life-long atmosphere—not to mention the phenomenal musical gifts of the Russian people—where are our Churches of the West to turn for a new, inspired, devout music when they shall have learned the lessons taught by this St. Nicholas Cathedral Choir? Will Western choirs and their music ever evoke such a remark as was made to me after the concert given by that choir in the New Synod Hall for the recent General Convention of the Protestant Episcopal Church: "I am so glad the Russians are going to Heaven, for that will ensure our having suitable music there?" For one thing, we have not the golden treasury of song which is the heritage of the Russians, from which to draw our inspiration. This indescribably beautiful Russian sacred music springs from the same fount of inspiration—the heart and soul of the people—as the folk-songs upon which the secular composers of the nation have founded their most characteristic—and therefore most successful—works.

In the year 891 the Patriarch of Constantinople sent to Prince Vladimir of Kiev, when the latter adopted Christianity as the State religion, a band of Church singers of Slavonic extraction. At the same time the Greek Princess Anna, the bride of Prince Vladimir, brought with her a complete Church choir, in which were also Greek singers. Thus Russian Church music, in its origin, was directly dependent, on the one hand, upon the singing of the Slavonic Church, and on the other, upon the Greek—the Mother Church. St. Cyril and St. Methody had christianized the Bulgarians and their neighbors a whole century earlier, and

Bulgaria had made good use of that century in adapting the Greek chants to the test of their service books in that language which (in a slightly modified form) is still the splendidly sonorous liturgical language of Russia, and other kindred branches of the Orthodox Catholic Church. The Russians immediately began to develop independently the chants they had taken over from the Greeks, and promptly originated new "Russian" melodies, as well as more than one original system of musical notation, and musical chords and progressions of their own. They conceived a profound love for Church singing, and it speedily permeated the whole life of the people, just as the Church provided prayers and hymns for every imaginable situation in life, for every impulse of the soul. Huge choir-books, containing ever new melodies, made their appearance in rapid succession, and in the fourteenth and fifteenth centuries the Russians were already in possession of such a rich treasury of melody as is not to be found in a single one of the non-Slavonic races of Europe. After the fourteenth century the original musical notations went entirely out of use, and no one has yet been able to decipher the whole of these choir-treasures. In the sixteenth and seventeenth centuries deleterious innovations, introduced over the Western border, gained away, and were followed, in the eighteenth century by an almost fatal enthusiasm for the most florid sort of Italian music. The Russians laid violent hands upon their own wonderful sacred music, and distorted it after the most approved—and worst—Italian models.

The fifth period of Russian Church music was inaugurated by Dmitry Bortynsky, (1751-1843), Director of the Imperial Choir, who put an end, in great measure, to these abuses, and turned for inspiration to the ancient, national melodies, harmonizing them and eliminating the objectionable elements introduced into sacred music from alien lands and Churches. In fact, he was to Russian Church music what Glinka was to the Russian opera. His work stands to that of the modern composers of Church music—both those famed for secular compositions also, like Rakhmaninoff, Gretchaninoff, Ippolitoff-Ivanoff, and those who have written for the Church only, like Lvovskiy, Kastalsky and others—as Glinka's "A Life for the Tsar" stands to Musorgsky's "Boris Godunoff." He was the pathfinder—he showed the true way. Musicians began to collect the ancient chants which survived, unwritten, among the people (like the Epic Songs), and to decipher the old choir books. The more closely the composers for the Church follow these ancient, inspired national sacred "folk-songs" (if one may call them so, by way of making their status perfectly clear) the more successful are they in producing the extraordinary music which may be justly designated as the one genuinely fit, fervent, truly devout and really divine Church music in existence.

Be sure not to miss the next installment of Mrs. Austin's remarkable book on love. She discusses the two great instincts that follow the awakening of mate-love in a woman's soul, the longing for children, and for nestbuilding.

If You Could—

Separate the most nutritious part of the kernels of choicest white corn.

If you could cook this carefully selected part just as we cook it—

If you could cure, sweeten and salt it to get the same delicious, delicate flavor that we get—

If you could roll each separate bit, thin and ribbon, under 40 tons of pressure—

If you could pass the flaky bits in at the top of a great oven 30 feet high through which they would slowly move to the bottom and come out toasted to a delicate golden-brown—and all this, without being touched by hand—

Then, 'most anyone could make his own

Post Toasties

But the best part is, you don't have to go to all that bother and care. It is all done for you.

Anywhere in America, ten or fifteen cents (according to size) will buy a large, tightly sealed package of this dainty food—

Sweet and crisp, fresh from the factory, and ready to eat with cream, immediately the package is opened.

Consider Our Service a Part of this Speedometer

WHEN you buy a Jones Speedometer your purchase includes not only an instrument you can depend upon for accurate readings, but a Service that is equally dependable. As this is now a Johns-Manville product, we are able through our 49 established Service Branches to make adjustments, replacements and, in case of accident, speedy and efficient repairs on the

Jones Speedometer

Centrifugal Principle

And because of the great scope of this Johns-Manville Service, throughout the United States and Canada, the Jones Speedometer is as conveniently and efficiently kept in as perfect running condition as your watch.

The Jones is a centrifugal speedometer. The indicating hand is connected by a continuous, unbroken, metal-to-metal drive with the road wheel. And because the Jones is non-magnetic it is immune from magnetic influences. For the reason that it depends upon the unalterable mechanical law of centrifugal force, it is also

unaffected by variations in temperature and needs no complex compensating mechanism.

To the accuracy of the Jones Speedometer have been added many noteworthy refinements of detail, such as the instantaneous trip reset, large, steady pointer and clock face dial that is easily read from the tonneau of the car.

Finally the Johns-Manville Tag, attached to each Jones Speedometer, guarantees the instrument. If you want this kind of Guarantee and Service, insist upon Jones equipment. Write nearest Branch for booklet.

Finance

By ALBERT W. ATWOOD

Protecting the Stockholder. Part IV. By Law.

WHENEVER proposals are made for the legislative protection of investors, objection is raised that securities cannot be made absolutely safe and pure like food. The more restriction with which you hedge securities about, it is said, the lower the return in interest and dividends. Invariably, it is argued, the big profits accrue on securities which at their inception contained a large element of risk, and the story is told that lawyers objected to having to take stock in the Ford Motor Company when they drew up its incorporation papers, although by now the profits from this stock have enabled them to retire from the practice of law.

"Will not restriction and regulation kill initiative? Is it any one's business to protect the investor but his own against anything but fraud? Certainly the law must not attempt to restrict the emission of securities to those of successful enterprises of tried worth. If men were punished for failure, what would become of progress? Men must be left free to work out inventions and business processes and then induce others to put their capital into these ideas. The law cannot guarantee that investments will be safe and profitable, nor can it prevent men from taking chances on the Stock Exchange or elsewhere."

This line of argument contains much that is both forceful and true. There are two sad, hard lessons that every investor must learn. The first is that no one is so interested in the safety of his money as himself. Not long ago the investor ran his own business. He stood behind the counter and the forge or at the mill, and there were no distant strangers to cheat him. From a selfish, narrow point of view there is no reason why the directors of a large corporation should worry about the small stockholder. Indeed, it requires an immense amount of altruism to work industriously and single-mindedly in the interest of several thousand persons whom one has never seen. The second lesson which investors must learn is that there is precious little chance of their rights being endangered or their interests abused if they content themselves with securities yielding 3 1/2 to 4 1/2 per cent. interest. The man with an underlying mortgage lien of the Pennsylvania or Chicago, Burlington & Quincy railroads stands in no need whatever of protection. That is, all manner of danger comes into play as the rate of interest mounts up.

Organization, Regulation and Publicity

BUT it is a significant fact that in countries where the state has strictly regulated the organization and internal conduct of corporations, and has enforced a large measure of publicity during all the stages of corporate life, there have been no signs of dulled initiative or lessened profits. Take the relatively unimportant matter of publicity of stockholders' lists. If large corporations in this country, and especially banks, were compelled to make public a complete list of their owners, the welkin would fairly ring with the means of those who denounce the

DELCO

ELECTRIC CRANKING LIGHTING IGNITION

Three Epoch Making Steps in Automobile Development

The automobile of today is an almost perfected machine.

Powerful, speedy, splendid in its ability to do things—yet under such complete control that it is as easy to operate as an electric carriage.

There have been three epoch making steps in the development of this remarkable machine—

THE GASOLENE MOTOR—We might have had motor cars without the gasoline engine. Steam or electricity might have served as the motive power—but they would not have been the splendid high powered, flexible machines that have so revolutionized our ideas of time and distance. The gasoline engine is fundamental to the automobile as we know it today.

THE PNEUMATIC TIRE—But even with the gasoline engine simplified and perfected to its highest efficiency its usefulness would have been sadly curtailed had not the pneumatic tire come to make its full development possible. The pneumatic tire, too, is fundamental to the twentieth century automobile.

THE DELCO SYSTEM—The Delco System has been the refining influence in the development of the gasoline car. It has eliminated the crudities of the crank and of hand lighted lamps. It has provided an ignition that is thoroughly dependable under all sorts of operating conditions. It has furnished an always available auxiliary power that removes the danger of accident when the engine stalls unexpectedly in a tight place. It has immeasurably broadened the scope of the automobile by making it so easy and safe to operate that almost any one can readily master it.

The Delco System is the pioneer in the Electric cranking and lighting field—and today two-thirds of all the electrically cranked cars in existence are Delco equipped. Verify this last statement for yourself—count the electrically equipped cars you see on the street.

4 Cylinder \$1335

THE Lexington-Howard Company is the sort of an organization that you would conduct, if you were a successful manufacturer. The Lexington "Four" and the Howard "Six" are the sort of cars that you yourself would build, because they include those splendid requisites that invariably make for manufacturing success.

"Goodness in the goods" means vastly more than sky-rocket salesmanship; and the "built-in" quality and endurance such as you see in this type of motor car is not stained by "get-rich-quick" methods.

You've tried the others; and invariably you've found that the sole worth of their "unusual specifications" ended in their value as "talking points."

Now suppose you ask us to show you just wherein you can benefit from the Lexington-Howard organization.

Any automobile manufacturer who cannot "sell" another manufacturer his organization, should not hope to sell that man his car.

We believe we can convince any man who knows and appreciates those business principles that for some reason always seem to insure a "quality product."

evils of government interference with business and the socialistic tendencies of the day. In 1906 the Interstate Commerce Commission secured and permitted to be published a list of the ten largest stockholders in all of the country's railroads. But so loud were the railroads' protests, it is averred that the custom was abandoned. In Canada it is the custom for several of the great chartered banks to include in their annual reports a complete list of stockholders. Before me, as I write, is the report of the Royal Bank of Canada for December 31, 1909, containing the name of every shareholder with the amount of his holdings. Does any one dare to say that this two-hundred million-dollar bank has not prospered since 1909?

Or take the huge London banks with their deposit accounts of three and four hundred million dollars, far exceeding the largest in this country. In the London & Westminster Bank, control is kept out of the hands of a few great stockholders by allowing to the owners of 800 shares or over four votes and no more. In the Union of London & Smiths Bank, no shareholder is allowed more than 20 votes.

To Germany for Guidance

NO country has been more successful in a business way in the last few years than Germany. Indeed if there is any one criticism of Germany from the industrial and financial point of view it is that profits have been too great, success almost too rapid. Yet the regulation of the internal affairs of corporations in Germany goes beyond the wildest proposals in this country. Under the Commercial Code every corporation is compelled to provide for reserve funds out of earnings. Directors have been punished by the courts for not setting aside one-twentieth of the year's profits for reserves as required by law. Sums must be set aside also to provide for premiums on stock issued.

The German Code has been criticized for its harshness and complexity, but not for its inadequacy. It applies to all corporations. Minority stockholders are protected, because one-tenth of the stock can compel an adjournment of an annual meeting until they secure sufficient information, and one-tenth of the stock can demand an examination of affairs by outside auditors appointed by the district court. Corporations cannot buy their own stock, thus preventing much evil inside speculation which goes on in this country. When a corporation is organized a most detailed statement must be made of all contracts for purchase of property, and other essential facts, and for two years thereafter any banker who offers the securities for sale is jointly liable with the organizers for any incorrectness or incompleteness of this statement, or for any willful injury to the company. Indeed the managers cannot be sued until after redress has been sought from the bankers who offered the stock.

No stock exchange can list securities until one year after publication of the first annual report, with balance sheet and statement of earnings. The Code compels all corporations to issue a detailed annual statement with balance sheet and profit and loss account. Corporations in this country, except those few which are regulated by the Interstate Commerce Commission and public utility boards, do not have to issue any reports. The German Commercial Code further requires, to an almost harsh extent indeed, that

organisers of corporations refrain from selling stock for quite a long period following organization. In the commercial registry of the district courts contracts must be filed wherever special advantage is given to organisers or stockholders, and where property has been sold to a company at organization by its organisers an outside audit must be filed where it can be inspected by the public, this audit to be made by disinterested persons appointed by the local board of trade or the district court.

Precise criminal penalties are provided for false statements of a company's condition. The actual managers of all corporations are compensated, according to law, from the profits of the year's operations, but not until reserves and amortization have been cared for, and 4 per cent. paid on the capital stock.

Finally the German Code compels each corporation to have two governing bodies, the managing directors and the supervising council, with a logical separation of powers and responsibilities, the council keeping watch and guard over the active directors in the interest of the corporation. Councilmen cannot act as directors, and the directors are far more than mere employees of the council, as officers are of directors in England and in this country. Directors practically must give all their time to the company; custom, if not law, prescribes fewer of them than in this country, and in Europe generally directors are selected more for their knowledge of the business in hand, and less because they represent some particular capitalistic group, industry or locality, than is the case here.

Publicity Not Enough

PUBLICITY alone will not protect investors. The New York Stock Exchange exacts plenty of information from the companies whose securities are listed with it, but that precaution did not prevent the Fisco and New Haven scandals. Prevention of "water" in stock will not accomplish much. The stock of the Woolworth Company has held at a high price although there is supposed to be \$50,000,000 of water in it, simply because the company is well managed. With respect to public-utility corporations much is being accomplished by the state commissions. At first the traction, gas and electric companies feared that commission regulation of their security issues would be harmful, but the effect has been just the reverse in the states where it is in force. In the same way railroad securities will be strengthened when the Interstate Commerce Commission is given jurisdiction over railroad security issues as well as over rates.

But there is still great confusion and complexity in these matters. Not all the states have public utility commissions, and some of these commissions have jurisdiction over service and rates and not over finances. Then there are "blue-sky" laws in several states, designed to prevent the sale of worthless securities by giving the state banking commissioner authority over dealers who offer securities, but these laws differ widely and none have been in existence long enough to be well tested. Congress may soon establish a Trade Commission to regulate the trusts, but only a minute fraction of the country's corporations will be affected. There are nearly fifty states, each with a system of corporation law different from that of its fellows.

10% More Oats For Your Money In This New Quaker 25¢ Size

Now Quaker Oats is put up for your economy, in a large 25-cent package. Also, as always, in the regular 10-cent size.

We save in packing this large size. And we give you that saving in more oats for your money—one-tenth more for each dime than the 10-cent size. Then you don't need to buy so often. You will not so often run out.

Try this big package next time.

The oats are the same—just the big, plump grains. The luscious flavor is exactly the same as you find in the 10-cent size.

And a Quaker Oats breakfast—the world's premier breakfast—will cost less than one-half cent per person.

*(The prices quoted do not apply
in the Far West or South)*

Quaker Oats

Just the Big, Luscious Flakes Alone

In every bushel of oats there are big grains and little—puny grains and plump.

The big grains alone have that luscious flavor which folks love in oats. So we pick them out, discarding all others. A bushel of choice oats yields but ten pounds of Quaker.

That's the reason for these big, white flakes. That's the reason for this wondrous flavor. From all the world over the lovers of oats send to us to get it.

Is it worth the getting?

In the first place, remember that Quaker Oats costs no more than others. It is easy to get. Any grocer will supply it if you simply mention Quaker.

Perhaps you get no more food

value than in other oatmeal, but you make that food value enticing. And that's a vital point.

Oats are vim-producing. They are rich in the elements brains and nerves require. "From early infancy," the best physicians say, "Feed your child on oats."

Then why not get the luscious flakes which make the dish inviting?

Medical Women's Handicap

By KRISTINE MANN, M.D.

ONE so often hears it said that women are now on an equal footing with men as far as educational opportunities go, that I wonder whether the public realizes the immense handicap of sex in obtaining adequate medical preparation.

It is true that many first-class medical colleges are at present open to women. Women have not yet, of course, so wide a choice as men. Columbia University still closes her doors to the would-be woman medical student. Even her own graduates from Barnard must go elsewhere for a physician's training. Cornell University, though frankly open to women, still compels them to take their first year at Ithaca, whereas men may take theirs either in New York or at Ithaca. Johns Hopkins has always admitted women on the same terms as men, and has done much toward maintaining a high standard of medical education for women. In their university courses, whether at Cornell, Johns Hopkins, or the Western universities, women have had absolutely fair play and have not shown themselves inferior to the men in their capacity for amassing facts, powers of observation, good judgment, understanding of human nature, or scientific integrity—all qualities that make the practicing physician of value to the community.

And this brings me to the point to which I wish to call your attention: while women, if they so desire it, can get a medical education equal to that of men, and can graduate with honors and distinction, their education from this point on, in the East, is often extremely restricted by the regulations regarding hospital appointments which now prevail. These hospitals appoint internes each year, and they are selected by competitive examinations. The competitive examinations purport to select the candidates on the basis of their training, intelligence, personality; but no matter how large a proportion of these the women may have, she is excluded from just competition. Women are not allowed to serve as internes in any of the large hospitals in New York City. They are excluded as well from the Massachusetts General Hospital (with almost negligible exceptions). It is to be expected that they would not be considered eligible as internes in the hospitals controlled by the College of Physicians and Surgeons, which excludes them from their medical courses; but they are also *hors de concours* in the hospitals in which the Cornell students receive instruction!—and in spite of the fact that many of the professors at Cornell are alive to the injustice and inconsistency of this arrangement.

The present situation is a misfortune—that works to the disadvantage of the woman herself, the hospital and the public.

It is admitted now that hospital service is if anything more important to the student than any year of college work. In the hospital the young doctor learns how to practice medicine. His facts become fixed in his mind through use. Some medical colleges, as, notably, Minnesota University, regard hospital work as so essential that they refuse to give the degree of M.D. without it. It goes without saying that the better the hospital, the better training the student gets, and, conversely, the better the student the more

capable is he of taking advantage of good hospital training. The ambition of the young doctor is to be brought in contact with men of originality and power in their profession—a type of man found far more often associated with large city hospitals than elsewhere—particularly where those hospitals are connected with medical schools of good standing.

In the large city hospitals, also, the interne has opportunity to see a greater variety of cases than in the smaller, less centrally located hospitals. Also all the modern methods of treatment are more likely to be tried out first in the larger than in the smaller hospitals.

It is an obvious advantage, too, for a doctor to occupy the position of interne in a hospital in the city where he is subsequently to practice. But even if a woman is a born and bred New Yorker, with intentions of settling there permanently, she has almost no chance for hospital experience in her own town.

It is possible, therefore, under present conditions, for a woman to graduate first in her class from a medical college like Cornell, which ranks second to none, and find herself compelled to choose between hospital service in a small New York hospital or in a hospital in some distant town. This is such a manifest injustice that it needs no further comment. If there is such a thing as sex disability which woman has to overcome in her struggle for existence, why place absolutely artificial obstacles in her path? A woman, no matter how brilliant in her profession, has no chance to work under doctors of distinction, to have her work, if successful, known by these doctors; she starts her career with a serious handicap.

IN the next place the present situation is a disadvantage to the patients in the hospital. When patients are receiving care for nothing, it is a question how far consideration for their wishes should enter into the discussion. But if the matter were put to vote among the patients, I venture to guess that they would prefer to have the line drawn fairly at excellence than at sex. Even in the women's and children's wards—the gynecological and obstetrical—the internes are entirely men. There are many women who (while they would choose the best doctor regardless of sex for gynecological conditions) would vastly prefer a skillful woman doctor for the day-to-day management of their case. Their wishes in this matter should surely be regarded with at least the same consideration that the men's receive. Because in some of the wards men patients do not wish women students present at the bedside clinics, women are excluded. Whether the women patients object or not to men internes who have complete charge of the management of their cases is never even inquired into. And after all, must we not admit that women internes, where good ones can be secured, are more suitable in the gynecological wards than men? The exceptional man may be better than a woman in this work; but would not the average woman doctor be bound to be more successful than the average man doctor in dealing with the types of cases found in these wards in our large public hospitals? Acquainted, as I am, with the average type of interne

and knowing, as I do, many of the young, well-trained women doctors, who have been sent out of New York for their hospital experience, I can only say that the present arrangement bears particularly hard upon the women patients.

In the third place this handicap of women must in the last analysis react unfavorably on the public. Women physicians are in demand by society. There is no question on this point. They are performing a work in certain respects different from the work of men physicians. There are women who are eager to fill this demand. Should they not be given by that public the best advantages possible? Why should the public, who is going to employ these women not only as private practitioners but as inspectors of schools and factories, exclude them from the opportunity of attaining the best possible education? The city has it in its power to give them this training without extra cost to itself, too!

There are many visiting doctors connected with the large hospitals at present who desire internes with knowledge, good judgment and absolute reliability. If these qualities can be found to a greater extent in a woman applicant than in a man, they would choose the woman.

WHAT prevents women, then, from being admitted immediately? The trustees and Boards of Directors of the hospitals are loath to make a change. The argument advanced is that there are no rooms built in the hospital for women doctors. The argument seems to the women as parallel to the argument against women's suffrage: that "the polling places are unsewered." It is a reply which sounds trivial in comparison with the seriousness of the argument. We argue that in justice to the woman doctor, the woman patient and the public, women should be admitted to the hospitals as internes. We are told that although all this were true, the question is settled by the fact that "there are no sleeping rooms in the hospital for them."

ANOTHER reason why those in authority have hesitated to introduce women internes has been fear of sex complications brought about by the close intermingling of the sexes. At present, however, both men and women entering the hospitals are older. Most of them have had seven or eight years of education graded upon their high-school education and the average age would be nearer twenty-five than twenty. This danger has, therefore, much decreased in the past years. It is a danger which would surely not exist to any greater degree than the danger of complications and love affairs arising between internes and nurses, which, while probably occurring, has never been a serious menace to nurses and doctors working together.

It is also said that women cannot stand the strain. This can never be foretold. The only way one can tell whether women can stand the physical strain of an internship in a large hospital is to let them try. We were told years ago that women could not stand the strain of the higher education.

The city hospitals are more or less indirectly under the control of the public. I wonder if the public realizes the situation as regards its women physicians?

"The
Little
Grey
Man"

Pure Food!

THAT is the particular hobby of Professor Lewis B. Allyn, "the little grey man" of Westfield, Massachusetts. Unofficially, he has been carrying on, for several years, an unrelenting war against impurities in and misleading statements concerning foods and beverages. His work has become known in thousands of American homes—in these thousands of homes his word has become law. The health of the nation has been materially improved through his quiet efforts.

Henceforth Professor Allyn will be Food Editor of *The Ladies' World*. In every future issue of the magazine his work will appear, and his advice will be at the service of our readers.

Read the preliminary announcement of what he intends to do in *The Ladies' World*.
